

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### **Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

### PART III. THE LAW OF SCOTLAND.

#### GENERAL OBSERVATIONS.

1. THE MUNICIPAL LAW of Scotland, as of most other countries, consists partly of statutory or written law, which has the express authority of the legislative power; partly of customary or unwritten law, which derives force from its presumed or tacit consent.

2. Under our statutory or written law is comprehended, 1. Our acts of parliament: not only those which were made in the reign of James I. of Scotland, and from thence down to our union with England in 1707, but such of the British statutes enacted since the union as concerned this part of the united kingdom.

3. A collection of law books under the title of REGIAM MAJESTATEM was published by Sir John Skene, at the commencement of the 16th century. It consisted of the *Regiam Majestatem* now generally deemed to be a mere transcript from a work of Glauville, an English lawyer, called *Regiam Pothestatem*, interlarded with a few of the laws and particular customs of this country, the Borough Laws, the laws of K. Malcolm, &c. Though we are inclined to think these books unworthy to be ranked as part of the statute law of this country, yet as their authenticity was much agitated by the legal antiquarians of the last century, we may, under the article REGIAM MAJESTATEM, give a short abstract of the dispute.

4. Our written law also comprehends, 2. The acts of federant, which are ordinances for regulating the forms of proceeding before the court of session in the administration of justice, made by the judges, who have a delegated power from the legislature for that purpose.

5. The civil, or Roman and canon laws, though they are not perhaps to be deemed proper parts of our written law, have undoubtedly had the greatest influence in Scotland. The Roman still continues to have great authority in all cases where it is not derogated from by any statute or custom, and where the genius of our law suffers us to apply it.

6. Our unwritten, or customary law, is that

which, without being expressly enacted by statute, derives its force from the tacit consent of king and people; which consent is presumed from the ancient custom of the community. Custom, as it is equally founded in the will of the lawgiver with written law, has therefore the same effects: hence, as one statute may be explained or repealed by another, so a statute may be explained by the uniform practice of the community; and even go into disuse by a posterior contrary custom.

7. An uniform tract of the judgments or decisions of the court of session is commonly considered as part of our customary law, because such uniformity establishes what is the custom in each particular case.

8. The SCOTS ACTS of parliament were, by our most ancient custom, proclaimed in all the different shires, boroughs, and baron-courts, of the kingdom. But after our statutes came to be printed, that custom was gradually neglected; and at last, the publication of our laws, at the market-cross of Edinburgh, was declared sufficient; and they became obligatory 40 days thereafter. British statutes are deemed sufficiently notified, without formal promulgation; though, for the information of the lieges in general, copies of every public statute are now forwarded to each district of every county throughout the kingdom, at the public expence. After a law is published, no pretence of ignorance can excuse the breach of it.

9. As laws are given for the rule of our conduct, they can regulate future cases only; for past actions being out of our power, can admit of no rule. New laws can therefore have no retrospect.

10. By the rules of interpreting statute law received in Scotland, an argument may be used from the title to the act itself, a *rubric ad nigrum*; at least, where the rubric has been either originally framed, or afterwards adopted by the legislature.

11. But the rules for the interpretation of laws in Scotland, being in general, nearly the same with those observed for the interpretation and construction of the statute laws in England, it is unnecessary to repeat them here. See PART II, SECT. V.

12. The objects of the laws of Scotland, according to Mr Erskine, are, Persons, Things, and Actions:

## CHAP. I.

## Of PERSONS.

AMONG persons, judges, who are invested with jurisdiction, deserve the first consideration.

## SECT. I. Of JURISDICTION and JUDGES in GENERAL.

1. JURISDICTION is a power conferred upon a judge or magistrate, to take cognizance of and decide causes according to law, and to carry his sentences into execution. The tract of ground, or district, within which a judge has the right of jurisdiction, is called his *territory*: and every act of jurisdiction exercised by a judge without his territory, either by pronouncing sentence, or carrying it into execution, is null.

2. The supreme power, which has the right of enacting laws, naturally has the right of erecting courts, and appointing judges, who may apply these laws to particular cases: but, in Scotland, this right has been always intrusted with the crown, as having the executive power of the state.

3. Jurisdiction is either supreme, inferior, or mixed. That jurisdiction is supreme, from which there lies no appeal to a higher court. Inferior courts are those whose sentences are subject to the review of the supreme courts, and whose jurisdiction is confined to a particular territory. Mixed jurisdiction participates of the nature both of the supreme and inferior: thus the judge of the high court of admiralty, and the commissaries of Edinburgh, have an universal jurisdiction over Scotland, and they can review the decrees of inferior admirals and commissaries; but as their own decrees are subject to the review of the courts of session or judicatory, they are, in that respect, inferior courts.

4. Jurisdiction is either civil or criminal: By the first, questions of private right are decided; by the 2d, crimes are punished. But, in all jurisdictions, though merely civil, there is a power inherent in the judge, to punish, either corporally, or by a pecuniary fine, those who offend during the proceedings of the court, or who shall afterwards obstruct the execution of the sentence.

5. Jurisdiction is either privative or cumulative. Privative jurisdiction, is that which belongs only to one court to the exclusion of all others. Cumulative, otherwise called *concurrent*, is that which may be exercised by any one of two or more courts, in the same cause.

6. All heritable jurisdictions, except those of admiralty and a small pittance reserved to barons, are either abolished, or annexed to the crown. See JURISDICTION, § III.

7. Jurisdiction is either proper or delegated. Proper jurisdiction, is that which belongs to a judge or magistrate himself, in virtue of his office. Delegated, is that which is communicated by the judge to another called a *depute*.

8. Civil jurisdiction is founded, 1. *Ratione domicilii*, if the defender has his domicile within the judge's territory. A domicile is the dwelling place where a person lives with an intention to remain; and custom has fixed it as a rule, that residence for 40 days founds jurisdiction. If one has no fixed dwelling place, *e. g.* a soldier, or a

travelling merchant, a personal citation against him within the territory is sufficient to found the judge's jurisdiction over him, even in civil questions. As the defender is not obliged to appear before a court to which he is not subject, the pursuer must follow the defender's domicile.

9. It is founded, 2. *Ratione rei sitæ*, if the subject in question lie within the territory. If that subject be immoveable, the judge, whose jurisdiction is founded in this way, is the sole judge competent, excluding the judge of the domicile.

10. Where one, who has not his domicile within the territory, is to be sued before an inferior court *ratione rei sitæ*, the court of session must be applied to, whose jurisdiction is universal, and who, of course, grant letters of supplement to cite the defender to appear before the inferior judge. Where the party to be sued resides in another kingdom, and has an estate in this, the court of session is the only proper court, as the *commune forum* to all persons residing abroad; and the defender, if his estate be heritable, is considered as lawfully summoned to that court, by a citation at the market cross of Edinburgh, and pier and shore of Leith: but where a stranger, not a native of Scotland, has only a moveable estate in this kingdom, he is deemed to be so little subject to the jurisdiction of our courts, that action cannot be brought against him till his effects be first attached by an arrestment *jurisdictionis fundandæ causæ*; which is laid on by a warrant issuing from the supreme courts of session, or admiralty, or from that within whose territory the subject is situated, at the suit of the creditor.

11. A judge may, in special causes, arrest or secure the persons of such as have neither domicile nor estate within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of course by the judge ordinary of either side, against those who have their domicile upon the opposite side, for arresting their persons, till they give caution *judicio sitæ*; and even the persons of citizens or natives may be so secured, where there is just reason to suspect that they are *in meditatione fugæ*, *i. e.* that they intend suddenly to withdraw from the kingdom; upon which suspicion, the creditor who applies for the warrant must make oath. An inhabitant of a borough royal, who has furnished one who lives without the borough in meat, clothes, or other merchandize, and who has no security for it but his own account-book, may arrest his debtor, till he give security *judicio sitæ*.

12. A judge may be declined, *i. e.* his jurisdiction disowned judicially, 1. *Ratione causæ*, from his incompetency to the special cause brought before him. 2. *Ratione suspecti iudicis*; where either the judge himself or his near kinsman, has an interest in the suit. No judge can vote in the cause of his father, brother, or son, either by consanguinity or affinity; nor in the cause of his uncle or nephew by consanguinity. 3. *Ratione privilegii*; where the party is by privilege exempted from their jurisdiction.

13. Prorogated jurisdiction, *jurisdiction in consensibus*, is that which is, by the consent of parties, conferred upon a judge, who, without such consent, would be incompetent. Where a judge

is incompetent, every step he takes must be null, till his jurisdiction be made competent by the party's actual submission to it. It is otherwise where the judge is competent, but may be declined by the party upon privilege.

14. In order to prorogation, the judge must have jurisdiction, such as may be prorogated. Hence, prorogation cannot be admitted where the judge's jurisdiction is excluded by statute. Yet where the cause is of the same nature with those to which the judge is competent, though law may have confined his jurisdiction within a certain sum, parties may prorogate it above that sum unless where prorogation is prohibited. Prorogation is not admitted in the king's causes; for the interest of the crown cannot be hurt by the negligence of its officers.

15. All judges must at their admission swear, 1. The oath of allegiance, and subscribe the assurance; 2. The oath of abjuration; 3. The oath of supremacy; 4. lastly, The oath *de fidelis administratione*.

16. A party who has either properly declined the jurisdiction of the judge before whom he had been cited, or who thinks himself aggrieved by any proceedings in the cause, may, before decree, apply to the court of session to issue letters of adjournment for calling the action from before the inferior court to themselves.

17. That the court of session may not waste their time in trifles, no cause for a sum below 100 Sterling can be advocated to the court of session from the inferior judge competent; but if an inferior judge shall proceed upon a cause to which he is incompetent, the cause may be carried from him by advocacy, let the subject be ever so inconsiderable.

SECT. II. *Of the SUPREME JUDGES and COURTS of SCOTLAND.*

1. THE KING, who is the fountain of jurisdiction, might by our ancient constitution have judged in all causes either in his own person, or of those whom he was pleased to vest with jurisdiction; but the whole power is now vested in the latter.

2. THE PARLIAMENT of Scotland, as our court of the last resort, had the right of reviewing the sentences of all our supreme courts.

By the treaty of UNION, in 1707, the parliaments of Scotland and England are united into one parliament of Great Britain. From this period, the British house of peers, as coming in place of the Scots parliament, is become our court of the last resort, to which appeals lie from all the supreme courts of Scotland; but that court has no original jurisdiction in civil matters, in which they judge only upon appeal. By art. 22. of that treaty, the Scots share of the representation in the house of peers is fixed to 16 Scots peers elective; and in the house of commons to 45 commoners, of which 30 are elected by the freeholders of counties, and 15 by the royal boroughs. The Scots privy council was also thereupon abolished, and sunk into that of Great Britain, which for the future is declared to have no other powers than the English privy council had at the time of the union.

4. A court was erected in 1425, consisting of

certain persons to be named by the king, out of the three estates of parliament, which was vested with the jurisdiction formerly lodged in the council, and got the name of the *SESSION*, because it was ordained to hold annually a certain number of sessions at the places to be specially appointed by the king. This court had a jurisdiction, cumulative with the judge ordinary, in spuilzies, and other possessory actions, and in debts; but they had no cognisance in questions of property of heritable subjects. No appeal lay from its judgments to the parliament. The judges of this court served by rotation, and were changed from time to time, after having sat 40 days; and became so negligent in the administration of justice, that it was at last thought necessary to transfer the jurisdiction of this court to a council to be named by the king, called the *daily council*.

5. The present model of the court of session, or college of justice, was formed in the reign of James V. The judges thereof, who were vested with an universal civil jurisdiction, consisted originally of 7 churchmen, 7 laymen, and a president, whom it behoved to be a prelate; but spiritual judges were in 1584 partly, and in 1640, totally prohibited. The judges of session have been always received by warrants from the crown. Anciently the king seems to have transferred to the court itself the right of choosing their own president; and in a *feudrum* recorded June 26, 1593. K. James VI. condescended to present to the lords, upon every vacancy in the bench, a list of three persons, out of which they were to choose one. But he soon resumed the exercise of both rights, which continued with the crown till the usurpation; when it was ordained, that the king should name the judges of the session, by the advice of parliament. After the restoration, the nomination was again declared to be solely in the sovereign.

6. Though judges may, in general, be named at the age of 21 years, the lords of session must be at least 25. No person can be named lord of session, who has not served as an advocate or principal clerk of session for five years, or as a writer to the signet for 10; and in the case of a writer to the signet, he must undergo the ordinary trials upon the Roman law, and be found qualified two years before he can be named. Upon a vacancy in the bench, the king presents the successor by a letter addressed to the lords, wherein he requires them to try and admit the person presented. The power to reject the presentee upon trial is taken away, and a bare liberty to remonstrate substituted in its place.

7. Besides the 15 ordinary judges, the king was allowed to name 3 or 4 lords of his great council, who might sit and vote with them. These extraordinary lords were suppressed in the reign of George I.

8. The appellation of the COLLEGE OF JUSTICE is not confined to the judges, who are distinguished by the name of *senators*; but comprehends advocates, clerks of session, writers to the signet, and others, as described, *Act S.* 23d Feb. 1687. Where, therefore, the college of justice is entitled to any privilege, it extends to all the members of the college. They are exempted from

watching, warding, and other services within the borough; and from payment of ministers stipends, and of all customs, &c. imposed upon goods carried to or from Edinburgh. Several of these privileges and immunities were called in question by the city of Edinburgh within these 20 years; but they were found by the court of session to be in full force; and their decision being appealed to the House of Lords, was affirmed.

9. Though the jurisdiction of the session be properly limited to civil causes, the judges have always sustained themselves as competent to the crime of falsehood. Where the falsehood deserves death or disembowment, they, after finding the crime proved, remit the criminal to the court of justiciary. Special statute has given to the court of session jurisdiction in contraventions of lawburrows, deforcements, and breach of arrestment; and they have been in use to judge in battery *pendente lite*, and in usury.

10. In certain civil causes, the jurisdiction of the session is exclusive of all inferior jurisdictions; as in declarators of property, and other competitions of heritable rights, provings of the tenor, *cessiones honorum*, restitution of minors, reductions of decrees or of writings, sales of the estates of minors or bankrupts, &c. In a 2d class of causes, their jurisdiction can be only exercised in the way of review, after the cause is brought from the inferior court; as in maritime and consistorial causes, which must be pursued in the first instance before the admiral or commissary; and in actions below 12l. sterling, which must be commenced before the judge ordinary. In all civil actions, which fall under neither of these classes, the jurisdiction of the session is concurrent, even in the first instance, with that of the judge ordinary. The session may proceed as a court of equity by the rules of conscience, in abating the rigour of law, and giving aid in proper cases to such as in a court of law can have no remedy: and this power is inherent in the supreme court of every country, where separate courts are not established for law and for equity. This court formerly met upon the 12th of June, and rose upon the 11th of August for the summer session; but now, in consequence of an act passed in the session of parliament 1790, it meets on the 12th of May and rises on the 11th of July for the summer session; the winter sederunt being still held as formerly, viz. from the 12th of November to the 11th of March inclusive.

11. The supreme criminal judge was styled the Justiciar; and he had anciently an universal civil jurisdiction, even in matters of heritage. He was obliged to hold two justice courts or ayres yearly at Edinburgh or Peebles, where all the freeholders of the kingdom were obliged to attend. Besides this universal court, special justice ayres were held in all the different shires in the kingdom twice in the year: These last having gone into disuse, 8 deputies were appointed, two for every quarter of the kingdom, who should make their circuits over the whole in April and October.

12. The office of deputies was suppressed in 1672; and 5 lords of session were added, as *commissioners of justiciary*, to the justice-general and justice-clerk. The justice-general, if present, is

constant president of the court, and in his absence the justice-clerk. The kingdom is divided into 3 districts, and two of the judges are appointed to hold circuits in certain boroughs of each district twice in the year; one judge may proceed to business in the absence of his colleague. In trials before this court the evidence was always taken down in writing till the act 23d Geo. III. was passed; by which the judges may try and determine all causes by the verdict of an assize, upon examining the witnesses *viva voce* without reducing the testimony into writing, unless it shall appear more expedient to proceed in the former way, which they have it in their power to do. This act was at first temporary, but is now made perpetual by 27th Geo. III. cap. 18.

13. By an old statute, the crimes of robbery, rape, murder, and wilful fire-raising, (the four pleas of the crown), are said to be referred to the king's court of justiciary; but the only crime in which, *de praxi*, the jurisdiction of justiciary became at last exclusive of all inferior criminal jurisdiction, was that of high treason. The court of justiciary, when sitting at Edinburgh, has a power of advocating causes from all inferior criminal judges, and of suspending their sentences.

14. The CIRCUIT COURT can also judge in all criminal causes which do not infer death or disembowment, upon appeal from any inferior court within their district; and has a supreme civil jurisdiction, by way of appeal, in all causes not exceeding 12l. sterling, in which their decrees are not subject to review; but no appeal is to lie to the circuit, till the cause be finally determined in the inferior court.

15. THE COURT OF EXCHEQUER, as the king's chamberlain court, judged in all questions of the revenue. In pursuance of the treaty of Union, that court was abolished, and a new court erected, consisting of the Lord High Treasurer of Great Britain, and a chief Baron, with 4 other Barons of Exchequer; which barons are to be made of sergeants at law, English barristers, or Scots advocates of 5 years standing. This court has a private jurisdiction conferred upon it, as to the duties of customs, excise, or other revenues appertaining to the king or prince of Scotland; and as to all honours and estates that may accrue to the crown; in which matters, they are to judge by the forms of proceeding used in the English court of Exchequer, under the following limitations; that no debt due to the crown shall affect the debtor's real estate in any other manner than such estate may be affected by the laws of Scotland, and that the validity of the crown's titles to any honours or lands shall continue to be tried by the court of session. The barons have the powers of the Scots court transferred to them, of passing the accounts of sheriffs or other officers who have the execution of writs issuing from, or returnable to, the court of exchequer, and of receiving resignations, and passing signatures of charters, gifts of casualties, &c. But though all these must pass in exchequer, it is the court of session only who can judge of their preference after they are completed.

16. The jurisdiction of the ADMIRAL in maritime causes was of old concurrent with that of the session. The high admiral is declared the king's justice

### I. SECT. III.

### L A W.

5

neral upon the seas, on fresh water with-  
nark, and below the first bridge, and in  
rivers and creeks. His civil jurisdiction ex-  
tends to all maritime causes; and so comprehends  
all charter-parties, freights, salvages, bot-  
tomry, &c. He exercises this supreme jurisdic-  
tion in the high court of admiralty; and he may also name inferior depu-  
ties whose jurisdiction is limited to particular dis-  
tricts whose sentences are subject to the re-  
view of the high court. In causes which are de-  
fined under the admiral's cognizance, his  
jurisdiction is sole; in so much, that the session  
judge may review his decrees by suspen-  
sion of execution cannot carry a maritime ques-  
tion to him by advocacy. The admiral has  
also, by usage, a jurisdiction in mercantile  
causes where they are not strictly maritime,  
but in such cases he sits with that of the judge ordinary.

Our supreme courts have seals or signets  
of their several jurisdictions. The courts  
of law and the chancery used formerly the same sig-  
net which was called the king's, because the  
seal was from thence run in the king's name;  
but when the justiciary got at last a separate sig-  
net, yet that of the session still retains the  
name of the KING'S SIGNET. In this office  
the clerk summons for citation, letters of execu-  
tion, or for staying or prohibiting of  
execution, and generally whatever passes by the  
hand of the session, and is to be executed by  
the officers of the court. All these must, before  
they are signed by the writers or clerks of the  
court, be put under the seal of the session, where they are  
in a depending process, merely for pro-  
bation they pass by the signet, must be  
signed by a clerk of session. The clerks of the  
court prepare and subscribe all signatures of  
writs, or other royal grants, which pass in ex-

which they return juries, for the trial of causes  
that require them. The writs for electing mem-  
bers of parliament have been, since the union, di-  
rected to the sheriffs, who, after they are execu-  
ted, return them to the crown office from whence  
they issued. They also execute writs issuing from  
the court of exchequer; and in general, take care  
of all estates, duties, or casualties, that fall to the  
crown within their territory, for which they must  
account to the exchequer.

4. A LORD OF REGALTY was a magistrate who  
had a grant of lands from the sovereign, with a  
royal jurisdiction annexed thereto. His civil ju-  
risdiction was equal to that of a sheriff; his crimi-  
nal extended to the 4 pleas of the crown. He had  
a right to repledge or reclaim all criminals, sub-  
ject to his jurisdiction, from any other competent  
court, though it were the justiciary itself, to his  
own. He had also right, according to the most  
common opinion, to the single escheat of all de-  
nounced persons residing within his jurisdiction, e-  
ven though such privilege had not been expressed  
in the grant of regality.

5. THE STEWART was the magistrate appointed  
by the king over such regality lands as happened  
to fall to the crown by forfeiture, &c. and there-  
fore the steward's jurisdiction was equal to that of  
a regality. The two stewartries of Kirkcudbright,  
and of Orkney and Zetland, make shires or counties  
by themselves, and send each a representative  
to parliament.

6. Where lands not erected into a regality fell  
into the king's hands, he appointed a bailie over  
them, whose jurisdiction was equal to that of a  
sheriff.

7. By the late jurisdiction act, 20 Geo. II. all  
heritable regalities and baileries, and all such he-  
ritable sheriffships and stewartries as were only  
parts of a shire, are dissolved; and the powers  
formerly vested in them are made to devolve upon  
such of the king's courts as these powers would  
have belonged to, if the jurisdictions dissolved had  
never been granted. All sheriffships and stewar-  
tries that were no part of a shire, where they had  
been granted, either heritably or for life, are re-  
sumed and annexed to the crown. No high sher-  
riff or steward can hereafter judge personally in a  
any cause. One sheriff or steward-depute is to be  
appointed by the king in every shire, who must  
be an advocate of three years standing; and whose  
office as sheriff or steward-depute is now by 28  
Geo. II. held *ad vitam aut culpam*.

8. The appanage, or patrimony, of the prince  
of Scotland, has been long erected into a regality  
jurisdiction, called the Principality. It is perso-  
nal to the king's eldest son, upon whose death or  
succession, it returns to the crown. The prince  
has, or may have, his own chancery, from which  
his writs issue, and may name his own chamber-  
lain and other officers, for receiving and managing  
his revenue. The vassals of the prince are enti-  
tled to elect, or to be elected, members of parlia-  
ment for counties, equally with those who hold  
of the crown.

9. JUSTICES OF THE PEACE are magistrates na-  
med by the sovereign, over the several counties of  
the kingdom, for the special purpose of preserving  
the

#### I. Of the INFERIOR JUDGES and COURTS of SCOTLAND.

SHERIFF, (from *shere*, to cut or divide, and  
governor,) is the judge ordinary constitu-  
ted by the crown over a particular division or  
county.

The sheriff's jurisdiction, both civil and  
criminal, was, in ancient times, nearly as ample  
in his own territory as that of the supreme  
court of session and justiciary was over the whole  
kingdom.

His civil jurisdiction now extends to all ac-  
tions, contracts, or other personal obliga-  
tions, and to all possessory actions, as  
replevin, ejections, spuilzies, &c.; to all briefs  
from the chancery, as of inquest, trespas,  
tort, &c.; and even to adjudications  
of debt, when proceeding on the renuncia-  
tion of the apparent heir. His present criminal  
jurisdiction extends to certain capital crimes, as  
murder, though it be one of the  
pleas of the crown; and he is competent to most  
of the public police, and has a cumulative  
jurisdiction with justices of the peace in all riots  
and disturbances of the peace.

Justices have a ministerial power, in virtue of

the public peace. Anciently their power reached little farther than to bind over disorderly persons for their appearance before the privy council or justiciary; afterwards they were authorized to judge in breaches of the peace, and in most of the laws concerning public policy. They may compel workmen or labourers to serve for a reasonable fee, and they can condemn masters in the wages due to their servants. They have power to judge in questions of highways, and to call out the tenants with their cottars and servants to perform six days work yearly for upholding them. It has been lately, however, found by the court of session, that justices have no jurisdiction whatever in common actions for debt. So that it now seems fixed, that they are incompetent in such actions, except where they are declared competent by special statute.

10. Since the union, our justices of the peace, over and above the powers committed to them by the laws of Scotland, are authorized to exercise whatever belonged to the office of an English justice, in relation to the public peace. From that time, the Scots and the English commissions have run in the same style, which contain powers to inquire into and judge in all capital crimes, witchcrafts, felonies, and several others specially enumerated; with this limitation subjoined, *of which justices of the peace may lawfully inquire*. Two justices can constitute a court. Special statute has given the cognizance of several matters of excise to the justices, in which their sentences are final; as to which, and the powers thereby vested in them, the reader must be referred to the excise laws; which are too numerous and complex to be detailed in this work.

11. A **BOROUGH** is a body corporate, made up of the inhabitants of a certain tract of ground erected by the sovereign, with jurisdiction annexed to it. Boroughs are erected, either to be holden of the sovereign himself, which is the case of royal boroughs; or of the superior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their charters, to choose annually certain office-bearers or magistrates; and in boroughs of regality and barony, the nomination of magistrates is, by their charter, lodged sometimes in the inhabitants, sometimes in the superior. Bailies of boroughs have jurisdiction in matters of debt, services, and questions of possession betwixt the inhabitants. Their criminal jurisdiction extends to petty riots, and reckless fire raising. The dean of guild is that magistrate of a royal borough who is head of the merchant company; he has the cognizance of mercantile causes within borough; and the inspection of buildings, that they encroach neither on private property, nor on the public streets; and he may direct insufficient houses to be pulled down. His jurisdiction has no dependence on the court of the borough, or baillie court.

12. A **BARON**, in the extensive sense of that word, is one who holds his lands immediately of the crown; and, as such, had, by our ancient constitution, right to a seat in parliament, however small his freehold might have been. The lesser barons were exempted from the burden of at-

tending the service of parliament. This exemption grew insensibly into an utter disability in all the lesser barons from sitting in parliament, without election by the county; though there is no statute expressly excluding them.

13. To constitute a baron in the strict law sense, his lands must have been erected, or at least confirmed; by the king, *in liberam baroniam*; and such baron had a certain jurisdiction, both civil and criminal, which he might have exercised, either in his own person, or by his baillie.

14. But by the jurisdiction act, the civil jurisdiction of a baron is reduced to the power of recovering from his vassals and tenants, the rents of lands, and of condemning them in mill-services; and of judging in causes where the debt and damages do not exceed 40s. Sterling. His criminal jurisdiction is, by the same statute, limited to assaults, batteries, and other smaller offences, which may be punished by a fine not exceeding 20s. Sterling, or by setting the offender in the stocks in the day time not above three hours; the fine to be levied by pouding, or one month's imprisonment. The jurisdiction formerly competent to proprietors of mines, and coal or salt works, over their workmen, is reserved; and also that which was competent to proprietors who had the right of fairs or markets, for correcting the disorders that might happen during their continuance; provided they shall exercise no jurisdiction interfering the loss of life, or demeritation.

15. The **HIGH CONSTABLE** of Scotland had no fixed territorial jurisdiction, but followed the court; and had, jointly with the marshal, the cognizance of all crimes committed within two leagues of it. All other constabularies were dependent on him: these had castles, and sometimes boroughs, subject to their jurisdiction, as Dundee, Montrose, &c. and among other powers, now little known, they had the right of exercising criminal jurisdiction within their respective territories during the continuance of fairs. By the jurisdiction act, all jurisdictions of constabulary are dissolved, except that of high constable.

16. The office of the **LYON KING OF ARMS** was chiefly ministerial, to denounce war, proclaim peace, carry public messages, &c. But he has also a right of jurisdiction, whereby he can punish all who usurp arms contrary to the law of arms, and deprive or suspend messengers, heralds, or pursuivants, (who are officers named by himself); but he has no cognizance of the damage arising to a private party through the messenger's fault. Messengers are subservient to the supreme courts of session and justiciary; and their proper business is to execute all the king's letters either in civil or criminal causes. They must find caution for the proper discharge of their duty *qua* messengers; and in case of any malversation, or neglect, by which damage arises to their employers, their sureties may be recurred upon for indemnification. They are, however, not answerable for the conduct of the messenger in any other capacity *but qua* such; and therefore, if a messenger is authorized to uplift payment from a debtor, and fails to account to his employer, the cautioner is liable; his obligation extending only to the re-

lar and proper duties of the office in executing the diligence, or the like.

17. Our judges had, for a long time, no other fines or appointments, than what arose from the sentences they pronounced. Our criminal judges applied to their own use the fines or issues of their several courts; and regalities had a right to the whole escheat of all persons denounced, who resided within their jurisdiction; and our civil judges got a certain proportion of the sum contained in the decree pronounced. But these were all prohibited upon regular salaries being settled upon them.

#### SECT. IV. OF ECCLESIASTICAL PERSONS.

1. THE Pope, or bishop of Rome, was long acknowledged, over the western part of Christendom for the head of the Christian church. The papal jurisdiction was abolished in Scotland in 1560. The king was, by act 1669, declared to have supreme authority over all persons, and in all causes ecclesiastical; but this act was repealed by 1792, as inconsistent with Presbyterian church government, which was then upon the point of being established.

2. Before the reformation from Popery, the clergy was divided into secular and regular. The former had a particular tract of ground given them in charge, within which they exercised the pastoral office of bishop, presbyter, or other church officer. The regular clergy had no cure of souls; but were tied down to residence in their abbacies, priories, or other monasteries; and they, as the name of *regular*, from the rules of mortification to which they were bound, according to the institution of their several orders. Upon the vacancy of any benefice, whether secular or regular, commendators were frequently appointed to let the fruits, as factors or stewards, during the vacancy. The Pope alone could give the higher benefices in *commendam*; and at last, from the pretence of his power, he came to name commendators for life, and without any obligation to resign. After the reformation, several abbacies and priories were given by James VI. in *perpetuam commendam*, to laics.

3. Upon abolishing the Pope's authority, the regular clergy were totally suppressed; and, in place of all the different degrees which distinguished the inferior clergy, we had at first only parsonal presbyters or ministers, and superintendants, who had the oversight of the church within a certain district: soon thereafter, the church government became episcopal, by archbishops, bishops, and, and after some intermediate turns, is now governed by kirk sessions, presbyteries, synods, and general assemblies.

4. *Prelate*, in our statutes, signifies a bishop, dean, or other dignified clergyman, who in virtue of his office had a seat in parliament. Every bishop has his chapter, which consisted of a certain number of the ministers of the diocese, by whose assistance he managed the affairs of the diocese within that district. The nomination of bishops to vacant sees has been in the crown since 1534, though under the appearance of continuing to present right of election, which was in the pope. The confirmation by the crown under

the great seal, of the chapter's election; conferred a right to the spirituality of the benefice; and he had grant, upon the consecration of the bishop-elect, gave a title to the temporality; but this ad grant fell soon into disuse.

5. He who founded or endowed a church was entitled to the right of patronage thereof, or *advocatio ecclesie*; whereby, among other privileges, he might present a churchman to the cure, in case of a vacancy. The presentee, after he was received into the church, had a right to the benefice *proprio jure*; and if the church was parochial, he was called a parson. The Pope claimed the right of patronage of every kirk to which no third party could shew a special title; and, since the reformation, the crown, as coming in place of the Pope, is considered as universal patron, where no right of patronage appears in a subject. Where two churches are united, which had different patrons, each patron presents by turns.

6. Gentlemen of estates frequently founded colleges or collegiate churches; the head of which got the title of *provost*, under whom were certain prebendaries, or canons, who had their several stalls in the church, where they sung masses. Others of lesser fortunes founded chaplainries, which were donations granted for the singing of masses for deceased friends at particular altars in a church. Though all these were suppressed upon the reformation, their founders continued patrons of the endowments; out of which they were allowed to provide bursars, to be educated in any of the universities.

7. Where a fund is gifted for the establishment of a second minister in a parish where the cure is thought too heavy for one, the patronage of such benefice does not belong to the donor, but to him who was patron of the church, unless either where the donor has reserved to himself the right of patronage in the donation, or where he and his successors have been in the constant use of presenting the second minister, without challenge from the patron. The right of presenting incumbents was by Act 1695, c. 23, taken from patrons, and vested in the heritors and elders of the parish, upon payment to be made by the heritors to the parish of 600 marks; but it was again restored to patrons, by Act c. 12, with the exception of the presentations held in pursuance of the former act.

8. Patrons were not simply administrators of the church; for they held the fruits of the vacant benefice as their own, for some time after the reformation. But that right is now no more than a trust in the patron, who must apply them to pious uses within the parish, at the sight of the heritors, verily as they will do. If he fail, he loses his right of administering the vacant stipend for that and the next vacancy. The king, who is exempted from this rule, may apply the vacant stipend of his churches to any pious use, though not within the parish. If one should be ordained to a church, in opposition to the presentee, the patron, whose civil right cannot be affected by any sentence of a church-court, may retain the stipend as vacant. Patrons are to this day entitled to a seat and burial place in the churches of which they are patrons, and to the right of all the tithes

of the parish not heritably disposed. See CHAP. II. § 8. X.

9. That kirks may not continue too long vacant, the patron must present to the presbytery (formerly to the bishop), a fit person for supplying the cure, within six months from his knowledge of the vacancy, otherwise the right of presentation accrues to the presbytery *jure devoluto*. Upon presentation by the patron, the bishop collated or conferred the benefice upon the presentee by a writing, in which he appointed certain ministers of the diocese to induce or institute him into the church; which induction completed his right, and was performed by their placing him in the pulpit, and delivering to him the bible and keys of the church. The bishop collated to the churches of which himself was patron, pleno jure, or without presentation; which he also did in mensal churches, whose patronages were sunk, by the churches being appropriated to him, as part of his patrimony. Since the revolution, a judicial act of admission by the presbytery, proceeding either upon a presentation, or upon a call from the heritors and elders, or upon their own *jus devotivum*, completes the minister's right to the benefice.

10. Soon after the reformation, the Popish churchmen were prevailed upon to resign in the sovereign's hands a third of their benefices; which was appropriated, in the first place, for the subsistence of the reformed clergy. To make this fund effectual, particular localities were assigned in every benefice, to the extent of a third, called the *assumption of thirds*; and for the farther support of ministers, Q. Mary made a grant in their favour of all the small benefices not exceeding 300 merks. Bishops, by the act which restored them to the whole of their benefices, were obliged to maintain the ministers within their dioceses, out of the thirds; and in like manner, the laic titulars, who got grants of the teinds, became bound, by their acceptance thereof, to provide the kirks within their erections in competent stipends.

11. But all those expedients for the maintenance of the clergy having proved ineffectual, a commission of parliament was appointed in the reign of James VI. for planting kirks, and modifying stipends to ministers out of the teinds; and afterwards several other commissions were appointed, with the more ample powers of dividing large parishes, erecting new ones, &c. all of which were, in 1707, transferred to the court of session, with this limitation, that no parish should be disjoined, nor new church erected, nor old one removed to a new place, without the consent of three fourths of the heritors, computing the votes, not by their numbers, but by the valuation of their rents within the parish. The judges of session, when sitting in that court, are considered as a commission of parliament, and have their proper clerks, mace, and other officers of court, as such.

12. The lowest stipend that could be modified to a minister by the first commission, was 500 merks, or five chalders of victual, unless where the whole teinds of the parish did not extend so far: and the highest was 1000 merks, or ten chalders. The parliament in 1633 raised the minimum to 8 chalders of victual, and proportionably in like manner; but as neither the commission appointed by

that act, nor any of the subsequent ones, was limited as to the *maximum*, the commissioners have been in use to augment stipends considerably above the old *maximum*, where there is sufficiency of free teinds, and the cure is burdensome, or living expensive.

13. Where a certain quantity of stipend is modified to a minister out of the teinds of a parish, without proportioning that stipend among the several heritors, the decree is called a *decree of modification*: but where the commissioners also fix the particular proportions payable by each heritor, it is a decree of *modification and locality*. Where a stipend is only modified, it is secured on the whole teinds of the parish, so that the minister can insist against any one heritor to the full extent of his teinds; such heritor being always entitled to relief against the rest, for what he shall have paid above his just share: but where the stipend is also localled, each heritor is liable in no more than his own proportion.

14. Few of the reformed ministers were, at first, provided with dwelling houses; most of the Popish clergy having, upon the first appearance of the reformation, let their manse in feu, or in long tacks: ministers therefore got a right, in 1563, to as much of these manse as would serve them, notwithstanding such feus or tacks. Where there was no parson's nor vicar's manse, one was to be built by the heritors, at the sight of the bishop, (now the presbytery), the charge not exceeding L. 1000 Scots, nor below 500 merks. Under a manse are comprehended stable, barn, and byre, with a garden; for all which it is usual to allow half an acre of ground.

15. Every incumbent is entitled at his entry to have his manse put in good condition; for which purpose, the presbytery may appoint a visitation by tradesmen, and order estimates to be laid before them of the sums necessary for the repairing, which they may proportion among the heritors according to their valuations. The presbytery, after the manse is made sufficient, ought, upon application of the heritors, to declare it a *free manse*; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwise he or his executors shall be liable in damages; but they are not bound to make up the loss arising from the necessary decay of the building by the waste of time.

16. All ministers, where there is any landward or country parish, are, over and above their stipend, intitled to a glebe, which comprehends 4 acres of arable land, or 16 fowms of pasture ground where there is no arable land; (a *sowm* is what will graze ten sheep or one cow;) and it is to be designed or marked by the bishop or presbytery out of such kirk lands within the parish as lie nearest to the kirk, and, in default of kirk lands, out of temporal lands.

17. A right of relief is competent to the heritors, whose lands are set off for the manse or glebe, against the other heritors of the parish. Manse and glebes, being once regularly designed, cannot be sued or sold by the incumbent in prejudice of his successors, which is in practice extended even to the case where such alienation evidently appears profitable to the benefice.

18. Ministers, beside their glebe, are entitled to grafs for a horse and two cows. And if the lands, out of which the grafs may be designed, either lie at a distance, or are not fit for pasture, the heritors are to pay to the minister L. 20 Scots yearly as an equivalent: Ministers have also freedom of foggage, pasturage, fuel, seal, divot, loaning, and free fish and entry, according to use and wont: but what these privileges are, must be determined by the local customs of the several parishes.

19. The legal terms at which stipends become due to ministers are Whitfunday and Michaelmas. If the incumbent be admitted to his church before Whitfunday, (till which term the corns are not presumed to be fully sown,) he has right to that whole year's stipend; and, if he is received after Whitfunday, and before Michaelmas, he is entitled to the half of that year; because, though the corns were sown before his entry, he was admitted before the terms at which they are presumed to be reaped. If he dies or is transported before Whitfunday, he has right to no part of that year; if before Michaelmas, to the half; and if not till after Michaelmas, to the whole.

20. After the minister's death, his executors have right to the annat; which, in the sense of the canon law, was a right reserved to the Pope, of the first year's fruits of every benefice. Upon a threatened invasion from England, 1547, the annat was given by our parliament, to the executors of such churchmen as should fall in battle in defence of their country: but the word *annat* or *ann*, as it is now understood, is the right which law gives to the executors of ministers, of half a year's benefice over and above what was due to the minister himself for his incumbency.

21. The executors of a minister need make up no title to the ann by confirmation: neither is the right assignable by the minister, or affectable with his debts; for it never belonged to him, but is a mere gratuity given by law to those whom it is presumed the deceased could not sufficiently provide; and law has given it expressly to *executors*: and if it were to be governed by the rules of succession in executory, the widow, in case of no children, would get one half, the other would go to the next of kin; and where there are children, she would be entitled to a third, and the other two thirds would fall equally among the children. But the court of session have in this last case divided the ann into two equal parts, of which one goes to the widow, and the other among the children *in capita*.

22. From the great confidence that was, in the first ages of Christianity, reposed in churchmen, dying persons frequently committed to them the care of their estates, and of their orphan children; but these were simply rights of trust, not of jurisdiction. The clergy soon had the address to establish to themselves a proper jurisdiction, not confined to points of ecclesiastical right, but extending to questions that had no concern with the church. They judged not only in tithes, patronage, testaments, breach of vow, scandal, &c. but in questions of marriage and divorce, because marriage was a sacrament; in tochers, because these were given in consideration of marriage; in

all questions where an oath intervened, on pretence that oaths were a part of religious worship, &c. As churchmen came, by this extensive jurisdiction, to be diverted from their proper functions, they committed the exercise of it to their officials or commissaries: hence the commissary court was called the *Bishop's Court*, and *Curia Christianitatis*; it was also styled the *Consistorial Court*; from *consistory*, a name first given to the court of appeals of the Roman emperors, and afterwards to the courts of judicature held by churchmen.

23. At the reformation, all episcopal jurisdiction, exercised under the authority of the Pope, was abolished. As the course of justice in consistorial causes was thereby stopped, Q. Mary, besides naming a commissary for every diocese did, by a special grant, establish a new commissary court at Edinburgh, consisting of 4 judges or commissaries. This court is vested with a double jurisdiction; one diocesan, which is exercised in the special territory contained in the grant, viz. the counties of Edinburgh, Haddington, Linlithgow, Peebles, and a great part of Stirlingshire; and another universal, by which the judges confirm the testaments of all who die in foreign parts, and may reduce the decrees of all inferior commissaries, provided the reduction be pursued within a year after the decree. Bishops, upon their re-establishment in the reign of James VI. were restored to the right of naming their several commissaries.

24. As the clergy, in times of Popery, assumed a jurisdiction independent of the civil power or any secular court, their sentences could be reviewed only by the pope, or judges delegated by him; so that, with regard to the courts of Scotland, their jurisdiction was supreme. But, by an act 1560, the appeals from our bishops courts, that were then depending before the Roman consistories, were ordained to be decided by the court of session: and by posterior act, 1609, the session is declared the king's great consistory, with power to review all sentences pronounced by the commissaries. Nevertheless, since, that court had no inherent jurisdiction in consistorial causes prior to this statute, and since the statute gives them a power of judging only by way of advocacy, they have not, to this day, any proper consistorial jurisdiction in the first instance; neither do they pronounce sentence in any consistorial cause brought from the commissaries, but remit it back to them with instructions. By the practice immediately subsequent to the act before quoted, they did not admit advocations from the inferior commissaries, till the cause was first brought before the commissaries of Edinburgh; but that practice is now in disuse.

25. The commissaries retain to this day an exclusive power of judging in declarators of marriage, and of the nullity of marriage; in actions of divorce and of non adherence, of adultery, bastardy, and confirmation of testaments; because all these matters are still considered to be properly consistorial. Inferior commissaries are not competent to questions of divorce, under which are comprehended questions of bastardy and adherence, when they have a connection with the lawfulness of marriage, or with adultery.

26. Commissaries have now no power to pronounce decrees in absence for any sum above L. 40 Scots, except in causes properly consistorial: but they may authenticate tutorial and curatorial inventories; and all bonds, contracts, &c. which contain a clause for registration in the books of any judge competent, and protests on bills, may be registered in their books.

#### SECT. V. Of MARRIAGE.

I. PERSONS, when considered in a private capacity, are chiefly distinguished by their mutual relations; as husband and wife, tutor and minor, father and child, master and servant. The relation of husband and wife is constituted by marriage; which is the conjunction of man and wife, vowing to live inseparably till death.

2. MARRIAGE is truly a contract, and so requires the consent of parties. Idiots, therefore, and furious persons, cannot marry. As no person is presumed capable of consent within the years of pupillarity, which, by our law, lasts till the age of 14 in males, and 12 in females, marriage cannot be contracted by pupils; but if the married pair shall cohabit after puberty, such acquiescence gives force to the marriage. Marriage is fully perfected by consent, which founds all the conjugal rights and duties. The consent requisite to marriage must be *de presenti*.

3. It is not necessary, that marriage should be celebrated by a clergyman. The consent of parties may be declared before any magistrate, or simply before witnesses, which, if *copula* follows, constitutes a marriage: and though no formal consent should appear, marriage is presumed from the cohabitation, or living together at bed and board, of a man and woman who are generally reputed husband and wife. A man's acknowledgement of his marriage to the midwife whom he called to his wife, and to the minister who baptized his child, was found sufficient presumptive evidence of marriage; without the aid either of cohabitation, or of *habite and repute*. Children may enter into marriage, not only without the knowledge, but even against the remonstrances of a father.

4. Marriage is forbidden within certain degrees of blood. By the law of Moses (Leviticus xviii.), which, by the act 1567. c. 15. has been adopted by us, cousins German, and all remoter degrees, may lawfully marry. Marriage in the direct line is forbidden *in infinitum*. Marriage also, where either of the parties is naturally unfit for generation, or stands already married to a third person, is *ipso jure* null.

5. To prevent bigamy and incestuous marriages, the church has introduced proclamation of banns; that all persons who know any objection to the marriage may offer it. When the order of the church is observed, the marriage is called *regular*; when otherwise, *clandestine*. Marriage is valid, when entered into in either of these ways; but when clandestine, there are certain penalties imposed upon the parties, as well as on the celebrator and witnesses.

6. By marriage, a society is created between the married pair, which draws after it a mutual communication of their civil interests, in as far as is

necessary for maintaining it. As the society lasts only for the joint lives of the *foeci*; therefore rights that have the nature of a perpetuity, which our law styles *heritable*, are not brought under the partnership or communion of goods; as a land estate, or bonds bearing a yearly interest: it is only moveable subjects, or the fruits produced by heritable subjects during the marriage, that become common to man and wife.

7. The husband, as the head of the wife, has the sole right of managing the goods in communion, which is called *JUS MARITI*. This right is so absolute, that it bears but little resemblance to a right of administering a common subject. For the husband can, in virtue thereof, sell, or even gift, at his pleasure, the whole goods falling under communion; and his creditors may affect them for the payment of his proper debts: so that the *jus mariti* carries all the characters of an assignation, by the wife to her husband, of her moveable estate. It arises *ipso jure* from the marriage; and therefore needs no other constitution. But a stranger may convey an estate to a wife, so as it shall not be subject to the husband's administration; or the husband himself may, in the marriage contract, renounce his *jus mariti* in all or any part of his wife's moveable estate.

8. From this right are excepted *paraphernal goods*, which, as the word is understood in our law, comprehends the wife's wearing apparel, and the ornaments to her proper person; as necklaces, ear-rings, breast or arm jewels, buckles, &c. These are neither alienable by the husband, nor affectable by his creditors. Things of promiscuous use to husband and wife, as plate, medals, &c. may become paraphernal, by the husband's giving them to the wife, at or before marriage; but they are paraphernal only in regard to that husband who gave them as such, and are esteemed common moveables, if the wife, whose *paraphernalia* they were, be afterwards married to a 2d husband; unless he shall in the same manner appropriate them to her.

9. The right of the husband to the wife's moveable estate, is burdened with the moveable debts contracted by her before marriage: and as his right is universal, so also is his burden; for it reaches to her whole moveable debts, though they should far exceed her moveable estate. Yet the husband is not considered as the true debtor in his wife's debts. In all actions for payment, she is the proper defender: the husband is only cited for his interest, that is, as curator to her, and administrator of the society-goods. As soon therefore as the marriage is dissolved, and the society-goods thereby suffer a division, the husband is no farther concerned in the share belonging to his deceased wife; and consequently is no longer liable to pay her debts, which must be recovered from her representatives, or her separate estate.

10. This obligation upon the husband is, however, perpetuated against him, 1. Where his proper estate, real or personal, has been affected, during the marriage, by complete legal diligence; in which case, the husband must, by the common rules of law, relieve his property from the burden with which it stands charged: but the utmost diligence against his person is not sufficient to per-

petuate

petuate the obligation; nor even incomplete diligence against his estate. 2. The husband continues liable, even after the wife's death, in so far as he is *lucratus* or profited by her estate: still, however, the law does not consider a husband who has got but a moderate tocher with the wife as *lucratus* by the marriage; it is the excess only which it considers as *lucrum*, and that must be estimated by the quality of the parties and their condition of life.—As he was at no time the proper debtor in his wife's moveable debts; therefore, though he should be *lucratus*, he is, after the dissolution, only liable for them *subsidiarie*, i. e. if her own separate estate is not sufficient to pay them off.

11. Where the wife is debtor in that sort of debt, which, if it had been due to her, would have excluded the *ius mariti*, e. g. in bonds bearing interest, which, as we shall afterwards see, (CHAP. II, SECT. II, § 4.) continues heritable as to the rights of husband and wife, notwithstanding of the enactment of the statute 1661, which renders them moveable in certain other respects, the husband is liable only for the bygone interests, and those that may grow upon the debt during the marriage; because his obligation for her debts must be commensurated to the interest he has in her estate. It is the husband alone who is liable in personal diligence for his wife's debts, while the marriage subsists: the wife, who is the proper debtor, is free from all personal execution upon them while she is *vestita viro*.

12. The husband by marriage becomes the perpetual curator of the wife. From this right it arises, 1. That no suit can proceed against the wife till the husband be cited for his interest. 2. All deeds, done by a wife without the husband's consent, are null; neither can she sue in any action without the husband's concurrence. Yet where the husband refuses, or by reason of forfeiture, &c. cannot concur; or where the action is to be brought against the husband himself, for not performing his part of the marriage articles; the judge will authorise her to sue in her own name. The effects arising from this curatorial power appear even before marriage, upon the publication of banns; after which the bride, being no longer *in jure*, can contract no debt, nor do any deed, either to the prejudice of her future husband, nor even to her own. But in order to this, it is necessary that the banns shall have been published in the bride's parish church as well as in that of her husband.

13. If the husband should either withdraw from his wife, or turn her out of doors; or if, continuing in family with her, he should by severe treatment endanger her life; the commissaries will authorise a separation *a mensa et thoro*, and give a separate alimony to the wife, suitable to her husband's estate, from the time of such separation until either a reconciliation or a sentence of divorce.

14. Certain obligations of the wife are valid, notwithstanding her being *sub cura mariti*; *ex. gr.* obligations arising from delict; for wives have no privilege to commit crimes. But if the punishment resolves into a pecuniary mulct, the execution of it must, from her incapacity to fulfil, be

suspended till the dissolution of the marriage, unless the wife has a separate estate exempted from the *ius mariti*.

15. Obligations arising from contract, affect either the person or the estate. The law has been so careful to protect wives while *sub cura mariti*, that all personal obligations granted by a wife, though with the husband's consent, as bonds, bills, &c. are null; with the following exceptions: 1. Where the wife gets a separate *peculium* or stock, either from her father or a stranger, for her own or her children's alimony, she may grant personal obligations in relation to such stock; and by stronger reason, personal obligations granted by a wife are good, when her person is actually withdrawn from the husband's power by a judicial separation. 2. A wife's personal obligation, granted in the form of a deed *inter vivos*, is valid, if it is not to take effect till her death. 3. Where the wife is by the husband *preposita negotiis*, intrusted with the management either of a particular branch of business, or of his whole affairs, all the contracts she enters into in the exercise of her *prepositura* are effectual, even though they be not reduced to writing, but should arise merely *ex re*, from furnishings made to her: but such obligations have no force against the wife; it is the husband only, by whose commission she acts, who is thereby obliged.

16. A wife, while she remains in family with his husband, is considered as *preposita negotiis domesticis*; and consequently may provide things proper for the family; for the price whereof the husband is liable, though they should be misapplied, or though the husband should have given her money to provide them elsewhere. A husband who suspects that his wife may hurt his fortune by high living, may use the remedy of inhibition against her; by which all persons are interpellated from contracting with her, or giving her credit. After the completing of this diligence, whereby the *prepositura* falls, the wife cannot bind the husband, unless for such reasonable furnishings as he cannot instruct that he provided her with *aliunde*. As every man, and consequently every husband, has a right to remove his managers at pleasure, inhibition may pass at the suit of the husband against the wife, though he should not offer to justify that measure by an actual proof of the extravagance or profusion of her temper.

17. As to rights granted by the wife affecting her estate; she has no moveable estate, except her *paraphernalia*; and these she may alien or impignorate, with consent of the husband. She can, without the husband, bequeath by testament her share of the goods in communion. A wife can lawfully oblige herself, in relation to her heritable estate, with consent of her husband. A husband, though he be curator to his wife, can, by his acceptance or intervention, authorise rights granted by her in his own favour.

18. All donations, whether by the wife to the husband, or by the husband to the wife, are revocable by the donor; but if the donor dies without revocation, the right becomes absolute. A grant made by the husband, in consequence of the natural obligation that lies upon him to provide for his wife, is not revocable, unless in so far

as it exceeds the measure of a rational settlement; neither are remuneratory grants revocable, where mutual grants are made in consideration of each other, except where an onerous cause is simulated. All voluntary contracts of separation, by which the wife is provided in an yearly alimony, are effectual as to the time past, but revocable either by the husband or wife.

19. As wives are in the strongest degree subject to the influence of their husbands, third parties, in whose favours they had made grants, were frequently vexed with actions of reduction, as if the grant had been extorted from the wife through the force or fear of the husband. To secure the grantees against this danger, ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her husband not present, that she was not induced to grant the deed *ex vi aut metu*. A wife's ratification is not absolutely necessary for securing the grantee: law indeed allows the wife to bring reduction of any deed she has not ratified, upon the head of force or fear; of which, if she bring sufficient evidence, the deed will be set aside; but if she fails in the proof, it will remain effectual to the receiver.

20. Marriage by the law of Scotland, cannot be dissolved till death, except by divorce, proceeding either upon the head of adultery, or of wilful desertion.

21. Marriage is dissolved by death, either *within* year and day from its being contracted, or *after* year and day. If it is dissolved within year and day, all rights granted in consideration of the marriage (unless guarded against in the contract) become void, and things return to the same condition in which they stood before the marriage; with this restriction, that the husband is considered as a *bona fide* possessor, in relation to what he has consumed upon the faith of his right; but he is liable to repay the tocher, without any deduction in consideration of his family expence during the marriage. If things cannot be restored on both sides, equity hinders the restoring of one party and not the other. In a case which was a few years ago, before the court of session, it was determined, after a long hearing in presence, that where a marriage had been dissolved within the year without a living child, by the death of the husband, the widow was entitled to be alimented out of an estate of which he died possessed, though there were no conventional provisions stipulated in favour of the wife.

22. Upon the dissolution of a marriage, after year and day, the surviving husband becomes the irrevocable proprietor of the tocher; and the wife, where she survives, is entitled to her jointure, or to her legal provision. She has also a right to mournings, suitable to the husband's rank, and to alimony from the day of his death, in term at which her life-rent provision commences. If no conventional, commenced, or created by the marriage, the same effect as if it had been made on the day of the husband's death. A day is adjudged *rem evidentiæ*, the year itself is running of any provision has the same effect.

The legal right of courtesy competent to the surviving husband is explained below; CHAP. SECT. IX. § 28.

23. DIVORCE is such a separation of married persons, during their lives, as looses them from the nuptial tie, and leaves them at freedom to termarry with others. But neither adultery, nor wilful desertion, are grounds which must necessarily dissolve marriage; they are only handles, wh the injured party may take hold of to be free. The cause of divorce upon adultery, marriage is, special statute, (1600. c. 20.) prohibited between the two adulterers.

24. Where either party has deserted from the other for four years together, that other may sue for adherence. If this has no effect, the church is to proceed, first by admonition, then by excommunication; all which previous steps are declared to be a sufficient ground for putting a divorce. *De praxi*, the commissaries pronounce sentence in the adherence, after a year's desertion; but four years must intervene between the first desertion and the decree of divorce.

25. The legal effects of divorce on the head of desertion are, that the offending husband shall forfeit the tocher, and forfeit to the wife all provisions, legal and conventional; and, on the other hand, the offending wife shall forfeit to her husband her tocher, and all the rights that would have belonged to her in the case of her survival. This was also esteemed the rule in divorces upon adultery. But by a decision of the court of session, in 1762, founded on a tract of ancient decisions recovered from the records, the offending husband was allowed to retain the tocher!

#### SECT. VI. Of MINORS, and their TUTOR CURATORS.

1. THE stages of life principally distinguished in law are, *pupilarity*, *puberty* or *minority*, and *majority*. A child is under pupilarity, from birth to 14 years of age if a male, and till 12 female. Minority begins where pupilarity and continues till majority; which, by the law of Scotland, is the age of 21 years complete in males and females: but minority, in a legal sense, includes all under age, whether *pupilarity* or *puberty*. Because pupils cannot in any degree govern themselves, and minors seldom with discretion, pupils are put by law under the power of tutors, and minors may put themselves under the protection of curators. Tutary is a power assigned to govern the person, and administer the estate of a pupil. Tutors are either *testamentary* or *dativæ*.

2. A tutor nominate is he who is appointed by the father, in his testament or other written instrument, to the care of his natural or adopted child. Such tutor is not obliged to give security for the faithful discharge of his office, unless his fidelity is presumed to have been defective, or known to be so by the father.

as it exceeds the measure of a rational settlement; neither are remuneratory grants revocable, where mutual grants are made in consideration of each other, except where an onerous cause is simulated. All voluntary contracts of separation, by which the wife is provided in an yearly alimony, are effectual as to the time past, but revocable either by the husband or wife.

19. As wives are in the strongest degree subject to the influence of their husbands, third parties, in whose favours they had made grants, were frequently vexed with actions of reduction, as if the grant had been extorted from the wife through the force or fear of the husband. To secure the grantees against this danger, ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her husband not present, that she was not induced to grant the deed *ex vi aut metu*. A wife's ratification is not absolutely necessary for securing the grantee: law indeed allows the wife to bring reduction of any deed she has not ratified, upon the head of force or fear; of which, if she bring sufficient evidence, the deed will be set aside; but if she fails in the proof, it will remain effectual to the receiver.

20. Marriage by the law of Scotland, cannot be dissolved till death, except by divorce, proceeding either upon the head of adultery, or of wilful desertion.

21. Marriage is dissolved by death, either *within* year and day from its being contracted, or *after* year and day. If it is dissolved within year and day, all rights granted in consideration of the marriage (unless guarded against in the contract) become void, and things return to the same condition in which they stood before the marriage; with this restriction, that the husband is considered as a *bona fide* possessor, in relation to what he has consumed upon the faith of his right; but he is liable to repay the tocher, without any deduction in consideration of his family expence during the marriage. If things cannot be restored on both sides, equity hinders the restoring of one party and not the other. In a case which was a few years ago, before the court of session, it was determined, after a long hearing in presence, that where a marriage had been dissolved within the year without a living child, by the death of the husband, the widow was entitled to be alimented out of an estate of which he died possessed, though there were no conventional provisions stipulated in favour of the wife.

22. Upon the dissolution of a marriage, after year and day, the surviving husband becomes the irrevocable proprietor of the tocher; and the wife where she survives, is entitled to her jointure, or to her legal provisions. She has also right to mournings, suitable to the husband's quality; and to alimony from the day of his death till the term at which her life-rent provision, either legal or conventional, commences. If a living child be procreated of the marriage, the marriage has the same effect as if it had subsisted beyond the year. A day is adjoined to the year, in *majorem evidentiam*, that it may clearly appear that the year itself is elapsed; and therefore, the running of any part of the day, after the year, has the same effect as if the whole were elapsed.

The legal right of courtesy competent to the surviving husband is explained below; CHAP. II. SECT. IX. § 28.

23. DIVORCE is such a separation of married persons, during their lives, as looses them from the nuptial tie, and leaves them at freedom to intermarry with others. But neither adultery, nor wilful desertion, are grounds which must necessarily dissolve marriage; they are only handles, which the injured party may take hold of to be free. In the case of divorce upon adultery, marriage is, by special statute, (1600. c. 20.) prohibited betwixt the two adulterers.

24. Where either party has deserted from the other for four years together, that other may sue for adherence. If this has no effect, the church is to proceed, first by admonition, then by excommunication; all which previous steps are declared to be a sufficient ground for pursuing a divorce. *De praxi*, the commissaries pronounce sentence in the adherence, after one year's desertion; but four years must intervene between the first desertion and the decree of divorce.

25. The legal effects of divorce on the head of desertion are, that the offending husband shall restore the tocher, and forfeit to the wife all her provisions, legal and conventional; and, on the other hand, the offending wife shall forfeit to the husband her tocher, and all the rights that would have belonged to her in the case of her survivance. This was also esteemed the rule in divorces upon adultery. But by a decision of the court of session, in 1762, founded on a tract of ancient decisions recovered from the records, the *offending husband* was allowed to retain the tocher!

#### SECT. VI. Of MINORS, and their TUTORS and CURATORS.

1. THE stages of life principally distinguished in law are, *pupillarity*, *puberty* or *minority*, and *majority*. A child is under pupillarity, from the birth to 14 years of age if a male, and till 12 if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of 21 years complete, both in males and females: but minority, in a large sense, includes all under age, whether pupils or *puberes*. Because pupils cannot in any degree act for themselves, and minors seldom with discretion, pupils are put by law under the power of tutors, and minors may put themselves under the direction of curators. Tutory is a power and faculty to govern the person, and administer the estate, of a pupil. Tutors are either *nominate*, of *law*, or *dativæ*.

2. A tutor nominate is he who is named by a father, in his testament or other writing, to a lawful child. Such tutor is not obliged to give caution for the faithful discharge of his office; because his fidelity is presumed to have been sufficiently known to the father.

3. If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwise, there is place for a *tutor of law*. This sort of tutory devolves upon the next agnate; by which we understand him who is nearest related by the father, though females intervene.

4. Where

4. Where there are two or more agnates equal in blood to the pupil, he who is entitled to the pupillar succession falls to be preferred to the others. But as the law suspects, that he may not be so careful to preserve a life which stands in the way of his own interest, this sort of tutor is added from the custody of the pupil's person; which is commonly committed to the mother, or a widow, until the pupil be 7 years old; and, in default of the mother, to the next cognate, or the highest relation by the mother. The tutor of law must (by act 1474) be at least 25 years of age. He is seized or declared by a jury of free men, who are called upon a brief issuing from the chancery, which is directed to any judge in any jurisdiction. He must give security before he enters upon the management.

5. If no tutor of law demands the office, any person, even a stranger, may apply for a tutory office. But because a tutor in law ought to be allowed a competent time to deliberate whether he will serve or not, no tutory dative can be given, till the expiring of a year from the time at which the tutor of law had first a right to serve. It is the king alone, as the father of his country, who gives tutore dative, by his court of exchequer; and by act 1672, no gift of tutory can pass in exchequer, without the citation or consent of the next of kin to the pupil, both by the father and mother, nor till the tutor give security, recorded in the books of exchequer. There is no room for a tutor of law, or tutor dative, while a tutor nominate can be hoped for; and tutors of law, or dative, even after they have begun to act, may be removed by the tutor nominate, as soon as he offers to accept, unless he has expressly renounced the office. If a pupil be without tutors of any kind, the court of session will, at the suit of any person, name a factor (steward) for the management of the pupil's estate.

6. After the years of pupillarity are over, the pupil is considered as capable of acting by himself, and he has confidence enough of his own capacity and prudence. The only two cases in which restraints are imposed upon minors are, 1. Where they are named by the father, in a state of health. 2. Where the father is himself alive; for a father may name, without any service, administrator, and, both tutor and curator of law, to his children, in relation to whatever estate may fall to them during their minority. This right in the father does not extend to grandchildren, nor to the issue of his immediate children as are foris-born. Neither has it place in subjects which have been by a stranger to the minor, exclusive of the father's administration. If the minor chooses to be under the direction of curators, he may fix such as he pleases.

7. These curators are styled *ad negotia*; to distinguish them from another sort called curators *in rem*, who are authorized by the judge to conduct a pupil or minor in actions of law, and where he is without tutors and curators, where his tutors and curators are parties to suits. Women are capable of being tutors and curators, under the following restrictions: 1. The office of a female tutor or curator falls by marriage, even though the nomination should

provide otherwise; for she is no longer *sui juris*, and of course incapable of having another under her power. 2. No woman can be tutor of law. Papists are (by act 1700) declared incapable of tutory or curatory.

8. In this, tutory differs from curatory, that, as pupils are incapable of consent, they have no person capable of acting; which defect the tutor supplies. Hence, the tutor subscribes alone all deeds of administration: but in curatory, it is the minor who subscribes as the proper party; the curator does no more than consent. Hence also, the persons of pupils are under the power either of their tutors or of their nearest cognates; but the minor, after pupillarity, has the disposal of his own person, and may reside where he pleases. In most other particulars, the nature, the powers, and the duties of the two offices coincide. Both tutors and curators must, previous to their administration, make a judicial inventory, subscribed by them and the next of kin, before the minor's judge ordinary, of his whole estate personal and real; of which, one subscribed duplicate is to be kept by the tutors or curators themselves; another, by the next of kin on the father's side; and a third by the next of kin on the mother's. If any estate belonging to the minor shall afterwards come to their knowledge, they must add it to the inventory within two months after their attaining possession thereof. Should they neglect this, the minor's debtors are not obliged to make payment to them: they may be removed from their offices as suspected; and they are intitled to no allowance for the sums disbursed by them in the minor's affairs, act 1672, except the expence laid out upon the minor's entertainment, upon his lands and houses, and upon completing his titles.

9. Tutors and curators cannot grant leases of the minor's lands, to endure longer than their own office; nor under the former rental, without either a warrant from the court of session, or some apparent necessity.

10. They have power to sell the minor's moveables; but cannot sell their pupil's land estate, without the authority of a judge; yet this restraint reaches not to such alienations as the pupil could by law be compelled to grant, e. g. to renunciations of wadsets upon redemption by the reverser; for in such case, the very tenor of his own right lays him under the obligation; nor to the renewal of charters to heirs; but the charter must contain no new right in favour of the heir. The alienation, however, of heritage by a minor, with consent of his curators, is valid.

11. Tutors and curators cannot, contrary to the nature of their trust, authorize the minor to do any deed for their own benefit; nor can they acquire any debt affecting the minor's estate; and, where a tutor or curator makes such acquisition, in his own name, for a less sum than the right is entitled to draw, the benefit thereof accrues to the minor. It seems, however, that such purchase would be considered as valid, provided it were *bona fide* acquired at a public sale; for in such case, the tutor or curator is in fact meliorating the situation of his ward by enhancing the value of his property by a fair competition. In general, it seems to be the genius and spirit of our law,

that

that tutors and curators shall do every thing in their power towards the faithful and proper discharge of their respective offices.

12. Persons named to the offices of tutory or curatory, may either accept or decline: and where a father, in *liege poullie* (when in a state of health), names certain persons both as tutors and curators to his children, though they have acted as tutors, they may decline the office of curatory. Tutors and curators having once accepted, are liable *in diligence*, that is, are accountable for the consequences of their neglect in any part of their duty from the time of their acceptance. They are accountable *singuli in solidum*, i. e. every one of them is answerable, not only for his own diligence, but for that of his co-tutors; and any one may be sued without citing the rest: but he who is condemned in the whole, has action of relief against his co-tutors.

13. From this obligation to diligence, are excepted, 1. Fathers or administrators in law, who, from the presumption that they act to the best of their power for their children, are liable only for actual intromissions. 2. Tutors and curators named by the father in consequence of the act 1696, with the special provisos, that they shall be liable barely for intromissions, not for omissions; and that each of them shall be liable only for himself, and not *in solidum* for the co-tutors: but this power of exemption from diligence is limited to the estate descending from the father himself. Tutors or curators are not entitled to any salary or allowance for pains, unless a salary has been expressly contained in the testator's nomination; for their office is presumed gratuitous.

14. Though no person is obliged to accept the office of tutor or curator, yet having once accepted, he cannot throw it up, or renounce it, without sufficient cause; but, if he should be guilty of misapplying the minor's money, or fail in any other part of his duty, he may be removed at the suit of the minor's next in kin, or by a co-tutor or co-curator. Where the misconduct proceeds merely from indolence or inattention, the court, in place of removing the tutor, either join a curator with him, or, if he be a tutor nominate, they oblige him to give caution for his past and future management.

15. The offices of tutory and curatory expire also by the pupil's attaining the age of puberty, or the minor's attaining the age of 21 years complete; and by the death either of the minor, or of his tutor and curator. Curatory also expires by the marriage of a female minor, who becomes thereby under the coverture of her own husband. After expiry of the office, reciprocal actions lie at the instance both of the tutors and curators, and of the minor. That at the instance of the minor is called *actio tutelæ directæ*, by which he can compel the tutors to account; that at the instance of the tutors, *actio tutelæ contrariæ*, by which the minor can be compelled to repeat what has been profitably expended during the administration: but this last does not lie till after accounting to the minor; for till then the tutors are presumed *intus habere*, to have effects in their own hands for answering their disbursements.

16. Deeds done by pupils, or by minors having

curators, without their consent, are they oblige the granters, in as far as sums profitably applied to their use. under curators can indeed make a testament; but whatever is executed in a deed *inter vivos*, requires the curator: Deeds by a minor who has no curators, are as if he had had curators, and without their consent; he may even alienate without the interposition of a judge.

17. Minors may be restored again granted in their minority, that are void, or themselves void, no remedy of restitution; but where they are granted by a tutor in his pupil's at a minor who has no curators, as these sit in law, restitution is necessary: and a minor, having curators, executes a deed to himself with their consent, he has no action against the curators, but he has of restitution against the deed itself, cannot be restored, if he does not raise a summons for reducing the deed *minorennitatis et lesionis*, before he be old. These 4 years, between the age 25, called *quadriennium utile*, are indu minor, that he may have reasonable that period, when he is first presumed perfect use of his reason, to consider what deeds done in his minority have prejudicial to him.

18. Questions of restitution are pro court of session. Two things must be the minor, in order to reduce the deed he was minor when it was signed; 2. hurt or lesed by the deed. This lesio proceed merely from accident; for that of restitution was not intended to exer from the common misfortunes of life; owing to the imprudence or negligence nor, or his curator.

19. A minor cannot be restored again delict or fraud; e. g. 1. If he should to bargain with him by saying he was Restitution is excluded, if the minor, after majority, has approved of the deed by a formal ratification, or tacitly by interest, or by other acts inferring agreement. 3. A minor, who has taken himself to a merchant, shopkeeper, &c. cannot against any deed granted by him in that business, especially if he was *prox rennitati* at signing the deed. 4. Ac the more common opinion, a minor restored in a question against a minor, a gross unfairness shall be qualified in the

20. The privilege of restitution does die with the minor himself. 1. If a minor to a minor, the time allowed for restitution by the minority of the heir, not cestor. 2. If a minor succeeds to a minor was not full 25, the privilege continues heir during his minority; but he cannot self of the *anni utiles*, except in so far as unexpired at the ancestor's death. 3. succeeds to a minor, he has only the *qu utile* after the minor's death; and if he to a major dying within the *quadriennium*

of it can be profitable to him than what remained when the ancestor died.

21. No minor can be compelled to state himself as a defender, in any action, whereby his heritable estate flowing from ascendants may be evicted from him, by one pretending a preferable right.

22. This privilege is intended merely to save minors from the necessity of disputing upon questions of preference. It does not therefore take place, 1. Where the action is pursued on the father's falsehood or delict. 2. Upon his obligation to convey heritage. 3. On his liquid bond for a sum of money. 4. Nor in actions pursued by the minor's superior, upon feudal casualties. 5. This privilege cannot be pleaded in bar of an action which had been first brought against the father; nor where the father was not in the peaceable possession of the heritable subject at his death. The persons of pupils are by act 1696 protected from imprisonment on civil debts.

23. Curators are given, not only to minors, but in general to every one, who, either through defect of judgment, or unsuitness of disposition, is incapable of rightly managing his own affairs. Of the first sort, are idiots and furious persons. Idiots, or *sanis*, are entirely deprived of the faculty of reason. The distemper of the furious person does not consist in the defect of reason; but in an over-heated imagination, which obstructs the application of reason to the purposes of life. Curators may be also granted to lunatics; and even to persons dumb and deaf, though they are of sound judgment, where it appears that they cannot exert it in the management of business. The regular way of appointing this sort of curators, is by a jury summoned upon a brief from the chancery; directed to the judge of the special territory where the person alleged to be fatuous or furious resides; that he may have an opportunity to oppose it: and for this reason, he ought to be made a party to the brief. The curatory of idiots and furious persons belongs to the nearest agnate; but a father is preferred to the curatory of his fatuous son, and the husband to that of his fatuous wife, before the agnate.

24. A clause is inserted in the brief, for inquiring how long the fatuous or furious person has been in that condition; for all deeds granted after the period at which it appeared by the proof that the fatuity or furiosity began, are void. Fatuous and furious persons are, by their very state, incapable of being obliged; therefore all deeds done by them may be declared void, upon proper evidence of the fatuity at the time of signing, though they should never have been cognosed idiots by an inquest.

25. We have some few instances of the sovereign's giving curators to idiots, where the next estate did not claim; but such gifts are truly detestable from our law, since they pass without any injury into the state of the person upon whom the curatory is imposed.

26. Persons, let them be ever so profuse, or liable to be imposed upon, if they have the exercise of reason, can effectually oblige themselves, till they are interdicted by law. This may be done by *Interdiction*, which is a legal restraint laid upon such persons from bearing any deed to their own prejudice, without the consent of their curators or interdictors.

27. Voluntary interdiction, though it be imposed by the sole act of the person interdicted, cannot be recalled at his pleasure: but it may be taken off, 1. By a sentence of the court of session, declaring, either that there was, from the beginning, no sufficient ground for the restraint; or that the party is, since the date of the bond, become *rei sui providus*. 2. It falls, even without the authority of the lords, by the joint act of the person interdicted, and his interdictors, concurring to take it off. 3. Where the bond of interdiction requires a certain number as a quorum, the restraint ceases, if the interdictors shall by death be reduced to a lesser number.

28. Judicial interdiction is imposed by a sentence of the court of session. It commonly proceeds on an action brought by a near kinsman to the party; and sometimes from the *nobile officium* of the court, when they perceive, during the pendency of a suit, that any of the litigants is, from the facility of his temper, subject to imposition. This sort must be taken off by the authority of the same court that imposed it.

29. An interdiction need not be served against the person interdicted; but it must be executed, or published by a messenger, at the market cross of the jurisdiction where he resides, by publicly reading the interdiction there, after three oyessees made for convocating the liegee. A copy of this execution must be affixed to the cross; and thereafter, the interdiction, with its execution, must (by act 1581) be registered in the books both of the jurisdiction where the person interdicted resides and where his lands lie, or (by act 1600) in the general register of the session, within 40 days from the publication.

30. An interdiction, duly registered, has this effect, that all deeds done thereafter, by the person interdicted, without the consent of his interdictors, affecting his heritable estate, are subject to reduction. Registration in the general register secures all his lands from alienation, wherever they lie; but where the interdiction is recorded in the register of a particular shire, it covers no lands except those situated in that shire.

31. No deed, granted with consent of the interdictors, is reducible, though the strongest lesion or prejudice to the grantor should appear: the only remedy competent, in such case, is an action by the grantor against his interdictors, for making up to him what he has lost through their undue consent.

32. The law concerning the state of children falls next to be explained. Children are either born in wedlock, or out of it. All children, born in lawful marriage are presumed to be begotten by the person to whom the mother is married; and consequently to be lawful children. This presumption is so strongly founded, that it cannot be defeated but by direct evidence that the mother's husband could not be the father of the child, e.g. where he is impotent, or was absent from the wife till within six lunar months of the birth. The canonists indeed maintain, that the concurring testimony of the husband and wife, that the child was not procreated by the husband, is sufficient to slide this legal presumption for legitimacy: but it is an agreed point, that no regard is to be paid

to such testimony, if it be made after they have owned the child to be theirs. A father has the absolute right of disposing of his childrens persons, of directing their education, and of moderate chastisement; and even after they become *puberes*, he may compel them to live in family with him, and to contribute their labour and industry, while they continue there, towards his service. A child who gets a separate stock from the father for carrying on any trade or employment, even though he should continue in the father's house, may be said to be emancipated or foris-familiated, in so far as concerns that stock; for the profits arising from it are his own. Foris-filiation, when taken in this sense, is also inferred by the child's marriage, or by his living in a separate house, with his father's permission or good-will. Children, after their full age of 21 years, become, according to the general opinion, their own masters; and from that period are bound to the father only by the natural ties of duty, affection, and gratitude. The mutual obligations between parents and children to maintain each other, are explained in *CHAP. II. Sect. XIII. § 4.*

33. Children born out of wedlock, are styled natural children, or bastards. Bastards may be legitimated or made lawful. 1. By the subsequent intermarriage of the mother of the child with the father: and this legitimation entitles the child to all the rights of lawful children. The subsequent marriage, which produces legitimation, is considered by the law to have been entered into when the child legitimated was begotten; and hence, if he be a male, he excludes, by his right of primogeniture, the sons procreated after the marriage, from the succession of the father's heritage, though these sons were lawful children from the birth. Hence, also, those children only can be thus legitimated, who are begotten of a woman whom the father might at that period have lawfully married. 2. Bastards are legitimated by letters of legitimation from the sovereign. See *CHAP. II. Sect. XXII. § 3.*

34. As to the power of masters over their servants; all servants now enjoy the same rights and privileges with other subjects, unless in so far as they are tied down by their engagements of service. Servants are either necessary or voluntary. Necessary are those whom law obliges to work without wages, of whom immediately. Voluntary servants engage without compulsion, either for mere subsistence, or for wages also. Those who earn their bread in this way, if they should refuse to engage may be compelled to it by the justices of the peace, who have power to fix the rate of their wages.

35. Colliers, coal-bearers, filters, and other persons necessary to collieries and salt works, as they are particularly described by act 1661, were formerly tied down to perpetual service at the works to which they had once entered. Upon a sale of the works, the right of their service was transferred to the new proprietor. All persons were prohibited to receive them into their service, without a testimonial from their last master; and if they deserted to another work, and were redeemed within a year thereafter, he who had received them was obliged to return them, within 24 hours,

under a penalty. But though the proprietor neglected to require the deserter within the year did not, by that short prescription, lose his property in him. Colliers, &c. where the colliery which they were restricted was either given or not sufficient for their maintenance, might fully engage with others; but if the former should be again set a-going, the proprietor might reclaim them back to it.

36. But by 15 Geo. III. cap. 28 these remain the only remaining vestiges of *slavery* in that of Scotland, were abrogated; and, after the 1st July 1775, all colliers, coal-bearers, and salters declared to be upon the same footing with servants or labourers. The act subjects those who were bound prior to the 1st July 1775, to a certain number of years service for their freedom according to the age of the person.

37. Indigent children may be compelled to any of the king's subjects without wages, till the age of 30 years. Vagrants and sturdy beggars may be also compelled to serve any manufacturer, because few persons are willing to receive into their service, public work houses are ordered to be built for setting them to work. Poor who cannot work, must be maintained in the parishes in which they were born; and if the place of their nativity is not known, that parish falls upon the parishes where they have their most common resort for the three years immediately preceding their being apprehended; their applying for the public charity. When contributions collected at the churches, to which they belong, are not sufficient for their maintenance, they are to receive badges from the parson and kirk-cessor, in virtue of which they may ask alms at the dwelling houses of the inhabitants of the parish.

## CHAP. II.

### OF THINGS.

THE things, or subjects, to which persons have a right, are the second object of law.

SECT. I. *Of the DIVISION of RIGHTS, and the SEVERAL WAYS by which a RIGHT may be ACQUIRED.*

1. THE right of enjoying and disposing of a thing at one's pleasure, is called PROPERTY. Proprietors are restrained by law from using their property emulously to their neighbour's prejudice on this principle of justice of every kind reprobated by law. In particular, such as the air, render the neighbourhood unwholesome, or, in short, to use the words of Lord BACON, "render the enjoyment of life and property uncomfortable." Every state or society has a power over private property, called, by lawyers, *dominium eminentis*, in virtue of which a proprietor may be compelled to sell his property for an adequate price, where an evident utility to the public demands it.

2. Certain things are by nature incapable of appropriation; as the air, the light, the ocean, none of which can be brought under the power of any one person, though their use be common to all. Others are by law exempted from pro-

commerce, in respect of the uses to which they are destined. Of this last kind are 1. *Res publicæ*, as navigable rivers, highways, bridges, &c.: the right of which is vested in the king, chiefly for the benefit of his people, whence they are called *regalia*. 2. *Res universitatis*, things which belong in property to a particular corporation or society, and whose use is common to every individual in it; but both property and use are subject to the regulations of the society; as town houses, corporation halls, market places, church yards, &c. The lands or other revenue belonging to a corporation do not fall under this class, but are *juris privati*, *quoad* the corporation.

3. Property may be acquired, either by *occupation* or *accession*; and transferred by *tradition* or *prescription*: but prescription being also a way of *losing* property, falls to be explained under a separate title. OCCUPATION, or OCCUPANCY, is the appropriating of things which have no owner, by apprehending them, or seizing their possession. This was the original method of acquiring property: and continued, under certain restrictions, the doctrine of the Roman law, *Quid nullius est, sit arpentis*: but it can have no room in the feudal plan, by which the king is looked on as the original proprietor of all the lands within his dominions.

4. Even in that sort of moveable goods which are presumed to have once had an owner, this rule obtains by the law of Scotland, *Quod nullius est, sit domini regis*. Thus, the right of treasure hid under ground is not acquired by occupation but accrues to the king. Thus also, where one finds strayed cattle or other moveables, which have been lost by the former owner, the finder acquires no right in them, but must give public notice thereof; and if, within a year and day after such notice, the proprietor does not claim his goods, they fall to the king, sheriff, or other person to whom the king has made a grant of such escheats.

5. In that sort of moveables which never had an owner, as wild beasts, fowls, fishes, or pearls found on the shore, the original law takes place, that he who first apprehends, becomes proprietor; in so much, that though the right of hunting, fowling, and fishing, be restrained by statute, under certain penalties, yet all game, even what is caught in contravention of the law, becomes the property of the catcher (unless where the confiscation thereof is made part of the penalty), the contravener, being obnoxious, however, to the penal enactment of the statutes in consequence of his transgression. It was not for a long time a fixed point whether a person, though possessed of the raised rest by law entitling him to kill GAME, could hunt upon another person's grounds without consent: but it was lately found by the court of session, and affirmed upon appeal, that he could not; it being repugnant to the idea of property, that any person, however qualified, should have it in his power to traverse and hunt upon another's grounds without consent of the proprietor. Although certain things become the property of the first occupant, yet there are others which fall not under this rule. Thus whales thrown in, or killed on our coasts, belong neither to those who find them, nor to the proprietor of the grounds on

which they are cast; but to the king, providing they are so large as that they cannot be drawn by a wane with six oxen.

6. ACCESSION is that way of acquiring property, by which, in two things which have a connection with or dependence on one another, the property of the principal thing draws after it the property of its accessory. Thus a house belongs to the owner of the ground on which it stands, tho' built with materials belonging to and at the charge of another; trees taking root in our ground, tho' planted by another, become ours. Thus also, the insensible addition made to one's ground by what a river washes from other grounds (which is called *alluvio*), accrues to the master of the ground which receives the addition. The Romans excepted from this rule the case of paintings drawn on another man's board or canvas, in consideration of the excellency of the art; which exception our practice has for a like reason extended to similar cases.

7. Under accession is comprehended SPECIFICATION; by which is meant, a person's making a new species or subject, from materials belonging to another.

8. Though the new species should be produced from the COMMIXTION or confusion of different substances belonging to different proprietors, the same rule holds; but where the mixture is made by the common consent of the owner, such consent makes the whole a common property, according to the shares that each proprietor had formerly in the several subjects.

9. Property is carried from one to another by TRANSMISSION; which is the delivery of possession by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requisite, in order to the transmitting of property in this way: 1. The intention or consent of the former owner to transfer it on some proper title of alienation, as sale, exchange, gift, &c. 2. The actual delivery in pursuance of that intention. The first is called the *causa*, the other the *modus transferendi domini*: which last is so necessary to the acquiring of property, that he who gets the last right, with the first tradition, is preferred, according to the rule, *Traditionibus, non nudis pactis, transferuntur rerum dominia*.

10. Tradition is either real, where the *ipsa corpora* of moveables are put into the hands of the receiver; or symbolical, which is used where the thing is incapable of real delivery, or even when actual delivery is only inconvenient. Where the possession or custody of the subject has been before, with him to whom the property is to be transferred, there is no room for tradition.

11. POSSESSION, which is essential both to the acquisition and enjoyment of property, is defined, the detention of a thing, with a design, or *animus* in the detainer, of holding it as his own. It cannot be acquired by the sole act of the mind, without real detention; but, being once acquired, it may be continued *solo animo*. Possession is either natural, or civil. Natural possession is, when one possesses by himself: thus, we possess lands by cultivating them and reaping their fruits, houses by inhabiting them, moveables by detaining them in our hands. Civil possession is, when hold-

ing the thing, either by the sole act of the mind, or by the hands of another who holds it in our name: thus the owner of a thing lent, possesses it by the borrower; the proprietor of lands, by his tacksmen, trustee, or steward, &c. The same subject cannot be possessed entirely, or *in solidum*, by two different persons at one and the same time; and therefore possession by an act of the mind ceases, as soon as the natural possession is so taken up by another, that the former possessor is not suffered to re-enter. Yet two persons may, in the judgment of law, possess the same subject, at the same time, on different rights: thus, in the case of a pledge, the creditor possesses it in his own name, in virtue of the right of impignoration; while the proprietor is considered as possessing, in and through the creditor, in so far as is necessary for supporting his right of property. The same doctrine holds in liferenters, tacksmen, and, generally, in every case where there are rights affecting a subject distinct from the property.

12. A *bona fide* possessor is he who, though he is not really proprietor of the subject, yet believes himself proprietor on probable grounds. A *mala fide* possessor is he who knows, or is presumed to know, that what he possesses is the property of another. A possessor *bona fide* acquired right, by the Roman law, to the fruits of the subject possessed, that had been reaped and consumed by himself, while he believed the subjects his own. By our customs, perception alone, without consumption, secures the possessor: nay, if he has sown the ground, while his *bona fides* continued, he is entitled to reap the crop, *propter curam et culturam*. But this doctrine does not reach to civil fruits, e. g. the interest of money, which the *bona fide* receiver must restore, together with the principal, to the owner.

13. *Bona fides* necessarily ceaseth by the *confessio rei alium* in the possessor, whether such consciousness should proceed from legal interpellation, or private knowledge. *Mala fides* is sometimes induced by the true owner's bringing his action against the possessor, sometimes not till litigation, and, in cases uncommonly favourable, not till sentence be pronounced against the possessor.

14. The property of moveable subjects is presumed by the bare act of possession, until the contrary be proved; but possession of an immoveable subject, though for 100 years together, if there is no seisin, does not create even a presumptive right to it: *nulla seisin, nulla terra*. Such subject is considered as caducuary, and so accrues to the sovereign. Where the property of a subject is contested, the lawful possessor is entitled to continue his possession, till the point of right be discussed; and, if he has lost it by force or stealth, the judge will, upon summary application, immediately restore it to him.

15. Where a possessor has several rights in his portion, affecting the subject possessed, the general rule is, that he may ascribe his possession to which of them he pleases; but one cannot ascribe his possession to a title other than that on which it commenced, in prejudice of him from whom his title flowed.

## SECT. II. Of HERITABLE and MOVEABLE RIGHTS.

1. FOR the better understanding the doctrine of this title, it must be known, that by the law of Scotland, and indeed of most nations of Europe, since the introduction of feus, wherever there are two or more in the same degree of consanguinity to one who dies intestate, and who are not all females, such rights belonging to the deceased as are either properly feudal, or have any resemblance to feudal rights, descend wholly to one of them, who is considered as his proper heir; the others, who have the name of next of kin or executors, must be contented with that portion of the estate which is of a more perishable nature. Hence has arisen the division of rights to be explained under this title: the subjects descending to the heir, are styled *heritable*; and those that fall to the next of kin *moveable*.

2. All rights of, or affecting lands, under which are comprehended houses, mills, fishings, teinds; and all rights of subjects that are *fundo annexa*, whether completed by seisin or not, are heritable *ex sua natura*. On the other hand, every thing that moves itself or can be moved, and in general whatever is not united to land, is moveable: as household-furniture, corns, cattle, cash, arrears of rent and of interest, even though they should be due on a right of annual rent: for though the arrears last mentioned are secured on land, yet being presently payable, they are considered as cash.

3. Debts, (*nomina debitorum*), when due by bill, promissory note, or account, are moveable. When constituted by bond, they do not all fall under any one head; but are divided into heritable and moveable, by the following rules. All debts constituted by bond bearing an obligation to interest the creditor in any heritable subject in security of the principal sum and annual rent, or annual rent only, are heritable; for they not only carry a yearly profit, but are secured upon land.

4. Bonds merely personal, though bearing a clause of interest, are, by act 1661, declared to be moveable as to succession; i. e. they go, not to the heir, but to the next of kin or executors: but they are heritable with respect to the sick, and to the rights of husband and wife; that is, though, by the general rule, moveable rights fall under the communion of goods consequent upon marriage, and the moveables of denounced persons fall to the crown or sick by single descent, yet such bonds do neither, but are heritable in both respects.

5. Bonds taken payable to heirs and assignees, including executors, are heritable in all respects, from the destination of the creditor. But a bond which is made payable to heirs, without mention of executors, descends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor; for the word *heir*, which is a generic term, points out him who is to succeed by law in the right; and the executor, being the heir *in mobilibus*, is considered as the person to whom such bond is taken payable. But where a bond is taken to heirs male, or to a series of heirs, one after another, such bond is heritable, because its destination necessarily excludes executors.

6. Subjects

6. Subjects originally moveable become heritable. 1. By the proprietor's destination. Thus, a jewel, or any other moveable subject, may be provided to the heir, from the right competent to every proprietor to settle his property on whom he pleases. 2. Moveable rights may become heritable, by the supervening of an heritable security: Thus, a sum due by a personal bond becomes heritable, by the creditor's accepting an heritable right for securing it, or by adjudging upon it.

7. Heritable rights do not become moveable by accessory moveable securities; the heritable right being in such case the *jus nobilius*, which draws the other after it.

8. Certain subjects partake, in different respects, of the nature both of heritable and moveable. Personal bonds are, by the above cited act 1661, moveable in respect of succession; but heritable as to the first, and the rights of husband and wife. All bonds, whether merely personal, or even heritable, on which no seisin has followed, may be affected at the suit of creditors, either by adjudication, which is a diligence proper to heritage; or by arrestment, which is peculiar to moveables. Bonds securing executors, though they descend to the creditor's heir, are payable by the debtor's executors, without relief against the heir; since the debtor's succession cannot be affected by the destination of the creditor.

9. All questions, whether a right be heritable or moveable, must be determined according to the condition of the subject at the time of the ancestor's death. If it was heritable at that period, it must belong to the heir; if moveable, it must fall to the executor, without regard to any alterations that may have affected the subject in the intermediate period between the ancestor's death and the competition.

### I. HERITABLE RIGHTS.

#### SECT. III. Of the CONSTITUTION of HERITABLE RIGHTS by CHARTER and SEISIN.

1. HERITABLE rights are governed by the feudal law, which owed its origin, or at least its first improvements, to the Longobards; whose kings, upon having penetrated into Italy, the better to preserve their conquests, made grants to their principal commanders of great part of the conquered provinces, to be again subdivided by them among the lower officers, under the conditions of fidelity and military service.

2. The feudal constitutions and usages were first reduced into writing about the year 1150. by two lawyers of Milan, under the title of *Consuetudines Feudorum*. None of the German emperors appear to have expressly confirmed this collection by their authority; but it is generally agreed, that it had their tacit observation, and was considered as the customary feudal law of all the countries subject to the empire. No other country has ever acknowledged these books for their law; but each state has formed to itself such a system of feudal rules, as best agreed with the genius of its own constitution. In feudal questions, therefore, we are governed, in the first place, by our own statutes and customs; where these fail us, we have regard to the practice of neighbouring countries, if the ge-

nus of the law appears to be the same with ours; and should the question still remain doubtful, we may have recourse to those written books of the feus, as to the original plan on which all feudal systems have proceeded.

3. This military grant got the name, first of *beneficium*, and afterwards of *feudum*; and was defined a gratuitous right to the property of lands, made under the conditions of fealty and military service, to be performed to the granter by the receiver; the radical right of the lands still remaining in the granter. Under lands, in this definition, are comprehended all rights or subjects so connected with land, that they are deemed a part thereof, as houses, mills, fishings, jurisdictions, patronages, &c. though feus in their original nature were gratuitous, they soon became the subject of commerce; services of a civil or religious kind were frequently substituted in place of military; and now, of a long time, services of every kind have been entirely dispensed with in certain feudal tenures. He who makes this grant is called *superior*, and he who receives it the *vassal*. The subject of the grant is commonly called the *feu*; though that word is at other times, in our law, used to signify one particular tenure. (See SECT. IV. § 2.) The interest retained by the superior in the feu is styled *dominium directum*, or the superiority; and the interest acquired by the vassal, *dominium utile*, or the property. The word *fee* is promiscuously applied to both.

4. Allodial goods are opposed to feus; by which are understood goods enjoyed by the owner, independent of a superior. All moveable goods are allodial; lands only are so when they are given without the condition of fealty or homage. By the feudal system, the sovereign, who is the fountain of feudal rights, reserves to himself the superiority of all the lands of which he makes the grant; so that, with us, no lands are allodial, except those of the king's own property, the superiorities which the king reserves in the property lands of his subjects, and manes and glebes, the right of which is completed by the presbytery's designation, without any feudal grant.

5. Every person who is in the right of an immoveable subject, provided he has the free administration of his estate, and is not debarred by statute, or by the nature of his right, may dispose of it to another. Nay, a vassal, though he has only the *dominium utile*, can subvert his property to a subvassal by a subaltern right, and thereby raise a new *dominium directum* in himself, subordinate to that which is in his superior; and so on *in infinitum*. The vassal who thus subfeus is called the subvassal's immediate superior, and the vassal's superior is the subvassal's mediate superior.

6. All persons, who are not disabled by law, may acquire and enjoy feudal rights. Papists cannot purchase a land estate by any voluntary deed. Aliens, who owe allegiance to a foreign prince, cannot hold a feudal right without naturalization; and therefore, where such privilege was intended to be given to favoured nations or persons, statutes of naturalization were necessary, either general or special; or at least, letters of naturalization by the sovereign.

7. Every heritable subject, capable of commerce,

may be granted in feu. From this general rule are excepted, 1. The annexed property of the crown, which is not alienable without a previous dissolution in parliament. 2. Tailized lands, which are devised under condition that they shall not be aliened. 3. An estate *in hereditate jacente* cannot be effectually aliened by the heir-apparent that is not entered; but such alienation becomes effectual upon his entry, the supervening right accruing in that case to the purchaser; which is a rule applicable to the alienation of all subjects not belonging to the vendor at the time of the sale.

8. The feudal right, or, as it is called, *investiture*, is constituted by charter and feisin. By the charter, we understand that writing which contains the grant of the feudal subject to the vassal, whether it be executed in the proper form of a charter or of a disposition. Charters by subject superiors are granted, either, 1. *A me de superiore meo*, when they are to be holden, not of the grantor himself, but of his superior. This sort is called a *public holding*, because vassals were in ancient times publicly received in the superior's court before the *pares curie* or co-vassals. Or, 2. *De me*, where the lands are to be holden of the grantor. These were called sometimes *base rights*, from *bas*, *lower*; and sometimes *private*, because, before the establishment of our records, they were easily concealed from third parties; the nature of all which will be more fully explained, in SECT. VII. An original charter is that by which the fee is first granted: a charter by progress is a renewed disposition of that fee to the heir or assignee of the vassal. All doubtful clauses in charters by progress ought to be construed agreeably to the original grant; and all clauses in the original charter are understood to be implied in the charters by progress, if there be no express alteration.

9. A *SEISIN* is the instrument or attestation of a notary, that possession was actually given the superior or his baillie, to the vassal or his attorney; which is considered as so necessary a solemnity, as not to be suppliable, either by a proof of natural possession, or even of the special fact that the vassal was duly entered to the possession by the superior's baillie.

10. The symbols by which the delivery of possession is expressed, are for lands, earth, and stone; for rights of annual rent payable forth of land, it is also earth and stone with the addition of a penny money; for parsonage teinds; a sheaf of corn; for jurisdictions the book of the court; for patronages, a psalm book, and the keys of the church; for fishings, net and coble; for mills, clap and napper, &c. The feisin must be taken upon the ground of the lands, except where there is a special dispensation in the charter from the crown.

11. All feisins must be registered within 60 days after their date, either in the general register of feisins at Edinburgh, or in the register of the particular shire appointed by the act 1617; which, it must be observed, is not, in every case, the shire within which the lands lie. Burgage feisins are ordained to be registered in the books of the borough.

12. Unregistered feisins are ineffectual against third parties, but they are valid against the granters and their heirs. Feisins regularly recorded, are

preferable, not according to their own dates, but the dates of their registration.

13. Feisin necessarily supposes a superior by whom it is given; the right therefore which the sovereign, who acknowledges no superior, has over the whole lands of Scotland, is constituted *jure coronæ* without feisin. In several parcels of land that lie contiguous to one another, one feisin serves for all, unless the right of the several parcels be either holden of different superiors, or derived from different authors, or enjoyed by different tenures under the same superior. In discontinuous lands, a separate feisin must be taken on every parcel, unless the sovereign has united them into one tenantry by a charter of union; in which case, if there is no special place expressed, a feisin taken on any part of the united lands will serve for the whole, even though they be situated in different shires. The only effect of union is, to give the discontinuous lands the same quality as if they had been contiguous or naturally united; union, therefore, does not take off the necessity of separate feisins, in lands holden by different tenures, or the rights of which flow from different superiors, these being incapable of natural union.

14. The privilege of barony carries a higher right than union does, and consequently includes union in it as the lesser degree. This right of barony can neither be given, nor transmitted, unless by the crown; but the quality of simple union, being once conferred on lands by the sovereign, may be communicated by the vassal to a subvassal. Though part of the lands united or erected into a barony be sold by the vassal to be holden *a me*, the whole union is not thereby dissolved: what remains unsold retains the quality.

15. A charter, not perfected by feisin, is a right merely personal, which does not transfer the property (see CHAP. II, SECT. XIII, § 1.); and a feisin of itself bears no real faith without its warrant: It is the charter and feisin joined together that constitutes the feudal right, and secures the receiver against the effect of all posterior feisins, even though the charters on which they proceed should be prior to his.

16. No quality, which is designed as a lien or real burden on a feudal right, can be effectual against singular successors, if it be not inserted in the investiture. If the creditors in the burden are not particularly mentioned, the burden is not real; for no perpetual unknown incumbrance can be created upon lands. Where the right itself is granted with the burden therein mentioned, or where it is declared void if the sum be not paid against a day certain, the burden is real; but where the receiver is simply obliged by his acceptance to make payment, the clause is effectual only against him and his heirs.

#### SECT. IV. Of the SEVERAL KINDS of HOLDING.

1. FEUDAL subjects are chiefly distinguished by their different manners of holding, which were either *ward*, *blanch*, *f. u.*, or *burgage*. *Ward-holding*, (which is now abolished by 20 Geo. II. c. 50.) was that which was granted for military service. Its proper *reddendo* was, *services*, or *services nisi and wont*; by which last was meant the performance of service whenever the superior's occasions require it.

. As all feudal rights were originally as tenure, ward-holding was *in dubio* Hence, though the *reddendo* had con- a special service or yearly duty, the is presumed ward, if another holding ricularly expressed. holding is that whereby the vassal is old to pay to the superior a yearly rent r grain, and sometimes also in services r farm, as ploughing, reaping, carriage- rior's use, &c. *nomine feudi firme*. This ure was introduced for the encourage- giculture, the improvement of which rably obstructed by the vassal's obliga- ary service. It appears to have been own in Scotland as far back as *leges*

holding is that whereby the vassal to the superior an customary yearly duty; money, a robe, a pair of gilt spurs, &c. acknowledgment of the superiority, *no- firme*. This duty, where it is a thing growth, if it be not demanded withm cannot be exacted thereafter; and where *si pretatur tantum* are subjoined to the they imply a release to the vassal, what- quity of the duty may be, if it is not an the year.

holding is that, by which boroughs id of the sovereign the lands which are d in their charters of erection. This, in on of *Craig*, does not constitute a separ- , but is a species of ward holding; with erty, that the vassal is not a private per- community: and indeed, watching and , which is the usual service contained in e of such charters, might be properly id, some centuries ago, to have been of ay kind. As the royal borough is the sfil, all burgh holders hold immediate- crown: the magistrates, therefore, when ve the resignation of the particular bur- ad give it to them, act, not as superi- a- the king's bailies specially authorized

the subjects, granted to churches, monas- other societies for religious or charitable ad to be mortified, or granted *ad manum* ; either because all casualties must necessa- to the superior, where the vassal is a cor- which never dies; or because the property subjects is granted to a dead hand, which aser it to another. In lands mortified or Popery to the church, whether grant- ates for the behoof of the church, or *in mof, nam*; the only services prestable by s were prayers, and singing of masses for f the deceased, which approaches nearer holding than ward. The purposes of s having been, upon the reformation, superstitious, the lands mortified were a the crown: but mortifications to uni- hospitals, &c. were not affected by that u; and lands may, at this day, be mor- nly lawful purpose, either by blanch or iding. But as the superior must lose all res of superiority in the case of mortifi- churches, universities, &c. which being

considered as a corporation, never dies; therefore lands cannot be mortified without the superior's consent. *Craig, lib. 1. dig. 11. § 21.*

SECT. V. Of the CASUALTIES due to the SUPERIOR.

1. THE right of the superior continues unim- paired, notwithstanding the feudal grant, unless in so far as the *dominium utile*, or property, is con- veyed to his vassal. The superiority carries a right to the services and annual duties contained in the *reddendo* of the vassal's charter. The duty payable by the vassal is a *debitum feudi, i. e.* it is recover- able, not only by a personal action against himself, but by a real action against the lands.

2. Besides the constant fixed rights of superiori- ty, there are others, which, because they depend upon uncertain events, are called *casualties*.

3. The casualties proper to a ward holding, while that tenure subsisted, were *ward, recognition, and marriage*, which it is now unnecessary to explain, as by the late statutes 20 and 25 Geo. II. for abolish- ing ward holdings, the tenure of the lands held ward of the crown or prince is turned into *blanch*, for payment of one penny Scots yearly, *si pretatur tantum*; and the tenure of those holden of subjects into *feu*, for payment of such yearly feu-duty in money, victual, or cattle, in place of all services: as should be fixed by the court of session. And accordingly that court, by act of sederunt, Feb. 3, 1749, laid down rules for ascertaining the ex- tent of these feu duties. A full history of their casualties, and of the effects consequent upon their falling to the superior, will be found in *Erskin's large Institute*, B. 2. T. 5. § 5. *et sequent.*

4. The only casualty, or rather forfeiture, pro- per to feu holding, is the loss or tinsel of the feu right, by the neglect of payment of the feu duty for two full years. Yet where there is no conven- tional irritancy in the feu right, the vassal is al- lowed to purge the legal irritancy at the bar; that is, he may prevent the forfeiture, by making pay- ment before sentence: but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unless where he can give a good reason for the delay of payment.

5. The casualties common to all holdings are, *non-entry, relief, life rent extinct, disclamation, and purpresture*. NON-ENTRY is that casualty which arises to the superior out of the rents of the feudal subject, through the heir's neglecting to renew the investiture after his ancestor's death. The superior is entitled to this casualty, not only where the heir has not obtained himself invest, but where his tutor or infirmament is set aside upon nullities. The heir, from the death of the ancestor, till he be cited by the superior in a process of general declarator or non-entry, loses only the retoured duties of his lands, (see § 6.) and he forfeited these, though his delay should not argue any contempt of the supe- rior, because the casualty is considered to fall, as a condition implied in the feudal right and not as a penalty of transgression: but reasonable excuses are now admitted to liberate even from the retoured duties before citation.

6. For understanding the nature of retoured du- ties, it must be known, that there was anciently a general valuation of all the lands in Scotland, de- signed both for regulating the proportion of pub- lic

lic subsidies, and for ascertaining the quantity of non-entry and relief duties payable to the superior; which appears, by a contract between king Robert I. and his subjects in 1327, preserved in the Advocates' Library, to have been settled at least as far back as the reign of Alexander III. This valuation became in the course of time, by the improvement of agriculture, and perhaps also by the heightening of the nominal value of our money, from the reign of Robert I. down to that of James III. much too low a standard for the superior's casualties: wherefore, in all services of heirs, the inquest came at last to take proof likewise of the present value of the lands contained in the brief (*quantum nunc valent*), in order to fix these casualties. The first was called the *old*, and the other *new*, *extent*. Though both extents were ordained to be specified in all retours made to the chancery upon briefs of inquest; yet by the appellation of retoured duties in a question concerning casualties, the new extent is always understood. The old extent continued the rule for levying public subsidies, till a tax was imposed by new proportions, by several acts made during the usurpation. By two acts of Cromwell's parliament, held at Westminster in 1656, imposing taxations on Scotland, the rates laid upon the several counties are precisely fixed. The subsidy granted by the act of convention 1667 was levied on the several counties, nearly in the same proportions that were fixed by the usurper in 1656; and the sums to which each county was subjected were subdivided among the individual landholders in that county, according to the valuations already settled, or that should be settled by the commissioners appointed to carry that act into execution. The rent fixed by these valuations is commonly called the *valued rent*; according to which the land tax, and most of the other public burdens, have been levied since that time.

7. In feu holdings, the feu-duty is returned as the rent, because the feu-duty is presumed to be, and truly was at first, the rent. The superior therefore of a feu-holding gets no non-entry, before citation in the general declarator; for he would have been entitled to the yearly feu-duty, though the fee had been full, *i. e.* though there had been a vassal insert in the lands. The superior of teinds gets the fifth part of the retoured duty as non-entry, because the law considers teinds to be worth a fifth part of the rent. In rights of annual rent which are holden of the grantor, the annual renter becomes his debtor's vassal; and the annual rent contained in the right is retoured to the blanch or other duty contained in the right before declarator.

8. It is because the retoured duty is the presumed rent, that the non-entry is governed by it. If therefore no retour of the lands in non-entry can be produced, nor any evidence brought of the retoured duty, the superior is intitled to the real, or at least to the valued, rent, even before citation. In lands formerly holden ward of the King, the heir, in place of the retoured duties, is subjected only to the annual payment of one per cent, of the valued rent.

9. The heir, after he is cited by the superior in the action of general declarator, is subjected to

the full rents till his entry, because his neglect is excusable after citation. The decree of declarator, proceeding on this action, entitles the superior to the possession, and gives him right to rents downward from the citation. As this of non-entry is properly penal, our law has ways restricted it to the retoured duties, if heir had a probable excuse for not entering.

10. Non-entry does not obtain in burgage holdings, because the incorporation of inhabitants in the whole incorporated subjects of the King; there can be no non-entry due in lands granted to communities, because there the vassal dies. This covers the right of particulars in non-entry: for if non-entry be excluded with respect to the whole, it cannot be obtained with respect to any part. It is also excluded, as to a third of lands, by the terce, during the widow's life; as to the whole of them, by the courtesy during the life of the husband. But it is not excluded by a precept of feisin granted to the heir till it be taken thereupon.

11. RELIEF is that casualty which entitles superior to an acknowledgment or consideration from the heir for receiving him as vassal. called *relief*, because, by the entry of the heir, the fee is relieved out of the hands of the superior; is not due in feu-holdings flowing from subject, unless where it is expressed in the charter special clause for doubling the feu-duty at the entry of an heir; but, in feu-rights holden of crown, it is due, though there should be no clause in the charter. The superior can recover this casualty, either by a pointing of the ground as a *debitum fundi*, or by a personal action against the heir. In blanch and feu holdings, where casualty is expressly stipulated, a year's blanch or feu duty is due in name of *relief*, besides current year's duty payable in name of *blanch feu farm*.

12. ESCHEAT (from *eschewer*, to fall) is that forfeiture which falls through a person's being denounced rebel. It is either *single* or *lifrent*.

13. Persons cited to the court of judicary be also denounced rebels, either for appearing there with too great a number of attendants; if they fail to appear, they are declared fugiti from the law.

14. SINGLE ESCHEAT falls, without denunciation, upon sentence of death pronounced in criminal trial; and, by special statute, upon being convicted of certain crimes, though not capital; as perjury, bigamy, deforcement, breach of arrestment, and usury. By the late act concerning ward-holdings, the casualties both of *single* and *lifrent* escheat are discharged, when proceeding upon denunciation for civil debts; but still continue, when they arise from criminal cases. All moveables belonging to the rebel at the time of his rebellion, (whether proceeding upon denunciation, or sentence in a criminal trial), all that shall be afterwards acquired by him till relaxation, fall under *single* escheat.

15. Bonds bearing interest, because they continue heritable *quoad fructum*, fall not under *single*, such fruits of heritable subjects as became due after the term next ensuing the rebellion, these being reserved for the *lifrent* escheat.

ing never retains the right of escheat but makes it over to a donatory, whose effected, till, upon an action of generator, it be declared that the rebel's fallen to the crown by his denunciation at the right of it is now transferred to the gift in his favour. Every creditor the rebel, whose debt was contracted lion, and who has used diligence beator, is preferable to the donatory. heat cannot be affected by any debt nor by any voluntary deed of the rebellion.

rebel, if he continues unrelaxed for lay after rebellion, is construed to be : and therefore, where he holds any t, his superiors, as being without a entitled, each of them, to the rents of lands belonging to the rebel as hold of ring all the days of the rebel's natural casualty of LIFERENT ESCHEAT; ex: the denunciation proceeds upon trea- per rebellion, in which case the liferent : king.

s that estate only, to which the rebel- er right of liferent in his own person, nder his liferent escheat.

ough neither the superior nor his dona- nter into possession in consequence of ity, till decree of declarator; yet that eing truly declaratory, has a retrospect, not so properly confer a new right, as ie right formerly constituted to the su- y the civil death of his vassal. Hence, rs or heritable bonds, though granted e rebellion, and all adjudications, though e debts contracted before that period, are g against the liferent escheat, unless seisin eon thereon within year and day after the rebellion.

re, as in single escheat, no debt contrac- rebellion can hurt the donatory, nor any ight granted after that period, though y or satisfaction of prior debts.

ACLAMATION is that casualty whereby a fens his whole feu to his superior, if he r disclaims him, without ground, as to of it.

RESTITUTION draws likewise a forfeiture ole feu after it; and is incurred by the roaching upon any part of his superior's , or attempting by building, inclosing, wile to make it his own. In both these linquencies, the least colour of excuse vail.

grant, from the crown, whether char- of casualties, or others, proceed on sig- which pass the signet. When the king re- Scotland, all signatures were superscribed but, on the accession of James VI. to the f England, a cachet or seal was made, he king's name engraved on it, in pursu- an act of the privy-council, April 4, 1603, ich all signatures were to be afterwards hat the lords of exchequer were empower- if and these powers are transferred to t of exchequer, which was established in after the union of the two kingdoms in

1707. Grants of higher consequence, as remissions of crimes, gifts proceeding upon forfeiture, and charters of *novo damus*, must have the king's sign manual for their warrant.

24. If lands holding of the crown were to be conveyed, the charter passed, before the union of the kingdoms in 1707, by the great seal of Scot- land; and now by a seal substituted in place of it. Grants of church dignities, during episcopacy, passed also by the great seal; and the commissions to all the principal officers of the crown, as Jus- tice-Clerk, King's Advocate, Solicitor, &c. do so at this day. All rights which subjects may trans- mit by simple assignation, the king transmits by the privy-seal: as gifts of moveables, or of casual- ties that require no seisin. The quarter seal, o- therwise called the *testimonial of the great seal*, is appended to gifts of tutory, commissions of brieves issuing from the chancery, and letters of pre- sentation to lands holding of a subject, proceeding upon forfeiture, bastardy, or *ultimus heres*.

25. Seals are to royal grants what subscription is to rights derived from subjects, and give them authority; they serve also as a check to gifts pro- cured (*subreptione vel obreptione*) by concealing the truth, or expressing a falsehood; for, where this appears, the gift may be stopped before pas- sing the seals, though the signature should have been signed by the king. All rights passing un- der the great or privy seal must be registered in the registers of the great or privy seal *respective*, before appending the seal.

#### SECT. VI. Of the RIGHT which the VASSAL ac- quires by GETTING the FEU.

1. UNDER the *dominium utile*, which the vassal ac- quires by the feudal right, is comprehended the property of whatever is considered as part of the lands, whether of houses, woods, inclosures, &c. above ground; or of coal, limestone, minerals, &c. under ground. Mills have, by the generality of our lawyers, been deemed a separate tene- ment, and so not carried by a charter or disposi- tion, without either a special clause conveying mills, or the creation of the lands into a barony. Yet it is certain, that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour, without mentioning it, although the lands are not erected into a barony. If the lands disposed be affricted, or thirled to another mill, the purchaser is not allowed to build a new corn mill on his property, even though he should offer security that it shall not hurt the thirle; which is introduced for preventing daily tempta- tions to fraud.

2. Proprietors are prohibited to hold dove- cotes, unless their yearly rent, lying within two miles thereof, extend to ten chalders of victual. A purchaser of lands, with a dove-cote, is not obliged to pull it down, though he should not be qualified to build one; but, if it becomes ruinous he cannot rebuild it. The right of brewing, though not expressed in the grant, is implied in the nature of property; as are also the rights of fishing, fowling, and hunting, in so far as they are not restrained by statute.

3. There are certain rights naturally consequent on property, which are deemed to be preserved by

by the crown as *regalia*; unless they be specially conveyed. Gold and silver mines are of this sort; the first universally; and the other, where three half-pennies of silver can be extracted from the pound of lead, by act 1424. Three half-pennies at that time were equal to about two shillings five pennies of our present Scots money. These were by our ancient law annexed to the crown; but they are now dissolved from it; and every proprietor is entitled to a grant of the mines within his own lands, with the burden of delivering to the crown a tenth of what shall be brought up.

4. Salmon fishing is likewise a right understood to be reserved by the crown, if it be not expressly granted: but 40 years possession thereof, where the lands are either erected into a barony, or granted with the general clause of fishings, establishes the full right of the salmon fishing in the vassal. A charter of lands, within which any of the king's forests lie, does not carry the property of such forest to the vassal.

5. All the subjects which were by the Roman law accounted *res publicæ*, as rivers, highways, ports, &c. are, since the introduction of feus, held to be *inter regalia*, or *in patrimonium principis*; and hence encroachment upon a highway is said to infer purpresture. No person has the right of a free port without a special grant, which implies a power in the grantee to levy anchorage and shore dues, and obligation upon him to uphold the port in good condition. In this class of things, our forefathers reckoned *FORTALICES*, or small places of strength, originally built for the defence of the country, either against foreign invasions or civil commotions; but these now pass with the lands in every charter.

6. The vassal acquires right by his grant, not only to the lands specially contained in the charter, but to those that have been possessed 40 years as pertinent thereof. But, 1. If the lands in the grant are marked out by the special limits, the vassal is circumscribed by the tenor of his own right, which excludes every subject without these limits from being pertinent of the lands. 2. A right possessed under an express investment is preferable, *ceteris paribus*, to one possessed only as pertinent. 3. Where neither party is invest *per expressum*, the mutual promiscuous possession by both, of a subject as pertinent, resolves into a community of the subject possessed: but if one of the parties has exercised all the acts of property of which the subject was capable, while the possession of the other was confined to pasturage only, or to casting seal and divot, the first is to be deemed sole proprietor, and the other to have merely a right of servitude.

7. As *BARONY* is a *nomen universitatis*, and unites the several parts contained in it into one individual right, the general conveyance of a barony carries with it all the different tenements of which it consists, tho' they should not be specially enumerated; and this holds, even without erection into barony, in lands that have been united under a special name. Hence, likewise, the possession by the vassal of the smallest part of the barony lands preserves to him the right of the whole.

8. The vassal is entitled, in consequence of his

property, to levy the rents of his own to recover them from his tenants by a rent before his own court; and from all seisors and intruders, by an action of duties before the sheriff. He can a from his lands, tenants who have no he can grant tacks or leases to others. is a contract of location, whereby the or any other immoveable subject, is let fee or tackman for a certain yearly i in money, the fruits of the ground, c It ought to be reduced into writing, right concerning lands; tacks, therefo given verbally, to endure for a term of good against neither party for more tha An obligation to grant a tack is as effe the grantor as a formal tack. A lifi ving a temporary property in the fruits, tacks to endure for the term of his own

9. The tackman's right is limited to which spring up annually from the sub: ther naturally, or by his own industry therefore entitled to any of the growin bove ground, and far less to the min clay, &c. under ground, the use of w fumes the substance. Tacks are, like tracts, personal rights in their own n. consequently ineffectual against singula in the lands; but, for the encouragem culture, they were, by act 1449, decl tual to the tackman for the full time c durance, into whose hands soever the l come.

10. To give a written tack the ben statute, it must mention the special tae able to the proprietor, which, though be not clusory, secures the tackman; : be followed by possession, which it want of a seisin. If a tack does not a term of entry, the entry will comme next term after its date, agreeable to *Quod pure debetur, presenti die debetur.* not mention the *ib, i. e.* the term at v to determine, it is good for one year if the intention of parties, to continue than one year, should appear from an the tack. (*e. g.* if the tackman should to certain annual prestations,) it is fu two years as the *minimum*. Tacks: perpetuity, or with an indefinite ill, be benefit of the statute. Tacks of hou borough do not fall within this act, it tonary to let these from year to year.

11. Tacks necessarily imply a *d. l. 9.* choice by the fetter of a proper person rant. Hence the conveyance of a tack not granted to assignees, is ineffectual a landlord's consent. A right of tack, th heritable, falls under the *ius quasi*, bee not be separated from the labouring out plements of tillage, which are moveab This implied condition of assignees is limited to voluntary, and does not ext cessary, assignments; as adjudication of the tackman's creditor: but a tack, ex cluding assignees, cannot be carried e indication. It was not a fixed point: ture, whether a tenant could sublet wi

set of the landlord; but the court of session, in a case which occurred a few years ago, denied the power of subletting in the tenant, where the lease was for 19 years. Liferent tacks; because they import a higher degree of right in the tackman than tacks for a definite term, may be assigned, unless assignees be specially excluded.

12. If neither the fetter nor tackman shall properly discover their intention to have the tack dissolved at the term fixed for its expiration, they are understood, or presumed, to have entered into a new tack upon the same terms with the former, which is called *tacit relocation*; and continues till the landlord warns the tenant to remove, or the tenant renounces his tack to the landlord: this obtains also in the case of moveable tenants, who possess from year to year without written tacks. In judicial tacks, however, by the court of session, tacit relocation neither does nor can take place; for cautioners being interposed to them, they are looked at the end of the tack: and therefore, where judicial tackmen possess after expiry of their right, they are accountable as factors.

13. In tacks of land, the fetter is commonly bound to put all the houses and office-houses, necessary for the farm, in good condition at the tenant's entry; and the tenant must keep them and leave them so at his removal. But, in tacks of houses, the fetter must not only deliver to the tenant the subject set, in tenantable repair at his entry, but uphold it in that repair during the whole years of the tack, unless it is otherwise covenanted between the parties.

14. If the inclemency of the weather, inundation, or calamity of war, should have brought upon the crop an extraordinary damage (*plus quam tolerabile*), the landlord had, by the Roman law, no claim for any part of the tack-duty: if the damage was more moderate, he might exact the full rent. It is nowhere defined, what degree of sterility or devastation makes a loss *plus quam tolerabile*; though the scope of our law seems to be, that no relief is afforded, unless where a total loss arises from the Act of God, or the King's Enemies. Tenants are not obliged to pay any public burdens to which they are not expressly bound by the tack, except tolls and services.

15. Tacks may be evacuated during their currency; 1. In the same manner as feu-rights by the tackman's running in arrear of his tack-duty for two years together. This irritancy may be prevented by the tenant's making payment at the bar before sentence. 2. Where the tenant either runs in arrear of one year's rent, or leaves his farm uncultivated at the usual season; in which case he may, by act of sederunt 1756, be ordained to give security for the arrears, and for the rent of the following crops, if the tack shall subsist so long; otherwise, to remove, as if the tack were at an end. 3. Tacks may be evacuated at any time by the mutual consent of parties.

16. The landlord, when he intends to remove a tenant whose tack is expiring, or who possesses without a tack must, upon a precept signed by himself, warn the tenant 40 days preceding the term of Whitsunday, or at immediately preceding the fest, personally, or at his dwelling-house, to remove at that term, with his family and effects. The precept must be also executed on the ground

of the lands, and thereafter read in the parish church where the lands lie, after the morning service, and affixed to the next patent door thereof. Whitsunday, though it be a moveable feast, is, in questions of removing, fixed to the 15th of May. In warnings from tenements within borough, it is sufficient that the tenant be warned 40 days before the ish of the tack, whether it be Whitsunday or Martinmas; and in these the ceremony of chalking the door is sustained as warning when proceeding upon a verbal order from the proprietor. It may perhaps be doubtful how far this obtains as a general rule, because the mode of warning ought to depend on the practice of each particular borough, and any warning made agreeably to this practice must be legal.

17. This process of warning was precisely necessary for founding an action of removing against tenant, till the act of sederunt 1756, which leaves it in the option of the proprietor, either to use the former method, or to bring his action of removing before the judge ordinary; which, if it be called 40 days before the said term of Whitsunday, shall be held as equal to a warning. Where the tenant is bound, by an express clause of his tack, to remove at the ish without warning, such obligation is, by the said act, declared to be a sufficient warrant for letters of horning, upon which, if the landlord charge his tenant forty days before the said Whitsunday, the judge is authorized to eject him within six days after the term of removing expressed in the tack.

18. Actions of removing might, even before this act of sederunt, have been pursued without any previous warning; 1. Against vicious possessors, i. e. persons who had seized the possession by force, or who without any legal title, had intruded into it, after the last possessor had given it up. 2. Against possessors who had a naked tolerance. 3. Against tenants who had run in arrear of rent, during the currency of their tacks. 4. Against such as had sold their lands, and continued to possess after the term of the purchaser's entry. Upon the same ground, warning was not required, in removings against possessors of liveried lands, after the death of the liverier who died in the natural possession: but if he possessed by tenants, his tenants could not be disturbed in their possessions till the next Whitsunday, that they might have time to look out for other farms; but they might be compelled to remove at that term, by an action of removing, without warning.

19. A landlord's title in a removing, let it be ever so lame, cannot be brought under question by a tenant whose tack flows immediately from him; but, if he is to insist against tenants not his own, his right must be perfected by investment, unless it be such as requires no investment, as trees, &c.

20. The defender, in a removing, must (by act 1755), before offering any defence which is not instantly waived, give security to pay to the fetter the *violent profits*, if they should be awarded against him. These are so called, because the law considers the tenant's possession after the warning, as violent. They are estimated, in tenements within borough, to double the rent; and in lands, to the highest profits the pursuer could have made of them either by a tenant or by himself. The nature of the security required by the said act

of parliament is, to pay all damages, which the warner, or others having interest, may sustain.

21. If the action of removing shall be passed from, or if the landlord shall, after using warning, accept of rent from the tenant, for any term subsequent to that of the removal, he is presumed to have changed his mind, and tacit relocation takes place. All actions of removing against the principal or original tackman, and decrees thereupon, if the order be used, which is set forth *supra*, (Sec. § 17.) are, by the act of federunt 1756, declared to be effectual against the assignees to the tack or subtenants.

22. The landlord has, in security of his tack duty, over and above the tenant's personal obligation, a tacit pledge or hypothec, not only on the fruits, but on the cattle pasturing on the ground. The corn, and other fruits, are hypothecated for the rent of that year whereof they are the crop; for which they remain affected, though the landlord should not use his rights for years together. In virtue of this hypothec, the landlord is entitled to a preference over any creditor, though he has actually used a pouding; except in the special case, that pouding is executed after the term of payment, when the landlord can appropriate the crop for his payment, the pouding in such case being obliged to leave as much on the ground as to satisfy the landlord's hypothec. This right however cannot compete with an extent issued for a debt due to the crown.

23. The whole cattle on the ground, considered as a quantity, are hypothecated for a year's rent, one after another successively. The landlord may apply this hypothec for payment of the past year's rent, at any time within three months from the last conventional term of payment, after which it ceases for that year. As the tenant may increase the subject of this hypothec, by purchasing oxen, sheep, &c. so he can impair it, by selling part of his stock; but if the landlord suspects the tenant's management, he may, by sequestration or pouding, make his right, which was before general upon the whole stock, special upon every individual. A superior has also a hypothec for his feu-duty, of the same kind with that just explained.

24. In tacks of houses, breweries, shops, and other tenements, which have no natural fruits, the furniture and other goods brought into the subject set are hypothecated to the landlord for one year's rent. But the tenant may by sale impair his hypothec, as he might that of cattle in rural tenements; and indeed, in the particular case of a shop, the tenant rents it for no other purpose than as a place of sale.

#### SECT. VII. *Of the TRANSMISSION of RIGHTS, by CONFIRMATION and RESIGNATION.*

1. A VASSAL may transmit his feu either to universal successors, as heirs; or to singular successors, *i. e.* those who acquire by gift, purchase, or other singular title. This last sort of transmission is either voluntary, by disposition; or necessary, by adjudication.

2. By the first feudal rules, no superior could be compelled to receive any vassal in the lands, other than this heir expressed in the investiture; for the

superior alone had the power of ascertaining what order of heirs the feu granted by himself to descend. But the right of refusal in the superior did not take place, 1. In the case of creditors or adjudgers, whom superiors were obliged to receive upon payment of a year's (1469, c. 37. 1672, c. 19.): 2. In the case of chasers of bankrupt estates, who were put on the same footing with adjudgers by act 1690, c. 1. The crown refuses no voluntary disponent, on paying a composition to the exchequer of a part of the valued rent. Now, by 20 Geo. superiors are directed to enter all singular successors (except incorporations) who shall have from the vassal a disposition, containing protest of resignation; they always receiving the or casualties that law entitles them to, on a valuation, *i. e.* a year's rent. It was long matter of doubt how this composition due to the superior upon the entry of singular successors should be regulated. The matter at last received a solemn decision; finding, That the superior is entitled, the entry of singular successors, in all cases where such entries are not taxed, to a year's rent of the subject, whether lands or houses, as the same set, or may be set at the time; deducting the duty and all public burdens, and likewise all annual burdens imposed on the lands by consent of the superior, with all reasonable annual repair of houses and other perishable subjects.

3. Base rights, *i. e.* dispositions to be held by the disponent, are transmissions only of the property, the superiority remaining as formerly. This kind of right might, before establishing registers, have been kept quite concealed from the granter and receiver, a public right being preferable to it, unless clothed with possession; but as this distinction was no longer necessary after the establishment of the records, all transmissions are declared preferable, according to the dates of their several registrations; without respect to the former distinction of base and public, or being clothed and not clothed with possession.

4. Public rights, *i. e.* dispositions to be held by the granter's superior, may be perfected either by confirmation or resignation; and therefore generally contain both precept of seisin and precept of resignation. When the receiver is to complete his right in the first way, he takes seisin upon the precept: but such seisin is inefficacious without the superior's confirmation, for the disponent cannot be deemed a vassal till the superior receive him as such, or confirm the holding. By usual style in the transmission of lands, the disposition contains an obligation and precept of investment, both *a me* and *de me*, in the option of the disponent; upon which, if seisin is taken indefinitely, it is construed in favour of the disponent to be a confirmation, because a public right is null without confirmation: but if the receiver shall afterwards obtain the superior's confirmation, it is construed as if it had been from the beginning a public right.

5. Where two several public rights of the superior in the subject are confirmed by the superior, their preference is governed by the dates of the confirmations, not of the investments confirmed; because it is the confirmation which completes a public right.

6. Though a public right becomes, by the

person's confirmation, valid from its date; yet if any impediment intervene betwixt that period and the confirmation, to hinder the two from being conjoined, *e. g.* if the grantor of a public right should afterwards grant a base right to another, upon which seisin is taken before the superior's confirmation of the first, the confirmation will have effect only from its own date; and consequently the base right first completed will carry the property of the lands preferable to the public one.

1. RESIGNATION is that form of law, by which a vassal surrenders his feu to his superior; and it is either *ad perpetuam remanentiam*, or *in favorem*. In resignation *ad remanentiam*, where the feu is resigned, to the effect that it may remain with the superior, the superior, who before had the superiority, acquires, by the resignation, the property also of the lands resigned; and his interest in the lands still subsisted, notwithstanding the right by which he had given his vassal the property; therefore, upon the vassal's resignation, the superior's right of property revives, and is consolidated with the superiority, without the necessity of a new attainment; but the instrument of resignation must be recorded.

2. Resignations *in favorem* are made, not with an intention that the property resigned should remain with the superior, but that it should be again given by him, in favour either of the resigner himself, or of a third party; consequently the feu remains in the resigner, till the person in whose favour resignation is made gets his right from the superior perfected by seisin. And because resignations *in favorem* are but incomplete personal deeds, our law has made no provision for recording them. Hence, the first seisin on a second resignation is preferable to the last seisin upon the first resignation; but the superior, accepting a second resignation, whereupon a prior seisin may be taken in prejudice of the first resignatory, is liable in damages.

3. By our former decisions, one who was vested with a personal right of lands, *i. e.* a right not completed by seisin, effectually divested himself by disposing it to another; after which no right remained in the disposer, which could be carried by a second disposition, because a personal right is no more than a *jus obligationis*, which may be transferred by any deed sufficiently expressing the will of the grantor. But this doctrine, at the same time that it rendered the security of the records extremely uncertain, was not truly applicable to such rights as required seisin to complete them; and therefore it now obtains, that the grantor even of a personal right of lands is not so divested by conveying the right to one person, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the dispositions, but on the priority of the seisins following upon them.

SECT. VIII. OF REDEEMABLE RIGHTS.

1. A heritage right is said to be redeemable, when it contains a right of reversion, or return, in favour of the person from whom the right flows. Reversions are either legal, which arise from the law itself, as in adjudications, which law declares to be redeemable within a certain time after their

date; or conventional, which are constituted by the agreement of parties, as in wadsets, rights of annual rent, and rights in security. A WADSET (from *wad* a pledge) is a right, by which lands, or other heritable subjects, are impignorated by the proprietor to his creditor in security of his debt; and, like other heritable rights, is perfected by seisin. The debtor, who grants the wadset, and has the right of reversion, is called the *reverser*; and the creditor, receiver of the wadset, is called the *wadsetter*.

2. WADSETS, by the present practice, are commonly made out in the form of mutual contracts, in which one party sells the land, and the other grants the right of reversion. When the right of reversion is thus incorporated in the body of the wadset, it is effectual without registration; but where the right of reversion is granted in a separate writing, it is ineffectual against the singular successor of the wadsetter, unless it be registered in the register of seisins within 60 days after the date of the seisin upon the wadset.

3. Rights of reversion are generally esteemed *stricti juris*; yet they go to heirs, though heirs should not be mentioned, unless there be some clause in the right, discovering the intention of parties, that the reversion should be personal to the reverser himself. In like manner, though the right should not express a power to redeem from the wadsetter's heir, as well as from himself, redemption will be competent against the heir. All our lawyers have affirmed, that reversions cannot be assigned, unless they are taken to assignees; but from the favour of legal diligence, they may be adjudged.

4. Reversions commonly leave the reverser at liberty to redeem the lands *quandocunque*, without restriction in point of time; but a clause is adjoined to some reversions, that if the debt be not paid against a determinate day, the right of reversion shall be irrevocable, and the lands shall become the irredeemable property of the wadsetter. Nevertheless, the irritancy being penal, as in wadsets, where the sum lent falls always short of the value of the lands, the right of redemption is by indulgence continued to the reverser, even after the term has expired, while the irritancy is not declared. But the reverser, if he does not take the benefit of this indulgence within 40 years after the lapse of the term is cut out of it by prescription.

5. If the reverser would redeem his lands, he must use an order of redemption against the wadsetter: the first step of which is premonition (or notice given under form of instrument) to the wadsetter, to appear at the time and place appointed by the reverser, then and there to receive payment of his debt, and thereupon to renounce his right of wadset. In the voluntary redemption of a right of wadset holden base, a renunciation duly registered re-establishes the reverser in the full right of the lands. Where the wadset was granted to be holden of the grantor's superior, the superior must receive the reverser on payment of a year's rent, if he produce a disposition from the wadsetter, containing procuratory of resignation. If, at executing the wadset, the superior has granted letters of reverses, *i. e.* an obligation again to enter the reverser upon redemption of the lands, he will be obliged to receive him without payment of the

year's rent. But letters of regrefs will not have this effect against singular successors in the superiority, if they are not registered in the register of reversions. All wadsets that remain personal rights, are extinguished by simple charges, though they should not be recorded.

6. If the wadsetter either does not appear at the time and place appointed, or refuses the redemption money, the reverser must consign it under form of instrument, in the hands of the person appointed in the right of reversion; or, if no person be named, in the hands of the clerk to the bills, a clerk of the session, or any responsible person. An instrument of consignment, with the consignatory's receipt of the money consigned, completes the order of redemption, stops the farther currency of interest against the reverser, and founds him in an action for declaring the order to be formal, and the lands to be redeemed in consequence of it.

7. After decree of declarator is obtained, by which the lands are declared to return to the debtor, the consigned money, which comes in place of the lands, becomes the wadsetter's, who therefore can charge the consignatory upon letters of horning to deliver it up to him; but, because the reverser may, at any time before decree, pass from his order, as one may do from any other step of diligence, the consigned sums continue to belong to the reverser, and the wadsetter's interest in the wadset continues heritable till that period.

8. If the wadsetter chooses to have his money rather than the lands, he must require from the reverser, under form of instrument, the sums due by the wadset, in terms of the right. The wadset sums continue heritable, notwithstanding requisition, which may be passed from by the wadsetter even after the reverser has consigned the redemption money in consequence thereof.

9. Wadsets are either proper or improper. A proper wadset is that whereby it is agreed, that the use of the land shall go for the use of the money; so that the wadsetter takes his hazard of the rents, and enjoys them without accounting, in satisfaction, or *in solutum* of his interest.

10. In an improper wadset, the reverser, if the rent should fall short of the interest, is taken bound to make up the deficiency: if it amounts to more, the wadsetter is obliged to impute the excess towards extinction of the capital: and, as soon as the whole sums, principal and interest, are extinguished by the wadsetter's possession, he may be compelled to renounce and divest himself in favour of the reverser.

11. If the wadsetter be entitled by his right to enjoy the rents without accounting, and if at the same time the reverser be subjected to the hazard of their deficiency, such contract is justly declared usurious: and also in all proper wadsets wherein any unreasonable advantage has been taken of the debtor, the wadsetter must (by act 1661) during the not requisition of the sum lent, either quit his possession to the debtor, upon his giving security to pay the interest, or subject himself to account for the surplus rents, as in improper wadsets.

12. Infeftments of annual rent are also redeemable rights. A right of annual rent does not carry the property of the lands; but it creates a real *nexus* or burden upon the property, for payment

of the interest or annual rent contained in the right; and consequently the bygone interests due upon it are *debita fundi*. The annual renter may therefore either insist in a real action for obtaining letters of pouding the ground, or sue the tenant in a personal action towards the payment of his past interest: and in a competition for those rents, the annual renter's preference will not depend on his having used a pouding of the ground for his right was completed by the seisin; the power of pouding the ground, arising from that antecedent right, is *mere facultatis*, and need not be exercised, if payment can be otherwise got. As it is only the interest of the sum lent which is a burden upon the lands, the annual renter, if he wants his principal sum, cannot recover it either by pouding or by a personal action against the debtor's tenants; but must demand it from the debtor himself on his personal obligation in the bond, either by requisition, or by a charge of letters of horning, according as the right is drawn.

13. Rights of annual rent, being servitudes upon the property, and consequently consistent with the right of property in the debtor may be extinguished without resignation.

14. Infeftments in security are another kind of redeemable rights (now frequently used in place of rights of annual rent), by which the receiver are infeft in the lands themselves, and not simply in an annual rent forth of them, for security of the principal sums, interest, and penalty, contained in the rights. If an infeftment in security be granted to a creditor, he may thereupon enter into the immediate possession of the lands or annual rent for his payment. They are extinguished as rights of annual rent.

15. All rights of annual rent, rights in security, and generally whatever constitutes a real burden on the fee, may be the ground of an adjudication, which is preferable to all adjudications, or other diligences, intervening between the date of the right and of the adjudication deduced on it; not only for the principal sum contained in the rights but also for the whole past interest contained in the adjudication. This preference arises from the nature of real debts, or *debita fundi*: but in order to obtain it for the interest of the interest accumulated in the adjudication, such adjudication must proceed on a process of pouding the ground.

#### SECT. IX. Of SERVITUDES.

1. **SERVITUDE** is a burden affecting lands, or other heritable subjects, whereby the proprietor is either restrained from the full use of what is his own, or is obliged to suffer another to do some thing upon it. Servitudes are either *natural*, *legal* or *conventional*. *Nature* itself may be said to constitute a servitude upon inferior tenements, where by they must receive the water that falls from those that stand on higher ground. *Legal* servitudes are established by statute or custom, from considerations of public policy; among which may be numbered the restraints laid upon the proprietors of tenements within the city of Edinburgh. There is as great a variety of *conventional* servitudes, as there are ways by which the exercise of property may be restrained by paction in favour of another.

#### 2. *Conventional*

1. *Conventional servitudes* are constituted, either by grant, where the will of the party burdened is expressed in writing: or by prescription, where his consent is presumed from his acquiescence in the burden for 40 years. A servitude constituted by writing, or grant, is not effectual against the grantor's singular successors, unless the grantee has been in the use or exercise of his right: but they are valid against the grantor and his heirs, even without use. In servitudes that may be acquired by prescription, 40 years exercise of the right is sufficient, without any title in writing, other than a charter and seisin of the lands to which the servitude is claimed to be due.

2. Servitudes constituted by grant are not effectual, in a question with the superior of the tenement burdened with the servitude, unless his consent be adhibited; for a superior cannot be hurt by his vassal's deed: but where the servitude is acquired by prescription, the consent of the superior, whose right afforded him a good title to interrupt, is implied. A servitude by grant, though followed only by a partial possession, must be governed, as to its extent, by the tenor of the grant; but a servitude by prescription is limited by the measure or degree of the use had by him who prescribes: agreeably to the maxim, *Tantum praescriptum, quantum possessum*.

3. Servitudes are either *predial* or *personal*. *Predial* servitudes are burdens imposed upon one tenement, in favour of another tenement. That to which the servitude is due is called the *dominant*, and that which owes it is called the *servient tenement*. No person can have right to a predial servitude, if he is not proprietor of some dominant tenement that may have benefit by it; for that right is annexed to a tenement, and so cannot pass from one person to another, unless some tenement goes along with it.

4. *Predial* servitudes are divided into *rural* servitudes, or of lands; and *urban* servitudes, or of houses. The rural servitudes of the Romans were *iter, actus, via, aqueductus, aqueductus, and jus pascendi pecoris*. Similar servitudes may be constituted with us, of a foot road, horse road, cart road, dams, and aqueducts, watering of cattle, and pasturage. The right of a high-way is not a servitude constituted in favour of a particular tenement, but is a right common to all travellers. The care of high-ways, bridges, and ferries, is committed to the sheriffs, justices of peace, and commissioners of supply in each shire.

5. Common pasturage, or the right of feeding one's cattle upon the property of another, is sometimes constituted by a general clause of pasturage in a charter or disposition, without mentioning the lands burdened; in which case, the right comprehends whatever had been formerly appropriated to the lands disposed out of the grantor's own property, and likewise all pasturage due to them out of other lands. When a right of pasturage is given to several neighbouring proprietors, on a major or common belonging to the grantor, indefinite as to the number of cattle to be pastured, the extent of their several rights is to be proportioned according to the number that each of them can fodder in winter upon his own dominant tenement.

6. The chief servitudes of houses among the Romans were those of support, viz. *tigni immittendi*, and *oneris ferendi*. The first was the right of fixing in our neighbours wall a joist or beam from our house: the second was that of resting the weight of one's house upon his neighbour's wall.

7. With us, where different floors or stories of the same house belong to different persons, as is frequent in the city of Edinburgh, the property of the house cannot be said to be entirely divided; the roof remains a common roof to the whole, and the area on which the house stands supports the whole; so that there is a communication of property, in consequence of which the proprietor of the ground floor must, without the constitution of any servitude, uphold it for the support of the upper, and the owner of the highest story must uphold that as a cover to the lower. When the highest floor is divided into garrets among the several proprietors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret.

8. No proprietor can build, so as to throw the rain water falling from his own house, immediately upon his neighbour's ground, without a special servitude, which is called of *stillicide*; but, if it falls within his own property, though at the smallest distance from the march, the owner of the inferior tenement must receive it.

9. The servitudes *altius non tollendi, et non officendi luminibus vel prospectui*, restrain proprietors from raising their houses beyond a certain height, or from making any building whatsoever that may hurt the light or prospect of the dominant tenement. These servitudes cannot be constituted by prescription alone: for, though a proprietor should have his house ever so low, or should not have built at all upon his grounds for 40 years together, he is presumed to have done so for his own convenience or profit; and therefore cannot be barred from afterwards building a house on his property, or raising it to what height he pleases, unless he be tied down by his own consent.

10. We have two predial servitudes to which the Romans were strangers, viz. that of fuel or seal and divot, and of thirlage. The first is a right, by which the owner of the dominant tenement may turn up peats, turfs, seals, or divots, from the ground of the servient, and carry them off either for fuel, or thatch, or the other uses of his own tenement.

11. *THIRLAGE* is that servitude, by which lands arestricted, or thirled, to a particular mill; and the possessors bound to grind their grain there, for payment of certain multures and sequels as the agreed price of grinding. In this servitude, the mill is the dominant tenement, and the lands restricted (which are called also the *thirl* or *sucken*) the servient.

12. *MULTURE* is the quantity of grain or meal payable to the proprietor of the mill, or to the multerer his tackman. The quantities paid to the mill by the lands not restricted, are generally proportioned to the value of the labour, and are called *out-town* or *out-sucken multures*; but those paid by the thirl are ordinarily higher, and are called *in-town* or *in-sucken multures*.

13. The

14. The *SEQUELS* are the small quantities given to the servants, under the name of *knave'ship, bancnok, and lock or gownpen*.

15. Thirlage is either, 1. Of grindable corns; or, 2. Of all growing corns; or, 3. Of the *invecta et illata*, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is in practice restricted to the corns which the tenants have occasion to grind, either for the support of their families, or for other uses; the surplus may be carried out of the thirl unmanufactured, without being liable in multure. Where it is of the *grana crescentia*, the whole grain growing upon the thirl is astricted, with the exceptions, 1. Of seed and horse corn, which are destined to uses inconsistent with grinding; and, 2. Of the farm-duties due to the landlord, if they are delivered in grain not grinded. But, if the rent be payable in meal, flour, or malt, the grain of which these are made must be manufactured in the dominant mill.

16. The thirlage of *invecta et illata* is seldom constituted but against the inhabitants of a borough or village, that they shall grind all the unmanufactured grain they import thither at the dominant mill. Multure, therefore, cannot be exacted in a thirlage of *invecta et illata*, for flour or oat-meal brought into the servient tenement, unless the importer had bought it in grain, and grinded it at another mill. The same grain that owes multure, as *granum crescens*, to the mill in whose thirl it grew, if it shall be afterwards brought within a borough where the *invecta et illata* are thirled, must pay a second multure to the proprietor of that dominant tenement; but, where the right of these two thirlages is in the same proprietor, he cannot exact both. Where lands are thirled in general terms, without expressing the particular nature of the servitude, the lightest thirlage is presumed, from the favour of liberty; but in the astriction of a borough or village, where there is no growing grain which can be the subject of thirlage, the astriction of *invecta et illata* must be necessarily understood.

17. Thirlage, in the general case, cannot be established by prescription alone, for *ius que sunt iure facultatis non prescribitur*; but where one has paid for 40 years together the heavy insucken multure, the slightest title in writing will subject his lands. Thirlage may, contrary to the common rule, be constituted by prescription alone, 1. Where one pays to a mill a certain sum, or quantity of grain yearly, in name of multure, whether he grinds it at it or not, called *dry multure*. 2. In mills of the king's property; which is constituted *jure corona*, without titles in writing; and, where he derives right from another, his titles are more liable to be lost. This is extended in practice to mills belonging to church lands, where 30 years possession is deemed equivalent to a title in writing, from a presumption that their rights were destroyed at the reformation. Though thirlage itself cannot be constituted by mere possession, the proportion of multure payable to the dominant tenement may be so fixed.

18. The possessors of the lands astricted are bound to uphold the mill, repair the dam-lykes and aqueducts, and bring home the millstones.

These services, though not expressed in the constitution, are implied. By act of parliament passed in 1799 the right of thirlage may be communicated into fixed annual payment at the instance either of the proprietor of the mills or thirled lands.

19. Servitudes, being restraints upon property, are *stricti juris*: they are not therefore presumed, if the acts upon which they are claimed can be explained consistently with freedom; and, when servitudes are constituted, they ought to be used in the way least burdensome to the servient tenement. Hence, one who has a servitude of peats upon his neighbour's moss, is not at liberty to extend it for the use of any manufacture which may require an extraordinary expence of fuel; but must confine it to the natural uses of the dominant tenement.

20. Servitudes are extinguished, 1. *Confusione*, when the person comes to be proprietor of the dominant and servient tenements; for *res sua nomini servit*, and the use the proprietor thereafter makes of the servient tenement is not *jure servitutis*, but is an act of property. 2. By the perishing either of the dominant or servient tenement. 3. Servitudes are lost *non utendo*, by the dominant tenement neglecting to use the right for 40 years; which is considered as a dereliction of it, though he who has the servient tenement should have made no interruption by doing acts contrary to the servitude.

21. *Personal* servitudes are those by which the property of a subject is burdened, in favour, not of a tenement, but of a person. The only personal servitude known in our law, is usufruct or liferent; which is a right to use and enjoy a thing during life, the substance of it being preserved. A liferent cannot therefore be constituted upon things which perish in the use; and though it may upon subjects which gradually wear out by time, as household furniture, &c. yet with us, it is generally applied to heritable subjects. He whose property is burdened, is usually called the *fiar*.

22. *LIFERENTS* are divided into *conventional* and *legal*. *Conventional* liferents are either *simple*, or by *reservation*. A *simple liferent*, or by a separate constitution, is that which is granted by the proprietor in favour of another: And this sort, contrary to the nature of predial servitudes, requires seisin in order to affect singular successors; for a liferent of lands is, in strict speech, not a servitude, but a right resembling property which constitutes the liferenter vassal for life; and singular successors have no way of discovering a liferent right, which perhaps is not yet commenced, but by the records; whereas, in predial servitudes, the constant use of the dominant tenement makes them public. The proper right of liferent is intransmissible; *offibus usufructuarii inheret*: When the profits of the liferented subject are transmitted to another, the right becomes merely personal: for it entitles the assignee to the rent, not during his own life, but his cedent's; and is therefore carried by simple assignation, without seisin.

23. A liferent by *reservation*, is that which a proprietor reserves to himself in the same writing by which he conveys the fee to another. It requires no seisin; for the grantor's former seisin, which  
virtually

usually included the life-rent, still subsists as to the interest which is expressly reserved. In conjunction with the husband and wife, the assignment of conjunct fee resolves, in the general case, into a life-rent.

24. Life-rents, *à la vie*, are the *terce* and the *quarta*. The *terce* (*tertia*) is a life-rent commonly by law to widows, who have not accepted of special provisions, in the third of the heritable lands in which their husbands died intestate; and the *quarta* only where the marriage has subsisted three calendar days, or where a child has been born of it.

25. The *TERCE* is not limited to lands, but extends to tithes, and to servitudes and other burdens affecting lands; thus, the widow is entitled, as to right of her *terce*, to a life-rent of the third of the tithes secured, either by rights of annual rent or by rights in security. In improper wadset the *terce* is a third of the sum lent: In those lands proper, it is a third of the wadset lands; in case of redemption, a third of the redemption-money. Neither rights of reversion, superiority, nor patronage, fall under the *terce*; for none of these have fixed profits, and so are not proper subjects for the widow's subsistence; nor tithes, because they are not feudal rights. Burgh-rentments are also excluded from it, the reason whereof is not so obvious. Since the husband's seisin is both the measure and security of the *terce*, such debts or diligences alone, as exclude the husband's seisin, can prevail over it.

26. Where a *terce* is due out of lands burdened with a prior *terce* still subsisting, the 2d *terce* has only right to a third of the two thirds that remain unaffected by the first *terce*. But upon the death of the first widow, whereby the lands are discharged of her *terce*, the lesser *terce* becomes enlarged, as if the first had never existed. A widow, who has accepted of a special provision for her husband, is thereby excluded from the *terce*, unless such provision shall contain a clause that she shall have right to both.

27. The widow has no title of possession, and cannot receive the rents in virtue of her *terce*, till she be served to it; and in order to this, she must obtain a brief out of the chancery, directed to the sheriff, who calls an inquest, to take proof that she was wife to the deceased, and that her husband died intestate in the subjects contained in the *terce*.

28. *COURTESY* is a life-rent given by law, to the surviving husband, of all his wife's heritage in which she died intestate, if there was a child of the marriage born alive. A marriage, though of the strict continuance, gives no right to the *courtesy*, if there was no issue of it. The child born of the marriage must be the mother's heir; If she had a child of the former marriage, who is to succeed to her estate, the husband has no right to the *courtesy* while such child is alive; so that the *courtesy* is due to the husband, rather as father than heir, than as husband to an heiress. *Hereditary* is here opposed to conquest; and so is to be understood only of the heritable rights to which the wife succeeded as heir to her ancestors, excluding what she herself had acquired by singular

29. Because the husband enjoys the life-rent of his wife's whole heritage, on a lucrative title, he is considered as her temporary representative; and so is liable in payment of all the yearly burdens chargeable on the subject, and of the current interest of all her debts, real and personal, to the value of the yearly rent he enjoys by the *courtesy*. The *courtesy* needs no solemnity to its constitution; That right which the husband had to the rents of his wife's estate during the marriage, *jure marite*, is continued with him after her death, under the name of *courtesy*, by an act of the law, itself. As in the *terce*, the husband's seisin is the ground and measure of the wife's right; so in the *courtesy*, the wife's seisin is the foundation of the husband's; and the two rights are, in all other respects, of the same nature; if it is not that the *courtesy* extends to burghage holdings, and to superiorities.

30. All life-renters must use their right *salva rei substantia*: whatever therefore is part of the fee itself, cannot be encroached on by the life-renter, e. g. woods or growing timber, even for the necessary uses of the life-rented tenement. But, where a coppice or *silva cedua* has been divided into hags, one of which was in use to be cut annually by the proprietor, the life-renter may continue the former yearly cuttings; because these are considered as the annual fruits the subject was intended to yield, and so the proper subject of a life-rent.

31. Life-renters are bound to keep the subject life-rented in proper repair. They are also burdened with the alimony of the heir, where he has not enough for maintaining himself. The bare right of apparence founds the action against the life-renter. It is a burden personal to the life-renter himself, and cannot be thrown upon his adjudging creditors as coming in his place by their diligences. Life-renters are also subjected to the payment of the yearly cesses, stipends, &c. falling due during their right, and to all other burdens that attend the subject life-rented.

32. Life-rent is extinguished by the life-renter's death. That part of the rents which the life-renter had a proper right to, before his death, falls to his executors; the rest, as never having been *in bonis* of the deceased, goes to the heir. Martinmas and Whitsunday are, by our custom, the legal terms of the payment of rent; consequently, if a life-renter of lands survives the term of Whitsunday, his executors are entitled to the half of that year's rent, because it was due the term before his death; and if he survives the term of Martinmas, they have right to the whole. If the life-renter, being in the natural possession, and having first sowed the ground, should die, even before Whitsunday, his executors are intitled to the whole crop, in respect that both seed and industry were his. In a life-rent of money constituted by a moveable bond, the executors have a right to the interest, down to the very day of the life-renter's death, where no terms are mentioned for the payment thereof; but in the case of an heritable bond, or of a money life-rent secured on land, the interests of life-renter and heir (or of heir and executor, for the same rules serve to fix the *interests* of both) are both governed by the legal

terms of land-rent, without regard to the conventional.

#### SECT. X. Of TEINDS.

1. TEINDS, or tithes, are that liquid proportion of our rents or goods, which is due to churchmen, for performing divine service, or exercising the other spiritual functions proper to their several offices. Most of the canonists affirm, that the precise proportion of a tenth, not only of the fruits of the ground, but of what is acquired by personal industry, is due to the Christian clergy, of divine right, which they therefore call the *proper patrimony of the church*; though it is certain that tithes, in their infancy, were given, not to the clergy alone, but to lay-monks who were called *pauperes*, and to other indigent persons. Charles the Great was the first secular prince who acknowledged this right in the church. It appears to have been received with us, as far back as David I.

2. After the reformation in 1560, K. James VI. seized upon the lands belonging to Monasteries, Abbeyes, and other religious houses. He made grants of these possessions to his laic subjects upon condition of their providing the different cures with ministers, and allowing them adequate *stipends* out of the revenues arising from these grants. These became at last heritable, and conferred not only a right to *special lands*, but to the *teinds* of the whole lands within the beneficiary, as *in loco* of the church. The grantees were styled *Lords of Erection, Commendators, Titulars*.

3. By act 1587, all church lands, property and superiority were annexed to the crown, and the teinds of course. Excepting, 1. The possessions, in land, of the present clergy, which remained with them *during their lives*. 2. The teinds drawn by the bishop and inferior clergy, *with their manifes and glebes*, which were reserved for their successors. 3. The fee or teinds of lands mortified to universities, hospitals, and other charitable purposes. 4. The teinds of benefices founded or endowed by *lay patrons*, which were allowed to remain with the patrons.

4. The crown, by the final abolition of episcopacy, in 1690, is now in the right of the teinds and superiorities of bishops lands.

5. In consequence of the extensive grants by James VI. to titulars, the teinds of the greater part of all the lands of the kingdom became the private property of laymen; who continued the use of drawing the *ista corpora* of the fruits and goods, which produced much oppression and complaint. Whereupon Charles I. attempted a reduction of the grants of erection by James, and the matter was at last submitted to himself—By 1. The titulars. 2. The clergy. 3. The royal boroughs for the teinds gifted to them for hospitals, and 4. The proprietors of the lands suffering the drawing of teinds.

6. The king on the 2d September 1629, ordained, 1. That the proprietors might sue the titulars for a valuation and sale of their teinds before the commission. 2. Where the teinds were not drawn, he fixed them at a fifth of the yearly rent and the price was 9 years purchase of this. 3. Where the teinds were drawn, the *ista corpora*

were to be valued on a proof before the commissioners; and the amount of them in many, deducting one fifth, (as king's ease) was the full teind duty, which might also be acquired at 9 years purchase. A commission was appointed for that effect by statute 1637, now vested in the lords of session by the union in 1707.

7. ORDER of VALUATION. 1. The mortified teinds might be valued but not sold. 2. The bishops teinds falling to the crown were, by act 1693, declared not judicially saleable, while they remained with the crown. Nor, 3. Those teinds which an heritor in a disposition or sale of his lands had expressly reserved, but both might be *valued*.

8. The superiorities of erection were declared to revert to the crown lands *cum decimis inclusis* are not subject to teinds being presumed to have been ancient grants made by the church of lands or teinds in their possession previous to the reformation.

9. The valuations made by sub-commissioners, in consequence of the commission in 1633, were many of them carried off by Cromwell or burnt in 1700. Where they are found the commission still approves, unless d. s. t. from; but where a valuation is once approved of by the high commission, even although there should be an over payment, the valuation would stand good, so as to exclude a new one, and prevent an augmentation. Where laymen are the patrons or titulars, a valuation and sale is competent as above.

10. Teinds remaining with beneficiaries were, by 1693, made redeemable by patrons, for payment of a suitable stipend to the incumbents; and these the patron must sell at 6 years purchase. Teinds in the hands of the crown, in place of the bishops, are generally set in lease for payment of a composition, but seldom disposed. Mortified teinds may be disposed as above.

11. In valuation of teinds, the fruits and goods, as corns and grass, which are liable in teind, are only included. Hence houses, wood, &c. are excepted. Where parsonage and vicarage tithes belong to different heritors, the value of the vicarage is deducted from the 5th of the rental, or the amount of the parsonage teind.

12. Ministers or stipendiaries are in the first place to be supported from the teinds, which are of 4 classes: viz. 1. Such as are in the hands of the crown, never disposed or erected. 2. Such as are in the hands of laymen. 3. Such as are in lease from the crown, titulars, or patrons. 4. Those heritably disposed by the titulars. The two first are called *free teind* and are modified *primo loco* to their real extent or tack duty paid; and then the surplus teind of the tackman (after paying the tack-duty and which was previously allocated) in consideration of which the commissioners grant him a prerogative. And lastly, the teinds heritably disposed are burdened in proportion with the patrons own lands, when all the free and surplus tack teinds are exhausted. If the titular warranted against future augmentations, he is liable solely.

13. The patron may modify upon any one heritor to the extent of his teinds, until citation in an action of valuation: And the minister may sue any one

carry not only the lands themselves that belonged to the deceased, but the rents therefore fallen due since his death; for these, as an accessory to the estate belonging to the deceased, would have descended to the heir if he had entered, which rule is applied to all adjudications led on a special charge. This sort of adjudication is declared redeemable within 7 years by any co-adjudging creditor, either of the deceased debtor or of the heir renouncing. The heir himself, who renounces, cannot be restored against his renunciation, nor consequently redeem, if he be not a minor. But even a major may redeem indirectly, by granting a simulate bond to a confident person; the adjudication upon which, when conveyed to himself, is a good title to redeem all other adjudications against the lands belonging to his ancestor.

7. Adjudications *in implement* are declared against those who have granted deeds without procuratory of resignation, or precept of seisin, and refuse to divest themselves; to the end that the subject conveyed may be effectually vested in the grantee. These adjudications may be also directed against the heir of the granter, upon a charge to enter. Here there is no place for a legal reversion; for, as the adjudication is led for completing the right of a special subject, it must carry that subject as irredeemably as if the right had been voluntarily completed.

8. All adjudications led within year and day of that which has been made first effectual by seisin (where seisin is necessary), or exact diligence for obtaining seisin, are preferable *pari passu*. The year and day runs from the date of the adjudication, and not of the seisin or diligence, for obtaining it. After the days of that period, they are preferable according to their dates. All the co-adjudgers within the year are preferable *pari passu*, as if one adjudication had been led for all their debts. This makes the seisin or diligence on the first adjudication a common right to the rest, who must therefore refund to the owner of the diligence his whole expence laid out in carrying on and completing it. And though that first adjudication should be redeemed, the diligence upon it still subsists as to the rest. This *pari passu* preference, however, does not destroy the legal preference of adjudications led on *debita fundi* (see SECT. VIII. § 15.); nor does it take place in adjudications *in implement*.

9. A new sort of adjudication has been lately introduced into the law of Scotland by the act of 33d Geo. III. cap. 74. for rendering the payment of the creditors of insolvent debtors more equal and expeditious; and renewed by an act passed in 1798 for a limited time. It is expected to be made perpetual, and was obtained at the special desire of the CONVENTION OF ROYAL BURGHS, and superintended in its formation and progress by some of the first legal and mercantile characters in this country, and among others by Sir WILLIAM FORBES, and the present PRESIDENT of the COURT OF SESSION.

10. Before treating of judicial sales of bankrupts estates, the nature of SEQUESTRATION may be shortly explained, which is a diligence that generally utters in actions of sale. Sequestration of *res* is a judicial act of the court of session, where-

by the management of an estate is put into the hands of a factor or steward named by the court, who gives security, and is to be accountable for the rents to all having interest. This diligence is competent, either where the right of the lands is doubtful, if it be applied for, before either of the competitors has attained possession, or where the estate is heavily charged with debts: but, as it is an unfavourable diligence, it is not admitted, unless that measures shall appear necessary for the security of creditors. Subjects not brought before the court by the diligence of creditors, cannot fall under sequestration; for it is the competition of creditors, which alone founds the jurisdiction of the court to take the disputed subject into their possession.

11. The court of session who decree the sequestration have the nomination of the factor, in which they are directed by the recommendation of the creditors. A factor appointed by the session, though the proprietor had not been insect in the lands, has a power to remove tenants. Judicial factors must, within six months after extracting their factory, make up a rental of the estate, and a list of the arrears due by tenants, to be put into the hands of the clerk of the process, as a charge against themselves, and a note of such alterations in the rental as may afterwards happen; and must also deliver to the clerk annually a scheme of their accounts, charge and discharge, under heavy penalties. They are, by the nature of their office, bound to the same degree of diligence that a prudent man adhibits in his own affairs; they are accountable for the interest of the rents, which they either have, or by diligence might have recovered, from a year after their falling due. As it is much in the power of those factors to take advantage of the necessities of creditors, by purchasing their debts at an undervalue, all such purchases made either by the factor himself, or to his behoof, are declared equivalent to an acquittance or extinction of the debt. No factor can warrantably pay to any creditor, without an order of the court of session: for he is, by the tenor of his commission, directed to pay the rents to those who shall be found to have the best right to them. Judicial factors are entitled to a salary, which is generally stated at 5 per cent. of their intromissions; but it is seldom ascertained till their office expires, or till their accounting; that the court may modify a greater or smaller salary, or none, in proportion to the factor's integrity and diligence. Many cases occur, where the court of session, without sequestration, name a factor to preserve the rents from perishing; e. g. where an heir is deliberating whether to enter, where a minor is without tutors, where a succession opens to a person residing abroad; in all which cases the factor is subjected to the rules laid down in act of sederunt, Feb. 13, 1736. By the said act of 33 Geo. III. the estates of those engaged in trade and manufactures may be sequestered, at the suit of a creditor to the extent of £100, two creditors to the extent of £150, and three or more to the extent of £200. The bankrupt's funds are placed under the management, first of a factor, then of a trustee chosen by the creditors; but to detail their duty and powers, and the different modes of procedure, would require

more room than a work of the present nation permit.

The word **BANKRUPT** is sometimes applied to persons whose funds are not sufficient for their debts, and sometimes, not to the debtor, but to the estate. The court of session are empowered, on the petition of any real creditor, to try the value of the bankrupt's estate, and sell it for the payment of debts.

No process of sale, at the suit of a creditor, can proceed without a proof of the debtor's bankruptcy, or at least that his lands are so charged with debts, that no prudent persons will buy from him, and therefore the summons of sale must comprehend the debtor's whole estate. The debtors apparent heir, and all the real creditors in session, must be made parties to the suit, and a sufficient if the other creditors be called in by a judicial citation. The summons of sale concludes with ranking or preference of the debtor's creditors. In this ranking, first and second terms are assigned to the whole creditors, and then in court (or producing) their rights and diligences; and the decree of certification being thereupon, against the writings not produced, has the same effect in favour of the debtors who have produced their rights, as if the decree had proceeded upon an action of reduction and prohibition. See **CHAP. III; SECT. I, § 3.** In the late bankrupt act, the sale may precede the ranking of the creditors, unless the court, on application of the creditors, or any of them, shall find sufficient cause to delay the sale. The moveable property of the lands is adjudged to the court to the highest offerer at the sale. The court receiving payment must grant to the purchaser an absolute warrant, to the extent of the price received by them; and the lands purchased are cleared discharged of all debts or deeds of the bankrupt, or his ancestors, either on payment of the price by the purchaser to the creditors according to their preference, or consignation of it.

In the act 1695, purchasers were bound to consign the price in the hands of the magistrates of burgh; but by § 3. of the above act, they may assign it in the royal bank or bank of Scotland. The only remedy provided to such creditors, who judge themselves hurt by the sale or division of the price, even though they should be minors, is an action for recovering their share of the price of the creditors who have received it.

The expence of these processes is debursed of the factor out of the rents in his hands; by the whole burden of such expence falls on the posterior creditors. Apparent heirs are entitled to bring actions of the estates belonging to their ancestors, whether bankrupt or not; the expence of which falls upon the pursuer, if there is any excess of the price, after payment of the creditor; but if their be no excrecence, the creditor who alone are gainers by the sale, ought to bear the charge of it.

As processes of ranking and sale are designed for the common interest of all the creditors, and hence carried on or completed during their lifetime, they ought to give any preference in the distribution; *pendente lit, nihil innovandum.*

17. It is a rule in all real diligences, that where a creditor is preferable on several different subjects, he cannot use his preference arbitrarily, by favouring one creditor more than another; but must allocate his universal or catholic debt proportionally against all the subjects or parties whom it affects.

II. MOVEABLE RIGHTS.

THE law of heritable rights being explained, Moveable Rights fall next to be considered; the doctrine of which depends chiefly on the nature of Obligations.

SECT. XIII. Of OBLIGATIONS and CONTRACTS in GENERAL.

1. An obligation is a legal tie, by which one is bound to pay or perform something to another. Every obligation on the person obliged implies an opposite right in the creditor, so that what is a burden in regard to the one is right with respect to the other; and in all rights founded on obligation are called *personal*. There is this essential difference between a real and a personal right, that a *jus in re*, whether of property or of an inferior kind, as servitude, entitles the person vested with it to possess the subject as his own; or if he is not in possession, to demand it from the possessors: whereas the creditor in a personal right has only *jus ad rem*, or a right to compel the debtor to fulfil his obligation; without any right in the subject itself, which the debtor is bound to transfer to him. One cannot oblige himself, but by a present act of the will. A bare resolution, therefore, or purpose, to be obliged, is alterable at pleasure.

2. Obligations are either, 1. Merely natural, where one person is bound to another by the law of nature, but cannot be compelled by any civil action to the performance. Or, 2. Merely civil, which may be sued upon by an action, but are excluded by an exception in equity; as in the case of obligations granted through force or fear, &c. 3. Proper or full obligations, are those which are supported both by equity and the civil sanction.

3. Obligations may be also divided into, 1. Pure, to which neither day nor condition is adjoined. These may be exacted immediately. 2. Obligations *ex die*, which have a day adjoined to their performance. 3. Conditional obligations; in which there is no proper debt (*dies non credit*) till the condition be purified, because it is possible the condition may never exist; but the grantor, even of these, has no right to refuse.

4. Obligations, when considered with regard to their cause, were divided by the Romans, into those arising from contract, quasi contract, delict, and quasi delict: but there are certain obligations, even full and proper ones, which cannot be derived from any of these sources, and to which Lord Stair gives the name of *obediential*. Such are the obligation on parents to aliment or maintain their children; which arises singly from the relation of parent and child, and may be enforced by the civil magistrate. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their issue in all the necessaries of life, and giving them suitable edu-

cation. It ceases, when the children can earn a livelihood by their own industry; but the obligation on parents to maintain their indigent children, and reciprocally on children to maintain their indigent parents, is perpetual. This obligation is on the father's death, transferred to the eldest son, the heir of the family; who, as representing the father, must aliment his younger brothers and sisters: the brothers are only entitled to alimony, till their age of 21, after which they are presumed able to do for themselves; but the obligation to maintain the sisters continues till their marriage.

5. All obligations, arising from the natural duty of restitution, fall under this class; thus, things given upon the view of a certain event, must be restored, if that event does not afterwards exist: thus also, things given *ob turpem causam*, where the turpitude is in the receiver and not the giver, must be restored. And on the same principle, one upon whose ground a house is built or repaired by another, is obliged, without any covenant, to restore the expence laid out upon it, in so far as it has been profitable to him.

6. A contract is the voluntary agreement of two or more persons, whereby something is to be given or performed upon one part, for a valuable consideration, either present or future, on the other part. Consent, which is implied in agreement, is excluded, 1. By error in the essential of the contract. 2. By such a degree of restraint upon any of the contracting parties, as extorts the agreement.

7. Loan, or *mutuum*, is that contract which obliges a person, who has borrowed any fungible subject from another, to restore to him as much of the same kind, and of equal goodness. Whatever receives its estimation in number, weight, or measure, is a *fungible*; as corn, wine, current coin, &c. The only proper subjects of these contracts are things which cannot be used without either their extinction or alienation: hence the property of the thing lent is necessarily transferred by delivery to the borrower, who consequently must run all the hazards either of its deterioration or its perishing, according to the rule, *res perit suo domino*. Where the borrower neglects to restore at the time and place agreed on, the estimation of the thing lent must be made according to its price at that time and in that place, because it would have been worth so much to the lender, if the obligation had been duly performed. If there is no place nor time stipulated for, the value is to be stated according to the price that the commodity gave when and where it was demanded. In the loan of money, the value put on it by public authority, and not its intrinsic worth, is to be considered.

8. Commodate is a species of loan, gratuitous on the part of the lender, where the thing lent may be used, without either its perishing or its alienation. Hence, in this sort of loan, the property continues with the lender: the only right the borrower acquires in the subject is its use, after which he must restore the individual thing that he borrowed: consequently, if the subject perishes, it perishes to the lender, unless it has perished by the borrower's fault. What degree of fault or negligence makes either of the contracting parties liable to the other in damages is comprehended

under the following rules. Where the contract gives a mutual benefit to both parties, each contractor is bound to exhibit a middle sort of diligence, such as a man of ordinary prudence uses in his affairs. Where only one of the parties has benefit by the contract, that party must use exact diligence; and the other who has no advantage by it, is accountable only for dole, or for gross omissions, which the law construes to be dole. Where one employs less care on the subject of any contract which implies an exuberant trust than he is known to employ in his own affairs, it is considered as dole.

9. Hence it will appear that this is a *bilateral* contract; the borrower must be exactly careful of the thing lent, and restore it at the time fixed by the contract, or after that use is made of it for which it was lent: if he puts it to any other use, or neglects to restore it at the time covenanted, and if the thing perishes thereafter, even by mere accident, he is bound to pay the value. On the other part, the lender is obliged to restore to the borrower such of the expences debursed by him on that subject as arose from any uncommon accident, but not those that naturally attend the use of it. Where a thing is lent gratuitously, without specifying any time of redelivery, it constitutes the contract of *precarium*, which is revocable at the lender's pleasure, and, being entered into from a personal regard to the borrower, ceases by his death.

10. Deposition is also a *bilateral* contract, by which one who has the custody of a thing committed to him (the depositary) is obliged to restore it to the depositor. If a reward is bargained for by the depositary for his care, it resolves into the contract of location. As this contract is gratuitous, the depositary is only answerable for the consequences of gross neglect; but after the deposit is redemanded, he is accountable even for casual misfortunes. He is entitled to a full indemnification for the losses he has sustained by the contract, and to the recovery of all sums expended by him on the subject.

11. An obligation arises without formal paction, barely by a traveller's entering into an inn, ship, or stable, and there depositing his goods, or putting up his horses; whereby the innkeeper, ship-master, or stabler, is accountable, not only for his own facts and those of his servants, (which is an obligation implied in the very exercise of these employments,) but of the other guests or passengers; and, indeed, in every case, unless where the goods have been lost *damno fatali*, or carried off by pirates or house-breakers. Not only the masters of ships, but their employers, are liable each of them for the share he has in the ship; but by the present custom of trading nations, the goods brought into a ship must have been delivered to the master or mate, or entered into the ship-book. Carriers fall within the intendment of this law; and practice has extended it to vintners within borough. The extent of the damage sustained by the party may be proved by his oath *in litem*.

12. SEQUESTRATION, whether voluntarily consented to by the parties, or authorized by the judge, is a kind of deposit; but as the office of equities, to whose care the subject in dispute is committed,

ted, is not considered as gratuitous, he throw it up at pleasure, as a common demay do; and he is liable in the middle of diligence. Confignation of money is also. The risk of the configned money the configner, where he ought to have ayment, and not confignation; or has comonly a part; or has chosen for confignation neither named by the parties nor of edit. It is the office of a confignatory, to e money in safe custody till it be called herefore he puts it out at interest, he must hazard of the debtor's insolvency; but, same reason, though he should draw inteit, he is liable in none to the configner.

'LEDGE, when opposed to wadset, is a ;, by which a debtor puts into the hands reditor a special moveable subject in secu- the debt, to be redelivered on payment. a security is established by law to the crepon a subject which continues in the debt- lation, it has the special name of an hy-

Tradesmen and ship-carpenters have an :c on the house or ship repaired, for the ls and other charges of reparation; but not expence of building a new ship. This, r, must not now be understood to apply uly; for the court of session, in different ca- ch lately occurred before them, and found- m the law and practice of England in firm- s, have found, that no hypothec exists for ence of repairs done in a home port. Own- ships have an hypothec on the cargo for the ; heritors on the fruits of the ground; and ls on the *inveſta et illata*, for their rents. ; also, and agents, have a right of hypo- r more properly of retention, in their con- 's writings, for their claim of pains and de- ents. A creditor cannot, for his own pay- ll the subject impignorated, without ap- to the judge ordinary for a warrant to put : public sale or roup; and to this applica- : debtor ought to be made a party.

#### KIV. Of OBLIGATIONS by WORD or WRIT.

HE appellation of *verbal* may be applied to gations to the constitution of which writ- et essential, which includes both real and ial contracts; but as these are explained eparate titles, obligation *by word*, in the : this rubric, must be restricted, either to :s, or to such verbal agreements as have no ame to distinguish them. Agreement im- ie intervention of two different parties, who ader mutual obligations to one another. nothing is to be given or performed but on t, it is properly called a *promise*; which, gratuitous, does not require the accept- him to whom the promise is made. An hich must be distinguished from a promise, something to be done by the other party; sequently is not binding on the offerer, till cepted, with its limitations or conditions, to whom the offer is made; after which, nes a proper agreement.

riting must necessarily intervene in all ob- s and bargains concerning heritable sub- hough they should be only temporary; as

tacks, which, when they are verbal, last but for one year. In these, no verbal agreement is bind- ing, though it should be referred to the oath of the party; for, till writing is adhibited, law gives both parties a right to reſile, as from an unfinished bargain; which is called *locus penitentie*. If, upon a verbal bargain of lands, part of the price shall be paid by him who was to purchase, the *inter- ventus rei*, the actual payment of money creates a valid obligation, and gives a beginning to the contract of sale: and, in general, wherever mat- ters are no longer entire, the right to reſile seems to be excluded. An agreement, whereby a real right is passed from, or restricted, called *patium liberatorium*, may be perfected verbally; for free- dom is favourable, and the purpose of such agree- ment is rather to dissolve than to create an obliga- tion. Writing is also essential to bargains made un- der condition that they shall be reduced into writ- ing; for in such cases, it is *pars contractus*, that, till writing be adhibited, both parties shall have liberty to withdraw. In the same manner, verbal or nuncupative testaments are rejected by our law; but verbal legacies are sustained, where they do not exceed 100l. Scots.

3. Anciently, when writing was little used, deeds were executed by the party, appending his seal to them in presence of witnesses. For preventing frauds that might happen by appending seals to false deeds, the subscription also of the granter was afterwards required, and, if he could not write, that of a notary. As it might be of dan- gerous consequences to give full force to the sub- scription of the parties by initials, which is more easily counterfeited; our practice, in order to sus- tain such subscription, seems to require a proof, not only that the granter used to subscribe in that way, but that *de facto* he had subscribed the deed in question; at least, such proof is required if the instrumentary witnesses be still alive.

4. As a further check, it was afterwards pro- vided, that all writings carrying any heritable right, and other deeds of importance, be subscribed by the principal parties, if they can subscribe; other- wise, by two notaries before four witnesses specially designed. The subsequent practice extended this requisite of the designation of the witnesses to the case where the parties themselves subscribed. Custom has construed obligations for sums not exceeding 100l. Scots, to be obligations of im- portance. In a divisible obligation, *ex. gr.* for a sum of money, though exceeding 100l. the sub- scription of one notary is sufficient, if the creditor restricts his claim to 100l. But in an obligation indivisible, *e. g.* for the performance of a fact, if it be not subscribed in terms of the statute, it is void. When notaries thus attest a deed, the attestation or docquet must specially express that the grant- er gave them a mandate to sign; nor is it suffi- cient that this be mentioned in the body of the writing.

5. In every deed, the name of him who writes it, with his dwelling place, or other mark of dis- tinction must be inserted. The witnesses must both subscribe as witnesses, and their names and designations be inserted in the body of the deed: and all subscribing witnesses must know the grant- er, and either see him subscribe or hear him ac- knowledge

knowledge his subscription; otherwise they are declared punishable as accessory to forgery. Deeds, decrees, and other securities, consisting of more than one sheet, may be written by way of book, in place of the former custom of pasting together the several sheets, and signing the joinings on the margin; provided each page be signed by the grantor, and marked by its number, and the testing clause express the number of pages.

6. Instruments of feisin are valid, if subscribed by one notary, before a reasonable number of witnesses which is extended by practice to instruments of resignation. Two witnesses are deemed a reasonable number to every deed that can be executed by one notary. It is not necessary that the witnesses to a notarial instrument or execution see the notary or messenger sign; for they are called as witnesses to the transaction which is attested, and not to the subscription of the person attesting.

7. A new requisite has been added to certain deeds since the union, for the benefit of the revenue: they must be executed on stamped paper or parchment, paying a certain duty to the crown. These duties must all be paid before the paper is wrote upon, under a penalty; but they are so numerous and complex, that it would be tedious, even if it fell under our plan, to enter into an enumeration of them. They and the exemptions from them will be found at length in the stamp tables kept at the different offices, and regularly inserted in the Scottish almanacks.

8. The grantor's name and designation are essential, not properly as solemnities, but because no writing can have effect without them. Bonds were, by our ancient practice, frequently executed without filling up the creditor's name; and they passed from hand to hand, like notes payable to the bearer: but as there was no method for the creditor of a person possessed of these to secure them for his payment, all writings taken blank in the creditor's name are declared null, as covers to fraud; with the exception of indorsations of bills of exchange.

9. Certain privileged writings do not require the ordinary solemnities. 1. Holograph deeds (written by the grantor himself) are effectual without witnesses. The date of no holograph writing, except a bill of exchange (see next paragraph), can be proved by the grantor's own assertion, in prejudice either of his heir or his creditors, but must be supported by other adminicles. 2. Testaments, if executed where men of skill and business cannot be had, are valid though they should not be quite formal: and let the subject of a testament be ever so valuable, one notary signing for the testator, before two witnesses, is in practice sufficient. Clergymen were frequently notaries before the reformation; and, though they were afterwards prohibited to act as notaries, the case of testaments is excepted; so that these are supported by the attestation of one minister, with two witnesses. 3. Discharges to tenants are sufficient without witnesses, from their presumed sufficiency or ignorance in business. 4. Missive letters *in re mercatoria*, commissions, and fitted accounts in the course of trade, and bills of exchange, though they are not holograph, are, from

the favour of commerce, sustained without the ordinary solemnities.

10. A BILL OF EXCHANGE is an obligation in the form of a mandate, whereby the drawer or mandant desires him to whom it is directed, to pay a certain sum, at the day and place therein mentioned, to a third party. Bills of exchange are drawn by a person in one country to his correspondent in another; and they have that name, because it is the exchange, or the value of money in one place compared with its value in another, that generally determines the precise extent of the sum contained in the draught. The creditor in the bill is sometimes called the possessor, or *porteur*. A parties to bills are of different countries, question concerning them ought to be determined by the received custom of trading nations, unless when special statute interposes. For this reason, bill of exchange, though their form admits not of witnesses, yet prove their own dates, in questions either with the heir or creditors of the debtor.

11. A bill is valid, without the designation either of the drawer or of the person to whom it is made payable: It is enough, that the drawer's subscription appears to be truly his; and one being possessor of a bill marks him out to be the creditor, if he bears the name given in the bill to the creditor: nay, though the person drawn on should not be designated, his acceptance presumes that it was he whom the drawer had in his eye. Bills drawn blank, in the creditor's name, fall under the statutory nullity; for though indorsations of bills are excepted from it, bills themselves are not. Not only the person drawn upon must sign his acceptance, but the drawer must sign his draught, before any obligation can be formed against the acceptor: yet it is sufficient in practice that the drawer signs before the bill be produced in judgment; though it should be after the death both of the creditor and acceptor. A creditor in a bill may transmit it to another by indorsation, though the bill should not bear *to his order*; by the same rule that other right are transmissible by assignation, though they do not bear *to assignees*.

12. The drawer, by signing his draught becomes liable for the value to the creditor in the bill, in case the person drawn upon either does not accept, or after acceptance does not pay; for he is presumed to have received value from the creditor at giving him the draught, though he should not bear *for value received*: but, if the drawer was debtor to the creditor in the bill before the draught, the bill is presumed to be given towards payment of the debt, unless it expressly bears *for value*. The person drawn upon, if he refuse to accept, while he has the drawer's money in his hands, is liable to him in damages. A bill presumes value from the creditor, and indorsation presumes value from the indorsee; who therefore, if he cannot obtain payment from the acceptor, has recourse against the indorser upon the bill be indorsed in these words, *without course*.

13. Payment of a bill by the acceptor, acquiesces both the drawer and him at the hands of the creditor: but it entitles the acceptor, if he was the drawer's debtor, to an action of *recourse*

and, if he was, to a ground of com-  
 s, when indorsed, are considered as fo-  
 s of money delivered to the onerous in-  
 which therefore carry right to the con-  
 e of all burdens that do not appear  
 on themselves. Hence, a receipt or dis-  
 y the original creditor, if granted on a  
 paper, does not exempt the acceptor  
 and payment to the indorsee; hence, also  
 of compensation competent to the ac-  
 count the original creditor can be pleaded  
 e indorsee: but, if the debtor shall prove  
 th of the indorsee, either that the bill is  
 to him for the indorser's own behoof, or  
 did not the full value for the indorsation,  
 see is justly considered as but a name;  
 fore all exceptions, receivable against  
 nal creditor, will be sustained against  
 protested bill, after registration, can-  
 nismitted by indorsation, but by assigna-

is must be negotiated by the possessor,  
 e person drawn upon, within a precise  
 order to preferre recourse against the  
 In bills payable so many days after sight  
 tor has a discretionary power of fixing  
 ert somewhat sooner or later, as his oc-  
 ell require. Bills payable on a day cer-  
 t not be protested for acceptance till the  
 yment, because that day can neither be  
 d nor shortened by the time of accep-  
 for the same reason, the acceptance of  
 able on a precise day, need not be dated:  
 e a bill is drawn payable so many days  
 at, it must; because there the term of  
 depends on the date of acceptance.  
 hough bills are, in strict law, due the  
 on which they are made payable, and  
 efore be protested on the day thereafter;  
 are three days immediately following the  
 yment, called *days of grace*, within any  
 the creditor may protest the bill; but if  
 protesting till the day after the last day  
 , he loses his recourse. Where a bill is  
 d, either for not acceptance or not pay-  
 e dishonour must be notified to the draw-  
 orser, within three posts at farthest. This  
 s of negotiation is confined to such bills  
 be protested by the possessor upon the  
 ay of grace; where, therefore, bills are in-  
 after the days of grace are expired, the in-  
 is left more at liberty, and does not lose  
 orse, tho' he should not take a formal pro-  
 ot payment, if, within a reasonable time  
 d give the indorser notice of the acceptor's  
 g to pay. Not only does the possessor,  
 eglct, strict negotiation, lose his recourse  
 the drawer, where the person drawn upon  
 es afterwards bankrupt; but tho' he should  
 solvent: for he may in that case recover  
 t from the debtor, and so is not to be in-  
 in an unnecessary process against the draw-  
 er: he has tacitly renounced by his negli-  
 . Recourse is preserved against the drawer,  
 h the bill should not be duly negotiated, if  
 sion drawn upon was not his debtor; for  
 the drawer can qualify no prejudice by the

neglect of diligence, and he ought not to have  
 drawn on one who owed him nothing.

17. The privileges superadded to bills by sta-  
 tute are, that though, by their form, they can  
 have no clause of registration, yet, if duly pro-  
 tested, they are registrable within six months after  
 their date in case of not acceptance, or in six  
 months after the term of payment in the case of  
 not payment; which registration is made the  
 foundation of summary diligence, either against  
 the drawer or indorser in the case of not accep-  
 tance, or against the acceptor in the case of not  
 payment. This is extended to inland bills, *i. e.*  
 bills both drawn and made payable in Scotland.  
 After acceptance, summary diligence lies against  
 no other than the acceptor; the drawer and in-  
 dorser must be pursued by an ordinary action. It  
 is only the principal sum in the bill, and interest,  
 that can be charged for summarily: the exchange,  
 when it is not included in the draught, the re-ex-  
 change incurred by suffering the bill to be pro-  
 tested and returned, and the expence of diligence,  
 must all be recovered by an ordinary action; be-  
 cause these are not liquid debts, and so must be  
 previously constituted.

18. Bills, when drawn payable at any consider-  
 able distance of time after date, are denied the  
 privileges of bills; for bills are intended for curren-  
 cy, and not to lie as a security in the creditor's hands.  
 Bills are not valid which appear *ex facie* to de-  
 viate. No extrinsic stipulation ought to be con-  
 tained in a bill which deviates from the proper  
 nature of bills: hence, a bill to which penalty is ad-  
 ducted, or with a clause of interest from the date,  
 is null. Inland precepts drawn, not for money  
 the medium of trade, but for fungibles, are null,  
 as wanting writer's name and witnesses. It was  
 not an agreed point whether promissory notes,  
 without writer and witnesses, unless holograph,  
 are probative.

19. So stood the law of Scotland, in regard to  
 BILLS and PROMISSORY NOTES, previous to the  
 statute 12 Geo. III. By that statute, however,  
 the law of Scotland has undergone very material  
 alterations. They are declared to have the same  
 privileges, and to prescribe in six years after the  
 term of payment. Bank notes and post-bills are  
 excepted from this prescription: nor does it run dur-  
 ing the years of the creditor's minority. Inland  
 bills and promissory notes must be protested with-  
 in the days of grace, to secure recourse; and the  
 dishonour notified within 14 days after the pro-  
 test. Summary diligence may pass not only a-  
 gainst the acceptor, but likewise against the  
 drawer, and all the indorseees jointly and severally;  
 and at the instance of any indorsee, though the  
 bill was not protested in his name, upon his pro-  
 ducing receipt or letter from the protesting indor-  
 see. This act was in force only for 7 years after  
 15th May 1772, and to the end of the then next  
 session of parliament. But as it was found by ex-  
 perience, that it had been of great advantage to  
 Scotland, it was made perpetual by the late act  
 23 Geo. III. so that it has now become a perma-  
 nent part of the law of Scotland.

20. As for the solemnities essential to deed;  
 signed in a foreign country, when they come to  
 receive execution in Scotland, it is a general rule,

that

that no laws can be of authority beyond the dominions of the lawgiver. Hence, if strictness, no deed, though perfected according to the law of the place where it is signed, can have effect in another country where different solemnities are required to a deed of that sort. But this rigour is so softened *ex comitate*, by the common consent of nations, that all personal obligations granted according to the law of that country where they are signed, are effectual every where; which obtains in obligations to convey heritage. Conveyances themselves, however, of heritable subjects, must be perfected according to the law of the country where the heritage lies, and from which it cannot be removed.

21. A writing, while the granter keeps it under his own power or his doer's, has no force; it becomes obligatory, only after it is delivered to the grantee himself, or found in the hands of a third person. As to which last, the following rules are observed. A deed found in the hands of one who is the doer both for the granter and grantee, is presumed to have been put in his hands as doer for the grantee. The presumption is also for delivery, if the deed appears in the hands of one who is a stranger to both. Where a deed is deposited in the hands of a third person, the terms of deposition may be proved by the oath of the depository, unless where they are reduced into writing. A deed appearing in the custody of the grantee himself, is considered as his absolute right; in so much that the granter is not allowed to prove that it was granted in trust, otherwise than by a written declaration signed by the trustee, or by his oath.

22. The following deeds are effectual without delivery: 1. Writings containing a clause dispensing with the delivery; these are of the nature of revocable deeds, where the death of the granter is equivalent to delivery, because after death there can be no revocation. 2. Deeds in favour of children, even natural ones; for parents are the proper custodians or keepers of their children's writings. From a similar reason, post-nuptial settlements by the husband to the wife need no delivery. 3. Rights which are not to take effect till the granter's death, or even where he reserves an interest to himself during his life; for it is presumed he holds the custody of these, merely to secure to himself such reserved interest. 4. Deeds which the granter lay under an antecedent natural obligation to execute, *e. g.* rights granted to a cautioner for his relief. 5. Mutual obligations *e. g.* contracts; for every such deed, the moment it is executed, is a common evident to all the parties contractors. Lastly, the publication of a writing by registration, is equivalent to delivery.

#### SECT. XV. Of OBLIGATIONS and CONTRACTS arising from CONSENT; and of ACCESSORY OBLIGATIONS.

I. CONTRACTS consensual, (*i. e.* which might, by the Roman law, be perfected by sole consent, without the intervention either of things or of writing,) are *sale, permutation, location, society, and mandate*. Where the subject of any of these contracts is heritable, writing is necessary.

1. SALE is a contract, by which one becomes

obliged to give something to another, in consideration of a certain price in current money to be paid for it. Things consisting merely in use may be the subject of this contract, as the draught of a net. Commodities, where their importation or use is absolutely prohibited, cannot be the subject of sale; and even in run goods, no action against the vender for not delivery, if the buyer knew the goods were run. So far indeed has this principle been carried, and so anxious have judges been to put a stop to the practice of smuggling, that in different cases which have occurred of action being brought at the instance of a foreign merchant, against persons resident in Scotland, payment of goods which had been smuggled, no distinction has been made betwixt the case of foreign merchant being or not being a native of Scotland. Where the foreign merchant was a native of Scotland, it has been presumed that he was acquainted with the revenue law of the country, and that he was in a manner *versus in relicitu*; and therefore action has been denied recovery of the price of such goods: but when on the other hand, the foreign merchant was a native of Scotland, no ways amenable to, or even presumed ignorant of, its laws, he has never been allowed action for the price of such goods, unless it were shown that he had in fact *particeps criminis*, by aiding the smuggler. The same principle has regulated the decisions in the courts of England in cases of a similar nature, which have within these few years come before them.

3. Though this contract may be perfected before delivery of the subject, the property remains till then with the vender: (See PART II, *Set* § 9.) Yet till delivery, the hazard of its deterioration falls on the purchaser, because he has the profits arising from it after the sale. On the other hand, the subject itself perishes to the vender; 1. If it should perish through his fault after his undue delay to deliver it. 2. If a thing is sold as a fungible, and not as an individual *corpus*, *e. g.* a quantity of farm-wheat, sold without distinguishing the parcel to be delivered from the rest of the farm. 3. The *periculum* lies on the vender till delivery, if he be obliged by a special article in the contract to deliver the subject in a certain place.

4. LOCATION is that contract where an hire is stipulated for the use of things, or for the service of persons. He who lets his work or the use of his property to hire, is the locator or lessor; the other, the conductor or lessee. In the location of things, the lessor is obliged to deliver the subject, fitted to the use it was let for; and the lessee must preserve it carefully, put it to no other use, and, after that is over, restore it. When a workman or artificer lets his labour, and if his work is either not performed according to the contract, or if it be insufficient, even from mere skilfulness, he is liable to his employer in damages; for he ought not, as an artificer, to have undertaken a work to which he was not equal. A servant hired for a certain term, is entitled to full wages, though from sickness or other accident he should be disabled for a part of his time; but if he die before the term, his wages are due for the time he actually served. If a mar-

, or without good reason turns off, before the  
 a servant who eats in his house, the servant  
 entitled to his full wages, and to his mainte-  
 e till that term: and, on the other part, a  
 nt, who without ground deserts his service,  
 its his wages and maintenance, and is liable  
 is master in damages.

SOCIETY or COPARTNERSHIP is a contract,  
 by the several partners agree concerning the  
 munication of loss and gain arising from the  
 ct of the contract. It is formed by the reci-  
 cal choice which the partners make one of a-  
 er; and so is not constituted in the case of a-  
 ers, or of several legatees in the same subject.  
 partnership may be so constituted, that one  
 be partners shall, either from his sole right of  
 xty in the subject, or from his superior skill,  
 stituted to a certain share of the profits, with-  
 being subjected to any part of the loss; but a  
 ty where one partner is to bear a certain pro-  
 ion of loss, without being entitled to any  
 e of the profits, called by the Romans *societas  
 na*, is justly reprobated. All the partners are  
 ed to shares of profit and loss proportioned  
 heir several stocks, where it is not otherwise  
 nanted.

As partners are united, from a *delectus perso-*  
 in a kind of brotherhood, no partner can,  
 hout a special power contained in the con-  
 t, transfer any part of his share to another.  
 the partners are bound *in solidum* by the obli-  
 ion of any one of them, if he subscribe by the  
 or social name of the company; unless it be  
 ed that falls not under the common course of  
 nification. The company effects are the  
 mon property of the society subjected to its  
 its; so that no partner can claim a division  
 roof, even after the society is dissolved, till  
 are paid: and, consequently, no creditor of  
 partner can, by diligence, carry to himself the  
 roperty of any part of the common stock, in  
 eplace of a company creditor: but he may,  
 by attachment, secure his debtor's share in the  
 mpany's hands, to be made forthcoming to him  
 the close of the copartnership, in so far as it is  
 exhausted by the company debts.

A Society, being founded in the mutual confi-  
 nce among the *socii*, is dissolved, not only by  
 renunciation, but the death of any one of  
 its members, if it be not otherwise specially covenanted.  
 A partner who renounces upon unfair views, or  
 at a critical time, when his withdrawing may be  
 detrimental to the society, looses his partners from all  
 engagements to him, while he is bound to  
 make good all the profits he shall make by his with-  
 drawing, and for the loss arising thereby to the  
 society. Not only natural but civil death, e. g.  
 from a sentence inflicting capital punish-  
 ment, makes one incapable to perform the duties  
 of a partner, and consequently dissolves the soci-  
 ety. In both cases, of death and renunciation,  
 the surviving partners may continue the copart-  
 nership either expressly, by entering into a new  
 contract, or tacitly, by carrying on their trade as  
 before. Public trading companies are now e-  
 specially constituted, with rules very different  
 from those which either obtained in the Roman  
 law, or at this day obtain in private societies.

law, or at this day obtain in private societies.  
 The proprietors or partners in these, though they  
 may transfer their shares, cannot renounce; nor  
 does their death dissolve the company, but the  
 share of the deceased descends to his representative.

8. A JOINT TRADE is not a copartnership, but  
 a momentary contract, where two or more per-  
 sons agree to contribute a sum to be employed in  
 a particular course of trade, the produce whereof  
 is to be divided among the adventurers, according  
 to their several shares, after the voyage is finished.  
 If, in a joint trade, that partner who is intrusted  
 with the money for purchasing the goods, should,  
 in place of paying them in cash, buy them upon  
 credit, the furnisher who followed his faith alone  
 in the sale, has no recourse against the other ad-  
 venturers; he can only recover from them what  
 of the buyer's share is yet in their hands. Where  
 any one of the adventurers in a joint trade be-  
 comes bankrupt, the others are preferable to his  
 creditors, upon the common stock, as long as it  
 continues undivided, for their relief of all the en-  
 gagements entered into by them on account of  
 the adventure.

9. MANDATE is a contract, by which one em-  
 ploys another to manage any business for him;  
 and by the Roman law, it must have been gratui-  
 tous. It may be constituted tacitly, by one's suf-  
 fering another to act in a certain branch of his af-  
 fairs, for a tract of time together, without chal-  
 lenge. The mandatory is at liberty not to accept  
 of the mandate; and, as his powers are solely  
 founded in the mandant's commission, he must, if  
 he undertakes it, strictly adhere to the directions  
 given him: Nor is it a good defence, that the meth-  
 od he followed was more rational; for in that  
 his employer was the proper judge. Where no  
 special rules are prescribed, the mandatory, if he  
 acts prudently, is secure, whatever the success may  
 be; and he can sue for the recovery of all the ex-  
 pences reasonably deburred by him in the execu-  
 tion of his office.

10. Mandates may be general, containing a  
 power of administering the mandant's whole af-  
 fairs; but no mandate implies a power of dispo-  
 sition gratuitously of the constituent's property, nor  
 even of selling his heritage for an adequate price:  
 but a general mandatory may sell such of the  
 moveables as must otherwise perish. No manda-  
 tory can, without special powers, transact doubt-  
 ful claims belonging to his constituent, or refer  
 them to arbiters.

11. Mandates expire, 1. By the revocation of  
 the employer, though only tacit, as if he should  
 name another mandatory for the same business.  
 2. By the renunciation of the mandatory; even  
 after he has executed part of his commission, if his  
 office be gratuitous. 3. By the death, either of  
 the mandant or mandatory: But if the matters  
 are not entire, the mandate continues in force,  
 notwithstanding such revocation, renunciation, or  
 death. Precepts of resignation, and precepts  
 of seisin, are made out in the form of mandates;  
 but, because they are granted for the sole benefit  
 of the mandatory, all of them, excepting precepts  
 of *clare constitut*, are declared (by act 1693) to contin-  
 ue after the death either of the grantor or grantee.

Deeds which contain a clause or mandate for registration, are for the same reason made registrable after the death of either, by acts 1693 and 1696.

12. The favour of commerce has introduced a tacit mandate, by which masters of ships are empowered to contract in name of their exercitors or employers, for repairs, ship-provisions, and whatever else may be necessary for the ship or crew; so as to oblige not themselves only, but their employers. Whoever has the actual charge of the ship is deemed the master, though he should have no commission from the exercitors, or should be substituted by the master in the direction of the ship without their knowledge. Exercitors are liable, whether the master has paid his own money to a merchant for necessaries, or has borrowed money to purchase them. The furnisher or lender must prove that the ship needed repairs, provisions, &c. to such an extent; but he is under no necessity to prove the application of the money or materials to the ship's use. If there are several exercitors, they are liable *singuli in solidum*. In the same manner the undertaker of any branch of trade, manufacture, or other land negotiation, is bound by the contracts of the insurers whom he sets over it, in so far as relates to the subject of the *propositura*.

13. Contracts and obligations, in themselves imperfect, receive strength by the contractor or his heirs doing any act thereafter which imports an approbation of them, and consequently supplies the want of an original legal consent. This is called HOMOLOGATION; and it takes place even in deeds intrinsically null, whether the nullity arises from the want of statutory solemnities, or from the incapacity of the grantor. It cannot be inferred, 1. By the act of a person who was not in the knowledge of the original deed; for one cannot approve what he is ignorant of. 2. Homologation has no place where the act or deed, which is pleaded as such, can be ascribed to any other cause; for an intention to come under an obligation is not presumed.

14. QUASI CONTRACTS are formed without explicit consent, by one of the parties doing something which by its nature either obliges him to the other party, or the other party to him. Under this class may be reckoned tutory, &c. the entry of an heir, *negotiorum gestio*, *indebiti solutio*, communion of goods between two or more common proprietors, and *mercium jactus levandæ navis causa*. *Negotiorum gestio* forms those obligations which arise from the management of a person's affairs, in his absence, by another, without a mandate. As such manager acts without authority from the proprietor, he ought to be liable in exact diligence, unless he has from friendship interposed in affairs which admitted no delay; and he is accountable for his intromissions with interest. On the other part, he is entitled to the recovery of his necessary disbursements on the subject, and to be relieved of the obligations in which he may have bound his self in consequence of the management.

15. *Indebiti solutio*, or the payment to one of what is not due to him, if made through any mistake, either of fact, or even of law, founds him who made the payment in an action against the receiver for repayment; *condictio indebiti*. This action does not lie, 1. If the sum paid was due *ex equitate*, or

by a natural obligation: for the obligee is founded solely in equity. 2. If the payer made the payment knew that nothing was due; *qui consilio dat quod non debebat, prosumitur*.

16. Where two or more persons become common proprietors of the same subject, by legacy, gift, or purchase, without the partnership, an obligation is thereby contracted among the proprietors to communicate and loss arising from the subject, while common: And the subject may be the fruit of any having interest. This divides the question is among the common proprietors according to the valuation of their respective shares: But where the question is between proprietors and those having servitudes upon the property, the superficies is only divided, and justice to the property. Common to the king, or to royal boroughs, and to lands lying ruinous, and belonging to rent proprietors, may be divided, with the consent of borough and incorporated officers, the execution of which is committed to the mayor, or justices of the peace.

17. The throwing of goods overboard to lighten a ship in a storm, creates an obligation whereby the owners of the ship and cargo are obliged to contribute for the relief of whose goods were thrown overboard may bear a proportional loss of the goods for the common safety. In this contribution the ship's provisions suffer no estimation, and the owner who has cut his mast, or parted with the ship to save the ship is entitled to this relief has lost them by the storm, the loss of the ship and freight. If the election of the ship, the goods preserved from it are not liable in contribution. Ejection fully made, if the master and a third party mariners judge that measure necessary, the owner of the goods should oppose: goods ejected are to be valued at the value of the goods of the same sort which are afterwards sold for.

18. There are certain obligations which do not subsist by themselves, but are accessory to a part of other obligations. Of this kind is the obligation to pay interest, or *fidjussio*, is that obligation by which one comes engaged as security for another shall either pay a sum, or perform a duty.

19. A cautioner for a sum of money bound, either simply as cautioner for the debtor, or conjunctly and severally for the principal debtor. The first has, by the benefit of *ordinis*, or of discussion, the creditor is obliged to discuss the principal debtor, before he can insist for payment against the cautioner. Where one is bound jointly and for the principal, or conjunctly and severally with him, the two obligants are equally in the same obligation, each and consequently, the cautioner, though an accessory, may be sued for the whole either discussing or even citing the principal debtor. Cautioners for performance of a duty, or for the faithful discharge of a duty (as for factors, tutors, &c.) cannot by

their engagement be bound conjunctly and severally with the principal obligant, because the fact to which the principal is bound cannot possibly be performed by any other. In such engagement, therefore, the failure must be previously constituted against the proper debtor, before action can be brought against the cautioner for making up the loss of the party suffering.

20. The cautioner, who binds himself at the desire of the principal debtor, has an *actio mandati* or of relief against him, for recovering the principal and interest paid by himself to the creditor, and for necessary damages; which action lies *de jure*, though the creditor should not assign to him on payment. As relief against the debtor is implied in fidejussory obligations, the cautioner, where such relief is cut off, is no longer bound: hence, the defence of prescription frees the cautioner, as well as the principal debtor.

21. But, 1. Where the cautionary is interposed to an obligation merely natural, the relief is restricted to the sums that have really turned to the debtor's profit. 2. A cautioner who pays without citing the debtor, loses his relief, in so far as the debtor had a relevant defence against the debt, in whole or in part. Relief is not competent to the cautioner, till he either pays the debt, or is distressed for it; except, 1st, Where the debtor is expressly bound to deliver to the cautioner his obligation cancelled, against a day certain, and has *fructus*; or, 2dly, Where the debtor is *vergens ad insolvam*; in which case the cautioner may, by proper diligence, secure the debtor's funds for his own relief, even before payment or distress.

22. A right of relief is competent *de jure* to the cautioner who pays, against his co-cautioner, unless where the cautioner appears to have renounced it. In consequence of this implied relief, a creditor, if he shall grant a discharge to any one of the cautioners, must, in demanding the debt from the others, deduct that part as to which he has cut off their relief by that discharge. Where the principal debtor, in a bond in which a cautioner is bound, grants bond of corroboration with a new cautioner, both cautioners, as they intervene for the same debt, and at the desire of the same debtor, have a mutual relief against each other; but where the cautioner in the first bond signs as a principal obligant in the corroboration, the cautioner in the new bond, it would seem, would be entitled to a total relief against the first cautioner. At same time, the decisions of the court of session are not perfectly at one upon this branch of the doctrine of cautionary.

23. Cautionary is also *judicial*, as in a suspension. It is sufficient to loose the cautioner, that when he became bound, the suspender had good reason to suspect, e. g. if the charger had at that period no wife, or had not then performed his part, though these grounds of suspension should be afterwards taken off. In all maritime causes, where the parties are frequently foreigners, the defender must give caution *judicio fidei et judicatum solvi*: such cautioner gets free by the death of the defender before sentence; but he continues bound, though the cause should be carried from the admiral to the court of session. This sort of caution is only to be exacted in causes strictly maritime.

24. It happens frequently, that a creditor takes two or more obligants bound to him, all as principal debtors, without fidejussion. Where they are so bound, for the performance of facts that are in themselves indivisible, they are liable each for the whole, or *singuli in solidum*. But, if the obligation be for a sum of money, they are only liable *pro rata*; unless, 1. Where they are in express words bound conjunctly and severally; or, 2. In the case of bills or promissory notes. One of several obligants of this sort, who pays the whole debt, or fulfils the obligation, is entitled to a proportional relief against the rest; in such manner, that the loss must, in every case, fall equally upon all the solvent obligants.

25. Obligations for sums of money are frequently accompanied with an obligation for the annual rent or interest thereof. INTEREST, (*usura*) is the profit due by the debtor, of a sum of money to the creditor for the use of it, which is fixed, by 12 *Ann. Stat.* 2. c. 16 at 5 per cent.

26. Interest is due, either *by law* or *by pactio*. It is due *by law*, either from the force of statute, under which may be included acts of seducement, or from the nature of the transaction. Bills of exchange, and inland bills, though they should not be protested, carry interest from their date in case of non-acceptance; or from the day of their falling due, in case of acceptance and non-payment. Interest is due by a debtor after denunciation, for all the sums contained in the diligence, even for that part which is made up of interest.

27. The subject-matter of all obligations consists either of things, or of facts. Things exempted from commerce cannot be the subject of obligation. (See SECT. I. § 2.) One cannot be obliged to the performance of a fact naturally impossible; nor of a fact in itself immoral, for that is also in the judgment of law impossible. Since impossible obligations are null, no penalty or damage can be incurred for non-performance; but it is otherwise, if the fact be in itself possible, though not in the debtor's power; in which case the rule obtains, *locum facti impræstabilis subit damnus et interesti*.

28. DONATION, so long as the subject is not delivered to the donee, may be justly ranked among obligations; and it is that obligation which arises from the mere good will and liberality of the granter.

29. Donations made in contemplation of death, or *mortis causa*, are of the nature of legacies, and like them revocable; consequently, not being effectual in the granter's life, they cannot compete with any of his creditors; not even with those whose debts were contracted after the donation. They are understood to be given from a personal regard of the donee, and therefore fall by his predecease. No deed, after delivery, is to be presumed *in donatio mortis causa*; for revocation is excluded by delivery.

30. Deeds are not presumed, *in dubio*, to be donations. Hence, a deed by a debtor to his creditor, if donation be not expressed, is presumed to be granted in security or satisfaction of the debt; but bonds of provision to children are, from the presumption of paternal affection, construed to be intended as an additional patrimony: yet a

toe; given to a daughter in her marriage-contract is presumed to be in satisfaction of all former bonds and debts; because marriage contracts usually contain the whole provisions in favour of the bride.

SECT. XVI. *Of the DISSOLUTION or EXTINGUISHMENT OF OBLIGATIONS.*

1. OBLIGATIONS may be dissolved by *performance or implement, consent, compensation, novation, and confusion*. 1. By *specific performance*; thus, an obligation for a sum of money is extinguished by payment. The creditor is not obliged to accept of payment by parts, unless where the sum is payable by different divisions. If a debtor in two or more separate bonds to the same creditor, made an indefinite payment, without ascribing it at the time to any one of the obligations, the payment is applied, 1<sup>st</sup>, To interest, or to sums not bearing interest. 2<sup>dly</sup>, To the sums that are least secured, if the debtor thereby incurs no rigorous penalty. But, 3<sup>dly</sup>, If this application be penal on the debtor, *e. g.* by suffering the legal of an adjudication to expire, the payment will be applied so as to save the debtor from that forfeiture. Where one of the debts is secured by a cautioner, the other not, the application is to be so made, *ceteris paribus*; that both creditor and cautioner may have equal justice done to them.

2. Payment made by the debtor upon a mistake in fact, to one whom he believed, upon probable grounds, to have the right of receiving payment, extinguishes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect; as if a debtor, seized by letters of caption, should make payment to the messenger; for *ignorantia juris neminem excusat*. In all debts, the debtor, if he be not interpellated, may safely pay before the term, except in tack-duties or feu-duties; the payment whereof, before the terms at which they are made payable, is construed to be collusive, in a question with a creditor of the landlord or superior. Payment is *in dubio* presumed, by the voucher of the debt being in the hands of the debtor; *chirographum, apud debitorem repertum, presumitur solutum*.

3. Obligations are extinguishable by the *consent of the creditor*, who, without full implement, or even any implement, may renounce the right constituted in his own favour.

4. A discharge, though it should be general, of all that the granter can demand, extends not to debts of an uncommon kind, which are not presumed to have been under the granter's eye. This doctrine applies also to general assignments.

5. Where the same person is both creditor and debtor to another, the mutual obligations, if they are for equal sums, are extinguished by *compensation*; if for unequal, still the lesser obligation, is extinguished, and the greater diminished, as far as the concurrence of debit and credit goes.

6. The right of *RETENTION*, which bears a near resemblance to compensation, is chiefly competent, where the mutual debts, not being liquid, cannot be the ground of compensation; and it is sometimes admitted *ex equitate*, in liquid debts, where compensation is excluded by statute: thus, though compensation cannot be pleaded after de-

ree, either against a creditor or his assignee if the original creditor should become the debtor, even after decree, may retain the assignee, till he gives security for the debtor's claim against the cedent. This is frequently founded in the expence or work employed on the subject retain so arises from the mutual obligations in on the parties.

7. Obligations are dissolved by no whereby one obligation is changed into without changing either the debtor or The first obligation being thereby extinguished the cautioners in it are loosed, and all sequences discharged; so that the debtor bound only by the last. As the creditor a right is once constituted, ought not to implication, novation is not easily presumed the new obligation is construed to be corroborative of the old; but, where the novation expressly bears to be *in satisfaction* of these words must necessarily be explained. Where the creditor accepts of a debtor, in the place of the former who is discharged this method of extinction is called *delegatio*.

8. Obligations are extinguished *confusio* the debit and credit meet in the same person by succession or singular title, *e. g.* a debtor succeeds to the creditor, or the creditor the debtor, or a stranger to both; for one may be debtor to himself. If the succession, from the *confusio* arises, happens afterwards divided, so as the debtor and creditor come to be different persons; the *confusio* does not produce an extinction, but only a temporary suspension, of the debt.

SECT. XVII. *Of ASSIGNATION*

1. HERITABLE rights, when they are with investment, are transmitted by deed which is a writing containing procurator's assignation and precept of feisin; but they neither require no feisin, or on which feisin actually followed, are transmissible by *assignation*. He who grants the assignation is the *cedent*; and he who receives it, the *cessionary*: if the assignee conveys his right to a third person, the deed of conveyance is called *translation*; and if he assigns it back to himself a *retrocession*.

2. Assignations must not only be declared to the assignee, but intimated by him to the creditor. Intimations are considered as so necessary in completing the conveyance, that in a competition between two assignations, the last, if first intimated, is preferred.

3. Though, regularly, intimation to the creditor is made by an instrument, taken in the presence of a notary, by the assignee or his procurator, the law admits equipollencies, where the deed of assignment given to the debtor is equal to the deed of intimation. Thus, a charge upon letters of horning in the assignee's instance, or a suit brought by the assignee, supplies the want of intimation being judicial acts, which expose the deed to the eyes both of the judge and of the creditor, or the debtor's promise of payment by

assignee, because this is in effect corroboration of the original debt. The assignee's possession of right, by entering into payment of the rents reserved, is also equal to an intimation; for it puts not only notice to the debtor, but his actual compliance: but the debtor's private knowledge of the assignment is not sustained as a defence.

Certain conveyances need no intimation: 1. Assignations of bills of exchange; for these are to be attested with forms, introduced by the laws of particular states. 2. Bank notes are fully attested by the bare delivery of them; for as they are payable to the bearer, their property must pass with their possession. 3. Adjudication, which is a judicial conveyance, and marriage, which is a conveyance, carry the full right of the subjects thereconveyed, without intimation: nevertheless, as there is nothing in these conveyances which can themselves put the debtor *in mala fide*, he is therefore *in tuto* to pay to the wife, or to the original creditor in the debt adjudged, till the marriage or adjudication be notified to him. Assignations of moveable subjects though they be intimated, if they are made *retenta possessione*, (the cedent retaining the possession), cannot hurt the cedent's creditors; for such rights are presumed, all questions with creditors, to be collusive, and raised in trust for the cedent himself.

4. An assignation carries to the assignee the whole right of the subject conveyed, as it was in the hands of the cedent; and consequently, he may use diligence, either in his cedent's name while he is alive, or in his own.

5. After an assignation is intimated, the debtor cannot prove a payment, or compensation, by the oath of the cedent, who has no longer any interest in the debt; unless the matter has been made litigious by an action commenced prior to the intimation: but the debtor may refer to the oath of the assignee, who is in the right of the debt; that the assignation was gratuitous, or in part for the cedent: either of which being proved, the oath of the cedent will affect the assignation. If the assignation be in part onerous, and in part gratuitous, the cedent's oath is good against the assignee only so far as his right is gratuitous. The assignee is competent against the original creditor in a moveable debt, which can be proved otherwise than by his oath, continue relevant against an onerous assignee; whose right can be no better than that of his author, and must therefore remain affected with all the burdens which were attached to it in the author's person.

#### SECT. XVIII. Of ARRESTMENTS and POUNDINGS.

1. The diligences, whereby a creditor may affect his debtor's moveable subjects, are *arrestment* and *pounding*. By *arrestment* is sometimes meant the securing of a criminal's person till trial; but in a legal sense, it is understood in the rubric of this title, it is the order of a judge, by which he who is debtor of a moveable obligation to the arrester's debtor, is prohibited to make payment or delivery till the debt due to the arrester be paid or secured. The debtor's debtor is usually called the common debtor; because, where there are two or more competing

creditors, he is debtor to all of them. The person in whose hands the diligence is used is styled the arrester.

2. Arrestment may be laid on by the authority either of the supreme court, or of an inferior judge. In the first case, it proceeds either upon special letters of arrestment, or on a warrant contained in letters of horning; and it must be executed by a messenger. The warrants granted by inferior judges are called precepts of arrestment, and they are executed by the officer proper to the court.

3. All debts, in which one is personally bound, though they should be heritably secured, are grounds upon which the creditor may arrest the moveable estate belonging to his debtor. Arrestment may proceed on a debt, the term of payment whereof is not yet come, in case the debtor be *vergens ad inopiam*.

4. Moveable debts are the proper subject of arrestment; under which are comprehended conditional debts; and even depending claims. For lessening the expence of diligence to creditors, all bonds which have not been made properly heritable by feisin are declared arrestable: but this does not extend to adjudications, wadsets, or other personal rights of lands, which are not properly debts. Certain moveable debts are not arrestable: 1. Debts due by bill, which pass from hand to hand as bags of money. 2. Future debts: for though inhibition extends to *adquirenda* as well as *acquisita*, yet arrestment is limited, by its warrant, to the debt due at the time of serving it against the arrester. Hence, an arrestment of rents or interest carries only those that have already either fallen due or at least become current. Claims, depending on the issue of a suit, are not considered as future debts; for the sentence, when pronounced, has a retrospect to the period at which the claim was first founded. The like doctrine holds in conditional debts. 3. Alimentary debts; for these are granted on personal considerations, and so are not communicable to creditors: but the past interest due upon such debt may be arrested by the person who has furnished the alimony. One cannot secure his own effects to himself for his maintenance, so as they shall not be affectable by his creditors. Salaries annexed to offices granted by the king, and particularly those granted to the judges of the Session, and the fees of servants, are considered as alimentary funds; but the surplus fee, over and above what is necessary for the servant's personal uses, may be arrested. It has also been found, that a wadset sum consigned after an order of redemption used, but before decret of declarator, is not arrestable.

5. If, in contempt of the arrestment, the arrester shall make payment of the sum, or deliver the goods arrested, to the common debtor, he is not only liable criminally for breach of arrestment, but he must pay the debt again to the arrester. As the law formerly stood, an arrestment used at the market cross of Edinburgh, pier and shore of Leith, against a person furth of the kingdom, was good; so that if the arrester made payment to his creditor after the date of the arrestment, he was found liable in second payment to the arrester.

er, because he had done all in his power to notify his diligence. This, however, is very properly altered by § 3. of the act of the 23d Geo. III. which declares, that an arrestment used at the market cross of Edinburgh, pier and shore of Leith, in the hands of any person out of the kingdom, without other sufficient notification, shall not interpel the arrestee from paying *bona fide* to the original creditor. Arrestment is not merely prohibitory, as inhibitions are; but is a step of diligence which founds the user in a subsequent action, whereby the property of the subject arrested may be adjudged to him. It therefore does not, by our latter practice, fall by the death of the arrestee; but continues to subsist, as a foundation for an action of forthcoming against his heir, while the subject arrested remains *in medio*. Far less is arrestment lost, either by the death of the arrester, or of the common debtor.

6. Where arrestment proceeds on a depending action, it may be loosed by the common debtor's giving security to the arrester for his debt in the event it shall be found due. Arrestment founded on decrees, or on registered obligations, which in the judgment of law are decrees, cannot be loosed but upon payment or consignation; except,  
 1. Where the term of payment of the debt is not yet come, or the condition has not yet existed.  
 2. Where the arrestment has proceeded on a registered contract, in which the debts or mutual obligations are not liquid.  
 3. Where the decree is suspended, or turned into a libel; for, till the suspension be discussed, or the pending action concluded, it cannot be known whether any debt be truly due. A loosing takes off the *nexus* which had been laid on the subject arrested; so that the arrestee may thereafter pay safely to his creditor, and the cautioner is substituted in place of the arrestment, for the arrester's security: yet the arrester may, while the subject continues with the arrestee, pursue him in a forthcoming, notwithstanding the loosing.

7. Arrestment is only an inchoated or begun diligence; to perfect it, there must be an action brought by the arrester against the arrestee, to make the debt or subject arrested forthcoming. In this action, the common debtor must be called for his interest, that he may have an opportunity of excepting to the lawfulness or extent of the debt on which the diligence proceeded. Before a forthcoming can be pursued, the debt due by the common debtor to the arrester must be liquidated; for the arrester can be no further entitled to the subject arrested than to the extent of the debt due to him by the common debtor. Where the subject arrested is a sum of money, it is, by the decree of forthcoming, directed to be paid to the pursuer towards satisfying his debt; where goods are arrested, the judge ordains them to be exposed to sale, and the price to be delivered to the pursuer. So that, in either case, decrees of forthcoming are judicial assignations to the arrester of the subject arrested.

8. In all competitions, regard is had to the dates, not of the grounds of debt, but of the diligence proceeding upon them. In the competition of practitioners, the preference is governed by *their* dates, according to the priority even of

hours, where it appears with any certainty is the first. But, as arrestment is but a diligence, therefore if a prior arrester should insist in an action of forthcoming, at a time as may be reasonably construed intimation of his begun diligence, he loses his preference. But, as dereliction of diligence is not presumed, the distance of above two years between the first arrestment and the decree of forthcoming was found not to make such a *moræ* as the posterior arrester to a preference.

of preference, according to the dates of several arrestments, holds, by our present law, whether they have proceeded on a direct dependence; on debts not yet payable; on debts already payable; provided the debts shall have been closed, or the debt has been payable, before the issue of the competent

9. By statute 35d Geo. III. cap. 74. § 1. it is enacted, that when a debtor is made bankrupt, in terms of the Act 1696, as thereby extending to all arrestments which shall have been used before the date of the bankruptcy, within any effects of such bankrupt, within any time prior to the bankruptcy, or within four months thereafter, shall be ranked *pari passu* if they had been of the same date; and, at a time coming, letters on precepts of a hearing to be upon a depending action granted summarily, upon production of a libel or summons. And it shall be no objection to the said *pari passu* preference, that such was not executed, or that the debt was dated at the date of arrestment, provided these and all other necessary steps are taken, without any undue delay. And any of the arresters shall in the meantime a decree of forthcoming or preference, as covered payment, he shall nevertheless be liable for the sum recovered to those who shall be found to have a *pari passu* preference, after allowance out of the fund of the estate of making it effectual. And all arrestments entered within the period of four months subsequent to the bankruptcy, for attaching the same estate, shall rank with each other according to the date of the law and practice; but shall not come in preference to those used prior to the period aforesaid.

10. In the competition of arrestments, an assignation by the common debtor, if intimated before arrestment, is preferred to the arrestment. If the assignation is granted after the arrestment, but not intimated till after the arrestment is preferred.

11. *POINDING* is that diligence applicable to moveable subjects, by which their property is directed to the creditor. No poinding proceeds, till a charge be given to the debtor or performer, and the days thereof be counted; except poindings against vassals for their rents, and poindings against tenants for rent, upon the landlord's own decree; in which the ancient custom of poinding without charge continues. A debtor's goods may be poinded by one creditor, though they have been already poinded by another; for arrestment is an imperfect diligence, leaves the right subject still in the debtor, and so cannot prevent a creditor from using a more perfect

which has the effect of carrying the property directly to himself.

11. No cattle pertaining to the plough, nor instrument of tillage, can be poinded in the time of labouring or tilling the ground, unless where the debtor has no other goods. By labouring time is understood, that time, in which that tenant, whose goods are to be poinded, is ploughing, tho' he should have been earlier or later than his neighbours; but summer fallowing does not fall under this rule.

12. In the execution of poinding, first, the debtor's goods must be appraised on the ground of the lands where they are laid hold on. Next, the messenger must, after public intimation by three justices, declare the value of the goods according to the appraisement, and require the debtor to make payment of the debt, including interest and expenses. If payment shall be offered to the creditor, or in his absence to his lawful attorney; or in case of refusal by them, confiscation of the debt shall be made in the hands of the judge ordinary, or his clerk, the goods must be left with the debtor; if not, the messenger may either leave the goods in the debtor's possession, or remove them to a place of security, after declaring the property of them to belong to the poinder, and leaving a schedule of the poind with the debtor. In the 3d place, the execution of the poind is to be forthwith reported to the judge ordinary, who grants warrant for rouping the effects, exposing the same at no less than the appraiser value.

13. Ministers may poind for their stipends, upon one appraisement on the ground of the lands, and landlords were always in use to poind so, for their rents. Poinding, whether it be considered as a sentence, or as the execution of a sentence, must be proceeded in between sun rising and sun setting; or at least it must be finished before the going off of day light.

14. Any person who stops a poinding *via facti*, on grounds pretences, is liable, both criminally, in the pains of forcement (see CHAP. III. Sect. IV. (10.)) and civilly, in the value of the goods which might have been poinded by the creditor.

15. By the foresaid statute 33d Geo. III. cap. 72. § 7. it is declared, that a person is rendered bankrupt, as thereby directed, no poinding of the moveables belonging to such a bankrupt, within 30 days before his bankruptcy, or within 4 calendar months thereafter, shall give a preference to the poinder; but that every other creditor of the bankrupt having liquidated grounds of debt, or decrees for payment, and summoning such poinder before the 4 months are elapsed, shall be entitled to a proportional share of the price of the goods so poinded offering to his debt; deducting always the expence of such poinding, together with ten per cent on the said price, or appraised value, which the poinder shall retain to account of his debt in preference to the other creditors; the said debt being thereby so far diminished in the competition with them, saving always the husband's right of hypothec for rents or other hypothec known in law.

## SECT. XIX. Of Prescription.

1. PRESCRIPTION, which is a method, both of establishing and of extinguishing property, is either *positive* or *negative*. *Positive* prescription is generally defined, as the Roman *usucapio*, The acquisition of property (it should rather be, when applied to our law, the securing it against all further challenge) by the possessor's continuing his possession for the time which law hath declared necessary for that purpose: *negative*, is the loss or amission of a right, by neglecting to follow it forth, or use it, during the whole time limited by law.

2. Positive prescription was first introduced into our law by 1617, c. 12. which enacts, that whoever shall have possessed his lands, annual rents, or other heritages, peaceably, in virtue of infeftments, for 40 years continually after their dates, shall not thereafter be disquieted in his right by any person pretending a better title. Under *heritages* are comprehended every right that is *fundus annexum*, and capable of continual possession.

3. The act requires, that the possessor produce, as his title of prescription, a charter of the lands preceding the 40 years possession, with the seisin following on it: and where there is no charter extant, seisins, one or more, standing together for 40 years, and proceeding either on retours or precepts of *clare constat*. Singular successors must produce for their title of prescription, not only a seisin, but its warrant, as a charter, disposition, &c. either in their own person, or in that of their author: but the production, by an heir, of seisins, one or more, standing together for 40 years, and proceeding on retours or precepts of *clare constat*, is sufficient.

4. The negative prescription of obligations, by the lapse of 40 years, was introduced into our law long before the positive, (1469, c. 29.—1474, c. 55.) This prescription is now amplified by the foresaid act, 1617, which has extended it to all actions competent upon heritable bonds, reversions and others whatsoever; unless where the reversions are either incorporated in the body of the wadset right, or registered in the register of reversions: And reversions so incorporated, or registered, are not only exempted from the negative prescription, but they are an effectual bar against any person from pleading the positive.

5. A shorter negative prescription is introduced by statute, in certain rights and debts. Actions of *spuilzie*, *election*, and *others of that nature*, must be pursued within three years after the commission of the fact on which the action is founded. Under the general words, *and others of that nature*, are comprehended all actions, where the pursuer is admitted to prove his libel by his own oath *in litem*.

6. Servants fees, house-rents, men's ordinaries, (*i. e.* money due for board), and merchants accounts, fall under the triennial prescription, (by 1579, c. 83.) There is also a general clause subjoined to this statute, of *other like debts*, which includes alimentary debts, wages due to workmen, and accounts due to writers, agents, or procurators. These debts may, by this act, be proved after the three years, either by the writing or oath of the debtor; so that they prescribe only as to the mean

mean of proof by witnesses; but after the three years, it behoves the creditor to refer to the debtor's oath, not only the constitution, but the subsistence of the debt. In the prescription of house rents, servants fees, and alimony, each term's rent, fee, or alimony, runs a separate course of prescription; so that in an action for these, the claim will be restricted to the arrears incurred within the three years immediately before the citation: But, in accounts, prescription does not begin till the last article; for a single article cannot be called an account. Actions of removing must also be pursued within three years after the warning. Reductions of erroneous retours prescribe, if not pursued within 20 years.

7. Ministers stipends and multures prescribe in 5 years after they are due; and arrears of rent, 5 years after the tenant's removing from the lands. As the prescription of mails and duties was introduced in favour of poor tenants, that they might not suffer by neglecting to preserve their discharges, a proprietor of lands subject to a liferent, who had obtained a lease of all the liferented lands from the liferenter, is not entitled to plead it, nor a tackman of one's whole estate, who had by the lease a power of removing tenants. Bargains concerning moveables, or sums of money which are proveable by witnesses, prescribe in five years after the bargain. Under these are included sales, locations, and all other consensual contracts, to the constitution of which writing is not necessary. But all the abovementioned debts, may, after the five years, be proved, either by the oath or the writing of the debtor; of which above, § 6. A quinquennial prescription is established in arrestments, whether on decrees or depending actions: The first prescribe in 5 years after using the arrestment, and the last in five years after sentence is pronounced on the depending action.

8. No person binding for or with another, either as cautioner or co-principal, in a bond or contract for a sum of money, continues bound after 7 years from the date of the bond, provided he has either a cause of relief in the bond, or a separate bond of relief, intimated to the creditor, at his receiving the bond. But all diligence used within the seven years against the cautioner shall stand good. The statute excludes all cautioneries for the faithful discharge of officers; these not being obligations in a bond or contract for sums of money: and practice has denied the benefit of it to all judicial cautioners, as cautioners in a suspension.—Actions of count and reckoning, competent either to minors against their tutors or curators, or *vice versa*, prescribe in ten years after the majority or death of the minor.

9. Holograph bonds, missive letters, and books of account, not attested by witnesses, prescribe in 20 years, unless the creditor shall thereafter prove the verity of the subscription by the debtor's oath. It is therefore sufficient to save from the effect of the prescription, that the constitution of the debt is proved by the party's oath after the 20 years; whereas, in stipends, merchants accounts, &c. actually the constitution, but the subsistence of the debt, must be proved by writing or the debtor's oath, after the term of prescription. Some laws extend this prescription of holograph writ-

tings to all obligations for sums not exceeding L. 100 Scots, which are not attested by witnesses, because though these are in practice sustained they ought not to have the same duration deeds attested by witnesses. Though in the prescriptions of debts, the right of action is ver lost, if not exercised within the time limited, yet where action was brought on any of debts, before the prescription was run, it is not lost, like any other right, for 40 years. A statute defeated the purpose of the acts establishing prescriptions, all processes upon warnings, seizures, ejections, or arrestments, or for payment contained in act 1669, c. 9. are by the said act joined with 1685, c. 14, declared to prescribe five years, if not wakened within that time. CHAP. III. Sect. I. § 26.

10. The duration of bills is limited to six years by the 12 Geo. III.; rendered perpetual by the 13 Geo. III. Thus also, a receipt for bills given by a writer to his employer, not filled up within 23 years, was found not productive of an action. The prescriptions of the restitution of mine the benefit of inventory, &c. are explained in proper places.

11. In the positive prescription, as established by the act 1617, the continued possession for years, proceeding upon a title of property chargeable with falsehood, secures the possessor against all other grounds of challenge, and in summe *bona fides, presumptione juris et de jure* the long negative prescription, *bona fides* in a debtor is not required: the creditor's neglect to insist for so long a time, is construed as a bandoning of his debt, and so is equivalent to a discharge. Hence, though the subsistence of a debt should be referred to the debtor's oath after the 40 years, he is not liable.

12. Prescription runs *de momento in momentum* the whole time defined by law must be complete before a right can be either acquired or lost by that interruption, made on the last day of the year, breaks its course. The positive prescription runs against the sovereign himself, even as to annexed property; but it is generally thought cannot suffer by the negative; he is secure against the negligence of his officers in the management of processes, by express statute, 1600. The negative as well as the positive prescription runs against the church, though churchmen but a temporary interest in their benefices, because the rights of beneficiaries to their benefices are liable to accidents, through the frequent removal of incumbents, 15 years possession does, by the Roman chancery which we have also found a presumptive title in the beneficiary this is not properly prescription; for if he is recovered, perhaps out of the incumbent's hands, it shall appear, that he has possessed the benefice or other subjects to a greater extent than he is entitled to, his possession will be restricted accordingly. The right must not be confounded with that established in favour of churchmen, which is called a prescription upon a possession of 10 years.

13. The clause in the act 1617, giving effect to the prescription, is extended to the positive prescription, as well as to the negative prescription, by the act

minority is not admitted in the case of children, where there is a continual of minors, that being a *casus insolitus*: expressly excepted in several of the statutes, as 1; 79, c. 18—1669, c. 9; law leaves them in the common case, be subject to the common rules.

Prescription does not run *contra non valentem* against one who is barred, by some disability, from pursuing; for in such case, diligence nor dereliction can be imputed

certain rights are incapable of prescriptions that law has exempted from common. *Res mere facultatis*, e. g. a faculty to subject with debts, to revoke, &c. cannot be exercised at any time: hence, a person's right of using any act of property on lands, cannot be lost by the greatest time. 7. Exceptions competent to a pleading an action, cannot prescribe, unless the action is founded on a right produced within the years of prescription. Obligations of yearly pensions or pay-ments, though no demand has been made on 40 years, do not suffer a total prescription: they subsist as to the arrears fallen due at period; because prescription cannot affect an obligation till it be payable, and a pension or payment is considered as a debt.

A right can be lost *non utendo* by one, unless that prescription be to establish a debt. Hence the rule arises, *juri sanguinis non scribitur*.

Prescription may be interrupted by any act by the proprietor or creditor uses his right of debt. In all interruptions, notice be given to the possessor of the subject, or, that the proprietor or creditor intends upon his right. All writings whereby a person himself acknowledges the debt, and offers for payment brought, or diligences taken upon his obligation, by holding, arrestment, &c. must be effectual to prescription.

Interruptions, by citation upon libelled actions, where they are not used by a minor, if not renewed every seven years: but the appearance of parties, or any judicial proceeding thereupon, it is no longer a bare plea, but an action which subsists for 40 years. It is found, that the sexennial prescription is not interrupted by a blank citation, as in the court of admiralty. Citations for the prescription of real rights must be by messengers; and the summonses, on which citations proceed, must pass the signature bill, and be registered within 60 days after execution, in a particular register approved that purpose: and where interruption of rights is made *via facti*, an instrument taken upon it, and recorded in the said register, otherwise it can have no effect against successors.

Interruption has the effect to cut off the

XIII. PART I.

course of prescription, so that the person prescribing can avail himself of no part of the former time, but must begin a new course, commencing from the date of the interruption. Minority, therefore, is no proper interruption: for it neither breaks the course of prescription, nor is it a document or evidence taken by the minor on his right: it is a personal privilege competent to him, by which the operation of the prescription is indeed suspended during the years of minority, which are therefore discounted from it; but it continues to run after majority, and the years before and after the minority may be conjoined to complete it. The same doctrine applies to the privilege arising from one's incapacity to act.

20. Diligence used upon a debt, against any one of two or more co-obligants, prescribes the debt itself, and so interrupts prescription against all of them; except in the special case of cautioners, who are not affected by any diligence used against the principal debtor. In the same manner, a right of annual rent, constituted upon two separate tenements, is preserved as to both from the negative prescription, by diligence used against either of them. But whether such diligence has also the effect to hinder the possessor of the other tenement by singular titles from the benefit of the positive prescription, may be doubted.

### III. OF SUCCESSION.

#### SECT. XX. Of SUCCESSION in HERITABLE RIGHTS.

1. SINGULAR successors are those who succeed to a person yet alive, in a special subject by singular titles; but succession in its proper sense, is a method of transmitting rights from the dead to the living. Heritable rights descend by succession to the HEIR properly so called; moveable rights to the *executors*, who are sometimes said to be heirs in moveables. Succession is either by *special destination*, which descends to those named by the proprietor himself; or *legal*, which devolves upon the persons whom the law marks out for successors, from a presumption, that the proprietor would have named them had he made a destination. The first is in all cases preferred to the other, as presumption must yield to truth.

2. In the succession of heritage, the heirs at law are otherwise called *heirs general*, *heirs vulgariter*, or *heirs of line*; and they succeed by the right of blood, in the following order. First, descendants; among these, sons are preferred to daughters, and the eldest son to all the younger. Where there are daughters only, they succeed equally, and are called heirs portioners. Failing immediate descendants, grand-children succeed; and in default of them, great-grandchildren; and so on *in infinitum*: preferring, as in the former case, males to females, and the eldest male to the younger.

3. Next after descendants, collaterals succeed; among whom the brothers *german* of the deceased have the first place. But as, in no case, the legal succession of heritage is, by the law of Scotland, divided into parts, unless where it descends to females; the immediate younger brother of the deceased excludes the rest, according to the rule,

(G) *heritages*

their property. The heirs, therefore, to such estate, are absolute fiars, and they may alter the destination at pleasure. Estates with clauses prohibitory, e. g. that it shall not be lawful to the heirs to sell or alien the lands in prejudice of the son, none of the heirs can alien gratuitously; but the members of entail may contract which will be effectual to the creditors, or use of the estate for onerous causes. In such cases, the maker himself may alter the estate, 1. Where it has been granted for a particular cause, as in mutual tailzies; or, 2. Where the maker is expressly disabled, as well as the heirs.

Where a tailzie is guarded with irritant and resolutive clauses, the estate entailed cannot be altered by the debt, or deed, of any of the persons succeeding thereto, in prejudice of the substitution.

By statute 1685, c. 22. the entail must be entered in a special register established for that purpose; and the irritant and resolutive clauses inserted, not only in the procuratories, and scissins, by which the tailzies are constituted, but in all the after conveyances; otherwise they can have no force against successors. But a tailzie, even without clauses, is effectual against the heir of the substitution, or against the institute who accepts of it. It has been found, that an entail, though contracted before the act 1685, was in effect, because not recorded in terms of the act. The heir of entail has full power over the estate, except in so far as he is expressly fettered by the act. Heirs of entail are notwithstanding any restrictions in the entail, to improve their estates by granting, building farm-houses, draining, including, exchanging, under certain limitations, and repayment of three parts of the expense in the next heir of entail.—This act extends to all tailzies, whether made prior or posterior to 1685.

The heir, who counteracts the directions of the entail, by alienating any part of the estate, or by contracting debt that infringes the substitution; the lands entailed must be actualized upon the debt contracted.

When the heirs of the last person specially named in a tailzie come to succeed, the irritancies no longer operate in favour of whom the substitution operates; and consequently, the fee, as before tailzied, becomes simple and absolute in the person of such heirs. By the late Act Geo. II. for abolishing wardholdings, the lands purchased within Scotland, notwithstanding the strictest entail; and where the lands are in the hands of minors or fatuous persons, the Majesty may purchase them from the curators or guardians. And heirs of entail may sell the lands and vassals the superiorities belonging to the estate; but in all these cases, the price is to be paid in the same manner, that the lands and vassalries sold were settled before the sale. The same rights, not only of land estates, but of heritable rights, are sometimes granted to two or more persons in conjunct fee. Where a right is so grant-

ed to two strangers, without any special clause adjoined to it, each of them has an equal interest in the fee, and the part of the deceased descends to his own heir. If the right be taken to the two jointly, and the longest liver and their heirs, the several shares of the conjunct fiars are affectable by their creditors during their lives: but, on the death of any one of them, the survivor has the fee of the whole, in so far as the share of the predeceased remains free, after payment of his debts. Where the right is taken to the two in conjunct fee, and to the heirs of one of them, he to whose heirs the right is taken is the only fiar; the right of the other resolves into a simple life-rent: yet where a father takes a right to himself and his son jointly, and to the son's heirs, such right being gratuitous, is not understood to strip the father of the fee, unless a contrary intention shall plainly appear from the tenor of the right.

16. Where a right is taken to a husband and wife, in conjunct fee and life-rent, the husband, as the *persona dignior*, is the only fiar: the wife's right resolves into a life-rent, unless it be presumable, from special circumstances, that the fee was intended to be in the wife. Where a right of moveables is taken to husband and wife, the heirs of both succeed equally, according to the natural meaning of the words.

17. Heirs of provision are those who succeed to any subject, in virtue of a provision in the investiture, or other deed of settlement.

18. Though all provisions to children, by marriage contract conceived in the ordinary form, being merely rights of succession, are postponed to every onerous debt of the grantor, even to those contracted posterior to the provisions; yet where a father executes a bond of provision to a child actually existing, whether such child be the heir of a marriage or not, a proper debt is thereby created, which, though it be without doubt gratuitous, is not only effectual against the father himself and his heirs, but is not reducible at the instance even of his prior onerous creditors, if he was solvent at the time of granting it.

19. In marriage contracts, the conquest, or a certain part of it, is often provided to the issue; by which is meant whatever real addition shall be made to the father's estate during the marriage by purchase or donation. Conquest therefore must be free, i. e. what remains after payment of the father's debts. As in other provisions, so in conquest; the father is still fiar, and may therefore dispose of it for onerous or rational causes. Where heritable rights are provided to the heirs of a marriage, they fall to the eldest son, for he is the heir at law in heritage. Where a sum of money is so provided, the word *heir* is applied to the subject of the provision, and so marks out the executor, who is the heir in moveables. When an heritable right is provided to the bairns (or issue) of a marriage, it is divided equally among the children, if no division be made by the father; for such destination cuts off the exclusive right of the legal heir. No provision granted to bairns, gives a special right of credit to any one child, as long as the father lives: the right is granted *familie*; so that the whole must indeed go to one or other of them; but the father has a power inherent in him,

to divide it among them, in such proportions as he thinks best, yet so as none of them may be entirely excluded, except in extraordinary cases.

20. A clause of return is that, by which a sum in a bond or other right, is in a certain event limited to return to the grantor himself, or his heirs.

21. An heir is, in the judgment of law, *eadem persona cum defuncto*, and so represents the deceased universally, not only in his rights, but in his debts: in the first view, he is said to be heir *active*; in the second, *passive*.

22. Before an heir can have an active title to his ancestor's rights, he must be entered by service and retour. He who is entitled to enter heir, is, before his actual entry, called *apparent heir*. The bare right of apparenay carries certain privileges with it. An apparent heir may defend his ancestor's titles against any third party who brings them under challenge. Tenants may safely pay him their rents; and after they have once acknowledged him by payment, he may compel them to continue it; and the rents not uplifted by the apparent heir belong to his executors, upon his death.

23. As an heir is, by his entry, subjected universally to his ancestor's debts, apparent heirs have therefore a year (*annus deliberandi*) allowed to them from the ancestor's decease, to deliberate whether they will enter or not; till the expiration of which, though they may be charged by creditors to enter, they cannot be sued in any process founded upon such charge.

24. All services proceed on briefs from the chancery, which are called *briefs of inquest*, and have been long known in Scotland. The judge, to whom the brief is directed, is required to try the matter by an inquest of 15 sworn men. The inquest, if they find the claim verified, must declare the claimant heir to the deceased, by a verdict or service, which the judge must attest, and return the brief, with the service proceeding on it, to the chancery; from which an extract is obtained called the *retour of the service*.

25. The service of heirs is either *general* or *special*. A *general* service vests the heir in the right of all heritable subjects, which either do not require seisin, or which have not been perfected by seisin in the person of the ancestor. A public right, therefore, according to the feudal law, though followed by seisin, having no legal effects till it be confirmed by the superior, must, as a personal right, be carried by a general service. A *special* service, followed by seisin, vests the heir in the right of the special subjects in which the ancestor died in seisin.

26. If an heir, doubtful whether the estate of his ancestor be sufficient for clearing his debts, shall, at any time within the *annus deliberandi*, exhibit upon oath a full inventory of all his ancestor's heritable subjects, to the clerk of the shire where the lands lie; or, if there is no heritage requiring seisin, to the clerk of the shire where he died; and if, after the same is subscribed by the sheriff or sheriff-depute, the clerk, and himself, and registered in the sheriff's books, the extract thereof shall be registered within 40 days after expiration of the *annus deliberandi* in the general register appointed for that purpose, his subsequent entry will subject him no farther than to the value

of such inventory. If the inventory be and registered within the time prescribed, may serve on it, even after the year.

27. Creditors are not obliged to acquiesce in the value of the estate given up by the heir, if they be real creditors, may bring the estate to public sale, in order to discover its true value; an estate is always worth what can be got for it.

28. Practice has introduced an anomaly of entry, without the interposition of an heir, by the sole consent of the superior; who, satisfied that the person applying to him is the next heir, grants him a precept (called *consuetudo*), from the first words of its reciting, mandating his bailie to in seise him in the estate that belonged to his ancestor. Of the nature is the entry by *HASP AND STAPLE*, commonly used in burgage tenements of houses; the bailie, without calling an inquest, or declaring a person heir, upon evidence before himself; and, at the same time in the subject, by the symbol of the hasp and staple of the door. Charges given by creditors to the apparent heirs to enter, stand in the place of a real entry, so as to support the credit of the estate. See SECT. XII; § 2.

29. A general service cannot include a special one; since it has no relation to any specific subject, and carries only that class of rights which seisin has not proceeded; but a special service implies a general one of the same kind or class, and consequently carries even such right which has not been perfected by seisin. Service is required to establish the heir's right in titles of honour, or offices of the highest dignity; descend *jure sanguinis*.

30. An heir, by immixing with his estate without entry, subjects himself to liability as if he had entered; or, in our law, purchases a passive title. The only passive title which an apparent heir becomes liable for all his ancestor's debts, is *gestio pro re aliena*; his behaving as none but an heir has right. Behaviour as heir is inferred from the heir's intromission, after the death of the ancestor, with any part of the lands or other heritable subjects belonging to the deceased, to which the heir himself might have completed an active title.

31. This passive title is excluded, if the intromission be by order of law; or if it be confined to singular titles, and not as heir to the estate. But an apparent heir's purchase of right to his ancestor's estate, otherwise than by public roup (auction), or his possessing it as heir, is deemed behaviour as heir.

32. Behaviour as heir is also excluded, if the intromission is final, unless an intention to satisfy the ancestor's creditors be presumable from the circumstances attending it.

33. Another passive title in heritage, incurred by the apparent heir's accepting the estate right from the ancestor, to any particular estate to which he himself might have succeeded as heir; and it is called *præscriptio hereditatis*. If the right be onerous, there is no passive

consideration paid for it does not amount to its full value, the creditors of the deceased may reduce it, insofar as it is gratuitous, but still it infers no passive title.

34. The heir incurring this passive title is no farther liable, than if he had at the time of his acceptance entered heir to the granter, and so subjected himself to the debts that were then chargeable against him; but with the posterior debts he has nothing to do, not even with those contracted between the date of the right and the instrument taken upon it, and he is therefore called *successor titulo lucrativo post contractum debitum*.

35. Neither of these passive titles takes place, unless the subject intermeddled with or disposed be such as the intromitter or receiver would succeed to as heir. In this also, these two passive titles agree, that the intromission in both must be after the death of the ancestor; for there can be no *termini habitiles* of a passive title, while the ancestor is alive. But in the following respect they differ: *Gestio pro herede*, being a vicious passive title founded upon a quasi delict, cannot be objected against the delinquent's heir, if process has not been interdicted while the delinquent himself was alive; whereas the *successor titulo lucrativo* is by the acceptance of the disposition understood to have entered into a tacit contract with the granter's creditors, by which he undertakes the burden of their debts; and all actions founded on contract are transmissible against heirs.

36. An apparent heir, who is cited by the ancestor's creditor in a process for payment, if he offers any peremptory defence against the debt incurred a passive title: for he can have no interest to object against it, but in the character of heir.

37. By the principles of the feudal law, an heir, when he is to complete his titles by special service, and necessarily pass over his immediate ancestor, as his father, if he was not infert; and serve heir to that ancestor who was last vest and seized in the right, and in whose *hereditas jacens* the right must remain, till a title be connected thereto from him. As this bore hard upon creditors who might think themselves secure in contracting with a person who they saw for some time in the possession of an estate, and from thence concluded that it was legitimated in him it is therefore provided by act 1695 that every person, passing over his immediate ancestor who had been three years in possession, and serving heir to one more remote, shall be liable for the debts and deeds of the person interjected, to the value of the estate to which he is served.

38. Our law, from its jealousy of the weakness of mankind while under sickness, and of the impetuosity of friends: on that occasion, has declared that all deeds affecting heritage, if they be granted by a person on deathbed, (i. e. after contracting a sickness which ends in death), to the danger of the heir, are ineffectual, except where the debts of the granter have laid him under a necessity to alienate his lands. As this law of deathbed is founded solely in the privilege of the heir, deathbed deeds, when consented to by the heir, are not reducible. The term properly opposed to deathbed is *liege possie*, by which is understood a state of death; and it gets the name, because persons in death have the *legitima potestas*, or lawful power, of disposing of their property at pleasure.

39. The two extremes being proved, of the granter's sickness immediately before signing, and of his death following it, though at the greatest distance of time, did, by our former law, found a presumption that the deed was granted on deathbed, which could not have been elided but by a positive proof of the granter's convalescence; but now the allegation of deathbed is also excluded, by his having lived 60 days after signing the deed. The legal evidence of convalescence is the granter's having been, after the date of the deed, at kirk OR market unsupported; for a proof of either will secure the deed from challenge. The going to kirk or market must be performed when the people are met together in the church or churchyard for any public meeting, civil or ecclesiastical, or in the market-place at the time of public market. No other proof of convalescence is receivable because at kirk and market there are always present unsuspected witnesses whom we can hardly be sure of in any other case.

40. The privilege of setting aside deeds *ex capite lethi*, is competent to all heirs, not to heirs of line only, but of conquest, tailzie, or provision; not only to the immediate, but to remoter heirs, as soon as the succession opens to them. But, where it is consented to or ratified by the immediate heir, it is secured against all challenge, even from the remoter.

41. The law of deathbed strikes against dispositions of every subject to which the heir would have succeeded, or from which he would have had any benefit, had it not been so disposed. Deathbed deeds granted in consequence of a full or proper obligation in *liege possie*, are not subject to reduction; but, where the antecedent obligation is merely natural, they are reducible. By stronger reason, the deceased cannot, by a deed merely voluntary, alter the nature of his estate on deathbed to make the prejudice of his heir, so as from heritable to make it moveable; but if he should, in *liege possie*, exclude his apparent heir, by an irrevocable deed containing reserved faculties, the heir cannot be heard to quarrel the exercise of these faculties on deathbed.

42. In a competition between the creditors of the deceased and of the heir, our law (act 1661) has justly preferred the creditors of the deceased, as every man's estate ought to be liable, in the first place, for his own debt. But this preference is, by the statute, limited to the case where the creditors of the deceased have used diligence against their debtor's estate, within three years from his death; and therefore the heir's creditors may, after that period, affect it for their own payment. All dispositions by an heir, of the ancestor's estate, within a year after his death, are null, in so far as they are hurtful to the creditors of the ancestor. This takes place, though these creditors should have used no diligence, and even where the dispositions are granted after the year: It is thought they are ineffectual against the creditors of the deceased who have used diligence within the three years.

SECT. XXI. Of SUCCESSION in MOVEABLES.

1. IN the succession of moveable rights, it is an universal rule, that the next in degree to the deceased

ceased (or next of kin) succeeds to the whole; and if there are two or more equally near, all of them succeed by equal parts, without that prerogative, which takes place in heritage, of the eldest son over the younger, or of males over females. Neither does the right of representation (explained, SECT. XX. § 4.) obtain in the succession of moveables, except in the single case of competition between the full blood and the half blood; for a niece by the full blood will be preferred before a brother by the half blood, though she is by one degree more remote from the deceased than her uncle. Where the estate of a person deceased consists partly of heritage, and partly of moveables, the heir in the heritage has no share of the moveables, if there are others as near in degree to the deceased as himself: but where the heir, in such case, finds it his interest to renounce his exclusive claim to the heritage, and betake himself to his right as one of the next of kin, he may collate: • communicate the heritage with the others, who in their turn must collate the moveables with him; so that the whole is thrown into one mass, and divided equally among all of them. This doctrine holds, not only in the line of descendants, but of collaterals; for it was introduced, that the heir might in no case be worse than the other next of kin.

2. One may settle his moveable estate upon whom he pleases, excluding the legal successor, by a testament; which is a written declaration of what a person wills to be done with his moveable estate after his death. No testamentary deed is effectual till the death of the testator; who may therefore revoke it at pleasure, or make a new one, by which the first loses its force, according to the rule, *voluntas testatoris est ambulatoria usque ad mortem*; and hence testaments are called *last or latter wills*. Testaments, in their strict acceptation, must contain a nomination of executors, *i. e.* of persons appointed to administer the succession according to the will of the deceased: yet nothing hinders one from making a settlement of moveables, in favour of an universal legatee, though he should not have appointed executors; and on the other part, a testament where executors are appointed is valid, though the person who is to have the right of succession should not be named. In this last case, the executor nominated be a stranger, *i. e.* one who has no legal interest in the moveable estate; he is merely a trustee, accountable to the next of kin; but he may retain a third of the dead's part (explained in § 6.) for his trouble in executing the testament; in payment of which, legacies, if any be left to him, must be imputed. The heir, if he be named executor, has right to the third as a stranger; but if one be named who has an interest in the legal succession, he has no allowance, unless such interest be less than a third. Nuncupative or verbal testaments are not, by the law of Scotland, effectual for supporting the nomination of an executor, let the subject of the succession be ever so small: but verbal legacies, not exceeding real Scots, are sustained: and even where they are granted for more, they are effectual only as to the excess.

3. A LEGACY is a donation by the deceased, to be paid by the executor to the legatee. It may

be granted either in the testament or in writing. Legacies are not due till the death; and consequently they can tra right to the executors of the legatee, in that the granter survives him. A case some years ago, where a testator left a legatee when the legatee arrived at a certain age. The legatee survived the testator, but did not receive the legacy until he was of age. The legacy was payable. It was found upon the authority of the Roman law, that a legatee vested in the legatee a mortgaged legacy upon his decease was due to the legatee's kin.

4. Legacies, where they are general, certain sum of money indefinitely, give the legatee no right in any one debt or subject, but only insist in a personal action against the executor, for payment out of the testator's estate. A special legacy, *i. e.* of a particular debt or subject, or of a particular subject belonging to the testator, is of the nature of an assignation, and the property of the special debt or subject vests upon the testator's death, in the legatee, therefore directly sue the debtor or possessor, as no legacy can be claimed till the debts of the testator are paid; the executor must be cited in such process, if it may be known, whether there are funds sufficient for answering the legacy. What is not enough for payment of all the debts of the testator, each of the general legatees must suffer a proportional abatement: but a special legatee takes the legacy entire, though there should be not enough for payment of the rest; and, on the other hand, if the debt or subject be exhausted, the legatee has no claim, if the debt or subject be exhausted, whatever the extent of the legacy may be.

5. Minors, after puberty, can test with their parents, wives without their husbands, sons interdicted without their interdicted fathers, bastards cannot test, except in the cases as set forth; SECT. XXII. § 3. As a part of the goods, falling under the community of the goods, belonging to a husband upon his decease, to his widow, *jure relicto* certain share to the children, called the *portion natural*, or *bairns part of gear*; if the father has a wife or children, though he be the administrator of all these goods during his life, he consequently may alien them by a deed *in legem possit*, even gratuitously, if he has no intent to disappoint the wife or children, or shall appear, yet cannot impair their share gratuitously on death-bed; nor can he dispose of his moveables to their prejudice by testament, if it should be made in *legem possit*; since the deed does not operate till the death of the testator, which period the division of the goods in favour of the wife and children.

6. If a person deceased leaves a widow and child, his testament, or, in other words, his estate in communion, divide in two: one half to the widow; the other is the dead's part absolute property of the deceased, on which the testator can test, and which falls to his next of kin if he dies intestate. Where he leaves children and a widow, but no widow, the children get their LEGITIME: the other half is the de

It is also to the children, if the father has died upon it. If he leaves both widow and child, the division is tripartite: the wife takes one third by herself; another falls, as legitime, to the child equally among them, or even to an illegitimate child though he should succeed to the hereditary estate remaining third is the dead's part. If the wife predeceases without children, one third is retained by the husband, the other falls to the child of kin: Where she leaves children, the division is bipartite, by the common law, since no legitime is truly due on the husband's death: yet it is in practice tripartite; one third remains with the surviving father, as if it were due to him *proprio nomine*, and another third is administered for the legitime for his child remaining third, being the wife's share, or her children, whether of that or any foreign birth; for they are all equally her next

of kind. Before a testament can be divided, the debts of the deceased are to be deducted; for all legacies must be free. As the husband has the right of burdening the goods in communion, they affect the whole, and so lessen the legitime share of the relict, as well as the child's part. His funeral charges, and the mourning expences due to the widow, are considered as proper debts; but legacies, or other grants granted by him on death-bed, affect the dead's part. Bonds bearing interest, due to the deceased, cannot diminish the relict's share, such bonds, when due to the deceased, do not affect it. The funeral charges of the wife surviving, fall wholly on her executors, who are next of kin to her share. Where the deceased leaves no family, neither husband, wife, nor child, the testament suffers no division, but all is the part of the next of kin.

The whole issue of the husband, not only by a second marriage which was dissolved by his death, but by any former marriage, has an equal interest in the legitime; otherwise the children of the first marriage would be cut out, as they could not have the legitime during their father's life. But the legitime is due, 1. Upon the death of a mother. 2. Neither is it due to grandchildren, upon the death of a grandfather. Nor, 3. To children illegitimate, *i. e.* to such as, by having renounced the legitime, are no longer considered as in the line, and so are excluded from any farther share of the moveable estate than they have already received.

As the right of legitime is strongly founded in law, the renunciation of it is not to be inferentially implied. Renunciation by a child of the legitime has the same effect as his renouncing it in favour of the other children entitled to it; and consequently the share of the renouncer falls among the rest; but he does not thereby lose his right to the dead's part, if he does not expressly renounce his share in the father's executors. The renunciation of the legitime, where he is the younger child, has the effect to convert the legitime subject thereof into the dead's part, which therefore falls to the renouncer himself as next of kin, if the heir be not willing to collate the legitime with him. Yet it has been found that the

renunciation of the only younger child made the whole legitime accrue to the heir without collation.

10. For preserving an equality among all the children, who continue entitled to the legitime, we have adopted the Roman doctrine of *collatio bonorum*; whereby the child, who has got a provision from his father, is obliged to collate it with the others, and impute it towards his own share of the legitime; but if from the deed of provision, the father shall appear to have intended it as a *precipuum* to the child, collation is excluded. A child is not bound to collate an heritable subject provided to him, because the legitime is not impaired by such provision. As this collation takes place only in questions among children who are entitled to the legitime, the relict is not bound to collate donations given to her by her husband, in order to increase her legitime; and on the other part, the children are not obliged to collate their provisions, in order to increase her share.

11. As an heir in heritage must complete his titles by entry, so an executor is not vested in the right of the moveable estate of the deceased without confirmation. Confirmation is a sentence of the commissary or bishop's court, empowering an executor, one or more, upon making inventory of the moveables pertaining to the deceased, to recover, possess, and administer them, either in behalf of themselves, or of others interested therein. Testaments must be confirmed in the commissariat where the deceased had his principal dwelling house at his death. If he had no fixed residence, or died in a foreign country, the confirmation must be at *Edinburgh*, as the *commune forum*; but if he went abroad with an intention to return, the commissariat within which he resided, before he left Scotland, is the only proper court.

12. Confirmation proceeds upon an edict, which is affixed on the door of the parish church where the deceased dwelt, and serves to intimate to all concerned the day of confirmation, which must be nine days at least after publishing the edict. In a competition for the office of executor, the commissary prefers, *primo loco*, the person named to it by the deceased himself, whose nomination he ratifies or confirms, without any previous decerniture: this is called the confirmation of a testamentary executor. In default of an executor named by the deceased, universal dispoones are by the present practice preferred; after them, the next of kin; then the relict; then creditors; and, lastly, special legatees. All these must be decerned executors, by a sentence called a *decree dative*; and if afterwards they incline to confirm, the commissary authorise them to administer, upon their making inventory, and giving security to make the subject thereof forthcoming to all having interest; which is called the confirmation of a testamentary executor.

13. A creditor, whose debtor's testament is already confirmed, may sue the executor, who holds the office for all concerned, to make payment of his debt. Where there is no confirmation, he himself may apply for the office, and confirm as executor-creditor; which entitles him to sue for and receive the subject confirmed, for his own payment: and where one applies for a confirmation

as executor-creditor, every co-creditor may apply to be conjoined with him in the office. As this kind of confirmation is simply a form of diligence, creditors are exempted from the necessity of confirming more than the amount of their debts.

14. A creditor, whose debt has not been constituted or his claim not closed by decree, during the life of his debtor, has no title to demand directly the office of executor *qua* creditor: but he may charge the next of kin who stands off, to confirm, who must either renounce within twenty days after the charge, or be liable for the debt; and if the next of kin renounces, the pursuer may constitute his debt, and obtain a decree *cognitionis causâ*, against the *hereditas jacens* of the moveables, upon which he may confirm as executor-creditor to the deceased. Where one is creditor, not to the deceased, but to his next of kin who stands off from confirming, he may affect the moveables of the deceased, by obtaining himself decerned executor-dative to the deceased, as if he were creditor to him, and not to his next of kin.

15. Where an executor has either omitted to give up any of the effects belonging to the deceased in inventory, or has estimated them below their just value, there is place for a new confirmation, *ad omiffa, vel male appretiatâ*, at the suit of any having interest; and if it appears that he has not omitted or undervalued any subject *dolose*, the commissary will ordain the subjects omitted, or the difference between the estimations in the principal testament and the true values, to be added thereto; but if dolé shall be presumed, the whole subject of the testament *ad omiffa vel male appretiatâ*, will be carried to him who confirms it, to the exclusion of the executor in the principal testament.

16. The legitime and reliet's share, because they are rights arising *ex lege*, operate *ipso jure*, upon the father's death, in favour of the reliet and children; and consequently pass from them, though they should die before confirmation, to their next of kin: whereas the dead's part, which falls to the children or other next of kin in the way of succession, remains, if they should die before confirming, *in bonis* of the first deceased; and so does not descend to their next of kin, but may be confirmed by the person who, at the time of confirmation, is the next of kin to the first deceased. Special assignations, though neither intimated nor made public during the life of the grantor, carry to the assignee the full right of the subjects assigned, without confirmation. Special legacies are really assignations, and so fall under this rule. The next of kin, by the bare possession of the *ipſa corpora* of moveables, acquires the property thereof without confirmation, and transmits it to his executors.

17. The confirmation of any one subject by the next of kin, as it proves his right of blood, has been adjudged to carry the whole executry out of the testament of the deceased, even what was omitted, and to transmit all to his own executors. The confirmation of a stranger, who is executor nominated, as it is merely a trust for the next of kin, has the effect to establish the right of the next of kin to the subjects confirmed, in the same manner as if himself had confirmed them.

18. Executry, though it carries a certain de-

gree of representation of the deceased, is not an office: executors therefore are not bound to the debts due by the deceased, beyond the value of the inventory; but, at the same time, they are liable in diligence for making the executry effectual to all having interest. A creditor who confirms more than his debt, is liable in diligence for what he exceeds. Executors are not liable in interest, even for bonds recovered by them as carried into the deceased, because their office obliges them to retain the sums they have made effectual to a distribution thereof among all having interest. This holds though they should again lay out money upon interest, as they do it at risk.

19. There are certain debts of the deceased privileged debts, which were always payable to every other. Under that name are reckoned, medicines furnished to the deceased, physicians fees during that year, general charges, and the rent of his house, and servants wages for the year or term current death. These the executors are in duty bound to pay on demand. All the other creditors, who obtain themselves confirmed, or who are confirmed by the executor already confirmed, within six months after the death, are preferred, with those who have done more timely, and therefore no executor can either discharge his own debt, or pay a testamentary debt, without excluding any creditor, who shall use diligence in the six months, from the benefit of *passu* preference; neither can a decree of debt be obtained, in that period, against an executor, because, till that term be expired, it cannot be known how many creditors are entitled to the fund in his hands. If a creditor is confirmed within the six months, the executor is bound to pay for his own debt, and pay the reliet *venienti*. Such creditors of the deceased, who use diligence within a year after their death, are preferable on the subject of the fund to the creditors of his next of kin.

20. The only passive title in moveables is intromission; which may be defined an unjustifiable intrusion into the estate of a person deceased, without the assent of the law. This is not confined, as the passive title in heritable estate, to the persons interested in the succession, but strikes against all intromission, whether by the executor confirmed intromission more than he has contained, he incurs no title; fraud being in the common case, from his not giving up in inventory the subjects intromitted with. Vicious intromission is also presumed, where the repositories of the estate are not sealed up, as soon as they are incapable of sense, by his nearest relative, or by the master of such house, and then delivered to the judge ordinary, to be kept for the benefit of all having interest.

21. The passive title of vicious intromission does not take place where there is any proof or circumstance that takes off the presumption of fraud. In consequence of this rule, no intromission, or *ingredia causâ*, by the will

continue the possession of the decedent to preserve his goods for the benefit of the decedent, infers no passive title. And in principle, an intruder, by himself executor, and thereby subjecting himself to account, before action be brought against the passive titles, purges the vitiolity of the intruder: and where the intruder is interested in the succession, *e. g.* his confirmation, at any time within the death of the decedent, will give him a title, notwithstanding a prior claim of his passive title was intended only in favour of creditors, it cannot be sued against; since it arises *ex delicto*, it cannot be sued against the heir of the intruder.

any one of many delinquents may be liable to the whole punishment, so any one delinquent may be sued *in solidum* for debt, without calling the rest; but a creditor who pays, has an action of relief against the others for their share of it. If the debt is sued jointly, they are liable, not their several intrusions, but *pro*

the whole of a debtor's estate is subjected to the payment of his debts; and therefore, both the executor and the creditor are liable for them, in a question of debt; but as succession is by law to the heritable and the moveable of these ought, in a question between the executor and the creditor, to bear the burdens which are laid on the estate. Action of relief is accordingly given to the heir who has paid a moveable debt, against the executor; and *vice versa*. This is cut off by the decedent's having disposed of his land-estate or his moveables, or his debts; for such burden is construed as an alteration of the law, but merely as a farther security, unless the contrary shall be presumed from the special style of the disposition.

## II. Of LAST HEIRS and BASTARDS.

When a vassal dies without leaving any heir, the superior, as the old law stood, succeeds as last heir, both in the heritable and moveable estate of the deceased. The superior, *Quod nullius est, cadit in regem*.

lands, to which the king succeeds, he succeeds immediately of himself, the property is not taken from him, but the property is taken from the superior's hands. If they are lands of a subject, the king, who cannot be a subject, names a donatory; who, if he has a title, must obtain a decree of deodand thereafter he is presented to the superior by letters of presentation from the king, with the superior seal, in which the superior is to enter the donatory. The whole estate of the decedent is, in this case, subjected to his heir, and to the widow's legal provisions. Neither the king nor his donatory is liable beyond the value of the succession. A person who has not alienated his heritage *in vivo*, to the present.

judge of the king, who is entitled to succeed to such decedent, in the character of *ultimus heres*.

3. A bastard can have no legal heirs, except those of his own body; since there is no succession but by the father, and a bastard has no certain father. The king therefore succeeds to him, failing his lawful issue, as last heir. Though the bastard, as absolute proprietor of his own estate, can dispose of his heritage in *lege possit*, and of his moveables by any deed *inter vivos*; yet he is disabled, *ex d. f. de natalium*, from bequeathing by testament, without letters of legitimation from the sovereign. If the bastard has lawful children, he may test without such letters, and name tutors and curators to his issue. Letters of legitimation, let their clauses be ever so strong, cannot enable the bastard to succeed to his natural father, to the exclusion of lawful heirs.

4. The legal rights of succession, being founded in marriage, can be claimed only by those who are born in lawful marriage; the issue therefore of an unlawful marriage are incapable of succession. A bastard is excluded, 1. From his father's succession; because law knows no father who is not marked out by marriage. 2. From all heritable succession, whether by the father or mother; because he cannot be pronounced lawful heir by the inquest, in terms of the brief. And, 3. From the moveable succession of his mother; for though the mother be known, the bastard is not her lawful child, and legitimacy is implied in all succession conferred by law. A bastard, though he cannot succeed *jure sanguinis*, may succeed by destination, where he is specially called to the succession by an entail or testament.

5. Certain persons, though born in lawful marriage, are incapable of succession. Aliens are, from their allegiance to a foreign prince, incapable of succeeding in *feudal rights*, without naturalization. Children born in a foreign state, whose fathers were natural born subjects, and not attainted, are held to be natural born subjects. Persons professing the Popish religion, who neglect, upon attaining the age of 15, to renounce its doctrines by a signed declaration, formerly could not succeed in *heritage*; but by a late act for relief of protesting catholics, the rigour of this law is greatly mitigated. See ENGLAND, § 130.

## CHAP. III.

### Of ACTIONS.

HITHERTO OF PERSONS and RIGHTS, the two first objects of law: ACTIONS are its third object, whereby persons make their rights effectual.

#### SECT. I. Of the NATURE, DIVISION, &c. of ACTIONS.

1. AN ACTION may be defined, A demand regularly made and insisted in, before the judge competent, for the attaining or recovering of a right; and it admits of several divisions, according to the different natures of the rights pursued upon.

2. Actions are either real or personal. A real action is that which arises from a right in the thing itself, and which therefore may be directed against

out, of all or any part of his estate or effects, movable or moveable, for payment of debt, shall, when joined with insolvency, be held as sufficient proof of notour bankruptcy; and from and after the last step of such diligence, the said debtor, if living, shall be held bankrupt. It is provided by the act 1696, that all heritable bonds or writs on which seisin may follow, shall be reduced, in a question with the grantor's other creditors upon this act, to be of the date of the seisin following thereon. But this act was found to relate only to securities for former debts, and not *novi debita*.

14. Actions are divided into *rei persequutorie*, and *reale*. By the first, the pursuer insists barely to recover the subject that is his, or the debt due to him; and this includes the damage sustained. In real actions, which always arise *ex delicto*, something is also demanded by way of penalty.

15. Actions of SPUIZIE, *ejection*, and *intrusion*, are penal. An action of spuilzie is competent to one dispossessed of a moveable subject violently, without order of law, against the person dispossessing: not only for being restored to the possession of the subject, if extant, or for the value, if destroyed, but also for the violent profits, if the action be brought within three years from the spoliation. Ejection and intrusion are, in heritable subjects, what spuilzie is in moveables. The difference between the two first is, that in ejection, violence is used; whereas the intruder enters into the void possession, without either a title from the proprietor, or the warrant of a judge. The actions arising from all the three are of the same general nature.

16. The action of contravention of LAW-BORROWS is also penal. It proceeds on letters of law-borrows, (from *borg*, a cautioner), which contain a warrant to charge the party complained upon, that he may give security not to hurt the complainant in his person, family, or estate. These do not require the previous citation of the party complained upon, because the caution which the law requires is only for doing what is every man's duty; but, before the letters are executed against him, the complainant must make oath that he stands bodily harm from him. The penalty of contravention is ascertained to a special sum, according to the offender's quality.

17. The most celebrated division of actions in the law is into *petitory*, *possessory*, and *declaratory*. PETITORY ACTIONS are those, where something is demanded from the defender, in consequence of a right of property, or of credit in the matter: Thus, actions for restitution of moveables, actions of poinding, of forthcoming, and all personal actions upon contracts or qualifications, are petitory.

18. POSSESSORY ACTIONS are those which are demanded, either upon possession alone, as spuilzies; or upon possession joined with another title, as replevin; and they are competent either for getting into possession, for holding it, or for recovering it; analogous to the interdicts of the Roman law, *per vim bonorum, uti possidetis*, and *unde vi*.

19. A DECLARATORY ACTION is that, in which the right is craved to be declared in favour of the party, but nothing sought to be paid or per-

formed by the defender, such as declarators of marriage, of irritancy, &c.

21. The action of double or MULTIPLE-POINDING may be also reckoned *declaratory*. It is competent to a debtor, who is distressed, or threatened with distress, by two or more persons claiming right to the debt, and who therefore brings the several claimants into the field, in order to debate and settle their several preferences, that so he may pay securely to him whose right shall be found preferable. This action is daily pursued by an arrestee, in the case of several arrestments used in his hands for the same debt; or by tenants in the case of several adjudgers, all of whom claim right to the same rents. In these competitions, any of the competitors may bring an action of multiple-poinding in name of the tenants, or other debtors, without their consent, or even though they should disclaim the process; since the law has introduced it as the proper remedy for getting such competitions determined: And while the subject in controversy continues *in medio*, any third person who conceives he has a right to it, may, though he should not be cited as a defender, produce his titles, as if he were an original party to the suit, and will be admitted for his interest in the competition. By the foresaid bankrupt statute, however, it is competent, in the case of a forthcoming or multiple-poinding raised on an arrestment used within 60 days prior, or four calendar months subsequent to a bankruptcy, for any other creditor, who has used an arrestment, producing his interest, and making his claim, in the process at any time before the expiration of the four months, to be ranked.

22. A process of WAKENING is likewise accessory. An action is said to sleep, when it lies over not insisted in for a year, in which case its effect is suspended: but even then it may, at any time within the years of prescription, be revived or awakened by a summons, in which the pursuer recites the last step of the process, and concludes that it may be again carried on as if it had not been discontinued.

23. An action that stands upon any of the inner house rolls cannot sleep; nor an action in which decree is pronounced, because it has got its full completion: Consequently the decree may be extracted after the year, without the necessity of a wakening.

24. An action of *transumpt* falls under the same class. It is competent to those who have a partial interest in writings that are not in their own custody, against the possessors thereof, for exhibiting them, that they may be transumed for their behoof: after which full duplicates are made out, collated, and signed, by one of the clerks of court, which are called *transumpt*s, and are as effectual as an extract from the register.

25. Actions proceeded anciently upon *brives* issuing from the chancery, directed to the justiceary or judge ordinary, who tried the matter by a jury, upon whose verdict judgment was pronounced: And to this day we retain certain *brives*, as of *inguest*, *terc*, *idiotry*, *tutory*, *perambulation*, &c. But summonies were, immediately upon the institution of the college of justice, introduced in the place of *brives*. A summons, when applied to

actions pursued before the session, is a writ in the king's name, issuing from his signet upon the pursuer's complaint, authorising messengers to cite the defender to appear before the court and make his defence; with certification, if he fail to appear, that decree will be pronounced against him in terms of the summons.

26. The days indulged by law to a defender, between his citation and appearance, to prepare for his defence, are called *inducie legales*. If he is within the kingdom, 21 and 6 days, for the first and second diets of appearance, must be allowed him for that purpose; and if out of it, 60 and 15. Defenders residing in Orkney or Zetland must be cited on 40 days. In certain summonses which are privileged, the *inducie* are shortened: Spuilzies and ejections proceed on 15 days; wakenings and transferences, being but incidental, on six. See the list of privileged summonses, in act of sederunt June 29th, 1672. A summons must be executed, *i. e.* served against the defender, so as the last diet of appearance may be within a year after the date of the summons; and it must be called within a year after that diet, otherwise it falls for ever. Offence against the authority of the court, acts of malversation in office by any member of the college of justice, and acts of violence and oppression committed during the dependence of a suit by any of the parties, may be tried without a summons, by a summary complaint.

27. Defences are pleas offered by a defender for eluding an action. They are either *dilatory*, which do not enter into the cause itself, and focus only procure an absolver from the *lis pendens*: Or *peremptory*, which entirely cut off the pursuer's right of action. The first, because they relate to the terms of proceeding, must be offered *in limine judicii*, and all of them at once. But peremptory defences may be proposed at any time before sentence. By act of sederunt, however, 1787, all defences, both dilatory and peremptory, so far as they are known, must be proposed at returning the summons, under a penalty; and the same enactment extends to the cases of suspensions and advocations. The writings to be founded upon by the parties also must be produced; the intention of the court, in framing the act of sederunt, being to accelerate as much as possible the decision of causes.

28. A cause, after the parties had litigated it before the judge, was said by the Romans, to be litiscontested. By LITISCONTTESTATION a judicial contract is understood to be entered into by the litigants, by which the action is perpetuated against heirs, even when it arises *ex delicto*. By our law, litiscontestation is not formed till an act is extracted, admitting the libel or defence to proof.

## SECT. II. Of PROBATION.

1. ALL allegations by parties to a suit, must be supported by proper proof. Probation is either by writing, by the party's own oath, or by witnesses. In the case of allegations, which may be proved by either of the three ways, a proof is said to be admitted *prout de jure*; because, in such case, all the legal methods of probation are competent

to the party; if the proof he brings he be lame, he may have recourse either to or to his adversary's oath; but, if he sh take himself to the proof by oath, he can after use any other probation (for the 1 signed § 3.); and on the contrary, a pu has brought a proof by witnesses, on an act, is not allowed to recur to the oath of the defender. Single combat was, by our ancient law, admitted as evidence, in matters both civil and criminal. See BATTLE, § 2—4.

2. As obligations or deeds signed by himself, or his ancestors or authors, must be taken as evidence, the least liable exception; every debt or allegation may be proved by evidence in writing. The solemnities of probative deeds are explained in CHAP. XIV, § 3, *et seq.* Books of account kept by merchants, tradesmen, and other dealers in trade, though not subscribed, are probative against who keeps them; and, in case of a furnishing shop keeper, such books, if they are kept by him, supported by the testimony of a single witness, afford a *semiplena probatio*, which becomes full evidence by his *in* supplement. Notarial instruments and attestations by messengers bear full evidence, solemnities therein set forth were used, invalidated otherwise than by a proof of it; but they do not prove any other extraneous facts therein averred, against third parties.

3. Regularly, no person's right can be proved by his own oath, nor taken away by the oath of his adversary; because these are the bare oaths of parties in their own favour. But, in a matter in issue, if referred by one of the parties to the oath of the other, such oath, though taken in favour of the deponent himself, is decisive; because the reference is a virtual agreement between the litigants, by which they consent to put the issue of the cause upon the oath of the other.

4. A defender, though he cannot be compelled to swear to facts in a libel properly contained in trespasses, where the conclusion is to a fine, or to damages.

5. An oath upon reference is sometimes qualified by special limitations restricting it. Such qualifications, which are admitted by the judge in the oath, are called *intrinsic*; those which the judge rejects or separates from the oath are called *extrinsic*.

6. Oaths of verity, are sometimes referred to the judge to either party, *ex officio*; because they are not founded on any contract between the litigants, are not finally binding, but may be traversed on proper evidence afterwards produced. These oaths are commanded by the judge for supplying a lame or defective proof and are therefore called *oaths in* (See § 2.)

7. To prevent groundless allegations, calumny has been introduced, by which a party may demand his adversary's oath, if he believes the fact contained in his libel to be just and true.

8. In all oaths, whether verity of certification carries, or at least implies, a cer-

party does not appear at the day assign-  
ing, he shall be held *pro confesso*.  
An oath which resolves into a *non minus*,  
said to prove any point; yet where one  
upon a recent fact, to which he him-  
self, his oath is considered as a dissem-  
ble truth, and he is held *pro confesso*, as  
refused to swear.

An oath *in litem*, is that which the judge re-  
quires, for ascertaining either the quan-  
tity of goods which have been taken  
by the defender without order of law,  
or of his damages.

The law of Scotland rejects the testimony  
of a witness, 1. In payment of any sum above  
500 l. all which must be proved either *scriptu-  
mento*. 2. In all gratuitous promises,  
or the smallest trifle. 3. In all contracts,  
which is either essential to their constitu-  
tion. CHAP. II. SECT. XIV. § 2.) or where it  
is prohibited, as in the borrowing of

the other part, probation by witnesses  
is required to the extent of 1000 l. Scots, in pay-  
ment of legacies, and verbal agree-  
ments contain mutual obligations. And it  
is required to the highest extent, 1. In all bargain-  
ings, or known engagements naturally arising  
from, concerning moveable goods. 2. In  
contracts, where satisfaction, even of a written  
contract, where such obligation binds the party  
to the performance of them. 3. In facts  
which naturally admit of a proof by writing,  
though the effect of such proof should be the  
proof of a written obligation, especially if the  
contract is of fraud or violence: thus, a bond is re-  
quired, on a proof by witnesses. 4. Last-  
ing, or a creditor with the rents of  
the estate, payable in grain, may be proved  
by witnesses; and even intromission with the silver  
ware the creditor has entered into the to-  
tion of the debtor's lands.

A person, whose near relation to another  
than being a judge in his cause, can be  
as a witness for him; but he may against  
a wife or child, who cannot be con-  
sidered as giving testimony against the husband or  
brother-in-law, *perjurii*, et *metuum perjurii*.  
The witness, whose propinquity to one of  
the parties is objected to, be as nearly related to  
the other, the objection stands good.

The testimony of infamous persons is re-  
jected, if they have been guilty of crimes  
which render them infamous.

Witnesses, before they are examined in  
court, are purged of partial counsel; that is,  
they declare, that they have no interest in  
the cause, nor have given advice how to conduct it;  
nor have got neither bribe nor promise, nor  
been instructed how to depose; and that  
they have no enmity to either of the parties.

The interlocutory sentence or warrant, by  
which the witnesses are authorized to bring their proof,  
may be by way of act, or of incident diligence. In  
the former, the lord ordinary who pronounces it is no  
judge in the process; but in an incident  
diligence, which is commonly granted upon spe-

cial points, that do not exhaust the cause, the  
lord ordinary continues judge.

16. Where facts do not admit a direct proof,  
presumptions are received as evidence, which in  
many cases make as convincing a proof as the di-  
rect. Presumptions are consequences deduced  
from facts known or proved, which infer the cer-  
tainty, or at least a strong probability, of another  
fact to be proved. This kind of probation is  
therefore called *artificial*, because it requires a rea-  
soning to infer the truth of the point in question,  
from the facts that already appear in proof. Pre-  
sumptions are either, 1. *juris et de jure*; 2. *juris*;  
or, 3. *hominis* or *judicis*. The first sort obtains,  
where statute or custom establishes the truth of  
any point upon a presumption; and it is so strong,  
that it rejects all proof that may be brought to e-  
lide it in special cases. Thus, the testimony of a  
witness, who forwardly offers himself without be-  
ing cited, is, from a presumption of his partiality,  
rejected, let his character be ever so fair; and thus  
also, a minor, because he is by law presumed in-  
capable of conducting his own affairs, is upon that  
presumption disabled from acting without the con-  
sent of his curators, though he should be known  
to behave with the greatest prudence. Many such  
presumptions are fixed by statute.

17. *Presumptiones juris* are those which our law  
books or decisions have established, without found-  
ing any particular consequence upon them, or  
statuting *super presumpto*. Most of this kind are  
not proper presumptions inferred from positive  
facts, but are founded merely on the want of a  
contrary proof; thus, the legal presumptions for  
freedom, for life, for innocence, &c. are in effect  
so many negative propositions, that servitude,  
death, and guilt, are not to be presumed, without  
evidence brought by him who makes the allega-  
tion. All of them, whether they be of this sort,  
or proper presumptions, as they are only con-  
jectures formed from what commonly happens may  
be elided, not only by direct evidence, but by o-  
ther conjectures, affording a stronger degree of  
probability to the contrary. *Presumptiones hominis*  
or *judicis*, are those which arise daily from the cir-  
cumstances of particular cases; the strength of  
which is to be weighed by the judge.

18. A *fiction juris* differs from a presumption.  
Things are presumed, which are likely to be true;  
but a fiction of law assumes for truth what is ei-  
ther certainly false, or at least is as probably false as  
true. Thus an heir is feigned or considered in  
law as the same person with his ancestor. Fic-  
tions of law must, in their effects, be always li-  
mited to the special purposes of equity for which  
they were introduced. See CHAP. II. SECT. I. § 3.

### SECT. III. Of SENTENCES and their EXECUTIONS.

1. PROPERTY would be most uncertain, if de-  
bateable points might, after receiving a definitive  
judgment, be brought again in question, at the  
pleasure of either of the parties: every state has  
therefore fixed the character of final to certain  
sentences or decrees, which in the Roman law are  
called *res judicata*, and which exclude all review  
or rehearing.

2. Decrees of the court of session, are either in  
form

*foro contradiitorio*, where both parties have litigated the cause, or in absence of the defender. Decrees of the session *in foro* cannot, in the general case, be again brought under the review of the court, either on points which the parties neglected to plead before sentence (which we call *competent* and *omitted*), or upon points pleaded and found insufficient (proposed and repelled.) But decrees, tho' *in foro*, are reversible by the court, where either they labour under essential nullities; *e. g.* where they are *ultra petita*, or not conformable to their grounds and warrants, or founded on an error in calcul, &c.; or where the party against the decree is obtained has thereafter recovered evidence sufficient to overturn it, of which he knew not before. As parties might formerly reclaim against the sentences of the session, at any time before extracting the decree, no judgment was final till extract; but now, a sentence of the inner house, either not reclaimed against within six federunt days after its date, or adhered to upon a reclaiming bill, though it cannot receive execution till extract, makes the judgment final as to the court of session. And, by an order of the house of lords, March 24, 1725, no appeal is to be received by them from sentences of the session, after five years from extracting the sentence; unless the person entitled to such appeal be minor, clothed with a husband, *non compos mentis*, imprisoned, or out of the kingdom. Sentences pronounced by the lord ordinary have the same effect, if not reclaimed against, as if they were pronounced in presence; and all petitions against the interlocutor of an ordinary must be preferred within 8 federunt days after signing such interlocutor.

3. Decrees, *in absence* of the defender, have not the force of *res judicate* as to him; for where the defender does not appear, he cannot be said to have subjected himself by the judicial contract which is implied in litigation; a party therefore may be restored against these, upon paying to the other his costs in recovering them. The sentences of inferior courts may be reviewed by the court of session,—before decree, by advocacy,—and after decree, by suspension or reduction; which two last are also the methods of calling in question such decrees of the session itself, as can again be brought under the review of the court.

4. REDUCTION is the proper remedy, either where the decree has already received full execution by payment, or where it decrees nothing to be paid or performed, but simply declares a right in favour of the pursuer.

5. SUSPENSION is that form of law by which the effect of a sentence condemnatory, that has not yet received execution, is stayed or postponed till the cause be again considered. The first step towards suspension is a bill preferred to the lord ordinary on the bills. This bill, when the desire of it is granted, is a warrant for issuing letters of suspension which pass the signet; but if the petition of the bill shall not, within 14 days after passing it, except to the letters, execution may by act of parliament proceed on the sentence. In such case, the court is obliged for the charger to put up a caution on the minute book for production of a petition, which may be expressed

at any time before this is done; and if suspender shall allow the production to betracted, the bill falls. Suspensions of decrees *in foro* cannot pass, but by the whole lords in time of session, and by three in vacation time; but other decrees may be suspended by any one of judges. By act of federunt in 1727, to rein the abuse of presenting a multiplicity of bills suspension of the decrees of inferior judges, in causes which have passed in absence, it is decreed, that all bills of suspension of decrees, by inferior judges in absence of the defenders, in case under 12<sup>l</sup>. sterling value, shall be refused and committed to the interior judge if competent; suspender, however, before being heard in inferior court, reimbursing the charger of the expences incurred by him previous to the remit.

6. As suspension has the effect of staying the execution of the creditor's legal diligence, it cannot in the general case, pass without caution given the suspender to pay the debt, in the event it shall be found due. Where the suspender cannot, from his low or suspected circumstances, procure a questionable security, the lords admit jurat caution, *i. e.* such as the suspender swears is the best he can offer; but the reasons of suspension are, in that case, to be considered with particular accuracy at passing the bill. Decrees in favour of the clergy, of universities, hospitals, or parish schoolmasters, for their stipends, rents, or salaries cannot be suspended, but upon production of charges, or on consignation of the sums charged for. A charger, who thinks himself secure without a cautioner, and wants dispatch, may, when a suspension of his diligence is sought, apply to the court to get the reasons of suspension summarily discussed on the bill.

7. Though he, in whose favour the decree is pronounced is always called the charger, yet a decree may be suspended before charge be given on it. Nay, suspension is competent even where there is no decree, for putting a stop to any illegal act whatsoever; thus, a building, or the exercise of a power which one assumes unwarrantably, is a proper subject of suspension. Letters of suspension are considered merely as prohibitory diligence; so that the suspender, he would turn provoker, must bring an action of reduction. If, upon discussing the letters of suspension, the reasons shall be sustained, a decree is pronounced, suspending the letters of diligence on which the charge was given *simpliciter*; which is called a *decree of suspension*, and takes off the effect of the decree suspended. If the reasons of suspension be repelled, the court find the letters of diligence orderly proceeded, *i. e.* regularly carried on; and they ordain them to be put to their execution.

8. Decrees are carried into execution, by diligence, either against the person or against the state of the debtor. The first step of personal execution is by letters of horning, which pass a warrant of the court of session, on the decrees magistrates of boroughs, sheriffs, admirals, and commissaries. If the debtor does not obey the letters of horning within the days of the charge the charger, after denouncing him rebel, and registering the horning, may apply for letters

captis

which contain a command, not only to the sheriff, but to magistrates, to apprehend and detain the debtor.

Such commoners, peers, married women, and persons, are secured against personal execution by caption upon arrestment. Such commoners also as are elected knights of the shire, are secured against arrestment by the privilege of parliament. No person can be executed against a debtor within the precincts of the king's palace of HOLYROOD, or the privilege of sanctuary affords no protection to criminals, as that did which was, by law, conferred on churches and religious houses.

Where the personal presence of the debtor is necessary in any of our courts, the judges are empowered to grant protection, for such time as may be necessary for his coming and going, not exceeding three days. Protection from diligence is also granted by the court of session under the late statute, where it is applied for, with the consent of the trustee, or a certain number of creditors as the case may require.

When a debtor is imprisoned, he ought not to be confined in the open air, not even under a hedge; for the creditors have an interest in the debtor being kept under close confinement, by the *quodammodo carceris*, they may be obliged to pay their debt: and any magistrate or sheriff who shall suffer the prisoner to go abroad, without proper attestation, upon oath, of the state of his health, is liable *subsidiarie* to the creditors. Magistrates are in like manner liable, if they suffer a prisoner to escape through the negligence of their prison: but, if he shall escape by night, by the use of instruments, or by any other accident which is imputed to the magistrates or jailor, he is chargeable with the debt; provided he has not, immediately after his escape, made diligent search for him. Regularly, no creditor can be released upon letters of caption, though he has made payment, could be released by letters of suspension, containing a charge upon the debtor to set him at liberty; because the discharge could not take off the penalty by the debtor for contempt of the court: but to save unnecessary expence in such debts, jailors are empowered to release prisoners where the debt does not exceed ten pounds Scots, upon production of a discharge which the creditor consents to his releasing.

The law, from compassion, allows insolvent debtors to apply for a release from prison under the name of *liber homo*, i. e. upon their making satisfaction to their creditors all their estate real and personal must be insisted for by way of action, and the creditors of the prisoner ought to be satisfied. The prisoner must, in this case, be examined only by the court of session, and a particular inventory of his estate, and oath that he has no other estate than is returned, and that he has made no conveyance of any part of it, since his imprisonment by his creditors. He must also make oath that he has granted any disposition of his estate before his imprisonment, and consents

to send on the persons to whom, and on the cause of granting it; that the court may judge, whether, by any collusive practice, he has forfeited his claim to liberty.

12. A fraudulent bankrupt is not allowed this privilege; nor a criminal who is liable in any arrestment or indemnification to the party injured or his executors, though the crime itself should be extinguished by a pardon. A disposition granted on a *cessio bonorum* is merely in farther security to the creditors, not in satisfaction or in solution of the debts.

13. Where a prisoner for debt declares upon oath, before the magistrate of the jurisdiction, that he has not wherewith to maintain himself, the magistrate may set him at liberty, if the creditor, in consequence of whose diligence he was imprisoned, does not aliment him within ten days after intimation made for that purpose. But the magistrate may, in such case, detain him in prison, if the creditor chuses to bear the burden of the aliment rather than release him. The statute authorising this release, which is usually called the ACT OF GRACE, is limited to the case of prisoners for civil debts.

14. Decrees are executed against the moveable estate of the debtor by arrestment or poinding; and against his heritable estate, by inhibition, or adjudication. If one be condemned, in a removing or other process, to quit the possession of lands, and refuses, notwithstanding a charge, letters of ejection are granted of course, ordaining the sheriff to eject him, and to enter the obtainer of the decree into possession. Where one opposes by violence the execution of a decree, or of any lawful diligence, which the civil magistrate is not able by himself and his officers to make good, the execution is enforced *manu militari*.

15. A DECREE ARBITRAL, which is a sentence proceeding on a submission to arbiters, has some affinity with a judicial sentence, though in most respects the two differ. A SUBMISSION is a contract entered in by two or more parties who have disputable rights or claims, whereby they refer their differences to the final determination of an arbiter or arbiters, and oblige themselves to acquiesce in what shall be decided. Where the day within which the arbiters are to decide, is left blank in the submission, practice has limited the arbiters power of deciding to a year. As this has proceeded from the ordinary words of style, empowering the arbiters to determine betwixt and the day of next to come; therefore where a submission is indefinite, without specifying any time, like all other contracts or obligations, it subsists for 40 years. Submissions, like mandates, expire by the death of any of the parties submitters before sentence. As arbiters are not vested with jurisdiction, they cannot compel witnesses to make oath before them, or havers of writings to exhibit them; but this defect is supplied by the court of session, who, at the suit of the arbiters, or of either of the parties, will grant warrant for citing witnesses, or for the exhibition of writings. For the same reason, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the submitters consent to the regulation of the decree arbitral,

trial, performance may be enforced by summary diligence.

16. The power of arbiters is wholly derived from the consent of parties. Hence where their powers are limited to a certain day, they cannot pronounce sentence after that day. Nor can they subject parties to a penalty higher than that which they have agreed to in the submission. And where a submission is limited to special claims, sentence pronounced on subjects not specified in the submission is null, as being *ultra vires compromissi*.

17. But, on the other hand, as submissions are designed for a most favourable purpose, the amicable composing of differences, the powers thereby conferred on arbiters receive an ample interpretation. Decrees-arbitral are not reducible upon any ground, except corruption, bribery, or falsehood.

#### SECT. IV. OF CRIMES.

1. THE word CRIME, in its most general sense, includes every breach either of the law of God or of our country; in a more restricted meaning, it signifies such transgressions of law as are punishable by courts of justice. By our law, no private party, except the person injured, or his next of kin, can accuse criminally: but the king's advocate, who in this question represents the community, has a right to prosecute all crimes *in vindictam publicam*, though the party injured should refuse to concur. Smaller offences, as petty riots, injuries, &c. which do not demand the public vengeance, pass generally by the appellation of *delicta*, and are punished either by fine or imprisonment.

2. The essence of a crime is that there be an intention in the actor to commit; for an action in which the will of the agent has no part, is not a proper object either of reward or punishment: hence arises the rule *crimen deli contrahitur*. Simple negligence does not therefore constitute a proper crime. Yet where it is extremely gross, it may be punished arbitrarily. Far less can we reckon in the number of crimes, those committed by an idiot or furious person: but lesser degrees of fatuity, which only darken reason, will not afford a total defence, though they may save from the *pæna ordinaria*. Actions committed in drunkenness are not to be considered as involuntary, seeing the drunkenness itself, which was the last cause of the action, is both voluntary and criminal.

3. On the same principle, such as are in a state of infancy, or in the confines of it, are incapable of a criminal action, dole not being incident to that age; but the precise age at which a person becomes capable of dole, being fixed neither by nature nor by statute, is by our practice to be gathered by the judge, as he best can, from the understanding and manners of the person accused. Where the guilt of a crime arises chiefly from statute, the actor, if he is under puberty, can hardly be found guilty; but, where nature itself points out its deformity, he may, if he is *proximus pubertatis*, be more easily presumed capable of committing it: yet, even in that case, he will not be punished *pæna ordinaria*.

4. One may be guilty of a crime, perpetrating it himself, but being ac crime committed by another; which villain is styled *ope et confilio*, and, in our *art and part*. A person may be guilty, either, 1. By giving advice or counsel to crime; or, 2. By giving warrant or committing it; or, 3. By actually assisting in the execution. It is generally doctors, that, in the more atrocious adviser is equally punishable with the and that, in the slighter, the circumstances from the adviser's lesser age, the joculose manner of giving advice, &c. may as pleas for softening the punishment, gives mandate to commit a crime, as the spring of action, seems more guilty than the person employed as the instrument in executing it; yet the actor cannot excuse himself on the pretence of orders which he ought not to obey.

5. Assistance may be given to the execution of a crime, not only in the actual execution of it, by furnishing him, intentionally, with poison, arms, or the other means of executing it. That sort of assistance which is not given after the criminal act, and which is called *absting*, though it be of itself criminal, does not infer art and part of the principal if one should favour the escape of a criminal, or conceal him from the law.

6. Those crimes that are in their nature most hurtful to society, are punished by death: others escape with a lesser punishment, sometimes fixed by statute, and sometimes left to the discretion of the judge, who may exercise his jurisdiction, either by imprisonment, or a corporal punishment, if the punishment is left, by law, to the discretion of the judge, he can in no case extend it. The fixed extent of the criminal punishment, in all capital trials, though it should not express it.

7. Certain crimes are committed immediately against God himself; others, against a particular person; and a third kind, against particular property. The chief crime in the first class, cognizable in the spiritual courts, is BLASPHEMY, under which is included ATHEISM. This crime consists in denying or vilifying the Deity, by speech or writing; and those who curse God or any of the blessed Trinity, are to suffer death, as a heinous and impious act; and those who deny himself in their denial. The denial of a prophet or of the authority of the holy Scriptures is punishable capitally for the third offence.

8. No prosecution can now be carried against witchcraft or conjuration. But all who are convicted of any of these offences, are to be imprisoned for a year, fixed in the pillory in that year, and hold surety for their behaviour.

9. Some crimes against the state are directed against the supreme power, and constitution itself; others discover a neglect of law, as tends to subvert authority, or a ruin of government. The former, *crimen læse majestatis*, is that crime which is committed against the

ate; and can be committed only by the subjects of that state either by birth

Soon after the union of the two kingdoms, the laws of treason then in force, were made ours by 7 Ann. c. 21. In regard to the facts constituting that crime, the corruption of all the penalties and forfeitures conse-

quences of treason, by the law of England, is the death of the King, Queen-consort, or apparent to the crown; to levy war against the King, or adhere to his enemies; to counterfeit the king's coin, or his great or privy seal; to be the chancellor, treasurer, or any other officer of England, while they are doing so; which last article is by the fore-mentioned act applied to Scotland, in the case of a judge of the session or of justiciary or councillor. Those who wash, clip, or counterfeit the proper money of the realm; who advise by writing or printing, that the Pretender has a right to the crown, that the king is illegitimate, or that cannot limit the succession to it, or correspondence with the Pretender, or who employ him, are also guilty

of proceeding in the trial of treason against peers or commoners, are set off against the crown, published by order of the House of Commons in 1709, subjoined to a collection of laws concerning treason. By the conviction of a traitor, the whole estate of the traitor for-forever. His blood is also corrupted, so that the death of an ancestor, he cannot inherit the estate which he cannot take, falls to the next in line, as escheat, *ab defectum*, without distinguishing whether the lands are the whole, or of a subject. No attainder against a peer, after the death of the Pretender, is hurt the right of any person, or the property of the offender, during his natural life, or of his creditors and other third parties. Forfeiture on treason, must be taken according to the law of England.

**RECEPTION OF TREASON**, from *reprendre*, is the receiving or concealing of treason. It is the king's bare knowledge of the crime, without the assistance of a magistrate or other person, by his office to take examinations; would not in the least degree assist to the execution of the act 7 Ann. makes the English law ours. Its punishment is, by the act, perpetual imprisonment, together with the forfeiture of the offender's moveables, and the forfeiture of his heritable estate, during his life, in the style of our law, his single estate.

**CRIME OF SEDITION**, consists in the raising or disturbances in the state. It may be real. Verbal sedition, or leasing sedition, is the uttering of words calculated to excite discord between the king and the people, and is punished either by imprisonment, or by death, at the discretion of the judge. It is generally committed by convocations, and a considerable number of people, without authority, under the pretence

PART I.

of redressing some public grievance, to the disturbing of the public peace. Those who are convicted of this crime are punished with the confiscation of their goods; and their lives at the king's will. If any persons, to the number of 12, shall assemble, and being required by a magistrate or constable to disperse, shall nevertheless continue together for an hour after such command, the persons disobeying shall suffer death and confiscation of moveables.

14. **JUDGES**, who, wilfully or through corruption, use their authority as a cover to injustice or oppression, are punished with the loss of honour, fame, and dignity. Under this head may be classed *theftbote*, (from *bote*, compensation,) which is the taking a consideration in money or goods from a thief to exempt him from punishment, or connive at his escape from justice. A sheriff, or other judge, guilty of this crime, forfeits his life and goods. And even a private person, who takes *theftbote*, suffers as the principal thief. The buying of disputed claims, concerning which there is a pending process, by any judge or member either of the session or of an inferior court, is punished by the loss of the delinquent's office; and all the privileges thereto belonging.

15. **DETOUR** is the opposition given, or resistance made, to messengers, or other officers, while they are employed in executing the law. The court of session is competent to this crime. It is punishable with the confiscation of moveables, the one half to the king, and the other to the creditor at whose suit the diligence was used. Armed persons, to the number of three or more, assisting in the illegal running, landing, or exporting of prohibited or uncustomed goods, or any who shall resist, wound, or maim any officer of the revenue, in the execution of his office, are punishable with death and the confiscation of moveables.

16. **BREACH OF ARRESTMENT** (see CHAP. II. SECT. XVIII. § 5.) is a crime of the same nature with detourment, as it imports a contempt of the law and of our judges. It subjects to an arbitrary corporal punishment, and the escheat of moveables; with a preference to the creditor for his debt; and for such farther sum as shall be modified to him by the judge. Under this head of crimes against good government and police, may be reckoned the *forestalling of markets*; that is, the buying of goods intended for a public market, before they are carried there; which for the third criminal act infers the escheat of moveables; as also slaying salmon in forbidden time; destroying plough graith in time of tillage, slaying of houghing hories or cows in time of harvest, and destroying or spoiling growing timber; as to the punishment of which, see statutes 1503, c. 72.—1587, c. 82. and 1689, c. 16.—1 *Geo. I. St. 2. c. 48.*

17. Crimes against particular persons may be directed either against life, limb, liberty, chastity, goods, or reputation. **MURDER** is the wilful taking away of a person's life, without a necessary cause. Our law makes no distinction betwixt premeditated and sudden homicide: both are punished capitally. **Casual homicide**, where the actor is in some degree blamable; and **Homicide in self-defence**, where the just bounds of defence have been exceeded; are punished arbitrarily:

I

but

but the slaughter of night thieves, house breakers, assistants in masterful depredations, or rebels denounced for capital crimes, may be committed with impunity. The crime of *dem. mbration*, or the cutting off of a member, is joined with that of murder; but in practice, its punishment has been restricted to the escheat of moveables, and an afflictment or indemnification to the party. **MUTILATION**, or the disabling of a member, is punished at the discretion of the judge.

18. **SELF-MURDER** is as highly criminal as the killing our neighbour; and for this reason, our law has, contrary to the rule, *crimina morte extinguuntur*, allowed a proof of the crime, after the offender's death, that his single escheat might fall to the king or his donatory. To this end, an action must be brought, not before the Justiciary, but the session, because it is only intended *ad civilem effectum*, for proving and declaring the self-murder; and the next of kin to the deceased must be made a party to it.

19. The punishment of **PARRICIDE**, or the murder of a parent, is not confined, by our law, to the criminal himself. All his posterity in the right line are declared incapable of inheriting; and the succession devolves on the next collateral heir. Even the cursing or beating of a parent infers death, if the person guilty be above 16 years; and an arbitrary punishment, if he be under it. A presumptive or statutory murder is constituted by 1690, c. 21. by which any woman who shall conceal her pregnancy, during its whole course, and shall not call for, or make use of, help in the birth, is to be reputed the murderer, if the child be dead, or amissing. This act was intended to discourage the unnatural practice of women making away with their children begotten in fornication, to avoid church censures.

20. **DUELLING**, is the crime of fighting in single combat, on previous challenges given and received. Fighting in a duel, without licence from the king, is punishable by death; and whatever person, principal or second, shall give a challenge to fight a duel, or shall accept a challenge, or otherwise engage therein, is punished by banishment and escheat of moveables, though no actual fighting should ensue.

21. **HAIMSUCKEN** (from *haim* "home," and *sucken* "to seek or pursue") is the assaulting or beating of a person in his own house. The punishment of this crime is nowhere defined, except in the books of the *Majesty*, which make it the same as that of a rape; and it is, like rape, capital by our practice. The assault must be made in the proper house of the person assaulted, where he lies and rises daily and nightly; so that neither a public house, nor even a private, where one is only transiently, falls within the law.

22. Any party to a law-suit, who shall slay, wound, or otherwise invade his adversary, at any period of time between executing the summons and the complete execution of the decree, or shall be accessory to such invasion, shall lose his cause. The sentence pronounced on this trial, against him who has committed the battery, is not subject to reduction, either on the head of minority, or on any other ground whatever: and if the person prosecuted for this crime shall be denounced

for not appearing, his liferent, as well as his escheat, falls upon the denunciation.

23. The crime of *wrongous imprisonment* is inferred, by granting warrants of commitment order to trial, proceeding on informations not subscribed, or without expressing the cause of commitment; by receiving or detaining prisoners on such warrants; by refusing to a prisoner a copy of the warrant of commitment; by detaining him in close confinement, above eight days after his commitment; by not releasing him on bail where the crime is bailable; and by transporting persons out of the kingdom, without either the own consent, or a lawful sentence. The persons guilty of a wrongous imprisonment are punished by a pecuniary mulct, from L. 6000 down to L. 400 *Scots*, according to the rank of the person detained; and the judge, or other person guilty is over and above subjected to pay to the person detained a certain sum *per diem*, proportioned to his rank, and is declared incapable of public trust. All these penalties may be insisted for by a summary action before the session, and are subject to no modification.

24. **ADULTERY** is the crime by which the marriage bed is polluted. This crime could neither by the Roman nor Jewish law be committed, but where the guilty woman was the wife of another by ours, it is adultery, if either the man or woman be married. We distinguish between simple adultery, and that which is notorious or manifest. Open and manifest adulterers, who continue incorrigible, notwithstanding the censures of the church, are punished capitally. This crime is distinguished by one or other of the following characters: where there is issue procreated between the adulterers; or where they keep bed and company together notoriously; or where they give scandal to the church, and are, upon the obstinate refusing to listen to its admonitions, excommunicated. The punishment of simple adultery, not being defined by statute, is left to the discretion of the judge; but custom has made the falling of the single escheat one of its penalties.

25. **BIGAMY** is a person's entering into the engagements of a second marriage, in violation of former marriage-vow still subsisting. Bigamy, on the part of the man, has been tolerated in many states, before the establishment of Christianity, even by the Jews themselves; but it is prohibited by the precepts of the gospel, and it is punished by our law, whether on the part of the man or of the woman, with the pains of perjury.

26. **INCEST** is committed by persons who stand within the degrees of kindred forbidden in Lev. xviii. and is punished capitally. The same degrees are prohibited in affinity, as in consanguinity Lev. xviii. 15. *et seq.* As this crime is repugnant to nature, all children, whether lawful or natural, stand on an equal footing: *civills ratio civilia j: corrumpere potest, non vero naturalia*. It is difficult indeed to bring a legal proof of a relationship merely natural, on the side of the father; but the mother may be certainly known without marriage.

27. There is no explicit statute making rape or the ravishing of women, capital; but it is plainly supposed in act 1612. c. 4. by which the ravisher is exempted from the pains of death,

use of the woman's subsequent consent, a violation that she went off with him of her own will; and even then, he is to suffer the punishment, either by imprisonment, or of goods, or a pecuniary fine.

**FRAUD** is defined, a fraudulent interference with the property of another, with a view of gaining it. Our ancient law proportioned the punishment of the theft to the value of the goods, punishing it gradually, from a slight punishment to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two sheep. In later acts, it is taken for granted, that a theft of any value, is taken for granted, that is capital. But where the thing stolen is of less value, we consider it not as theft but as a misdemeanour, which is punished either corporally or by imprisonment. The breaking of orchards, or the cutting of green wood, is punished by a fine, which rises as the crime is repeated.

**RECEIVING** may be aggravated into a capital crime, though the value of the thing stolen be less than if the theft were repeated, or committed by a thief, or by landed men; or of things set apart for sacred uses. The receivers and concealers of stolen goods, knowing them to be such, are punished as thieves. Those who barely harbour the criminal within 48 hours either before or after committing the crime, are punished as accessories of the theft. Such as sell goods to thieves or lawless persons who dare not come to market, are punished with imprisonment and the forfeiture of moveables.

**ROBBERY** attended with violence is called *robbery* in our old statutes, *rief* or *stouthrief*; which class may be included *forning*, or the neat and drink by force, without payment. **STOUTHRIEF** came at last to be committed maliciously, by bands of men associated together, that it was thought necessary to vest all justices with a power of holding courts of assize and trying, and condemning them.

**RAPE**, all were capitally punished, who seized lands from deprecation payed to a yearly contribution, which got the name of **LACK MAIL**. An act also passed, commanding a banishment a band of *forners*, who were brought from *Egypt*, called *gyffes*, and adjudging that all that should be reputed *Egyptians*, if they were taken within the kingdom. Robbery on the seas is called **PIRACY**, and is punished capitally by the high admiral. Several acts which constitute this crime are set out in *8 Geo. I. c. 24*.

**PERJURY**, in a large sense, is the fraud or suppression of truth, to the damage of society. The lives and goods of persons consulting false weights or measures were, by an act in the king's mercy; and their heirs inherit but upon a remission. The law against this crime, punishes it by confinement to the stocks, or imprisonment of moveables. That particular species of perjury, which consists in the falsifying of passes, is called **FORGERY**. Our law has now of a long time, agreeably to the act, made this crime capital; unless the offender be of execrations, or other writings of

smaller moment; in which case, it is punished arbitrarily.

32. The writing must not only be fabricated, but put to use or founded on, in order to infer this crime. And though it be strictly criminal, yet the trial of it is proper to the court of session; but where improbation is moved against a deed by way of exception, the inferior judge, before whom the action lies, is competent to it *ad civilem effectum*. When it is pleaded as an exception, our practice, to discourage affected delays, obliges the defender, who moves it, to consign L. 40 Scots; which he forfeits, if his plea shall appear calumnious.

33. Where a person, found guilty of forgery by the court of session, is by them remitted to the justiciary, an indictment is there exhibited against him, and a jury sworn, before whom the decree of session is produced, in place of all other evidence of the crime, in respect of which the jury find the pannel guilty; so that decree being pronounced by a competent court, is held as full proof, or, in the style of the bar, as *probatio probata*.

34. **PERJURY**, which is the judicial affirmation of a falsehood on oath, really constitutes the *crimen falsi*; for he who is guilty of it does, in the most solemn manner, substitute falsehood in the place of truth. To constitute this crime, the violation of truth must be deliberately intended by the swearer; and therefore reasonable allowances ought to be given to forgetfulness or misapprehension, according to his age, health, and other circumstances. The breach of a promissory oath, does not infer this crime; for he who promises on oath, may sincerely intend performance when he swears, and so cannot be said to call on God to attest a falsehood. Though an oath, however false, if made upon reference in a civil question, concludes the cause, the person perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.

35. Notwithstanding the mischievous consequences of perjury to society, it is not punished capitally, but by confiscation of moveables, imprisonment for a year, and infamy. The court of session is competent to perjury *incidenter*, when, in any examination upon oath, taken in a cause depending before them, a person appears to have sworn falsely; but in the common case, that trial is proper to the justiciary. **SUBORNATION of perjury** consists in tampering with persons who are to swear in judgment, by directing them how they are to depose; and it is punished with the pains of perjury.

36. The crime of **STELLIONATE**, from *stellio*, includes every fraud which is not distinguished by a special name; but is chiefly applied to conveyances of the same numerical right, granted by the proprietor to different disponees. The punishment of stellionate must necessarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent acts. The persons guilty of that kind of it, which consists in granting double conveyances, are by our law declared infamous, and their lives and goods at the king's mercy. The cognizance of *fraudulent bankruptcies*

is appropriated to the court of session, who may inflict any punishment on the offender that appears proportioned to his guilt, death excepted.

37. The crime of *USURY*, before the reformation, consisted in the taking of *any* interest for the use of money; and now in taking a higher rate of interest than is authorised by law. It is divided into *usurus manifestus*, or direct; and *velatus*, or covered. One may be guilty of the first kind, either where he covenants with the debtor for more than the lawful interest on the loan-money: or where one receives the interest of a sum before it is due, since thereby he takes a consideration for the use of money before the debtor has really got the use of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of losing his sum, he may covenant for an higher interest than the legal, without the crime of usury; for there, the interest is not given merely in consideration of the use of the money, but of the danger undertaken by the creditor.

38. Covered usury, is that which is committed under the mask not of a loan but of some other contract; *e. g.* a sale or an improper wadset. And in general, all obligations entered into with an intention of getting more than the legal interest for the use of money, however they may be disguised, are usurious. As a farther guard against this crime, the taking more than the legal interest for the forbearance of payment of money, merchandise, or other commodities, by way of loan, exchange, or other contrivance whatever; or the taking a bribe for the loan of money, or for delaying its payment when lent, is declared usury. Where usury is proved, the usurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the sums or goods lent. Usury, when it is to be pursued criminally, must be tried by the justiciary; but where the libel concludes only for voiding the debt, or restitution, the session is the proper court.

39. *INJURY*, in its proper acceptation, is the reproaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed against a private person, consists in the uttering contumelious words, which tend to expose our neighbour's character by making him little or ridiculous. It does not seem that the twitting one with natural defects, without any sarcastical reflections, though it be inhuman, falls under this description, as these imply no real reproach in the just opinion of mankind. Where the injurious expressions have a tendency to blacken one's moral character, or fix some particular guilt upon him, and are deliberately repeated in different companies, or handed about in whispers to confidants, it then grows up to the crime of slander: and where a person's moral character is thus attacked, the *animus injuriandi* is commonly inferred from the injurious words themselves, unless special circumstances be offered to take off the presumption, *ex. gr.* that the words were uttered in judgment in one's own defence, or by way of information to a magistrate, and had some foundation in fact. Though the cognizance of slander is proper to the commissaries, who, as the *judices de scandalis*, are the only judges of scandal; yet,

for some time past, bare verbal injuries are tried by other criminal judges, and a session. It is punished either by a fine conditioned to the condition of the person and injured, and the circumstances of place; or if the injury import scandal, by acknowledging the offence; and frequently two are conjoined. The calling one is not, in strict speech, a verbal injury not affect the person's moral character it may hurt his credit in the way of it founds him in an action of damages, may be brought before the judge ordinary. Injury is inflicted by any fact by which honour or dignity is affected; as striking a cane, or even aiming a blow without spitting in one's face; assuming a colour or any other mark of distinction proper &c. The composing and publishing libels may be reckoned of this kind. They are tried by the judge ordinary, and either by fine or imprisonment, according to the merit of the offenders.

#### SECT. V. Of CRIMINAL JURISDICTION of TRIAL, and the EXTINCTION of

1. Criminal jurisdiction is founded, *domicilii*, if the defender dwells within the territory of the judge. Vagabonds, who have no certain *domicile*, may be tried wherever they are apprehended. 2. *Ratione delicti*, if the crime is committed within the territory. By an act now expired, treason committed in the Scots counties, was made triable by the justiciary, wherever it should fit.

2. No criminal trial can proceed, if the person accused is capable of making his defence. Absents therefore cannot be tried; nor furious persons, *durante furore*, even if the crime is committed while they were in their senses. Our practice considers every person who is capable of doing, to be also sufficiently qualified for making his defence in a criminal trial.

3. No person can be imprisoned, or stand trial for any crime, without a writing expressing the cause, and procured by a subscribed information, unless in the cases of dignities done to judges, riots, and offences specially mentioned in act 1701, c. 6. A person committed for trial, if the crime he is accused he not capital, is entitled to be released upon bail, the extent of which is fixed by the judge, not exceeding 1000 Scots for a nobleman, 6000 for a landman, 2000 for every other gentleman, and 600 for any other inferior person. In the option of the judge, 60 l. sterling. They who, either from the nature of the crime, or from which they are charged, or from their inability to procure bail, may not be released in prison untried, it is lawful for every person to apply to the criminal judge, that the trial may be brought on. The judge must issue writs for messengers, for intimating to the prisoner a diet for the criminal trial, within a certain time after the intimation, under the pain of imprisonment: And if the prosecutor

if within that time, or if the trial is not finished 40 days more when carried on before the Justiciary, or in 30 when before any other judge; the prisoner is, upon a 2d application, setting forth that the legal time is elapsed, entitled to his freedom, under the same penalty.

4. Upon one's committing any of the grosser crimes, it is usual for a justice of the peace, sheriff, or other judge, to take a precognition of the facts, *i. e.* to examine those who were present at the criminal act, upon the special circumstances attending it, in order to know whether there is ground for a trial, and to serve as a direction to the prosecutor, how to set forth the facts in the libel; but the persons examined may insist to have their declarations cancelled before they give testimony at the trial. Justices of the peace, sheriffs, and magistrates of boroughs, are also authorised to receive informations, concerning crimes to be tried in the circuit courts; which informations are to be transmitted to the justice-clerk 40 days before the sitting of the respective courts. To discourage groundless criminal trials, all prosecutors, where the defender was absolved, were condemned by statute, in costs, as they should be notified by the judge, and besides were subjected to a small fine, to be divided between the sic and the defender: And where the king's advocate was the only pursuer, his informer was made liable. This sufficiently warrants the present practice of condemning vexatious prosecutors in a pecuniary mulct, though far exceeding the statutory sum.

5. The forms of trial upon criminal accusations differ much from those observed in civil actions, if we except the case of such crimes as the court of session is competent to, and of lesser offences tried before inferior courts. The trial of crimes proceeds either upon indictment, which is sometimes used when the person to be tried is in prison; or by criminal letters issuing from the signet of the justiciary. In either case, the defender must be served with a full copy of the indictment or letters, and with a list of the witnesses to be brought against him, and of the persons who are to pass on the inquest, and 15 free days must intervene between his being so served and the day of appearance. When the trial proceeds upon criminal letters, the private prosecutor must give security, at raising the letters, that he will report them duly executed to the justiciary in the terms of 1535, c. 35.; and the defender, if he be not already in prison, is, by the letters, required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial: and if he gives none within the days of the charge, he may be denounced rebel, which entails the forfeiture of his moveables.

6 That part of the indictment, or of the criminal letters, which contains the ground of the charge against the defender, and the nature or degree of the punishment he ought to suffer, is called the *libel*. All libels must be special, setting forth the particular facts inferring the guilt, and the particular place where these facts were done. The time of committing the crime may be libelled in general terms, with an alternative as to the

month, or day of the month: but as it is not practicable, in most cases, to libel upon the precise circumstances of accession that may appear in proof, libels against accessories are sufficient, if they mention, in general, that the persons prosecuted are guilty art and part.

7. The defender in a criminal trial may raise letters of exculpation, for citing witnesses in proof of his defences against the libel, or of his objections against any of the jury or witnesses; which must be executed to the same day of appearance with that of the indictment or criminal letters.

8. The *DIETS* of appearance, in the court of justiciary are peremptory: the criminal letters must be called on the very day to which the defender is cited; and hence, if no accuser appears, their effect is lost *instantia perit*, and new letters must be raised. If the libel, or any of the executions, shall to the prosecutor appear informal, or if he be dissident of the proof, from the absconding of a necessary witness, the court will, upon a motion made by him, desert the diet *pro loco et tempore*; after which new letters become also necessary. A defender, who does not appear on the very day to which he is cited, is declared fugitive; in consequence of which, his single escheat falls. The defender, after his appearance in court, is called the *PANNEL*.

9. The two things to be chiefly regarded in a criminal libel, are, 1. The relevancy of the facts, *i. e.* their sufficiency to infer the conclusion; 2. Their truth. The consideration of the first belongs to the judge of the court; that of the other to the jury of assize. If the facts libelled be found irrelevant, the pannel is dismissed from the bar; if relevant, the court remits the proof thereof to be determined by the jury; which must consist of 15 men picked out by the court from a greater number not exceeding 45, who have been all summoned, and given in list to the defender at serving him with a copy of the libel.

10. Crimes cannot, like debts, be referred to the defender's oath; for no person is compellable to swear against himself, where his life, limb, liberty, or estate is concerned, nor even in crimes which infer infamy; because one's good name is, in right estimation, as valuable as his life. There is one exception however to this rule in trying the crime of usury, which may be proved by the usurer's own oath, notwithstanding the rule, *Nemo tenetur jurare in suam turpitudinem*. Crimes therefore are in the general case proveable only by the defender's free confession, or by writing, or by witnesses. No extrajudicial confession, unless it is adhered to by the pannel in judgment can be admitted as evidence.

11. All objections relevant against a witness in civil cases are also relevant in criminal. No witness is admitted, who may gain or lose by the event of the trial. *Socii criminis*, or associates in the same crime, are not admitted against one another, except either in crimes against the state, as treason; in occult crimes, where other witnesses cannot be had, as forgery; or in thefts or depredations committed in the Highlands. The testimony of the private party injured may be received against the pannel, where the king's advocate

is the only prosecutor, if from the nature of the crime, there must needs be a penury of witnesses, as in rape, robbery, &c.

12. After all the witnesses have been examined in court, the JURY are shut up in a room by themselves, where they must continue excluded from all correspondence, till their verdict or judgment be subscribed by the (foreman or chancellor) and clerk; and according to this verdict the court pronounces sentence, either absolving or condemning. It is not necessary, by the law of Scotland, that a jury should be unanimous in finding a person guilty; the narrowest majority is as sufficient against the pannel, as for him. Juries cannot be punished on account of an erroneous verdict, either for or against the pannel.

13. Though the proper business of a jury be to inquire into the truth of the facts found relevant by the court, for which reason they are sometimes called the *inquisi*; yet, in many cases, they judge also in matters of law or relevancy. Thus, though an objection against a witness should be repelled by the court, the jury are under no necessity to give more credit to his testimony than they think just: and in all trials of art and part, where special facts are not libelled, the jury, if they return a general verdict, are indeed judges not only of the truth, but of the relevancy of the facts that are sworn to by the witnesses. A general verdict, is that which finds in general terms, that the pannel is *guilty* or not *guilty*, or that the libel or defences are *proved* or not *proved*. In a special verdict, the jury finds certain facts proved, the import of which is to be afterwards considered by the court.

14. Criminal judges must now suspend for some time the execution of such sentences as affect life or limb, that so condemned criminals, whose cases deserve favour may have access to apply to the king for mercy. No sentence of any court of judicature S. of the river Forth, importing either death or demembration, can be executed in less than 30 days; and, if N. of it, in less than 40 days, after the date of the sentence. But corporal punishments, less than death or dismembring, e. g. whipping, pillory, &c. may be inflicted 8 days after sentence on this side Forth and 12 days after sentence beyond it.

15. Crimes are extinguished, 1. By the death of the criminal: both because a dead person can make no defence, so that his trial is truly a judging upon the hearing of one side; and because, though his guilt should be ever so notorious, he is after death carried beyond the reach of human penalties: such trials therefore can have no effect, but to punish the innocent heir, contrary to that most equitable rule, *Culpa tenet suos auctores*. 2. Crimes may be extinguished by a remission from the sovereign. But a remission, though it secures

the delinquent from the public resentment, the exercise of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever therefore founds on a remission, is liable to damages, to the private prosecutor, in the same manner as if he had been tried and found guilty. Even general acts of indemnity passed in parliament, though they secure against such penalties as law inflicts upon the criminal merely *per modum pene*, yet do not against the payment of any pecuniary fine is that given by statute to the party injured, nor against the demand of any claim, competent to him in name of damages.

16. Lesser injuries, which cannot be properly said to affect the public peace may be extinguished, either by the private party's expressly forgiving him or by his being reconciled to the offender, after receiving the injury. Hence arises the rule *Diffimulatione tollitur injuria*. But where the offence is of a higher nature, the party injured though he may pass from the prosecution, in so far as his private interest is concerned, cannot preclude the king's advocate, or procurator *filice* from insisting *ad vindictam publicam*.

17. Crimes are also extinguished by prescription which operates by the mere lapse of time, without any act either of the sovereign or of the private sufferer. Crimes prescribe in 20 years; but in particular crimes, the preception is limited by statute to a shorter time. No person can be prosecuted upon the act against wrongous imprisonment, after three years. High treason, committed within his majesty's dominions, suffers likewise a triennial preception, if indictment be not found against the traitor within that time. All actions brought up on any penal statute made or to be made where the penalty is appropriated to the crown, expire in two years after committing the offence; and where the penalty goes to the crown or other prosecutor, the prosecutor must sue within one year and the crown within two years after the year ended. Certain crimes are, without the aid of any statute, extinguished by a shorter prescription than 20 years. By our old law, in the cases of rape, robbery, and hamefucken, the party injured was not heard after a silence of 24 hours; from a presumption, that persons could not be so grossly injured, without immediate complaining: And it is probable, that a prosecution for these crimes, if delayed for any considerable time, would be cut even at this day, or at least the punishment restricted. Lesser injuries suffer also a short prescription by law *presuming* forgiveness, from the nature of the offence, and the silence of the party. The particular space of time sufficient to establish this presumption must be determined by the judge, according to circumstances.

## L A W

(s.) \*LAW. n. f. [*laga*, Sax. *loi*, Fr. *lawg*, Erse.] 1. A rule of action.—That which doth assign unto each thing the kind, the same we term a *law*. *Hooker*.—

## L A W

Unhappy man to break the pious *laws*  
Of nature, pleading in his children's cause. *Dry*  
2. A decree, edict, statute, or custom, publickly established as a rule of justice.—

*Ordi*

them *laus*, part such as appertain  
 office, part religious rites. *Milton*.  
 n would not give *laus* to the Irish,  
 w the Irish, gave *laus* to them.  
 A decree authoritatively annexing re-  
 nishments to certain actions.—  
 y *laus* argue so many sins. *Milton*.

LANGUAGE, OR LAW LATIN. In  
 law proceedings were formerly writ-  
 d all public proceedings were in Nor-  
 French, and even the arguments of  
 and decisions of the the court were in  
 arbarous dialect. An evident and  
 dge, it must be owned, of tyranny  
 servitude; being introduced under the  
 William the Norman, and his sons:  
 observation of the Roman satyrst was  
 erified, that *Gallia caesulicos docuit fa-*  
*mos*. This continued till the reign of  
 ; who, having employed his arms  
 in subduing the crown of France,  
 nbeceiving the dignity of the victors  
 nger the language of a vanquished  
 by a statute, therefore, passed in the  
 his reign, it was enacted, that for the  
 eas should be pleaded, shown, defend-  
 ed debated and judged, in the English  
 : be entered, and enrolled in Latin: In  
 as Alfonso X. king of Castile (the great-  
 Edward III.) obliged his subjects  
 Castilian tongue in all legal proceed-

ings; and as, in 1286, the German language was  
 established in the courts of empire. And perhaps,  
 if the legislature had then directed that the writs  
 themselves, which are mandates from the king to  
 his subject, to perform certain acts, or to appear  
 at certain places, should have been framed in the  
 English language, according to the ancient law; it  
 would not have been improper. But the record  
 or enrolment of those writs and the proceedings  
 thereon, which was calculated for the benefit of  
 posterity, was more serviceable (because more du-  
 rable) in a dead and immutable language than in a-  
 ny mutable, or living, one. The practisers, how-  
 ever, being used to the Norman language, and  
 therefore imagining they could express their  
 thoughts more aptly and more concisely in that  
 than in any other, still continued to take their notes  
 in law French; and of course, when those notes  
 came to be published, under the denomination of  
*reports*, they were printed in that barbarous dia-  
 lect; which, joined to the additional terrors of a  
 Gothic black letter, has occasioned many a stu-  
 dent to throw away his Plowden and Littleton,  
 without venturing upon a page of them. And  
 yet in reality, upon a nearer acquaintance, they  
 would have found nothing very formidable in  
 the language; which differs in its grammar and  
 orthography as much from the modern French,  
 as the diction of Chaucer and Gower does from  
 that of Addison and Pope. Besides, as the Eng-  
 lish and Norman languages were concurrently u-  
 sed by the people of England for several centuries  
 together, the two idioms have naturally assimila-  
 ted, and mutually borrowed from each other:  
 for which reason the grammatical construction  
 of each is so very much the same, that an English-  
 man (with a week's preparation) would under-  
 stand the laws of Normandy, collected in their  
*grand coutumier*, as well, if not better, than a  
 Frenchman bred within the walls of Paris. The  
 Latin, which succeeded the French for the entry  
 and enrolment of pleas, during the reign of Ed-  
 ward III. and which continued in use for four  
 centuries, answers so nearly to the English (often-  
 times word for word) that it is not at all surpri-  
 sing it should generally be imagined to be totally  
 fabricated at home, with little more art or trou-  
 ble than by adding Roman terminations to Eng-  
 lish words. Whereas in reality it is a very uni-  
 versal dialect, spread throughout all Europe at the  
 irruption of the northern nations; and particular-  
 ly accommodated and moulded to answer all the  
 purposes of the lawyers with a peculiar exactness  
 and precision. This is principally owing to the  
 simplicity, or (if the reader please) the poverty  
 and baldness of its texture, calculated to express  
 the ideas of mankind just as they arise in the hu-  
 man mind, without any rhetorical flourishes, or  
 perplexed ornaments of style: for it may be ob-  
 served, that those laws and ordinances, of public  
 as well as private communities, are generally the  
 most easily understood, where strength and per-  
 spicuity, not harmony or elegance of expression,  
 have been principally consulted in compiling them.  
 These northern nations, or rather their legislators,  
 though they have resolved to make use of the Latin  
 tongue in promulging their laws, as being more  
 durable, and more generally known to their con-  
 quered

quered subject, than their Teutonic dialects, yet (either through choice or necessity) frequently intermixed therein some words of a Gothic original; which is, more or less, the case in every country of Europe, and therefore not to be imputed as any peculiar blemish in our English legal latinity. The truth is, what is generally denominated *law Latin* is in reality a mere technical language, calculated for eternal duration, and easy to be apprehended both in present and future times; and on those accounts best suited to preserve those memorials which are intended for perpetual rules of action. As to the objection of locking up the law in a strange and unknown tongue, this is of little weight with regard to records; which few have occasion to read, but such as do or ought to understand the rudiments of Latin. And besides, it may be observed of the law Latin, as the very ingenious Sir John Davis observes of the law French, "that it is so very easy to be learned, that the meanest wit that ever came to the study of the law doth come to understand it almost perfectly in ten days without a reader." It is true, indeed, that the many terms of art, with which the law abounds, are sufficiently harsh when Latinized, (yet not more so than those of other sciences,) and may, as Mr Selden observes, give offence "to some grammarians of squeamish stomachs, who would rather choose to live in ignorance of things the most useful and important, than to have their delicate ears wounded by the use of a word unknown to Cicero, Sallust, or the other writers of the Augustan age." Yet this is no more than must unavoidably happen, when things of modern use, of which the Romans had no idea, and consequently no phrases to express them, come to be delivered in the Latin tongue. It would puzzle the most classical scholar to find an appellation, in his pure Latinity, for a constable, a record, or a deed of feoffment: it is therefore to be imputed as much to necessity as ignorance, that they were styled in our forensic dialect, *constabularius, recordum, and seoffamentum*. Thus again, another uncouth word of our ancient laws (for I defend not the ridiculous barbarisms sometimes introduced by the ignorance of modern practisers), the substantive *murdrum*, or the verb *murdrare*, however harsh and unclassical it may seem, was necessarily framed to express a particular offence; since no Latin word in being, *occidere, interficere, necare*, or the like, was sufficient to express the intention of the criminal, or *quo animo* the act was perpetrated; and therefore by no means came up to the notion of murder at present entertained by law; viz. a killing *with malicious aforethought*. A similar necessity produced a similar effect at Byzantium, when the Roman laws were turned into Greek for the use of the oriental empire: for, without any regard to Attic elegance, the lawyers of the imperial courts made no scruple to translate *judici commissarius, δίκην κομισσαριος; cubiculum, κούβουλον; filium familiæ, παισιον οἰκειας; repudium, εἰρηλιον; compromissum, ἀποπρομίσσειον; reverentia et obsequium, εὐσεβεια και σεβασμιον*; and the like. They studied more the exact and precise import of the words, than the neatness and delicacy of their cadence. And it may be suggested, that the terms of the law are not more numerous, more uncouth, or

more difficult to be explained by a teacher, than those of logic, physics, and the whole circle of Aristotle's philosophy; nay, even of the polite arts of architecture and its kindred studies, or the science of rhetoric itself. Sir Thomas More's famous legal question contains in it nothing more difficult, than the definition in which in his time the philosophers currently, gave of their *materia prima*, the groundwork of all natural knowledge; that it *neque quid, neque quantum, neque quale, neque aliquorum quibus ens determinatur*; or its subsequent explanation by Adrian Heereboard, who assures us that *materia prima non est corpus neque per formam corporitatis, neque per simplicem essentiam: est tamen ens, et quidem substantia, licet incompleta; habetque nomen ex se entitativum, et simul est potentia subiectiva*. The law, therefore, with regard to its technical phrases, stands upon the same footing with other studies, and requests only the same indulgence. This technical Latin continued in use from the time of its first introduction, till the subversion of our ancient constitution under Cromwell; when among many other innovations in the law, some for the better and some for the worse, the language of our records was altered and turned into English. But, at the restoration of king Charles this novelty was no longer countenanced: the practisers finding it very difficult to express themselves so concisely or significantly in any other language but the Latin. And thus it continued without any sensible inconvenience till about the year 1750, when it was again thought proper that the proceedings at law should be done into English, and it was accordingly so ordered by statute 1 Geo. II. c. 26. This was done, in order that the common people might have knowledge and understanding of what was alleged or done for and against them, in the process and pleadings, the judgement and entries in cause: Which purpose it is doubtful how well it was answered; but there is reason to suspect, that the people are now, after many years experience, as ignorant in matters of laws as before. On the other hand, these inconveniences have already arisen from the alteration; that now many clerks and attorneys are hardly able to read, much less to understand, a record even of so modern a date as the reign of George I. And it has much enhanced the expense of all legal proceeding: for since the practisers are confined (for the sake of the stamp-duties, which are thereby considerably increased) to write only a stated number of words in a sheet; and as the English language, through the multitude of its particles, is much more verbose than the Latin, it follows, that the number of sheets must be very much augmented by the change. The translation also of technical phrases, and the names of writs and other process, were found to be so very ridiculous (a writ of *nisi prius, quare impedit, fieri facias, habeas corpus*, and the rest, not being capable of an English dress with any degree of seriousness), that in two years time a new act was obliged to be made, 6 Geo. II. c. 14. which allows all technical words to continue in the usual language and has thereby defeated every purpose of the former statute.

(6.) LAW. MILITARY. See MILITARY, and MARINE.

**W, MUNICIPAL.** See **LAW, Part I, Sect. I.**  
**WS, BREHON.** See **BREHONICÆ LEGES.**  
**WS, MARITIME.** The most ancient sy-  
 laritime laws is that of Rhodes, which  
 ce during the time of the Grecian em-  
 afterwards incorporated into the Roman  
 hough, in some parts, not applicable to  
 it state of trade, and, in others, now  
 telligible, it contains the groundwork  
 ft equitable and beneficial rules observed  
 commerce. A like system was set forth  
 d I. of England, called the *Statutes of*  
 nd another, by the town of Wisby, in  
 of Gothland. From these systems, im-  
 nd enlarged in the course of time, our  
 aritime law is derived. The jurisdiction  
 purely maritime belongs, in Britain, to  
 of admiralty, which proceeds on the  
 ; but their proceedings are subject to  
 ul, and their decisions to the review, of  
 or courts. We shall here consider the  
 s which subsist between the masters of  
 ships, the freighters, and the furnishers  
 ions or repairs. **I. Between MASTERS**  
**CHARTERS.** A charter party is a contract  
 the master and freighters, in which the  
 voyage is described, and the time and  
 as of performing it are ascertained. The  
 most frequently determined for the whole  
 without respect to time. Sometimes it  
 on the time. In the former case, it is e-  
 d at a certain sum for the whole cargo;  
 ch per ton, barrel-bulk, or other weight  
 re; or so much per cent on the value of  
 . This last is common on goods sent to  
 ; and the invoices are produced to ascer-  
 alue. The burden of the ship is men-  
 tioned in the contract, in this manner,  
*and tons, or thereby*; and the number men-  
 ght not to differ above 5 tons, at most,  
 exact measure. If a certain sum be a-  
 for the freight of the ship, it must all be  
 ough the ship, when measured, should  
 , unless the burden be *quarantied*. If  
 be freighted for transporting cattle, or  
 so much a head, and some of them die  
 stage, freight is only due for such as are  
 alive; but, if for *lading* them, it is due  
 as were put on board. When a whole  
 ighted, if the master suffers any other  
 ides those of the freighter to be put on  
 is liable for damages. It is common to  
 the number of days that the ship shall  
 at each port to load or unload. The  
 used is, *work weather days*; to signify,  
 lays, holidays, and days when the wea-  
 the work, are not reckoned. If the  
 tained longer, a daily allowance is often  
 h, in name of **DEMURRAGE**. If the voy-  
 mpleted in terms of the agreement, with-  
 fortune, the master has a right to de-  
 yment of the freight before he delivers  
 . But if the safe delivery be prevented  
 ult or accident, the parties are liable,  
 g to the following rules. If the merchant  
 on the ship within the time agreed on,  
 may engage with another, and recover  
 . If the merchant load the ship, and *re-cal*  
**XIII. PART I.**

it after it has set sail, he must pay the whole  
 freight; but if he unload it before it sets sail, he  
 is liable for damages only. If a merchant loads  
 goods which is not lawful to export, and the ship  
 be prevented from proceeding on that account, he  
 must pay the freight notwithstanding. If the  
 shipmaster be not ready to proceed on the voyage  
 at the time agreed on, the merchant may load the  
 whole, or part of the cargo, on board another  
 ship, and recover damages; but chance, or noto-  
 rious accident, by the marine law, releases the  
 master from damages. If an embargo be laid on  
 the ship before it sails, the charter-party is dissol-  
 ved, and the merchant pays the expence of load-  
 ing and unloading; but if the embargo be only  
 for a short limited time, the voyage shall be per-  
 formed when it expires, and neither party is liable  
 for damages. If the shipmaster sails to any other  
 port than that agreed on, without necessity, he is  
 liable for damages; if through necessity, he must  
 sail to the port agreed on at his own expence. If  
 a ship be taken by the enemy, and retaken or ran-  
 somed, the charter-party continues in force. If  
 the master transfer the goods from his own ship  
 to another, without necessity, and they perish, he  
 is liable for the value; but if his own ship be in  
 imminent danger, the goods may be put on board  
 another ship at the risk of the owner. If a ship  
 be freighted out and home, and a sum agreed on  
 for the whole voyage, nothing is due till it return;  
 and the whole is lost if the ship be lost on the re-  
 turn. If a certain sum be specified for the home-  
 ward voyage, it is due, although the factor a-  
 broad should have no goods to send home. In  
 the case of a ship freighted to Madeira, Carolina,  
 and home, a particular freight fixed for the home-  
 ward voyage, and an option reserved for the fac-  
 tor at Carolina to decline it, unless the ship ar-  
 rived before 1st March: the shipmaster, foreseeing  
 he could not arrive there within that time, and  
 might be disappointed of a freight, did not go  
 there at all. He was found liable in damages, as  
 the obligation was absolute on his part, and con-  
 ditional only on the other. If the goods be da-  
 maged without fault of the ship or master, the  
 owner is not obliged to receive them: and pay  
 freight, but he must either receive the whole, or  
 abandon the whole; he cannot choose those that  
 are in best order, and reject the others. If the  
 goods be damaged through the insufficiency of  
 the ship, the master is liable; but, if it be owing  
 to stress of weather, he is not accountable. It is  
 customary for shipmasters, when they suspect da-  
 mage, to take a *protest against wind and weather*  
 at their arrival. But as this is the declaration of  
 a party, it does not bear credit, unless supported  
 by collateral circumstances. If part of the goods  
 be thrown over-board, or taken by the enemy,  
 the part delivered pays freight. The shipmaster  
 is accountable for all the goods received on board,  
 by himself or mariners, unless they perish by the  
 act of God, or of the king's enemies. Shipmas-  
 ters are not liable for leakage on liquors; nor ac-  
 countable for the contents of packages, unless  
 packed and delivered in their presence. Upon a  
 principle of equity, that the labourer is worthy of  
 his hire, differences arising with regard to freight,  
 when the case is doubtful, ought rather to be de-

terminated in favour of the shipmaster. II. *SHIP and OWNERS with CREDITORS.* When debts are contracted for provisions or repairs to a ship, or arise from a failure in any of the above mentioned obligations, the ship and tackle, and the owners, are liable for the debt, as well as the master. By the mercantile law, the owners are liable in all cases, without limitation; but by statute, they are not liable for embezzlement beyond their value of ship, tackle, and freight. A shipmaster may pledge his ship for necessary repairs during a voyage; and this hypothecation is implied by the maritime law, when such debts are contracted. This regulation is necessary, and is therefore adopted by all commercial nations; for, otherwise, the master might not find credit for necessary repairs, and the ship might be lost. If repairs be made at different places, the last are preferable. The relief against the ship is competent to the court of admiralty in England, only when repairs are furnished during the course of a voyage; for the necessity of the case extends no further. If a ship be repaired at home, (e. g. upon the Tay or Thames,) the creditor is only entitled to relief at common law. The creditor may sue either the masters or owners; but if he undertook the work on the special promise of the one, the other is not liable. If the master buys provisions on credit, the owners are liable for the debt, though they have given him money to pay them. If a ship be mortgaged, and afterwards lost at sea, the owners must pay the debt; for the mortgage is, only an additional security, though there be no express words to that purpose in the covenant. If a ship be taken by the enemy, and ransomed, the owners are liable to pay the ransom, though the ransomer die in the hands of the captors. III. *OWNERS of SHIP and CARGO with each other.* There is a mutual obligation which subsists between all the owners of a ship and cargo. In time of danger, it is often necessary to incur a certain loss of part for the greater security of the rest; to cut a cable; to lighten the ship, by throwing part of the goods overboard; to run it ashore; or the like: and as it is unreasonable that the owners of what is exposed for the common safety should bear the whole loss, it is defrayed by an equal contribution among the proprietors of the ship, cargo, and freight. This is the famous *LEX RHODIA de jactu*, and is now called a *general average*. The custom of valuing goods which contribute to a general average, is not uniform in all places. They are generally valued at the price they yield at the port of destination, charges deducted; and goods thrown overboard are valued at the price they would have yielded there. Sailors wages, cloaths and money belonging to passengers, and goods belonging to the king, pay no general average; but proprietors of gold and silver, in case of goods being thrown overboard, contribute to the full extent of their interest. The following particulars are charged as general average: Damage sustained in an engagement with the enemy; attendance on the wounded, and rewards given for service in time of danger, or gratuities to the widows or children of the slain; ransom; goods given to the enemy in the nature of ransom; charges of bringing the ship to a place of safety when in danger

from the enemy, or waiting for convoy of quarantine; goods thrown overboard or rigging cut; holes cut in the ship; water; pilotage, when a lake is sprung when voluntarily run aground, and bringing it afloat; goods lost by being wrecked; the long boat lost in lightening the ship; hire of cables and anchors; loss of goods lying in ballast, victualling, and gear when detained; charges at law, in respect of ship and cargo; interest and committals these debursments. Though goods on a lighter, and lost; are charged as a general average; yet if the lighter be saved, and the rest of the goods be lost, the goods on the lighter belong to their respective proprietors, and are not being liable to any contribution. If the goods be plundered by a pirate, the ship or shipmaster is not entitled to any contribution. The essential circumstances that constitute general average are these; the loss must be a voluntary action; and the object of the sacrifice must be the common safety of the whole.

which is allowed, seems to fall within the scope of the law. For other maritime laws, see II. *INSURANCE*, § II; *QUARANTINE*; I. (10.) *LAWs, MERCANTILE.* The law of commercial and maritime affairs is nearer to uniformity through the districts of Europe, than those on other continents. Some of the fundamental regulations taken from the Roman law; others suggested by experience, during the progress of commerce; and the whole have been reduced to a system, and adopted into the laws of trading nations, with some local exceptions. The British legislature has enacted many statutes respecting commerce, and a greater part of our mercantile law is derived from the decisions of our courts, founded on the custom of merchants of such custom, where no direct statute determines the controversy, and becomes precedent for regulating like cases after the existence of a custom not formerly recognised in England, determined by a jury of twelve. The most common mercantile customs are those between buyer and seller; between employer and employee; between partners; between owners, makers, mariners, and freighters; between insurers and the owners of the goods insured; and between the parties concerned in acting bills of exchange. See the *ACT and BILL*, § 19; *BOTTOMRY*, § 2; 2. *FACTORAGE*; *INSURANCE*, § II; *SHIP*; *SALE*; &c.

(II.) *LAWs RESPECTING CUSTOM-HOUSE LAWS.* The expedient duties on goods imported, or exported, adopted by every commercial nation, is of great antiquity in Britain. The attention of the British legislature has been directed to the object of raising a revenue, which they have attempted by duties, exempt backs, bounties, and other regulations, which the national trade into those channels contribute most to the public benefit. The object to obtain every requisite info-

goods, exported, whether liable to duty or not, are required to be entered at the respective custom-houses; and, from these entries, accounts are regularly made up of the whole British trade, distinguishing the articles, their quantity and value, and the countries which supply or receive them. The objects of our legislature may be reduced to the following heads: I. To encourage the employment of British shipping and seamen, for the purpose of supplying our navy when public exigencies require. II. To increase the quantity of money in the nation, by prohibiting the exportation of British coin, by encouraging exportation, and discouraging importation, and by promoting agriculture, fisheries, and manufactures. For these purposes, it is penal to entice certain manufacturers abroad, or export the tools used in their manufactures; the exportation of raw materials is, in most instances, prohibited; and their importation permitted free from duty, and sometimes rewarded with a bounty. The exportation of some goods, manufactured to a certain length only (e. g. white cloth), is loaded with a duty, but permitted duty-free when the manufacture is carried to its full extent. The importation of rival manufactures is loaded with heavy duties, or absolutely prohibited. These restrictions are most severe towards nations with which the balance of trade is supposed against us, or which are considered as our most formidable rivals in power or commerce. III. To secure us plenty of necessaries for subsistence and manufacture, by discouraging the exportation of some articles that consume by length of time, and regulating the intra-trade according to the exigencies of the seasons. IV. To secure the trade of the colonies to the mother-country, and preserve a mutual intercourse, by encouraging the produce of their staple-commodities, and restraining their progress in these manufactures which they receive from us in exchange. The foundation of our commercial regulations is the famous ACT OF NAVIGATION, which was first enacted during the time of the commonwealth, and adopted by the first parliament after the restoration. The substance of this act, and subsequent amendments, is as follows: 1. Goods from Asia, Africa, and America, may not be imported, except in British ships duly navigated, or ships belonging to the British plantations; and they can only be imported from the place of their production or manufacture, or the port where they are usually first shipped for transportation. Goods of the Spanish or Portuguese plantations, imported from Spain and Portugal in British ships, bullion and some other inconsiderable articles are excepted. The restriction on European goods is not universal, but extends to several of the bulkiest articles. Russian goods, masts, timber, boards, salt, pitch, rosin, tar, hemp, flax, raisins, figs, prunes, olives, oil, corn, sugar, potashes, wine, and vinegar, may not be imported, except in ships belonging to Great Britain or Ireland, legally manned; nor Turkey goods and currants, except in ships British built; or in ships belonging to the country where these goods are produced or manufactured, or first shipped for exportation; and, if imported in foreign ships, they pay alien's duty. To entitle a

ship to the privileges of a British ship, it must be built in Britain, and belong entirely to British subjects; and the master, and  $\frac{3}{4}$  fourths of the mariners, must be British subjects, except in case of death, or unavoidable accidents. In time of war, the proportion of British mariners required is generally confined to  $\frac{1}{2}$ ; and the same proportion only is required in the Greenland fishery. No goods may be imported into, or exported from, the plantations in Asia, Africa, or America, except in ships built in Britain, Ireland, or the plantations, or prize ships, manned by British subjects, duly registered, and legally navigated. The following goods, enumerated in the act of navigation and subsequent acts, may not be exported from the plantations, except to some other plantation or to Britain: Tobacco, cotton-wool, indigo, ginger, suttic, and other dyeing wood, molasses, hemp, copper-ore, beaver-skins and other furs, pitch, tar, turpentine, masts, yards, and boltsprits, coffee, pimento, cocoa-nuts, whale-fins, raw silk, pot and pearl ashes. Rice and sugar were formerly comprehended in this list, but their exportation is now permitted under certain restrictions. Iron may not be imported to Europe, except to Ireland; and none of the non-enumerated may be imported to any country north of Cape Finisterre, except the Bay of Biscay and Ireland. 2. For the more effectual prevention of smuggling, no goods may be imported in vessels belonging to British subjects, and no wine, in any vessel whatever, unless the master, have a manifest on board, containing the name, measure, and built of the ship, the place to which it belongs, and a distinct enumeration of the goods on board, and places where they were laden. If the ship be cleared from any place under his Majesty's dominions, the manifest must be attested by the chief officer of the customs, or chief magistrate, who is required to transmit a copy thereof to the place of destination. Ship-masters must deliver copies of this manifest to the first custom-house officer who goes on board within four leagues of the shore, and also to the first who goes on board within the limits of any port, and must deliver the original manifest to the custom-house at their arrival, and make report of their cargo upon oath. If the report disagree with the manifest, or either disagree with the cargo on board, the ship-master is liable in the penalty of L. 200. The proprietors of the goods must enter them, and pay the duties within 20 days; otherwise they may be carried to the custom-house, and sold by auction, if not relieved within six months; and the overplus of the value, after paying duty and charges, paid to the proprietors. 3. The importation of cattle, beef, mutton, and pork, except from Ireland, woollen cloths, malt, and various articles of hardware, cutlery, and earthen ware, is prohibited: Also the following goods from Germany and the Netherlands; olive oil, pitch, tar, potashes, rosin, salt, tobacco, wines, except Rhenish wine, and Hungary wines from Hamburg. 4. The importation of various other goods is restricted by particular regulations respecting the time and place of importation, the packages, the burden of the ship, the requisition of a licence, and other circumstances. To guard

more effectually against the manufactory trade, the importation of some articles is only permitted in ships of a certain burden, whose operations are not easily concealed. Spirits must be imported in ships of 100 tons or upwards, except rum, and spirits of British plantations, which are only restricted to 70 tons; wine, 60 tons; tea, tobacco, and snuff, 50 tons; salt, 40 tons. Wine, spirits, and tobacco are also restricted in respect of the packages in which they may be imported. 5. Diamonds and precious stones, flax, flaxseed, linen rags, beaver wool, wool for clothiers, linen-yarn unbleached, and most drugs used in dyeing, may be imported duty free. 6. All goods imported are liable to duties, except such as are expressly exempted. The revenue of customs was new-modelled at the restoration. A subsidy of tonnage on wines, and of poundage, or 1 s. on the pound value of other goods, was granted during the king's life, and rendered perpetual. A book of rates was composed for ascertaining these values; and articles not rated paid duty according to the value, as sworn to by the importer. If the goods be valued too low by the importer, the custom-house officer might seize them, upon paying to the proprietor the value he swore to, and 10 per cent for profit; such goods to be sold, and the overplus paid into the customs. Various additional duties were imposed; some on all goods, some on particular kinds; some according to the rates, some unconnected with them; some with certain abatements, some without any; the greater part to be paid down in ready money, and a few for which security may be granted; with variations, according to the ship's place and circumstances of importation. The number of branches amounted to upwards of 50: and sometimes more than 10 were chargeable upon the same articles. By these means the revenue of the customs became a subject of much intricacy. The inconveniences which this gave rise to are now removed by the *consolidation act*; which appoints one fixed duty for each article free from fractions, instead of the various branches to which they were formerly subject. 7. Goods of most kinds may be exported duty free when regularly entered; and those that have paid duty on importation are generally entitled to drawback on part, sometimes of the whole, when re-exported within 3 years, upon certificate that the duties were paid on importation, and oath of their identity. In some cases, a bounty is given on manufactured goods, when the materials from which they are manufactured have paid duty on importation; and manufactures subject to excise, have generally the whole or part of the excise duties returned. 8. The following goods are *prohibited to be exported*; white ashes, horns, unwrought hides of black cattle, tallow, coin, brass, copper, engines for knitting stockings, tools for cotton, linen, woollen, silk, iron, and steel manufactures; wool, woollens, woollen yarn, fullers earth, fulling clay, and tobacco pipe clay. 9. The object of the laws respecting the corn trade is to encourage agriculture, by not only permitting the free exportation, but rewarding it with a bounty when the prices are low, and checking the importation by a heavy duty; and, to prevent scarcity, by prohibiting the importation when the prices are high,

and permitting exportation at an easy duty. Various temporary laws have been enacted for purposes, and sometimes other expedients employed in times of scarcity, such as prohibiting the tillery from corn, and manufacture of starch: by a permanent law, in 1773, the low dutie bounties are regulated as under:

	At or above.	Low-duty.	Under. B
Wheat,	48 s. per qr.	6 d.	44 s.
Rye,	32 s.	3 d.	28 s.
Pease and beans,	32 s.	3 d.	28 s.
Oats,	16 s.	2 d.	14 s.
Barley,	24 s.	2 d.	22 s.

The duties, when the prices are lower than in the first column, amount to a prohibition. When the prices are higher than in the column prefix the bounty, no exportation is permitted. Oats are under the bounty price, oatmeal is entitled to a bounty of 2 s. 6 d. per quarter. Bounties are allowed on the exportation of sugar, sail-cloth, linen under limited prices, stuffs of British manufacture, cordage, spirits, barley is under 24 s. beef, pork, salmon, herrings, cod, ling, flake, and sprats. Various other bounties are allowed for the encouragement of our fisheries. Ships from 150 to 300 tons employed in the Greenland whale-fishery, and forming to the regulations prescribed, are all 30 s. per ton. Vessels employed in the herring fishery receive 20 s. per ton, besides a bounty on the herrings caught and cured, amounting in cases to 4 s. per barrel. Other bounties are limited to a limited number of the most successful vessels employed in the herring and Newfoundland fisheries, and in the southern whale-fishery. unnecessary, as well as impracticable, to enter into a full detail of our custom house laws. In all that can be admitted into a work of this nature, I must convey but very imperfect information, even that little becomes useless in a short time from alterations in the laws. We have therefore only marked the general outlines in this manner, which, however, will be sufficient to enable the reader to judge of the principles upon which the British legislature has acted. How far the duties employed have contributed to the ends proposed, and how far the ends themselves are always or whether a trade encumbered by fewer regulations would not prove more extensive and beneficial; have been subjects of discussion, upon which we will not presume to offer our opinion.

(12.) LAWS RESPECTING GAME, OR CHASE LAWS. See GAME, § 2. Sir William Blackstone, in treating of the alterations in these laws, and mentioning franchises granted of chase and free ten, as well to preserve the breed of animals, as to indulge the subject, adds, "From a principle to which, though the forest-laws are mitigated, and by degrees grown entirely obsolete; yet from this root has sprung a law, known by the name of the *game-law*, now a source of contention and wantonness in its highest vigour: founded upon the same unreasonable notion of permanent property in wild creatures; and productive of the same tyranny to the commons, but with this difference, that the forest-laws have blessed only one mighty hunter throughout the land; the *game-laws* have raised a little N

of the manor. And in one respect the ancient law was much less unreasonable than the modern; the king's grantee of a chase or free warren, he kill game in every part of his franchise; but though a freeholder of less than L. 100 a year is forbidden to kill partridge upon his own estate, nobody else (not even the lord of the manor, if he hath a grant of free warren) can do it without committing a trespass and subjecting himself to action. Under the article GAME, the destroying such beasts and fowls as are ranked under that denomination, was observed (upon the old copies of the forest-law) to be a trespass and action in all persons alike, who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or estate a manor of their own. But the laws called the game-laws have also inflicted additional punishments (chiefly pecuniary) on persons guilty of this general offence, unless they be people of high rank or fortune as is therein particularly specified. All persons, therefore, of what property or condition soever, that kill game out of their own territories, or even upon their own estates, without the king's licence expressed by the grant of a franchise, are guilty of the first original offence or encroaching on the royal prerogative. And those indigent persons who do so, without having such rank or fortune as is generally called qualification, are guilty, not only of the original offence, but of the aggravations also created by the statutes for preserving the game: which aggravations are so severely punished, and those punishments so implacably inflicted, that the offence against the king is seldom thought of, provided the miserable delinquent can make his peace with the lord of the manor. The only rational footing upon which this offence, thus aggravated, can be considered as a crime, is, that in low and indigent persons it promotes idleness, and takes them away from their proper employments and callings: which is an offence against the public police and economy of the commonwealth. The statutes for preserving the game are many and various, and not a few obscure and intricate; it being remarked, that in one statute only, 5 Ann. c. 14. there is the word game in no fewer than six places, besides the mistakes: the occasion of which, or what punishment of persons were probably the penalties of these statutes, it is unnecessary here to inquire. It may be in general sufficient to observe, that the qualifications for killing game, as they are generally called, or more properly the exemptions from the penalties inflicted by the statute law, are, 1. The having a freehold estate of L. 100 per annum: there being fifty times the property requisite to enable the man to kill a partridge, as to a knight of the shire. 2. A leasehold for years of L. 150 per annum. 3. Being the son or heir apparent of an esquire (a very loose and general description) or person of superior degree. 4. Being the owner or keeper of a forest, park, or warren. For unqualified persons transgressing these laws, by killing game, keeping engines for that purpose, or even having game in their possession, or for persons (however qualified) to kill game, or have it in possession, at unreasonable times of the year, or unreasonable hours

of the day or night, on Sundays or on Christmas day, there are various penalties assigned, corporal and pecuniary, by different statutes (after-mentioned), on any of which, but only on one at a time, the justices may convict in a summary way, or (in most of them) prosecutions may be carried on at the assizes. And, lastly, by 28 Geo. II. c. 12. no person, however qualified to kill, may make merchandise of this valuable privilege, by selling or exposing to sale any game, on pain of like forfeiture as if he had no qualification.—The statutes above referred to are as follow. No person shall take pheasants or partridges with engines in another man's ground without licence, on pain of 10l. stat. 11 Hen. VII. c. 13. If any person shall take or kill any pheasants or partridges with any net in the night time, they shall forfeit 20s. for every pheasant, and 10s. for every partridge taken; and hunting with spaniels in standing corn, incurs a forfeiture of 40s. 23 Eliz. c. 10. Those who kill any pheasant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 20s. for every fowl and hare; and selling, or buying to sell again, any hare, pheasant, &c. the forfeiture is 10s. for each hare, &c. 1 Jac. I. c. 17. Also pheasants or partridges are not to be taken between the first of July and the last of August, on pain of imprisonment for a month, unless the offenders pay 20s. for every pheasant, &c. killed: and constables having a justice of peace's warrant, may search for game and nets, in the possession of persons not qualified by law to kill game or to keep such nets, 7 Jac. I. c. 11. Constables, by a warrant of a justice of peace, are to search houses of suspected persons for game: and if any game be found upon them, and they do not give a good account how they came by the same, they shall forfeit for every hare, pheasant, or partridge, not under 5s. nor exceeding 20s. And inferior tradesmen hunting, &c. are subject to the penalties of the act, and may likewise be sued for trespass. If officers of the army or soldiers kill game without leave, they forfeit 5l. an officer, and 10s. a soldier; 4 & 5 W. and M. c. 23. Higglers, chapmen, carriers, innkeepers, victuallers, &c. having in their custody hare, pheasant, partridge, heath-game, &c. (except sent by some person qualified to kill game), shall forfeit for every hare and fowl 5l. to be levied by distress and sale of their goods, being proved by one witness, before a justice; and for want of distress shall be committed to the house of correction for three months: one moiety of the forfeiture to the informer, and the other to the poor. And selling game, or offering the same to sale, incurs the like penalty; wherein hare and other game found in a shop, &c. is adjudged an exposing to sale: killing hares in the night is liable to the same penalties: and if any persons shall drive wild-fowls with nets, between the first day of July and the 1st of Sept. they shall forfeit 5s. for every fowl; 5 Ann. c. 14. 9 Ann. c. 25. If any unqualified person shall keep a gun, he shall forfeit 10l.: and persons being qualified may take guns from those that are not, and break them; 21 & 22 Car. II. c. 25. and 33 H. VIII. c. 6. One justice of peace, upon examination and proof of the offence, may commit the offender till he hath paid

paid the forfeiture of 10*l.* And persons, not qualified by law, keeping dogs, nets, or other engines to kill game, being convicted thereof before a justice of peace, shall forfeit 5*l.* or be sent to the house of correction for 3 months; and the dogs, game, &c. shall be taken from them, by the statute 5 Ann. If a person hunt upon the ground of another, such other person cannot justify killing of his dogs, as appears by 2 Roll. Abr. 567. But it was otherwise adjudged Mich. 33 Car. II. in C. B. 2 Cro. 44. and see 3. Lev. xxviii. In actions of debt, *qui tenet*, &c. by a common informer on the statute 5 Ann. for 15*l.* wherein the plaintiff declared on two several accounts, one for 10*l.* for killing two partridges, the other for 5*l.* for keeping an engine to destroy the game, not being qualified, &c. the plaintiff had a verdict for 5*l.* only: this action was brought by virtue of the stat. 8 Geo. I. See stat. 9 Geo. I. c. 22. See likewise 24 Geo. II. c. 34. for the better preservation of the game in Scotland. By the stat. 26 Geo. II. c. 2. all suits and actions brought by virtue of stat. 8 Geo. I. c. — for the recovery of any pecuniary penalty, or sum of money, for offences committed against any law for the better preservation of the game, shall be brought before the end of the second term after the offence committed. By 28 Geo. II. c. 12. persons selling, or exposing to sale, any game, are liable to the penalties inflicted by 5 Ann. c. 14. on higglers, &c. offering game to sale: and game found in the house or possession of a poulterer, salesman, fishmonger, cook, or pastry-cook, is deemed exposing thereof to sale. By 2 G. III. c. 19. after the 1st June 1762, no person may take, kill, buy or sell, or have in his custody, any partridge, between 12th Feb. and 1st September, or pheasant between 1st Feb. and 1st Oct. or heath fowl between 1st Jan. and 20th Aug. or grouse between 1st Dec. and 25th July, in any year; pheasants taken in their proper season, and kept in mews, or breeding places, excepted; and persons offending in any of the cases aforesaid, forfeit 5*l.* per bird, to the prosecutor, to be recovered, with full costs, in any of the courts at Westminster. By this act, likewise, the whole of the pecuniary penalties under the 8 Geo. I. c. 19. may be sued for, and recovered to the sole use of the prosecutor, with double costs; and no part thereof to go to the poor of the parish. By 5 Geo. III. c. 14. persons convicted of entering warrens in the night-time, and taking or killing of coney there, or aiding or assisting therein, may be punished by transportation, or by whipping, fine, or imprisonment. Persons convicted on this act, not liable to be convicted under any former act. This act does not extend to the destroying coney in the day time, on the sea and river banks in the county of Lincoln, &c. No satisfaction to be made for damages occasioned by entry, unless they exceed 1*s.* By 10 Geo. III. c. 19. it is enacted, That if any person kill any hare, &c. between sun setting and sun-rising, or use any gun, &c. for destroying game, he shall for the first offence be imprisoned for any time not exceeding six nor less than three months: if guilty of a second offence, after conviction of a first, to be imprisoned for any time not exceeding 12 months nor less than six; and

shall also, within three days after the time of commitment, either for the first or for any second offence, be once publicly whipped. By 23 G. III. c. 50. and 31 Geo. III. c. 21. every person Great Britain (the royal family excepted), shall, after July 1, 1785, use any dog, gun, net, or other engine, for the taking or destruction of game (not as acting as gamekeeper), shall deliver a paper or account in writing, containing his name and place of abode, to the clerk of the peace, his deputy, and annually take out a certificate thereof; and every such certificate shall be charged with a stamp-duty of 2*l.* 2*s.* (and an additional 2*l.* 1*s.* by 31 Geo. III. c. 21.) making in the whole 5*l.* 3*s.*—Every deputation of a gamekeeper shall be registered with the clerk of the peace, and every gamekeeper shall annually take out a certificate thereof; which certificate shall be charged with a stamp duty of 10*s.* 6*d.* (and an additional 6*d.* by 31 Geo. III. c. 21.) making in the whole 1*l.* 1*s.*—The duties to be under the management of the commissioners of the stamp-office, and after 1st July, 1785, the clerk of the peace shall annually deliver to persons requiring the same, duly stamped, a certificate or licence according to the form therein mentioned, for which he shall be entitled to demand 1*s.* for his trouble, and on refusal or neglect to deliver the same shall forfeit 20*l.*—Every certificate to bear date the 1st of July following, on penalty of 20*l.* After the 1st of July, 1785, any person that shall take, kill, or other dog, or any gun, net, or engine, for the taking or killing of game, without a certificate, shall be liable to the penalty of 20*l.* And if any person shall, for the space of 20 days after the said 1st of July, or if any gamekeeper thereunto to be appointed shall, for the space of 20 days after such appointment, neglect or refuse to take out his deputation and take out a certificate thereof, he is liable to the penalty of 20*l.* The lists of the peace are to transmit to the stamp-office in London alphabetical lists of the certificates, on penalty of 20*l.* These lists are to be kept in the stamp-office in London, and there to be inspected on payment of 1*s.*: And the commissioners of the stamp duties are, once or oftener in every year, as soon as such lists are transmitted to them, to cause the same to be published in newspapers circulating in each county, or in public paper as they shall think most proper; and any gamekeeper, who shall have registered his deputation, and taken out a certificate thereof, shall be liable to the penalty of 20*l.* And if any person, who shall have obtained a certificate, shall be liable to the penalty of 50*l.* The certificate shall not be used to authorise persons to kill game at any time prohibited by law, nor to give any person a right to kill game, unless such person shall be

lised so to do by the laws now in being, but shall be liable to the same penalties as if this act had not passed. So that though by this act qualified and unqualified persons are equally included, yet having a certificate does not give an unqualified person a right to kill game: the point of right still stands upon the former acts of parliament; and any unqualified person killing game without a certificate, is not only liable to the penalty inflicted by this act, but also to all the former penalties relating to the killing of game, &c. Witnesses refusing to appear on justices summons, or appearing and refusing to give evidence, forfeit 10l. The certificates obtained under deputations, not to be given in evidence for killing of game by a gamekeeper out of the manor, in respect of which such deputation or appointment was given and made. Persons counterfeiting stamps to suffer death as felons. Penalties exceeding 20l. are to be recovered in any of his majesty's courts of record at Westminster; and penalties not exceeding 20l. are recoverable before two justices, and may be levied by distress. The whole of the penalties go to the informer.

(12.) LAW, TRIAL BY WAGER OF, (*vadiatio legi*); a species of trial in the English law, so called, as another species is styled WAGER OF BATTLE, *vadiatio duelli*, (see BATTLE, § 2.): because as in the wager of battle, the defendant gave *vadium*, i. e. pledge, or gage, to try the cause by battle; so here he was put in *vadium*, or sureties, that at such a day he would *make his law*, i. e. take the benefit which the law allowed him. (See TRIAL.) For our ancestors considered, that there were many cases where an innocent man, of good credit, might be overborn by a multitude of false witnesses; and therefore established this species of trial, by the oath of the defendant himself: for if he will absolutely swear himself not chargeable, and appears to be a person of reputation he shall go free, and for ever acquitted of the debt, or other cause of action. The manner of waging law is this. He that has waged or given security, to make his law, brings with him into court 11 of his neighbours: a custom which we find described so early as in the league between Alfred and Guthrum the Dane; for by the old Saxon constitution every man's credit in courts of law depended upon the opinion which his neighbours had of his veracity. The defendant then, standing at the end of the bar, is admonished by the judges of the nature and danger of a false oath. And if he still persists, he is to repeat this oath: "Hear this, ye justices, that I do not owe unto Richard Jones the sum of ten pound: nor any penny thereof, in manner and form as the said Richard hath declared against me. So help me God." And thereupon the 11 neighbours, or cojurators shall avow upon their oaths, that they believe in their consciences that he saith the truth; so that himself must be *proven de falsitate*, and the *de credulitate*. In the old Swedish or Gothic constitution, wager of law was not only permitted, as in criminal cases, unless the fact be extremely clear against the prisoner; but was absolutely required, in many civil cases: which Stiernhook, a Swedish author justly reckons, a source of frequent perjury. This, he tells us, was owing to the Popish ecclesiastics,

who introduced this method of purgation from their canon law; and, having sown a plentiful crop of oaths in all judicial proceedings, reaped afterwards an ample harvest of perjuries: for perjuries were punished in part by pecuniary fines, payable to the church. But in England wager of law is never required; and only admitted, where an action is brought upon matters privately transacted between the parties, and wherein the defendant may be presumed to have made satisfaction, without being able to prove it. Therefore it is only in action of debt upon simple contract, or for amercement, in actions of detinue, and of account, where the debt may have been paid, the goods restored, or the account balanced, without any evidence of either. And by such wager of law the plaintiff is perpetually barred; for in the simplicity of ancient times it was presumed, that no one would perjure himself for any worldly thing. Wager of law, however, lieth in a real action, where the tenant alleges he was not legally summoned to appear, as well as in mere personal contracts. But it was never permitted, unless the defendant bore a fair character; and it was confined to cases where a debt might be supposed to be discharged, or satisfaction made in private, without witnesses. At length it was considered, that (even under all its restrictions,) wager of law threw too great a temptation in the way of indigent or profligate men: and therefore new remedies were devised, and new forms of action were introduced, wherein no defendant is at liberty to wage his law. So that wager of law is now quite out of use, being avoided by the mode of bringing the action; but still it is not *out of force*. And therefore, when a new statute inflicts a penalty, and gives an action of debts for recovering it, it is usual to add, "in which no wager of law shall be allowed:" otherwise an hardy delinquent might escape any penalty of the law, by swearing he had never incurred, or else had discharged it.

(1.) LAWÁ, a town in the island of Borneo, seated on the river, N. 2. Lon. 110. 42. E. Lat. 0. 40. N.

(2.) LAWÁ, a river of Borneo, which runs into the sea, in Lon. 119. 30. E. Lat. 0. 30. N.

LAWBORROWS, or } See LAW, PART III.  
LAWBURROWS. } CHAP. III. S. 2. L. 16

(1.) LAWENBURG, a duchy of Lower Saxony, bounded by that of Holstein, on the N. and W. by that of Mecklenburg on the E. and by that of Lunenburg, from which it is separated by the Elbe, on the W.: about 85 miles long, and 20 broad. The chief towns are Lawenburg, Molln, Wittenburg, and Ratzelburg. It belongs to his Majesty as elector of Hanover.

(2.) LAWENBURG, the capital of the above duchy, is a small but populous city, seated on the Elbe, under the brow of a very high hill, whence there is a delightful prospect of the adjacent country. It has a castle on an eminence, and is convenient for trade. Lon. 10. 51. E. Lat. 53. 36. N.

(3, 4.) LAWENBURG, a town of Germany, in Farther Pomerania, and the chief place of a territory so named, belonging to the elector of Brandenburg.

(1.) LAWERS, an eminent engraver, who flourished

rished about the middle of the 16th century. He was a native of Flanders, and is said to have studied under Paul Pontius, whose style of engraving he often imitated. He possessed considerable merit; but was not equal to that great master, either in handling the graver, or knowledge of drawing. He engraved from several painters; but his best works are from the pictures of Rubens.

(2.) **LAWERS**, in geography, the highest mountain in Perthshire, seated on the N. side of Loch Tay. It measures 4,015 feet above the sea level; and produces a great variety of Alpine plants, rarely met with in other parts of Britain.

(3.) **LAWERS**, a river of the Batavian republic, in the dep. of the Ems, which runs between the late provinces of Groningen and E. Friesland, and falls into the sea 10 miles E. of Dockum.

(1.) **LAWES**, Henry, a celebrated musician, under Charles I. whom he served in his public and private music, and set some of the works of almost every poet of eminence in that reign. The *Comus* of Milton, and several of the lyrics of Waller, were set by him; and both these poets have done him honour in their verses. He composed a considerable number of psalm tunes in the *Antient Sacra*, for three voices and an organ; and many more of his compositions are to be seen in a work called *Steed airs and dialogues*; and in the *Treasury of music*, and the *Musical companion*. He died in 1662.

(2.) **LAWES**, William, brother to the above, was also a most capital musician. He made above 30 several sorts of music for voices and instruments; nor was there any instrument then in use, but he composed to it as aptly as if he had studied that alone. In the music school at Oxford are two large manuscript volumes of his works in score for various instruments. He was a commissary under general Gerard in the civil war, and, to the great regret of the king, was killed at the siege of Chester in 1645.

\* **LAWFUL**, *adj.* [*low* and *full*]. Agreeable to law; conformable to law; allowed by law; legitimate; legal.—It is not *lawful* for thee to have her. *Matt. xiv. 4.*—Gleeser's bastard son was kinder to his father, than my daughters got 'twixt the *lawful* sheets. *Shak. King Lear.*

\* **LAWFULLY**, *adv.* [from *lawful*]. Legally; agreeably to law.—

This bond is forfeit;  
And *lawfully* by this the Jew may claim  
A pound of flesh. *Shak.*

—Though it be not against strict justice for a man to do those things which he might otherwise *lawfully* do, yet Christian charity will, in many cases, restrain a man. *South.*—I may be allowed to tell your lordship, the king of poets, what an extent of power you have, and how *lawfully* you may exercise it. *Dryden.*

\* **LAWFULNESS**, *n. f.* [from *lawful*]. Legality; allowance of law.—It were an error to speak further, till I may see some sound foundation laid of the *lawfulness* of the action. *Bacon.*

\* **LAWGIVER**, *n. f.* [*law* and *giver*]. Legislator; one that makes laws.—Satanban we esteem as the *lawgiver* of our nation. *Johnson.*—A law may be very reasonable in itself, although one

does not know the reason of the *lawgivers*  
\* **LAWGIVING**, *adj.* [*law* and *giving*].  
gislator.—

*Lawgiving* heroes, fam'd for taming  
And raising cities with their charming l

**LAWINGEN**, a town of Germany, in the circle of Suabia; formerly imperial, but now to the duke of Neuburg. Here the duke varia, in 1704, fortified his camp to defend country against the British forces and then under the D. of Marlborough, who forced intrenchments. It is seated on the Danube 10. 29. E. Lat. 38. 32. N.

(1.) \* **LAWLESS**, *adj.* [from *law*]. 1. Strained by any law; not subject to law.—Necessity of war, which among human actions most *lawless*, hath some kind of affinity with necessity of law. *Ruleigh.*—

The *lawless* tyrant, who denies  
To know their God.  
Orpheus did not, as poets feign, tame  
beasts,

But men as *lawless*, and as wild as they;  
Not the gods, nor angry Jove will be  
Thy *lawless* wand'ring walks in open air  
Blind as the Cyclops, and as blind as  
They own'd a *lawless* savage liberty.

He meteor-like, flames *lawless* thro' the  
Destroying others, by himself destroy'd  
2. Contrary to law; illegal.—

He needs no indirect or *lawless* course  
To cut off those that have offended him  
We cite our faults,  
That they may hold excus'd our *lawless*.

Thou the first, lay down thy *lawless*.

(2.) **LAWLESS COURT**, a court held to annually on King's Hill at Rockford in Essex Wednesday morning after Michaelmas cock-crowing, where they whisper, and light a candle, nor any pen and ink, but only Persons who owe suit, or service, and do appear, forfeit double their rent every year are missing. This servile attendance, informs us, was imposed on the tenants spring at this unseasonable hour to raise a mummery. The court belongs to the honour of Lough, and to the earl of Warwick; and is *lawless*, from its being held at an unlawful

\* **LAWLESSLY**, *adv.* [from *lawless*]. In a manner contrary to law.—

Fear not, he bears an honourable mit  
And will not use a woman *lawlessly*.

**LAWLING**, a town of Essex, between and burnham.

\* **LAWMAKER**, *n. f.* [*law* and *maker*]. Legislator; one who makes laws; a lawgiver. Judgment is, that the church of Christ admit no *lawmakers* but the evangelists. *Hobbes.*

(1.) \* **LAWN**, *n. f.* [*law* and *land*]. *Daunt's lawn, land*, Friz. 1. A open space between walls; Betwixt *lawn* *lawn*, or level down blocks;

Grazing, the tender herbs were interpos'd.  
—Young trees, that gradually shot up into

d forests, intermixed with walks, and  
l gardens. *Addison*.—  
grassy forms shoot o'er the lawns of hell.

*Pope*.  
pers'd in lawns and opening glades,  
es arise that shun each other's shades.

*Pope*.  
French.] Fine linen, remarkable for  
in the sleeves of bishops.—  
p the wounds my finest lawn I'd tear.

*Prior*.  
m high life high characters are drawn,  
n crape is twice a saint in lawn. *Pope*.  
uties by the lawn-rob'd prelate pay'd,  
last words, that dust to dust convey'd!

*Tickell*.  
AWN (§ 1 *def.* 1.) is a spacious plain in  
adjoining to a noble seat. The dimen-  
awn, in a large park, should be as ex-  
he ground will permit; and never less  
es: but in gardens of a moderate ex-  
n of 10 acres is sufficient; and in those  
est size, 15 acres. The best situation  
is in the front of the house: and here,  
e front the east, it will be extremely  
; but the most desirable aspect for a  
t of the SE. As to the figure of the  
e recommend an exact square, others an  
are, some an oval, and others a circu-  
: but none of these are to be regarded.  
o be so contrived, as to suit the ground;  
should be trees planted for shade on the  
s of the lawn, so that the sides may be  
irregular plantations of trees, which,  
: not some good prospects beyond the  
uld bound it on every side, and be  
und pretty near to each end of the  
the trees are placed irregularly, some  
uch forwarder on the lawn than others,  
wded too close together, they will make  
pearance than any regular plantations;  
e is a variety of trees, properly dispo-  
will have a good effect; but only those  
ke a fine appearance, and grow large,  
nd handsome, should be admitted. The  
re are the elm, oak, chestnut, and beech;  
clumps of ever-greens intermixed will  
: beauty of the whole, especially in win-  
est sorts are lord Weymouth's pine, and  
and spruce firs.

ROW, a town of Poland, in Lemberg

TRICE-TOWN, a township of Nova Scotia,  
l. of Halifax.

SON, James, of Belvidere, A. M. and  
Presbyterian preacher, who made no  
ife for many years, in our ecclesiastical  
He was born at Belvidere, his paternal  
ce, in the parish of Auchterarder, in  
re, about 1744; and studied divinity, phi-  
, &c. at the university of Glasgow; where  
his degrees in April 1768; and from which  
XIII. PART I.

he received the most ample certificates of his learn-  
ing, piety and strict morality, in 1771. His for-  
tune, however, as a probationer, was extremely  
singular. Though his morals were unimpecha-  
ble; tho' his religion was sincere; though his ad-  
herence to strict Presbyterian principles was so  
strong, or rather *enthusiastic*, as, a century earlier,  
would have raised him to eminence in the church;  
or perhaps, under the tyrannical reign of the  
house of Stewart, might have procured him the  
honour of a crown of martyrdom; and tho' his  
learning, particularly, in the Greek and Hebrew  
languages, was acknowledged, even by his ene-  
mies, yet from the personal pique of one man,  
an opposition was excited against him, founded  
on the most trivial circumstances, which, after a  
contest of ten years, carried on with unparalleled  
perseverance on his part, and no less obstinacy on  
that of his opponents, ended in his being refused  
a licence. This opposition originated from his pa-  
rish minister, Mr Campbell, whose settlement Law-  
son's father had originally opposed, and who, from  
a vindictive principle, resolved to prevent young  
Lawson from having any chance of one. Mr  
Campbell and the majority of that presbytery be-  
ing connected with the popular party in the  
church, and Lawson's own principles being well  
known to be diametrically opposite to those of  
the Court party, Lawson, trusting solely to the  
justice of his cause, was supported by neither par-  
ty; though any support he received, in the gene-  
ral assembly, was from the latter, who carried  
partial decisions of three successive assemblies in  
his favour. But the final decision of that Court  
in May 1781, confirmed the sentence of the pres-  
bytery, refusing him a licence. A full narrative of  
the origin, progress, and result of this opposition,  
with a number of interesting remarks, letters,  
speeches, &c. was published by him, at Edin-  
burgh in Aug. 1781, 12mo. entitled *The Present  
Case of James Lawson, A. M. B. D. &c.* He af-  
terwards went to London, and obtained a licence  
among the Dissenters. Returning to Scotland, he  
joined the Presbytery of Relief, and, from princi-  
ples of humanity, married a sister of the rev. Mr  
Gellatly, who, he was assured, had fallen in love  
with him; which is not improbable, as his person  
was genteel, his temper mild, and his manners a-  
miable. He wrote several other tracts, and died  
about 1797, of a decay, leaving two children.  
His peculiar sentiments and habits of thinking may  
be judged of from a single circumstance. During  
his examination by the assembly's committee, be-  
ing found somewhat deficient in his knowledge of  
Latin, though well skilled in Greek and Hebrew,  
he told the committee, that he saw no use for La-  
tin, to illustrate the Scriptures, but considered the  
original languages as absolutely necessary.

LAWSONIA, EGYPTIAN PRIVET, a genus  
of the monogynia order, belonging to the octan-  
dria class of plants; and in the natural method  
ranking with those of which the order is doubt-  
ful. The calyx is quadrifid; the petals four; the  
stamina four in pairs; the capsule is quadrilocular  
and polyspermous. There are two species, viz.

1. LAWSONIA INERMIS, and } both natives of
2. LAWSONIA SPINOSA, } India. Some

authors take the first to be the plant termed by

the Arabians *HEB* or *albenna*; the pulverised leaves of which are much used by the eastern nations for dyeing their nails yellow: but others, Dr Hasselquist in particular, attribute that effect to the leaves of the other species of Egyptian privet which bears prickly branches. It is probable, that neither set of writers are mistaken, and that the shrub in question is a variety only of the thorny *lawsonia*, rendered mild by culture. *Alhenna* grows naturally and is cultivated throughout India, as also in Egypt, Palestine, and Persia. In those countries, says Hasselquist, it flowers from May to August. The leaves being pulverised, are made with water into a paste, which the inhabitants of those countries bind on the nails of their hands and feet, keeping it on all night. The deep yellow colour that is thus obtained is considerably permanent, not requiring to be renewed for several weeks. It would seem that this custom is very ancient in Egypt; the nails of some mummies being found dyed in this manner. The dried flowers of the henna afford a fragrant but sickly smell.

\* **LAW-SUIT.** *n. f.* [*law* and *suit*.] A process in law; a litigation.—The giving the priest a right to the tithe would produce *lawsuits* and wrangles. *Swift*.

(1.) \* **LAWYER.** *n. f.* [from *law*.] Professor of law; advocate; pleader.—It is like the breath of an unfeeling lawyer, you gave me nothing for it. *Shakespeare's King Lear*.—Is the law evil, because some lawyers in their office swerve from it? *Whitgift*.—I have entered into a work touching laws, between the speculative discourses of philosophers, and the writing of lawyers. *Bacon*.—

The nymphs with scorn beheld their foes,

When the defendant's council rose;

And what no lawyer ever lack'd,

With impudence own'd all the fact. *Swift*.

(2.) **LAWYER.** See **ADVOCATE**, **BARRISTER**, § 1, 2; **COUNSEL**, § 2, 3; **COUNSELLOR**, § 2; and **SERGEANT**.

(1.) \* **LAX.** *adj.* [*laxus*, Latin] 1. Loose; not confined.—

In habit *lax*, ye pow'rs of heav'n! *Milton*.  
2. Diffracted; not strongly combined.—In mines, those parts of the earth which abound with strata of stone, suffer much more than those which consist of gravel, and the like *laxer* matter, which more easily given way. *Woodward*. 3. Vague; not rigidly exact.—Dialogues were only *lax* and moral discourses. *Baker*. 4. Loose in body, so as to go frequently to stool; *laxative* medicines are such as promote that disposition. *Quincy*. 5. Slack; not tense.—By a branch of the auditory nerve that goes between the ear and the palate, they can hear themselves, though their outward ear be stopp'd by the *lax* membrane to all sounds that come that way. *Holder's Elements of Speech*.

(2.) \* **LAX.** *n. f.* A looseness; a diarrhoea.

(3.) **LAX**, in geography, a town of the Helvetic republic, in the Valais, 33 miles E. of Sion.

\* **LAXATION.** *n. f.* [*laxatio*, Latin.] 1. The act of loosening or slackening. 2. The state of being loosened or slackened.

(1.) \* **LAXATIVE.** *adj.* [*laxatif*, French; *laxo*, Latin.] Having the power to ease costiveness.—

Omitting honey, which is of a *laxative* self, the powder of loadstones doth dissipate and bind, than purge and loose. *Brown*.—The oil in wax is emollient and anodyne. *Arbutnot*.

(2.) \* **LAXATIVE.** *n. f.* A medicine laxative; a medicine that relaxes the bowels without stimulation.—

Nought profits him to save abroad  
No vomits upward aid, nor downward

\* **LAXATIVENESS.** *n. f.* [from Power of easing costiveness.]

**LAXEMBERG**, or } a town of Austria  
**LAXEMBURG**, } a palace, seat  
ver, 10 miles S. of Vienna. Lon. 16. :  
48. 3. N.

(1.) **LAXEY**, a town in the isle of M

(2.) **LAXEY BAY**, } a bay and cape

(3.) **LAXEY CAPE**, } coast of the isle  
its S. extremity. The bay affords fresh  
W. winds in from 7 to 10 feet water.

**LAXFORD**, a considerable river of  
in the county of Sutherland, which  
Loch-Stalk, divides the parish of E  
from Ashir, and falls into an arm of  
Laxford harbour.

**LAXIANA**, a river of Spain, w  
into the Xalon, 3 miles above An  
ragon.

\* **LAXITY.** *n. f.* [*laxitas*, Lat.] 1. No  
sion; not close cohesion.—The former c  
never beget whirlpools in a chaos of so g  
and thinness. *Bentley*. 2. Contrariety o  
precision; as, *laxity* of expression. 3. Lo  
costiveness.—If sometimes it cause any  
in the same way with iron unprepared,  
disturb some bodies, and work by pur  
mit. *Brown*. 4. Slackness; contrari  
sion.—*Laxity* of a fibre is that degree  
in its parts which a small force can alt  
increase its length beyond what is natur  
—In consideration of the *laxity* of the  
are subject to relapse. *Wifem*. 2. Openne  
ness.—Hold a piece of paper close by th  
candle, and by little and little remove it  
and there is upon the paper some part of  
I see in the candle, and it grows still les  
I remove; so that if I would trust my sen  
believe it as very a body upon the pap  
candle, though infected by the *laxity* of  
in which it flows. *Digby on Bodies*.

\* **LAXNESS.** *n. f.* *Laxity*; not tens  
sion; not costiveness.—For the free pa  
found into the ear, it is requisite that  
num be tense, and hard stretched; oth  
*laxness* of that membrane will certainly  
damp the sound. *Holder*.

**LAXTON**, the name of 3 English  
Northampton, Nottingham, and York

(1.) \* **To LAY.** *v. a.* [*leggan*, Sax. *l*  
1. To place; to put; to repose. This  
correlative to *l*, involves commonly  
or *extension*; 2. a punishment *laid* is a  
that cannot be shaken off; in immobility  
weight. One hound *laid* to another in  
*sion*.—He *laid* his robe from him. *Jo*

their swords under their heads. *Ezek.*  
on the flow'ry herb I found me *laid*. *Milt.*  
He sacrificing *laid*

traills on the wood. *Milton.*  
ice along.—Seek not to be judge, left at  
thou fear the person of the mighty, and  
sibling block in the way of thy upright-  
*ness*.—A stone was *laid* on the mouth of  
*Daniel*. 3. To beat down corn or grafs,  
r ill accident is *laying* of corn with great  
arvest. *Bacon.*—

Let no sleep there play,  
eking kids the flowery meadows *lay*. *May.*  
ep from rising; to settle; to still.—  
se th' advantage of my power,  
y the summer's duit with showers of  
ood. *Shak.*

a sandy soil, and the way had been full  
but an hour or two before a refreshing  
hower of rain had *laid* the dust. *Ray.* 5.  
ep; to dispose regularly: either of these  
ay be conceived from the following ex-  
but regularity seems rather implied; so  
o *lay* bricks; to *lay* planks.—Schifina-  
lows, or criminal persons, are not fit to  
undation of a new colony. *Bacon.*—

the deep foundations of a wall,  
nos, nam'd from me, the city call. *Dryd.*  
ill be apt to call it pulling up the old  
ms of knowledge; I persuade myself,  
way I have pursued *lays* those foundations  
ée. 6. To put; to place.—Then he of-  
him again; then he put it by again;  
y thinking, he was very loth to *lay* his  
it. *Shak.*—

Till us death *lay*  
and mellow, we are but stubborn clay.

*Donne.*  
hall *lay* hands on the sick, and recover.  
They, who so state a question, do no  
separate and disentangle the parts of it,  
another, and *lay* them, when so disen-  
in their due order. *Locke.*—

to thy name our annual rites will pay,  
thy altars sacrifices *lay*. *Pope.*  
ry; to inter.—David fell on sleep, and  
unto his fathers, and saw corruption.  
36. 8. To station or place privily.—*Lay*  
mbush for the city behind thee. *Jos.* viii.  
wicked have *laid* a snare for me. *Pf.*—  
vait, O! wicked man, against the dwell-  
er righteous. *Prov.* xxiv. 15. 9. To spread  
acc.—The colouring upon those maps  
*laid* on so thin, as not to obscure or  
y part of the lines. *Watts.* 10. To paint;  
—The pictures drawn in our minds are  
ling colours, and, if not sometimes re-  
anish and disappear. *Locke.* 11. To put  
late of quiet.—They bragged, that they  
ot but to abuse, and *lay* asleep, the queen  
il of England. *Bacon.* 12. To calm; to  
quiet; to allay.—

Friends, loud tumults are not *laid*  
alf the casines that they are rais'd.

*Ben Jonson.*  
with her radiant finger still'd the roar  
der, chas'd the clouds, and *laid* the winds.

*Milton.*

After a tempest, when the winds are *laid*,  
The calm sea wonders at the wrecks it made.  
*Waller.*

I fear'd I should have found  
A tempest in your soul, and came to *lay* it.  
*Denham.*

At once the wind was *laid*. *Dryden.*  
13. To prohibit a spirit to walk.—The husband  
found no charm to *lay* the devil in a petticoat, but  
the rattling of a bladder with beans in it. *L'Esfr.*  
14. To set on a table.—I *laid* meat unto them.  
*Hof.* xi. 4. 15. To propagate plants by fixing  
their twigs in the ground.—The chief time of *lay-*  
ing gilliflowers is in July, when the flowers are  
gone. *Mortimer.* 16. To wager; to stake.—

But since you will be mad, and since you may  
Suspect my courage, if I should not *lay*;

The pawn I proffer shall be full as good. *Dryd.*  
17. To repose any thing.—The sparrow hath  
found an house, and the swallow a nest, for her-  
self, where she may *lay* her young. *Pf.* lxxxiv. 3.

18. To exclude eggs.—After the egg *lay'd*, there  
is no further growth or nourishment from the fe-  
male. *Bacon.*—A hen mistakes a piece of chalk  
for an egg, and sits upon it; she is insensible of  
an increase or diminution in the number of those  
she *lays*. *Addison.* 19. To apply with violence;  
as, to *lay* blows.—*Lay* siege against it, and build a  
fort against it, and cast a mount against it. *Ezek.*

A dreadful band of gloomy cares surround me,  
And *lay* strong siege to my distracted soul.

*Phillips.*  
20. To apply nearly.—She *layeth* her hands to the  
spindle, and her hands hold the distaff. *Proverbs,*  
xxi. 19.—The living will *lay* it to his heart. *Ec-*  
*cles.* vii. 2.—The peacock *laid* it extremely to heart,  
that, being Juno's darling bird, he had not the  
nightingale's voice. *L'Esfrange.*—He that really  
*lays* these two things to heart, the extreme neces-  
sity that he is in, and the small possibility of help,  
will never come coldly to a work of that concern-  
ment. *Duppa.* 21. To add; to conjoin.—Wo un-  
to them them that *lay* field to field. *Isa.* v. 8. 22.

To put in a state; implying somewhat of disclo-  
sure.—If the sinus ly distant, *lay* it open first, and  
cure that apertion before you divide that in ano.  
*Wijem.*—The wars have *laid* whole countries waste.  
*Addison.* 23. To scheme; to contrive.—

Every breast she did with spirit inflame,  
Yet still fresh projects *lay'd* the grey ey'd dame,

*Chapm.*

—Homer is like his Jupiter, has his terrors, shak-  
ing Olympus; Virgil, like the same power in his  
benevolence, countessing with the gods, *laying*  
plans for empires. *Pope.*—Don Diego and we have  
*laid* it so, that before the rope is well about thy  
neck, he will break in and cut thee down. *Ar-*  
*buthnot.* 24. To charge as a payment.—A tax  
*laid* upon land seems hard to the landholder, be-  
cause it is so much money going out of his pocket.  
*Locke.* 25. To impute; to charge.—

*Lay* the fault on us. *Shak.*  
How shall this bloody deed be answered?

It will be *laid* to us. *Shak.*  
We need not *lay* new matter to his charge.

*Shak.*  
—Men groan from out of the city, yet God *layeth*

not folly to them. *Job,* xxiv. 14.—

Let us be glad of this, and all our fears

*Lay* on his providence.

*Par. Reg.*

—The writers of those times *lay* the disgraces and ruins of their country upon the numbers and fierceness of those savage nations that invaded them. *Temple*.—They *lay* want of invention to his charge; a capital crime. *Dryden*.—You represented it to the queen as wholly innocent of those crimes which were *laid* unjustly to its charge. *Dryden*.—They *lay* the blame on the poor little ones. *Locke*.—There was eagerness on both sides; but this is far from *laying* a blot upon Luther. *Atterbury*, 26. To impose, as evil or punishment.—

The weariest and most loathed life

That age, ah, penury, imprisonment,

Can *lay* on nature, is a paradise

To what we fear of death.

*Shak.*

—Thou shalt not be to him as an usurer, neither shalt thou *lay* upon him usury. *Exod.* xx. 25.—The lord shall *lay* the fear of you, and the dread of you upon all the land. *Deut.* xi. 25.—These words were not spoken to Adam; neither, indeed, was there any grant in them made to Adam; but a punishment *laid* upon Eve. *Locke*. 27. To enjoin as a duty, or a rule of action.—It seemed good to *lay* upon you no other burden. *Acts*, xv. 28.—Whilst you *lay* on your friend the favour, acquit him of the debt. *Wycherley*.—

A prince who never disobey'd,

Not when the most severe commands were *laid*.

*Dryden.*

—You see what obligation the profession of Christianity *lays* upon us to holiness of life. *Tillotson*.—

Neglect the rules each verbal critic *lays*,

For not to know some trifles is a praise. *Pope*. 28. To exhibit; to offer.—It is not the manner of the Romans to deliver any man to die, before that he which is accused have the accusers face to face, and have licence to answer for himself concerning the crime *laid* against him. *Acts*, xxv. 16.—Till he *lays* his indictment in some certain country, we do not think ourselves bound to answer. *Atterbury*. 29. To throw by violence.—He bringeth down them that dwell on high; the lofty city he *layeth* it low, even to the ground. *Isa.* xxvi. 5.—

Brave Cæneus *laid* Ortygius on the plain,

The victor Cæneus was by Turnus slain. *Dryd.*

The leaders first

He *laid* along, and then the vulgar pierc'd. *Dryd.*

30. To place in comparison.—*Lay* down by those pleasures the fearful and dangerous thunders and lightnings, and then there will be found no comparison. *Raleigh*. 31. To *LAY* apart. To reject; to put away.—*Lay* apart all filthiness. *James*, i. 21. 32. To *LAY* aside. To put away; not to retain.—Let us *lay* aside every weight, and the sin which doth so easily beset us. *Heb.* xii. 1.—

Amaze us not with that majestic frown,

But *lay* aside the greatness of your crown.

*Waller.*

Recommon first, then Mulgrave rose, like light;

The S. agryite, and Horace, *laid* aside. *Granv.*

—Retention is the power to revive again in our minds those ideas which, after imprinting, have disappeared, or have been *laid* aside out of sight. *Locke*.—

When by just vengeance guilty mortals perish,

The gods behold their punishment with

And *lay* the uplifted thunder-bolt aside

33. To *LAY* away. To put from one; keep.—Queen Esther *laid* away her glory, and put on the garments of anguish. *xiv.* 2. 34. To *LAY* before. To expose; to shew; to display.—I cannot better satisfy piety, than by *laying* before you a prospect of labours. *Wake*.—That treaty hath been *fore* the commons. *Swift*.—Their office *lay* the business of the nation before him. 35. To *LAY* by. To reserve for some future use.—Let every one *lay* by him in store, as he prospered him. *1 Cor.* xvi. 2. 36. To put from one; to dismiss.—Let brethren that have fitted themselves for command by sea or land, not be *laid* by as persons idle for the time. *Bacon*.—She went away *laid* by her veil. *Gen.* xxxviii. 19.—

Did they not swear to live and die

With Essex, and straight *laid* him by.

For that look, which does your peer

When in your throne and robes you

law,

*Lay* it by here, and give a gentler smile

Mira can *lay* her beauty by,

Take no advantage of the eye,

Quit all that Lely's art can take,

And yet a thousand captives make.

Then he *lays* by the publick care,

Thinks of providing for an heir.

The Tuscan king,

*Laid* by the lance, and took him to th

Where Dædalus his borrow'd wings

To that obscure retreat I chuse to fly.

My zeal for you must *lay* the father

And plead my country's cause against

Fortune, conscious of your destiny,

E'en then took care to *lay* you softly

Dismiss your rage, and *lay* your we

Know I protect them, and they shall

—When their displeasure is once declar'd

ought not presently to *lay* by the severity

brows, but restore their children to the

grace with some difficulty. *Locke*. 37.

*down*. To deposit as a pledge, equivalent

satisfaction.—I *lay* down my life for the

x. 15.—

For her, my lord,

I dare my life *lay* down.

38. To *LAY* down. To quit; to resign

foldier being once brought in for the

will not have him to *lay* down his arms:

*Spenser*.—

Ambitious conquerors, in their march

Check'd by thy voice, *lay* down the

appear.

—The story of the tragedy is purely

I take it up where the history has *laid*.

*Dryden*. 39. To *LAY* down. To com-

pose.—I will *lay* me down in peace and

xlvi. —And they *lay* themselves down

laid to pledge by every altar. *Amos*, ii.

*lay* us down, to sleep away our cares; and

up the senses. *Glanc*.—

god conduct me to the sacred shades,  
 he plains of Tempe *lay me down*. *Dryd.*  
*ly down*. To advance as a proposition.  
*laid down*, in some measure, the descrip-  
 old known world. *Abbot*.—Kircher *lays* it  
 certain principle, that there never was any  
 rude, which did not acknowledge and  
 me supremae deity. *Stillingfleet*.—I must  
 this for your encouragement, that we  
 ger now under the heavy yoke of a per-  
 ning obedience. *Wake*.—Plato *lays* it down  
 ipic, that whatever is permitted to be-  
 man, whether poverty or sickness, shall,  
 life or death, conduce to his good.  
 rom the maxims *laid down* many may  
 , that there had been abuses. *Swift*. 41.  
 or. To attempt by ambush, or insidi-  
 lies.—He embarked, being hardly *laid*  
 by Cortugogli, a famous pirate. *Knolles*.  
 ay forth. To diffuse; to expatiate.—  
 the delight of gods and of men! and so  
 myself forth upon the gratefulness of the  
 'Estrange. 43. To LAY forth. To place  
 id in decent posture.—

Embalm me,

*lay me forth*; although unqueen'd, yet  
 ke  
 xa, and daughter to a king, inter me.

*Shak.*

LAY bold of. To seize; to catch.—Then  
 father and his mother *lay bold on* him,  
 g him out. *Deut.* xxi. 19.—Favourable  
 aptitude and inclination, be heedfully  
 of. *Locke*. 45. To LAY in. To store;  
 re.—Let the main part of the ground em-  
 gardens or corn be to a common stock;  
 in, and stored up, and then delivered out  
 rtion. *Bacon*.—

essei and provisions *laid in* large  
 an and beast.

*Milton.*

equal stock of wit and valour  
 d *laid in* by birth a tailor. *Hudibras*.  
 saw the happiness of a private, but they  
 they had not yet enough to make them  
 they would have more, and *laid in* to  
 eir solitude luxurious. *Dryden*.—Readers,  
 in the flower of their youth, should la-  
 those accomplishments which may set off  
 rsons when their bloom is gone, and so  
 rely provisions for manhood and old age.

46. To LAY on. To apply with vio-  
 We make no excuses for the obstinate:  
 re the proper remedies; but blows *laid on*,  
 r different from the ordinary. *Locke*. 47.  
 open. To shew; to expose.—

ach me, dear creature, how to think and  
 peak,  
 pen to my earthy gross conceit,  
 other'd in errors, feeble, shallow weak,  
 folded meaning of your word's deceit.

*Shak.*

l *layeth open* his folly. *Prov.* xiii. 16. 48.  
 over. To incrust; to cover; to deco-  
 rationally.—Wo unto him that saith to the  
 Awake; to the dumb stone, Arise, it shall  
 behold, it is *laid over* with gold and silver,  
 ere is no breath at all in the midst of it.  
 i. 19. 49. To LAY out. To expend.—

Fathers are wont to *lay up* their sons,  
 Thou for thy son are bent to *lay out* all. *Milton*.  
 —Tycho Brahe *laid out*, besides his time and in-  
 dustry, much greater sums of money on instru-  
 ments than any man we ever heard of. *Boyle*.—

The blood and treasure that's *laid out*,  
 Is thrown away, and goes for nought. *Hudibras*.  
 —If you can get a good tutor, you will never re-  
 pent the charge; but will always have the satis-  
 faction to think it the money, of all other, the  
 best *laid out*. *Locke*.—

I, in this venture, double gains pursue,  
 And *laid out* all my stock to purchase you. *Dryd.*  
 My father never at a time like this

Would *lay out* his great soul in words, and waste  
 Such precious moments. *Addif.*  
 —A melancholy thing to see the disorders of a  
 household that is under the conduct of an angry  
 statefswoman, who *lays out* all her thoughts upon  
 the publick, and is only attentive to find out mis-  
 carriages in the ministry. *Addif.*—When a man  
 spends his whole life among the stars and planets,  
 or *lays out* a twelve-month on the spots in the sun,  
 however noble his speculations may be, they are  
 very apt to fall into burlesque. *Addif.*—Nature

has *laid out* all her art in beautifying the face; she  
 has touched it with vermilion, planted in it a  
 double row of ivory, and made it the seat of  
 smiles and blushes. *Addif.* 50. To LAY out. To  
 display; to discover.—He was dangerous, and  
 takes occasion to *lay out* bigotry, and false con-  
 fidence, in all its colours. *Atterbury*. 51. To LAY  
 out. To dispose; to plan.—The garden is *laid out*  
 into a grove for fruits, a vineyard, and an allot-  
 ment for olives and herbs. *Notes on the Odyssey*.  
 52. To LAY out. With the reciprocal pronoun,  
 to exert; to put forth.—No selfish man will be  
 concerned to *lay out* himself for the good of his  
 country. *Smalridge*. 53. To LAY to. To charge  
 upon.—When we began, in courteous manner,  
 to *lay* his unkindness to him, he, seeing himself  
 confronted by so many, like a resolute orator,  
 went not to denial; but to justify his cruel fal-  
 hood. *Sidney*. 54. To LAY to. To apply with vi-  
 gour.—

Let children be hired to *lay to* their bones,  
 From fallow as needeth, to gather up stones.

*Fulser.*

—We should now *lay to* our hands to root them  
 up, and cannot tell for what. *Oxford Reasons a-*  
*gainst the Covenant*. 55. To LAY to. To harass;  
 to attack.—The great master having a careful eye  
 over every part of the city, went himself unto the  
 station, which was then hardly *laid to* by the Bas-  
 sa Mustapha. *Knolles*.—

Whilst he this, and that, and each man's blow,  
 Doth eye, defend, and shift, being *laid to* sore;  
 Backwards he bears. *Daniel's Cru. War.*

56. To LAY together. To collect; to bring into  
 one view.—If we *lay* all these things together, and  
 consider the parts, rise, and degrees of his sin,  
 we shall find that it was not for nothing. *South*.—  
 Many people apprehend danger for want of tak-  
 ing the true measure of things, and *laying* mat-  
 ters rightly together. *L'Estr.*—My readers will be  
 very well pleased, to see so many useful hints up-  
 on this subject *laid together* in so clear and concise  
 a manner. *Addison*.—One series of consequences

will not serve the turn, but many different and opposite deductions must be examined, and *laid together*, before a man can come to make a right judgment of the point in question. *Locke*. 57. To LAY under. To subject to.—

A Roman soul is bent on higher views,  
To civilize the rude unpolish'd world,  
And lay it under the restraint of laws. *Addison*.  
58. To LAY up. To confine to the bed or chamber.—In the East Indies, the general remedy of all subject to the gout, is rubbing with hands till the motion raise a violent heat about the joints: where it was chiefly used, no one was ever troubled much, or *laid up* by that disease. *Temple*. 59. To LAY up. To store; to treasure; to repose for future use.—St Paul did will them of the church of Corinth, every man to *lay up* somewhat by him upon the Sunday. *Hooker*.—Those things which at the first are obscure and hard, when memory hath *laid them up* for a time, judgment afterwards growing explaineth them. *Hooker*.—That which remaineth over, *lay up* to be kept until the morning. *Exod.* xvi. 23.—The king must preserve the revenues of his crown without diminution, and *lay up* treasures in store against a time of extremity. *Bacon*.—The whole was tilled, and the harvest *laid up* in several granaries. *Temple*.—I will *lay up* your words for you till time shall serve. *Dryden*.—This faculty of *laying up*, and retaining ideas, several other animals have to a great degree, as well as men. *Locke*.—

What right, what true, what fit, we justly call,  
Let this be all my care; for this is all:  
To lay this harvest up, and hoard with haste  
What every day will want, and most, the last. *Pope*.  
(2.) \* To LAY. *v. n.* 1. To bring eggs.—Hens will greedily eat the herb which will make them lay the better. *Mortimer*. 2. To contrive; to form a scheme.—

Which mov'd the king,  
By all the aptest means could be procur'd,  
To lay to draw him in by any train. *Daniel*.  
3. To LAY about. To strike on all sides; to act with great diligence and vigour.—

At once he wards and strikes, he takes and pays,  
Before, behind, and round about him he lays. *Spenser*.

And *laid about* in fight more busily,  
Than th' Amazonian dame Penthesile. *Hudib*.  
—In the late successful rebellion, how studiously did they *lay about* them, to cast a slur upon the king? *Soutb*.—He provides elbow-room enough for his conscience to *lay about*, and have its full play in. *Soutb*. 4. To LAY at. To strike; to endeavour to strike.—

Fiercely the good man did at him lay,  
The blade oft groaned under the blow. *Spenser*.  
—The sword of him that *layeth at* him cannot hold. *Job*. 5. To LAY in for. To make overtures of oblique invitation.—I have *laid in* for these, by rebating the satire, where justice would allow it. *Dryden*. 6. To LAY on. To strike; to beat without intermission.—

His heart *laid on* as if it try'd,  
To force a passage through his side. *Hudibras*.  
Answer, or answer not, 'tis all the same,  
He lays me on, and makes me bear the blame. *Dryden*.

7. To LAY on. To act with vehemence expences.—My father has made her 1 the feast, and she *lays it on*. *Shakespeare*. 8 out. To take measures.—I made strict wherever I came, and *laid out* for intellig all places, where the entrails of the e laid open. *Woodward*. 9. To LAY upon. portune; to request with earnestness; faintly. Obsolete.—All the people *laid* 1 ly upon him to take that war in hand, said they would never bear arms more a Turks, if he omitted that occasion. *Kne*

(1.) \* LAY. *n. f.* [from the verb.] 1 a stratum; a layer; one rank in a series ed upwards.—A viol should have a *lay* strings below, as close to the belly as and then the strings of guts mounted bridge as in ordinary viols, that the up strucken might make the lower rebound. Upon this they lay a layer of stone, and 1 a lay of wood. *Mortimer*. 2. A wager steemed an eyes *lay*, whether any man years longer: I suppose it is the same, of any ten might die within one year. *G*

(2.) \* LAY. *n. f.* [*ley, leag*, Sax. *ley*, Grassy ground; meadow; ground, unple kept for cattle; more frequently, and n perly, written *lea*.—

A tuft of daisies on a flow'ry lay  
They saw.

—The plowing of *lays* is the first plow grafs ground for corn. *Mortimer's Hist.*

(3.) \* LAY. *n. f.* [*lay*, French. It is ginally, to signify *sorrow* or *complaint*, and have been transferred to poems written t sorrow. It is derived by the French fr Latin, a funeral song; but it is found li the Teutonick dialect: *ky, kod*, Saxon; *nish*.] A song; a poem. It is scarcely in poetry.—

To the maiden's sounding timbrels  
In well attuned notes, a joyous lay.

Soon he slumber'd, fearing not be h  
The whiles with a loud lay, she thus hi  
ly charm'd.

This is a most majestic vision, and  
Harmonious charming lays.

Nor then the solemn nightingal  
Ceas'd warbling, but all night tun'd her

If Jove's will  
Have link'd that amorous power to thy  
Now timely sing.  
He reach'd the nymph with his harmo:  
Whom all his charms could not inclin:

On Ceres let him call. and Ceres pr  
With uncouth dances, and with count

Ev'n gods incline their ravish'd ears,  
And tune their own harmonious spher  
To his immortal lays.

(4.) A LAY (§ 3.) was a kind of ancie among the French, consisting of very sho There were two sorts of lays; the *great*, *little*. The former consisted of 12 couplet ses, of different measures; the latter of 1 verses, divided into 4 couplets. These l

be lyric poetry of the old French poets, who were imitated by some among the English. They are said to have been formed on the model of the trochaic verses of the Greek and Latin tragedies.

(2.) \* LAY. *Preterite of lye.*—

O! would the quarrel lay upon our heads.

*Shak.*

—He was familiarly acquainted with him at such time as he lay ambassador at Constantinople. *Isid.*—When Ahab had heard those words he faked, and lay in sackcloth. 1 Kings, xxi. 27.—

I try'd whatever in the Godhead lay. *Dryden.*

He rode to rouse the prey,

That shaded by the fern in harbour lay,

And thence dislodged.

*Dryd.*

—Leaving Rome, in my way to Sienna, I lay the night at a village in the territories of the ancient

*Vol. Aidsfen.*—The burthen of the reformation lay upon his shoulders! *Francis Atterbury.*—The Jacobitians argued, That if the Pretender should invade those parts where the numbers and prizes of the dissenters chiefly lay they would fit

*Swift.*  
(A.) \* LAY. *adj.* [*laicus*, Latin; *lay* *☉*.] Not clerical; regarding or belonging to the people as distinct from the clergy.—

Altho' they had by law, and none repin'd,

The preference was but due to Levi's kind:

But when some lay preferment fell by chance,

The Gourmands made it their inheritance. *Dryd.*

—Lay persons, married or unmarried, being doctors of the civil law, may be chancellors, officials,

*De Ayliffe.*—

It might well startle

Our lay unlearned faith.

*Rowe.*

(2.) LAY BROTHERS, among the Romanists, pious but illiterate persons, who devote themselves to some convent to the service of the religious. They wear a different habit from that of the religious; but never enter into the choir, nor are present at the chapters: nor do they make any other except of constancy and obedience. In the convents there are also lay-sisters.

LAYAU, a town, river, and bay of St Vincents, on the W. coast. Lon. 61. 18. W. Lat. 13. 8. N.

(1.) LAYBACH, a navigable river of Germany, in Carniola, which rises a mile W. of Upper Laybach N. E. and runs into the Save, 3 miles W. of Kreuthberg.

(2.) LAYBACH, a town of Carniola, on the same river; 28 miles NE. of Trieste.

(3.) LAYBACH, UPPER, a town of Carniola, 11 miles SW. of Laybach, and 9 SE. of Hydria.

LAYCOCK, a town of Wiltshire, 4 miles from Chippenham. It has fairs July 7, and Dec. 21.

LAYDON, a town of Kent, in Sheppey isle.

(1.) \* LAYER. *n. f.* (from *lay*.) 1. A stratum, or one body spread over another.—A layer of rich mould beneath, about this natural

method to nourish the fibres. *Evelyn.*—The terrestrial matter is disposed into strata or layers, piled one upon another, in like manner as any earthy substance, settling down from a flood in great quantity, will naturally be. *Woodward.* 2. A layer of a plant.—Many trees may be propagated by layers. *Miller.*—Transplant also carnation seedlings, give your layers fresh earth, and set them

in the shade for a week. *Evelyn.* 3. A hen that lays eggs.—The oldest are always reckoned the best fitters, and the youngest the best layers. *Mort.*

(2.) LAYERS in gardening (§ 1. def. 2.) are tender shoots or twigs of trees, laid in the ground, till, having struck root, they are separated from the parent tree, and become distinct plants.—The propagating trees by layers is done in the following manner: The branches of the trees are to be slit a little way, and laid under the mould for about half a foot; the ground should be first made very light, and after they are laid they should be gently watered. If they will not remain easily in the position they are put in, they must be pegged down with wooden hooks: the best season for doing this is, for ever greens, towards the end of August; and, for other trees, in the beginning of February. If they have taken root, they are to be cut off from the main plant the succeeding winter, and planted out. If the branch is too high from the ground, a tub of earth is to be raised to a proper height for it. Some pare off the rhind, and others twist the branch before they lay it, but this is not necessary. The end of the layer should be about a foot out of the ground; and the branch may be either tied tight round with a wire, or cut upwards from a joint, or cut round for an inch or two at the place, and it is a good method to pierce several holes through it with an awl above the part tied with the wire.

LAYING THE LAND, in navigation, the state of motion which increases the distance from the coast, so as to make it appear lower and smaller, a circumstance which evidently arises from the intervening convexity of the surface of the sea. It is used in contradiction to raising the land, which is produced by the opposite motion of approach towards it.

\* LAYMAN. *n. f.* [*lay* and *man*.] 1. One of the people distinct from the clergy.—*Laymen* will neither admonish one another themselves, nor suffer ministers to do it. *Gov. of the Tongue.*—

Since a trust must be, the thought it best

To put it out of laymens pow'r at least,

And for their solemn vows prepar'd a priest.

*Dryden.*

—Where can be the grievance, that an ecclesiastical landlord should expect a third part value for his lands, his title as antient, and as legal, as that of a layman, who is seldom guilty of giving such beneficial bargains. *Swift.* 2. An image used by painters in contriving attitudes.—You are to have a layman almost as big as the life for every figure in particular, besides the natural figure before you. *Dryden's Def.*

LAYMEBAMBA, a town of Peru.

LAYRAC, a town of France, in the dep. of Lot and Garonne, 4½ miles S. of Agen, and 9 W. of Valence.

LAYSSAC, a town of France, in the dep. of Aveyron; 12 miles E. of Rodez.

\* LAYSTALL. *n. f.* An heap of dung.—

Scarce could he footing find in that foul way,  
For many corpses, like a great lay-stall

Of murdered men, which therein strewed lay.

*Spenser.*

LAYSTOFF, or LOWESTOFF, a town of Suffolk

folk, 117 miles from London. It seems to hang over the sea, and its chief business is fishing for cod in the North Sea, and for herring, mackerel, and sprats, at home. The church being 3 furlongs off, there is a chapel in the place. Having been a part of the ancient demesnes of the crown, this town has a charter and a seal, by the former of which the inhabitants are exempted from serving on juries. It has a market on Wednesday, and two annual fairs. Some reckon this the most eastern part of Britain.

LAYTONS, a town of the United States, in Virginia; 13 miles ESE. of Port Royal.

LAZA, a town of Spain, in Galicia.

LAZANILLA, a town in the isle of Cuba.

\* LAZAR. *n. f.* [from *Lazarus* in the gospel.] One deformed and nauseous with filthy and pestilential diseases.—

They ever after in most wretched case,

Like loathsome lazars, by the hedges lay. *F. Q.*  
—'I'll be sworn, and sworn upon't, she never shrowded any but lazars. *Shakesp.*—I am weary with drawing the deformities of life, and lazars of the people, where every figure of imperfection more resembles me. *Dryden.*—

Life he labours to refine

Daily, nor of his little stock denies  
Fit alms to lazars merciful and meek. *Philips.*  
LAZARE BUEY, a town of Spain, in New Castile, 8 miles from Toledo.

LAZARELLI, John Francis, an Italian poet, born at Guibo. He wrote sonnets and satirical poems, which have been often printed; and died in 1694.

(1.) LAZARETTO, an island in the Mediterranean, near the N. coast of Candy, formerly used by the Venetians as a lazaretto.

(2.) \* LAZARETTO, LAZAR-HOUSE. *n. f.* [*lazaret*, Fr. *lazaretto*, Ital. from *lazar*.] A house for the reception of the diseased; an hospital.—

A place

Before his eyes appear'd, sad, noisome, dark,  
A *lazar-house* it seem'd, where were laid  
Numbers of all diseases'd. *Milton.*

(3.) LAZARETTOS, or } are chiefly intended  
LAZAR-HOUSES, } for those afflicted  
with contagious distempers; and are particularly appointed for the performance of quarantine, by those who are suspected to have come from places infected with the plague.

LAZARIN, a town of Portugal, in Beira.

LAZARUS, [לָאָרִי, Heb. *i. e.* the Lord's help.] a Jew of Bethany, whom our Saviour raised from the dead, after having been 4 days in the grave. This miracle, with many peculiarly affecting circumstances attending it, is recorded in John xi. Lazarus, from the uncommon attention paid to his sisters by the Jews, upon his death, is supposed to have been a man of considerable property. He and his sisters, Martha and Mary, are recorded to have been among the peculiarly beloved friends of our Lord.

(1.) \* LAZARWORT. *n. f.* [*Laserpitium*.] A plant.

(2.) LAZARWORT. See LASERPITIUM.

\* LAZILY. *adv.* [from *lazy*.] Idly; sluggishly; heavily.—Watch him at play, when following his own inclinations; and see whether he be stirring

and active, or whether he *lazily* and listlessly dreads away his time. *Locke.*—

The eastern nations view the rising fires,  
Whilst night shades us, and *lazily* retires. *Crœ*

\* LAZINESS. *n. f.* [from *lazy*.] Idleness; selfishness; listlessness; heaviness in action; tameness.—That instance of fraud and *laziness*, the just steward, who pleaded that he could neither dig nor beg, would quickly have been brought both to dig and to beg too, rather than stand *South.*—My fortune you have rescued, not from the power of others, but from my own destiny and *laziness*. *Dryden.*

\* LAZING. *adj.* [from *lazy*.] Sluggish; idle.—The hands and feet mutinied against belly: they knew no reason, why the one should be *lazing*, and pampering itself with the fruit of the other's labour. *L'flr.*—The sot cried, *Utin hoc esset laborare*, while he lay *lazing* and lolled upon his couch. *South.*

LAZISE. See LACIZE.

LAZONBY, a small town of Cumberland, in Salkeld and Penrith.

(1.) \* LAZULI. *n. f.* The ground of this stone is blue, veined and spotted with white, and appearing or metallick yellow: it appears to be composed of, first, a white sparry, or crystalline matter: adly, flakes of the golden yellow tale; 3dly, a shining yellow substance; this fuses off in calcination of the stone, and casts a sulphureous smell; 4thly, a bright blue substance, of great value among the painters, under the name of ultramarine; and when rich, is found, upon trial, to yield about one 6th of copper, with a very little silver. *Woodward.*

(2.) LAZULI LAPIS, a species of zeolite, belonging to the class of argillaceous earths. See CLASSES, § 1, 4. It is of a blue colour. That which is a fine blue inclining to purple, has obtained the name of Oriental; but the pale blue is less esteemed. It is frequently variegated with yellow, white shining veins and speckles; which seem to be gold and silver, though they are in truth nothing but marcasites. The lapis lazuli has the following properties: 1. It retains its blue colour for a long time in calcining heat; but change last to a brown. 2. It melts easily in the fire to a white frothy slag; which puffs up greatly when exposed to the flame of a blow-pipe; but with strong heat in a covered vessel, it becomes compact and solid, with blue clouds in it. 3. It does not ferment with acids; but, if boiled with oil of vitriol, it slowly dissolves, and loses its blue colour. On adding a solution of fixed alkali, it precipitates a white earth, which being scorified with borax yields a silver coloured regulus, varying in beauty according to the different specimens of the stone. 4. By scorification with lead, it yields silver, sometimes in the quantity of 2 ounces to 1 cwt. of stone. 5. Oil of vitriol discovers the presence of silver more certainly in lapis lazuli than spirit of nitre. 6. On adding spirit of sal ammoniac to a solution either of crude or calcined lapis lazuli, no blue colour is produced; a certain proof that it does not depend on copper; which is further confirmed by the fixity of the blue colour in fire, and the colour of the slag or glass. 7. It is somewhat harder than the other kinds of zeo-

not approach to the hardness of quartz siliceous stones in general; for the purest lapis lazuli, may be rubbed into a white by means of steel, though it takes a comparable. 8. When perfectly calcined, it attracted by the loadstone; and when with lead, the slag becomes of a greenish and not like that produced by copper, as is always produced by iron mixed calcareous substance.—Mongez informs us, of the parts of lapis lazuli will strike steel. According to Cronstedt, it is seldom pure; but generally full of veins of melstone, and marcasite: but for the experiments by which the above mentioned quality determined, the purest pieces were picked as has been examined through a magnifying glass, and judged as free from heterogeneity as possible. Our author expresses a such as are in possession of any quantity stone would make farther experiments; and what substance it is which produces colour so constant in the fire, since it can be either on copper or iron; for though also on certain occasions, give a blue colour they never produce any other but what vanishes in the fire, and is destroyed by an alkali. "What is mentioned in several (says he) can by no means be objected to in these processes the silver employed with copper and other substances which volatile alkali, whereby the blue colour is produced." In 1761, M. Margraaf published experiments on the lapis lazuli, in which in a great measure with Cronstedt. According to him, the lapis lazuli does not contain iron; but he found in it a calcareous substance, though he took care to pick every purest bits he could find. Engestrom, is of opinion, that the calcareous is not essential to lapis lazuli; as Cronstedt, that the lapis lazuli he tried did not contain acids. He farther mentions, that dissolved in any of the mineral acids, it altered them into a jelly. Some of his experiments also indicate, that all kinds of lapis lazuli contain silver, though many of them lapis lazuli is found in many parts of Asia; but that of Asia and Africa is much more in beauty and real value to the Bohemian German kinds, which are too often false.

*Y. adj.* [This word is derived by a conjecture, with great probability, from a *l'aise*, but it is however Teutonic; *lijfer* in old *lofgh* in Dutch, have the same meaning. *Spelman* gives this account of the word: *antiqui Saxones, ut testatur Nithars ordinis; Edhilingos, Frilingos & Laxest nobiles, ingenuos & serviles; quam inactionem diu retinimus. Sed Ricardo undo pars servorum maxima se in liberavit; sic ut hodie apud Anglos rarior servus, qui mancipium dicitur. Restat in antiqua appellationis commemoratio. um hodie lazic dicimus.*] 1. Idle; sluggish to work.—

oldiers, like the night-owl's *lazy* flight  
III. PAR I I.

Or like a *lazy* thrasher with *fall*.  
Fall gently down, as if they struck their friends,  
—Wicked condemned men will ever live like  
regia, and not fall to work, but be *lazy*, and  
spend victuals. *Bacon*.—  
While *lazy* waters without motion lay. *Ros.*  
The *lazy* glutton safe at home will keep. *Dryd.*  
Like Eastern kings a *lazy* state they keep,  
And close confin'd in their own palace sleep. *Pope.*  
Or *lazy* lakes unconscious of a flood,  
Whose dull brown Naiads ever sleep in mud.

—What amazing stupidity is it, for men to be negligent of salvation themselves! to sit down *lazy* and unactive. *Rogers*: 2. Slow; tedious.—The ordinary method for recruiting their armies, was now too dull and *lazy* an expedient to resist this torrent. *Clarendon*.

**LAZZARETTE**, an island of Maritime Austria, in the Adriatic, near Venice, anciently called *St Maria of Nazareth*, where the Levant ships perform quarantine: For this purpose inns were built on it in 1422, which were rebuilt and enlarged in 1565.

**LAZZARO**, St, an island of Maritime Austria, S. of Venice, in the Lagoon. In 1182, it was allotted to poor persons afflicted with leprosy. It has an elegant church and convent, with a library belonging to the Armenian monks.

**LAZZERO**, St, a village of Maritime Austria, near Padua.

\* LD. is a contraction of *lord*.  
(1.) \* LEA. *n. f.* [Sax. a fallow; *laeg*, Sax. a pasture.] Ground inclosed, not open. Obsolete.—

Greatly agast with this piteous plea;  
Him rested the good man on the *lea*. *Spenser.*  
Ceres, most bounteous lady, thy rich *leas*  
Of wheat, rye, barley, fitches, oats and peas.

Her fallow *leas*  
The darnel, hemlock, and rank fumitory  
Doth root upon. *Shak.*  
Dry up thy harrow'd veins, and plough torn  
*leas*. *Shak.*  
On the lawns, and on the *leas*. *Milton.*  
The lowing herds wind slowly over the *lea*.  
*Grey.*

(1.) LEA, a river of England, which rises near Luton in Bedfordshire, and running to Hertford and Ware, and afterwards S. dividing Essex from part of Hertfordshire, and from Middlesex, falls into the Thames below Blackwall. Great quantities of corn are brought by it from Hertfordshire to London.

(3—17.) LEA is also the name of 15 English villages; viz. of 3 in Cheshire, 3 in Shropshire, 2 in Wilts; and of one each in Derby, Gloucester, Hereford, Hertford, Lancashire, Stafford, and Warwick, shires.

LEACH, a river in Gloucestershire.

LEACHLADE, a town of Gloucestershire, 12 miles E. of Cirencester, 29 from Gloucester, and 60 from London. The Thames waters it on the S. and E. and divides it from Wiltshire and Berkshire. The Leach runs through the N. side of the parish. The Thames is navigable for barges.

of 50 tons burden, but want of water one part of the year makes the navigation very uncertain. It has a market on Tuesday, and two fairs. The church is a large handsome building, with double aisles, supported by two rows of fluted pillars: Lon. 2. 15. W. Lat. 51. 42. N.

(11.) \*LEAD. *n. f.* [*led*, Saxon.] 1. *Lead* is the heaviest metal except gold and quicksilver. *Lead* is the softest of all the metals, and very little subject to rust. The weakest acids are the best solvents for *lead*; it dissolves very readily in aqua fortis diluted with water, as also in vinegar. The smoke of *lead* works is a prodigious annoyance, and subjects both the workmen, and the cattle that graze about them, to a mortal disease. *Hill*—  
Mine own tears

Do scald like molten lead. *Shak.*  
—Of *lead*, some I can shew you so like steel, and so unlike common *lead* ore, that the workmen call it steel ore. *Boyle*.—*Lead* is employed for the refining of gold and silver by the cupel; hereof is made common ceruss with vinegar; of ceruss, red *lead*; of plumbum ustum, the best yellow ochre; of *lead*, and half as much tin, folder for *lead*. *Grow*. 2. [In the plural.] Flat roof to walk on; because houses are covered with *lead*.—  
Stalls, bulks, windows,

Are smother'd up, *leads* fill'd and ridges hors'd  
With variable complexions; all agreeing  
In earnestness to see him. *Shak.*  
—I would have the tower two stories, and goodly *leads* upon the top, raised with statues interposed. *Bacon*.

(2.) *Lead* is one of the imperfect metals, of a dull white colour inclining to blue, the least ductile, the least elastic, and the least sonorous of the whole; and possesses a considerable degree of specific gravity, reaching from 11.3 to 11.479. See CHEMISTRY, *Index*.

(3.) *LEAD, GLASS OF*. See § 6. and GLASS, § 21.

(4.) *LEAD, NATIVE*. Cronstedt and some other mineralogists have doubted whether native *lead* was ever found in the earth, (see CHEMISTRY, § 854.); but the matter is now decided by innumerable testimonies. It appears from the *Philos. Transf.* for 1772, that some small pieces of native *lead* were found in Monmouthshire, in Wales. Bomare mentions a curious specimen of native *lead* kept in the collection of the abbe Nolin at Paris, that had been found in the lead mines of *Pompean*, near Rennes. It was very malleable, could be cut with a knife without crumbling, and easily melted over the flame of a candle. It weighed about 2 lb. was imbedded in an earthy *lead* ore of a reddish colour; and had a slaty vein that went through the middle of it.

(5.) *LEAD, ORES OF*. See CHEMISTRY, *Index*. *Lead* ores are found in various forms: 1. *Lead spar* is sometimes transparent, but generally opaque, and crystallized in regular forms of a laminar or striated texture. 2. *Lead ochre*, or native CERUSS, is the same substance, but in a loose form, or indurated and shapeless. Sometimes it is found in a silky form. Both contain some iron, calcareous earth, and clay; and both grow red or yellowish when heated. They effervesce with acids, and afford from 60 to 80 or 90 per cent of *lead*. They are found in Brittany, Lorrain, Ger-

many, and England. M. Sage, of the royal academy of Paris, pretended, that the white *lead* ore from Poulawen in the county of Bretagne, was mineralized by the marine acid; but his mistake was detected by the commissioners of that academy. This ore, according to these academicians, is composed of striated crystals, of a whitish pale, red, or grey colour. There is a *lead* ore of this kind sometimes grey and sometimes yellow, which is very heavy. Its structure is either lamellated or fibrous, and its laminae can hardly be separated; but it is friable, and may be cut with a knife. Sometimes it is crystallized; and sometimes its fibres are extremely thin, semitransparent, and have a silky look. They effervesce with acids, decrepitate in the fire, and seem to lose the aerial acid by which the *lead* is mineralized. The sparry *lead* ore has often a semitransparency like the sparry fluor; its crystals being generally terminated by hexahedral prisms, or cylindrical columns, striated, and apparently composed of a great number of filaments. These sparry crystals are always found in the same places with the galenas or sulphurated *lead* ores; and seem to be formed from their decomposition after the loss of their sulphur; so that it is not uncommon to find galenas which are beginning to pass into a state of white *lead*. There is a black ore of *lead*, which may be supposed to be an intermediate state betwixt the white *lead* ore and galena, as it seems to be a true white *lead* tinged by the hepatic vapours of the sulphur on its parting from the galena. There is also a green transparent *lead*, having a more or less yellowish cast. It frequently has no regular form, and appears like a kind of moss. When this green ore is crystallized, it consists of hexahedral truncated prisms, terminated by six-sided pyramids, either entire or truncated in the base. Prof. Brunnich says, that the green and the black *lead* ores from Saxony, and the Hungarian blue ores, are prismatic. According to Kirwan and Mongez, the green *lead* ores are either crystallized in needles as in Brittany, or in a loose powder as in Saxony; but mostly adhering to and investing quartz. They owe their green colour to iron, seldom containing any copper, and are very rare. Brunnich mentions a sapphire-coloured ore once found among some white *lead* spar at Wendisch Lemen. It was easily melted by a blow pipe. Natural red-*lead* or minium has been found in some Siberian mines. It is found either crystallized, or in shapeless masses, or in powder, in which it agrees with the brown or yellow ore. Dr J. R. Forster brought some of the crystallized red *lead* ore from Russia. The crystals were cubical, and the colour seemed rather pale. The red Siberian ores are perfectly rhombic; those from Bohemia have a cubical or rhomboidal form. Sulphur and arsenic are found in the red ones, but the others have not been sufficiently investigated. Most of them effervesce with acids. 3. *Arsenical lead spar*. Cronstedt says, that he tried an ore of this kind from an unknown place in Germany, and found that no metal could be melted from it by means of the blow-pipe; it could be done by other spars; but in a crucible that part of the arsenic which did not fly off was likewise reduced, and in the form of grains distilled

nd forced into the lead. Another ore fithis, and which likewise was not easily by means of the blow pipe, always shot gonal, but chiefly hexagonal crystals afmelted, having shining surfaces. Prof. observes, that these ores effervesce with d contain 40 per cent of lead. 4. The of the Germans contains lead minera-sulphur alone, and of this there are two varieties. At Villach in Austria there is found a potter's lead ore containing not ft portion of silver. 5. *Lead mineralized itriolic acid*, is generally in the form of a f, soluble in 18 times its quantity of metimes it is blackish, and crystallized in striz, or in friable stalactites; this last va-resces in the air, and is converted into a ol of lead. According to Mr Kirwan, it effervesce nor is soluble in other acids, e reduced by laying it on a burning coal. tes from the decomposition of sulphu-d ores. Dr Withering says, it is found quantity in the island of Anglesey; but ) iron, and not reducible by the blow-charcoal. 6. *Lead mineralized by the phos-id*, was discovered by Mr Gahn. It is of th yellow, or reddish colour, and does e with acids. After solution in nitrous e lead may be precipitated from this ore itriolic acid: 100 grains of lead are pro-ram 117 of this precipitate washed and The decanted liquor evaporated to dry-nds the phosphoric acid, from which the ible compound may be produced by dis-with charcoal. Seven ounces of this lead the neighbourhood of Friburg, treated anner, yielded by distillation 144 grains horus. A compound similar to this ore obtained by mixing pure phosphoric acid such as is combined with the volatile al-the fossile alkali in the microsmic salt hin-operation) with red lead. 7. **GALENA, ERS ORE**, in which the metal is miner-sulphurated silver. According to Mr it is the most common of all the lead t bluish dark lead colour, formed of cubes derate size, or in grains of a cubic fise-ose corners have been cut off; its texture ur, and its hardness varying in different is. That which is formed into grains is to be the richest in silver; but even ains only about one or one and a half ; that is, about 12 or 18 ounces per and the poorest not above 60 grains. t yield about half an ounce of silver per re barely worth the extracting. Differen-ens also vary in the quantity of sulphur ain, from 15 to 25 per cent, and that ntains the least is in some degree mallea-e proportion of iron in this ore is very at the lead is from 60 to 85 per cent. M. asserts, that galena is insoluble in the ni-id; but Dr Watson has shown, that it is ely dissolved by the acid when diluted. itic gravity of galena is from 7000 to It yields a yellow slag when melted. M. y distinguishes several varieties of this ore.

1. Cubic galena, the cubes of which are of va-rious sizes, and found either single or in groups; it is often found with the angles truncated, and is common at Freyberg. 1. In masses, without any regular configuration; very common at St Mare. 3. With large facets. It does not compose regu-lar crystals, but is entirely formed of large laminae. 4. With small facets, appearing like mica, com-posed of white and very brilliant scales. It is cal- led white silver ore, because it contains a consider- able quantity of that metal. 5. Small grained ga- lena, so called because it has a very close grain. It is likewise very rich in silver, and is found with the foregoing ore. No galena excepting that of Carinthia, is known to be without silver; but it has been observed, that those which afford the most silver have the smallest facets. 6. Galena crystallized like lead spar, in hexagonal prisms or cylindrical columns, contains little silver, and seems to be merely spathose lead, mineralized with- out having lost its form. Crystals of pure spathose lead entirely covered with a very fine galena, are sometimes found in the same piece, together with others which are changed into galena throughout. 8. *Antimonial lead ore*, in which the metal is mi- neralized by sulphur with silver and regulus of an- timony. This is of the same colour with galena, but its texture is different, being radiated, fila- mentous, or striated. When heated, it yields a white smoke; and it affords from 40 to 50 per cent of lead, and from  $\frac{1}{2}$  oz. to 2 oz. of silver per quintal. 9. *Pyritous lead ore*, mineralized by sulphur with silver and a large proportion of iron. This is of a brown or yellowish colour; of an oblong or stalac- tical form; friable; and of a lamellar, striated, or loose texture; affording 18 or 20 per cent of lead at most, which is obtained merely by melting it, the iron detaining the sulphur. It is only a mixture of galena with the brown pyrites. 10. *Lead mineralized by arsenic*, was lately discovered in Siberia. It is of a pale colour externally, but internally of a deep red. It is for the most part crystallized in rhomboidal parallelepipeds, or ir- regular pyramids. Lehman says, that it con- tains sulphur, arsenic, and about 54 per cent of lead; and Mr Pallas says, that it contains some silver also. It was found near Catherineburg in Siberia; and Lehman says, that on being reduced to powder, it resembled the best carmine. A specimen examined by Mongez was of a yellow greenish colour, and was found among quartz in the same country, and contained some arsenic. Both these, according to M. Magellan, may be easily reduced by a blow-pipe. 11. *Stoney or sandy lead ores*, consist either of the calciform or galena kind, intimately mixed and diffused through stones and earth, chiefly of the calcareous or barytic genus. To this species Mongez refers the earthy lead ore, falsely called *native musicot*, found in the lead mines of Pompean, principally in solid pieces. These are either yellowish or grey: they appear bright like glass when broken, and effervesce with acids; whence it appears that the ore contains fixed air. Sometimes it is mixed with clay. 12. The mine of Morgenstern at Freyberg has a peculiar variety of lead ore con- taining silver, which deserves to be noticed on ac-

count of its yellowish brown colour, and likewise on account of its singular figure, which consists of slender cylinders. Sometimes it is found in dendritical forms, like the *kuis kobalt*. Most of the ores of lead contain silver; and those kinds of galena which do not, are very scarce. In Hungary and Transylvania, the lead ore contains a quantity of gold as well as silver. Sometimes the potter's ores are found so poor in silver, that it is not worth the expence of extracting it. These, when free from mixtures of the rock, are employed without any fusion to glaze earthen ware; and a considerable trade is carried on in the Mediterranean with such ores from the mines of Sardinia and France.

(6.) LEAD, PHENOMENA AND PROPERTIES OF.

Lead unites with most metals except iron when exposed to heat, it melts long before it is ignited. By a strong heat it becomes volatile, and flies off in vapours. If suffered to cool very slowly, and the melted portion be poured off from that which is become solid, it is found to be crystallized in quadrangular pyramids. When melted with the contact of air, it soon becomes covered with a grey dull pellicle, which by proper management is converted into MINIMUM, as explained under CHEMISTRY; and by this operation it becomes heavier by about 10 lb. in the 100. By too much heat minimum loses its beautiful red colour, and assumes that of a pale yellow; by a heat still more violent, it melts into a transparent glass, so fusible that it penetrates the crucible and escapes. But if one part of sand be added to three parts of calx of lead, the sand melts, by the assistance of the calx, into a beautiful amber-coloured glass. With two parts of lead and one of sand, it resembles a topaz. A similar quantity of the calx of lead, added to common glass, does not alter its transparency, but gives it a greater degree of weight, and more especially a kind of unctuousness, which renders it capable of being cut and polished more easily without breaking. This glass is very proper for making achromatic lenses; but is subject to veins, and to have a gelatinous appearance. "The English (says M. Fourcroy) call it *flint glass*; our workmen find great difficulty in selecting pieces of any considerable magnitude, exempt from striae, in that which is imported from England." This great imperfection seems, in Macquer's opinion, to depend on the principles of the glass not being uniformly combined: for that purpose it is necessary that it should be kept in fusion for a long time; but as the lead would by that means be dissipated, the flint-glass would lose a part of its density and unctuousness, which are its chief merit. M. Magellan tells us, that it is the purest calx of lead called *minimum*, made immediately from the metal, and the most pure quartzous sand, with pure mineral alkali, or rather with good nitre, that produce, when properly melted, the best flint glass. The greater the proportion of red-lead, the heavier is the glass, and of course its refraction the greater; an essential requisite for such glass as is employed for the lenses of achromatic telescopes. It must, however, be observed, that glass made with lead has the defect of being of unequal density, for want of a perfect mixture of all its parts; so that it is

extremely difficult to find pieces of a diameter among hundred weights of that shall be quite free from filaments. By chance the late Mr Dollond procured pure flint-glass, from which he made admirable triple object lenses of three feet focus, which have been so much admired, that no such other glass has yet been found. Very considerable premiums have been offered for the method of producing the best kind of optical instruments. All the calces of cially minium, have a great attraction for air. If therefore we should desire a calx in perfect purity, it must be kept free from the contact of air, or slightly calcined and used, to separate the fixed air it may be bed. When exposed to the air, it is in proportion to the dampness of the air attracts a white rust, which is not a pure calx combined with the fixed air imbibed from the atmosphere. It is not altered by pure air; therefore we must conclude, that the water with which the internal part of lead pipe which water runs is usually covered, owing to the saline substances contained in it. M. Magellan endeavours to account for the phenomena of the calcination of lead, by the doctrine of phlogiston; but they may be accounted for upon the Lavoisier's (See CHEMISTRY) Caustic alkaline liquor on lead, dissolve a small quantity of it, and more. Plants do not thrive so well as in earthen vessels.

(7.) LEAD, POISONOUS EFFECTS OF

When taken into the human body, is productive of various disorders, particularly a danger of choleric terminating in a palsy; and common earthen ware is glazed with it, the use of it cannot be supposed to be void in all cases. Fountains, or vessels of earthenware contain water, often communicate a noxious quality to it when suffered to remain long; the vapour is dangerous to the workmen, and the fumes falling upon the grass are noxious to the cattle who eat it; the fish habit the waters near smelting-houses; nor is it safe for any animal to drink it. The habit of poisoning by lead, antimonial emetics are commended. Navier prescribes liver and hepatic waters. The internal use is certainly dangerous, though it is often used in medicine; and even the external use altogether safe. Certain it is, that all who deal much in lead, are subject to the above mentioned from the habitual contact of metal or its calces, even though they do not use it internally, nor are exposed to its fumes.

(12.) LEAD, USES OF. In Holland customary to correct the most offensive oils, as that of rape-seed and rancid oils or olives, by impregnating them with

to abuse may be discovered by mixing a hat oil with a solution of orpiment made water: for, on shaking them together, and them to rest, the oil, if it has any saturation, will appear of an orange red; but if a pale yellowish one. A similar abuse been practised with acid wines, which dis- much of the lead as communicate a sweet- This is discovered in a similar manner; n this principle is founded the *liquor pro-* or test-liquor. This liquor is merely a for- orpiment or liver of sulphur in lime-water. drops of this solution be put in a glass of ected liquor, it will exhibit a precipitation rk-coloured cloud. This is owing to the ent of the lead to the sulphur in the orpi- If lead, or its calces, in powder, be mix- a solution of hepar sulphuris, a decompos- sives, but the alkali is not thus deprived sulphur. Instead of this, it is re-converted oiated tartar. Lead cannot be united e: but if both are exposed to the fire in a vessel, the lead scorifies the iron, after t melts with the calx into a dark-coloured. This property which lead possesses, of re- all the imperfect metals to a glass, is the of its being used in the REFINING, or pu- on of gold and silver; neither of which can ed by it, but remain pure in the bottom upel. This process is the more complete on of the great efficacy of lead in dissolving bodies. In this respect it is so powerful a at no earthen vessel or crucible can con- when fused, of whatever materials the ves- ade. A mixture of raw and burned clay he action of lead for the greatest length of ut at last this also gives way, and is con- n the sides. LITHARGE, a sort of refuse is employed in the composition of all the uses called PASTES, which are designed as ns of precious stones. The addition of li- enders them more solid and brilliant. The d ingredients are the purest of flint, puri- ali, borax, and litharge; the other addi- bly of metallic calces, are added, mere- sake of tinging them with various col- Lead is employed in making various ves- cisters for water, large boilers for chemi- other purposes, &c. The calx of tin is to be with 4 lb. of distilled water, and dried; and er evaporated by the heat of a water-bath. evaporation nitre of lead is procured; eing calcined, the weight of the residue he quantity of metal contained in the tin, 3 a few grains for the augmentation of arising from calcination, as well as the o- talic substances, such as zinc and copper, the tin under examination may contain. and Charlard by this method ascertained, e wrought tin or pewter contains about f lead in the 100; and that the common d in France under that name, often con- lb. in the same quantity; an enormous

dose, sufficient to expose those who use vessels made of this composition to the greatest danger." There are several methods used by pewterers to discover the fineness of tin. This is done in some cases by simple inspection, the judgment being as- sisted by the weight and noise produced in bend- ing the metal. But the best method is by trying the specific gravity of the metal; which will dis- cover a very small quantity of lead, the difference in gravity betwixt the two metals being very con- siderable.

(13.) LEAD, WATER OF. See PHARMACY.

(14.) LEAD, WHITE. See CHEMISTRY, and PHARMACY, *Index*.

(II.)\* LEAD, *n. f.* [from the verb.] Guidance; first place: a low despicable word.—Yorkshire takes the *lead* of the other counties. *Herring*.

(III.) LEAD, BLACK, OR PLUMBAGO, a genus of inflammable substances, frequently confounded with MOLYBDÆNA; the appearance of which is nearly the same, though the qualities are very dif- ferent. See CHEMISTRY, *Index*. Black lead, when pure, is extremely black; but when fresh cut, ap- pears of a bluish white, and shining like lead. It is micaceous, and minutely scaly; easily broken, and of a granular and dull appearance when broken. Its tract on paper is much darker than that of molybdæna, which has a fine silvery appear- ance; by which means they are easily distinguish- ed. Black lead is too soft to strike fire with steel: it is insoluble in acids; but in a very strong fire, when exposed to the air at the same time, it is en- tirely volatile, leaving only a little iron and a small quantity of siliceous earth. It may be decom- posed by deslagration with nitre; but the common fluxes are not capable of procuring its fusion. Its specific gravity is from 11.987 to 12.167. Various contradictory theories have been formed respect- ing this mineral, and various experiments made to prove them, by Messrs. Scheele, Pelletier, Prief- ley, Kirwan, Gahn, Hielm, Pott, Cronstedt, Quil- ley, and other eminent chemists; but these theories be- ing all founded on the imaginary principle of PHLO- GISTON, it is unnecessary to take notice of them. Black lead is found of different kinds; *viz.* 1. Of a steel-grained and dull texture; naturally black, but when rubbed affording a dark lead colour. 2. Of a granulated and scaly appearance at the same time. It is found in different countries, as Germany, France, Spain, the Cape of Good Hope, and America; but generally in small quantities, and of very different qualities. The best sort, however, and the fittest for making pencils, is found in Cumberland, at a place called *Borrowdale*, where it abounds so much, that hence not only the whole island of Britain, but the whole continent of Europe, may be said to be supplied. "I have seen (says M. Magellan) various speci- mens from different countries; but their coarse texture and bad quality cannot bear any compar- ison with that of Borrowdale; though it some- times, but seldom, contains pyritaceous particles of iron. It is but a few years ago, that this mine seemed to be almost exhausted; but by digging some few yards through the strata underneath, ac- cording to the advice of an experienced miner, whose opinion had been long unattended to, a very thick and rich vein of the best black lead has been

been discovered, to the great joy of the proprietors and advantage of the public." The principal use of black lead is for making pencils for drawing; which have the advantage of marking paper very distinctly for a time, though their traces may afterwards be entirely rubbed out by a soft bread or elastic gum. To form the pencils, the lead is cut into thin parallel rods, and put into quadrangular grooves cut in pieces of cypress wood; and a slit being glued over, they are worked into small cylinders like quills. A coarser kind are made by working up the powder of black lead with sulphur, or some mucilaginous substance; but these answer only for carpenters, or some very coarse drawings. One part of plumbago with 3 of clay, and some cows hair, makes an excellent coating for retorts, as it keeps its form even after the retorts have melted. The famous crucibles of Ypsen are formed of plumbago mixed with clay. These are called in Britain *Hessian crucibles*; but a manufacture of the same kind is now established at Chelsea, near London, where crucibles are manufactured nearly of the same quality with the foreign ones. The powder of black lead serves also to cover the straps for razors; and with it the east iron work, such as stoves, &c. receive a gloss on their surface. An application, however, perhaps as useful as any other, is to smooth the surfaces of wooden work which are subjected to much friction, as wooden screws, packers presses, &c.; neither greasy nor oily substances, nor soapy ointments, produce such a good effect upon them as black lead. In the new nomenclature, it is styled *Carbure of Iron*. See CHEMISTRY, *Index*, and *Vocab.* 1.

(1.) \* To LEAD. *v. a.* [from the noun.] To fit with lead in any manner.—He fashioneth the clay with his arm, he applieth himself to lead it over; and he is diligent to make clean the furnace. *Ecclesiast.* xxxviii. 30.—There is a traverse placed in a loft, at the right hand of the chair, with a privy door, and a carved window of glass leaded with gold and blue, where the mother sitteth. *Bacon.*

(2.) \* To LEAD. *v. a.* preter. *I led*; part. *led*. [*ledan*, Saxon; *leiden*, Dutch.] 1. To guide by the hand.—

, or LEADER WATER, a river of wickthire, which rises in the Lam- , and falls into the Tweed, 3 miles

It formerly abounded with salmon t since the improvement of the ad-

acent grounds by lime became general, they are not near so numerous, owing to the rains washing down that mineral into the river.

(1.) LEADHILLS, mountains of Scotland, in the county of Lanark, and district of Clidesdale, abounding with the most famous and ancient lead mines in the kingdom, the lead ores having been first discovered in 1513.

(2.) LEADHILLS, a village on the top of one of the above mountains, upon a level with Tintock, (N° 1.) or rather in a hollow near its summit, by some said to be the highest human habitation in Great Britain. Here, however, reside many hundreds of miners with their families. These miners, though in a great measure excluded from society by their situation, yet not only find means to procure a comfortable subsistence, but also pay more attention to the cultivation of the mind than many of their countrymen situated seemingly in more favourable circumstances for the attainment of knowledge. They are very intelligent, and have a circulating library for the instruction and amusement of their little community. They labour in the mines only 6 hours in the 24; so that they have a good deal of spare time. They are employed by two companies, who have agents, overseers, &c. at Leadhills, as well as at London. Amidst these mountains particles of gold have sometimes been found washed down by the rains and streams of water; but this desert tract is chiefly valuable for producing metals of inferior worth. "Nothing (says Mr Pen- nant) can equal the gloomy appearance of the country round. Neither tree, nor shrub, nor verdure, nor picturesque rock, appear to amuse the eye. The spectator must plunge into the bowels of these mountains for entertainment." The veins of lead lie mostly N. and S. and their thickness, which seldom exceeds 40 feet, varies greatly in different parts. Some have been found hiled with ore within two fathoms of the surface; others sink to the depth of 90 fathoms. The earl of Hope- ton, the proprietor, has in his possession a solid mass of lead-ore from these mines, weighing five tons. He has also a piece of native gold that weighs two ounces, which was found here. The lead is all sent to Leith, where it has the privilege of being exported free of duty. The total pro- duce, in 1786, was 10,080 bars of lead: In 1790, it was near 18,000 bars. The scanty pasture at- forded by this barren region feeds some sheep and cattle; but those in the neighbourhood of the mines sometimes perish by drinking of the water in which the lead ore has been washed. See LEAD-BRASH. The population of this village, in 1791, was 970. It has a good school, and lies 15 miles S. of Lanark.

\* LEADING. *participial adj.* Principal; chief; capital.—In organized bodies, which are propa- gated by seed, the shape is the *leading* quality, and most characteristic part, that determines the species. *Locke.*—Mistake arise from the influence of private persons, upon great numbers stiled *lead-* ing men and parties. *Swift.*

\* LEADING-STRINGS *n. f.* [*lead and string.*] Strings by which children, when they learn to walk, are held from falling.—

Sound may serve such, ere they to sense are  
grown,  
Like *leading-strings*, 'till they can walk alone.  
*Dryden.*

—Was he ever able to walk without *leading-strings*, or swim without bladders, without being discovered by his hobbling and his sinking? *Swift.*

\* **LEADMAN.** *n. f.* [*lead* and *man*.] One who begins or leads a dance.

Such a light and mettled dance

Saw you never,

And by *leadmen* for the nonce,

That turn round like grindle stones.  
*Ben Jonson.*

(1.) \* **LEADWORT.** *n. f.* [*lead* and *wort*; *plumbago*.] A flower.

(2.) **LEADWORT.** See **PLUMBAGO**, N° L. I., 2.

**LEENA.** See **ATTICA**, § 10.

(1.) \* **LEAF.** *n. f.* *leaves*, plural. [*leaf*, Sax. *leaf*; Dutch.] 1. The green deciduous parts of plants and flowers.—

This is the state of man; to-day he puts forth  
The tender *leaves* of hopes, to-morrow blossoms.  
*Shak.*

—A man shall seldom fail of having cherries borne by his graft the same year in which his incision is made, if his graft have blossom buds; whereas if it were only *leaf* buds, it will not bear fruit till the second season. *Boyle.*—Those things which are removed to a distant view, ought to make but one mass; as the *leaves* on the trees, and the hills in the sea. *Dryden.* 3. A part of a book containing two pages.—

Happy ye *leaves*, when as those lily hands  
Shall handle you.  
*Spenser.*

Peruse my *leaves* through ev'ry part,  
And think thou seest the owner's heart  
Scrawl'd o'er with trifles.  
*Swift.*

3. One side of a double door. The two *leaves* of the one door were folding. 1 *Kings*. 4. Any thing foliated, or thinly beaten.—Eleven ounces two pence sterling ought to be of so pure silver, as is called *leaf* silver, and then the melter must add of other weight seventeen pence halfpenny farthing. *Camden.*—*Leaf* gold, that flies in the air as light as down, is as truly gold as that in an ingot. *Digby on Bodies.*

(2.) **LEAF** (§ 1. *def.* 1.) is defined by Miller, “a part of a plant extended into length and breadth in such a manner as to have one side distinguishable from the other.” Linnæus defines leaves “the organs of motion, or muscles of the plana.”—The leaves are not merely ornamental to plants; they serve very useful purposes, and make part of the organs of vegetation. Most of plants, especially trees, are furnished with leaves; in mushrooms, and shrubby horse tail, they are totally wanting. Ludwig defines leaves to be fibrous and cellular processes of the plant, which are of various figures, but generally extended into a plain membranaceous or skinny substance. They are of a deeper green than the foot-stalks on which they stand, and are formed by the expansion of the vessels of the stalk, among which in several leaves, the proper vessels are distinguished by the particular taste, colour, and smell, of the liquors contained within them. By the expansion of the vessels of the stalk, are produced

several ramifications of branches, winding each other mutually; form a kin the meshes or interstices of which are with a tender cellular substance, called *pith*, or *parenchyma*. This pulpy substance is frequently consumed by insects, whilst the nous net remaining untouched exhibits the skeleton of the leaf. The net is externally with an epidermis or scarf-skin, seems to be a continuation of the scarf-skin of the stem, and perhaps of that of the stem. Saussure, a judicious naturalist, has attempted to prove, that this scarf-skin, like that of a tree, is a true bark, composed itself of an epicortical net; these parts seem to be the perspiration, which serve to dissipate the superfluous juices. The cortical net is furnished principally on the surface of the leaf, with a number of suetlers or absorbent vessels, which imbibe the humidity of the air. The upper face, turned towards heaven, serves as to the lower, which looks downward; disposition is so essential to the vegetation, that if a branch is overturned in summer as to destroy the natural direction of the growth, they will, of themselves, in a very short time resume their former position; and that as the branch is thus overturned. Leaves are useful and necessary organs; trees are totally divested of them. In general, plants cannot shoot vigorously, unless they have undergone the depredate process; witness, likewise, the very common stripping off some of the leaves from plants, we would suspend their growth, or diminish the number of their shoots. This method is observed with corn and the cucurbitaceae, and, in cold years, is practised on fruit trees, to render the fruit riper and better; but in this case it is proper to wait until the fruits have acquired their full bulk, as they contribute greatly to their growth, but when too numerous, that exquisite recede the juices, which is so necessary to render them delicious and palatable. When vegetative organs of perspiration and inspiration are superfluous. Plants, therefore, are not adorned with leaves: they produce new leaves every year; and every year the greater part of them are totally divested of them, and remain naked the winter. See **PLANT**.

(3.) **LEAF**, in clocks and watches, are given to the notches of their pinions.

(4.) **LEAF**, **CREEPING**, in zoology. See **TIS**.

(5.) **LEAF GOLD**, or **GOLD LEAF** (§ 1. *def.* 1.) is fine gold beaten into plates of extreme thinness for the purpose of gilding, &c. The process of gold leaf, according to Dr Lewis, is as follows:—The gold is melted in a black lead with some borax, in a wind furnace, call workmen a *wind hole*: as soon as it attains a perfect fusion, it is poured out into an iron mould, six or eight inches long, and thence into a narrow channel, previously greased, so as to make the tallow run and fire not to take flame. The bar of gold is then heated, to burn off the unctuous matter, a

into a long plate, which is further extended by being passed repeatedly between rollers, till it becomes a ribbon as thin as paper: formerly the whole of this extension was done by means of the hammer, and some of the workmen are still said to follow the same method; but the flattening-mill both abridges the labour, and renders the plate of more uniform thickness. The ribbon is divided by compasses, and sheers into equal pieces, which are then pressed between equal weights: these are forged till they are an inch square; and afterwards annealed, to remove the rigidity which is contracted in the hammering and flattening. Six ounces of gold, or 960 grains, the weight which the workmen usually melt at a time, will make 150 of these squares, when each of them contains six grains and two-fifths; and as 9000 of these squares would make a cubic inch, the thickness of the gold plates is about the 766th part of an inch. The further extension of these pieces of gold, it is necessary to interpose some thing between them and the hammer, for to prevent the blow, and defending them from the immediate action: as also to place every two of the pieces some proper interlayer, which, while it prevents their uniting, or injuring one another, may suffer the gold to extend. Both these ends are answered by certain animal membranes. The gold-plates are made of three kinds of membranes; for the first, common parchment made of sheep-skin, interlaying with the gold, first the vellum, and then the closest vellum, made of calf-skin; the second, the much finer skins of ox-gut, cut into the large straight gut slit open, and cured on purpose for this use, and called *gold-beater's skin*. The preparation of these is a distinct business, practised by several persons in the kingdom, some of whom I have not satisfactorily observed. The general process is said to consist, first, in one upon another, by the smoothest possible state, in which they readily cohere inseparably; stretching them on a table, and carefully scraping off the fat and the dirt, so as to leave only the fine exterior of the gut; beating them between sheets of paper, to force out what remains in them; moistening them once with an infusion of warm spices; and then drying and pressing them. It is said, that the best is made of gypsum, or plaster of Paris, is rubbed with the bare foot both on the vellum and the parchment, which fills up such minute holes as are left in them, and prevents the gold-leaf from falling off, as it would do to the simple animal membrane. It is observable, that, notwithstanding the vast extent to which the gold is beaten, and the great tenuity of the skins, and the great tenuity of themselves, yet they sustain continual use for several months, without growing thinner. Our workmen, after 70 or 80 repetitions, the which they contract no flaw, will no longer be able to extend between them; but they may be again rendered fit for use by immersing them with the virtue which they have

L PART I.

lost, and that even holes in them may be repaired by the dexterous application of fresh pieces of skin: a microscopical examination of some skins that had been long used plainly showed these repairs. The method of restoring their virtue is said in the *Encyclopedie* to be, by interlaying them with leaves of paper moistened with vinegar and white wine, beating them for a whole day, and afterwards rubbing them over as at first with plaster of Paris. The gold is said to extend between them more easily, after they have been used a little, than when they are new. The beating of the gold is performed on a smooth block of black marble, weighing from 200 to 600 pounds, the heavier the better; about nine inches square on the upper surface, and sometimes less, fitted into the middle of a wooden frame, about two feet square, so as that the surface of the marble and the frame form one continuous plane. Three of the sides are furnished with a high ledge; and the front, which is open, has a leather flap fastened to it, which the gold-beater takes before him as an apron, for preserving the fragments of gold that fall off. Three hammers are employed, all of them with two round and somewhat convex faces, though commonly the workman uses only one of the faces; the first, called the *cutting-hammer*, is about 4 inches in diameter, and weighs 15 or 16 lb. and sometimes 20; though few workmen can manage those of this last size: the second, called the *shoddering hammer*, weighs about 12 lb. and is about the same diameter; the third, called the *gold-hammer*, or *finishing hammer*, weighs 10 or 11 lb. and is nearly of the same width. The French use 4 hammers, differing both in size and shape from those of our workmen, they have only one face, being in figure truncated cones. The first has very little convexity, is near 5 inches in diameter, and weighs 24 or 25 lb. the second is more convex than the first, about an inch narrower, and scarcely half its weight: the third, still more convex, is only about two inches wide, and 4 or 5 lb. in weight: the 4th or finishing hammer is near as heavy as the first, but narrower by an inch, and the most convex of all. As these hammers differ so remarkably from ours, I thought proper to insert them, leaving the workmen to judge what advantage one set may have above the other. A hundred and fifty of the pieces of gold are interlaid with leaves of vellum, 3 or 4 inches square, one vellum leaf being placed between every two of the pieces, and about 20 more of the vellum leaves on the outsides; over these is drawn a parchment case, open at both ends, and over this another in a contrary direction, so that the assemblage of gold and vellum leaves is kept tight and close on all sides. The whole is beaten with the heaviest hammer, and every now and then turned upside down, till the gold is stretched to the extent of the vellum; the case being from time to time opened for discovering how the extension goes on, and the packet, at times, bent and rolled as it were between the hands, for procuring sufficient freedom to the gold, or, as the workmen say, to make the gold work. The pieces, taken out from between the vellum leaves, are cut in four with a steel knife; and the 600 divisions, hence resulting, are interlaid, in the same

N

Manner,

manner, with pieces of the ox-gut skins five inches square. The beating being repeated with a lighter hammer till the golden plates have again acquired the extent of the skins, they are a second time divided in four: the instrument used for this division is a piece of cane cut to an edge, the leaves being now so light, that the moisture of the air or breath condensing on a metalline knife would occasion them to stick to it. These last divisions being so numerous, that the skins necessary for interposing between them would make the packet too thick to be beaten at once, they are parted into three parcels, which are beaten separately, with the smallest hammer, till they are stretched for the 3d time to the size of the skins: they are now found to be reduced to the greatest thinness they will admit of; and indeed many of them, before this period, break or fail. The French workmen, according to the minute detail of this process given in the *Encyclopedie*, repeat the division and the beating once more; but as the squares of gold, taken for the first operation, have four times the area of those used among us, the number of leaves from an equal area is the same in both methods, viz. 16 from a square inch. In the beating, however simple the process appears to be, a good deal of address is requisite, for applying the hammers so as to extend the metal uniformly from the middle to the sides: one improper blow is apt not only to break the gold leaves, but to cut the skins. After the last beating, the leaves are taken up by the end of a cane instrument, and, being blown flat on a leather cushion, are cut to a size, one by one, with a square frame of cane made of a proper sharpness, or with a frame of wood edged with cane: they are then fitted into books of 25 leaves each, the paper of which is well smoothed, and rubbed with red bole to prevent their sticking to it. The French, for sizing the leaves, use only the cane knife; cutting them first straight on one side, fitting them into the book by the straight side, and then paring off the superfluous parts of the gold about the edges of the book. The size of the French gold leaves is somewhat less than from 3 inches to 3½ square; that of ours, from 3 inches to 3¾. The process of gold-beating is considerably influenced by the weather. In wet weather, the skins grow somewhat damp, and in this state make the extension of the gold more tedious: the French are said to dry and press them at every time of using; with care not to overdry them, which would render them unfit for farther service. Our workmen complain more of frost, which appears to affect the metalline leaves themselves: in frost, a gold leaf cannot easily be blown flat, but breaks, wrinkles, or runs together. Gold leaf ought to be prepared from the finest gold; as the admixture of other metals, though in too small a proportion to sensibly affect the colour of the leaf, would dispose it to lose of its beauty in the air. And indeed there is little temptation to the workman to use any other; the greater hardness of alloyed gold occasioning as much to be lost in point of time and labour, and in the greater number of leaves that break, as can be gained by any quantity of alloy that would not be at once discoverable by the eye. All metals

render gold harder and more difficult even silver, which in this respect see quality less than any other metal, & gold a mixture sensibly harder than separately, and this hardness is in felt than in gold-beating. The French prepare the *green gold leaf*, from a one part copper and two of silver with But this is probably a mistake: for mixture gives no greenness to gold been informed by our workmen, that of leaf is made from the same finest highest gold coloured sort, the green only a superficial teint induced upon some part of the process: this gold little otherwise used than for the gtain books. But though the gold is advantageously diminish the quantity leaf by the admixture of any other of the gold, yet means have been contri particular purposes, of saving the p by producing a kind of leaf called whose basis is silver, and which has ficial coat of gold upon one side: a silver and a thinner one of gold, laid another, heated and pressed together cohere; and being then beaten into as in the foregoing process, the gold quantity is only about one fourth silver, continues every where to cov tension of the former keeping pace the latter.

(6.) LEAF INSECT. See CIMEX,

(7.) LEAF, WALKING. See MAY

\* To LEAF, v. n. [from the noun leaves; to bear leaves leaves.—Moth the leaves at autumn; and if not cold, would leaf about the solstice.

\* LEAFLESS, adj. [from leaf.] Noun.—Bare honesty without some other being looked on as a leafless tree, no himself to its shelter. *Government of* Where doves in flocks, the leaf shade.

\* LEAFY, adj. [from leaf.] Full

(1.) \* LEAGUE, n. s. [licu, I league; luca, Lat. from lech, Welch was used to be erected at the end of Camden. 2. A measure of length, 20 miles.—

Ere the ships could meet by tw We were encount'ed by a high

Ev'n Italy, though many a league remote,  
In distant echoes answer'd. *Addison.*

(ii.) A LEAGUE (§ i. def. 1.) contains more or fewer geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land-measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or 3 English miles. The French league sometimes contains the same measure, and in some parts of France it consists of 3500 paces: the mean or common league consists of 2400 paces, and the little league of 2000. The Spanish leagues are larger than the French, 17 Spanish leagues making a degree, or 20 French leagues, or 69½ English statute miles. The Dutch and German leagues contain each 4 geographical miles. The Persian leagues are pretty near of the same extent with the Spanish; that is, they are equal to 4 Italian miles: which is pretty near to what Herodotus calls the length of the Persian *parasang*, which contained 30 stadia, 8 whereof, according to Strabo, make a mile. The word comes from *leuca*, or *leuge*, an ancient Gaulish word for an itinerary measure, and retained in that sense by the Romans. Some derive the word *leuca* from *λευκος*, white; as the Gauls, in imitation of the Romans, marked the distances in their roads with white stones.

(iii.) \* LEAGUE. *n. f.* [*ligue*, French; *ligo*, Lat.] A confederacy; a combination either of interest or friendship.—

You peers, continue this united league. *Shak.*

We come to be informed by yourselves,

What the conditions of that league must be. *Shak.*

—Thou shalt be in league with the stones of the field; and the beasts of the field shall be at peace with thee. *Job.*—Go break thy league with Baal, that he may depart from me. 2 *Chron.* xvii. 3.

—It is a great error, and a narrowness of mind, to think, that nations have nothing to do one with another, except there be either an union in sovereignty, or a conjunction in pacts or leagues: there are other bands of society and implicit confederations. *Bacon.*—

I, a private person, whom my country

As a league breaker gave up bound, presum'd

Single rebellion, did hostile acts. *Milton.*

Let there be

'Twixt us and them no league nor amity. *Denb.*

(1.) LEAGUE (§ II. 1.) denotes also an alliance between princes and states for their mutual aid, either in attacking some common enemy, or in defending themselves. Leagues, among the Greeks, were of 3 sorts: 1. *ἑσθία*, *ἑσθία*, or *ἑσθία*, whereby both parties were obliged to cease from hostilities, without even molesting the allies of each other; 2. *ἐπιμαχία*, whereby they engaged to have the same friends and enemies, and to assist each other upon all occasions. All these leagues were confirmed with oaths, imprecations, and sacrifices. The victims most generally used were a boar, a ram, or goat, sometimes all three; and sometimes bulls and lambs. They cut out the testicles of the animal, and stood upon them while they swore; and some of the hair of the victim was distributed to all present. Then they cut the animal's

throat, which was called *ἄρκια τιμίαι*, in Latin, *ferire fedus*.—This done, they repeated their oaths and imprecations, calling the gods to witness the honesty of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union: while this was pouring out, they prayed that the blood of him who should break the treaty might be poured out in like manner. Upon these occasions no part of the victim was eaten. Still further to increase the solemnity of this obligation, the league was engraven upon brass, fixed up in places of public concourse, and sometimes read at the solemn games. Some exchanged certain *εὐβόλαι* or *εὐσεφῆς* upon the occasion, and frequently sent ambassadors, on some appointed day, to keep them in mind of their engagements to each other. The ceremonies of the Romans in making leagues were performed by the *Feciales*. See *FECIALES*.

(3.) The LEAGUE, by way of eminence, denotes that famous one on foot in France, from 1576 to 1593. Its intent was to prevent the succession of Henry IV. who was of the reformed religion, to the crown; and it ended with his abjuration of that faith. (See HENRY, N° ii.) The *leaguers*, or confederates, were of three kinds. The *zealous leaguers* aimed at the utter destruction, not only of the Huguenots, but also of the ministry. The *Spanish leaguers* had principally in view the transferring the crown of France to the king of Spain, or the infant his daughter. The *moderate leaguers* aimed only at the extirpation of Calvinism, without any alteration of the government.

(4.) LEAGUE, ACHÆAN. See ACHÆANS, and GREEKS, § 7.

(5.) LEAGUE AND COVENANT, SOLEMN. See ENGLAND, § 47; and SECEDERS.

(6.) The LEAGUES OF THE GRISONS, now form part of the Helvetic republic. See GRISONS, § 1; and HELVETIC REPUBLIC.

\* To LEAGUE. *v. n.* To unite; to confederate.—Where fraud and falsehood invade society, the band presently breaks, and men are put to a loss where to league and to fasten their dependances. *South.*

\* LEAGUED. *adj.* [from *league*.] Confederated.—

And now thus leagu'd by an eternal bond,  
What shall retard the Britons bold designs?

*Philips.*

(1.) LEAGUER, *n. f.* one who makes, or is joined in a league. See LEAGUE, § 3.

(2.) \* LEAGUER. *n. f.* [*belegeren*, Dutch.] Siege; investment of a town.—We will bind and hoodwink him so, that he shall suppose no other but that he is carried into the *leaguer* of the adversaries, when we bring him to our own tents. *Shak.*

(1.) \* LEAK. *n. f.* [*leek*, *leke*, Dutch.] A breach or hole which lets in water.—There will be always evils, which no art of man can cure: breaches and leaks more than man's wit hath hands to stop. *Hooker.*—The water rushes in, as it doth usually in the leak of a ship. *Wilkins.*—

Whether she sprung a leak I cannot find,

Or whether she was overfet with wind. *Dryden.*

(2.) A LEAK, at sea, is a hole in the ship, thro' which the water comes in. A ship is said to

*spring a leak* when she begins to *leak* or to let in the water. The manner of stopping a leak is to put into it a plug wrapped in oakum and well tarred, or in a tawpawling clout, which keeps out the water; or nailing a piece of sheet lead on the place. Seamen sometimes stop a leak by thrusting a piece of salt beef into it. The sea-water, says Mr Boyle, being fresher than the brine imbibed by the beef, penetrates into its body, and causes it to swell so as to bear strongly against the edges of the broken plank, and thereby stops the influx of the water.—A ready way to find a leak in a ship is to apply the narrower end of a speaking trumpet to the ear, and the other to the side of a ship where the leak is supposed to be; then the noise of the water issuing in at the leak will be heard distinctly, whereby it may be discovered.

\* *To LEAK. v. n. 1.* To let water in or out.—They will allow us ne'er a jordan, and then we leak in your chimney. *Shak.*—His feet should be washed every day in cold water; and have his shoes so thin, that they might leak, and let in water. *Locke.* 2. To drop through a breach or discontinuity.—The water which will perhaps by degrees leak into several parts, may be emptied out again. *Wilkins.*—

Golden stars hung o'er their heads,

And dart at once their baleful influence

In leaking fire. *Dryden and Lee,*

(1.) \* **LEAKAGE.** *n. s.* [from *leak.*] Allowance made for accidental loss in liquid measures.

(2.) **LEAKAGE**, in commerce, is an allowance of 12 per cent in the customs, granted to importers of wines for the waste or damage it is supposed to have received in the passage: an allowance of two barrels in 22 is also made to the brewers of ale and beer by the excise-office.

(3.) **LEAKAGE** signifies also the state of a vessel that leaks.

(1.) **LEAKE**, John, M. D. a late eminent English physician, son of a clergyman, and born at Kirk-Oswald in Cumberland. After going through the usual studies, in which he made rapid advances, he attended the London hospitals, and was admitted a member of the corporation of surgeons in that city. He then set out on a tour to Portugal and Italy, and on his return commenced business in Piccadilly, and delivered lectures on the obstetrical art. His *Introductory Lecture on the Theory and Practice of Midwifery*, was published in 1764, and went through 4 editions in 4to. In 1765, he published the original plan of the *Westminster Lying-in Hospital*; and having purchased a piece of ground, erected a building according to his plan, and made a free gift of the whole to the governors of the hospital. In 1773, he published *Practical Observations on the Child-bed Fever*: in 1774, he republished his Lecture, including the History, Nature, and Tendency of Midwifery; which he afterwards considerably enlarged, and published in 2 vols. under the title of *Medical Observations and Instructions, on the Nature, Treatment, and Cure of various Diseases incident to Women*. In 1792, he published *A Practical Essay on the Diseases of the Viscera, particularly those of the Stomach and Bowels*. But his intense application in the composition of this work, induced an aff-

fection of the breast, which ended in his death in 1792.

(2.) **LEAKE**, Richard, master gunner of England, was born at Harwich in 1629, and bred to the sea. At the restoration, he was made master gunner of the Princess, a frigate of 50 guns; and in the first Dutch war distinguished himself by his skill and bravery in two extraordinary actions; one against 15 sail of Dutch men of war; and another in 1667 against two Danes in the Baltic, in which the commanding officers of the Princess being killed or desperately wounded, the command devolved on him, according to the rules of war. In 1669, he was promoted to be gunner of the Royal Prince, a first rate man of war. He was engaged, with his two sons Henry and John, in the sea fight against Van Tromp, in 1673; when the Royal Prince had all her masts shot away, near 400 of her men killed and disabled, and most of her upper tier of guns dismounted. As she lay thus like a wreck, a great Dutch man of war came down upon her with two fire-ships, either to burn or carry her off; and Capt. Rooke, afterwards Sir George, thinking it impossible to defend her, ordered the men to save their lives, and the colours to be struck. Leake hearing this, took the command upon himself, saying, "The Royal Prince shall never be given up to the enemy, while I am alive to defend her." His undaunted spirit inspired the small residue of the ship's company with courage; they returned with alacrity to the fight, and, under the direction of this valiant gunner and his two sons, sunk both the fire-ships, and obliged the man of war to sheer off; and having thus saved the Royal Prince, he brought her into Chatham. But his joy in this victory was damped by the loss of Henry, his eldest son, who was killed near him. Soon after, Leake was made commander of a yacht, and gunner of Whitehall. In 1677, he obtained a grant for life of the office of master-gunner of England, and store-keeper of the ordnance at Woolwich. In these posts he had full scope for his genius; he invented the culbee piece; and contrived to fire a mortar by the blast of a piece, which has been used ever since. He was also the principal contriver of what the French call *infernals*, used at the bombardment at St Malo's, in 1693. In these kind of inventions, as well as in compositions for fire-works, he had frequent trials of skill with French and Dutch gunners and engineers in Woolwich warren, at which king Charles II. and the duke of York were often present, and he never failed to excel all his competitors.

(3.) **LEAKE**, Sir John, an English admiral, distinguished by his bravery and success, was born in 1656, and was taught mathematics and gunnery by Richard his father. (See N<sup>o</sup> 1.) He distinguished himself in 1673, in the memorable engagement between Sir Edward Spragg and Van Tromp, when but 16 years of age; and being afterwards made captain, he signalized himself by executing the desperate attempt of conveying some victuallers into Londonderry, which obliged the enemy to raise the siege; and at the famous battle of the Hoëuc. In 1702, being made commodore of a squadron, he destroyed the French trade and settlements at Newfoundland, and thus restored

the whole island to the British. On his was created rear-admiral; soon after, he was vice-admiral of the blue, and was He was engaged with admiral Rook GIBRALTAR; soon after which, he distinguished himself in the general engagement off when commanding the leading Squadron, consisting only of six ships, he drove the enemy, consisting of 13, out of the line so disabled that they never returned to In 1705, he relieved Gibraltar, which had been besieged by sea, and the Spaniards seasonably, that the enemy was to have taken the town that very night in several places, but undoubtedly have made themselves masters of it; 500 Spaniards having, by the help of ladders, climbed up the rocks by a way thought inaccessible. Of these 200 were he the spot; 220 accepted quarter, and the vowing to escape fell headlong down (See GIBRALTAR, § 6.) He was soon created vice-admiral of the white, and then he died that fortress. The last time, he attacked the French fleet coming out of the bay of which two were taken, and two run ashore destroyed: baron Pointi died soon afterwards he received in the battle; and in 1705, the enemy raised the siege. In 1705, he was engaged in the reduction of Barcelona; in 1706 he relieved that city, when reduced to the last extremity, and obliged king Philip V. to raise the siege. Soon after he took Cartagena; he proceeded to Alicante and Joyce, they were committed to him; and he concluded that the reduction of Majorca. Upon his return, prince George of Denmark made him a present of a ring valued at 400 l. and he received a pension of 1000 l. from Q. Anne, as a reward for his services. In 1707, he was made admiral of the fleet and commander in chief of the fleet; and he surprised a convoy of the enemy's ships off Barcelona, and thus saved that city from being a confederate army from famine: soon after, by the new queen of Spain to king George II. for his services, he made him a present of a ring worth 500 l. He then proceeded to Minorca, which he reduced to the obedience of the king; and soon after assisted lord Stan- he conquest of Minorca. On his return, he appointed one of the lord high admiral's ships, and in 1709, was made rear admiral of the fleet. He was several times chosen M. P. for Devonshire; and in 1712 conducted the English fleet to the possession of Dunkirk. But upon the death of K. George I. he was superseded, and received a pension of 600 l. a-year. He died in 1720.

LEAKE, Stephen MARTIN, Esq. son of Captain, by a sister of Admiral LEAKE's lady, distinguished himself in the heralds office as the first person to be garter. He was the first person to professedly on English coins; two of his *Historical Account* of these were published by him with plates, under the title of *Numerical History*, London, 1726, 8vo; the 2d approved, in 1745, 8vo. He printed, in 1712, *the Life of Sir John Leake, Kt. admiral of the fleet to whom he was indebted for a con-*

siderable estate. Of this work, which he is said to have wrote from a principle of *gratitude*, only 50 copies were printed; but it certainly would have afforded a stronger proof of this principle, had he printed 5000 copies. In 1766, he printed also 50 copies of *The Statutes of the Order of the Garter*, 4to. He died in 1773; and was buried in the parish church of Thorp in Essex, of which manor he was lord.

\* LEAKY. *adj.* [from *leak*.] 1. Battered or pierced, so as to let water in or out.—

Thou'rt so leaky,

That we must leave thee to thy sinking. *Shak.*

If you have not enjoy'd what youth could give,

But life sunk through you like a leaky sieve,

Accuse yourself, you liv'd not while you might. *Dryden.*

2. Loquacious; not close.—Women are so leaky, that I have hardly met with one that could not hold her breath longer than she could keep a secret. *L'Estrange.*

LEAM, a mountain of Ireland, in Galway.

LEAME, a river of Warwickshire.

(1.) \* LEAN. *adj.* [*blens*, Saxon.] 1. Not fat; meagre; wanting flesh; bare-boned.—

You tempt the fury of my three attendants,

Lean famine, quartering steel, and climbing fire. *Shak.*

Lean raw-bon'd rascals! who would e'er sup-

pose,

They had such courage and audacity! *Shak.*

Lean look'd prophets whisper fearful change. *Shak.*

I would invent as bitter searching terms,

As lean-fac'd envy in her loathsome cove. *Shak.*

—Seven other kine came up out of the river, ill-favour'd and lean-bethed. *Gen. xli. 3.*—Let a physician beware how he purge after hard frosty weather, and in a lean body, without preparation. *Bacon.*—

And fetch their precepts from the cynic tub,

Praising the lean, and fallow, abstinence. *Milt.*

Swear that Adrastus, and the lean-look'd prophet,

Are joint conspirators. *Dryden and Lee.*

—Lean people often suffer for want of fat, as fat people may by obstruction of the vessels. *Arbustn.*

But haggard grief, lean looking fallow care,

Dwell on my brow. *Rowe.*

2. Not unctuous; thin; hungry.—There are two chief kinds of terrestrial liquors, those that are fat and light, and those that are lean and more earthy, like common water. *Burnet.* 3. Low; poor: in opposition to *great* or *rich*.—

That which combin'd us was most great, and

let not

A leaner action rend us. *Shak.*

4. Jeune; not comprehensive; not embellished: as, a lean dissertation.

(2.) \* LEAN. *n. s.* That part of flesh which consists of the muscle without the fat.—

With razors keen we cut our passage clean

Thro' rills of fat, and deluges of lean. *Farquhar.*

(3.) LEAN, CAPE, a cape of Ireland, on the SW. extremity of Clare county, N. of the Shannon.

\* To LEAN. *v. n.* preter. *leaned* or *leant*. [*blinen*, Saxon; *lenen*, Dutch.] 1. To incline against; to rest against.—

*Lean* thine aged back against mine arm. *Shak.*  
—Security is expressed among the medals of Gordianus, by a lady *leaning* against a pillar, a scepter in her hand, before an altar. *Peacocks.*—The columns may be allowed somewhat above their ordinary length, because they *lean* unto so good supporters. *Wotton.*—

Upon his iv'ry sceptre first he *leant*,  
Then shook his head, that shook the firmament.

*Dryden.*

Oppress'd with anguish, panting and o'er-erupt.  
His fainting limbs against an oak he *leant*. *Dryd.*  
—Every other support will fail under us when we come to *lean* upon it. *Rogers.*—

Then *leaning* o'er the rails he musing stood.

*Gay.*

'Mid the central depth of black'ning woods,  
High rais'd in solemn theatre around  
*Leans* the huge elephant. *Thomson.*

2. To propend; to tend towards.—They delight rather to *lean* to their old customs, though they be more unjust, and more inconvenient. *Spens.*—Trust in the lord with all thine heart; and *lean* not unto thine own understanding. *Prov. iii. 5.*—A desire *leaning* to either side, biases the judgment strangely. *Watts.* 3. To be in a bending posture.—She *leans* me out at her mistress's chamber window, bids me a thousand times good night. *Shak.*—

She laid her down; and *leaning* on her knees,  
Invok'd the cause of all her miseries. *Dryden.*

The gods came downward to behold the wars,  
Sharp'ning their fights, and *leaning* from their stars. *Dryden.*

LEANDER. See HERO, N° II.

\* LEANLY. *adv.* [from *lean*.] Meagerly; without plumpness.

\* LEANNESS. *n. s.* [from *lean*.] 1. Extenuation of body; want of flesh; meagreness.—

If thy *leanness* loves such food,

There are those, that, for thy sake,  
Do enough. *Ben Jonson.*

—The symptoms of too great fluidity are excess of universal secretions, as of perspiration, sweat, urine, liquid dejections, *leanness*, and weakness. *Arbuth.* 2. Want of matter; thinness; poverty.—

The poor king Reignier, whose large style

Agrees not with the *leanness* of his purse. *Shak.*

(1.) LEO, in natural history, a mineral substance approaching to the nature of the lapis lazuli, found in the East Indies, and of great use in the Chinese porcelain manufactures, being the finest blue they are possessed of. This stone is found in the strata of pit-coal, or in those of a yellowish or reddish earth in the neighbourhood of the veins of coal. Pieces of it are often found lying on the surface of the ground, and these are a sure indication that more will be found on dipping. It is generally found in oblong pieces of the size of a finger, not-round, but flat. Some of this is very fine; some coarse and of a bad colour. The latter is very common; but the former is scarce, and greatly valued. It is not easy to distinguish them at sight, but the trying one piece is generally a sufficient test of the whole mine, for all that is found in the same place is usually of the same sort.—In preparing it for use, they first wash it very clean; then lay it at the bottom of their baking furnaces; and when it has been thus calc-

ned for 3 or 4 hours, it is taken out, and ed very fine in large mortars of porce stone pestles faced with iron. When is perfectly fine, they pour in boiling grind that with the rest; and when the incorporated, they add more, and pour some time settling. The remainder at of the mortar, which is the coarser grind again with more water; and so have made the whole fine, excepting or grit. All the liquors are then mixe and well stirred; and after being allowe or 3 minutes, poured off with the powde in them. This is suffered to subside and is the fine blue used in their best v mon smalt serving for the blue of all t china.

(2.) LEO, a river of China, in Cha

(1.) \* LEAP. *n. s.* [from the verb.] jump; act of leaping. 2. Space passed —After they have carried their riders *leaps*, and through all dangers, wha them in the end but to be broken wiv *trange*. 3. Sudden transition.—Wicke on by degrees, as well as virtue; and f from one extreme to another are unna *trange*.—The commons wrested even t chusing a king intirely out of the hands of which was so great a *leap*, and caused vulsion in the state, that the constituc bear. *Swift.* 4. An assault of an anin —The cat made a *leap* at the mouse.

5. Embrace of animals.—

How she cheats her bellowing lov

The rushing *leap*, the doubtful prog

6. Hazard, or effect of leaping.—

Methinks it were an easy *leap*

To pluck bright honour from the moon.

You take a precipice for no *leap*;  
And woo your own destruction.

Behold that dreadful downfall of

Where yon old fisher views the waves

'Tis the convenient *leap* I mean to t

(2.) LEAP, in music, is when the so proceed by conjoint degrees, as wh each note there is an interval of a thir a fifth, &c.

(3.) LEAP, THE LOVER'S. See LE

(1.) \* To LEAP. *v. n.* [*bleapan*, S. Scottish.] 1. To jump; to move upw gressively without change of the feet.— *eth* better with weights in his hand th for that the weight, if it be proj strengtheneth the sinews by contractin *leaping* with weights the arms are fir st wards and then forwards with so muc er force; for the hands go backward take their rise. *Bacon.*—

In a narrow pit

He saw a lion and *leap'd* down to it  
Thrice from the ground she *leap'd*  
to weild

Her brandish'd lance.

2. To rush with vehemence.—God c spirit of the king into mildness, who in ed from his throne, and took her in his: came to herself again. *Esth. xv. 8.*—A

t, and found her not, he *leaped* out  
le. *Judith*, xiv. 7.—

ruin upon ruin heaps  
ic, like a furious giant, *leaps*. *Sandys*.  
*leaping* from his horse he rais'd me up.

*Rowe*.  
d; to spring.—Rejoice ye in that day,  
joy. *Luke*, vi. 23.—

I am warm'd, my heart  
the trumpet's voice, and burns for glo-  
*Addison*.

to start.—  
ted frowning from me, as if ruin  
on his eyes. *Shak*.

s mouth go burning lamps, and sparks  
out. *Job*, xli. 29.

LEAP. *v. a.* 1. To pass over, or in-  
ing.—Every man is not of a constitu-  
a gulf for the saving of his country.

condemn'd to *leap* a precipice,  
before his eyes the depth below,  
rt. *Dryden*.

ir example still prevails:  
ts the stream, or *leaps* the pales. *Prior*.  
refs, as beasts.—

on they must not feel the sting of love:  
not *leap* the cow. *Dryden*.

ROG. *n. f.* [*leap* and *frog*.] A play of  
which they imitate the jump of frogs.  
win a lady at *leap-frog*, I should quick-  
a wife. *Shak*.

G, *n. f.* OF VAULTING, an exercise  
both among the Greeks and Romans.  
ans called it *άλμα*, and performed it  
its upon their heads and shoulders.  
they carried the weights in their hands,  
of different figures, but generally oval  
with holes or covered with thongs,  
rich the contenders put their fingers.  
hts were called *άλμης*. The contest  
ould leap the highest and farthest. The  
whence they jumped was called *βαλή*,  
which they leaped, *εκαμματα*, because  
was there dug up. This exercise was  
in the same manner by the Romans.  
R, Mary, an English poetess, born in  
onshire, in 1721. Her Poems, publish-  
: 8vo, are esteemed. She died in 1735,

LEAP-YEAR. *n. f.* *Leap-Year* or biffex-  
4th year, and so called from its *leap*-  
ore that year than in a common year;  
common year has 365 days, but the  
6; and then February hath 29 days,  
common years hath but 28. To find  
r you have this rule:—

by 4; what's left shall be  
year 0; for past 1, 2, 3. *Harris*.

of the name of *leap-year* is, that a day  
is missed; as, if on one year the first  
e on Monday, it will on the next year  
sday, but on *leap-year* it will *leap* to  
.—That the sun consisteth of 365 days  
: six hours, wanting eleven minutes;  
ours omitted will, in process of time,  
rave the compute; and this is the oc-  
be biffextile or *leap-year*. *Brown*.

(2.) LEAP-YEAR. See BISSILE, CHRONO-  
LOGY, § 47; and YEAR.

(1.) LEAR, a British king, said in ancient chro-  
nicles to have succeeded his father Bladud, about  
A. M. 3160. The story of this king and his three  
daughters, is well known from Shakespeare's ex-  
cellent tragedy founded on it.

(2.) LEAR, a river in Northumberland.  
LEARMONTH, Sir Thomas, commonly called  
*Thomas the Rhymer*, an ancient Scottish poet,  
and according to tradition, a prophet, was born  
in the parish of Earlstown, in Berwickshire, in  
the 13th century. See THOMAS. Part of his  
house is still standing, called *Rhymer's Tower*.  
And there is a stone built in the wall of the church  
with this inscription;

“Auld Rhymer's race—Lies in this place.”

(1.) \* To LEARN. *v. a.* [*learn*, Saxon.] 1.  
To gain the knowledge or skill of.—*Learn* a pa-  
rable of the fig tree. *Matt*. xxiv. 32.—He, in a  
shorter time than was thought possible, *learned*  
both to speak and write the Arabian tongue.  
*Knolles*:—

*Learn*, wretches! *learn* the motions of the  
mind,

And the great moral end of humankind. *Dryd*.  
—All he can *learn* of me, will be to weep! *A*.  
*Philips*. 2. To teach. [It is observable, that in  
many of the European languages the same word  
signifies to learn and to teach; to gain or impart  
knowledge.] This sense is now obsolete.—

He would *learn*  
The lion stoop to him in lowly wife,  
A lesson hard. *F. Queen*.

I know not how to curse: the red plague rid  
you,  
For *learning* me your language. *Shak. Temp*.

A thousand more mischances than this one,  
Have *learn'd* me how to brook this patiently.  
*Shak*.

Hast thou not *learn'd* me how  
To make perfumes? *Shak. Cymb*.

(2.) \* To LEARN. *v. n.* To take pattern: with *of*.  
—Take my yoke upon you, and *learn* of me; for  
I am meek and lowly. *Matt*. vi. 29.—In imitation  
of sounds, that Man should be the teacher is no  
part of the matter; for birds will *learn* one of a-  
nother. *Bacon*.

\* LEARNED. *adj.* [from *learn*.] 1. Versed in  
science and literature.—It is indifferent to the  
matter in hand, which way the *learned* shall de-  
termine of it. *Locke*.—

Such labour'd nothings, in so strange a style,  
Amaze th' unlearn'd, and make the *learned*  
smile. *Pope*.

The *learned* met with free approach,  
Although they came not in a coach. *Swift*.

—The best account is given of them by their own  
authors: but I trust more to the table of the *learn-*  
*ed* bishop of Bath. *Arbutnot*. 2. Skilled; skil-  
ful; knowing: with *in*.—

Thou train'd in arms, and *learn'd* in martial  
arts,  
Thou chusest not to conquer men but hearts.  
*Granv*.

3. Skilled in scholastick, as distinct from other  
knowledge.—Men of much reading are greatly  
*learned*, but may be little knowing. *Locke*.

\* LEARN-

\* **LEARNEDLY**. *adv.* [from *learned*.] With knowledge; with skill.—The apostle seemed in his eyes but *learnedly mad*. *Hooker*.—

Much

He spoke, and *learnedly*, for life. *Shak.*  
—Ev'ry coxcomb swears as *learnedly* as they. *Swift*.

\* **LEARNER**. *n. f.* [from *learn*.] One who is yet in his rudiments; one who is acquiring some new art or knowledge.—The late *learners* cannot so well take the ply. *Bacon*.—Nor can a *learner* work so cheap as a skilful practised artist can. *Graunt*.

\* **LEARNING**. *n. f.* [from *learn*.] 1. Literature; skill in languages or sciences; generally scholastic knowledge.—*Learning* hath its infancy, when it is almost childish. *Bacon*.—

*Learning* thy talent is, but mine is sense. *Prior*.  
—As Moses was learned in all the wisdom of the Egyptians, so it is manifest from this chapter, that St Paul was a great master in all the *learning* of the Greeks. *Bentley*. 2. Skill in any thing good or bad.—An art of contradiction by way of scorn, a *learning* wherewith we were long thenceforwarned, that the miserable times whereunto we are fallen should abound. *Hooker*.

\* (1.) \* **LEASE**. *n. f.* [*Jaisser*, French. *Spelman*.] 1. A contract by which, in consideration of some payment, a temporary possession is granted of houses or lands.—

It were a shame to let this land by *lease*. *Shak.*  
Lords of the world have but for life their *lease*,  
And that too, if the lessor please, must cease. *Deubam*.

—I have heard a man talk with contempt of bishops *leases* as on a worse foot than the rest of his estate. *Swift*. 2. Any tenure.—

Our high-plac'd Macbeth  
Shall live the *lease* of nature *Shak.*  
Thou to give the world increase,  
Short'ned hast thy own life's *lease*. *Milton*.

(2.) **A LEASE**, in law, is either written, called an *indenture*, *deedpoll*, or *lease* in writing; or by word of mouth, called *lease parole*. All estates, interests of freehold, or terms for years in lands, &c. not put in writing and signed by the parties, shall have no greater effect than as estates at will; unless it be of leases not exceeding three years from the making; wherein the rent reserved shall be two thirds of the value of the things demised. Leases exceeding three years must be made in writing; and if the substance of a lease be put in writing, and signed by the parties, though it be not sealed it shall have the effect of a lease for years, &c. **AN ASSIGNMENT** differs from a lease only in this; that by a lease one grants an interest less than his own, reserving to himself a reversion; in assignments he parts with the whole property, and the assignee stands to all intents and purposes in the place of the assignor.

(3.) **LEASE**, in Scots Law, is generally called a **TACK**. See **LAW**, PART III, *Chap. II, Sect. VI, § 8*. The shortness of leases in many parts of Scotland, has been long and justly complained of, as disadvantageous, not only to the tenants, but even to the proprietors, as well as to the country in general, by tending greatly to retard improvements in husbandry. Leases for 19 years are too short for making any material improvements. Three times

that period, or 57 years, is much recommended.

(See *Stat. Acc. Index, Part I*.) "Although the granting of leases for 19 years at least," (says the Author of the *Stat. Acc. of Dunnichen*), "is now become universal, yet there prevails a considerable diversity of opinion among proprietors, as to the expediency of including the life of the farmers in their leases. Some advantages, however, seem to give a decided preference to this last sort of lease. The tenant knows he is settled for life, and is therefore afraid to over-crop his land, lest he thereby injure himself. Many lawsuits are thereby avoided. The tenant is also more attentive to the repairs of his buildings and fences; and requires a much less vigilant inspection, on the part of the proprietor, or his factor. To protect the newly planted trees round the inclosed fields, the proprietor of Dunnichen has given the heirs of the tenants a right to one 3d part of them at the expiration of the lease; and engages not to prosecute the tenants for any accidental damage from cattle. The tenants consider the trees as a part of their own property and are at pains to protect them from injury.—Until farms are transmitted from father to son like an inheritance, as is much the case in England, agriculture will not attain all the perfection of which it is capable. *Veteres migrate coloni* is an odious mandate." (*Ibid.* Vol. I. p. 431.) "The tenants" (says the rev. Mr Thom, of Glenbervie) "on the lands belonging to lord MONBODDO, hold their farms on easy, and perhaps, peculiar terms. Their leases are of an uncommon nature, being a *life, 19 years, and a life*. The possessor, during the 19 years, names the life with which the lease ends." (*Ib.* vi; 451.) The late lord Swinton far exceeded his brother senator in the length of his leases. The rev. Mr Cupples ascribes the great increase of population in his parish of Swinton, "to Lord Swinton's judicious attention to improve and enlarge his village of Swinton, partly by perpetual feus, and partly by leases of 999 years." Perhaps the best form of a lease yet suggested to the public, for the mutual advantage of all parties, is that proposed by the late Lord KAMES in his *Gentleman Farmer*. "In order" (says his lordship) "to excite the industry of the tenant, at the end of the lease he shall be entitled to a renewal of it, upon paying the proprietor a fifth part more of rent, unless the proprietor give him 10 years purchase of that fifth part. For example, the rent is 100l; the tenant offers 120l: He shall therefore continue in the possession another 19 years, at the advanced rent, unless the landlord pay him 200l. Should the tenant offer a still higher additional rent, the proprietor cannot turn him out, unless he pay him 10 years purchase of that offer."

(4.) **LEASE and RELEASE**, a species of conveyance used in the English law, first invented by Serjeant Moore, soon after the statute of use now the most common of any, and therefore to be shaken; though very great lawyers (particularly Mr Noy) have formerly doubted its dity. It is thus contrived: A lease, or bargain and sale, upon some pecuniary consideration, for one year, is made by the tenant or freehold to the lessee or bargainee. Now without any enrolment, makes the bargainee

that period, or 57 years, is much recommended. (See *Stat. Acc. Index, Part I*.) "Although the granting of leases for 19 years at least," (says the Author of the *Stat. Acc. of Dunnichen*), "is now become universal, yet there prevails a considerable diversity of opinion among proprietors, as to the expediency of including the life of the farmers in their leases. Some advantages, however, seem to give a decided preference to this last sort of lease. The tenant knows he is settled for life, and is therefore afraid to over-crop his land, lest he thereby injure himself. Many lawsuits are thereby avoided. The tenant is also more attentive to the repairs of his buildings and fences; and requires a much less vigilant inspection, on the part of the proprietor, or his factor. To protect the newly planted trees round the inclosed fields, the proprietor of Dunnichen has given the heirs of the tenants a right to one 3d part of them at the expiration of the lease; and engages not to prosecute the tenants for any accidental damage from cattle. The tenants consider the trees as a part of their own property and are at pains to protect them from injury.—Until farms are transmitted from father to son like an inheritance, as is much the case in England, agriculture will not attain all the perfection of which it is capable. *Veteres migrate coloni* is an odious mandate." (*Ibid.* Vol. I. p. 431.) "The tenants" (says the rev. Mr Thom, of Glenbervie) "on the lands belonging to lord MONBODDO, hold their farms on easy, and perhaps, peculiar terms. Their leases are of an uncommon nature, being a *life, 19 years, and a life*. The possessor, during the 19 years, names the life with which the lease ends." (*Ib.* vi; 451.) The late lord Swinton far exceeded his brother senator in the length of his leases. The rev. Mr Cupples ascribes the great increase of population in his parish of Swinton, "to Lord Swinton's judicious attention to improve and enlarge his village of Swinton, partly by perpetual feus, and partly by leases of 999 years." Perhaps the best form of a lease yet suggested to the public, for the mutual advantage of all parties, is that proposed by the late Lord KAMES in his *Gentleman Farmer*. "In order" (says his lordship) "to excite the industry of the tenant, at the end of the lease he shall be entitled to a renewal of it, upon paying the proprietor a fifth part more of rent, unless the proprietor give him 10 years purchase of that fifth part. For example, the rent is 100l; the tenant offers 120l: He shall therefore continue in the possession another 19 years, at the advanced rent, unless the landlord pay him 200l. Should the tenant offer a still higher additional rent, the proprietor cannot turn him out, unless he pay him 10 years purchase of that offer."

he use of the bargainee; and vests in the the use of the term for a year; and then immediately annexes the possession. He being thus in possession, is capable of a release of the freehold and reversion, if he made to a tenant in possession: dingly the next day, a release is granted This is held to supply the place of live-; and so a conveyance by lease and red to amount to a feoffment.

**LEASE**. *v. a.* [from the noun.] To *r.*—Where the vicar leases his glebe, the ft pay the great tithes to the rector or im- and the small tithes to the vicar. *Ayliffe*. **LEASE**. *v. n.* [*lesen*, Dutch.] To gather what the harvest men leave.—

She in harvest us'd to lease. *Dryden*. **LEASER**. *n. f.* [from *lease*.] Gleaner; ga- the reaper.—There was no office which n England might not have; and I look- ll who were born here as only in the of leasers and gleaners. *Swift*.

**LEASING POINT**, a cape on the W. coast of N. of the isle of Walney.

**LEASH**. *n. f.* [*lisse*, Fr. *letse*, Dutch; *lian*.] 1. A leather thong, by which a olds his hawk, or a courser leads his d. *Hammer*.—

1 like a fauning greyhound in the leash, him slip at will. *Shak.* c straining on, for plucking back; not llowing b unwillingly. *Shak.*

c; three.—I am sworn brother to a leasb s, and can call them all by their Chris- s. *Shak.*—

Some thought when he did gabble l heard the labourers of Babel, berus himself pronounce of languages at once. *Hudibras*.

urt a living comedy; they are a leasb of s. *Dennis's Letters*. 3. A band where- ic any thing in general.—The ravished ; shewn such game, would break those it tie her to the body. *Boyle*.

**LEASH**, (*§ 2, def. 2.*) among sportsmen, de- reatures of any kind; but chiefly grey- foxes, bucks, and hares.

**LEASH**. *v. a.* [from the noun.] To bind ; 1 a string.—

1 should the warlike Harry, like himself, : the port of Mars; and, at his heels, in like hounds, should famine, sword, d fire,

1 for employment. *Shak.* **SING.** *n. f.* [*leuse*, Saxon.] Lies; falshood. ons of men, how long will ye have such in vanity, and seek after leasng? *Psal. iv.*

'mongst ladies would their fortunes read l their hands, and merry leasngs tell.

ates foul leasngs and vile flattery, lthy blots in noble gentery. *Hub. Tale*. it false pilgrim which that leasng told, dredi old Archimago. *F. Quern*. tumb'd past the throw, and in his praise dmost stamp: the leasng. *Shak. Cor.*

.. XIII. PART II.

As folks, quoth Richard, prone to leasng, Say things at first, because they're pleating; *Prior.*

Trading free shall thrive again, Nor leasngs leud affright the swain. *Gay*. **LEASING-MAKING**, in Scots law, the uttering of words tending to excite discord between the king and his people; also called *verbal sedition*.

(1.) \* **LEAST**. *adj.* the superlative of *little*. [*larst*, Saxon. This word *Wallis* would persuade us to write *lest*, that it may be analogous to *less*; but surely the profit is not worth the change.] Little beyond others; smallest.—I am not worthy of the least of all the mercies shewed to thy ser- vant. *Gen. xxxii. 10.*—A man can no more have a positive idea of the greatest than he has of the least space. *Locke*.

(2.) \* **LEAST**. *adv.* In the lowest degree; in a degree below others; less than any other way.—

He resolv'd to wave his suit, Or for a while play least in fight. *Hudibras*. Ev'n that avert; I chuse it not; But taste it as the least unhappy lot. *Dryd.*

—No man more truly knows to place a right value on your friendship, than he who least deserves it on all other accounts than his due sense of it. *Pope*.

(3.) \* **At LEAST**. } To say no more; not to (4.) \* **At the LEAST**. } demand or affirm more \* **At LEAST WISE**. } than is barely sufficient; at the lowest degree.—

He who tempts; though in vain, at least as- perges The tempted with dishonour. *Milton*.

He from my side subducting, took peritaps More than enough; at least on her bestowed Too much of ornament, in outward show Elaborate, of inward lets exact. *Milton*.

—Upon the mast they saw a young man, at least if he were a man who sat as on horseback. *Sidney*. —Every effect doth after a sort contain, at least- wise resemble, the cause from which it proceedeth. *Hooker*.

Honour and fame at least the thund'rer ow'd, And ill he pays the promise of a God. *Pope*.

—The remedies, if any, are to be proposed from a constant course of the milken diet, continued at least a year. *Temple*.—A fiend may deceive a creature of more excellency than himself, at last by the tacit permission of the omniscient Being. *Dryd. Ded. to Jew. 2.* It has a sense implying doubt; to say no more; to say the least; not to say all that might be said.—

Whether such virtue spent now fail'd New angels to create, if they at least Are his created. *Milton*.

—Let useful observations be at least some part of the subject of your conversation. *Watts*.

\* **LEASY**. *adj.* [This word seems formed from the same root with *laisir*, French, or *loose*.] Flimsy; of weak texture. Not in use.—He never leaveth, while the sense itself be left loose and lea- sy. *Ascham's Schoolmaster*.

(1.) \* **LEATHER**. *n. f.* [*lether*, Saxon; *leair*, Ersc.] 1. Dressed hides of animals.—He was a hairy man, and girt with a girdle of leather about his loins. 2 *Kings, i. 8.*—

And if two boots keep out the weather, What need you have two hides of leather? *Prior*.

2. Skin: ironically.—

Returning sound in limb and wind,  
Except some leather lost behind.

*Swift.*

3. It is often used in composition for *leathern*.—  
The shepherds homely curds,

His cold thin drink out of his *leather* bottle;

Is far beyond a prince's delicacies.

*Shel.*

(2.) LEATHER, BLACKING OF. In the tanning of leather it is so much impregnated with the astringent parts of oak bark, or with that matter which strikes a black with green vitriol, that rubbing it over 3 or 4 times with a solution of the vitriol, or with a solution of iron in vegetable acids, is sufficient for staining it black. This operation is performed by the currier, who, after the colouring, gives a gloss to the leather with a solution of gum arabic and size made in vinegar. Where the previous astringent impregnation is sufficient to give due colour, and for those sorts of leather which have not been tanned, some galls or other astringents are added to the solution of iron. In many cases, particularly for the finer sorts of leather, and for renewing the blackness, lamp or ivory black are used. A mixture of either of these with linseed oil makes the common oil blacking. For a shining blacking, small beer or water are taken instead of oil, in the quantity of about a pint to an ounce of the ivory black, with the addition of half an ounce of brown sugar and as much gum-arabic. The white of an egg, substituted for the gum, makes the black more shining, but is supposed to hurt the leather, and make it apt to crack. It must be obvious, however, that all these compositions admit of many variations.

(3.) LEATHER, GILDING OF. Take glair of the whites of eggs, or gum water, and with a brush rub over the leather with either of them: then lay on the gold or silver, and, letting them dry, burnish them. See BURNISHING, and GILDING, § IV, 1, 2.

(4.) LEATHER, METHOD OF COVERING. OR DRESSING, WITH SILVER OR GOLD. Take brown bread; grate and move it on a stone with a muller adding water and chalk; and when the latter is dissolved, rub or lightly daub the leather over with it, till it looks a little whitish; and then lay on the silver or gold before the leather is quite dry, laying the leaves a little over each other, till they may not be the least part uncovered; and when they have well closed with the leaf, and are sufficiently dried on and hardened, rub them over with an ivory polisher, or the fore-hand of a horse.

(5.) LEATHER, METHOD OF DYEING. *Blue* is given by steeping the leather a day in urine and indigo, then boiling it with alum; or by tempering the indigo with red wine, and washing the skins therewith. *Red* is given by washing the skins, and laying them two hours in galls, then rubbing them out, dipping them in a liquor made with lignitum, alum, and verdigraese in water; and lastly, in a dye made of brazil wood, dyed with ley. *Purple* is given by wetting the skins with a solution of roche alum in warm water; and, when dry again, rubbing them with the hand with a decoction of log-wood in colder.

and alum water boiled. *Dark green* is a with steel filings and sal ammoniac steeped till soft, then smeared over the skin; and be dried in the shade. *Sky colour* is given by indigo steeped in boiling water, and the next day warmed and smeared over the skin, by smearing the skin over with aloes an oil dissolved and strained; or by infusing in *Orange colour* is given by smearing with berries boiled in alum-water; or, for a deep with turneric.

(6.) LEATHER, PROCESSES FOR DYEING AND YELLOW, AS PRACTISED IN TURKEY processes, with directions for preparing the skins, were communicated by N. P. Po, a native of Armenia, who received the Society for the Encouragement of Arts, besides the Society's gold medal, as a reward for discovering this secret. 1. *First Preparatory Skins, for both colours, by lime.* Let the skin with the hair on, be first laid to soak in water for 3 days; let them then be broken flesh side, put into fresh water for two days, and afterwards hung up to drain half an hour. Let them now be broken on the flesh side in cold lime on the same side, and double them with the grain side outward. In 10 days they must be hung up within doors over a fire for 5 or 6 days, till the hair be loose; when they be taken off, and the skins returned lime-pit for about 3 weeks. Take them up, let them be well worked flesh and grain side, 6th or 7th day during that time; after which they be washed ten times in clear water, and the water at each washing. 2. *Preparatory Skins, for both dyes, by drenching.* After squeezing the water out of the skins, put them into a muller of bran and water, warm as new milk, in following proportions; viz. about 3 lb. of bran to 3 skins, and water sufficient to make the mixture moderately fluid, which will be about a cask-pound of bran. In this drench let them lie 3 days; at the end of which they must be worked, and then returned into the drench 3 days longer. They must next be taken up, rubbed between the hands; the water squeezed from them, and the bran scraped off cleaving both sides of the skins. After this they must be washed ten times in clear water, and the water squeezed out of them. Thus far the preparatory process for both colours is the same; but after this the skins must be treated differently. 3. *Preparation in honey and bran of the Sky dyed RED.* Mix 1 lb. of honey with three tubs of warm water, and stir them together till the honey is dissolved. Then add two double tubs of bran; and taking 4 skins (for which above quantity of the mixture will be sufficient) work them well in it one after another, and then fold up each skin separately in a form, with the flesh side inwards; and lay them in an earthen pan, or other proper vessel, summer, by the side, but in winter, top of each other. Place the vessel in a warm position, so that such part of the fluid may spontaneously drain from the skins, may, and an acid fermentation will then raise in the skins, and the skins will swell considerably. In t

continue for 7 or 8 days; but the moist-  
drains from them must be poured off,  
vice a-day, as occasion may require.  
*2dly* in *Salt*, of the *Skins to be dyed Red*.  
Skins have been thus fermented in honey  
et them be taken out of that mixture on  
9th day, and well rubbed and worked  
ea salt, in the proportion of about half  
each skin. This will make them con-  
and part with a considerable quantity  
oilure; which must be squeezed out by  
ach skin separately through the hands.  
t next be scraped clean on both sides  
bran, superfluous salt, and remaining  
after which, dry salt must be strewed  
rain side, and well rubbed in with the  
ey are then to be doubled with the flesh  
uds, lengthwise from neck to tail, and  
re dry salt must be thinly strewed over  
ide, and rubbed in; for the two last o-  
about 1½ lb. of salt will be sufficient for

They must then be put, thus folded  
ther, between two clean boards, placed  
readthwise; and a heavy weight laid on  
board, in order gradually to press out  
sure they will thus part with. In this  
ature, they must be continued two days  
till it be convenient to dye them, for  
ry will then be duly prepared. 5. *Prep-*  
*f the Red Dye, in a proportion for four*  
t 8 gallons of water into a copper, with  
enan tied up in a linen bag. Shenan is  
of talicornia, and is much used by dyers  
It may be easily procured in any  
at a trifling expence, by any of the cap-  
turkey ships, at Aleppo, Smyrna, &c.  
CURNIA, and SHENAN.) Light a fire un-  
der; and when the water has boiled a-  
arter of an hour, take out the bag of  
d put into the boiling fluid or lixivium,  
rams of alum; 2dly, two drams pome-  
rk; 3dly, ¼ oz. of turmeric; 4thly, 3 oz.  
al; 5thly, 2 oz. of loaf sugar. Let the  
ture boil about six minutes, then cover  
nd take out a quart of liquor, putting it  
earthen pan; and when it is as cold as  
take one skin, folded lengthwise, the  
outwards, and dip it in the liquor, rub-  
ntly with the hands. Then taking out  
ang it up to drain, and throw away the  
is dye. Proceed in the same manner  
ther 3 skins; repeating the operation of  
ately, 8 times, squeezing the skins by  
hem through the hands before each fresh  
Lay them now on one side of a large pan,  
g, to drain off as much of the moisture  
a from them without pressure, for about  
rs, or till they are cold; then tan them.  
*6. Preparation of the Yellow Dye, in the*  
*proportion for four Skins.* Powder 4 oz. of the  
te galls in a marble mortar, sifting it  
a fine sieve. Mix the powder with about  
of water, and work the skins well in this  
for half an hour or more, folding up the  
w-fold. Let them lie in this tan for 24  
when they must be worked again as be-  
en taken out, scraped clean on both sides  
e first galls, and put into a like quantity  
a galls and water. In this fresh mixture

they must be again well worked for three quarters  
of an hour; then folded up as before, and left in  
the fresh tan for three days. On the 4th day they  
must be taken out, washed clean from the galls in  
seven or eight fresh quantities of water, and then  
hung up to dry. 7. *Method of Dressing the Skins.*  
When the skins are very near dry, they should be  
scraped with the proper instrument or scraper on  
the flesh side, to reduce them to a proper degree  
of thickness. They are then to be laid on a smooth  
board, and glazed by rubbing them with a smooth  
glass. After which they must be oiled, by rub-  
bing them with olive oil, by a linen rag, in the  
proportion of 1½ oz. of oil for 4 skins; they are  
then to be grained on a graining board, length-  
wise, breadthwise, and cornerwise, or from cor-  
ner to corner. 8. *Preparations with galls, for the*  
*Skins to be dyed YELLOW.* After the 4 skins are  
taken out of the drench of bran, and clean wash-  
ed, they must be very well worked, half an hour  
or more, in a mixture of 1½ lb. of the best white  
galls, finely powdered, with two quarts of clean  
water. The skins are then to be separately dou-  
bled lengthwise, rolled up with the flesh side out-  
wards, laid in the mixture, and close pressed down  
on each other, in which state they must continue  
two whole days. On the third day let them be  
again worked in the tan; and afterwards scraped  
clean from the galls, with an *ivory* or *brass* instru-  
ment, for no *iron* must touch them. They must  
then be put into a fresh tan, made of 2 lb. of galls  
finely powdered, with about 3 quarts of water,  
and well worked therein 15 times. After this  
they must be doubled, rolled up as before, and  
laid in the 2d tan for 3 days. On the 3d day ½ lb.  
of sea salt must be worked into each skin; and the  
skins doubled as before, and returned into the tan,  
till the day following, when they are to be taken  
out, and well washed six times in cold water, and  
four times water lukewarm. The water must be  
then well squeezed out, by laying the skins under  
pressure, for about half an hour, between two  
boards, with a weight of about 200 or 300 lb. laid  
upon the uppermost board, when they will be  
ready for the dye. 9. *Preparation of the Yellow*  
*Dye, in the proportion for four Skins.* Mix 6 oz. of  
cassiair gehira, or dgehira, or the berries of the  
eastern RHAMNUS, with the same quantity of al-  
lum; and pound them together till they be fine,  
in a marble or brass mortar, with a brass pestle.  
These may be had at Aleppo, and other parts of  
the Levant, at a small price. The common A-  
vignon or yellow berries may be substituted, but  
not with so good an effect; the cassiair gehira be-  
ing a stronger and brighter yellow dye. After  
pounding them, divide the materials, thus pow-  
dered, into 3 equal parts of 4 oz. each, put one  
part into about 1½ pints of water, in a china or  
earthen vessel, and stir the mixture together. Let  
the fluid stand to cool, till it will not scald the  
hand. Then spreading one of the skins flat on a  
table, in a warm room, with the grain side upper-  
most, pour a 4th part of the liquor, over the up-  
per or grain side, spreading it equally over the skin  
with the hand, and rubbing it well in. After-  
wards do the like with the other three skins.  
This operation must be repeated twice more on  
each skin separately, with the remaining 8 oz. of

the powder of the berries, and alum, with the same proportions of hot water. The skins when dyed, are to be hung up on a wooden frame, without being folded, with the grain side outwards, about  $\frac{1}{2}$  of an hour to drain; when they must be carried to a stream of running water, and well washed six times or more. After this they must be put under pressure for about an hour, till the water be well squeezed out; afterwards the skins must be hung up to dry in a warm room. The skins are then to be dressed and grained as before directed for those dyed red; except the oiling, which must be omitted.

(1.) \* LEATHERCOAT. *n. s.* [*leather and coat.*]  
An apple with a tough rind.—  
There is a dish of leathercoats for you. *Shak.*

(2.) LEATHERCOAT. See PYRUS, N° 3.  
\* LEATHERDRESSER. *n. s.* [*leather and dresser.*] He who dresses leather; he who manufactures hides for use.—He removed to Cumæ; and by the way was entertained at the house of one Tychius, a leather-dresser. *Pope.*

\* LEATHER-MOUTHED. *adj.* [*leather and mouth.*] By a leather-mouthed fish, I mean such as have their teeth in their throat; as, the chub or cheven. *Walton.*

\* LEATHERN. *adj.* [*from leather.*] Made of leather.—

I saw her hand; she has a leathern hand. *Shak.*  
The wretched animal heav'd forth such groans,  
That their discharge did stretch his leathern coat,  
Almost to bursting. *Shak.*

In silken or in leathern purse retain  
A splendid filling. *Philips.*

\* LEATHERSELLER. *n. s.* [*leather and seller.*] He who deals in leather, and vends it.

LEATHER-WOOD. See DIRCA.

\* LEATHERY. *adj.* [*from leather.*] Resembling leather.—Wormius calls this crust a leather skin. *Grew.*

LEATHES, or LEATHES WATER, a beautiful lake of Cumberland, S. by E. of Keswick, called also THIRLMERE, and WYTHBURN. It begins at the foot of Mount Helwellyn, skirts it for 4 miles, and has an outlet, which joins the rapid river Greeta, and thus communicates with the lake of DERWENT. It is almost intersected by two peninsulas, which are joined by a wooden bridge.

\* LEAVE. *n. s.* [*leave, Saxon; from lisan, to grant.*] 1. Grant of liberty; permission; allowance.—By your leave, Irenæus, methinks I see an evil lurk unespied. *Spenser.*

When him his dearest Una did behold,  
Distaining life, desiring leave to dye. *Spenser.*  
You're welcome; give us leave, drawer. *Shak.*  
Sylla's sway, when the free sword took leave  
To act all that it would. *Ben Jonson.*

We dare not give  
Our thoughts so unconfin'd a leave. *Waller.*  
No friend has leave to bear away the dead. *Dryden.*

Offended that we fought without his leave. *Dryden.*

—One thing more I crave leave to offer about syllogism, before I leave it. *Locke.*—I must have leave to be grateful to any who serves me, nor did the tory party put me to the hardship of ask-

ing this leave. *Pope.* 2. Farewell; adieu. *sense leave is permission to depart.*

Take leave and part, for you must part with,

Evils that take leave,  
On their departure, most of all shew evil  
—There is further compliment of leave tal  
tween France and him. *Shak.*

Occasion smiles upon a second leave.  
But, my dear nothings, take your leave  
—Many stars may be visible in our hem  
that are not so at present; and many sh  
leaves of our horizon, and appear unto s  
habitations. *Brown.*

(1.) \* TO LEAVE. *v. a.* pret. *I left; I le*  
[Of the derivation of this word the etym  
give no satisfactory account.] 1. To g  
forsake.—A man shall leave his father a  
ther, and cleave to his wife. *Gen. ii. 24.*

If they love less, and leave the lusty  
Envy them not their palates with the s  
*Ben*

2. To desert; to abandon.—He that is of  
thankful mind, will leave him in danger  
livered him. *Eccles. xxix. 17.* 3. To depa  
without action; as, I left things as I foun  
—When they were departed from him, t  
him in great distress. 1. *Chron. xxiv. 25.*

have remaining at death.—There be of th  
have left a name behind them. *Eccles.*  
5. Not to deprive of.—They still have left  
providence of God, and all the promises  
gospel, and my charity to them too. *Tay.*

To suffer to remain.—It leaveth a suspici  
more might be said, than is expressed. J  
These things must be left uncertain to far  
coveries in future ages. *Abbot's Descriptio*

*World.*—Who those are, to whom this  
descent belongs, he leaves out of the reac  
one to discover from his writings. *Locke.*

to carry away.—They encamped again;  
and destroyed the increase of the earth,  
no sustenance for Israel. *Judg. vi. 4.*—He  
the fruit of thy cattle; which also shall  
thee either corn, wine, or oil. *Deut. xxvi.*  
Vastus gave strict commandment, that the  
leave behind them unnecessary baggage.

8. To reject; not to choose.—

I am superiour, I can take or leave.  
9. To fix as a token or remembrance.—  
leave with my reader, as an occasion for  
consider, how much he may be beholde  
perience. *Locke.* 10. To bequeath; to g  
heritance.—

That peace thou leav'st to thy impo  
That peace, Oh happy shade! be ev

11. To give up; to resign.—Thou shalt  
thy vineyards; thou shalt leave them for  
and stranger. *Lev. xix. 10.*—If a wife m  
left to himself, and his own choice, to  
greatest good to himself he could devise;  
of all his wishes would be this, That th  
just such a being as God is. *Tillotson.*

permit without interposition.—Whet  
were a vassal, I leave the reader to judg  
13. To cease to do; to desist from.—L  
turn, lest my father leave caring for the;

or us. 1. *Sam. ix. 5.* 14. To LEAVE : from; to forbear.—If, upon any bid him *leave off* the doing of any ft be fure to carry the point. *Locke.* In as old age came on, he *left off Addison.* 15. To LEAVE off. To began to *leave off* some of his old ac- is roaring and bullying about the t on a ferious air. *Arbutnot. 16.* To omit; to neglect.— aught with curious bufinefs, that ceremony. *Shak.* partake: I have told 'em who you

is loth to be *left out.* *B. Jonfon.* down by order and divifion doth that nothing is *left out* or omitted, *Bacon.*— friend till utmost end ues be done, and none *left out.* *Mil.* world's exiftence may conceive, one atom *out* of matter *leave.*

*Blackmore.* ought this paffage *left out* with a great ent by Tucca and Varius, as it feems a part in the fixth *Æneid.* *Addifon.* LEAVE. *v. n.* 1. To ceafe; to defift. effence, and, I *leave* to be, by her fair influence min'd, chrifh'd, kept alive. *Shak.* : this bufinefs fo far fair is done, *leave* till all our own be won. *Shak.* t the eldeft, and *left* at the youngeft. o LEAVE off. To defift.—Grittus, they in the caftle would not hold batter or undermine it, wherewith e little prevailed. *Knolles.* you find that vigorous heat abate, nd for another fummons wait. *Raf.* off. To flop.— do not *leave off* there where they be-

get new mifchiefs. *Daniel.* LEAVE. *v. a.* [from *levy*; *lever*, Fr.] aife: a corrupt word, made, I be- fer, for a rhyme.—

An army ftrong she *leav'd*, thofe which him had of his realm 'd. *F. Queen.*

). *adj.* [from *leaves* of *leaf*.] 1. Fur- liage. 2. Made with leaves or folds. the loins of kings, to open before *leaved* gates. *Ifa. xlv. 1.*

VEN. *n. f.* [*levain*, French; *levare*, riment mixed with any body to make cularly ufed of four dough mixed in id.—It fhall not be baken with *lea-* 17.—All fermented meats and drinks efted; and thofe unfermented, by *ens*, are hardly digefted. *Floyer.* 2. which makes a general change in generally means fomething that de- pts that with which it is mixed.— r propofitions favour very ftrongly of t of innovations. *K. Charles.*

n is ufed to ferment and render light r quantity of dough or pafte. See —3; BAKM § 2; BREAD, § 3; and

1 EST. Leaven was ftrictly forbidden by the law of Mofes during the 7 days of the paffover; and the Jews, in obedience to this law, very carefully purified their houfes from all leaven as foon as the vigil of the feaft began. Nothing of honey or leaven was to have place in any thing prefented upon the altar, during this folemnity. If, during the feaft, the leaft particle of leaven was found in their houfes, the whole was polluted. Leaven, in its figurative fenfe, fignifies the bad paffions of envy, malice, and rancour, which four the temper, and extend their ferment over the focial affections; whereas unleavened bread implies fincerity, truth, and meeknefs. It is frequently ufed for any kind of moral contagion.

\* To LEAVEN. *v. n.* [from the noun.] 1. To ferment by fomething mixed.

You muft tarry the *leav'ning.* *Shak.* —Whofoever eateth *leavened* bread, that foul fhall be cut off. *Exod. xii. 17.*—Breads we have of feveral grains, with divers kinds of *leavenings*, and fea- fonings. *Bacon.* 2. To taint; to imbue.—

That cruel fomething unpoftelt, Corrodes and *leavens* all the reft. *Prior.*

\* LEAVER. *n. f.* [from *leave*.] One who de- ferts or forfakes.—

Let the world rank me in register A mafter *leaver*, and a fugitive. *Shak.*

(1.) \* LEAVES. *n. f.* The plural of LEAF.— Parts fit for the nourifhment of man in plants are, feeds, roots, and fruits; for *leaves* they give no nourifhment at all. *Bacon.*

(2.) LEAVES. See BOTANY, *Ind.* and LEAF, § 2, (3.) LEAVES, COLOURS EXTRACTED FROM. See COLOUR-MAKING, *Index.*

\* LEAVINGS. *n. f.* [from *leave*.] Remnant; relicks; offal; refufe; it has no fingular.—

My father has this morning call'd together, To this poor hall, his little Roman fenate, The *leavings* of Pharfalia. *Addifon.*

Then who can think we'll quit the place, Or flop and light at Cloe's head, With fcraps and *leavings* to be fed? *Swift.*

\* LEAVY. *adj.* [from *leaf*.] Full of leaves; covered with leaves: *leafy* is more ufed.—

Strephon, with *leavy* twigs of laurel tree, A garland made on temples for to wear. *Sidney.* Now, near enough: your *leavy* fcreens throw down,

And fhew like thofe you are. *Mach. tb.*

LEAWAVA, a fea port on the E. coaft of Cey- lon, famous for falt. Lon. 83. 15. E. Lat. 6. 40. N.

LEBA, a town of Saxony, in Pomerania.

LEBADEA, or { an ancient town of Bœotia, LEBADIA, { on the borders of Phocis, fitu- ated between Helicon and Chæroneæ, near Co- ronææ. In it flood the oracle of Jupiter Tro- phonius, which all who went to confult defcend- ed into a fubterraneous gulf.

(1.) LEBANON, a celebrated mountain in the S. of Syria and N. of Canaan. See LIBANUS.

(2.) LEBANON, a town of Pennsylvania, contain- ing 2 churches and 300 houfes in 1795; 8½ miles NW. of Philadelphia.

(3.) LEBANON, a flourifhing town of New Hampshire, in Grafton county, 5 miles SSE. of Hanover.

LEBBEAS. See JUDE, § 1.

LEBENA,

**LEBEDA**, or **LEBIDA**, an ancient sea port town of Tripoli, with a good harbour, and an old castle, seated on the Mediterranean. Lon. 14. 50. E. Lat. 32. 50. N.

**LEBEDOS**, one of the 12 ancient cities of Ionia, situated S. of Smyrna. It was the residence of players, where they met from all parts of Ionia, as far as the Hellespont, and celebrated annual games in honour of Bacchus. *Strabo*. It was overthrown by Lyfimachus, who removed the inhabitants to Ephesus; after which it dwindled down to a village. *Horace*.

**LEBEN**, or } one of the port towns of the  
**LEBENA**, } Gortynians, near the promontory of Leon, on the SE. side of Crete; famous for a temple of Æsculapius, built in imitation of that of Cyrenaica.

**LEBENTHOR**, a town of Germany in Stiria; 5 miles NNE. of Fridaw.

**LEBER**, a river of France, which runs into the Ill, below Schlettstadt.

**LEBID**, an Arabian poet, of the 6th century, who was employed by Mahomet, to answer the Satires that were written against him. He is said to have lived to the great age of 140.

**LEBIEDE**, a market town of the Italian republic, in the department of the Mincio, in the district and late duchy of Mantua, seated on the Po.

**LEBLANC**, Martel, one of the 14 learned Jesuits, sent by Lewis XIV. to Siam. He wrote a History of the Revolutions of Siam, in 2 vols. 8vo. He died at Mosambique.

**LEBRADÉ**, a town of Holstein.

**LEBRIJA**, or } an ancient, strong, and plea-  
**LEBRIXA**, } sant town of Spain, in Andalusia; seated on a territory abounding in corn, wine, and olives, of which they make the best oil in Spain. Lon. 5. 32. W. Lat. 36. 52. N.

(1.) **LECK**. See **LECH**, N° 2.

(2.) **LECK**, a town of Denmark, in Sle

**LECROPT**, a parish of Scotland, in the ties of Perth and Stirling, bounded on by the Teath, and on the E. by the F Allan; about 3 miles long, and nearly containing about 2000 acres, and affording prospect of the romantic scenery on the the above rivers, the cattle and bridge of the abbey of Cambuskenneth, the rock forth, the hills of Dundaff, the Ochills, soil is one half rich clay, the other dry-f the usual crops are produced. The po in 1794, was 470; the decrease, since 1 There is a large natural wood, ten orch a great number of planted trees in the besides part of a chain of ancient for *kiers*, erected by Galgacus, to watch the

Romans under Agricola, about A. D. 79. Robertson places this parish in Lon. 47. 0. Edinburgh. Lat. 56. 11. N.

LI, beds or couches, were of two kinds—the Romans, being destined to two different uses, to lie upon at entertainments, and to repose for sleep. The former were called *lecti* vs, the latter *lecti cubicularii*. See BED, 16.

LICTICA was a litter or vehicle, in which persons were carried. It was of two kinds, land and uncovered. The covered lectica is by Pliny *cubiculum viatorum*, a traveller's chamber. Augustus frequently ordered his slaves to stop his litter that he might sleep upon it. This vehicle was carried by 6 or 8 LECTICARI. The lectica differed from the SELLA, the first the traveller could recline himself upon, in the latter, he was obliged to sit. The lectica was invented in Bithynia; the sella was a machine, and esteemed the more honourable of the two. Lectica was also the name of a funeral bed, or bier for carrying out the dead. LECTICARI, among the Romans, servants employed the LECTICA.

LECTICARIUS was also an officer in the Greek church, whose business it was to bear off the bodies of those who died, and to bury them. These were otherwise denominated *decani* and *copiati*.

LECTIOREADING, in a medical view, is said by Hippocrates, (*lib. i. cap. 4.*) to be bad especially for those whose heads are weak; and (*lib. i. cap. 8.*) he recommends reading with a voice for such as have weak stomachs. It is directed by Paulus Æginetus as an exercise. *lib. i. cap. 19.*

LECTIO. *n. f.* [*lectio*, Lat.] A reading; a lecture; or a copy. —If the common text be not agreeable to his opinion, a various *lectio* shall be made. *Watts.*

LECTISTERNIUM, a solemn ceremony observed by the Romans in times of public danger, or an entertainment was prepared with great expense, and served up in the temples. The people were invited to partake of the good cheer, and statues placed upon couches round the temple in the same manner as men used to sit at table. The first lectisternium held at Rome was in honour of Apollo, Latona, Diana, Hercules, Mercurius, Neptune, to put a stop to a contagious pestilence which raged amongst the cattle, A. U. C. 473. At these feasts the Epulones presided, and a banquet was called *epulum*. See EPULUM, &c. Something like the lectisternium is occasionally observed among the Greeks, as to Casaubon.

LECTIUS, James, syndic of Geneva, a respectable and critic, of the 16th century. His principal work is his *Collection*, entitled *Poete Græci* in 2 vols folio. He died in 1612.

LECTORES, among the ancient Romans, servants in great men's houses, who read while their masters were at supper. They were called by the name of ANAGNOSTÆ.

LECTOURE, an ancient and strong town of France, in the dep. of Gers, and ci-devant prov. of Armagnac, with a castle; situated on a mountain,

at the foot of which runs the Gers. Lon. 0. 42. E. Lat. 43. 56. N.

\* LECTURE. *n. f.* [*lecture*, French.] 1. A discourse pronounced upon any subject.—Mark him, while Dametas reads his rustick *lecture* unto him, how to feed his beasts before noon. *Sidney*.—

When in musick we have spent an hour,

Your *lecture* shall have leisure for as much. *Shak.* —When letters from Cæsar were given to Rusticus, he refused to open them till the philosopher had done his *lectures*. *Taylor*.—Virtue is the solid good, which tutors should not only read *lectures* and talk of, but education should furnish the mind with, and fasten there. *Locke*. 2. The act or practice of reading; perusal.—In the *lecture* of holy scripture, their apprehensions are commonly confined unto the literal sense of the text. *Brown*. 3. A magisterial reprimand; a pedantick discourse.—

Numidia will be blest by Cato's *lectures* *Addis.*

(1.) \* To LECTURE. *v. a.* [from the noun.] 1. To instruct formally. 2. To instruct infolently and dogmatically.

(2.) \* To LECTURE. *v. n.* To read in publick; to instruct an audience by a formal explanation or discourse; as Wallis *lectured* on geometry.

(1.) \* LECTURER. *n. f.* [from *lecture*.] 1. An instructor; a teacher by way of lecture. 2. A preacher in a church hired by the parish to assist the rector or vicar.—If any minister refused to admit into his church a *lecturer* recommended by them, and there was not one orthodox or learned man recommended, he was presently required to attend upon the committee. *Clarendon*.

(2.) LECTURERS, (§ 1, *def. 2.*) in the church of England, are an order of preachers, distinct from the rector, vicar, and curate. They are chosen by the vestry, or chief inhabitants, supported by voluntary subscriptions and legacies, and usually preach on the Sunday afternoon. But the term is most generally applied to those who preach on any stated day. By 13 & 14 Car. II. cap. 4. lecturers in churches, unlicensed, and not conforming to the liturgy, shall be disabled, and shall suffer 3 months imprisonment in the common gaol; and two justices, or the mayor in a town corporate, shall, upon certificate from the ordinary, commit them. Where there are lectures founded by the donations of pious persons, (such as that of lady Mayer's at St Pauls,) the lecturers are appointed by the founders, without any interposition of rectors, &c. only with the leave of the bishop. But the lecturer is not entitled to the pulpit, without the consent of the rector or vicar, who is possessed of the freehold of the church.

\* LECTURESHIP. *n. f.* [from *lecture*.] The office of a lecturer.—He got a *lectureship* in town of 60 l. a year, where he preached constantly in person. *Swift*.

LECTYTHIS, in botany, a genus of the monogynia order, in the polyandria class of plants.

\* LED. *part. pret. of lead*.—Then shall they know that I am the Lord your God, which caused them to be *led* into captivity among the heathen. *Ezek. xxxix. 28.*—The leaders of the people caused them to err, and they that are *led* of them are destroyed. *Isa. ix. 16.*—As in vegetable

tables and animals, so in most other bodies, not propagated by seed, it is the colour we most fix on, and are most led by. *Locke.*

**LEDA**, in fabulous history, a daughter of king Thepius and Eurythemis, who married Tyndarus king of Sparta. Jupiter saw her bathing in the Eurotas, when she was some few days advanced in pregnancy, and struck with her beauty, resolved to deceive her. He persuaded Venus to change herself into an eagle, while he assumed the form of a swan, and after this metamorphosis Jupiter, as if fearful of the bird of prey, fled through the air into the arms of Leda, who willingly sheltered the trembling swan from the assaults of his superior enemy. Nine months after this adventure, Leda brought forth two eggs, from one of which sprung POLLUX and Helena, and from the other CASTOR and Clytemnestra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologists attribute this amour to Nemesis and not to Leda; and say that Leda was entrusted with the education of the children, which sprung from the eggs brought forth by Nemesis; others maintain that Leda received the name of NEMESIS after death. Homer and Hesiod make no mention of the metamorphosis of Jupiter into a swan, whence some think, that the fable was unknown to these two ancient poets, and invented after their time.

**LEDA-NEGUS**, a town of Abyssinia.

**LEDAT**, a town of France, in the dep. of Lot and Garonne; 3 miles NNW. of Villeneuve.

**LEDBURY**, a well built town of Herefordshire, inhabited mostly by clothiers, who carry on a pretty large trade. Lon. 2. 27. W. Lat. 52. 6. N.

**LEDDER**, a river of Wales, in Carnarvon.

**LEDENIZZE**, a populous village of Maritime Austria, in the prov. of Albania, and district of Rifano.

**LEDER**, a lake of Germany, in the Tirolse.

**LEDERSEE**, a river of the Italian republic, in the dep. of the Mincio, and late prov. of the Veronese, which runs into the lake Garda.

**LEDESMA**, an ancient and strong town of Spain, in Leon, seated on the Tome. Lon. 5. 25. W. Lat. 47. 2. N.

\* **LEDGE**. *n. f.* [*leggen*, Dutch, to lie.] 1. A row; layer; stratum.—The lowest ledge or row should be merely of stone, closely laid, without mortar: a general caution for all parts in building contiguous to board. *Wotton.* 2. A ridge rising above the rest; or projecting beyond the rest.—The four parallel sticks above five inches higher than the handkerchief, served as ledges on each side. *Gulliver.* 3. Any prominence, or rising part.—

Beneath a ledge of rocks his fleet he hides. *Dryd.*

**LEDGER**, *n. f.* an improper spelling of **LEGER**. See **BOOK-KEEPING**, and **LEGER**.

\* **LEDHORSE**. *n. f.* [*lead* and *horse*.] † A sumpter horse.

**LEDIGNAN**, a town of France in the dep. of Gard; 15 miles W. of Nismes.

† **LED HORSE** is not a proper compound. The two words are as distinct as any substantive and adjective, in our language. As *DR JOHNSON* produces no authority for the word, we are persuaded, there can be found in any good author.

**LEDNAIG**, a river of Perthshire, in the parish of Comrie, abounding with trouts.

**LEDOYRA**, a town of Spain, in Galicia.

**LEDUM**, **MARSH CISTUS**, or **WILD ROSEMARY**; a genus of the monogynia order, belonging to the decandria class of plants; and the natural method ranking under the 18th order *Bicornes*. The calyx is quinquefid; the corolla pl and quinquepartite; the capsule quinquelocul and opening at the base. There is but 1 species v

**LEDUM PALUSTRE**, with very narrow leaves. It grows naturally upon bogs and mosses in Yorkshire, Cheshire, and Lancashire; rising with slender shrubby stalk about two feet high, dividing into many slender branches, garnished with narrow leaves, like those of heath. The flowers are produced in small clusters at the end of the branches, and are shaped like those of the strawberry tree, but spread wider at top. They are of a reddish colour, and are succeeded by icy vessels filled with small seeds, which ripen in autumn. This plant is with difficulty raised in garden; for as it naturally grows upon bogs, unless it has a similar soil it will not thrive. It may be procured from the place of its growth, and taken up with good roots, otherwise it will not live.

**LEDWICH**, a river of England, in Salop.

**LEDYARD**, John, a native of North America, famed for travelling through distant and little known regions, chiefly on foot. After living several years with different tribes of the American Indians, he made a voyage to the S. Sea, in the humble station of a corporal of marines, along with the celebrated Capt. Cook. On his return he became anxious to traverse the vast continent between the Pacific and Atlantic Oceans. With only 10 guineas, he crossed the British Channel to Ostend, and proceeded by Denmark and the Sound to Stockholm and Peterburg. On his arrival at this last metropolis, he was observed an extraordinary person; and though without stockings and shoes, was invited to dine with the Portuguese ambassador. Being now supplied with necessaries, he travelled Eastward 6000 miles through Siberia to Yakutzk, thence to Oczakow and back again to Yakutzk, where he was seized in the empress's name, by two Russians; who conveyed him on a sledge through the deserts of N. Tartary, and left him on the borders of Poland, telling him that if he returned to Russia, he would be hanged. In spite of poverty, he made his way to Konigsberg, where he obtained pecuniary assistance, which enabled him to reach London. Being introduced to the Society for promoting the discovery of the interior parts of Africa, they employed him; and he proceeded to Grand Cairo in Egypt, where he engaged with the conductor of a caravan, and was on the point of setting out for Sennaar, when he was seized with an indisposition, on the 17 Jan. 1789, which terminated in his death. He was a man of an amiable and philanthropic disposition; and, in his various peregrinations, suffered many hardships among the barbarous nations whom he visited; but, in the account he published of his Travel

a compliment to the female sex, that, most savage nations, where he was often by the men, he always met with kindness from the women.

Charles, a celebrated general in the American congress, was a native of the Aldgate Ward, and Sheriff of London: he served under Gen. Burgoyne, in the army at Portugal, which he afterwards the American service. Upon the commencement of the revolution, he was appointed general. (See AMERICA, § 14.) But in was taken prisoner by Col. Harcourt, pretence of being a deserter, was closely, and refused to be exchanged, though officers were offered for him: (See § 27.) It is even said he was to have for high treason, but the spirited conduct of Washington and the Congress, in retaliation, prevented that measure: the capture of Gen. Burgoyne and his army, secured his parole in New York, and he was exchanged, rejoined the American army. Gen. Lee's misfortunes were not a defeat and disorderly retreat at Monmouth the flower of the American troops in command, subjected him to a court martial, which he spent at his estate in Berkeley, Virginia, and during which he wrote letters and other papers on public affairs. These he sent by his aid de camp, a young Virginian who owed his rise to Philadelphia to be printed. But this ungrateful man betrayed his trust, and gave the papers to the governor, who on perusal, is interested to suppress the publication. In the spring of 1782, Gen. Lee, went to Philadelphia on this business, but soon after his arrival was seized with a fever of which he died. He was interred with military honours, and the Congress attended the funeral.

Nathaniel, an English dramatic writer, a clergyman, educated at Westminster College Cambridge, where he took the B. A. in 1668. He went thence to London, where he attempted to commence actor, but failing, he turned play writer. His entitled *Nero Emperor of Rome* appeared, and was well received. He continued to write a play every year, till Nov. 1684, when symptoms of insanity, he was confined to Bedlam, and was discharged, and died in April 1688, he was discharged, and died in two plays. He died in 1690, in consequence of a drunken frolic. Lee is allowed to have more power over the passions, but his language is more rant and bombast. His *Rival* *Theodosius*, however, are still often applauded. He wrote 11 tragedies in which contain a great portion of poetic energy. None ever felt the passion of love more than Lee could any one describe it with more power. Addison commends his genius highly, that none of our English poets had turned for tragedy, although his natural

fire and unbridled impetuosity hurried him beyond all bounds of probability, and sometimes quite out of nature. The truth is, this poet's imagination ran away with his reason. While he was confined, a coxcomb scribbler had the cruelty to jeer him with his misfortune, observing that it was easy to write like a madman:—No (said Lee), it is not easy to write like a madman; but it is very easy to write like a fool.”

(3.) \* LEE, *n. f.* [*lee*, French.] 1. Dregs; sediment; refuse: commonly *lees*.—  
My cloaths, my sex, exchanging'd for thee  
I'll mingle with the people's wretched *lee*. *Prior*.  
2. Sea term; [supposed by *Skinner* from *Peau*, Fr.] A *leeward* ship is one that is not fast by a wind, to make her way so good as the might. To lay a ship by the *lee*, is to bring her so that all her sails may lie against the masts and throw'd flat, and the wind to come right on her broadside, so that she will make little or no way. *Dier*.—If we, in the bay of Biscay, had had a port under our *lee*, that we might have kept our transporting ships with our men of war, we had taken the Indian fleet. *Raleigh*.—The Hollanders were before Dunkirk with the wind at NW. making a *lee* shore in all weathers. *Raleigh*.—Better do so than venture splitting and sinking on a *lee* shore. *King Charles*.—

The pilot of some small night-founder'd skiff,  
Moors by his side under the *lee*, while night  
Invests the sea. *Milton*.  
Batter'd by his *lee* they lay. *Dryden*.  
(4.) LEE (§ 3. *def.* 2.) is used by seamen to distinguish that part of the hemisphere to which the wind is directed, from the other part whence it arises; which last is called to *windward*. This expression is chiefly used when the wind crosses the line of a ship's course, so that all on that side of her is called to *windward*, and all on the opposite side to *leeward*. Hence, *Under the LEE*, implies farther to the leeward, or farther from that part of the horizon whence the wind blows. *Under the LEE of the shore*; *i. e.* at a short distance from the shore which lies to windward. This phrase is commonly understood to express the situation of a vessel anchored, or sailing under the weather shore, where there is always smoother water, and less danger of heavy seas, than at a great distance from it.

(5.) LEE, in geography, a river of England, in Cheshire, which runs into the Weaver, 2 miles N. of Nantwich.

(6.) LEE, a village in Kent, 6 miles SE. by E. of London. Dr HALLEY lies interred in it.

(7, 8.) LEE, a rivers of Ireland; 1. in Cork, running into Cork harbour: 2. in Kerry, running into Tralee Bay.

(9.) LEE, a county of Virginia, bounded on the N. by Russel, E. by Washington, S. by N. Carolina, and W. by Kentucky.

LEEA, a genus of the pentandria order, in the monœcia class of plants.

(1.) \* LEECH, *n. f.* [*lee*, Saxon.] 1. A physician; a professor of the art of healing: whence we still use *cosuleech*.—

A *leech*, the which had great insight  
In that disease of grieved conscience,  
And well could cure the same. *Spenser*.  
Her words prevail'd, and then the learned *leech*

A *leech*, the which had great insight  
In that disease of grieved conscience,  
And well could cure the same. *Spenser*.  
Her words prevail'd, and then the learned *leech*

A *leech*, the which had great insight  
In that disease of grieved conscience,  
And well could cure the same. *Spenser*.  
Her words prevail'd, and then the learned *leech*

A *leech*, the which had great insight  
In that disease of grieved conscience,  
And well could cure the same. *Spenser*.  
Her words prevail'd, and then the learned *leech*

His punning hand 'gan to his wound to lay.

*Fairy Queen.*

The learned leeches in despair depart,  
And shake their heads, desponding of their art.

*Dryden.*

Wife leeches will not vain receipts obtrude.

*Dryden.*

The hoary wrinkled leech has watch'd and  
toll'd,

And wearied out his painful skill in vain. *Rowe.*

*A skilful leech,*

They say, had wrought this blessed deed;

This leech Arbuthnot was yeapt. *Gay.*

2. A kind of small water serpent, which fastens on animals, and sucks the blood; it is used to draw blood where the lancet is less safe, whence perhaps the name.—I drew blood by leeches behind his ear. *Wise man.*

Sticking like leeches, till they burst with blood,  
Without remorse insatiably. *Roscommon.*

(1.) LEECH, § 1. *def.* 2. See *HIRUDO*.

(3.) LEECHES, in a ship, the borders or edges of a sail which are either sloping or perpendicular. The leeches of all sails whose tops and bottoms are parallel to the deck, or at right angles to the mast, are denominated from the ship's side, and the sail to which they belong; as the *starboard leech* of the main-sail, the *lee leech* of the fore-top-sail, &c. But the sails which are fixed obliquely on the masts have their leeches named from their situation with respect to the ship's length; as the *fore leech* of the mizen, the *after leech* of the jib or fore-stay sail, &c.

• *To LEECH, v. a.* [from the noun.] *To treat with medicament.*

• *LEECHCRAFT, n. s.* [*leech* and *craft*.] *The art of healing.*

We study speech, but others we persuade;

We leechcraft learn, but others cure with it.

*Davies.*

LEECH-LINES, certain ropes fastened to the middle of the leeches of the main-sail and fore-sail, and communicating with blocks on the opposite side of the top, whence they pass downwards to the deck, serving to truss up those sails to the yard as occasion requires. See *BRAILS*.

LEECHMAN, William, D. D. a late learned divine of the church of Scotland. He was born in the parish of Dolphington in Lanarkshire, in 1706, and appointed minister of Beith in 1736, in which charge he continued till 1744, when he was succeeded by the rev. Dr WOTHERSPOON, afterwards president of the college of Princetown, in New Jersey. Dr Leechman was appointed principal of the University of Glasgow; in which office he continued till 1784, when he died, aged 78. He published an *Essay on Prayer*, and several Sermons.

LEECH-ROPE, a name given to that part of the bolt-rope to which the border or skirt of a sail is sewed. In all sails whose opposite leeches are of the same length, it is terminated above the earing, and below the clew. See *BOLT-ROPE*, *CLUE*, and *EAK-RING*, § 2.

(1.) LEEDS, a town of Yorkshire, in the W. Riding, 196 miles from London, with a magnificent stone bridge over the Aire to the suburbs. It was incorporated by Charles I. with a chief alder-

man, nine burgeses, and 20 assistants Charles II. with a mayor, 12 aldermen assistants. It has been long famous for its manufacture, and is one of the largest flourishing towns in the county, yet had church till the reign of Charles I. By the land navigation, it has communication with rivers Mersey, Dee, Ribble, Ouse, Trent, Severn, Humber, Thames, Avon, &c. vigation, including its windings, extends 500 miles in the counties of Lincoln, No. Lancaster, Westmoreland, Chester, Staff- wick, Leicester, Oxford, Worcester, & a long street of shops, and a hall for cloth, built in 1758. The merchants of York, and Hull, ship them off at the Holland, Hamburg, and the north. Ringing the market-bell at 6 or 7 A. M. they come and match their patterns, when for the cloth with a whisper, because the standings are so near each other; and worth of cloth is sometimes sold in an hour.

At half an hour after 8 the bell rings as the clothiers make room for the line hardware-men, shoemakers, fruiterers, shambles are well stored with all sorts of flesh; and 500 horse-loads of apples counted in a day. There is a magnifice where they sell great quantities of wool and a guildhall, with a fine marble statue of Anne, erected about 1714. The river being gable by boats, they send other goods their cloth, to Wakefield, York, and furnish York with coals. There is a hospital the town, and K. Charles I. had an apartment, which is still called the *King's chamber* is another place called *Tower-hill*, on which was once a tower; and there was a castle. K. Stephen besieged in his march to Here. There is a workhouse of free-stone, where children are taught to mix wool; and a pauper used as an hospital for aged poor. There are 2 almshouses, and 2 charity schools of coat boys. In the ceiling of St Peter's parochial church, the delivery of the last is finely painted in fresco by Parment church is a venerable free-stone pile, built in cathedral fashion, and seems to have patch-work of several ages. The increasing in Leeds in 1786, was nearly 400 houses. Presbyterian meeting-house was erected called the *new chapel*, which is the flattest the oldest, of that denomination in the land; and in the town and suburbs are their meeting-houses. It is noted for medicinal springs; one of which, called *St.* an extreme cold one, and has been very in rheumatism, rickets, &c. Here is a fair for relief of honest and industrious poor, with 80 l. a-year, besides 10 l. a-year for to read prayers; also a free school. Leeds fairs, with markets on Tuesday and Saturday the market laws are strictly observed. 10 miles WSW. of York, and 192 N. by W. don. Lon. 1. 29. W. Lat. 53. 48. N.

(2.) LEEDS, a town of New Jersey, SE. of Burlington.

is, a town of Virginia, in Richmond the N. bank of the Rappahannock; 77 E. of Port Royal, and 70 NE. of Lon. 77. 3. W. Lat. 38. 10. N.

*adj.* [*lieve, levee*, Dut.] Kind; fond.—  
: all these were low and leafy,  
: their flocks to feed.

*Spenser.*  
:K. *n. f.* [*leac*, Saxon; *look*, Dutch; *porrum*, Latin.] A plant.—  
: thou Fluellen?—Yes.

a village in Yorkshire.

*n. n. f.* the sudden and violent roll  
often takes to the leeward in a high  
rly when a large wave strikes her on  
side.

3, 2 towns in Yorksh. E. of Bedal.  
nthony VANDER, a celebrated paint-  
bruges, in 1664. He painted land-  
h he sketched very accurately from  
sea views, in storms and in calms.  
120.

Y, or LEE-STONE, a curious piece of  
anging to the family of Lee in Scot-  
ch an account was published in the  
or Dec. 1787; which favours very  
*marvellous*. It is a stone of a dark  
d triangular shape; its size is about  
ach side. It is set in a piece of silver  
though much defaced, by some let-  
tining, is supposed to be a shilling of  
: cros being very plain. It has been,  
in the Lee family since the year 1320  
at is, a little after the death of King  
, who having ordered his heart to be  
: Holy Land, one of the noble family  
as sent with it, and got the Crowned  
Arms from that circumstance. But  
so actually carried the heart was Si-  
of Lee, who from his carrying it  
a box, changed his name to Lock-  
t a heart within a lock for part of  
the motto *Corda ferata ferro*. This  
art, having taken prisoner a Saracen  
: came to ransom him; and on count-  
oney or jewels, this stone fell out of  
uch the hastily snatched up. Lock

hart, observing this, insisted to have it, else he  
would not give up his prisoner. Upon this the la-  
dy gave it him, and told him its many virtues, viz.  
that it cured all diseases in cattle, and the bite of  
a mad dog both in man and beast. It is used by  
dipping the stone in water, which is given to the  
diseased cattle to drink; and the person who has  
been bit, and the wound or part infected, is wash-  
ed with the water. No words are used in the dip-  
ping of the stone, nor any money allowed to be  
taken by the servants. Many cures are said to have  
been performed by it, and people used to come  
from all parts of Scotland, and even from York-  
shire, to get the water in which the stone is  
dipped to give their cattle, when ill of the mur-  
rain and black-leg. It is even said to have cured  
the plague at Newcastle during the 17th century.

Lady Baird of Sauchtonhall, near Edinburgh, ha-  
ving been bit by a mad dog, was come the length  
of an hydrophobia; upon which, having sent to  
beg the Lee-penny, she used it for some weeks,  
drinking and bathing in the water it was dipped  
in, and was quite recovered. This happened a-  
bout 100 years ago, and is said to have been very  
well attested. But it would require fresh attesta-  
tion, and the most incontestable proofs, to per-  
suade people the in present age to believe in  
such miracles, performed by a Saracenic talisman,

(1.) \* LEER, *n. f.* [*bleare*, Sax.] 1. An oblique  
view.—I spy entertainment in her; she gives the  
*leer* of invitation. *Shak.*—

Aside the devil turn'd  
For envy, yet with jealous *Leer* maligns  
Ey'd them askance. *Milton.*

2. A labour'd cast of countenance.—  
Damn with faint praise, with civil *leer*. *Pope.*  
With flameless visage, and perfidious *leer*.  
*Swift.*

(2.) LEER. See GLASS-MAKING, *SEB.* IV.  
(3.) LEER, in geography, a river of Germany,  
in E. Friesland, which runs into the Ems, near the  
town of Leer.

(4.) LEER, LEHR, or LIER, a town of E. Frie-  
land, on the above river, (N° 3.) 11 miles SE. of  
Emden, and 24 WNW. of Oldenburg.

\* To LEER, *v. n.* [from the noun.] 1. To look  
obliquely; to look archly.—I will *leer* upon him  
as he comes by; and do but mark the countenance  
he will give me. *Shak.*—I wonder whether you  
taste the pleasures of independency, or whether  
you do not sometimes *leer* upon the court. *Swift.*

2. To look with a forced countenance.—  
Bertran has been taught the arts of courts,  
To gild a face with smiles, and *leer* a man to ruin.  
*Dryden.*

LEERDAM, a town of the Batavian republic,  
in the dep. of Delft, and late prov. of S. Holland;  
11 miles S. of Utrecht, and 20 NE. of Dort. It  
was taken by the Spaniards in 1574. Lon. 5. 13.  
E. Lat. 51. 55. N.

LEEROT, a fort of Germany, in E. Friesland,  
at the mouth of the Leer, 10 miles from Emden.

LEERS, or LIERS, a town of the French re-  
public, in the dep. of the Ourte, and late bishop-  
ric of Liege, 4 miles N. of Liege. A battle was  
fought near it, Oct. 1, 1746; between the French,  
under Count Saxe, and the allies under Pr. Charles  
of Lorraine, in which the latter were defeated.

LEERSTRAND, a town of Norway.

(1.) \* LEES. *n. f.* [*lis*, French.] Druggs; keditment: it has seldom a singular.—The memory of king Richard was so strong, that it lay like *lees* at the bottom of men's hearts; and if the vessel was but stirred, it would come up. *Baron.*—

If they love *lees*, and leave the lusty wine,  
Envy them not their palates with the swine.

*B. Jonson.*

Those *lees* that trouble it, refine

The agitated soul of generous wine. *Dryden.*

(2.) LEES are the grossest and most ponderous parts of liquors, which, being separated by fermentation, fall to the bottom. The vinegar makers make a great trade of the lees of wine dried and made into cakes, after having squeezed out the remains of the liquor in presses.

LEESBURG, a town of Virginia, capital of Loudon county, 46 miles NW. of Alexandria, and 204 from Philadelphia. Lon. 77. 33. W. Lat. 39. 10. N.

\* To LEESE. *v. a.* [*lesen*, Dutch.] To lose; an old word.—

Then sell to thy profit both butter and cheefe,  
Who buyeth it sooner the more he shall *leese*.

*Tusser.*

No cause, nor client fat, will Chey'rill *leese*,  
But as they come on both sides he takes fees.

*B. Jonson.*

How in the port our fleet dear time did *leese*,  
Withering like prisoners, which lie put for fees.

*Donne.*

LEE-SIDE all that part of a ship or boat which lies between the mast and the side farthest from the direction of the wind; or otherwise, the half of a ship, which is pressed down towards the water by the effort of the sails, as separated from the other half by a line drawn through the middle of her length. That part of the ship which lies to windward of this line is accordingly called the *weather-side*. Thus admit a ship to be sailing southward, with the wind at east, then is her starboard or right side the *lee-side*; and the larboard, or left, the *weather-side*.

LEESNITZ, a town of Silesia, in Oppeln.

LEESTON, a river of Ireland, in Down.

LEE-STONE. See LEE-PENNY.

LEESTOWN, a town of Kentucky, on the river Kentucky; 20 miles W. of Lexington.

(1.) \* LEET. *n. f.* *Leete*, or *leta*, is otherwise called a law-day.—The word seemeth to have grown from the Saxon *lede*, which was a court of jurisdiction above the wapentake or hundred, comprehending three or four of them, otherwise called thirthing, and contained the third part of a province or shire: these jurisdictions, one and other, be now abolished, and swallowed up in the county court. *Cowell.*—

Who has a breast so pure,

But some uncleanly apprehensions

Keep *leets* and law-days, and in sessions sit

With meditations lawful?

*Shak.*

You would present her at the *leet*,

Because the bought stone jugs, and no seal'd  
quarts.

*Shak.*

(2.) A LEET, or COURT LEET (*leta visus francie*), is a court of record; ordained for punishing offences against the crown; and is said to be the

ancient court of the land. It inquires of all offences under high treason; but those who are to be punished with loss of life or member, are not inquirable and presentable here, and to be certified over to the justices of assize. Stat. 1. Edw. 1. And this court is called the view of frank pledge because the king is to be there certified by the view of the steward, how many people are within every leet, and have an account of their manners and government: and every person the age of 21 years, who hath remained there a year and a day, may be sworn to be faithful to the king, and the people to be kept in peace. A leet is incident to a hundred, as a court belongs to a manor: for by grant of a hundred, a passeth; and a hundred cannot be without a leet. The usual method of punishment in the leet, is by fine amercement; the former assessed by the steward, and the latter by the jury.

(3.) LEET, in geography, a river of Scotland in Berwicksh. which runs into the Tweed.

(4.) LEETS, in the Scottish borough police are those lists of names, made out, previous to the day of election, out of which, the magistrates, councillors, corporations, &c. annually elect a lord provost, bailies, deacons, and other officers, for the subsequent year. See DEACON § 2; and EDINBURGH, § 23.

(1, 2.) LEEUW, Gabriel and Peter, VAN, eminent Dutch painters, brothers. Gabriel born at Dort in 1643, and died in 1688. He painted animals with admirable spirit.

(3.) LEEUW, William DE, an eminent engraver of the 17th century. He was a native of Flanders, and the disciple of Sootman, in the manner of engraving, or rather etching, he excelled. His prints generally appear harsh at first; but become more agreeable upon examination. Several of them have great effect; particularly his Daniel in the lion's den, a large plate lengthwise, from Rubens. The first impressions of this plate are before the name of *Daukeris* added, and are extremely rare and dear.

LEEUE, or } a town of the French republic  
LEEUWEN, } in the dep. of the Dyle, and prov. of Austrian Brabant, seated on the Ge. It was taken by the French, in 1678, but restored to Spain by the peace of Nimeguen. In 1702 it was taken by the allies. It is 20 miles NW. Liege.

(1.) \* LEEWARD. *adj.* [*lee* and *ward*, Saxon.] Towards the wind. See LEE.—The classicists call long ships, the onerarie round, because their figure approaching towards circular: a figure, though proper for the stowage of goods, was not the fittest for sailing, because of the great quantity of *leeward way*, except when they were full before the wind. *Arbutnot.*—

A vessel with a double keel;

By change of wind to *leeward* side,

The pilot knew not how to guide.

(2.) To LEEWARD denotes towards that part of the horizon which lies under the lee, or which the wind bloweth. Thus, "We saw a fleet *under the lee*," and, "We saw a fleet *to leeward*," are synonymous.

(3.) LEEWARD ISLANDS, that part of the Car-

h, which extend from Dominica to Porto  
c CARIBBEE ISLANDS.

LEEWARD SHIP, is a vessel that falls  
reaward of her course, when sailing close-  
id consequently loses much ground.

ARDEN. See LEWARDEN.

LY. See NAVIGATION.

, a town of Turkey, in Natolia.

OGA, one of the FRIENDLY ISLANDS,  
after called HAPAEES; about 7 miles  
3 broad; very fertile, and highly culti-  
c fences running parallel from spacious  
ads. Capt. Cook sowed melons, pine  
dian corn, &c. on it. Lon. 149. 40. E.  
9. S.

EFT. participle preter. of *leave*.—

poor lady! desolate and left!  
ch a river as this been left to itself, to  
d its way out from the Alps, whatever  
it had made, it must have formed several  
Addis.—Were I left to myself, I would  
at instructing than diverting; but if we  
dful to the world, we must take it as we  
dijon.

EFT. *adj.* [*juste*, Dutch; *leous*, Latin.]  
; not right.—That there is also in men  
prepotency in the *rights*, we cannot with-  
y affirm, if we make observation in chil-  
o, permitted the freedom of both hands,  
nes confine it unto the *left*, and are not  
reat difficulty restrained from it. *Brown's*  
*vers*—

right to Pluto's golden palace guides,  
? to that unhappy region tends,  
to the depth of Tartarus descends. *Dryd.*  
gods of greater nations dwell around,  
n the right and left, the palace bound.  
*Dryden.*

A raven from a wither'd oak,  
their lodging was oblig'd to croak. *Dryd.*  
left foot naked when they march to fight,  
a bull's raw hide they sheathe the right.  
*Dryden.*

man who struggles in the fight,  
s left arm as well as right. *Prior.*

HANDED. *adj.* [*left* and *band*.] Using the  
rather than the right.—The limbs are used  
be right side, whereby custom helpeth;  
; that some are left-handed, which are  
se used the left hand most. *Bacon*.—For  
f the heart and liver on one side, where-  
come left-handed, it happeneth too rare-  
tenance an effect so common: for the  
e liver on the left side is very monstrous.  
*Fulg. Err.*

R-HANDEDNESS. *n. f.* [from *left-handed*.]  
use of the left hand.—

Although a squint left-handedness  
racious; yet we cannot want that hand.  
*Donne.*

EG. *n. f.* [*leg*, Danish; *leggur*, Islandick.]  
mb by which we walk; particularly that  
ween the knee and the foot.—  
y hake; and what their tardy feet deny'd,  
uty staff, their better leg, supply'd. *Dryd.*  
ping comfits, and ants eggs,  
most brought him off his legs. *Hudibras*.  
intrigues people cannot meet with, wher-

have nothing but legs to carry them. *Addison's G.*  
2. An act of obedience; a bow with the leg drawn  
back.—At court, he that cannot make a leg, put  
off his cap, kiss his hand, and say nothing, has  
neither leg, hands, lip, nor cap. *Shakspeare*.—

Their horses never give a blow,  
But when they make a leg, and bow. *Hudibras*.  
—If the boy should not put off his hat, nor make  
legs very gracefully, a dancing-master will cure  
that defect. *Locke*.—

He made his leg, and went away. *Swift*.

3. To stand on his own LEGS. To support himself.  
—Persons of their fortune and quality could well  
have stood upon their own legs, and needed not to  
lay in for countenance and support. *Collier of Fr.*

4. That by which any thing is supported on the  
ground: as, the leg of a table.

(2.) LEG, in anatomy, the whole lower extre-  
mity from the acetabula of the ossa innominata, is  
commonly divided into 3 parts, viz: the thigh, the  
leg properly so called, and the foot. See ANATO-  
MY, *Index*.

(1.) \* LEGACY. *n. f.* [*legatum*, Lat.] Legacy is  
a particular thing given by last will and testament.  
*Cowel*.—If there be no such thing apparent upon  
record, they do as if one should demand a legacy by  
force and virtue of some written testament, where-  
in there being no such thing specified, he pleadeth  
that there it must needs be. *Hooker*.—

Fetch the will hither, and we shall determine  
How to cut off some charge in legacies. *Shak.*  
—Good counsel is the best legacy a father can  
leave a child. *L'Esrange*.—

He deem'd 'em legacies of royal love. *Dryd.*  
When the heir of this vast treasure knew,  
How large a legacy was left to you,  
He wisely ty'd it to the crown again. *Dryden.*  
Leave to thy children tumult, strife, and war,  
Portions of toil, and legacies of care. *Prior.*

(2.) A LEGACY, in Scots law, is a donation, to  
be paid by the giver's executor after his death.  
See LAW, PART III; CHAP. II. *Scot. XXI*, § 3-5.

\* LEGAL. *adj.* [*legal*, Fr. *leges*, Lat.] 1. Done  
or conceived according to law.—Whatsoever was  
before Richard I. was before time of memory;  
and what is since is, in a legal sense, within the  
time of memory. *Hale's Hist. of the Common Law*.  
2. Lawful; not contrary to law. 3. According  
to the law of the old dispensation.—

His merits  
To save them, not their own, though legal,  
works. *Milton*.

\* LEGALITY. *n. f.* [*legalité*, Fr.] Lawfulness.

\* To LEGALIZE. *v. a.* [*legaliser*, Fr. from *legal*.]  
To authorize; to make lawful.—If any thing can  
legalize revenge, it should be injury from an ex-  
tremely obliged person. *South*.

\* LEGALLY. *adv.* [from *legal*.] Lawfully; ac-  
cording to law.—A prince may not, much less  
may inferior judges, deny justice, when it is legal-  
ly and competently demanded. *Taylor*.

\* LEGATARY. *n. f.* [*legataire*, Fr. from *lega-  
tum*, Lat.] 1. One who has a legacy left.—An ex-  
ecutor shall exhibit a true inventory of goods, ta-  
ken in the presence of fit persons, as creditors and  
legataries are, unto the ordinary. *Asylisse*. 2. Be-  
longing to a legate of the Roman see.—

All those you have done of late,

By your power *legatine* within this kingdom,  
Fall in the compass of a præsumure. *Shakef.*

(1.) \*LEGATE. *n. f.* [*legatus*, Latin; *legat*, Fr. *legato*, Ital.] 1. A deputy, an ambassador.—

The legates from th' Ætolian prince return:  
Sad news they bring. *Dryden.*

2. A kind of spiritual ambassador from the pope;  
a commissioner deputed by the pope for ecclesi-  
astical affairs.—

Look where the holy *legate* comes apace. *Shak.*  
—Upon the *legate's* summons, he submitted him-  
self to an examination, and appeared before him.  
*Atterbury.*

(2.) A LEGATE (§ 1. *def.* 2) is generally a car-  
dinal or bishop, whom the pope sends as his am-  
bassador to sovereign princes. See AMBASSADOR.  
There are 3 kinds of legates, viz. legates *a latere*,  
legates *de latere*, and legates by office, or *legati*  
*nati*: of these the most considerable are the legates  
*a latere*, the next are the legates *de latere*. See  
LATERE, § 1, and 2. Legates by office are those  
who have not any particular legation given them;  
but who, by virtue of their dignity and rank in  
the church, become legates: but the authority of  
these legates is much inferior to that of the leg-  
ates *a latere*. The power of a legate is some-  
times given without the title. Some of the nun-  
cios are invested with it. It was one of the eccle-  
siastical privileges of England from the Norman  
conquest, that no foreign legate should be obtrud-  
ed upon the English, unless the king should desire  
it upon some extraordinary emergency, as when  
a case was too difficult for the English prelates to  
determine.

(3.) LEGATE, COURT OF THE, was a court ob-  
tained by Cardinal Woolsey of Pope Leo X, in  
the 9th year of Henry VIII. wherein he, as legate  
of the pope, had power to prove wills, and dis-  
pense with offences against the spiritual laws, &c.  
It was but of short continuance.

\*LEGATEE. *n. f.* [from *legatum*, Latin.] One  
who has a legacy left him.—

If he chance to 'scape this dismal bout,  
The former *legatees* are blotted out. *Dryd. Juv.*

—My will is, that if any of the above-named *lega-  
tees* should die before me, that then the respective  
legacies shall revert to myself. *Swift.*

\*LEGATINE. *adj.* [from *legatus*.] Made by a  
legate.—When any one is absolved from excom-  
munication, it is provided by a *legatine* constitu-  
tion, that some one shall publish such absolution.  
*Ayliffe's Parergon.*

LEGATIO LIBERA, was a privilege frequent-  
ly obtained of the state, by senators of Rome, for  
going into any province or country, upon their  
own private business, in the quality of *legati* or  
envoys from the senate, that the dignity of this  
nominal office might secure them a good recep-  
tion, and have an influence on the management  
of their concerns. The cities and towns through  
which they passed were obliged to defray their  
expences. It was called *libera legatio*, because they  
might lay aside the office as soon as they pleased,  
and were not encumbered with any actual trust.

\*LEGATION. *n. f.* [*legatio*, Latin.] Deputa-  
tion; commission; embassy.—After a *legation* ad  
*res repetendas*, and a refusal, and a denunciation  
or *indiction* of a war, the war is no more confined

to the place of the quarrel, but is left at lar-  
*Bacon*.—In attiring, the duke had a fine unaf-  
fected politeness, and upon occasion costly, as in  
*legations*. *Wotton.*

\*LEGATOR. *n. f.* [from *lego*, Lat.] One who  
makes a will, and leaves legacies.—

A fair estate,  
Bequeath'd by some *legator's* last intent. *Dry.*

LEGATUS, a military officer among the an-  
cient Romans, who commanded as deputy of the  
commander in chief. The *legati*, at their first in-  
stitution, were not so much to command as to as-  
sist. They were generally chosen by the consul  
with the approbation of the senate. As to the  
number, we have no certain information, but this  
appears to have been at least one to every legion.  
In the absence of the consul or prætor, they  
had the *fasces*. Under the emperors there were  
two sorts of *legati*, *consulares*, and *prætorii*. The  
first commanded whole armies, as the emperor's  
lieutenant generals; and the latter had the com-  
mand of particular legions. The *legati* under  
prætors were in the provinces, judged inferior of-  
fices, and managed smaller concerns, remote  
things of great moment to the governor or præ-  
tor. This was their original office, though they  
were afterwards admitted to command in the army.

LEGE, a town of France, in the dep. of  
Lower Loire, 21 miles S. of Nantes.

(1.) \*LEGEND. *n. f.* [*legenda*, Latin.] 1.  
A chronicle or register of the lives of saints.—*Legends*  
being grown in a manner to be nothing else but  
heaps of frivolous and scandalous vanities, they  
have been even with disdain thrown out, the  
nests which bred them abhorring them. *Hobart.*  
There are in Rome two sets of antiquaries, the  
christian and the heathen; the former, through  
a fresher date, are so embroiled with fables and  
*legends*, that one receives but little satisfaction.  
*Addison.* 2. Any memorial or relation.—

And in this *legend* all that glorious deed  
Read, whilst you arm you. *Pope.*

3. An incredible unauthentic narrative.—  
Who can show the *legends*, that record  
More idle tales, or fables so absurd. *Blackmore.*

—It is the way of attaining to heaven, that many  
profane scorners so willingly let go the expecta-  
tion of it. It is not the articles of creed, but the  
duty to God and their neighbour, that is such a  
inconsistent incredible *legend*. *Bentley.* 4. Any in-  
scription; particularly on medals or coins.—Com-  
pare the beauty and comprehensiveness of *legends*  
on ancient coins. *Addison.*

(2.) The LEGEND (§ 1. *def.* 1.) was originally  
a book used in the old Romish churches, contain-  
ing the lessons to be read at divine service; hence  
the lives of the saints and martyrs came to be called  
*legends*, because chapters were read out of  
them at matins, and at the refectories of religious  
houses. Among these the golden legend, which  
is a collection of the lives of the saints, was re-  
ceived in the church with great applause, which  
it maintained for 200 years; though it is full of  
ridiculous and romantic stories, that the Roma-  
nists themselves are now ashamed of it.

(3.) LEGEND (§ 1. *def.* 4.) is also used to signify  
the words engraven about the margins, &c. on  
coins. Thus the legend of a French crown, be-  
fore

ution was *SVT NOMEN DOMINI*: Be that of a moulder, IN *HOC SIGNO* hose of the last emperors of Constantin *IESVS CHRISTVS BASILEVS BAS* XPS NIKA, i. e. *IESVS CHRISTVS* s also applied to the inscription of h serves to explain the figures or ded on them. In strictness, the le- rom the inscription; this last proper- ords placed on the reverse of a me- figures. It seems the ancients had in- nedals to serve both as images and the former for the common people, for persons of taste; the images to faces of princes; emblems their virt- actions. Every medal has proper- ls; that on the front, and that on The first generally serves only to dis- person by his name, titles, offices, is intended to express his noble fen- good deeds, and the advantages the aped by him. This, however, does erfully; for sometimes we find the between both sides, and sometimes d. In the medals of cities and pro- head is usually the genius of the east some deity adored there, the le- me of the city, province, or deity, zether; and the reverse is some sym- y, &c. frequently without a legend, th that of one of its magistrates. Le- ly commemorate the virtues of prin- our and consecrations, signal events, nents, deities, vows, privileges, &c. her in Latin or Greek, or a mixture

ARY, *adj.* fabulous; of the nature

ER. *n. f.* [from *leger*, Dutch. To in a place.] Any thing that lies in a *leger* ambassador; a resident; one s at the court which he is sent; a book that lies in the compting-house. gelo, having affairs to heav'n, a for his swift ambassador,

gainst the states of death and hell.

*Herbert.*  
w not his confidence from any of ended his person, who, in truth, lay covenant, and kept up the spirits of men by their intelligence. *Clarendon.*  
I *leger* bait, which is fixed, or made : certain place, when you shall be : call that a walking bait which you notion. *Walton.*

. See BOOK-KEEPING, *Index.*  
ERDEMAIN. *n. f.* [contracted per- *gereté de main*, French.] Slight of ; power of deceiving the eye by

nimble motion; trick; deception; knuck.—

He so light was at *legerdemain*,  
That what he touch'd came not to light again.  
*Hubbard.*

—Of all the tricks and *legerdemain* by which men impose upon their own souls, there is none so common as the plea of a good intention. *South.*

(2.) *LEGERDEMAIN* is a denomination given to certain deceptive performances, which either depend altogether on dexterity and address, or derive a small degree of aid from philosophical principles. The former class, tho' they may be styled *arts* in one sense of the word, yet depend so entirely upon *trick* and *deception*, and have so little connection with real *science*, that we are persuaded none of our readers will regret our omitting them. Of the latter class, sufficient specimens of entertaining experiments, illusions, &c. of a philosophical nature, will be found under the articles *ACOUSTICS*, *CATOPTICS*, *CHROMATICS*, *DIOPTRICS*, *ELECTRICITY*, *HYDROSTATICS*, *MAGNETISM*, *PYROTECHNICS*, &c.

\* *LEGERITY*. *n. f.* [*legereté*, Fr.] Lightness; nimbleness; quickness. A word not in use.—

The organs though defunct and dead before,  
Break up their drowsy grave, and newly move  
With casted slough and fresh *legerity*. *Sbak.*

*LEGER LINE*, in music, one added to the staff of five lines, when the ascending or descending notes run very high or low: there are sometimes many of these lines both above and below the staff, to the number of four or five.

(1.) *LEGERWOOD*, a parish of Scotland, in Berwicksh. between Lauderdale and the Lamem- moor hills, about 3 miles long by 2½ broad, containing about 8 square miles. The soil is various; the surface hilly; the climate cold, rainy and windy. Husbandry is much improved; oats, barley, pease, and turnips are the chief crops. The population, in 1795, was 422; the increase 24 since 1755. The number of sheep was 2,769; black cattle, 559; and swine 59: the annual produce in corn 2,500l. wool 400l. sheep 1300l. and oxen 1070l. in all 7,270l.

(2.) *LEGERWOOD*, a village in the above parish, 4 miles SE. of Lauder.

\* *LEGGED*. *adj.* [from *leg*.] Having legs; furnished with legs.

*LEGHENICH*. See *LECHNICH*.

*LEGHORN*, a handsome town of Etruria, an- ciently called *LIBURNUS PORTUS*, but by the modern Italians *LIVORNO*, about 30 miles SW. of Florence, in the territory of Pisa. It is a free port. The only defect of the harbour is its being too shallow for large ships. Cosmo I. had this town in exchange for Sarzana, from the Genoese; and it is the only sea-port in the kingdom. It was then but a mean unhealthy place; but is now well built, with broad, straight, parallel streets. It is also well fortified; but wants good water, which must be brought from Pisa, 14 miles distant. It is about 2 miles in circuit, and its general form is square. It has the convenience of canals, one of which is 5 miles long, and joining the Arno, merchandise and passengers are thus conveyed to Pisa. The port consisting of two havens, one for the *king's* galleys, and the other for merchant ships, is surrounded with a double mole.

mole, above

a particular place assigned them, out of which  
they must not be seen, without leave from the  
commissary. The number of the rowers in the  
galleys, whether Turkish slaves, criminals, or vo  
lunteers, are about 2000. In the area before the  
darseria or inner harbour, is a fine statue of Duke  
Ferdinand, with four Turkish slaves, in bronze,  
chained to the pedestal. The ducal palace is one  
of the finest structures in the town, and the ordi  
nary residence of the governor. Leghorn is the  
see of a bishop, and has a noble cathedral; but  
the other churches are not remarkable. It was  
taken possession of, by the French under Bona  
parte, on the 28 June 1796; but restored in 1797.  
It was again taken on the 24th March 1799, but  
retaken by the Austrians, on the 9th July 1799.  
Long. 11. o. E. Lat. 43. 50. N.

\* LEGIBLE. *n. f.* [*legibilis*, Lat.] 1. Such as  
may be read.—You observe some clergymen with  
their heads held down within an inch of the cush  
ion, to read what is hardly *legible*. *Swift*.  
2. Apparent; discoverable.—People's opinions  
of themselves are *legible* in their countenances.  
*Collier*.

\* LEGIBLY. *adv.* [from *legible*.] In such a  
manner as may be read.

(1.) LEGIO, a town of Galilee, from which  
Jerom determines the distances of the places in  
Galilee, so named from a Roman Legion there.  
It lay 15 miles W. of Nazareth, between mount  
Tabor and the Mediterranean; now thought to  
be LEGUNE.

(1.) \* LEGION. *n. f.* [*legio*, Latin.] 1  
body of Roman soldiers, consisting of  
5000.—The most remarkable piece in Ant  
pillar is, the figure of Jupiter Pluvius send  
on the fainting army of Marcus Aurel  
thunderbolts on his enemies, which is the  
confirmation possible of the story of the  
*legion*. *Addison*. 2. A military force.—

She to foreign realms  
Sends forth her dreadful legions.  
3. Any great number.—  
Not in the legions  
Of horrid hell, can come a devil more d

—The partition between good and evil is  
down; and where one sin has entered, leg  
force their way through the same breach.

(2.) A LEGION, in Roman antiquity,  
ed of different numbers at different period  
word comes from *legere*, (Lat.) to choose;  
when the legions were raised, they chose  
their youth as were most proper to bear ar  
the time of Romulus the legion consisted  
foot and 300 horse; though, after the rece  
the Sabines, it was augmented to 4000. In  
with Hannibal, it was raised to 5000, aft  
sunk to 4000 or 4500; this was the nu  
the time of Polybius. The number of  
kept in pay, differed according to circum  
During the consular state four legions wen  
up every year, and divided betwixt the t  
suls; yet there were sometimes 16 or 18  
situation of affairs required. Augustus r  
ed a standing army of 23 or 25 legions;  
number in after times is seldom found.

ferent legions were named or rather nu  
from the order in which they were raise  
*prima, secunda, tertia, &c.* but as there r  
many *prima, secunda, tertia, &c.* they w  
named from the emperors, as *Augusta, Cl  
Galbiana, Flavia, Ulpia, Trajana, Antonina*  
from the provinces which had been conqu  
their means, as *Partbica, Scythica, Gallie  
bica, &c.* or from the deities under whose  
tion the commanders had particularly plac  
selves, as *Minervia, Apollinaris, &c.* or f  
region where they were quartered, as  
*Cyrenaica, Britannica, &c.* or from partic  
idents, as *adjuvix, martia, fulminatrix  
victrix, &c.* Each legion was divided  
cohort, each cohort into 10 companies, a  
company into two centuries. The chi  
mander of the legion was called LEGAT  
lieutenant. The standards born by the  
were various; at first, the standard was a  
honour of Romulus's nurse; afterwards  
which animal was usually sacrificed at the  
sion of a treaty, to indicate that war is  
ken with a view to peace; sometimes a r  
to remind the general of his duty of sec  
which the minotaur, and labyrinth were e  
a horse was also born, also a boar; and  
was the first who changed all these for t

tion to a legion. 2. Containing a legion.

reat indefinite number.—Too many ap-  
nelves betwixt jest and earnest, make  
nary body of error. *Brown.*

EGISLATION. *n. f.* [from *legislator*,  
: act of giving laws.—Pythagoras joined  
o his philosophy, and, like others, pre-  
velations from God, to give a more  
sanction to the laws he prescribed.

ELATION. See LEGISLATOR, § 2.

SLATIVE. *adj.* [from *legislator*.] Giv-  
lawgiving.—

*legislative* frenzy they repent,  
; it should make no precedent. *Demb.*  
t is a kind lawgiver, and those qualities  
to the *legislative* style. *Dryden.*

EGISLATOR. *n. f.* [*legislator*, Latin; *le-*  
rench.] A lawgiver; one who makes  
y community.—It spoke like a *legisla-*  
ing spoke was a law. *South.*—  
s in animated marble frown,  
sitors seem to think in stone. *Pope.*

ISLATORS, ANCIENT. The most cele-  
est legislators were MOSES among  
Thefus, Draco, and SOLON among the  
; LYCURGUS among the Lacedemoni-  
as among the Romans, &c. See these

The first laws amongst the Athenians  
ve been those of Thefusus. After him  
CO, whose laws were said, for their se-  
have been written with blood; by them  
nce was punished with death; so that  
apple, and betraying one's country,  
ed as equal crimes. These were repeal-  
m, except such as related to murder:

distinction, Draco's laws were called  
Solon's *Nepoi*. The laws of Solon were  
measure suspended during the usurpa-  
istratus; but, after the expulsion of his  
re revived with some additions by Clis-  
ifter this, the form of government was  
ged, first by the 400, and afterwards by  
ants; but the ancient laws were again  
the Archonship of Euclides, and others  
at the instance of Diocles, Aristophon,  
of all, of Demetrius the Phalerean.  
hort sketch of the history of the Athe-  
SLATION, before that state submitted  
man yoke. (See ATTICA, § 5—16.)

laws were enacted by the suffrages of  
on particular exigencies; the decrees  
te continued to have the force of laws  
than a year. If a new law was to be  
to the assembly, it was necessary to  
pon a white tablet, and fix it up some  
e the meeting, left their judgment should  
by surprize. The laws were carefully  
ery year; and if any of them, from a  
circumstances, were found unsuitable or  
l, they were repealed: This was called

*one repeal*, because the suffrages were  
olding up of hands. The first laws a-  
Grecians were not written, but com-  
erse, that the people might with more  
sit them to memory. Solon penned his  
wooden tablets, called *axones*, and some  
with great probability assert, that they  
ten in the manner called *επιγραφαι*, from  
III. PART I.

left to right, and from right again to the left. See  
BOUSTROPHEDON. It was against the law for a-  
ny person to erase a decree, and certain persons  
called *Γραμματοι*, were appointed to prevent any  
corruption; whose business it was also to transcribe  
the old and enter the new ones. At Rome the peo-  
ple were in a great measure their own legislators;  
though Solon may be said, in some sense, to have  
been their legislator, as the decemviri, who were  
created for the making of laws, borrowed a great  
number from those of Solon. See LEX. With us  
the legislative power is lodged in the king, lords,  
and commons assembled in parliament. See LAW,  
and PARLIAMENT.

\* LEGISLATURE. *n. f.* [from *legislator*, Lat.]  
The power that makes laws.—Without the con-  
current consent of all three parts of the *legislature*,  
no law is or can be made. *Hale.*—In the notion  
of a *legislature* is implied a power to change, re-  
peal, and suspend laws in being, as well as to make  
new laws. *Addison.*—By the supreme magistrate  
is properly understood the legislative power; but  
the word magistrate seeming to denote a single  
person; and to express the executive power, it  
came to pass that the obedience due to the *legis-*  
*lature* was, for want of considering this easy dis-  
tinction, misapplied to the administration. *Saunders.*

\* LEGITIMACY. *n. f.* [from *legitimate*.] 1. Law-  
fulness of birth.—In respect of his *legitimacy*, it  
will be good. *Ayliffe.* 2. Genuineness; not spu-  
riousness.—The *legitimacy* or reality of these ma-  
rine bodies vindicated, I now require by what  
means they were hurried out of the ocean.  
*Woodward.*

\* LEGITIMATE. *adj.* [from *legitimus*, Latin; *legitime*, French.] Born in marriage; lawfully be-  
gotten.—

*Legitimate* Edgar, I must have your land.

*Shak.*  
—An adulterous person is tied to make provision  
for the children begotten in unlawful embraces,  
that they may do no injury to the *legitimate*, by  
receiving a portion. *Taylor.*

\* To LEGITIMATE. *v. a.* *legitimer*, [from the ad-  
jective. 1. To procure to any the rights of *legiti-*  
*mate* birth.—*Legitimate* him that was a bastard.  
*Ayliffe.* 2. To make lawful.—it would be im-  
possible for any enterprize to be lawful, if that  
which should *legitimate* it is subsequent to it, and  
can have no influence to make it good or bad.  
*Decay of Piety.*

\* LEGITIMATELY. *adv.* [from *legitimate*.]  
1. Lawfully: 2 Genuinely.—

By degrees he rose to Jove's imperial seat,  
Thus difficulties prove a soul *legitimately* great.

*Dryden.*

(1.) \* LEGITIMATION. *n. f.* [*legitimation*,  
French; from *legitimate*.] 1. Lawful birth.—

I have disclaimed my land;

*Legitimation*, name, and all is gone:  
Then, good my mother, let me know my fa-  
ther. *Shak.*

—From whence will arise many questions of *legi-*  
*mitation*, and what in nature is the difference be-  
twixt a wife and a concubine. *Locke.* 2. The act  
of investing with the privileges of lawful birth.

(2.) LEGITIMATION, § 1. *def.* 2. See BASTARD,  
and LAW, PART III. *Chaf.* II. *Sci.* XXII.

**LEGITIME**, in Scots law, that share of the moveable effects belonging to a husband and wife, which upon the husband's death falls to the children.

**LEGIUNCARA**, a town of Naples, in Bari.

**LEGLANTIER**, a town of France in the department of Oise, 9 miles N. of Clermont.

**LEGNAGO**, or } a district of the late pro-  
(1.) **LEGNANO**, } vince of Veronese, anciently called **LINIACUS**, now included in the Italian republic, and depart. of the Mincio. The soil is fertile, and it abounds in rice, maize, fruits, flax, hemp, silk, honey, &c.

(2.) **LEGNANO**, a fortified and populous town of the Italian republic, capital of the above territory, now in the department of the Mincio, and district of Verona. It has a great trade in grain: rice alone draws 50,000 ducats weekly. It has a canal erected in 1762, which runs between the Adige, the Tartaro, and the Po. It surrendered to the French, Sept. 13th 1796; but on the 26th March 1799, the French attacked the Austrians under Gen. Kray here, and were defeated, with the loss of 1500 killed, 22 officers and 500 men taken prisoners; besides 15 cannons, 15 loaded waggons, &c. It lies 22 miles ESE. of Verona, and 28 NNW. of Ferrara.

(3.) **LEGNANO, PORTO**, a town of the Italian republic, on the NE. side of the Adige, opposite to Legnano. "It was one of the boundaries between the Cisalpine republic and Maritime Austria mentioned in the treaty of Campo Formio; but is now, with the rest of the Veronese, by the treaty of Luneville, included in the Cisalpine or Italian republic, and department of the Mincio.

**LEGO**, or **LEGO NEGRO**, a town of Naples, in the province of Basilicata, 8 miles NW. of Lauria.

**LE GRAND**. See **GRAND**, N° 3—5.

**LEGS**, TO BE UPON ONE'S, a modern metaphor, much used respecting public speakers in parliament, &c. The late prof. J. H. Beattie, in his Dialogue in the Shades, between Swift, a bookseller and Mercury, repeatedly quoted, (see **BEATTIE**, § 2, &c.) introduces the god of eloquence, as thus instructing the Dean, to "make English of the newest and best pattern." "Instead of—He spoke an hour on various topicks, you must say—He was an hour upon his legs, and went into a variety of matter: an idiom which is now very common, and much admired; because it is figurative, verbose, and ambiguous; three qualities of style, which are now, among fashionable writers and speakers, indispensable."

**LEGUIGNO**, a town of the Italian republic, in Parma, 18 miles SSE. of Parma.

(1.) \* **LEGUME**. } *n. f.* [*legume*, French; *l-*

(1.) \* **LEGUMEN**. } *gumen*, Lat.] Seeds not reaped, but gathered by the hand; as beans: in general, all larger seeds; pulse.—Some *legumens*, as peas or beans, if newly gathered and distilled in a retort, will afford an acid spirit. *Boyle*.—In the spring fell great rains, upon which ensued a most destructive mildew upon the corn and *legumes*. *Arb: tl. not.*

(2.) **LEGUMEN**, or **POD**. See **BOTANY**.

(1.) \* **LEGUMINOUS**. *adj.* [*leguminus*, French; from *legumen*.] Belonging to pulse; consisting of

pulse.—The properest food of the vegetable is taken from the farinaceous seed barley, and wheat; or of some of the *leguminous*; as, peas, or beans. *Arbut*

(2.) **LEGUMINOUS**, is applied to whose fruit is a **LEGUMEN**, or pod. See *Glossary*.

**LEHEIGH**, a river of Pennsylvania rises in Northampton county, and after 75 miles, falls into the Delaware, at E.

**LEHNBERG**, a town of Germany, vince of Nassau Weilburg; 3 miles E burg.

**LEHR**. See **LEER**, N° 4.

**LEIBEN**, two towns of Germany, the one 10 miles NW. the other 14 SW

(1.) **LEIBNITZ**, Godfrey William eminent mathematician and philosopher Leipzig in Saxony in 1646. At the age studied mathematics at Leipzig and Je 1663, maintained a thesis *de Principiis ationis*. In 1664, he was admitted M. deavoured to reconcile Plato with A he afterwards did Aristotle with Des C the study of the law was his principal he was admitted LL.B. in 1665. In 1666 have taken the degree of doctor; but it, on pretence that he was too young reality because he had rejected the p Aristotle and the schoolmen. Upon th to Altorf, where he maintained a thesis *Perplexis*, with such applause, that he gree of LL. D. conferred on him. He settled to great advantage at Paris; by sion to the Roman Catholic religion, refuse all offers. In 1673, he went to where he became acquainted with Jo F. R. S. and Mr Oldenburg, the Sec 1676, he returned to England, and t into Holland, in order to proceed to where he proposed to settle. Upon there, he applied himself to enrich the brary with the best books of all kinds. dying in 1679, his successor Ernest Au tinued to patronize him, and employ write the history of the house of Brun travelled over Germany and Italy to terials. Frederick I. king of Prussia, t of Brandenburg, founded an acadern by his advice; and appointed him per sident, though he could not reside c Berlin. He projected an academy o kind at Dresden, but the execution of was prevented by the confusions in P likewise proposed a scheme of an ur guage. His writings had long before famous over all Europe. Besides th privy-counsellor of justice, which kin then elector of Hanover had given hi peror appointed him in 1711 aulic and Peter the Great made him privy c justice, with a pension of 1000 ducat dertook the establishment of an acad ences at Vienna; but the plague pre execution of it. However, the emj mark of his favour, settled a pension 2000 florins, and promised him anothe he would come and reside at Vienna,

reverted by death in 1716. His memory was so strong, that to fix any thing in it, he had only to rite it once; and he could even in his old age repeat Virgil exactly. He professed the Lutheran religion, but never went to church; and upon his death bed, his favourite servant, desiring him to send for a minister, he replied, *he had no need of one*. Foreigners for some time ascribed to him the invention of Fluxions, which had been previously discovered by Sir Isaac Newton. See FLUXIONS, § 2—6.

(2.) LEIBNITZ, a town of Germany, in Stiria, 15 miles S. of Graz.

LEIBNITZIAN PHILOSOPHY, or the philosophy of LEIBNITZ, is a system formed and published by its author in the 17th century, partly in imitation of the Cartesian, and partly in opposition to the Newtonian. The basis of Mr Leibnitz's philosophy was that of Des Cartes, though in some things he differed from him; for he retained the Cartesian subtle matter, with the universal plenitude and vortices; and represented the universe as a machine, that should proceed forever by the laws of mechanism, in the most perfect state, by an absolute inviolable necessity. After Sir Isaac Newton's philosophy was published in 1687, he printed an essay on the celestial motions, *Act. Erud.* 1689, where he admits of the circulation of ether with Des Cartes, and of gravity with Sir Isaac Newton; though he has not reconciled these principles, nor shown how gravity arose from the impulse of this ether, nor how to account for the planetary revolutions, and the laws of the planetary motions in their respective orbits. That which he calls the *harmonical vibration*, is the angular velocity of any one planet which decreases from the perihelium to the aphelium in the same proportion as its distance from the sun increases; but this law does not apply to the motions of the different planets considered together; because the velocities of the planets, at their mean distances, decrease in the same proportion as the square roots of the numbers expressing those distances. Besides, his system is defective, as it does not reconcile the circulation of ether with the free motions of the comets in all directions, or with the obliquity of the planes of the planetary orbits; nor resolve other objections to which the hypothesis of the plenum and vortices is liable. Soon after this period, the dispute commenced concerning the invention of the method of fluxions, which led Mr Leibnitz to take a very decided part in opposition to the philosophy of Sir Isaac Newton. From the wisdom and goodness of the Deity, and his principle of a sufficient reason, he concluded that *the universe was a perfect work, or the best that could possibly have been made*; and that other things, which were incommensurable and evil, were permitted as necessary consequences of what was best: the material system, considered as a perfect machine, can never fall into disorder, or require to be set right; and to suppose that God interposes in it, is to lessen the skill of the author, and the perfection of his work. He expressly charges an impious tendency on the philosophy of Sir Isaac Newton, because he asserts, that the fabric of the universe and course of nature could not continue for ever in

its present state, but would require, in process of time, to be re-established or renewed by the hand of its Former. The perfection of the universe, by reason of which it is capable of continuing for ever by mechanical laws in its present state, led Mr Leibnitz to distinguish between the quantity of motion and the force of bodies; and, whilst he owns, in opposition to Des Cartes, that the former varies, to maintain that the quantity of force is for ever the same in the universe, and to measure the forces of bodies by the squares of their velocities. This system also requires the utter exclusion of atoms, or of any perfectly hard and inflexible bodies. The advocates of it allege, that according to *the law of continuity*, (as they call a law of nature invented for the sake of the theory,) all changes in nature are produced by insensible and infinitely small degrees; so that no body can, in any case, pass from motion to rest, or from rest to motion, without passing through all possible intermediate degrees of motion: whence they conclude, that atoms or perfectly hard bodies are impossible: because if two of them should meet with equal motions, in contrary directions, they would necessarily stop at once, in violation of the law of continuity. Mr Leibnitz proposes two principles as the foundation of all our knowledge; the first, that it is impossible for a thing to be and not to be at the same time, which, he says, is the foundation of speculative truth: the other is, that nothing is without a sufficient reason why it should be so rather than otherwise; and by this principle, according to him, we make a transition from abstracted truths to natural philosophy. Hence he concludes, that the mind is naturally determined, in its volitions and elections, by the greatest apparent good, and that it is impossible to make a choice between things perfectly like, which he calls *indiscernables*; whence he infers, that two things perfectly like could not have been produced even by the Deity: and he rejects a vacuum, partly because the parts of it must be supposed perfectly like to each other. For the same reason he also rejects atoms, and all similar particles of matter, to each of which, though divisible *in infinitum*, he ascribes a MONAD (*Act. Lipsie*, 1698, p. 435.) or active kind of principle, endued, as he says, with perception and appetite. The essence of substance he places in action or activity, or, as he expresses it, in something that is between acting and the faculty of acting. He affirms absolute rest to be impossible, and holds motion, or a sort of *nisus*, to be essential to all material substances. Each monad he describes as representative of the whole universe from its point of sight; and after all, in one of his letters he tells us, that matter is not a substance, but a *substantivum* or *phenomene bicus fonde*. He frequently urges the comparison between the effects of opposite motives on the mind, and of weights placed in the scales of a balance, or of powers acting upon the same body with contrary directions. His learned antagonist, Dr Clarke, denies that there is a similitude between a balance moved by weights, and a mind acting upon the view of certain motives; because the one is entirely passive, and the other not only is

acted upon, but acts also. The mind, he owns, is purely passive in receiving the impression of the motive, which is only a perception, and is not to be confounded with the power of acting after, or in consequence of, that perception. The difference between a man and a machine does not consist only in sensation and intelligence, but in this power of acting also. The balance, for want of this power, cannot move at all when the weights are equal; but a free agent, he says, when there appear two perfectly alike reasonable ways of acting, has still within itself a power of choosing; and it may have strong and very good reasons not to forbear. The translator of *Masbeim's Beckesfalsical History observes*, that the progress of Arminianism has declined in Germany and several parts of Switzerland, in consequence of the influence of the Leibnitzian and Wolfian philosophy. Leibnitz and Wolf, by attacking that liberty of indifference, which is supposed to imply the power of acting not only without, but against, motives, struck, he says, at the very foundation of the Arminian system. He adds, that the greatest possible perfection of the universe, considered as the ultimate end of creating goodness, removes from the doctrine of predestination those arbitrary procedures and narrow views, with which the Calvinists are supposed to have loaded it, and gives it a new, a more pleasing, and a more philosophical aspect. As the Leibnitzians laid down this great axiomatic as the supreme object of God's universal dominion, and the hope to which all his dispensations are directed; so they concluded, that if this end was proposed, it must be accomplished. Hence the doctrine of necessity, to fulfil the purposes of a predestination founded in wisdom and goodness; a necessity, physical and mechanical, in the motions of material and inanimate things, but a necessity moral and spiritual in the voluntary determinations of intelligent beings, in consequence of propellent motives, which produce their effects with certainty, though these effects be contingent, and by no means the offspring of an absolute and essentially immutable fatality. These principles, says this writer, are applicable to the main doctrines of Calvinism; by them predestination is confirmed, though modified with respect to its reasons and its end; by them irresistible grace (irresistible in a moral sense) is maintained upon the hypothesis of propellent motives and a moral necessity; the perseverance of the saints is also explicable upon the same system, by a series of moral causes producing a series of moral effects.

(1.) LEICESTER, or LEICESTERSHIRE, an inland county of England, about 170 miles in circumference, and in form almost circular. It has Nottinghamshire and Derbyshire on the N. Rutlandshire and Lincolnshire on the E. Warwickshire on the W. from which it is parted by the Roman military way called *Watling Street*; and by Northamptonshire on the S. As it is far from the sea, and free from marshes, the air is sweet and wholesome. It is a champaign country, and fertile in corn and grass, being watered by several rivers, as the Soar, which passes through it and abounds in excellent salmon. &c. the Wreke, Trent, Eye, Senke, Auker, and Aven. These rivers being mostly navigable, greatly facilitate trade. In

some parts there is a great scarcity of fuel, both wood and coal; but in the hilly parts there is plenty of both, with great flocks of sheep. Besides wheat, barley, oats, and peas, it produces the best beans in England. They grow so tall and luxuriant in some places, particularly about Barton in the Beans, that they look like a forest; and the inhabitants eat them all the year round; which reason their neighbours call them *Bean bellies*. They have plenty of very good wool, which they make great quantities of stockings and send much of it unmanufactured into other parts of England. They trade greatly in corn and pulse; and likewise breed great numbers of coach and dray horses, most of the gentlemen being graziers; and several grass farms run from 500 l. to 2000 l. a-year. It is in the middle circuit, and diocese of Lincoln; and sends 4 members to parliament, two for the city, and two for the county.

(2.) LEICESTER, the capital of the above county, upon the LEAS, now called Soar. From its situation on the Fosse-way, and the many coins and antiquities discovered here, it seems to have been a place of some note in the time of the Romans. In the time of the Saxons it was a bishop's see, and afterwards so repaired and fortified by Edelfleda, that it became a most wealthy place, having 32 parish churches; but in Henry II's reign it was quite ruined, for joining in rebellion against him with Robert earl of Leicester. In the reign of Edward III. however, it recovered by the favour of his son Henry Plantagenet, D. and B. of Lancaster, who founded and endowed a collegiate church and hospital. It is a borough and corporation, governed by a mayor, recorder, steward, bailiff, 24 aldermen, 48 common council men, a solicitor, a town-clerk, and two chamberlains. It had its first charter from K. John. The freemen are exempted from paying toll in all the fairs and markets of England. It has 3 hospitals; the above mentioned is capable of supporting 100 people decently; another erected in the reign of Henry VIII. for 12 lazars; and a 3d for 6 widows. The castle was a prodigious large building; the hall and kitchen are still entire; the former is very spacious and lofty; and in the tower over one of the gate-ways is kept the magazine for the county militia. There was a famous monastery, called, from its situation in the meadows, *St Mary a Pratis* or *Prez*. In these meadows is now the course for the horse-races. Richard III. lies interred in St Margaret's church. The chief business of Leicester is the stocking trade; which produces about 60,000 l. a-year. In a parliament held here in the reign of Henry V. the first law for burning heretics was made, against the followers of Wickliffe, who was rector of Lutterworth in this county, and where his pulpit is said still to remain. The town suffered greatly in the civil wars, by two successive sieges. Its market on Saturday is one of the greatest in England for corn and cattle and it has 4 fairs. It lies 27 miles NNE. of Coventry, and 98 NNW. of London. Lon. L. 3. W. Lat. 52. 38. N.

(3.) LEICESTER, a populous town of Massachusetts, in Worcester county, with an academy, Baptist church, &c. 55 miles W. by S. of Boston.

**IDORFF**, a town of Austria.

**ACH**, a river of Silesia.

**S**, a town of Germany, in the Tirolese.

**GH**, Charles, M. D. and F. R. S. an physician and naturalist, born in Lancashire, published, 1. *An Account of the Nativity of Virginia*; and several other works out 1701.

**GH**, Sir Edward, a very learned Englishman at Shawell in Leicestershire, and called Magdalen Hall, Oxford. He was a member of the long parliament, and one of those to sit in the assembly of divines. He afterwards colonel of a regiment for the parliament in 1648 was among the Presbyterians turned out, and in December he was banished. From this period to the Restoration employed himself in writing a number of valuable books, which show proficiency, a knowledge of the languages, critical sagacity; and of which a list is in Anthony Wood. Sir Edward died at Allington, in Staffordshire, June 2, 1671.

**GH**, a sea port of Essex, on a creek in the Thames, opposite Canvey Island, 10 miles SSE. of Chelmsford, and 24 E. of London. Lon.  $0. 42. E.$  Lat.  $51. 31. N.$

**GH**, a town of Lancashire, 7 miles N. of Leighton, and 164 NW. of London. Lon. Lat.  $53. 30. N.$

**LEIGH** is also the name of 16 villages; one in each, in Cheshire, Gloucester, Kent, Somerset, Stafford, Surry, and Worcester; and 2 each in Devonshire, Dorsetshire, and Wilts.

**LIN**, a borough of Ireland, in the county of Leinster; about 43 miles from Dubbock river Barrow. At the E. end of the town a famous well covered with great ash dedicated to St Lascarian. This place formerly a city, though now only a village, the cathedral has been kept in good repair. The bishopric, founded in 632, but joined to the see of Armagh in 1600. Gurmund, a Danish prince died in this church. This cathedral was burnt, and rebuilt, A. D. 1232; since which time it is used as a parish church.

**LIN-BRIDGE**, a post town, 2 miles from the village. It was destroyed by the Irish in 1690. Here are the remains of a castle and an abbey. It has fairs in May, September, and

**LINTON**, Alexander, a presbyterian divine, died at Edinburgh in 1585. descended of the house of Ulan, or Ulysses-haven, and remarkable for his sufferings under the tyranny of Abp. James VI. publishing some pieces against episcopacy: being the measures of K. Charles I. rather virulently, he was tried for sedition, condemned to be publicly whipped, to have his ears cut off, and his nose slit; which barbarous sentence was accordingly executed. As compensation for his sufferings, the parliament in 1640, appointed him keeper of Lambeth, which they had converted into a State Prison in 1644.

(2.) **LEIGHTON**, Robert, D. D. Abp. of Glasgow, the son of the preceding presbyterian martyr, was also born at Edinburgh.

During Cromwell's usurpation, he was minister of a church near Edinburgh, and distinguished himself by his charity, and his aversion to religious and political disputes. The ministers were then called over yearly in the synod; and were commonly asked, Whether they had preached to the times? "For God's sake (answered Leighton), when all my brethren preach to the times, suffer me to preach about eternity." His moderation, however, giving offence, he retired to a life of privacy. But soon after, he was called by the unanimous voice of the magistrates, to preside over the college of Edinburgh; where, during ten years, he displayed all the talents of a prudent, wise, and learned governor. In 1662, when the ill-judged affair of introducing episcopacy into Scotland was resolved on, Leighton was consecrated bishop of Dunblane, and immediately gave an instance of his moderation: for when Sharpe and the other bishops proposed to enter Edinburgh in a pompous manner, Leighton remonstrated against it; but finding that what he said he had no weight, he left them, and went to Edinburgh alone. Leighton, in his own diocese, set such a remarkable example of moderation, that he was revered even by the most rigid Presbyterians. He went about preaching without any pomp; gave liberally to the poor; and removed none of the ministers, however exceptionable he might think their political principles. But finding that none of the other bishops could be induced to join in his moderate plan, he went to the king, and resigned his bishopric, telling him he would not have a hand in such oppressive measures. Soon after, the king and council, partly induced by this good bishop's remonstrances, resolved to carry on the cause of episcopacy in Scotland on a different plan; and with this view, Leighton was persuaded, in 1669, to accept of the archbishopric of Glasgow, on which he made one effort more; but finding it not in his power to stem the violence of the times, he resigned his archbishopric, in 1673, and retired into Sussex, where he devoted himself to acts of piety. He died at London, in 1684. He was of a most amiable disposition; strict in his life, polite, cheerful, engaging in his manners, and profoundly learned. He wrote a *Commentary on St Peter*; besides many sermons and useful tracts, which are greatly esteemed. He bequeathed his library to the church and clergy of DUNBLANE; and sunk about 840 l. for burials and other charitable purposes, in the colleges of Edinburgh and Glasgow, and parish of Dunblane.

(3.) **LEIGHTON**, or **LEIGHTON-BUZZARD**, a large town of Bedfordshire, on the Ouzel; with a market on Tuesday;  $7\frac{1}{2}$  miles WNW. of Dunstable, and 41 NW. of London. Lon.  $0. 35. W.$  Lat.  $51. 55. N.$

(4.) **LEIGHTON**, a town of Huntingdonshire, 5 miles N. of Kinbolton.

**LEIGNE**, a river of France, which runs into the Seine; S. of Bar.

**LEIMBACH**, a town of Germany, in Upper Saxony; one mile NE. of Mansfeld.

**LEIN**, a river of Germany, in Suabia.

**LEINA**, a river of Brunswick-Lunenbug, which rises on the borders of Hesse-Cassel, and passing by Göttingen, Calenberg, and Hanover, falls into the Aller.

(1.) **LEININGEN**, or **LINANGE**, a late county of Germany, in the palatinate of the Rhine, now included in the French republic, and dep. of Mont Tonnerre. It is fertile in corn, wine, and fruits.

(2.) **LEININGEN**, **NEW**, a town of the French republic, with a fort; late capital of the above county; 11 miles SW. of Worms, and 30 S. of Mentz. Lon. 8. 22. E. Lat. 49. 30. N.

(3.) **LEININGEN**, **OLD**, a town and castle, 3 miles SW. of New Leiningen.

**LEINSTER**, the eastern province of Ireland, bounded by Ulster on the N.; St George's, or the Irish Channel, on the E. and S.; and by the provinces of Connaught and Munster on the W. The capital of this province and of the kingdom is Dublin. It contains 12 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's-county, Longford, Louth, Meath, Queen's-county, West Meath, Wexford, and Wicklow. It is the most level, fertile, and best cultivated province in the kingdom; containing 2,642,958 Irish plantation acres, 858 parishes, 99 baronies, and 53 boroughs. It is about 124 miles long, and 74 broad, and extends from 51° 45' to 55° 45' Lat. N. Mr Cruttwell makes it only 104 miles long, 55 broad, and 360 in circuit. The chief rivers are the Barrow, Boyne, and Liffey. Dermot king of Leinster, marrying his daughter Eva to Strongbow earl of Pembroke, made him his heir; whereby the Earl inherited Leinster, and was afterwards infeoffed of it by Henry II. He died in 1176, and left an only daughter Isabel, espoused to William Marshal earl of Pembroke; by her he had five sons, who succeeded to his great estates in Leinster. In the early ages, this district was almost one continued forest.

**LEIPHEIM**, a town of Suabia, in Ulm, on the S. bank of the Danube; 11 miles NE. of Ulm, and 22 WNW. of Augsburg. It was pillaged in 1634.

**LEIPPE**, a town of Silesia, in Neisse.

(1.) **LEIPSICK**, or } a large, strong, and popu-

(1.) **LEIPZIG**, } lous town of Misnia, with a castle, and a famous university. It is neat, and regularly built, and the streets are lighted in the night; it carries on a great trade, and has a right to stop and sell the merchandize designed to pass through it, and the country for 75 miles round has the same privilege. There are three great fairs every year; at the new year, Easter and Michaelmas, which last 15 days each. There are six handsome colleges belonging to the university, besides the private colleges; and the exchange is a fine structure. The town was taken by the king of Prussia, but given up by the peace in 1763. It is seated in a plain between the Saale and Muld, near the confluence of the Playffe, the Elster, and the Barde. Lon. 12. 55. E. Lat. 51. 19. N.

Raab in Hungary; after which both fall into the Danube, 9 miles W. of Comorn.

(1.) LEITH, anciently called *Inverleith*, the port of Edinburgh, is seated on the banks of the Forth, about two miles from the capital. It is built on both sides of the harbour; by which it is divided into two parts, called NORTH and SOUTH LEITH. The communication between these was by a stone bridge of three arches, founded by Robert Ballentine abbot of Holyrood-house in 1493, and lately pulled down.—The harbour is formed by the conflux of the river, called the *Water of Leith*, with the Frith of Forth. The depth of water, at neap tides, is about 9 feet; but in high spring tides, it is about 16 feet. In the beginning of the 18th century, the town council of Edinburgh improved the harbour at an enormous expence, by extending a stone pier a considerable way into the sea. In 1777, they erected an additional stone quay towards its W. side. Upwards of 100 ships could then lie conveniently in this port; but it can now admit of a much greater number, in consequence of having lately undergone great improvements. The old bridge has been pulled down, and an elegant draw-bridge erected a little to the E. of the former site. It is accommodated with wet and dry docks, and other conveniences for ship-building, which is there carried on to some extent, as vessels come to Leith to be repaired from all parts of Scotland. The road of Leith affords good anchorage for ships of the greatest size. The harbour was granted to the community of Edinburgh by king Robert I. in 1326; but the banks of the harbour belonged to Logan of Restalrig, a turbulent baron, from whom the citizens purchased the bank between the houses and the river, (N<sup>o</sup> 2.) for the purpose of erecting wharfs, shops and granaries. As the situation of Leith, however, is much more convenient for trade than that of Edinburgh, the inhabitants of the metropolis fell upon various methods to restrain the trade of Leith. They first purchased from Logan of Restalrig, an exclusive privilege of carrying on every species of traffic in the town of Leith, and of keeping warehouses and inns for the entertainment of strangers in that place; and in 1483, the town council prohibited, under severe penalties, the citizens of Edinburgh from taking into partnership any inhabitant of Leith. To free themselves from this oppression, the people of Leith purchased the superiority of their town from Logan, for 3000l. Scots, and it was erected into a burgh of barony by the queen regent, Mary of Lorraine, who promised to erect it into a royal borough. She died, however, before this was accomplished; and upon her death, Francis and Mary, in violation of the private rights of the people of Leith, re-sold the superiority to the town of Edinburgh, to whom it has since been confirmed by grants from successive sovereigns. On the breaking out of the disturbances at the Reformation, the queen regent caused the whole town to be fortified, that the French troops might have a more ready inlet into the kingdom. It was accordingly surrounded with a wall, having eight bastions: but this wall went no farther than the street now called *Bernard's Nook*, because at that time the sea came up the length of

that street. All that space, therefore, on which the row of houses nearest the harbour of Leith now stands, has been gained since that time from the sea. In the time of Charles I. a fortification was erected at Leith by the Covenanters. Cromwell built a strong fort at the place called the *Citadel* in North Leith; but it was pulled down on the restoration of Charles II. by order of government. The gate and portcullices still, however, remain. A palace also formerly stood here, situated at the NE. boundary of the former town, where the weigh-house now stands. It was destroyed by the English in the time of Henry VIII. The remains of this building, called the *king's work*, with a garden, and a piece of waste land that surrounded it, was erected into a barony by James VI. and bestowed upon Bernard Lindsay of Lochiell, his groom of the chamber; who repaired, and appropriated it to the recreations of the court; but it soon fell from its dignity. The tennis court was converted into a weigh-house; and the street which bounds it is still called *Bernard's Nook*. As Leith lay within the parish of Restalrig, the church of Restalrig was the place of worship for the inhabitants of Leith; but in 1650 the Assembly ordered that church to be pulled down as a monument of idolatry, so that Leith wanted a parish church for upwards of 50 years. During that period they resorted for worship to a large and beautiful chapel, dedicated to St Mary, now called *South Leith church*; and in 1609 this chapel was by authority of parliament declared to be the parish church of the district; so that Restalrig is now in the parish of South Leith, as the latter was formerly in that of Restalrig. (See N<sup>o</sup> 7.) In 1772 a Chapel of Ease was erected by the inhabitants. There are also an episcopal and several other dissenting congregations in Leith. North Leith church is situated at the site of the N. end of the old bridge. A very great trade is carried on between Leith and many foreign ports. In 1784, the trade in flax, hemp, iron, athes, tar, wood, tea, spirits, groceries, wine, hops, soap, candles, and ropes, amounted to 495,000l.; besides 190,000 bolls of grain imported, at 161,000l. For the particulars, see *Sir J. Simlair's Stat. Acc.* Vol. VI. p. 569, 570. In general, the imports from France, Spain, and Portugal, are wines, brandy, and fruits; from the West Indies and America, rice, indigo, rum, sugar, and logwood. But the principal foreign trade of Leith is by the eastern seas, for the navigation of which it is most happily situated. To Germany, Holland, and the Baltic, it exports lead, glass ware, linen and woollen stuffs, and a variety of other goods; and imports immense quantities of timber, oak-bark, hides, linen rags, pearl athes, flax, hemp, tar, and many other articles. In 1784, there were 1774 ships cleared at the custom-house of Leith. And from Nov. 13th 1786 to Nov. 13th 1787, there arrived in Leith harbour, 1708 vessels, carrying 105,223 tons. (*Vide ibid.*) The Baltic trade, however, is at present rather on the decline; the great extent to which it was carried on for some years past having been chiefly owing to the vast increase of new buildings in Edinburgh and its environs. The coasting trade is at present the principal branch that employs the shipping at Leith, including

the

other ports on the Forth, 4th of the tonnage of the Nov. 11th 1786, and Nov. 11th 1787, in from ports in the Frith with coals and other goods, The ships employed in in general of a large size, and furnished with excellent passengers. They make 4 voyages up and down in the year. Ships in this port, however, are those of the Great Britain and fishery. The demand for cordage, is very considerable. There were lately three different companies carried on these manufactures, by private persons who dealt less consistently. The first of those companies was established at the beginning of the 18th century; and made, it is said, larger dividends and profits than any trading or manufacturing company in the nation. There are also many private manufacturers. In the middle of the 17th century, a manufactory of green glass was established at the citadel of Leith. Chopin bottles were sold at 4s. 6d. per dozen, and other bottles in proportion. Soon afterwards this article was manufactured also in North Leith; and, in 1707, chopin bottles were sold at 2s. 6d. per dozen, and others in proportion. That house being burnt down in 1746, a new house was built the following year on South Leith sands, and an additional one in 1764. The annual expence of both houses was between 8000l. and 9000l. Another was afterwards added, and three more have lately been erected. They manufacture not only bottles, but also window glass and crystal ware of all sorts. Manufactures of soft soap and candles were erected by St Clair of Rossin and Tome merchants; the former in 1750, and the latter in 1770: a manufactory of hard soap was also established in 1770. There are also a considerable manufactory for making cards with which wool is combed, a great carpet factory, and several iron forges. The inhabitants of Leith were divided into 4 classes, erected into corporations by the queen dowager, Mary of Lorraine; viz. mariners, maltmen, trades, and traffickers. The first consisted of ship-masters and sailors; the 2d of malt-makers and brewers; the 3d of coopers, bakers, smiths, wrights, &c.; and the 4th of merchants and shop-keepers. Of these the mariners are the most considerable. They obtained from Mary of Lorraine a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the support of their poor. This duty, which some years ago did not amount to 40l. a-year, now rises from 70l. to 120l. whereby this corporation is enabled to pay from 600l. to 700l. a-year to their poor. Opposite to South Leith church there is a large house belonging to them, called the *Trinity-hospital*, wherein some of their poor used formerly to be maintained, but now they are all out-pensioners. This hospital contains a large handsome hall for the meetings of the corporation. Near the school-house there is another hospital called *King James's hospital*; which bears upon its front his cypher and arms. Here some poor women belonging to the other

corporations are maintained. As Leith well supplied with water, and the streets were either properly cleaned nor lighted, an act was passed in 1771, appointing certain magistrates Edinburgh, lords of session, inhabitants of Edinburgh and Leith, and members of the corporations of Leith, *commissioners of the police*, empowering them to levy a sum not exceeding in the pound upon the valued rent of Leith great change which has since taken place in the streets of Leith shows the good effect of it and that it has both been judiciously provided and attentively executed. Leith is computed to contain 13,000 inhabitants. (See § 5 and 7 government of the town is vested in a magistrate from Edinburgh, having admiral's jurisdiction and in two residing bailies elected by the council of Edinburgh. See EDINBURGH, § 2.)

(2.) LEITH, OR THE WATER OF LEITH, a town in Scotland, in Mid Lothian, which rises at *Head*, in the W. extremity of the parish of *Frith*, from 3 large springs; and after receiving numerous additions from various rivulets, in a 14 miles, falls into the Frith of Forth at *Leith*. In this short space it drives about 80 mills of several kinds, the rent of some of which, in the immediate vicinity of Edinburgh, is upwards of 20l. Ster. per foot of water fall.

(3.) LEITH, OF LEITH HILL, a hill in Surrey affords a fine prospect of the surrounding country.

(4.) LEITH, a village of York, near Wharfedale.

(5.) LEITH, NORTH, a parish of Scotland in Mid Lothian, originally belonging to that of *Leith*, from which it was disjoined in 1711 when it contained only the village of *North Leith* and the *Coal hill*; but it was enlarged in 1712 by the addition of the baronies of *Newhavill* and *House-field*. It extends about a mile in length, and  $\frac{1}{4}$  of a mile in breadth, along the coast of the Frith of Forth; and comprehends about 170 acres, of which 20 are in kitchen garden. The soil is light and sandy, but is all improved and produces wheat, barley, clover and pease. The population, in 1791 was 642 families, or 2568 souls; Increase 209 since 1755. The patronage of this parish is vested in the heads of families to their honour they have been unanimous in their choice of ministers for above 100 years.

(6.) LEITH, NORTH, a village in the parish of *Leith*, consisting of the NW. part of the town of *Leith*. See N° 1.

(7.) LEITH, SOUTH, a parish of Mid Lothian comprehending the whole town of *Leith*, as described, (See N° 1.) except the village of *Leith*, (N° 6.) together with the villages of *Talrig*, *Abbey-Hill*, and *Calton* of *Edinburgh* (See *CALTON*, N° 1. and 3.) The total population, in 1791, was 2,893 families, or 11,432 souls: Increase since 1755, no less than 4,232.

(8.) LEITH, WATER OF. See N° 2.

(9.) LEITH, WATER OF, a village of Mid Lothian, about a mile W. of Edinburgh, forming the *Leith*, in a very romantic situation.

LEITHEN, a river of Scotland, in the county of Tweeddale, which falls into the Tweed in the middle of the parish of *Innerleithen*.

LEITH-HILL, a town of Surrey, which

 Conolly. It has 3 fairs.

FIELD, a town of Yorkshire, in the  
 on the N. side of Beverly.

M, a town S. of Chippenham, Wilts.

AND, John, the great English anti-  
 s born in London about the year 1507.  
 t his parents when a child, he found a  
 patron in Mr Thomas Miles, who pla-  
 St Paul's school, of which the gram-  
 yle was master. From that school, he  
 o Cambridge, and after some years, to  
 From Oxford he went to Paris, chiefly  
 ign to study the Greek language, which  
 at little understood in this kingdom. On  
 to England he took orders, and was ap-  
 applain to Henry VIII. who also gave  
 ctory of Poppeling, in the marshes of  
 pointed him his librarian, and in 1533  
 king's antiquary; an office never born  
 her person before or since. By this com-  
 : was empowered to search for ancient  
 n all the libraries of colleges, abbeys,  
 &c. in his majesty's dominions. It is  
 he renounced popery soon after his re-  
 ngland. In 1536, he obtained a dispen-  
 keep a curate at Poppeling, and set out  
 ury in search of antiquities. In this em-  
 he spent six years, during which time  
 III. PART I.

he visited every part of England, where monuments  
 of antiquity were to be expected. After his re-  
 turn, in 1542, the king gave him the rich rectory  
 of Haseley in Oxfordshire; and in 1555, a pre-  
 bend of King's College, now Christ's church, in  
 Oxford, besides that of E. and W. Knowle, in Sal-  
 isbury. Being thus amply provided for, he re-  
 tired to a house of his own in the parish of St Mi-  
 chael le Querne in London, where he spent six  
 years in digesting the materials he had collected.  
 Henry VIII. died in 1547; and not long after,  
 Leland lost his senses. In this dreadful state he  
 continued till 1552, when he died. He was a  
 man of great learning, an universal linguist,  
 an excellent Latin poet, and a most indefatigable and  
 skilful antiquary. On his death, Edward VI. gave  
 all his papers to Sir John Checke, his tutor and  
 Latin secretary of state. The king dying, and Sir  
 John being obliged to leave the kingdom, he gave  
 4 folio volumes of Leland's collections to Hum-  
 phrey Purefoy, Esq; which, in 1612, were by his  
 son given to William Burton, author of the histo-  
 ry of Leicestershire. This gentleman also became  
 possessed of the *Itinerary* in 8 vols folio, which, in  
 1632, he deposited in the Bodleian library. Ma-  
 ny other of Leland's MSS. after the death of  
 Sir John Checke, fell into the hands of lord Pa-  
 get, Sir William Cecil, and others, and at last for-  
 tunately came into the possession of Sir John Cot-  
 ton. These MSS. were of great use to all our  
 subsequent antiquarians, particularly Cambden,  
 Sir William Dugdale, Stowe, Lambard, Dr Bat-  
 teley, Ant. Wood, &c. His *Itinerary throughout*  
*most parts of England and Wales*, was published  
 by Mr Hearne, in 9 vols 8vo. in 1710-11; as was al-  
 so his *Collectanea de rebus Britannicis*, in 6 vols 8vo,  
 in 1715.

(2.) LELAND, John, an eminent writer in de-  
 fence of Christianity, born at Wigan in Lanca-  
 shire in 1691, of pious and virtuous parents.  
 They took the earliest care to season his mind  
 with proper instructions; but, in his 6th year, the  
 small pox deprived him of his understanding and  
 memory, and expunged all his former ideas. He  
 continued in this deplorable state near a year,  
 when his faculties seemed to spring up anew; and  
 though he did not retain the least trace of any im-  
 pressions made on him before the distemper, he  
 now discovered a quick apprehension and strong  
 memory. In a few years after, his parents settled  
 in Dublin, which gave him an easy introduction  
 to learning and the sciences. When properly qual-  
 ified, he was called to be pastor to a congrega-  
 tion of Protestant dissenters in that city. He was  
 an able preacher, but his labours were not confin-  
 ed to the pulpit. The many attacks made on  
 Christianity, and by some writers of no contemp-  
 tible abilities, led him to examine the subject with  
 the strictest care. Upon the most deliberate in-  
 quiry, the truth and divine original, as well as  
 the excellence and importance of Christianity, ap-  
 pearing to him with great lustre, he published an-  
 swers to several authors who successively appear-  
 ed in that cause. He was indeed a master in  
 this controversy; and his history of it, entitled,  
*A view of the Dissical Writers, that have appeared*  
*in England, in the last and present Century*, &c. is  
 highly and justly esteemed. In the decline of life

he published another labours work, entitled, "The Advantage and Necessity of the Christian Revelation, shown from the State of Religion in the ancient Heathen World, especially with respect to the Knowledge and Worship of the One true God; a Rule of moral Duty, and a State of future Rewards and Punishments; to which is prefixed, a long preliminary Discourse on Natural and Revealed Religion." 2 vols 4to. This noble and extensive subject, the several parts of which have been slightly and occasionally handled by other writers, Leland has treated at large with the greatest care, accuracy, and candour. And, in his *View of the Deistical Writers*, his cool and dispassionate manner of treating their arguments, and his solid confutation of them, have contributed more to depress the cause of atheism and infidelity, than the angry zeal of warm disputants. But not only his learning and abilities, but also his amiable temper, great modesty, and exemplary life, recommended him to general esteem and affection. He died in 1766, or in 1761, according to Dr Watkins.

(3.) LELAND, Thomas, LL.D. a late learned writer, born at Dublin, in 1722. He was a member of the university in that city. He wrote, 1. *A History of Ireland*; 2. *The Life of Philip K. of Macedon*; and 3. *A translation of Demosthenes Oration*s. He died in 1785, aged 63.

(4.) LELAND, in geography, a small town in Cornwall, 5 miles from Penzance.

LELANONIUS, the name given by Ptolemy to the Leven. See LEVEN, N° I.

LELCZA, a town of Poland, in Volhynia.

LELEGEIS, the ancient name of MILETUS, from the LELEGES, the first inhabitants of it.

(1.) LELEGES an ancient people of Asia, of Greek original; the name denoting a collection of people. They first occupied the islands; then passing over to the continent, they settled partly in Mysia on the Sinus Adramyttenus, and partly in that part of Ionia next to Caria.

(2.) LELEGES, a people of Laconia, who went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnassus, where they fixed their habitation.

(3.) LELEGES, a name given to the inhabitants of Megara for some time, from LEX one of their kings.

LELEGIA, an ancient name of LACONIA.

(1.) LELLEX, an Egyptian, who came with a colony to Megara, where he reigned about 200 years before the Trojan war.

(2.) LELLEX, the first king of Laconia in Peloponnesus. His subjects were called LELEGES, and the country where he reigned LELEGIA.

LELONG, James, a French ecclesiastic, born in 1655. He wrote a curious work, entitled, *An Historical Library of France*. He died in 1721, aged 66.

LELOW, a town of Poland, in Cracow.

LELUNDA, a river of Africa, in Congo.

LELY, Sir Peter, an excellent painter, born in Westphalia in 1617. He was a disciple of Peter Grebber at Haerlem; and in 1641 was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became state pain-

ter to Charles II. who knighted him; an pleasure in conversing with him. As a painter, he was preferred before all his countrymen. Hence he became so perpetually in business, that he was prevented from going to Italy to finish his studies. To compensate this, he procured the best drawings, printings, of the most celebrated Italian artists. Among these were part of the Arundel collection, which he got from that family, many of which were sold after his death at prodigious prices, bearing upon them his usual mark of P. I. In his correct draught and beautiful coloring, but especially in the graceful airs of his figures, and the pleasing variety of his postures, with the gentle and loose management of his pencil, he excelled most of his predecessors. Critics remark, that he preserved in almost all his female faces a drowsy sweetness of the eye, peculiar to himself; for which he is reckoned a great artist. The hands of his portraits are remarkably fine and elegantly turned; and he frequented landscapes in the back grounds of his pictures, in a style peculiar to himself. He excelled likewise in crayon-painting. He became enamoured of a beautiful English lady, who was married; and he purchased an estate at Keyrey to which he often retired. He died of a poplexy in 1680, at London; and was buried in Covent-garden church, where a marble monument is erected to his memory, with his Latin epitaph.

(1.) \* LEMAN. *n. f.* [Generally supposed to be *lamant*, the lover, French; but imagined to be *lemant*, with almost equal probability, to be from *leef*, Dutch, or *lof*, Saxon, *beloved*. This etymology is strongly supported by the present orthography, according to which it is written *leueman*.] A sweetheart; a gallant or lover. *Hammer*.—

Hold for my sake, and doom him not  
But vanquish'd, thine eternal bondslave  
And me thy worthy meed unto thy *lem*

Drink unto the *leman* mine.

(2.) LEMAN, in geography, a river of the shire, which runs into the Eux, near Tivert.

(3.) LEMAN, or LAC LEMAN, a department of the French republic, comprehending the former republic of Geneva; so named from LEMANUS, the ancient name of the lake of Geneva, § I, 1; and 12, N° II.

LEMANIS, or LEMANNUS, in ancient geography, a town in S. Britain, where Julius Cæsar first landed; supposed to be either 1. Dorsetshire, or LIME-HILL in Kent.

LEMANUS, or LEMANNUS, the ancient name of the lake of Geneva. See GENEVA, § 12.

LEMBA, a town of Africa, in Congo.

LEMBACH, 2 towns of Germany: 1. in the principality of Aigen; 2. in Stiria, 3 m. S. of Marburg.

(1.) LEMBECK, a town of the French republic, in the dep. of Escaut, and late prov. of Flanders; 8 miles S. of Ghent.

(2.) LEMBECK, a town of Germany, in the

**LEGE**, a town of France, in the dep. of France, 15 miles NW of Tarbe, and 15 mi.

**LEMBERG**, a town of France, in the dep. of France, 4 miles SW. of Bitche.

**LEMBERG**, a town of the French republic, dep. of Mont Tonnerre, 14 miles SW. of Mont, and 18 W. of Landau.

**LEMBERG**, or **LEMBURG**, a ci-devant palatinate, in Red Russia, which now forms the modern kingdom of Galicia. See GALICIA.

**LEMBERG**, a town of Poland, late capital of Russia, and of the ci-devant palatinate of Galicia, on the Peñter; now the capital of the Austrian kingdom of Galicia. See GALICIA, N° 3. It was originally named **LEO** after the emperor **LEO I.** who built it. It well fortified, and defended by two citadels of which is seated on an eminence with a square. The square, the churches and the buildings, are magnificent; and it is a large trading place. It has a Roman catholic church, and an Armenian as well as a Russian; but the protestants are not tolerated; was reduced to the last extremity by the Cossacks and Tartars, but was redeemed for the sum of money. In 1672, it was besieged by the Turks; but in 1704, was taken by Charles XII. It is 130 miles from Cracow, and 117 S. of Warsaw. Lon. 24. E. 49. 51. N.

**LEMBERG**, a town of Stiria, 5 miles N. of Trieste.

**LENGHE**, a town of the French republic, in the dep. of the Scheldt; 6 miles S. of Ghent.

**LENGUE**, a river of France, which runs into the sea, near Moissac.

**LENGUE**, or **LENGUE**, an island of the Archipelago, on the coast of Romania, 22 miles in circumference; with a town, river, and harbor of the same name, anciently called **Imbros**; Lon. 26. 40. 25. N.

**LENGUE**. See **LEMBERG**, N° 3 and 4.

**LENGUE**, a river of Maritime Austria, in Friuli, runs into the Adriatic, near Caorla.

**LEMERY**, Nicholas, a celebrated chemist, born in Normandy in 1618. After having finished the tour of France, he, in 1672, contracted an acquaintance with **M. Martyn** apothecary; and performed several courses of experiments in his laboratory at the Hotel de Clugny, which brought him to the knowledge of the principles of the art. Having procured a laboratory of his own, he gave lectures on chemistry, attended by such numbers of scholars, that he was obliged to allow him room to perform his operations in the first modern chemical laboratory, who he dispensed the senseless jargon of barbarous terms, and endeavored to clear and simplify ideas; and nothing that he did not perform. In 1685, he was disturbed on account of his religion; he fled to England, where he was well received by the king; but affairs not promising tranquility, he returned to France, where the revocation of the edict of Nantz made him turn Catholic, and persecutor. He then became associate professor and pensionary in the royal academy of

sciences, and died in 1715. He wrote, 1. *A Course of Chemistry*; 2. *An Universal Pharmacopœia*; 3. *An Universal Treatise of Drugs*; and 4. *A Treatise on Antimony*.

(2.) **LEMERY**, Lewis, son of the preceding, was born at Paris in 1677. He became physician to the king, and member of the Academy of Sciences. He published several papers in the Academy's Memoirs, and a *Treatise on Food*. He died in 1743.

**LEMGO**, or **LEMGOW**, a town of Westphalia, in the county of Lippe; 17 m. SW. of Minden.

**LEMMINGTON**, a town of Northumberland, 3 miles from Alnwick, in the valley of Whittingham.

(1.) **LEMMA**, *n. f.* [*lemma*, French.] A proposition previously assumed.

(2.) **LEMMA**, [*lemma*, Latin.] in mathematics, denotes a proposition, laid down to clear the way for some following demonstration; and prefixed either to theorems, to render their demonstration less intricate; or to problems to make their resolution more easy. Thus, to prove a pyramid one third of a prism, or parallelepiped, of the same base and height with it, the demonstration whereof in the ordinary way is difficult and troublesome; this lemma may be premised, which is proved in the rules of progression, that the sum of the series of the squares in numbers in arithmetical progression, beginning from 0, and going on 1, 4, 9, 16, 25, 36, &c. is always subscrip of the sum of as many terms, each equal to the greatest; or is always one 3d of the greatest term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is first premised, that a tangent may be drawn to the given curve in a given point. So in physics, to the demonstration of most propositions, such lemmata as these are necessary first to be allowed; that there is no penetration of dimensions; that all matter is divisible; and the like: and in medicine, that where the blood circulates, there is life, &c.

**LEMME**, a sea port of the Batavian republic, in the dep. of Eems, and late prov. of Prinsland, on the Zuyder Zee, 15 miles W. from Stavoren, and 20 E. of Ewarden.

**LEMMING**, a small animal, in zoology. See **MUS**.

**LEMMA**, **DUCK'S MEAT**, in botany, a genus of the diandria order, belonging to the monocœcia class of plants; and in the natural method ranking under the 14th order, *Alph. Musci*. The male calyx is monophyllous; there is no corolla; the female calyx monophyllous; there is no corolla, one style; the capsule unilocular. There are 7 species, all natives of Britain, growing in ditches and stagnant waters; all acceptable food for ducks and geese.

**LEMNIAN EARTH**, a medicinal, astringent, of a fatty consistence and reddish colour; used in the same cases as **BOLE**. It has its name from the island of Lemnos, whence it is chiefly brought. Many form it into round cakes, and impress a seal upon it; whence it is also called *terra sigillata*. A sort is said to be imported from Senegal, which is not properly an earth, though so called, but

composed of the dried pulp of the fruit of the **BAOBAB**.

**LEMNITZ**, a town of Saxony, in Neustadt.

**LEMNIUS**, Lævinius, a famous physician, born at Zeric-Zee in Zealand, in 1505. He practised physic with applause; and after his wife's death being made priest, became canon of Zeric-Zee, where he died in 1569. He wrote 1. An Account of the Plants mentioned in Scripture: 2. a book on Astrology: 3. *De oculis naturæ miraculis*.

**LEMNOS**, in ancient geography, an island in the Ægean sea, near Thrace, called also *Dipolis*, from its consisting of two towns. The first inhabitants were the PELASGI, or rather the Thracians, who were murdered by their wives. After them came the children of the Lemnian widows by the Argonauts, whose descendants were at last expelled by the Pelasgi, about A. A. C. 1109. Lemnos is about 112 miles in circumference according to Pliny; who says, that it is often shadowed by mount Athos, though at the distance of 87 miles! It has been called **HIPSIPYLE** from queen Hipsipyle. The inhabitants being mostly blacksmiths, the poets have fixed the forges of Vulcan in that island, and consecrated it to his divinity. Lemnos is also celebrated for a labyrinth, which, according to some, surpassed those of Crete and Egypt. Some remains of it were visible in the age of Pliny. Lemnos was reduced under the power of Athens by Miltiades. It is now called **STALIMENE**.

**LEMO**, a river of Italy, which rises in the Ligurian republic and runs into the Orba, in the Alexandrine.

(1.) \* **LEMON**. *n. f.* [*limon*. Fr. *limonium*, low Lat.] 1. The fruit of the lemon tree.—The juice of lemons is more cooling and astringent than that of oranges. *Arbutobot.*—The dyers use it for dyeing of bright yellows and lemon colours. *Mortimer*. Bear me, Pomona!

To where the lemon and the piercing lime,

Their lighter glories blend. *Thomson*.

2. The tree that bears lemons.—The lemon tree hath large stiff leaves; the flower consists of many leaves, which expand in form of a rose: the fruit is almost of an oval figure, and divided into several cells, in which are lodged hard seeds, surrounded by a thick fleshy substance, which for the most part, is full of an acid juice. There are many varieties of this tree, and the fruit is yearly imported from Lisbon in great plenty. *Miller*.

(2.) **LEMON**, in botany. See **CITRUS**, N<sup>o</sup> 1. § 2.

(3.) **LEMON**, George William, an English divine and lexicographer of considerable learning and industry. He was born in 1726; and published *An Etymological English Dictionary*, in one vol. 4to. which is esteemed. He died in 1797, aged 71.

(4.) **LEMON**, IMPREGNATED. See **COOK**, N<sup>o</sup> III, § 13.

(5.) **LEMON ISLAND**, one of the Skelig Islands, situated off the coast of Kerry, in Munster, Ireland. It is a round rock, always above water, and therefore no way dangerous to ships. An incredible number of gannets and other birds breed here; and it is remarkable that the gannets

nestles no where on the coast of Ireland but on this rock on the S. and another on the N. coast, though many of them are seen on all parts of our coasts on the wing.

(6.) **LEMON**, WATER. See **PASSIFLORA**.

\* **LEMONADE**. *n. f.* [from *lemou*.] Liquor made of water, sugar, and the juice of lemons.—Thou, and thy wife, and children, should walk in my gardens, buy toys, and drink lemonade. *Arbutobot*.

**LEMOSANO**, a town of Naples, in Molise.

**LEMOVICES**, a people of Aquitania, situated between the Bituriges Cubi on the N. the Arverni on the E. the Cadurci on the S. and the Pictones on the W. Before the revolution, this country was called LIMOSIN and LA MARCHE.

**LEMOVII**, an ancient people of Germany.

**LEMPACH**, a town of Austria, 14 miles WSW. of Vienna.

**LEMPDE**, a town of France, in the dep. of Upper Loire, 24 miles N. of St Flour.

**LEMPES**, a town of France, in the dep. of Isere, 18 miles NW. of Grenoble, and 13 S. of Tou du Pin.

(1.) **LEMPTA**, a desert country of Africa, inhabited by a fierce people who rob the caravans between Constantina and Nubia. Lon. 9. 0 E. Lat. 26. 30. N.

(2.) **LEMPTA**, a town of Tunis, on the E. coast.

(3.) **LEMPTA**, a river of Africa, in Calbari.

**LEMPVIG**, a town of Denmark in Jutland.

**LEMUR**, the MAUCAUCO, in zoology a genus of the mammalia class of quadrupeds, and of the order of primates: The characters are these. There are 4 fore teeth in the upper jaw, the intermediate ones being remote; and six long, compressed, parallel teeth in the under jaw; the dog teeth are solitary, and the grinders somewhat lobated. See *Plates* 199 and 200. Mr Kerr and Dr Gmelin enumerates 13 species; viz.

1. **LEMUR BICOLOR**, the *American Maucauco* inhabits S. America. It has a tail; the upper parts of the body are a blackish grey, the under a dirty white colour; with a heart-shaped spot of the same colour on the fore-head. The head resembles a bull-dog; the toes have narrow sharp claws.

2. **LEMUR CATTÀ**, the *ring-tailed Maucauco*, inhabits Madagascar, Mauritius, Joanna, and the neighbouring African continent. It is of the size of a cat; has the hair on the top and hind part of the head of a deep ash-colour, the back and sides reddish, the belly and insides of the limbs white; all its hair is very soft, close and fine, and erect like the pile of velvet; the tail is twice the length of the body. It is very good natured, and has all the life of a monkey, without its mischievous disposition; it is very cleanly, and has a weak cry. In a wild state they go in troops of 30 or 40, but are easily tamed when taken young.

3. **LEMUR ECAUDATUS**, the *tail-less maucauco* a small animal found in Bengal and the island of Ceylon. It is of a very singular construction, and perhaps longer in proportion to its thickness than any other quadruped. The head is roundish, with a sharp-pointed nose, and small ears: the body is covered with short, soft, and silky ash-coloured and reddish fur: the toes are naked, and

excepting those of the inner toe on foot, which are long, crooked, and length from the nose to the rump is it lives in the woods, and feeds on same state, it appears to be fond of vours small birds. This animal less of the sloth, and creeps slowly along it is very tenacious of its hold, and native noise. Some confound this species: LORIS, (See N<sup>o</sup> 12.) Mr Kerr says, some confusion among authors in their of the two last animals: for *this* ought LEMUR TARDIGRADUS of Linnæus, at manners."

LE MUR INDRI, the *Indri*, inhabits Madag- is black and has no tail; is about 3½ us 8 canine teeth in each jaw; 2 cut- the upper jaw, and 4 close set in the the feet have 5 toes, with flat sharp great toes are very large; the hair is ick; grey on the face, white and cur- ump; all the rest black. It is easily voice resembles that of a child.

LE MUR LANIGER, the curly *Maucauco*, in- agascar. It is of a brick-dust colour er parts, and white on the under; the the tail a tawney red. The head and 12 inches long; the tail 9. It has 2 the upper, and 4 in the lower jaw: large; the ears small: the paws have the thumbs and great toes have flat ills; the rest pointed claws. The hair t and curled like wool; whence the

LE MUR MACACO, or CAUDATUS, the *ruffed* or the *VARI* of Buffon, is an inhabitant scar. It is somewhat larger than the (N<sup>o</sup> 2.) and has long hair standing out sides of the head like a ruff: a long tail; of the whole animal generally black, mes white spotted with black. In a it is very fierce; and makes such a se in the woods, that the cries of two easily mistaken for the noise made by Ker distinguishes 4 varieties of this spe- *Black, Brown, White and Pied Vari.*

LE MUR MONGOZ, the MONGOOZ, or *woolly* inhabits Madagafcar, and the islands ward as far as Celebes. It is about the it, and has the whole upper part of the the tail covered with long, soft and a little curled or waved, of a deep ash-colour; the tail is very long. It uits, turns its tail over its head to prom- rain, and sleeps on trees; it is very id good-natured; and very tender. Mr bes 5 varieties of the Mongous; viz. 1. he *Black-faced*; 2. *Negro*, the *Black*; 3. the *White-banded*; 4. *Fuscus*, the and 5. *Cinereus*, the *Grey Mongous*.

LE MUR MURINUS, the *Murine Maucauco*, in- dagascar; is of an ash colour, with a on tail; all the toes and fingers have flat ills.

LE MUR PODJI, the TARSIER of Buffon, nted visage; slender nose, bilobated at eyes large and prominent; ears erect, led, semitransparent; an inch and a half

long with a tuft of hair between them on the top of the head, and long hairs on each side of the nose and on the upper eye-brow. In each jaw are two cutting and two canine teeth; which form an exception in this genus. There are 4 long slender toes and a distinct thumb on each foot; the thumbs on the hind feet are very broad and greatly dilated at their ends: the tail is almost naked; the greater part round and scaly like that of a rat, but growing hairy towards the end, which is tufted. The penis is pendulous; and the scrotum and testicles are of a vast size in proportion to the animal. Its length from nose to tail is near 6 inches; to the hind toes 11½, the hind legs being of a great length; the tail is 9½ inches long. It inhabits the remotest islands of India, especially Amboina.

10. LEMUR POTTO, the *Potto*, inhabits Guinea; has a tail, and is all of a pale rusty brown colour. In other particulars it is very like the IN- DRI. See N<sup>o</sup> 4.

11. LEMUR PREHENSILIS, the *prebussle* or *lit- tle maucauco*, has a rounded head, sharp nose, long whiskers; two canine teeth in each jaw; 4 cut- ting teeth in the upper jaw, 6 in the lower: 7 grind- ers on each side; the nearest sharp, the more dis- tant lobated: the ears are large, roundish, naked, and membranaceous; the eyes very large and full. The toes are long, and of unequal lengths; the ends round; the nails round, and very short; the tail is hairy, as long as the body, and prehensile. The animal is rather less than the black rat; and in Mr Pennant's opinion, seems to be the same which Buffon calls *le rat de Madagafcar*. It is supposed to live in the palm-trees, and feed on fruits. It holds its food in its fore feet like a squirrel; is lively, and has a weak cry; and when it sleeps, it rolls itself up.

12. LEMUR TARDIGRADUS of Seba, the *Loris* of Buffon, or *SLOTH of Ceylon*, has a produced dog-like visage, with the forehead high above the nose: the ears are large, thin, and rounded: the body is slender and weak; the limbs are very long and slender; the thumb on each side is distinct, and separate from the toes: the hair on the body is universally short, and delicately soft; the co- lour on the upper part tawny, beneath whitish. From the tip of the nose to the anus, the animal is only 8 inches long. It differs totally in form and nature from the ECAUDATUS; (See N<sup>o</sup> 3.) and notwithstanding the epithet of *tardigradus* or *sloth* given in Seba, it is very active, and ascends trees most nimbly. It has the actions of an ape; and, Seba says, the male climbs the trees, and tastes the fruits, before it presents them to its mate.

13. LEMUR VOLANS; the *flying maucauco*, the *Colugo* of Pallas, or *flying cat of Ternate*, resembles a bat; being furnished with a strong membrane like that animal, by which it is enabled to fly. It inhabits the country about Guzarat, the Moluc- ca isles, and the Philippines; feeds on fruits, and is very distinct both from the bat and flying squir- rel. Mr Pennant says it is 3 feet long, nearly as broad when expanded; the tail one foot; the head long; mouth, teeth and ears small; the hair ash- coloured; the legs covered with yellow down; the paws five-toed; the claws crooked and very sharp.

**LEMURALIA:** See **LEMURIA**.

**LEMURES**, in antiquity, sprites or hobgoblins, venereal ghosts of departed persons, who were supposed to return to terrify and torment the living. These are the same with the **LARVÆ**; whom the ancients imagined to wander round the world, to frighten good people, and plague the bad. For which reason at Rome they had **LEMURIA**; or feasts instituted to appease the manes of the deceased. See **LARES**: Apuleius explains the ancient notion of manes thus: the souls of men released from the bands of the body, and freed from performing their bodily functions, become a kind of demons or genii, formerly called *lemures*. Of these *lemures*, those that were kind to their families were called *lemures familiares*; but those who, for their crimes, were condemned to wander continually, without meeting with any place of rest, and terrified good men and hurt the bad, are vulgarly called *larvæ*. See **LARVÆ**, N<sup>o</sup> 1. Apuleius observes, that, in the ancient Latin, *lemis* signified the soul of a man separated from the body by death.

**LEMURIA**, or **LEMURIALIA**, a feast solemnized at Rome on the 9th of May, to pacify the manes of the dead or in honour of the *lemures*. It was instituted by Romulus, to appease the ghost of his murdered brother Remus, which he thought was continually pursuing him to revenge the horrid crime.—The *lemuria* is therefore supposed to be a corruption of *Remuria*, i. e. the feast of Remus. Sacrifices continued for three nights, the temples were shut up, and marriages were prohibited during the solemnity. A variety of whimsical ceremonies were performed, magical words made use of; and the ghosts desired to withdraw, without endeavouring to hurt or affright their friends above ground. The chief formalities were abjuration, putting black beans into their mouths, and beating kettles and pans to make the goblins keep their distance.

**LEN**, a river of Kent, which joins the Medway, near Maidstone.

**LENA**, a great river of Asia, in Siberia, which rises in Lat. 52. 30. N. and Lon. 124. 30. E. of Ferro. After traversing a large tract of land, it divides into 5 branches, about Lat. 73°. Three of these run W. and two E. by which it runs into the icy Sea. Its three western mouths lie in 143° Lon. E. of Ferro, but the eastern one extends to 153°. The current is every where slow, and its bed entirely free from rocks. The bottom is sandy, and the banks are in some places rocky and mountains. In its course to the northern ocean, 16 large rivers fall into it.

**LENÆA**, [from *λενος*, a wine press:] a festival kept by the Greeks in honour of Bacchus, at which there was much feasting and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedies. A goat was generally sacrificed on the occasion, and treated with various marks of cruelty and contempt, as being naturally fond of browsing on the vine shoots.

**LENÆUS**, a surname of **BACCHUS**.

**LENATA**, a town of the Italian republic, in the dept. of Olona, and district (late duchy) of Milan: 4 miles S. of Milan.

**LENBERAN**, a town of Persian Armenia,

**LENCICIA**, or **LENCICZ**, a strong town Poland, and capital of a palatinate so named, which is fort-seated on a rock, in a morass on the bank of the *Blura*. It was 3 times burnt; 1st. by accident in 1262; 2dly, by the Lithuanians in 1299, and, 3dly, by the Poles, in 1656, when it was garri-soned by the Swedes. It is now annexed to Prussia, and lies 60 miles SW. of Warsaw, or 110 N. by W. of Cracow. Lon. 18. 20. E. Lat. 52. 16. N.

**LENCLOS**, Ninon DE, a celebrated lady in the court of France, of a noble family, born at Paris in 1675; famous for her wit and gallantries. Her mother was a lady of exemplary piety, and wished her to become a nun; but her father early inspired her with the love of pleasure. Having lost her parents at 14 years of age, and finding herself mistress of her own fortune and actions, she refused never to marry: she had an income of 10,000 livres a year; and, according to the lessons she had received from her father, formed a plan of life and gallantry, which she pursued till her death. Never delicate with respect to the number, but always in the choice, of her lovers, she sacrificed nothing to interest; but loved only while her taste continued; and had among her lovers the greatest lords of the court. But though thus vicious in her amours, she had many virtues.—She was constant in her friendships, faithful to what she called the laws of honour, of strict veracity, disinterested, and remarkable for the most exact probity though, with all her boasted probity, she forgot that she owed legitimacy, inheritance, and maternal affection, to her own offspring. Women of the most respectable character were proud of having her for their friend; at her house was an assemblage of every thing that was agreeable in the city and the court; and mothers were anxious to send their sons to that school of politeness and good-taste, to learn sentiments of honour and gallantry. But the illustrious Madame de Sevigne very justly remarks in her letters, that this school was dangerous to religion and the Christian virtues because the seducing maxims of Ninon Lenclos were capable of depriving the mind of those invaluable treasures. She was esteemed beautiful even in old age; and is said to have inspired violent passion at 80. She died at Paris in 1706, aged 30. She had several children; one of whom, named *César valier de Villers*, ended his life tragically. He fell in love with Ninon, without knowing that she was his mother; and when, to get rid of his solicitations, she discovered to him the secret of his birth, he stabbed himself in her presence in a fit of despair. The letters of Ninon de Lenclos to the marquis de Sevigné, were published, but are reckoned spurious. A few of her genuine letters are preserved in the works of M. St Evremont.

**LENCZICZ**. See **LENCICIA**.

**LENCZNA**, a town of Poland, in Lublin.

\* **TO LEND**. *v. a.* preterite, and part. pass. *lent*, [*leanan*, Sax. *leuten*, Dutch.] 1. To assure or supply, on condition of repayment.—

In common wordly things 'tis call'd ungrate  
With dull unwillingness to pay a debt,  
Which, with a bounteous hand, was kindly lent  
Much more to be thus opposite with Heaven.

—The

lalt not give him thy money upon usury,  
im thy victuals for increase. *Levi.*—  
dare not give, and e'en refuse to lend,  
r poor kindred, or a wanting friend.

*Dryden.*  
fer to be used on condition that it be re-  
ll lend it thee, my dear, but have no  
give it from me. *Shak.*—

fair blessing we vouchsafe to send ;  
we spare you long, though often we  
y lend. *Dryden.*

ord ; to grant in general.—Covetousness,  
sea, receives the tribute of all rivers,  
like it in lending any back again. *Decay*  
-Painting and poetry are two sisters so  
they lend to each other their names and  
is called a dumb poetry, and the other  
picture. *Dryden.*—

thy new hope, and from thy growing  
we,  
and assistance, and relieve the poor. *Dryd.*  
lend me for a while thy patience,  
and descend to hear a young man speak,

*Addison.*

Cephisa, thou

and a hand to close thy mistress' eyes.

*A. Philips.*

BAR, a town of Maritime Austria, in the  
stian Istria, 19 miles E. of Capo of Istria.

ENARA. See LENDINARA.

DER. *n. f.* [from *lend.*] 1. One who lends  
2. One who makes a trade of putting  
interest.—Let the state be answered  
ll matter, and the rest left to the lender ;  
ement be final, it will not discourage  
he that took ten in the hundred, will  
scend to eight than give over his trade.

de droves of lenders crowd the bankers  
ers  
in money. *Dryden.*

would certainly encourage the lender to  
such a time of danger. *Addison.*

NDINARA, a district of Maritime Auf-  
ie polefin of Rovigo, between Rovigo  
, containing one town and 19 villages,  
: in corn and flax.

NDINARA, a town in the above district,  
digetto ; containing 9 churches, 4 con-  
academy, and several schools ; 8 miles  
vigo.

SIEDEL, a town of Franconia, in Ho-  
one mile W. of Kirchberg.

, LOUGH, a lake of Ireland, in W. Meath,  
f. of Mullingar.

Y. See CALLANDER, N° 7.

ANT, James, a learned French writer,  
551. After studying at Saumur, he went  
lberg, where he became minister of the  
hurch, in 1684, and chaplain to the elec-  
ager Palatine. The descent of the French  
Palatinate obliged him to leave Heidel-  
683. He went to Berlin, where the elec-  
eric, afterward king of Prussia, appointed  
of the ministers. There he continued to  
distinguishing himself by his writings. He  
acher to Charlotta Sophia, Q. of Prussia ;

and after her death, to Frederick the Great. In  
1707 he took a journey to England and Holland,  
where he preached before Q. Anne. In 1712, he  
went to Helmstadt, in 1715 to Leipzig, and in  
1725 to Breslaw, to search for rare books and  
MSS. He either planned the design of the *Bibli-*  
*otbeque Germanique*, which began in 1720 ; or it  
was suggested to him by one of the learned socie-  
ty, who took the name of *Anonymous*, and ordi-  
narily met at his house. He died in 1728. His  
principal works are, 1. The History of the Coun-  
cil of Constance, 2 vols 4to : 2. A History of the  
Council of Pisa, 2 vols 4to : 3. The New Testa-  
ment translated from the Greek into the French,  
with Notes by Beaufobre and Lenfant, 2 vols 4to :  
4. The History of Pope Joan, from Spanheim's  
Latin Dissertation : 5. Several pieces in the *Bibli-*  
*otbeque Choise, La Republique des Lettres, La Biblio-*  
*theque Germanique, &c.*

LENGFELD, } two towns of Franconia, in  
LENGFURT, } the county of Wertheim.

LENGIUM, a town of Sweden, in W. Gothia.

LENGLET, Nicholas, du Fresnoy, abbe, a ce-  
lebrated French author, born at Beauvois, in 1674.

He wrote on various subjects, historical, geogra-  
phical, political, and philosophical. The follow-  
ing merit notice : 1. A Method of Studying His-  
tory, with a Catalogue of the Principal Historians  
of every age and country ; 1713. This work was  
translated into most modern languages, particu-  
larly our own, with improvements, by Richard Raw-  
linson, LL. D. and F. R. S. and published at Lon-  
don in 1730, in 2 vols 8vo. 2. A Copious Abridg-  
ment of Universal History and Biography, in chro-  
nological order, under the title of *Tablettes chrono-*  
*logiques* ; which first appeared at Paris in 1744, in  
2 vols 8vo, and was universally admired. In the  
subsequent editions he made several corrections  
and improvements ; and from one of these, an  
English translation was published at London in  
1762, in 2 vols large 8vo. Another edition ap-  
peared in 1762, in which the general history was  
brought down to 1762. Du Fresnoy, however,  
loaded his work with catalogues of saints, mar-  
tyrs, councils, synods, heresies, schisms, and other  
ecclesiastical matters, fit only for the libraries of  
Popish convents. He was secretary to the French  
ambassador at Cologne in 1705, when he disco-  
vered a plot of delivering up Mons to the English.  
In 1721, he became librarian to Prince Eugene.  
He lived 82 years, but his end was tragical ; for,  
falling asleep by the fire, he fell into it, and his  
head was nearly burnt off, before the accident was  
discovered. This happened in 1756.

(1.) \* LENGTH. *n. f.* [from *lung, Sax.*] 1. The  
extent of any thing material from end to end ; the  
longest line that can be drawn through a body.—  
There is in Ticinum a church that is in *length* 100  
feet, in breadth 20, and in height near 50 : it re-  
porteth the voice 12 or 13 times. *Bacon.* 2. Ho-  
rizontal extension.—

Stretch'd at his *length* he spurns the swarthy  
ground. *Dryden.*

3. Comparative extent ; a certain portion of space  
or time : in this sense it has a plural.—

Large *lengths* of seas and shores

Between my father and my mother lay. *Shak.*

To

enemy, and Ralph, free;  
and foes, behind,  
three lengths the wind. *Hudib.*  
g with undiscover'd haste,  
length beyond the past. *Dryd.*  
or space.—  
lands, what oceans have you

ustal'd, and on what shores been  
*Dryden.*

idea of duration, the next  
measure of this common du-  
ge of its different lengths.  
tion or protraction.—

H great monarch, still augment

length of days, and every day like this.

*Dryden.*

Such toil requir'd the Roman name,

Such length of labour for so vast;  
—In length of time it will cover the  
and make one mountain with that  
now stands. *Addison.* 6. Reach of  
any thing.—I do not recommend te  
of sciences, to those extensive length—  
moderns have advanced. *Watt's*

7. Full extent; uncontracted  
who sent me this account, will  
the worthy gentleman's name; I  
length in one of my papers. *Spelt.*  
He had marched to the length of Exet  
had some thought of besieging. *Clare*  
latter part of any assignable time.—C  
ged of things burdensome, all was b  
length unto that wherein we now sta—

A crooked stick is not stuttened, unless it be bent  
as far on the clear contrary side, that so it may  
fettle itself at the length in a middle state of even-  
ness between them both. *Hooker.* 10. At LENGTH.  
[An adverbial mode of speech. It was formerly  
written at the length.] At last; in conclusion.—

At length, at length, I have thee in my arms,  
Tho' our malevolent stars have struggled hard,  
And held us long asunder. *Dryden.*

(2.) LENGTH, in duration, (§ 1. def. 5.) is ap-  
plied to any space of time, whether long or short.

(1.) \* To LENGTHEN. . . a. [from length.] 1.  
To draw out; to make longer; to elongate.—Re-  
laxing the fibres, is making them flexible, or easy  
to be lengthened without rupture. *Arbutnot.*—

Falling dews with spangles deck'd the glade,  
And the low sun had lengthen'd every shade. *Pope.*

2. To protract; to continue.—

Frame your mind to mirth and merriment,  
Which bars a thousand harms, and lengthens life.

*Shakesp.*

—Break off thy sins by righteousness, and thine  
iniquities by shewing mercy to the poor; if it may  
be a lengthening of thy tranquillity. *Dan.* iv. 27.—  
It is in our power to secure to ourselves an interest  
in the divine mercies that are yet to come, and to  
lengthen the course of our present prosperity. *At-*  
*terbury's Sermons.* 3. To protract pronunciation.  
—The learned languages were less constrained in  
the quantity of every syllable, beside helps of  
grammatical figures for the lengthening or abbre-  
viation of them. *Dryden.* 4. To LENGTHEN out.

[The particle out is only emphatical.] T  
tract; to extend.—

What if I please to lengthen out his da  
A day, and take a pride to cozen fate?

I'd hoard up every moment of my lif

To lengthen out the payment of my tears

—It lengthens out every act of worship, an  
duces more lasting and permanent impre  
the mind, than those which accompany an  
sient form of words. *Addison.*

(2.) \* To LENGTHEN. v. n. To grow  
to increase in length.—One may as well  
yard, whose parts lengthen and shrink, as  
sure of trade in materials, that have not a  
settled value. *Locke.*—

Still 'tis farther from its end;

Still finds its error lengthen with its way

LENGTHENING, part. adj. in ship car  
the operation of cutting a ship down ac  
middle, and adding a certain portion to her  
It is performed by sawing her planks aft  
different places of her length, on each sid  
midship frame, to prevent her from being to  
weakened in one place. The two ends  
drawn apart to a limited distance; which  
equal to the proposed addition of length.  
intermediate piece of timber is next adde  
keel, upon which a sufficient number of  
are erected, to fill up the vacancy produ  
the separation. The two parts of the ke  
afterwards united by an additional piece  
scored down upon the floor timbers, and  
beams as may be necessary are fixed ac  
ship in the new interval. Finally, the p  
the side are prolonged so as to unite with  
ther; and those of the ceiling refitted in t  
manner; by which the whole process is cor

**LENITIVE.** *adj.* [*lenitis*, Fr. *lenio*, Lat.]  
 ; emollient.—Some plants have a milk  
 the cause may be an inception of putre-  
 for those milks have all an acrimony,  
 one would think they should be *lenitive*.  
 There is aiment *lenitive* expelling the  
 thout stimulating the bowels; such are  
 is. *Arbutmot.*

**LENITIVE.** *n. f.* 1. Any thing medicinally  
 o ease pain. 2. A palliative.—There are  
 hat friendship will apply, before it would  
 ht to decretory rigours. *South's Sermons.*  
**LENITY.** *n. f.* [*lenitas*, Lat.] Mildness; mercer-  
 nesses; softness of temper.—

Henry gives consent,  
 er compassion, and of *lenity*,  
 e your country. *Shakesp. Henry VI.*

*Lenity* must gain  
 ighty men, and please the discontent.

*Daniel.*  
 So ample a pardon was proclaimed touch-  
 on, yet could not the boldness be beaten  
 ner with severity, or with *lenity* be abated.

The old imprison'd king,  
 : *lenity* first pleas'd the gaping crowd.

*Dryden.*  
**LERU**, a town of Persia, in Ghilan.  
**LERE**, a small town in Hertfordshire.  
**LE**, a river of Germany, which rises near  
 , and falls into the Roer, 2 miles W. of

**LEP**, a town of Westphalia, in the duchy  
 20 miles ESE. of Dusseldorf.

**LENAPEN.** See DELAWARES.  
**LENO**, a town of the Italian republic, in the  
 e Mella, and district (late prov.) of Bres-  
 300 citizens, in 1797.

**LENOX**, or **DUNBARTON-SHIRE**, a coun-  
 and, 24 miles long, and 20 broad, bound-  
 S. by the river and frith of Clyde; on  
 Lochlong and Argyleshire; on the N.  
 mpians, and on the E. by Monteith and

Great part of it is fit for nothing  
 age and sport; even in the lower lands,  
 not very fertile; yet the face of the  
 agreeably diversified with hills, dales,  
 heath, rivulets, rivers, lakes, woods,  
 orn, and gentlemen's seats and planta-  
 t of it is washed by the Clyde, which,  
 e of Dunbarton, is two miles broad at  
 it continues extending in width and  
 it joins the ocean. From the mouth  
 e, the two bays of Lochlong and Loch-  
 ige indentations in the county. The  
 any consideration that runs through  
 is the Leven. See LEVEN. But the  
 osity of this county is LOCH-LOMOND,  
 of fresh water, supplied by subterra-  
 and rivulets, surrounded with huge  
 extending 25 miles in length, and in  
 5 in breadth, incredibly deep in every  
 rked with 24 verdant isles, some of  
 cked with red deer, and inhabited.  
 e more wildly romantic than this  
 ountry during summer, on the S. side  
**L. PARLI.**

of the lake: the high road runs in some places  
 through natural woods; overhung, on one hand,  
 by steep mountains, covered with flowery heath;  
 and on the other opening in long vistas upon the  
 lake, terminated by green islands that seem to  
 float upon the water. Among the rivers of this  
 county, we must not omit the BLANE, which,  
 though an inconsiderable stream, hath been ren-  
 dered famous by the birth of George Buchanan,  
 the celebrated Latin poet and historian, on its  
 banks. (See BUCHANAN, N<sup>o</sup> 2.) Near his birth-  
 place, (which, however, lies in Stirlingshire, see  
 KILLEARN,) is BUCHANAN HOUSE, an elegant  
 seat belonging to the duke of Montrose, head of  
 the noble family of GRAHAM, so often distinguish-  
 ed by its loyalty, integrity, and valour. The same  
 part of the country gave birth to the great mathe-  
 matician and naturalist, NAPIER, Lord Merchif-  
 ton, inventor of the logarithms. The title of *Le-*  
*nox*, with the property of great part of the shire,  
 was formerly vested in a branch of the royal fami-  
 ly of Stuart, with which it was reunited in the  
 person of K. James VI. whose father, Henry Lord  
 Darnley, was son to the E. of LENOX. This prince  
 conferred the title upon his kinsman Eime Stuart,  
 son of John Lord of Aubigny in France: but, his  
 race failing at the death of Charles duke of Lenox  
 and Richmond, and the estate devolving to the  
 crown, Charles II. conferred both titles on his  
 own natural son by the duchess of Portsmouth;  
 and they are still enjoyed by his posterity. The  
 people of Lennox are chiefly Lowlanders, though  
 in some parts of it divine service is performed in  
 the Eise language. The most numerous clans in  
 this district, are the Macfarlanes, the Colquhouns,  
 and the Buchanans. They generally profess the  
 Protestant faith, according to the Presbyterian  
 discipline; though some of the gentry follow the  
 English ritual. The people are sober, honest, and  
 industrious; and though they live poorly, are tall,  
 vigorous, and healthy.

(2.) **LENNOX**, a town of Massachusetts, the cap-  
 ital of Berkshire: 145 miles from Boston.

**LENOIR**, a county of N. Carolina, in New-  
 bern district, bounded N. by Glasgow; E. by Cra-  
 ven; S. by Jones, and SW. by Dauphine: contain-  
 ing 2484 citizens and 957 slaves, in 1795. King-  
 ston is the capital.

**LENONCOURT**, a town of France, in the dep.  
 of Meurthe, 4½ miles ESE. of Nancy, and 7½ NW.  
 of Lunéville.

**LENOX.** See LENNOX.

(1.) \* **LENS.** *n. f.* From resemblance to the seed  
 of a lentil.—A glass spherically convex on both  
 sides, is usually called a *lens*; such as is a burn-  
 ing-glass or spectacle-glass, or an object glass of a  
 telescope. *Newton.*—According to the difference  
 of the *lenses*, I used various distances. *Newton.*

(2.) **A LENS**, is a piece of glass, or any other  
 transparent substance, the surfaces of which are so  
 formed, that the rays of light, by passing through  
 it, are made to change their direction, either tend-  
 ing to meet in a point beyond the lens, or made to  
 become parallel after converging or diverging; or  
 proceeding as if they had issued from a point be-  
 fore they fell upon the lens.

(3.) **LENS**, in geography, a town of France, in  
 the dep. of the Straits of Calais and ci-devant prov.

of Artois; built in 1208, by Baldwin E. of Flanders and Artois. In 1553, it was taken and burnt by the French; in 1582, it was pillaged by the garrison of Cambrai; in 1648, it was taken by the Spaniards; but retaken by the Pr. of Condé; and in 1658, it was confirmed to the French by the peace of the Pyrenees. It is  $7\frac{1}{2}$  miles NW. of Douay, and 95 NE. of Paris. Lon. 3. 5. E. Lat. 50. 26. N.

**LENSWYCK** a town of Norway.

(1.) \* **LENT**. *n. f.* [*lenten*, the Spring, Saxon.] The quadragesimal fast; a time of abstinence; the time from Ash Wednesday to Easter.—*Lent* is from springing, because it falleth in the Spring; for which our progenitors, the Germans, use *glent*. *Camden*.

(2.) **LENT** is a solemn time of fasting in the Christian church. Those of the Romish church, and some of the Protestant communion, maintain, that it was always a fast of 40 days, and, as such, of apostolical institution. Others think it was only of ecclesiastical institution, and that it was variously observed in different churches, and grew by degrees from a fast of 40 hours to a fast of 40 days. This is the opinion of Morton, Bp. Taylor, Du Moulin, Daillé, and others. The ancient manner of observing lent, among those who were piously disposed, was to abstain from food till evening: their only refreshment was a supper; and it was indifferent whether it was flesh or any other food, provided it was used with sobriety and moderation. Lent was thought the proper time for exercising, more abundantly, every species of charity. Thus what they spared from their own bodies by abridging them of a meal, was usually given to the poor; they employed their vacant hours in visiting the sick, and those that were in prison; in entertaining strangers, and reconciling differences. The imperial laws forbid all prosecution of men in criminal actions, that might bring them to corporal punishment and torture, during the whole season. This was a time of more than ordinary strictness and devotion, and therefore in many of the great churches they had religious assemblies for prayer and preaching every day. All public games and stage plays were prohibited; as well as the celebration of all festivals, birth-days, and marriages, as unsuitable to the occasion. The Christians of the Greek church observe 4 lents: the first commences on 15th of Nov. the 2d is the same with that of the church of England; the 3d. begins the week after Whitfuntide, and continues till the festival of St Peter and St Paul; and the 4th commences on the 1st of August, and lasts till the 15th. All these lents are observed with great strictness; but on Saturdays and Sundays they drink wine and use oil, which are prohibited on other days.

**LENTA**, a river of Naples, in Abruzzo Citra.

**LENTA**, a town of Germany, in Holstein.

**LENTELLA**, a town of Naples, in Abruzzo Citra; 18 miles NE. of Civita Borella.

(1.) \* **LENTEN**. *adj.* [from *lent*.] Such as is used in lent; sparing.—My lord, if you delight not in man, what *lenten* entertainment the players shall receive from you. *Shak.*—

She quench'd her fury at the flood,

And with a *lenten* fallad cool'd her blood. *Dryd.*

(2.) **LENTEN**, a town of Norway, 20 miles N. of Berga.

\* **LENTICULAR**. *adj.* [*lenticulaire*, French] Doubly convex; of the form of a lens.—The crystalline humour is of a lenticular figure, convex on both sides. *Ray.*

\* **LENTIFORM**. *adj.* [*lens* and *forma*, Latin] Having the form of a lens.

\* **LENTIGINOUS**. *adj.* [from *lentigo*.] Scurfy; furfuraceous.

\* **LENTIGO**. [Latin.] A freckle or scurfy eruption upon the skin; such especially as is common to women in child-bearing. *Quincy.*

(1.) \* **LENTIL**. *n. f.* [*lens*, Latin; *lentille*, French] A plant.—It hath a papilionaceous flower, the point of which becomes a short pod, containing orbicular seeds, for the most part convex; the leaves are conjugated, growing to one middle and are terminated by tendrils. *Miller.*—The Philistines were gathered together, where was a piece of ground full of lentiles. 2 Sam. xxiii. 11.

(2.) **LENTIL**. In botany. See **ERVUM**.

(1.) **LENTINI**, a river of Sicily, in the valley of Noto, anciently called **TERIAS**. It runs into the Adriatic, 5 miles below the town, N<sup>o</sup> 2.

(2.) **LENTINI**, a town of Sicily, seated on the above river, anciently called **LEONTIUM**. It was almost destroyed by an earthquake, in 1609. It lies 10 miles NW. of Augusta, 17 SW. of Catania, and 19 NW. of Syracuse. Lon. 31. 41. Ferro. Lat. 37. 18. N.

(1.) \* **LENTISCK**. *n. f.* [*lentiscus*, Latin; *l'isque*, French.]—*Lentisc* wood is of a pale brown almost whitish, resinous, fragrant, and acrid: it is the tree which produces mastic, esteemed elegant and balsamick. *Hill.*—*Lentisc* is a beautiful evergreen, the mastic or gum of which is used for the teeth or gums. *Mortimer.*

(2.) **LENTISCK**, in botany. See **PISTACIA**, N<sup>o</sup> 1.

(3.) **LENTISCK**, AFRICAN, } in botany. N<sup>o</sup> 3.

(4.) **LENTISCK**, PERUVIAN, } **SCHINUS**.

**LENTISCOSA**, a town of Naples, in Principato Citra; 9 miles SW. of Policastro.

\* **LENTITUDE**. *n. f.* [from *lentus*, Latin] Sluggishness; slowness. *Diſt.*

(1.) \* **LENTNER**. *n. f.* A kind of hawk—should enlarge my discourse to the observation of the haggard, and the two sorts of *lentners*. *Walt.*

(2.) **LENTNER**. See **FALCO**, N<sup>o</sup> 32.

**LENTO**, a town of the French republic, the island and dep. of Corfica; 11 m. S. of Ota.

**LENTON**, a town of Nottinghamshire, on the L. N. It has a fair for 7 days after Whitfuntide and a horse fair in November.

\* **LENTOR**. *n. f.* [*lentor*, Latin; *lenteur*, French] 1. Tenacity; viscosity.—Some bodies have a kind of *lentor*, and more depeccible nature than other. *Eacon.* 2. Slowness; delay; sluggish coldness.—The *lentor* or eruptions, not inflammatory, pass to an acid cause. *Arbutnot.* 3. [In physics] That fizy, viscid, coagulated part of the blood which, in malignant fevers, obstructs the capillary vessels. *Quincy.*

\* **LENTOUS**. *adj.* [*lentus*, Latin] Viscous; mucous; capable to be drawn out.—In this part of a *lentous* and transparent body, are to be discerned many specks which become black, a

are compacted and terrestrial than the  
it is rich not in distillation. *Brown.*

**STULUS**, the surname of a branch of  
ELIAN family at Rome which produced  
at men during the republic. See **ROME**.  
**STULUS**, Cneius Cornelius, surnamed  
was consul A. D. 26, and was also a  
tters. He wrote a history, mentioned  
ius, and Martial says he was a poet;  
orks are lost. He was put to death by  
who was jealous of his popularity.

**Z.**, a town of Prussia, in Marienburg.  
**ZBURG**, a town and extensive late  
of Helvetia, in the canton of Berne.

**ZEN**, a town of Saxony, in Prenzitz.

**ZIER**, a town of S. Walks, in Glamor-

It has a fair Oct. 10.  
**BURG**, a town of the Helvetic republic,  
one of the 4 municipal towns in the  
mous for its manufactures of flowered  
itons, &c. 16 miles W. of Zurich, and  
Berne.

**O**, in astronomy, the 5th sign of the  
See **ASTRONOMY**, § 548.

**o**, in zoology. See **FELIS**. N<sup>o</sup> VIII.

**o**, a native of Byzantium, who flourish-  
A. A. C. 350, and wrote some treatises  
and history, which are lost. His philo-  
sophy and political abilities, while  
used him to his countrymen, who em-  
as ambassador to Athens, Macedonia;  
ir most important business, excited the  
Philip III. of Macedonia; who saw his  
designs would be frustrated while such a  
triot lived. He therefore got a letter  
zo's name, offering to betray Byzan-  
K. of Persia, which produced the de-  
ous effect. The mob ran enraged to  
of the philosopher, who to avoid their  
himself.

**LEO**, the name of 6 emperors of the  
ing taken little notice of them in our  
tory of **CONSTANTINOPLE**, we shall  
brief biographical sketch of them.

Thracian, succeeded the emperor Mar-  
157: renewed the war with the Van-  
as unsuccessful, through the treachery  
ral Aspar, whom he put to death in  
he Goths, under pretence of reven-  
ath, ravaged the empire. Leo died

ie son of Zeno, by Ariadne daughter  
succeeded his grandfather, in 474; but  
d his health by debauchery, died the  
nd was succeeded by his father.

*he Isaurian*, was the son of a poor me-  
ntering the army, became one of the  
o Justinian II; and was made a general  
II. who, in 717, made him his col-  
empire. The Saracens having ravaged  
ged Constantinople, but Leo bravely  
and repulsed them. After this he  
nt, and burnt the library of Con-  
ontaining above 30,000 volumes, be-  
antiquity of medals and other antiqui-  
d in 741, and was succeeded by his  
ic V.

**LEO IV.** succeeded his father Constantine V. in  
775, and repulsed the Saracens in Asia. In his  
time the great controversy raged about images.  
See **ICONOCLASTÆ**. He died in 780, and was suc-  
ceeded by his son Constantine VI. whom he had  
associated in 776.

**LEO V.** *the Armenian*, rose to the rank of ge-  
neral by his valour, but was banished by the em-  
peror Nicephorus I. Michael I. recalled him in  
811, for which Leo showed his gratitude, by de-  
throning him in 813. He died detested for cruel-  
ty, in 820.

**LEO VI.** surnamed *the Philosopher*, the son of  
**BASIL I.** was associated by his father in 876, and  
succeeded him in 878. The Saracens, Bulgari-  
ans, and Hungarians having united against him,  
he imprudently called the Turks to his aid, who  
ravaged Bulgaria with fire and sword. He drove  
out and deposed the patriarchs Phocas and Ni-  
cholas; and died in 911. He wrote several books;  
the principal of which is a *Treatise on Tactics*;  
printed at Leyden in 1612.

(10—20.) **LEO** is also the name, real or assum-  
ed, of 11 popes of Rome. The transactions of se-  
veral of these are mentioned under the articles,  
**FRANCE**, § 15; **HISTORY Part II. Sect. IV.**; **I-**  
**TALY**, § 18, 20, &c. Only two of them are re-  
corded as authors, viz.

**LEO, I.** surnamed the **GRAT**, an Italian, who  
succeeded Sextus III. in 440. He showed great  
zeal against the Manichees and other heretics.  
His works amount to 3 vols folio. He died in 461.

**LEO X.** whose proper name was *John de Me-*  
*dicis*, is ever to be remembered by Protestants, as  
having proved the cause of the reformation, be-  
gun by Martin Luther. He was made a cardinal  
at 14 years of age, and some years after a legate,  
by Julius II. He was in that quality in the ar-  
my, which was defeated by the French near Ra-  
venna, in 1512, where he was taken prisoner. The  
soldiers, who took him, humbly asked his pardon  
for gaining the victory, besought him to give them  
absolution for it, and promised never to bear arms  
against the pope. When Julius died, Medicis was  
very ill of the venereal disease at Florence, and  
was carried to Rome in a litter. Hurrying about  
every night to the cardinals of his faction, his  
ulcer broke, and the matter which ran from it  
exhaled such a stench, that all the air in the con-  
clave was poisoned by it. Upon this the cardi-  
nals consulted the physicians, to know what the  
matter was. They, being bribed, said the car-  
dinal de Medicis could not live a month; which  
occasioned his being chosen pope. Thus cardinal  
de Medicis, then not 30 years of age, was elected  
pope; in consequence of his debaucheries, upon a  
false information; and as joy is a sovereign re-  
medy, he soon recovered his health. He was bet-  
ter calculated for a temporal than a spiritual  
prince, being ambitious, politic, luxurious, a cor-  
noisseur in the fine arts, and an accomplished fine  
gentleman: Thus qualified, it is no wonder that,  
neglecting the true interest of his church, he  
should avail himself of the folly of religious dupes,  
and publicly sell indulgences to support hi-  
prodigality; especially as he was known to disbelieve  
Christianity itself, which he called *A very profit-*  
*able*

able *suble* for him and his predecessors. In 1517, he published general indulgences throughout Europe (and ordered the priests to recommend them) in favour of those who would contribute any sum towards completing the church of St Peter; and thus paved the way for the reformation. (See INDULGENCE and LUTHER. Leo died in 1521, aged 45. It is but justice to add, that to this pope was principally owing the revival of literature in Italy. He spared neither pains nor expence to recover ancient MSS. and procure good editions of them; he favoured the arts and sciences; and gloried in being the patron of learned and ingenious men, who in return have been very lavish in his praise, particularly Mr Pope in his *essay on Criticism* :

But see! each Muse in Leo's golden days,  
Starts from her trance; and trims her wither'd  
bays, &c.

(21.) LEO, Abp. of Thessalonica, one of the revivers of Grecian literature, flourished in the 9th cent. y. and was deeply skilled in mathematics.

(22.) LEO ALLATIUS. See ALLATIUS.

(23.) LEO OF MODENA, a learned rabbi of Venice, who flourished in the 17th century. He wrote a history of the Jewish Rites and Ceremonies; and compiled a Hebrew and Italian dictionary.

(24.) LEO PILATUS, the first professor of Greek at Florence, about A.D. 1360. He was a man of great erudition; and went to Constantinople to procure MSS. but was shipwrecked on his return to Italy, in the Adriatic.

(25.) LEO, ST, a small but strong town of Italy, in the territory of the church, and duchy of Urbino, with a bishop's see. It is seated on a mountain, near the Marrechia. Lon. 12. 25. E. Lat. 43. 57. N.

LEOBEN, a town of Stiria, on the Muchr, 68 miles SW. of Vienna. At this town the preliminaries of peace between the emperor and the French republic, were agreed to, on the 20th April 1797.

LEOBSCHEZ, a town of Silesia, which was mostly burnt in 1603, and suffered much by the wars in 1626-7, 1634 and 1642. It is 27 miles WNW. of Ratibon.

LEOCATA. See ALICATA, N° 2.

(1.) LEOCHEL, [or *Leath-chuil*, Celt. *i. e.* the half of *Coul*] a hilly parish of Aberdeenshire, so named from part of the parish of Coul being annexed to it. It is an acute-angled triangle, with the acute angle to the E. 5 miles long and 4 broad. The climate is healthy and the soil fertile, tho' late, producing corn, bear, pease, and potatoes; but the old husbandry prevails. The population, in 1791, was 571; decrease since 1755, 215: number of sheep, 1300; horses 140; swine 40, and black cattle 800. About 200 acres are under wood. The chief manufacture is worsted stockings.

(2.) LEOCHEL, a river in the above parish, formed of 3 rivulets. It abounds with trouts and salmon; and runs into the Don below the church of Alford, 27 miles W. of Aberdeen.

(3.) LEOCHEL, a town of Aberdeenshire, 6 miles NN.W. of Kincardine O'Neil.

\* LEOID. *n. f.* *Leod* signifies the people; or, rather, a nation, country, &c. Thus *Leod* is

one of great interest with the people or nation of *Gibson*.

\* LEOF. *n. f.* *Leof* denotes love; so *leofwin* a winner of love; *leofstan*, best beloved; like the Agapetus, Erasmus, Philo, Amandus, &c. *Gibson*.

LEOGANE, a town of Hispaniola, seated in beautiful plain, on the W. side of the island. It was taken by the British in 1793, but retaken the 21st Oct. 1794, by the French and negroes (See HISPANIOLA, § 4.) In the beginning of 1800 it was totally burnt, by Toussaint Louverture's troops under Gen. Desalines, soon after the landing of the French under Gen. Leclerc.

(1.) LEOMINSTER, a large and populous borough of Herefordshire, seated on the Lug, which waters the N. and E. sides of it, and over which it has several bridges. It is a great thoroughfare betwixt S. Wales and London. In King John's reign it was burnt, but soon rebuilt. It was incorporated by Q. Mary I. and is governed by high steward, bailiff, recorder, 12 burgesses, and a town clerk. Its market is on Friday, and fairs, which are noted for horses and black cat, on February 13th, Tuesday after Midlent Sunday, May 13th, July 10th, Sept. 4th, and Nov. 2. It is noted for the best flax, wheat, barley, & bread. The inhabitants drive a considerable trade in wool, gloves, leather, hats, &c. and they have mills and other machines on the river. Near the church are some remains of its ancient priory. It has several good inns, and sends two members to parliament. It lies 26 miles W. by N. of Worcester and 137 WNW. of London. Lon. 2. 35. Lat. 52. 20. N.

(2.) LEOMINSTER, a town of Massachusetts, Worcester county; 46 miles W. of Boston; containing 1189 citizens in 1795. It has a post-office, and 8 mills; and carries on various manufactures of cloth, bricks, combs, &c.

(3.) LEON, Peter Cicca DE, author of the history of Peru. He left Spain, his native country at 13 years of age, to go into America, where he resided 17 years; and observed so many remarkable things, that he resolved to commit them to writing. The first part of his history was printed at Seville in 1553. He began it in 1541, and ended it in 1550. He was at Lima, the capital of the kingdom of Peru, when he gave the smallpox to it, and was then 32 years of age.

(4.) LEON, in geography, an ancient town of France, in the dep. of Finisterre, and chief province of Lower Bretagne, late capital of Leonnois; seated near the sea. Lon. 3. 55. Lat. 48. 41. N.

(5.) LEON, a province of Spain, anciently a kingdom; bounded on the N. by Asturias; on the E. by Galicia and Portugal; and on the S. and W. by Estremadura and Castile. It is about 125 miles long, 100 broad, and is divided into two almost equal parts by the Duero. It produces all the necessaries of life, and was the first Christian kingdom in Spain.

(6.) LEON, an ancient and large episcopal see, capital of the above kingdom, (N° 5.) built by the Romans in the time of Galba. It has the finest cathedral in all Spain. It was formerly more extensive and populous than at present, though it still contains about 1200 people. It is seated betwixt

rees of the river Egra, 150 miles NW. of Lon. 5. 31. W. Lat. 42. 25. N.

LEON, a town of the French republic, in Piedmontese, 4 miles N. of Savigliano and of Cherasco.

LEON, an island of Spain, in the Atlantic, and from the continent by a narrow strait; 12 miles long, and not quite 3 broad. The city 12 stands on its NW. extremity.

LEON, a town of Mexico, in Guadalajara; 5 E. of Guadalajara.

LEON DE CARACCAS. See CARACCAS, N° 2.

LEON DE GUANUCO. See GUANUCO.

LEON DE NICARAGUA, a town of New capital of the prov. of Nicaragua; the residence of the governor, and a bishop's see. It contains about 1200 houses, and has several monasteries and nunneries. At one end of the town the sea which ebbs and flows like the sea. It is at the foot of a volcano, which renders it subject to earthquakes. It was taken by the Spaniards in 1685, in fight of a Spanish army who killed 1000 of the Indians. Lon. 86. 10. W. Lat. 12. 25. N.

LEON, NEW, a populous province of N. America, in New Spain; bounded on the E. and W. by New Biscay; and N. by the country of the Aboriginal Indians. The chief cities are Monclova, St. Jago, Comargo, and St. Leon. The interior parts are full of mountains containing rich mines.

LEONARD, ST, a town of Austria, 6 miles N. of Waidthoven in Bavaria.

LEONARD, ST, two towns of France: 1. In the dep. of Vosges, 4½ miles S. of St. Die; 2. In the dep. of Upper Vienne; 10½ miles E. of Limoges.

LEONARD, ST, a town of Stiria.

LEONARD, ST, DE RACHEL, a town of the dep. of the North; 4 miles NE. of Valenciennes.

LEONARD, ST, DES BOIS, a town of France, in the dep. of Maine; 9 miles SW. of Alençon.

LEONARD, ST, LE NOBLET, an ancient town of France, in the dept. of Upper Vienne, and late of Guienne and territory of Limosin, with a considerable manufactory of cloths and paper. It is situated on the Vienne, 12 miles NE. of Limoges and 195 S. of Paris. Lon. 1. 35. E. Lat. 46. 5.

LEONARDO DA VINCI. See VINCI.

LEONARDO, ST; a town of Spain, in Old Castile, 11 miles N. of Oñate.

LEONARD'S HILL, ST, a hill of Mid Lothian, 1½ miles E. by S. of Edinburgh, near Arden and Salisbury Crags.

LEONARD'S TOWN, a post town of Maryland, in St. Mary's County; 113 miles S. of Baltimore and 217 SW. of Philadelphia.

LEONATUS, one of Alexander the Great's officers, who saved his life in India. (See INDIA.) After that monarch's death he got that country, which borders on the Hellespont, killed in battle, when assisting Antipater against the Athenians.

LEONBERG, a town of Suabia, in the duchy of Württemberg, 6 miles W. of Stuttgart.

LEONATIUS, John, one of the most learned men of the 16th century, was a native of Westphalia; he travelled into Turkey, and collected

excellent materials for composing *The Ottoman history*; and it is to him the public is indebted for the best account we have of that empire. To his knowledge in the learned languages, he had added that of the civil law; whereby he was very well qualified to translate the *Basilica*. His other works were esteemed. He died in 1593, aged 60.

LEONE, CAPE, or CAPE LEON, a cape on the coast of Greece, in the Gulf of Engia; 8 miles WSW. of Athens. It was anciently called *Artemisium*. See ARTEMISIUM, N° 1.

LEONESSA, a town of Naples, in Abruzzo Ultra, 19 miles NW. of Aquila.

LEONHARD, or } ST, a town of Carinthia,

(1.) LEONHART, } on the Levant, 104 miles WSW. of Vienna, and 42 E. of Clagenfurt. Lon. 15. 23. E. Lat. 46. 57. N.

(2.) LEONHART, ST, or ST LEONHARDT, a town of Austria, 10 miles SW. of St. Polten.

(1.) LEONI, a town of Naples, in the prov. of Principato Ultra; 12 miles W. of Conza.

(2.) LEONI, Giacomo, or James, a Venetian Nobleman, who settled in England, and published a fine edition of Palladio's works in folio, 1742. He died in 1742.

LEONICENUS, Nicolas, an eminent Italian physician, born in 1428. He was professor of Medicine at Ferrara, for above 60 years. He was the first who translated Galen's works, which he illustrated with commentaries. He also translated Hippocrates's Aphorisms, and the works of Lucian and Dion Cassius into Italian; and wrote *De Plinii and Plurium medicorum in medicina aliorum erroribus*. He died in 1524, aged 96.

LEONIDAS I, king of Sparta, a renowned warrior, slain in defending the straits of Thermopylae against Xerxes, 480 B. C. See SPARTA. There were other two Spartan kings of this name.

(1.) \* LEONINE, *adj.* [*Leonus*, Latin.] 1. Belonging to a lion; having the nature of a lion. 2. Leonine verses are those of which the end rhymes to the middle, so named from *Leo* the inventor: as, *Gloria facturum tenere conc ditur horum.*

(2.) LEONINE VERSES (§ 1, *def.* 2.) were much used in ancient hymns, epigrams, prophecies, &c. The origin of the word is uncertain: Pasquier derives it from one LEONINUS or *Leontius*, who excelled in this way; and dedicated several pieces to Pope Alexander III.; others derive it from Pope Leo; and others from *Leo*, the lion, esteeming it the loftiest of all verses, as the lion is styled the king of beasts.

LEONINUS. See last article, § 2.

LEONS, ST, a town of France, in the département of Aveiron, 18 miles ESE. of Rhodéz.

LEONSBERG. See LEONBERG.

LEONSPERG, a fort of Lower Bavaria, 5 miles N. of Dingeltingen.

LEONTARI, a town of European Turkey, in the Morea, 20 miles NW. of Mityla.

LEONTEUKA, a town of Russian Novgorod.

LEONTICA, feasts or sacrifices celebrated among the ancients in honour of the sun. They were called *Leontica*, and the priests who officiated at them *Leones*, because they represented the sun under the figure of a lion radiant, bearing a tiara, and gripping in his two fore-paws the horns of a bull, who struggled with him in vain to dis-

**LEPIDIUM LATIPOLIUM**, or the common **DITTANY**. It is a native of both Scotland and England. It hath small, white, creeping roots, by which it multiplies very fast, and is difficult to be eradicated after it has long grown in any place. The stalks are smooth, rise two feet high, and send out many side branches. The flowers grow in close bunches towards the top of the branches, coming out from the side; they are small, and composed of 4 small white petals. The seeds ripen in autumn. The whole plant has a hot biting taste like pepper; and the leaves have been often used by the country people to give a relish to their viands instead of that spice, whence the plant has got the appellation of *poor man's pepper*. It is reckoned an antiscorbutic, and was formerly used instead of the *horse radish scurvy-grass*.

**LEPIDOPTERA**, in zoology, an order of insects, with 4 wings, covered with imbricated squamulae. See **ENTOMOLOGY**, Sect. V.

**LEPIDUS**, M. Æmilius, one of the triumvirs, with Antony and Octavius. (See **ROME**.) He was forced to resign by Augustus, and died in obscurity at Cerchi; A. A. C. 13.

**LEPISMA**, in zoology; a genus of apterous insects, the characters of which are these: They have six feet formed for running; the mouth is furnished with 4 palpi, two of which are cetaceous and two capitated; the tail is terminated by extended bristles, and the body imbricated with scales. There are 7 species.

**LEPISMA SACCHARINA**, (Plate 199.) is an American species, so called because mostly found among sugar; but is now common in Europe. It is of a leaden colour, rather inclining to that of silver, by the small silvery scales with which it is covered; in which circumstance it resembles the silver fish, especially in its under part. It is found in gardens, under boxes, and in the crevices of window-sashes in houses, where it is very common. It runs with great swiftness, and is difficult to catch. When touched, it loses part of its scales, and its softness makes it easy to crush.

**LEPITHUS**. See **LAPATHUS**.

**LEPIUM**, in natural history, a genus of fossils of the harder gypsum, composed of very small particles, and of a less glittering hue. There is only one species of this genus, being one of the least valuable and most impure of the class of gypsums. It is of an extremely rude, irregular, coarse, and unequal structure; a little soft to the touch, of a very dull appearance, and of different degrees of a greyish white. It is burnt in plaster for the coarser works; it calcines very slowly and unequally, and makes but a very coarse plaster.

\* **LEPORINE**. *adj.* [*leporinus*, Lat.] Belonging to a hare; having the nature of hare.

**LEPPERSTOWN**, a town of Ireland, in the county of Waterford, Munster.

\* **LEPROSITY**. *n. f.* [from *leprous*.] Squamous disease.—If the crudities, impurities, and *leprositics* of metals were cured, they would become gold. *Bacon*.

(1.) \* **LEPROSY**. *n. f.* [*Ulcra*, Latin; *lepre*, Fr.] A loathsome distemper, which covers the body with a kind of white scales.—

So all the Athenian boys, and all  
Be general leprosy.

—It is a plague of *leprosy*. *Lev.* xiii. between the malice of my enemies and mens mistakes, I put as great a difference between the itch of novelty and the *leprosy*. *King Charles*.—Authors, upon the trance of the pox, looked upon it so heinous, that they ran away from it as much as Jews did from the *leprosy*. *Wijeman*.

(2.) *The* **LEPROSY** is a foul cutaneous appearing in dry, white, thin, scurfy scabs on the whole body, or part of it, and attended with a violent itching and of **See** **MEDICINE**, *Index*. The leprosy is of several kinds, but the Jews were particularly that called **ELEPHANTIASIS**. The Jews excluded all lepers from communion of kind, without excepting even kings. Solemn ceremonies were ordained to be performed by them after they were cleansed, prior to their re-admission into society. *See* **Lev.**—*59.* xiv. 1, —57.

\* **LEPROUS**. *adj.* [*Ulcra*, Lat. *lepro*] Infected with a leprosy.—

The silly amorous sucks his death,  
By drawing in a leprous harlot's breath.

**LEPSINA**, a town of Turkey in Livania.

**LEPTODECORHOMBES**, in natural history, a genus of fossils of the order of the selenitic, consisting of 10 planes, each so nearly equal opposite to it as very much to approach a caedral parallelipiped, though never regularly so. There are only five known, viz. 1. A thin, fine, pellucid, and slender kind, with transverse striae, found in considerable quantities in the strata of clay in Northamptonshire, particularly near Heddingfordshire. 2. A thin, dull-looking, opaque, slender-streaked sort, more scarce, found in Leicestershire and Staffordshire. 3. A thin fine-streaked species, with longitudinal striae, found in the clay pits at Richmond, at great depths. This has often on its top surface a very elegant smaller rhomboid, by 4 regular lines. 4. A rough kind, with transverse striae, and a scabrous surface, common in Leicestershire and Yorkshire. A very short kind, with thick plates, common in the clay-pits of Northamptonshire and Leicestershire.

**LEPTOROLYGINGLYMI**, in natural history, a genus of fossil shells, distinguished by the presence of minute teeth at the cardo; when numbers are found at Harwich cliffs, and in the marble pits of Sussex.

**LEPTUM**, in antiquity, a small piece of money, which, according to some, was only part of an obolus; but others will have it silver or brass drachm.

**LEPTURA**, in zoology, a genus of insects belonging to the order of coleoptera, the characters of which are these: The scutellum and the elytra are attenuated towards the apex, the thorax is somewhat cylindrical. There are 25 species, principally distinguished by their colours. *See* *Plate 198, fig. 7.*

(1.) **LEPUS**, the **PARA**, in astronomy,

the southern hemisphere. See ASTRO-  
18.

is, the HARE, in zoology, a genus of  
lia class of quadrupeds, and order of  
: characters are these: They have two  
each jaw; those in the upper jaw are  
: interior ones being smallest. The  
re 5 toes each, and the hind feet 4. See  
Dr Gmelin and Mr Kerr enumerate 15  
8 varieties.

ALPINUS, the *Mountain hare*, or *Al-*  
has short, broad, rounded ears; no  
head, and very long whiskers, with  
13 hairs above each eye: the colour of  
e bottom is dusky, towards the ends  
erruginous colour; the tips white, and  
are several long dusky hairs, though  
:ction the whole seems of a bright bay.  
of the animal is 9 inches. This spec-  
een on the Altaic chain; extends to  
thence to Kamtschatka; and is found  
lands. They inhabit always the mid-  
f the snowy mountains, in the rudest  
ded, and abounding with herbs and  
hey sometimes form burrows between  
id often lodge in the crevices. They  
r found in pairs: but in cloudy wea-  
llect together, and lie on the rocks,  
een whistle, very like that of a spar-  
e report of a gun, they run into their  
oon come out again. By wonderful  
provide against the rigorous season.  
of them, toward autumn, collect to-  
eaps of herbs and grasses, nicely dried,  
place either beneath the over-hanging  
een the chasms, or round the trunks of  
ny places the herbs appear scattered,  
ried in the sun. The heaps are form-  
or conoid ricks; and are of various  
ling to the number of the society em-  
rming them. They are sometimes of  
ght, and many feet in diameter, but  
t 3 feet. Without this provision of  
k they would perish during the storms  
hey select the best of vegetables, and  
hen in the fullest vigour, which they  
xcellent hay, by drying it. These  
n fertility amidst the rocks; for the  
ked with the dung of the animal, rot  
a chasms, and form a soil productive  
s. These ricks are also of great ser-  
people who hunt fables; for their  
l often perish, if they had not the pro-  
se little industrious animals to support  
h is easily to be discovered by their  
orm, even when covered with snow.  
of Jakutz feed both their horses and  
he reliques of the winter stock of these  
se animals are neglected as a food by  
it are the prey of fables and the Sil-

They are likewise greatly infested  
of gad fly, which lodges its egg in  
August and September, which often  
ictive to them.

AMERICANUS, the *American hare*, or  
as the ears tipped with grey: the upper  
tail is black, the lower white: the  
dy are mixed with cinereous, rust col-

our, and black; the legs are of a pale ferruginous  
colour; and the belly is white: the fore legs are  
shorter, and the hind legs longer, in proportion,  
than those of the common hare. It is 18 inches  
long, and weighs from 3 to 4½ lb. This species  
inhabits all parts of North America. In New Jer-  
sey, and the states S. of it, it retains its colour the  
whole year. In New England, Canada, and about  
Hudson's Bay, at the approach of winter, it changes  
its short summer's fur for one very long, silky,  
and silvery, even to the roots of the hairs; the ed-  
ges of the ears only preserving their colour. These  
hares are then in the highest season for the table;  
and are of vast use to those who winter in Hudson's  
Bay, where they are taken in great abundance in  
springs made of brass wire, to which they are led  
by a hedge made for that purpose, with holes left  
before the snares for the hares to pass through.—  
They breed once or twice a-year, and have from  
5 to 7 at a time. They do not migrate, but al-  
ways haunt the same places: neither do they bur-  
row, but lodge under fallen timber, and in hol-  
low trees. They breed in the grass; but in spring  
shelter their young in the trees, to which they al-  
so run when pursued; from which, in the southern  
states, the hunters force them by a hooked stick,  
or by making a fire, and driving them out by the  
smoke.

3. LEPUS BRASILIENSIS, the *Brazilian hare*,  
has very large ears, no tail, and generally a white  
ring round the neck. It is of the size and colour  
of a common hare, (See N° 21.) but resembles the  
rabbit in general appearance. It inhabits the  
woods in S. America and Mexico.

4. LEPUS CAPENSIS, the *Cape hare*, has long  
ears dilated in the middle; the outsidcs naked,  
and of a rose colour, the inside and edges covered  
with short grey hairs: the crown and back are of  
a dusky colour, mixed with tawny; the cheeks  
and sides cinereous; the breast, belly, and legs,  
rust-coloured: the tail is bushy, carried upwards;  
and of a pale ferruginous colour. This species is  
about the size of a rabbit. It inhabits the country  
3 days journey N. of the Cape of Good Hope;  
where it is called the *mountain hare*, for it lives  
only in the rocky mountains, and does not bur-  
row. It is difficult to shoot it, as, on the sight of  
any one, it instantly runs into the fissures of the  
rocks.

5. LEPUS CUNICULUS, the common RABBIT, has  
a very short tail, and naked ears. The colour of the  
fur, in a wild state, is brown; the tail black above,  
white beneath: in a tame state the general colour  
varies; and the eyes are of a fire red. The orig-  
inal native country of this species is Spain, where  
they were formerly taken with ferrets, as is now  
practised here. They love a temperate or warm  
climate, and are incapable of bearing great cold:  
In Sweden they are kept in houses. They abound  
in Britain. Their furs make a considerable article  
in the hat manufactories; and of late such part of  
the fur as is unfit for that purpose, has been found  
as good as feathers for stuffing beds and bolsters.  
Numbers of the skins are annually exported to  
China. The English counties most noted for rab-  
bits are Lincolnshire, Norfolk, and Cambridge-  
shire. Methwold is famous for the best kind for  
the table: the soil there is sandy, and full of mol-

tion, a varieties, viz. the *cornutus*, or horned hare; and the *melinus*, or yellow hare. The former he suspects to be fabulous.

13. *LEPUS TOLAI*, the *Baikal hare*, has a longer tail than that of a rabbit; and the ears are longer in the male in proportion than those of the varying hare, (N<sup>o</sup> 14.) the fur is of the colour of the common hare; and the size between that of the common and the varying hare. It inhabits the country beyond the lake Baikal, and extends through the great Gobece even to Thibet. The Tanguts call it *Rangwa*, and consecrate it among the spots of the moon. It agrees with the common rabbit in the colour of the flesh; but does not burrow, running instantly (without taking a ring as the common hare does) for shelter, when pursued, into holes of rocks. The fur is of no use in commerce.

14. *LEPUS VARIABILIS*, the *varying hare* of Pallas, has soft hair, which in summer is grey, with a slight mixture of black and tawny; the ears are shorter, and the legs more slender, than those of the common hare: the tail is entirely white, even in summer; and the feet are most closely and warmly furred. In winter, the whole hair changes to a snowy whiteness, except the tips and edges of the ears, which remain black, as well as the soles of the feet, on which, in Siberia, the fur is doubly thick, and of a yellow colour. It is less than the common species.—These animals inhabit the highest Scottish Alps, Norway, Lapland, Russia, Siberia, Kamtschatka, the banks of the Wolga, and Hudson's Bay. In Scotland, they keep on the tops of the highest hills, and never descend into the vales; nor do they ever mix with the common hare, though these abound in the neighbourhood. They do not run fast; and are apt to take shelter in clefts of rocks. They are easily tamed, and are very prolific. They are fond of honey and carraway comfits. They change their colour in September; resume their grey coat in April; and in the extreme cold of Greenland are always white. Both these and the common hares abound in Siberia, on the Wolga, and in the Orenburg government. The one never changes colour; the other, native of the same place, constantly assumes the whiteness of the snow during winter, not only in the open air and in a state of liberty, but, as experiment has proved, even when kept tame, and preserved in houses in the stove-warmed apartments, in which it experiences the same changes of colour as if it had dwelt on the snowy plains.—They collect together, and are seen in troops of 5, or 600, migrating in spring, and returning in autumn, in search of subsistence. In winter they quit the lofty hills, the S. boundaries of Siberia, and seek the plains and wooded parts, where vegetables abound; and in spring seek again the mountainous quarters. The flesh of the variable hare, in its white state, is excessively insipid. There have been several instances of what may be called monsters in this species, horned hares, having excrescences growing out of their heads, like the horns of the roebuck. Such are those figured in Geiner's history of quadrupeds, p. 634; in the *Museum Regium Hafniae* n<sup>o</sup> 48. tab. iv; and in Klein's history of quadrupeds, p. 32. tab. iii; and again described in

Wormius's museum, p. 321, and in Geeseum of the Royal Society. These instances occurred in Saxony, in Denmark, and in Tracan.

15. *LEPUS VIACACCIA*, the *Peruvian* the *Vistacbas*, or *Viacacha*, mentioned by Feuille, in their accounts of Peru, is called by M. Pennant nearly allied to the C (See N<sup>o</sup> 4.) Feuille says, they inhabit the parts of Peru. Their hair is very soft, a mouse colour; the tail is pretty long, as up; and the ears and whiskers are like the common rabbit. In the time of the hair was spun, and woven into cloth, which so fine as to be used only by the nobility.

LERAY, a town of France, in the dep. 8 miles N. of Sancerre, and 17 E. of Aul

LERCHBA, in botany; a genus of the dria order, belonging to the monadelph plants. The calyx is five-toothed; the funnel-shaped and quinquesid; there a there sitting on the tube of the germ; the style; the capsule is tubercular and polyis

LERE, n. f. *lere*, Sax. *lere*, Du lesson; lore; doctrine. Obsolete. This still retained in Scotland.—

Though he that had well ycond his Thus melled his talk with many a tear

LERGE, a town of Sweden in W. Ge

LERI, John DE, a Protestant minister gundy. He was studying at Geneva who reported there, that Villegagnon desired to send him some pastors into Brasil. In his voyage with two ministers, whom the of Geneva sent thither in 1556; and wrote count of that voyage, which has been mended by Thuanus and others.

(1.) LERIA, or LERIA, a strong town tugal in Estremadura, with a castle and see. It contains about 3500 inhabitants, formerly a royal residence. Lon. 7. 50. 39. 40. N.

(2.) LERIA. See LERO, N<sup>o</sup> 2. LERICE, a town of th: Ligurian rept miles SW. of Sarzana.

LERIDA, an ancient, strong, and lar of Spain, in Catalonia, with a bishop's see versity, and a strong castle. This place for king Charles, after the reduction of B in 1705; but was retaken by the duke of in 1707, after the battle of Almanza. It ed on a hill near the Segra, in a fertile miles W. of Barcelona. Lon. 0. 35. E. 31. N.

LERIN, a town of Spain, in Navarre.

LERINA, } or PLANASIA, in anci  
LERINAS, } graphy, one of the tv islands over against Antipolis, called also L now *St Honorat*. See next article.

LERINS, two islands in the Mediterra ing on the coast of the dep. of Var and li of Provence, in France. That nearest tl called ST MARGARET, is guarded by state-prisoners being sent to it. It was t the English in 1746, but marshal Belleisle it in 1747. The other is called *St Honor* is less than the former; but has a Bei abbey. It is hardly 6 miles S. of Antibes

, a town of Spain, in Old Castile, feat-  
Arlanza; 23 miles S. of Burgos. Lon.  
Lat. 42. 2. N.

INTL. See LEARMONTH, and THO-

ASZ, a village in Tyrol, where the em-  
nair IL died in a peasant's hut; A. D.  
s 12 miles SSE. of Reite.

, in ancient geography, a town, terrike,  
of Argolis, situated on the con-  
conica. Some suppose it to be a town  
2, on the borders of Argolis. Pausa-  
near Temenium, on the sea; with-  
whether it is town, river, or lake. Ac-  
Strabo, it is a lake, situated between  
ries of Argos and Mycene. If there was  
this name, it seems to have stood to-  
sea, but the lake to have been more  
fela calls it a well known town on the  
olicus; and Statius by Lerna seems to  
ething more than a lake. The lake,  
is that in which, Strabo says, was the  
dra of Hercules, and therefore called  
pifera. (Statius) The lake runs in a ri-  
to the sea, and perhaps arises from  
Tigil.) From the lake the proverb, *Lerna*  
(i. e. a pack of mischiefs,) took its rise;  
according to Strabo, religious purgations  
ormed in it; or, according to Helychius,  
he Argives threw all their filth into it.  
iere calls it "a country of Argolis cele-  
a grove and a lake, where the Dana-  
the heads of their husbands."

EA, a festival celebrated at LERNA, in  
Proserpina, Ceres and Bacchus.

EAN HYDRA. See HYDRA, N° 2.

A, in zoology; a genus of insects of  
f Vermes mollusca, the characters of  
these: The body fixes itself by its ten-  
tblong, and rather tapering; there are  
s like tails, and the tentacula are shap-  
is. See 3 specimens on Plate CC.

EA ASELLINA has a lunated body and  
orax, and inhabits the gills of the codg-  
of the northern ocean.

EA CYPRINACIA has 4 tentacula, two  
are lunulated at the top. It is about  
1 long, and of the thickness of a small  
body is rounded, of a pale greyish  
Ty on the surface, and somewhat pel-  
thrust out of a kind of coat or sheath,  
at the base, which is of a white colour  
: skin: towards the other extremity of  
there are 3 obtuse tubercles, one of  
uch larger than the rest: the mouth is  
the anterior part, and near it there are  
d fleshy procelles; and near these there  
ach side another soft process, which is  
the extremity. It is found on the sides  
um, carp, and roach, in many of our  
rivers, in great abundance.

EA SALMONEA, the salmon louse, has  
body, cordated thorax, and two linear  
saching nearly to each other.

EA, in ancient geography, a city of Cy-  
ears from its ruins; but now only a large  
ted on the S. coast, where there is a  
and a small fort for its defence.

LERNUPTIUS, John, a Latin poet of the 16th  
century, born at Buges. His works were pub-  
lished by Elzevir, under this title, *Jani Lernetii*  
*Basia, Ocelli, et alia Proematu*. He died in 1619.

(1.) LERO, in ancient geography, one of the  
two small islands in the Mediterranean, opposite  
to Antipolis, and half a mile distant from it on  
the S. Now called ST MARGARET, over against  
Antibes. See LERINS.

(2.) LERO, or } an island of the Archipelago,  
LEROS, } and one of the Sporades; an-  
ciently called LERIA; the birth-place of Patro-  
clus. Lon. 26. 15. E Lat. 37. 0. N.

LE ROY LE VEUT, [Fr. i. e. the King wills it.]  
the royal assent to public bills. See BILL, § 10—  
12; PARLIAMENT, and STATUTE.

LERRADILLA, a town of Spain, in the prov.  
of Leon; 12 miles SE. of Ciudad Rodrigo.

\* LERRY. [from *lere*.] A rating; a lecture.  
Rustick word.

LEERS, 2 rivers of France; 1. running into the  
Garonne, near Toulouse; 2. into the Rhone, near  
Beucaire.

(1.) LERWICK, a parish of Scotland, in the  
county of Zetland or Shetland; extending 6 miles  
from N. to S. by BRESSAY SOUND. The surface  
is hilly and rocky; the soil partly light sand,  
partly moss; the climate healthful. The popu-  
lation, in 1791, was 1291; increase 66, since  
1755; number of cows 200; of sheep 1500; be-  
sides many small horses. The chief manufacture  
is stockings; the principal fishery, ling and tusk,  
of which great quantities are exported. About 6  
tons of kelp are made annually. There are relics  
of two Pictish castles.

(2.) LERWICK, a town in the above parish, the  
capital of Zetland, situated in the island called  
*Mainland*. It contained 903 souls in 1791; and has  
many good houses, and as fashionable people as  
any town in Scotland, of its bulk. At the N.  
end there is a regular fort, which was built in the  
reign of Charles II; who during his first war with  
the Dutch, sent over a garrison of 300 men under  
colonel William Sinclair a native of Zetland; with  
Mr Milne architect, to build the fort, and 25 or 30  
cannons to plant upon it for protection of the  
country. A house was built within the fort to  
lodge 100 men. The garrison staid here three  
years; the charge of which, with the building the  
fort, is said to have cost 28,000 sterling. When  
the garrison removed, they carried off the cannon;  
and in the Dutch war which followed soon after,  
a Dutch frigate came into Bressay Sound, and burnt  
the house in the fort and several others of the best  
in the town. Lerwick is governed by a baillie.  
It chiefly subsists by the resort of foreigners; but  
has declined for several years past. Several pro-  
jects have been proposed which might be very be-  
neficial to Lerwick and Zetland; as that of the  
British merchants who carry goods from Muscovy  
and Sweden, for the plantations in America, (which  
must be entered at some British port) having them  
entered at Lerwick, which would save them a  
great deal of time and charges. (See *Giffard's De-  
script. of Zetland*. p. 7.) The Greenland and Her-  
ring Fishery companies of Britain also proposed  
Lerwick as a most commodious port for lodging  
their stores in, and repacking their herrings, melt-

ing their oil, and thence exporting it to foreign markets. The grand objection to these proposals is, that Lerwick is an open unfortified place; and in case of war, the merchants ships and goods would be exposed to the enemy. But it has been replied that, would government bestow a small garrison upon it of only 100 men, with 20 pieces of cannon, and be at the charge of repairing the old fort, and erecting a battery or two more, Lerwick would be sufficiently secure against any ordinary effort an enemy might make against it; and being thus fortified, all British ships from the E. or W. Indies, could come safely there in time of war; and be secure until carried thence by convoy, or otherwise. Thus Lerwick might become more advantageous to the trade of Great Britain than GIBRALTAR, or *Port Mahon*, for one tenth part of the charge of either of those places. Lon. 5. 46. W. Lat. 60. 20. N.

**LERY**, a river of Wales, in Cardigansh. which runs into the Irish Sea, 5 miles N. of Aberystwyth.

**LESA**, a river of Naples, which runs into the Neto, 5 miles W. of Cerenza.

**LESBIANS**, the ancient people of LESBOS. They were so debauched and dissipated that *Lesbian* was often used to signify debauchery and extravagance.

**LESBONAX**, a philosopher of Mytilene, who flourished in the first century. Two of his orations are inserted in Aldus's edition of Ancient Orators; and his treatise *De Figuris Grammaticis* was printed at Leyden in 1739.

**LESBOS**, a large island in the Ægean sea, on the coast of Æolia, about 168 miles in circumference. It was originally called PELASGIA, from the Pelasgi by whom it was first peopled; MACARIA, from Macareus who settled in it; and LESBOS, from Lesbus his son-in-law and successor. The chief towns of Lesbos were Methymna and Mytilene. It was originally governed by kings, but they were afterwards subjected to the neighbouring powers. The wine which it produced was greatly esteemed by the ancients, and still is in high repute among the moderns. Lesbos has given birth to many illustrious persons, such as Arion, Terpander, Sappho, &c. See MITYLENE.

(1.) **LESCAILLE**, James, a celebrated Dutch poet and printer, was born at Geneva, in 1610. He and his daughter; (N<sup>o</sup> 2.) excelled all the Dutch poets. He merited the poet's crown, with which the emperor Leopold I. honoured him in 1603. He died about 1677, aged 67.

(2.) **LESCATLE**, Katharine, daughter of the above, surnamed the *Sappho of Holland*, and the *ninth Muse*, died in 1711. A collection of her poems has been printed, in which are the Tragedies of Genesic, Wenceslaus, Herod and Mariamne, Hercules and Dejanira, Nicomedes, Ariadne, Cassandra, &c.

**LESCANO**, a town of Spain, in Guipuscoa.

**LESCAR**, a town of France, in the dep. of the Lower Pyrenees and late prov. of Gascony, seated on a hill. It contains about 6000 citizens, and lies 3 miles NW. of Pau, and 6 SE. of Orthez. Lon. 0. 30. W. Lat. 43. 23. N.

**LESCHERES**, a town of France, in the dep. of Upper Maine; 9 miles S. of Joinville.

**LESCIVIK**, a town of Persia, in Irak.

**LESCZYN**, a town of Poland, in Va.  
**LESER**, a river of the French repub dep. of the Rhine and Moselle, and is the rate of Trèves, which runs into the Meuse opposite Veldentz.

**LESGUIS**, a people of Asia, whose name is indifferently called by the Georgians, TARTAN and DAGHESTAN. It is bounded S. and E. by Persia and the Caspian, on and W. by Georgia, the Ossis, and Kist the N. by the Kisti and Tassar tribes. It is divided into a variety of districts, generally independent and governed by chiefs elected by the people. Guldenstaedt has remarked, in the language, 8 different dialects, and has classified the tribes in conformity to this observation. The dialect comprehends 15 tribes; viz. 1. Georgian Chumlaugh. The chief of this commonly called *Avar Khan*, is the most powerful prince of Lesquistan, and resides at on the river Kafruk. The village of A is the dialect of Andi, called *Harbul*. 2. in the high mountains, extending along of the Koisu, called *Karak*. This district is pendant on the Khan of the Kisti, Kuz Idatli, on the Koisu, joining on the A subject to the Avar Khan. 4. *Mukratli*, 5. the *Karak*, and subject to the Avar Khan. 6. *Onsekul*, subject to the same, and situated on the Koisu. 7. *Karakhle*, upon the *Karak*, 8. *Kafruk*, subject to the same. 9. *Ghumbet*, that joins the Koisu, 10. the chief of the *Comnyks*. 11. *Arakan Burtuma*, on the Koisu. 12. *Antsugh Samura*, subject to Georgia. 13. *Tebe*, same river, independent. 14. *Tamurg mural*, on the same river. 15. *Akhti*, *Rutal*, on the same. 16. *Dihar*, in a valley runs from the Alazan to the Samura. 17. formerly subject to Georgia, but is now independent. In this district are seen remains of the wall that begins at Derbent, and probably terminates at the Alazan.—The inhabitants of Derbent believe that their town was built by Alexander the Great, that this wall formerly extended as far as the Black Sea. From many inscriptions in Greek, Persian, Arabic, and Russian characters on the wall, and the aqueducts with their subterraneous passages, many of which are now filled up, must be of high antiquity. Derbent suffered greatly during its siege by Araks, who entirely destroyed the lower quarter inhabited by Greeks. It was again destroyed by Schach Abbas. (Gaerber.) This town is situated on the *Pyla Caspe*. The 2d dialect is spoken in the following districts: 1. *Dido*, or *Didonli*, the source of the Samura. This district is situated on a ridge of uninhabited mountain that runs from Caket. 2. *Unso*, on the small rivulet that join the Samura. These two districts containing together about 1000 families, were formerly subject to Georgia, but are now independent. The 3d dialect is that of *Kabutli*, lies on the Samura rivulet, E. of *Dido* of Caket. The 4th dialect is that of *Akhti*, situated on a rivulet that runs into the Koisu; of its villages are subject to the Avar Khan, the greater part to the khan of Axai. T

of about 800 families. The 5th dialect is divided into 4 districts; viz. 1. Akusha, on the western side of the Ufnei, or khan of the Caucasus; 2. Kara Caitak, containing about 1000 families.

The following custom is attributed by Gaerber to the subjects of this prince: Every man who has a son, he is carried from village to village, and alternately by every woman who has a child at her breast, till he is weaned. This custom, by establishing a kind of brotherhood between the prince and his subjects, singularly endears them to each other. 1. Balkar. 3. Zudakara, or Zudakh, subject to the Ufnei. 4. Koisu, near the Koisu. Colonel Gaerber, who gave an account of these countries in 1728, gives the following description of this very curious country. KUBESHA is a large strong town, situated in a valley between high mountains. Its inhabitants call themselves *Franki*, (FRANKS, or EUROPEANS), and relate, that their ancestors were driven from their country by some accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners cast away upon the coast; but those who pretend to be better acquainted with their history, tell the story in this way: That several centuries ago, a considerable trade was carried on in the Black Sea, and likewise on the coast of the Caucasus, and were certainly acquainted with the mountains, from which they derived their trade with the inhabitants of the Caucasus, of silver, copper, and other minerals, which they sent hither by workmen to establish manufactures, and to the inhabitants. The subsequent invasion of the Arabs, Turks, and Mongols, during which the mines were filled up, and the manufactures abandoned, prevented the strangers from effecting their return, so that they continued here, and established themselves into a republic. What reason is the more probable is, that they were excellent artists, and make very good fire-arms, and articles in gold and silver, for exportation. They have likewise, for their own use, small copper cannons, of three pounds caliber, which they cast by themselves. They coin Turkish and Russian money, and even rubles, which are current, as they are of the full weight. In their valleys they have pasture and gardens, as well as gardens; but they pursue the greater part of their corn, trusting chiefly to the sale of their manufactures, which is much admired in Persia, Turkey, and Russia. They are generally in good circumstances, quiet and inoffensive, but high spirit-independent. Their town is considered a safe spot, where the neighbouring princes fit their treasures with safety. They elect magistrates, to whom they pay the most absolute obedience; and as all the inhabitants are of perfect equality, each individual is to have in his turn a share in the government. In 1725, their magistrates, as well as the prince, acknowledged the sovereignty of Russia, without paying any tribute." 5. Zudakara, down the Koisu, subject to the

Ufnei, contains about 2000 families. The 6th dialect belongs to the districts on the eastern slope of Caucasus, between Tarku and Derbent, which are, 1. Caitak; and, 2. Tabasseran, or Kara-Caitak, both subject to the Ufnei. The 7th dialect is that of Kasi-Coumyk, on a branch of the Koisu, near Zudakara. This tribe has a khan, whose authority is recognised by some neighbouring districts. The 8th dialect is that of Kurac, belonging to the khan of Cuba.—There are some other tribes of Lesguis, whose dialects Mr Guldenstaedt was unable to procure. From a comparison of those which he has obtained, it appears that the language of the Lesguis has no kind of affinity with any other known language, excepting the Samoyede, to which it has a remote resemblance. These people are probably descended from the tribes of the mountaineers, known to ancient geographers under the name of LESGÆ, or LIGYES. The strength of their country, which is a region of mountains, whose passes are known only to themselves, has probably at all times secured them from invasion. They subsist by raising cattle, and by predatory expeditions into the countries of their more wealthy neighbours. During the troubles in Persia, in the beginning of the 8th century, they repeatedly sacked the towns of Shamachie and Ardebil, and ravaged the neighbouring districts; and the present wretched state of Georgia and of part of Armenia, is owing to the frequency of their incursions. In their persons and dress, and in their general habits of life, they greatly resemble the Circassians.

LESQUISTAN. See DAGHESTAN.

LESIGNAN, a town of France, in the dep. of Aude, 11 miles W. of Narbonne, and 17 E. of Carcassonne.

LESIGNY, a town of France, in the dep. of Vienne, on the Creuse, 9 miles E. of Châtellerault.

(1.) LESINA, an island of Maritime Austria, in the Adriatic, on the coast of Dalmatia, anciently called PHAROS; 44 miles long and 8 broad, containing a town, 32 villages, and 15,000 inhabitants; and abounding in corn, wine, fruits, wool, and flesh-coloured striped marble.

(2.) LESINA, the capital of the above island, seated at its W. end, has a good harbour, a castle on the top of a mountain of marble, and 1200 inhabitants, chiefly employed in ship-building, navigation, and fishing. It is 20 miles S. of Spolato. Lon. 34. 5. E. Ferro. Lat. 43. 33. N.

(3.) LESINA, a town and lake of Naples, in the prov. of Capitanata. The town was nearly destroyed by an earthquake in 1627. It is 86 miles NNE. of Naples.

(1.) LESKARD, a large and well built town of Cornwall, which has sent two members to parliament since the 23d of Edward I. It had formerly a castle, now in ruins. It has the greatest market in Cornwall. It was first incorporated by Edward earl of Cornwall; afterwards by Richard king of the Romans, and had privileges from Edward the Black Prince. Q. Elizabeth granted it a charter, by which it was to have a mayor and burgesses, with power to purchase lands, &c. It has a handsome town hall built on stone pillars, with a turret on it, and a clock with 4 dials that cost near 200 l. It has a large church, a meeting-house, an

eminent

eminent free school, and a curious conduit. The adjacent commons feed multitudes of sheep. It has a market on Saturday, 7 fairs, and a very great trade in all leather manufactures. Spinning has been of late encouraged by the clothiers of Devonshire.

(2.) **LESKARD, NORTH**, a hilly country between Leskard and Læneeston, abounding with mines of tin, which is cast at the blowing houses into blocks.

**LESKO**, a town of Poland, in the ci-devant palatinate of Lemberg, now the kingdom of Galicia; 68 miles SW. of Lemberg.

(1.) **LESLIE, Charles**, an Irish divine, and a zealous Protestant; but being attached to the house of Stuart, he left Ireland, and went to the pretender at Bar le Duc, and resided with him till near the time of his death; endeavouring to make him a Protestant, but without effect. He died in 1722. His principal works are, 1. A short and easy method with the Deists. 2. A short and easy method with the Jews. 3. The snake in the grass. 4. Hereditary right to the Crown of England asserted. 5. The Socinian controversy discussed. 6. The charge of Socinianism against Dr Tillotson considered; and many others. All his theological pieces, except the last, were collected and published by himself, in 2 vols. folio.

(2.) **LESLIE, John**, Bp. of Ross in Scotland, the son of Gavin Leslie an eminent lawyer, was born in 1526, and educated at the university of Aberdeen; of which diocese he was made official, when but a youth. He was soon after created LL. D. but being peculiarly addicted to the study of divinity, he took orders, and became parson of Uue. When the reformation began to spread in Scotland, and disputes about religion ran high, Dr Leslie, in 1560, distinguished himself at Edinburgh as a principal advocate for the Romish church, and was afterwards deputed by the chief nobility of that religion, to condole with Q. Mary on the death of her husband the king of France, and to invite her to return to her native dominions. Accordingly, they embarked together at Calais, in 1561, and landed at Leith. She immediately made him one of her privy council, and a senator of the college of justice. In 1564, he was made abbot of Lindores; and on the death of Sinclair was promoted to the bishopric of Ross. The influence derived from these accumulated honours he exerted for the good of his country. To him Scotland is indebted for the publication of its laws, commonly called *The black acts*, &c. parliament, from the Saxon character in which they were printed. At his desire, the revision and collection of them were committed to the great officers of the crown. In 1568, Q. Mary having fled to England for refuge, and being detained a prisoner, Q. Elizabeth appointed commissioners at York to examine into the dispute between Mary and her subjects. These commissioners were met by others from the Q. of Scots. The Bp. of Ross was of the number, and pleaded the cause of his royal mistress with great energy, though without success: Elizabeth had no intention to release her. Mary, disappointed in her expectations from the conference at York; sent the bishop ambassador to Elizabeth, who paid little attention to his complaints. He then began to negotiate a marriage

between his royal mistress and the duke of Norfolk, which negotiation proved fatal to her, and was the cause of Leslie's being confined in the Tower. In 1573 he was banished the country, and retired to Holland. The two following years he spent in fruitless endeavours, to procure the powers of Europe to espouse the cause of the queen. His last application was to the pope, the power of the heretic Elizabeth being then weighed with his holiness, than with the mass Catholic princes of Europe. His personal applications ineffectual, he had recourse to his pen in Q. Mary's vindication. His *ultima ratio regum* was too potent for his arguments. Bp. Leslie, during his exile, made coadjutor to the Abp. of Rouen. At Brussels when he received the account of Mary's execution; and immediately retired to a convent of Guirtenberg near that city, where he died in 1596. During the long captivity he wrote his *History of Scotland*, and of his knowledge and judgment as an historian he is equally to be commended. Where he is transcriber of Boece, there appear, indeed, the inaccuracies of that writer. But when he speaks in his own character, he has a candour, and a moderation, which appears even in authors of the Protestant party. His other works are, 1. *Afflicti animi*, &c. composed for the consolation of the queen. 2. *De origine, moribus, et gestis*. 3. *De titulo et jure serenissima Marie Scotorum, quo regni Angliæ successionem sibi jus*. 4. *Parænesis ad Anglos et Scotos*. 5. *De ministerio in republ. administranda*, &c. 6. *Ad reginam Elizabetham pro libertate in*. 7. *Parænesis ad nobilitatem populumque*. 8. An account of his proceedings durably in England from 1568 to 1572; M. S. 9. Apology for the bishop of Ross, conc. duke of Norfolk; M. S. Oxon. 10. *Sententia*, M. SS.

(3.) **LESLIE**, a parish of Scotland, is so named from the noble family of Ross banks of the Leven. The soil is good, and almost wholly arable. In 1785, and 1791, was 1212, and created 82 since 1755.

(4.) **LESLIE**, a small but populous town above parish, on the Leven, containing 1300 inhabitants in 1785. Spinning and weaving are the chief manufactures. It has fairs in April and October.

(5.) **LESLIE**, or } a parish of Aberde-  
(5.) **LESLEY**, } the district of Garioch,  
3 miles long and 3 broad. The soil is producing good crops of oats, barley, potatoes, with little cultivation. The population was 392; increase 94 since 1755; number of sheep 1200; and black cattle valued at L. 2920 sterling.

(6.) **LESLEY**, or **LESLEE**, a town in the parish, (N<sup>o</sup> 5.) 13 miles WNW. of Irvine.

(7.) **LESMAHAGOE**, a parish of Leinster, said to have been named after *St. Maccus* in the 6th century. It is 14 miles long and broad, and lies on the SW. bank of the

10 miles. The soil is various; the air moist and, but favourable to health and longevity, is not to vegetation. One native died lately 66. The chief crops are oats and barley. Population, in 1792, was 2810; decrease 1867, 55. Number of sheep about 7000; cows and horses 620. Coals, lime, lead, iron, and various petrifications, are found in the

LESMAHAGOE, a town in the above parish, 16 SW. of Lanark.

MONT, a town of France, in the dep. of the Meuse, 15 miles NE. of Troyes, and 16½ NW.

NEVEN, a town of France, in the dep. of the Moselle; 7½ miles N. of Landernau, and 13 NE. of Metz.

NEY, a town of France, in the dep. of Jura; 10 N. of Arbois, and 4½ NW. of Salins.

ON, a river of France, which runs into the Meuse, opposite Wiseppe, in the dep. of the Meuse.

PARRE, a town of France, in the dep. of the Vendée; 11 miles NNW. of Bourdeaux.

PAUD, a town of France, in the dep. of the Moselle; 6 miles NW. of Evaux.

PINETA, a town of Naples, in Molise.

LESS. A negative or privative termination. [From *leas*, Dutch.] Joined to a substantive, it signifies the absence or privation of the thing expressed by that substantive: as, a *witless* man, a man without wit; *childless*, without children; *fatherless*, deprived of a father; *penniless*, wanting

LESS. *adj.* [*leas*, Saxon.] The comparative is opposed to *greater*, or to *so great*; not to *more*, or to *equal*.—Mary, the mother of James Mark xv. 40.—He that thinks he has an idea of indefinite space will find, that he can never have a positive idea of the greatest, or the least space; for in this latter he is capable only of a comparative idea of space, which will always be *less* than any other space we have the positive idea. *Locke*.—All things that are considered as having parts, and capable of increase by the addition of any effecting parts, afford us, by their repetition, the idea of infinity. *Locke*.—

\* *less* to conquer, than to make wars cease, without fighting, awe the world to peace. *Hallifax*.

LESS. *adv.* In a smaller degree; in a lower degree.—This opinion presents a *less* merry, but a dangerous temptation to those in adversity of Piety.—The *less* space there is between the object, and the more pure the species, so much the more the species are pre-eminently distinguished; and, on the contrary, the more space of air there is, and the *less* it is, so much the more the object is confused and soiled. *Dryden*.—Their learning lay chiefly in show; they were not much wiser than the vulgar multitude. *Collier on Pride*.—The more themselves want from others, they will be more careful to supply the necessities of the individual. *Colledge*.—

My, and happy still she might have prov'd, she *less* beautiful, or *less* belov'd. *Pope*.

LESS. *n. f.* Not so much; opposed to *more*.

more, or to *as much*.—They gathered some more, some *less*. *Exod.* xvi. 17.—Thy servant knew nothing of this, *less* or more. *1 Sam.*

Yet could he not his closing eyes withdraw, Though *less* and *less* of Emily he saw. *Dryden*.

LESSA, a fort of Portugal; 6 m. N. of Oporto.

LESSARD, a town of France, in the dep. of Saone, 16 miles E. of Chalons, and 7½ NW. of Louhans.

LESSAY, a town of France, in the dep. of the Channel; 12 miles WSW. of Carentan.

\* LESSEE. *n. f.* The person to whom a lease is given.

LESSEN, a town of Prussia, in Culm.

(1.) \* To LESSEN. *v. a.* [from *less*.] 1. To make *less*; to diminish in bulk. 2. To diminish the degree of any state or quality; to make *less* intense.—

Kings may give To beggars, and not *lessen* their own greatness. *Denham*.

—Though charity alone will not make one happy in the other world, yet it shall *lessen* his punishment. *Calamy*.—Collect into one sum as great a number as you please, this multitude, how great soever, *lessens* not one jot the power of adding to it. *Locke*.—This thirst after fame betrays him into such indecencies as are a *lessening* to his reputation. *Spekt*.—Nor are the pleasures which the brutal part of the creation enjoy, subject to be *lessened* by the uneasiness which arises from fancy. *Atterbury*. 3. To degrade; to deprive of power or dignity.—

Who seeks To *lessen* thee, against thy purpose serves To manifest the more thy might. *Milford*.—St Paul chose to magnify his office, when ill men conspired to *lessen* it. *Atterbury*.

(2.) \* To LESSEN. *v. n.* To grow *less*; to shrink; to be diminished.—All government may be esteemed to grow strong or weak, as the general opinion in those that govern is seen to *lessen* or increase. *Temple*.—The objection *lessens* much, and comes to no more than this, there was one witness of no good reputation. *Atterbury*.

(1.) \* LESSER. *adj.* A barbarous corruption of *less*, formed by the vulgar from the habit of terminating comparatives in *er*; afterwards adopted by poets, and then by writers of prose, till it has all the authority which a mode originally erroneous can derive from custom.—

What great despite doth fortune to thee bear, Thus lowly to abase thy beauty bright, That it should not deface all other *lesser* sight? *Fairy Queen*.

It is the *lesser* blot, modestly finds, Women to change their shapes than men their minds. *Shakespeare*.

—The mountains, and higher parts of the earth, grow *lesser* and *lesser* from age to age. *Burnet*.—Cain, after the murder of his brother, cries out, Every man that findeth me shall slay me. By the same reason may a man, in the state of nature, punish the *lesser* breaches of that law. *Locke*.—Any heat promotes the ascent of mineral matter, but more especially of that which is subtle, and is consequently moveable more easily, and with a *lesser* power. *Woodward*.

The larger here, and there the *lesser* lambs,  
The new-fall'n young herd bleating for their  
dams. *Pope.*

(2.) \* *LESSER*. *adv.* [formed by corruption from *lesser*.]—

Some say he's mad; others, that *lesser* hate him,  
Do call it valiant fury. *Shak. Macbeth.*

(3.) *LESSER TONE*, in music. See *TONE*.

\* *LESSES*. *n. s.* [*laiffées*, French.] The dung of  
beasts left on the ground.

*LESSINA*. See *LESINA*.

*LESSINES*, a town of the French republic, in  
the dep. of Gemappes, and late prov. of Austrian  
Hainault, seated on the Dender, 23 miles WSW.  
of Brussels; famous for its linen manufacture.  
Lon. 3. 53. W. Lat. 51. 41. N.

*LESSING*, Gotthold Ephraim, a German poet,  
the son of a clergyman, born at Kametz, and e-  
ducated at Meissen and Leipzig. He formed an  
acquaintance with Voltaire at Berlin, and became  
secretary to General Tauenzien at Breslaw. He  
wrote a comedy, entitled, the Young Scholar, and  
several other pieces.

*LESSIUS*, Leonard, a learned Jesuit, born near  
Artwerp, in 1554. He became professor of philo-  
sophy at Douay, and afterwards of theology at  
Louvain. He wrote several works on theological  
subjects, which have been esteemed. Two of his  
books, *on the Being of a God*, and the Immortality  
of the Soul, were translated into English by a  
friend of Sir Walter Raleigh. He died in 1623.

(1.) *LESSOE*, an island of Denmark, in the Scag-  
gerac, 9 miles long, and from 4 to 1 broad.

(2.) *LESSOR*, a town of Norway, in Aggerhuus.

(3.) \* *LESSON*. *n. s.* [*leçon*, Fr. *lectio*, Latin.]

1. Any thing read or repeated to a teacher, in or-  
der to improvement.—

I but repeat that *lesson*

Which I have learn'd from thee. *Denham.*

2. Precept; notion inculcated.—

This day's contempr hath this *lesson* dear

Deep written in my heart with iron pen,

That bliss may not abide in state of mortal men.

*Fairy Queen.*

—Be not jealous over the wife of thy bosom, and  
wrench her not an evil *lesson* against thyself. *Ecclef.*

is. 1. 1. Portions of scripture read in divine ser-  
vice.—Notw<sup>t</sup> standing so eminent properties,  
whereof *lessons* are happily destitute; yet *lessons*

being free from some inconveniencies whereunto  
others are most subject, they may, in this respect,

be less taken, than in other they must give the hand  
to which betokeneth pre-eminence. *Hooker.* 4. Tune

picked for an instrument.—Those good laws were  
of good *lessons* set for a flute out of tune; of

which *lessons* little use can be made, till the flute  
be made fit to be played on. *Darwin on Ireland.*

5. A raising lecture.—She would give her a *lesson*  
for walking so late, that should make her keep  
within doors for one fortnight. *Sidney.*

(4.) *LESSONS*, among ecclesiastical writers. See

*LESSON*. In the ancient church, reading the  
scriptures was part of the service of the catechu-  
men; at which all persons were allowed to be  
present, to obtain instruction. The church of

England, in the choice of lessons, proceeds as fol-  
lows: for the first lesson on ordinary days, she

directs, to begin at the beginning of the ye  
Genesis, and so continue on, till the books of

Old Testament are read over; only (u. i. t.)

Chronicles, which are for the most part ti

with the books of Samuel and Kings, an

particular chapters in other books, either

they contain names of persons, places, c

matters less profitable to ordinary readers

course of the first lessons for Sundays is re

after a different manner. From Advent

septuagesima Sunday, some particular chapt

saiah are appointed to be read, because th

enforce the example.

\* *To LESSON*. *v. a.* [from the noun.] *T*

to instruct.—

Even in kind love, I do conjure thee  
To *lesson* me. *Shak. Two Gent. 2*

Well hast thou *lesson'd* us, this shall

—Children should be seasoned betimes,  
*soned* into a contempt and detestation of t

*L'Esrange.*

\* *LESSOR*. *n. s.* One who lets any  
farm, or otherwise, by lease.—

Lords of the world have but for  
lease,  
And that too, if the *lessor* please, must

—If he demises the glebe to a layman, t<sup>e</sup>

must pay the small tithes to the vicar,  
great tithes to the *lessor*. *Ayliffe.*

(1.) *LESSUDDEN*, [Celt. *Lis-Aidan*,  
*residence of Aidan*,] a considerable village

land, in Roxburghshire, on the banks of the

so named from Aidan, Bp. of Lindisfarne.

good school, and contains about 300 inh:

(2.) *LESSUDDEN*. See *BOSWELL'S*, S7

\* *LEST*. *conj.* [from the adjectiv *lest*.]  
particle may be sometimes resolved into

meaning prevention or care lest any thi

happen.—Forty stripes he may give him,  
exceed, *lest* if he should exceed, then th

should seem vile. *Deut. xxv.*—

*Lest* they faint  
At the sad sentence rigorously urg'd,  
All terror hide.

My labour will sustain me, and *let* cold  
Or heat should injure us, his timely care  
Not unbesought provided. *Milton.*  
—*Eng.* Luitprand brought hither the corps, *let* it  
be abused by the barbarous nations. *Addi-*  
*ce.* 2. It sometimes means only *that*, with a kind  
of emphasis.—

One doubt  
Pursues me still, *let* all I cannot die,  
*Let* that pure breath of life, the spirit of man,  
Which God inspir'd, cannot together perish  
With this corporeal clog. *Milton.*

\* **LESTERCOCK**. *n. s.* They have a device of  
two sticks filled with corks, and crossed flatlong,  
one of whose midst there riseth a thread, and at  
the same hangeth a sail; to this engine, termed a  
*lestercock*, they tie one end of their boulder, so as  
the wind coming from the shore filleth the sail,  
and the sail carrieth the boulder into the sea, which,  
at the respite of some hours, is drawn in again  
by a cord fastened at the nearer end. *Carew.*

**LESTERP**, a town of France, in the dep. of  
Sarthe,  $\frac{1}{2}$  miles NNW. of St Junien.

**LESTIGNANO**, a town of Etruria, (ci-devant  
Volterra) 17 miles S. of Volterra.

**LESTOFF**. See LAYSTOFF. It has 6 eighteen  
batteries, but no battery. The coast is very  
high and steep.

**LESTRANGE**, Sir Roger, a noted writer in  
the 17th century, descended from an ancient fa-  
mily at Hunstanton Hall, in Norfolk, where he  
was born in 1416, being the youngest son of Sir  
monard L'Estrange, Bart. a zealous royalist.  
Living in 1644 obtained a commission from king  
Charles I. for reducing Lynn in Norfolk, then in  
possession of the parliament, his design was dis-  
covered, and his person seized. He was tried by  
court martial at Guildhall in London, and con-  
demned to die as a spy; but was reprieved, and  
imprisoned in Newgate for some time. He after-  
wards went beyond sea; and in August 1653 re-  
turned to England, where he applied to Oliver  
Cromwell, and having once played before him on  
his viol, he was by some nicknamed *Olive's*  
*Be.* Being a man of parts, but in narrow cir-  
cumstances, he set up a newspaper, entitled *The*  
*Le Intelligencer*, in 1663; but gave it up upon  
publication of the first London gazette in 1665,  
having been allowed, however, a consideration by  
the government. Sometime after the Popish plot, when  
Tories began to gain the ascendant, he, in a  
paper called the *Observer*, became a zealous  
advocate for them. He was afterwards knight-  
ed and served in the parliament called by James  
in 1687. But things soon taking a different  
course, his *Observers* were discontinued. How-  
ever, he continued licenser of the press till king  
William's accession, in whose reign he met with  
no trouble as a disaffected person. He died,  
never, in peace, after he had survived his in-  
dignities. He published many political tracts,  
and translated several works from the Greek, La-  
tin, and Spanish, viz. Josephus's works, Cicero's  
speeches, Seneca's Morals, Erasmus's Colloquies,  
Aesop's Fables, and Bonas's Guide to Eternity.  
His style has been variously represented; his lan-  
guage being esteemed by some easy and humo-  
rous, while others reckon it low and grovelling.

Mr Gordon says, "that his productions are not  
fit to be read by any who have taste or good breed-  
ing. They are full of phrases picked up in the  
streets, and nothing can be more low or nause-  
ous. Our readers will find a sufficient number of  
specimens of his style, in the various quotations  
given by Dr Johnson.

**LESTRE**, a town of France, in the dep. of the  
Channel,  $\frac{1}{2}$  miles N. of Carentan.

**LESTWITHIEL**, a well built town of Corn-  
wall, about 229 miles from London. In it are  
kept the common gaol, the weights and measures  
for the whole stannary, and the county courts.  
It stands on the Foy, which brought up vessels  
from Powey, before it was choked up with sand  
from the tin mines, and therefore its once flour-  
ishing trade is decayed; but it holds the bushel-  
age of coals, salt, malt, and corn, in the town of  
Fowey, as it does the anchorage in its harbour.  
It was incorporated by Richard E. of Cornwall,  
king of the Romans, and has had other charters  
since. It consists of 7 capital burgesses, (whereof  
one is a mayor), and 17 common council-men. It  
is part of the duchy of Cornwall, to which it pays  
17l. 19s. 10d. a year for its liberties. Its chief  
trade is the woollen manufactory. Its church has  
a spire, the only one except that of Helston in the  
county. It has a market on Friday, and 3 fairs.  
It first returned members to parliament in the 33d  
of Edward I. They are chosen by their burgef-  
ses and assistants. It was anciently the county  
town, and the knights of the shire are still chosen  
here.

(1.) **LESWALT**, a parish of Scotland, in Wig-  
tonshire, in a peninsula called the *Rims of Gal-*  
*loway*, 7 miles long, and from 5 to 6 broad, tho'  
in one place only 3. The surface is much diver-  
sified with hills and plains, valleys, meadows, and  
moor. Hence the soil is very various, and the  
parish is but partly improved. The climate is  
mild and salubrious, though moist, and instances  
of longevity are frequent. The chief crops are  
oats, barley, clover, and ryegrass. The popula-  
tion, in 1791, was 1193, and had increased no less  
than 542 since 1755. The number of sheep was  
near 3000; of black cattle 1500; horses 240; and  
carts 57.

(2.) **LESWALT**, "a town of Scotland, in Wig-  
tonshire; 4 miles NW. of Stranraer." (*Cruik-*  
*shank.*) We suppose it lies in the above parish, but  
it is not mentioned in the Statistical Account of  
it, though two other villages are particularised,  
called *Claybole* and *Hillbood*.

(1) \* **LET**. *n. s.* [from the verb.] Hindrance;  
obstacle; obstruction; impediment.—The secret  
lets and difficulties in public proceedings are in-  
numerable. *Hooker.*—Solyman without *let* present-  
ed his army before the city of Belgrade. *Knolles'*  
*Hist. of the Turks.*—

It had been done ere this, had I been confid;  
We had no stop, no *let*. *Ben Jonson.*

Just judge, two *lets* remove; that free from  
dread,

I may before thy high tribunal plead. *Sander.*  
—To these internal dispositions to sin, add the  
external opportunities and occasions concurring  
with them, and removing all *lets* and rubs out of  
the way, and making the path of destruction plain  
before.

before the snuer's face; so that he may run his course freely. *Saugh.*

(1) \* L.E.T. the termination of diminutive words, from *lyte*, Saxon, *little*, *small*; as, *rivulet*, a small stream; *bamlet*, a little village.

(2) \* To L.E.T. *v. n.* [*letan*, Saxon.] 1. To allow; to suffer; to permit.—

Nay, nay, quoth he, *let* be your strife and doubt.

—Where there is a certainty and an uncertainty, *let* the uncertainty go, and hold to that which is certain. *Sp. Saunderson.*

Back on your lives, *let* be, said he, my prey, And *let* my vengeance take the devil's way.

*Dryden.*  
Remember me; speak, Raymond, will you *let* him?

Should he remember Leonora? *Dryden.*

—We must not *let* go manifest truths, because we cannot answer all questions about them. *Collier.*—One who fixes his thoughts intently on one thing, so as to take but little notice of the succession of ideas in his mind, *lets* slip out of his account a good part of that duration. *Locke.*—A solution of mercury in aquafortis being poured upon iron, copper, tin, or lead, dissolves the metal, and *lets* go the mercury. *Newton.* 2. A sign of the optative mood used before the first and imperative before the third person. Before the first person singular it signifies resolution, fixed purpose, or ardent wish. —*Let* me die with the Philistines. *Judges.*—

Here *let* me sit,  
And hold high converse with the mighty dead.

*Thompson.*

3. Before the first person plural, *let* implies exhortation.—Rise; *let* us go. *Mark.*—*Let* us seek out some desolate shade. *Shak.* 4. Before the third person, singular or plural *let* implies permission.—

*Let* Euclid rest, and Archimedes pause. *Milt.*

5. Or precept.—*Let* the soldiers seize him from one of the assassimates. *Dryden.* 6. Sometimes it implies concession.

O'er golden sands *let* rich Pactolus flow. *Pope.*

7. Before a thing in the passive voice, *let* implies command.—*Let* not the objects which ought to be contiguous be separated, and *let* those which ought to be separated be apparently so to us; but *let* this be done by a small and pleasing difference. *Dryden.* 8. *Let* has an infinitive mood after it without the particle *to*, as in the former examples.—

But one submissive word which you *let* fall,  
Will make him in good humour with us all.

*Dryden.*

—The seventh year thou shalt *let* it rest, and lie still. *Exodus.* 9. To leave: in this sense it is commonly followed by *alone*—

If it were so, I might have *let* alone  
Th' insulting hand of Douglas over you. *Shak.*

—The public outrages of a destroying tyranny are but childish appetites, *let* alone till they are grown ungovernable. *L'Estrange.*

*Let* me alone to accuse him afterwards. *Dryd.*

—This is of no use, and had been better *let* alone.

*Nestor.*—Nestor, do not *let* us alone till you have morter'd our necks, and reduced them to their antient standard. *Addison.*—This notion might be *let* alone and despised, as a piece of harlequin's un-

intelligible enthusiasm. *Rogers.* 10. To not permit; to give.—There's a letter for you, your name be Horatio, as I am *let* to know

*Shak.* 11. To put to hire; to grant to a

—Solomon had a vineyard at Baal Hamon; the vineyard unto keepers. *Cant.* viii. 11.

thing deadens so much the composition of

ture, as figures which appertain not to the figure we may call them figures to be *let*. *Dryden.*

*let* her second floor to a very genteel man.

—A law was enacted, prohibiting all bishop or other ecclesiastical corporations, from *letting*

lands for above the term of 20 years. *Swift*

To suffer any thing to take a course which requires no impulsive violence. In this sense it is

only joined with a particle.—She *let* them do a cord through the window. *Job.*—Launce

into the deep, and *let* down your nets for a draught. *Luke*, v. 4.—*Let* down thy pitcher, that I

drink. *Gen.* xxiv. 14.—The beginning of strife when one *let*eth out water. *Prov.* xvii. 14.—

recreation doth meliorate fruit, so doth pruning vines or trees after they be of some growth thereby *letting* forth gum or tears. *Bacon.*—

And if I knew which way to do't,  
Your honour safe, I'd *let* you out. *Ho.*

—The *letting* out our love to mutual object but enlarge our hearts, and make them the

marks for fortune to be wounded. *Boyle.*—

Every slacken'd fibre drops its hold,  
Like nature *letting* down the springs of life.

—From this point of the story, the poet *lets*

down to his traditional poverty. *Pope.*—You *let* it down, that is, make it softer by tempering it. *Maxon.* 13. To permit to take any course.—He *let* loose his thoughts wholly to

sure. *Sidney.*—*Let* reason teach impossibility thing, and the will of man doth *let* it go. *P.*

—He was *let* loose among the woods as foot was able to ride on horseback, or carry a

*Speator.* 14. To *LET* blood, is elliptical *let* out blood. To free it from confinement; fer it to stream out of the vein.—

*Let's* purge this cholera without *letting*

His antient knot of dangerous adverser  
To-morrow are *let* bleed at Pomfret castle.

—Hippocrates *let* great quantities of blood, opened several veins at a time. *Arbutnot.*

*LET* blood, is used with a dative of the whose blood is let.—As terebration doth me fruit, so doth *letting* plants blood, as pricking thereby letting forth tears. *Bacon.* 16. To

*in.* To admit.—

*Let* in your king, whose labour'd spirit  
Crave harbourage within your city walls.

—Roscetes presented his army before the gate of the city, in hopes that the citizens would

some tumult, and *let* him in. *Knolles.*—

What boots it at one gate to make defence  
And at another to *let* in the foe,

Effeminately vanquish'd?

—The more tender our spirits are made by grief, the more easy we are to *let* in grief, cause be innocent. *Taylor.*

They but preserve the ashes, thou the  
True to his sense, but true to his fame,

his current, where thou find'st it low, thine own to make it rise and flow.

*Denham.*  
 a period to my life, and to his fears, come; here's a throat, a heart, or any ready to let in death, and receive his  
*Denham.* 17. If a noun follows, for it is required.—It is the key that lets heir very heart, and enables them to ill that is there. *Soub.*—There are pictures as have been distinguished by their inscriptions, with inscriptions, that let you see and history of the person represented.—Most historians have spoken of ill terrible events, as if they had been secrets of Providence, and made each that private conduct by which they were termed. *Addison.*—These are not my ordinary readers to be let into. *Addison.* de through the town, I was let into the of all the inhabitants; one was a dog, whelp, and another a cur. *Addison.* in, or into. To procure admission.—I speak properly and correctly, where I let their thoughts into other men's more easily. *Locke.*—As soon as they down any quantity of the rocks, they springs and reservoirs among their ofen. 19. To LET off. To discharge, used of an arrow dismissed from the therefore suffered to fly off the string: I to guns.—Charging my pistol with caution! the emperor not to be afraid, it off in the air. *Swift.* 20. To LET out. t; to give to hire or farm.

LET. v. a. [*lettan*, Sax.] 1. To hinder; to oppose.—Their senses are not enjoying their objects. *Sidney.*—To glow all things, is to do nothing; whereby a of Jew or Grecian, or any in the Christ, may be let or hindered. *Hooker.* ab, leave off, whatever wight thou be, weary wretch from her due rest?

*Fairy Queen.*  
 re do ye let the people from their ad. v. 4.—The mystery of iniquity doth letteeth will let, until he be taken out. 2 *Thebes*.—I will work, and who will let l. 11.—

ow no longer letted of his prey, up at it with enrag'd desire. *Dryden.*  
 , when it signifies to permit or leave, is preterite and part. passive; but when to binder, it is letted; as, *musta me*, many things have letted me. *Introd. to*

LET. v. n. To forbear; to withhold After king Fernando had taken upon sion of a fraternal ally to the king, he let to counsel the king. *Bacon.* ; a cape on the W. coast of Jersey.

LEADE. See LEACHLADE. This town t the junction of 4 rivers, which here THAMES. Lon. 2. 15. W. Lat. 51. 42.

AM, a thriving village of Scotland, in ire, in the parish of Dunnichen, on the

N. bank of the Vinny; begun to be built in 1788, by Geo. Dempster, Esq; and containing 20 families in 1790. It has a market once a fortnight on Thursday, for cloth, flax, and yarn.

\* LETHARGICK. *adj.* [*letbargique*, Fr. from *letbargy*.] Sleepy by disease, beyond the natural power of sleep.—Vengeance is as if minutely proclaimed by thunder from heaven, to give men no rest from their sins, till they awake from the *letbargick* sleep, and arise from so dead, so mortiferous a state. *Hammond.*—

Let me but try if I can wake his pity  
 From his *letbargick* sleep. *Denham.*  
 —A lethargy demands the same cure and diet as an apoplexy from a phlegmatic case, such being the constitution of the *letbargick*. *Arbutnot.*

\* LETHARGICKNESS. *n. f.* [from *letbargick*.] Morbid sleepiness; drowsiness to a disease.—

A grain of glory mixt with humbleness,  
 Cures both a fever, and *letbargickness*. *Herbert.*  
 \* LETHARGIED. *adj.* [from the noun.] Laid asleep; entranced.—

His motion weakens, or his discernings  
 Are *letbargied*. *Shak.*

(1.) \* LETHARGY. *n. f.* [*ληθαργια*; *letbargie*, Fr.] A morbid drowsiness; a sleep from which one cannot be kept awake.—

The *letbargy* must have his quiet course.  
*Shakespeare.*  
 So fast a *letbargy*

Has seiz'd his pow'rs towards publick cares and dangers,  
 He sleeps like death. *Denham.*

—Europe lay then under a deep *letbargy*; and was no otherwise to be rescued from it, but by one that would cry mightily. *Atterbury.*—A *letbargy* is a lighter sort of apoplexy, and demands the same cure and diet. *Arbutnot.*

(2.) LETHARGY is derived from *ληθη*, oblivion, and *αλγη*, numbness, or laziness. In this disease, the patient if awaked, remains stupid, without sense or memory, and presently sinks again into his former sleep. See MEDICINE; *Index*.

(3.) LETHARGY. See FARRIEKY, S. E.

(1.) LETHE, in the ancient mythology, one of the rivers of hell, signifying oblivion or forgetfulness; its waters having, according to poetic fiction, the peculiar quality of making those who drank them forget every thing that was past.

(2.) \* LETHE. *n. f.* [*ληθη*.] Oblivion; a draught of oblivion.—

The conquering wine hath steep't our sense  
 In soft and delicate *lethe*. *Shak.*

*Lethe*, the river of oblivion, rolls  
 Her wat'ry labyrinth, which who so drinks  
 Forgets both joy and grief. *Milton.*

(1.) LETHENDY, a parish of Perthshire, 5 miles long from E. to W. and 1½ broad. The climate is mild, the soil fertile, and husbandry much improved. The annual produce is about 1614 bolls of oats, 1100 of barley, 100 of wheat, 100 of pease, 225 of potatoes, and 250 stones of lint. About 60 acres are under wood. The population, in 1795, was 367: increase 21. The roads were bad, the school in ruins, and the parish ten years without a teacher. But the leases are long, the rents moderate, and the tenants almost independent. The number of horses, in 1795,

Herodian, Rufus Festus, Pliny, the Phœnicians; St Cyprian, to the Egyptians; some, to the Persians, to the Chinese; but, with all these, they can never be entitled to all their characters are the signs of writing without the use of letters; impossible to read and write their characters without the use of letters; and it is not possible to print it by any other manner but by engraving in wood. See PRINTING. See also various conjectures about the origin of letters used in different languages according to Crinitus, Moses in the Hebrew letters; Abraham, the Syriac: Phœnicians, those of Attica, those by Cadmus, thence into Italy; Nicostrotata, the Roman; Isis, Vulfilas, those of the Goths, at the Egyptian hieroglyphics manner of writing: but whether the Phœnicians learned the use of writing from the Egyptians, or from their neighbours the Samaritans, need hardly be a question. The books of the Old Testament, written in Hebrew, they are more likely to be the first letters than the hieroglyphics. But wheresoever the Phœnician art, it is generally agreed, that Agenor first brought letters into Europe, in following ages, they spread over the world. See ALPHABET, CHARACTER, and WRITING. The first part or elements of grammar of these compose syllables, these compose sentences. The language consists of a number of letters each to have a different sound, As the difference of articulate letters to express the different ideas of sound, and not, as at present, one sound and sometimes another has brought a great deal of confusion into the languages, and rendered the modern tongues much more difficult otherwise have been. This defect, with the deficiency of all letters, from their wanting some certain sounds, has occasioned the invention of a universal alphabet, to express all such single sounds or letters in any language. See ALPHABET. Grammarians distinguish letters into vowels, consonants, liquids, diphthongs, and small letters. They are also distinguished by the shape and turn of the letters, and in printing, Roman, Italic, and in Type, among printers, is not by the CAPITALS, SMALL CAPITALS, but all the points, figures, marks cast and used in printing; and ornamental letters, cut in wood

or metal, which took place of the illuminated letters used in manuscripts. The letters used in printing are cast at the ends of small pieces of metal, about three quarters of an inch in length; and the letter being not indented, but raised, easily gives the impression, when, after being blacked with a glutinous ink, paper is closely pressed upon it. See the articles PRINTING and TYPE. A fount of letters includes small letters, capitals, small capitals, points, figures, spaces, &c.; but besides, they have different kinds of two-line letters, only used for titles, and the beginning of books, chapters, &c. See FOUNT.

(5.) A LETTER is also a writing addressed and sent to a person. Epistle is seldom used but in poetry. (See EPISTLE, § 1, 2.) Letter-writing was esteemed a liberal art by the Romans, and Cicero mentions with pleasure, in his epistles to Atticus, the elegant specimen he had received from his son of his genius in this way. Mr. Locke thinks it ought to form a particular branch of education. But no man who has got a liberal education can be at any loss to write a good letter. It has been said that "a fine letter does not consist in saying fine things, but in expressing ordinary ones in an uncommon manner. It is the *proprie communiis dicere*, the art of giving grace and elegance to familiar occurrences, that constitutes the merit of this kind of writing." This is very just, but if laid down as a general rule, will lead a young person, whose taste is not properly formed, to write his letters in a style of the most ridiculous and affected bombast. Purity in the choice of words, and justness of construction, joined with perspicuity, are the chief properties of the Epistolary style. Seneca lays down a good general rule: "I would have my letters (says he) to be like my discourses, when we either sit or walk together, unstudied and easy." And what wise man, in common discourse, aims at bright figures, beautiful turns of language, or laboured periods? It is not even always requisite to attend to exact order and method. He that is master of what he writes, will naturally express his thoughts without perplexity and confusion; and more than this is seldom necessary, especially in familiar letters. But as the subjects of letters are exceedingly various, the style ought to be accommodated to the particular subject about which the letter is wrote. All such words and expressions, as are unbecoming in conversation, should be avoided in letters; and a manly simplicity, free of all affectation, plain, but decent and agreeable, should run through the whole.

(6.) LETTER OF ATTORNEY, in law, is a writing by which one person authorises another to do some lawful act in his stead; as to give seisin of lands, to receive debts, sue a third person, &c. The nature of this instrument is to transfer to the person to whom it is given, the power of the maker, to enable him to accomplish the act intended to be performed. It is either general or special: and sometimes it is made recoverable, which is when a bare authority is only given; and sometimes it is irrevocable, as where debts, &c. are assigned from one person to another. It is generally held, that the power granted to the attorney must be strictly pursued; and that where it is made to three persons, two cannot

it. In most cases, the power given by a letter of attorney determines upon the death of a person who gave it. No letter of attorney made by any seamen, &c. in any ship of war, or having letters of marque, or by their executors, &c. in order to empower any person to receive any share of prizes of bounty-money, shall be valid, unless the same be made revocably and for the use of such seamen, and be signed and executed before, and attested by, the captain and one other of the signing officers of the ship, or the mayor or chief magistrate of some corporation.

(7.) LETTER OF MARQUE, OR MART. See MARQUE.

(8.) LETTERS, PATENT, OR OVERT, are writings sealed with the great seal of England, whereby a man is authorized to do, or enjoy any thing, which, of himself, he could not do. See PATENT. They are so called, by reason of their form; as being open with the seal affixed, ready to be shown for the confirmation of the authority given by them.

\* To LETTER. *v. a.* [from *letter*.] To stamp with letters.—I observe one weight *lettered* on both sides; and I found on one side, written in the dialect of men, and underneath it, calamities; on the other side was written, in the language of the gods, and underneath, blessings. *Addison*.

(1.) LEUCAS, in ancient geography

Leucadia, formerly called Νεαίτος and Νεαίτις, situated near a narrow neck of land, or isthmus, on a hill facing the east and Acarnania: but or lower part of the town was a plain lying on the sea by which Leucadia was divided from Acarnania, (*Levy*); though Thucydides says Leucas more inward in the island, which was joined to the continent by a bridge: It was a famous city, the capital of Acarnania, and place of general assembly.

1) LEUCAS, in zoology. See DELPHINUS, N° 8.

LEUCATA, or LEUCATE, in ancient geography, a promontory of LEUCADIA, according to Strabo, a white rock projecting into the sea towards Cephalonia, on which stood a temple of Apollo, surnamed LEUCAPIUS. At Leucata, which was annually celebrated here, the people offered an expiatory sacrifice, to avert the head of the victim all the calamities with which they might be threatened. For this purpose they made choice of a criminal condemned to death; and leading him to the brink of the precipice, precipitated him into the sea amidst the shouts of the spectators. The criminal, however, seldom perished in the water: for it was usual to cover him with feathers, and to bind to his body, which by spreading their wings might serve to break his fall. No sooner was he cast into the sea, than a number of boats were sent for that purpose flew to his assistance, and drew him out; and after being thus saved, he was banished for ever from the territory of Leucata. Strabo, lib. 10. p. 452. According to ancient authors, a strange opinion concerning Leucata prevailed for some time among the Greeks. They imagined that the LEAP from Leucata was a potent remedy against the violence of love. Hence disappointed or despairing lovers, came to Leucadia; and, having ascended the promontory, offered sacrifices in the temple, engaged by a formal vow to perform the desperate act, they voluntarily precipitated themselves into the sea. Some are reported to have been freed from the effects of the fall; and among these is mentioned a citizen of Buthroton, a man whose passions always taking fire at the least object, he four times had recourse to the remedy, and always with the same success. He who made the trial, however, seldom took any precaution to render their fall less rapid, and were generally destroyed; and women often resorted to this act of desperation.—At Leucata is shown the tomb of Artemisia, that celebrated queen of Caria, who gave so many proofs of valor at the battle of Salamis. Inflamed with violent passion for a young man who in vain refused her love, she surprised him in his bed and put out his eyes. Regret and despair brought her to Leucata, where she perished in the waves notwithstanding every effort to save her. Such likewise was the end of the unhappy Phaon. Forsaken by her lover Phaon, she came to seek relief from her sufferings, and found it in death. *Memor. ap. Strab. lib. 10. p. 452.*

2) LEUCATE, a large lake of France, in the mountains of the Auvergne, and Eastern Pyrenees, &c.

and late province of Languedoc. It runs into the Mediterranean by two streams.

(3.) LEUCATE, a town of France, on the N. side of the above lake, 17 miles S. of Narbonne, and 20 NE. of Perpignan. In 1637, it was besieged by the Spaniards, who were at last defeated by Marl. Schomberg. Lon. 3. 9. E. Lat. 42. 0. N.

LEUCE, a triangular island, in the Euxine Sea, between the mouths of the Borysthene and the Danube. The poets fabled it to be a kind of Elysian receptacle for departed heroes, and hence styled it, the *Island of the Blessed*.

LEUCH. See LEUK.

(1.) LEUCHARS, [*Gael. i. e. a wet flat.*] a parish of Scotland in Fifeshire, 9 miles long from W. and SW. to E. and SE. and 5 broad; bounded on the NE. E. and SE. by the German Ocean, and by the Eden on the S. and SW. All kinds of soil are to be found in it, and husbandry being much improved, great quantities of wheat, barley, pease and beans are annually raised and exported. About 36 acres, formerly covered with water to a considerable depth, have been rendered excellent arable ground, producing luxuriant crops of all kinds, by a drain of 24 feet deep, 20 feet wide and 3 miles long; and the air, which, by the pestiferous effluvia of the stagnant water, formerly subjected whole families, every spring and autumn, to intermittent fevers of very long continuance, is now rendered pure and salubrious, and these diseases have totally disappeared. The population, in 1792, was 1620; increase 71 since 1755, owing to the monopoly of farms: Number of horses 420; sheep, 2,120; and black cattle, 1559. There are above 230 acres planted with trees, besides much old wood.

(2.) LEUCHARS, a village in the above parish, about 5 miles W. of St Andrews. It has fairs in April and October. Above 70 new and elegant houses have been lately built in it.

LEUCHSTENBERG, or LEUCHTENBERG, capital of a landgraviate so named, seated on a mountain, near the Elreimpt; 36 miles E. of Nuremberg, and 39 N. of Ratibon, according to Mr Cruttwell, or 50 NW. as Dr Brookes has it. Lon. 12. 26. E. Lat. 49. 40. N.

LEUCIPPUS, a celebrated Greek philosopher and mathematician; first author of the famous system of atoms and vacuums, and of the hypothesis of storms; since attributed to the moderns. He flourished about A. A. C. 428.

LEUCOGÆUS, in ancient geography, a hill of Italy, between Puteoli and Neapolis in Campania, abounding in sulphur; now *P. Alumera*. It had springs called *Leucogæi fontes*; the waters of which, according to Pliny, gave a firmness to the teeth, clearness to the eyes, and proved a cure in wounds.

LEUCOJUM, GREAT SNOW-DROP, a genus of the monogynia order, in the hexandria class of plants; and in the natural method ranking under the 9th order, *Spatheæ*. The corolla is campanulate, sixpartite; the segments increased at the points, the stigma simple. There are 3 species; viz.

1. *LEUCOJUM ÆSTIVUM*, the *summer leucojum*, has a large, oblong, bulbous root, crowned with several long, flat, broad leaves; and amidst them an upright, thick, hollow stalk, 15 or 18 inches high; terminated by a spatha, protruding many white flowers, on slender footstalks, drooping downwards; flowering in May.

2. *LEUCOJUM AUTUMNALE*, the *autumnal leucojum*, hath a large oblong bulbous root, crowned with many narrow leaves; an upright, naked, hollow stalk, terminated by a spatha protruding many white flowers on long weak footstalks, hanging downwards, and flowering in autumn.

3. *LEUCOJUM VERNUM*, the *spring leucojum*, has an oblong bulbous root, sending up several flat leaves six or eight inches long; and amidst them an upright, channelled, hollow, naked stalk, about a foot high, terminated by a spatha, protruding one or two white flowers on slender footstalks drooping downwards, and appearing in March. All the 3 species are very hardy, durable in the roots, and increase exceedingly by offsets, which may be separated every two or three years.

(1.) *LEUCOMA*, in antiquity, a public register amongst the Athenians, in which were inserted the names of all the citizens, as soon as they were of age to enter upon their paternal inheritance.

(2.) *LEUCOMA*, in surgery, a distemper of the eye, otherwise called *albuga*. See *ALBUGA*, and *SURGERY*.

*LEUCOPETRA*, in ancient geography, a promontory of Italy, so called from its white colour (*Strabo*); in the country of the Bruttii, and territory of Rhegium; the termination of the Apennine, and the outmost extremity of the Bruttii, or the modern *Calabria Ultra*; as the Japygium is of the ancient Calabria, or the modern Calabria *Citra*.

*LEUCOPETRIANS*, in ecclesiastical history, a fanatical sect, which sprang up in the Greek and Eastern churches towards the close of the 12th century; the fanatics of this denomination professed to believe in a double Trinity, rejected wedlock, abstained from flesh, treated with the utmost contempt the sacraments of Baptism and the Lord's Supper, and all the various branches of external worship; placed the essence of religion in internal prayer alone, and maintained, as it is said, that an evil being, or genius, dwelt in the breast of every mortal, and could be expelled from thence by no other method than by perpetual supplication to the Supreme Being.

*LEUCOPETRUS*, the founder of the above enthusiastic sect. His chief disciple Tychicus, corrupted, by fanatical interpretations, several books of scripture, and particularly St Matthew's gospel.

*LEUCOPHÆA*. See *CAPRA*, § VII, N° 10.

*LEUCOPHÆUM*. See *GILDING*, § III.

\* *LEUCOPHLEGMACY*. *n. f.* [from *leucophlegmatick*.] Paleness, with viscid juices and cold sweatings.—Spirits produce debility, flatulency, fevers, *leucophlegmacy*, and dropsies. *Arbutnot.*

*LEUCOPHLEGMATIA*, in medicine, a kind of dropsy, otherwise called *anasarca*. See *MEDICINE. Index.*

\* *LEUCOPHLEGMATICK. adj.* [from *leucophlegma*.] Having such a constitution of body the blood is of a pale colour, viscid, and whereby it stuffs and bloats the habit, or white tumours in the feet, legs, or any other and such are commonly asthmatick and dropical. *Quincy*.—Asthmatic persons have voracious appetites, and for want of a right sanguification *leucophlegmatick. Arbutnot.*

*LEUCORYX*. See *CAPRA*, § VII, N°

*LEUCOS*, a river of Macedon, near Pyc

*LEUCOSIA*, an isle in the Tyrrhene Sea

*LEUCOTHEA*, or } in the mythology

*LEUCOTHOE*, } wife of Athamas, called into a sea deity; see *INO*. She was called *ΜΑΤΑ* by the Romans. She had a temple at where all the people, particularly women, ed vows for their brother's children. They not intreat the deity to protect their own children because Ino had been unfortunate in her female slaves were permitted to enter the temple or if their curiosity tempted them to transgress this rule, they were beaten with great severity.

*LEUCTRA*, in ancient geography, a town in Bœotia, W. of Thebes, or between Plateæ and Thespizæ, where the Lacedæmonians were completely defeated by Epaminondas and Pelopidas the Theban generals. The Theban army consisted at most but of 6000 men, whereas the enemy was at least 18,000; but Epaminondas trusted most in his horse, wherein he had the advantage, both in their quality and management; the rest he endeavoured to overcome by the disposition of his men, and the vigour of the attack. He suffered none to serve under him in the engagement, but such as he knew to be fully resolved to conquer or die. He put Pelopidas at the head of the left wing, opposite to Cleombrotus king of Sparta, and placed the main body of the battle there; concluding, that if he could break the body of the Spartans, which was 12 men deep, while his own was 50, they would be soon put to flight. He closed his ranks with the sacred band, which was commanded by Pelopidas; and placed his horse in the front right, from which he had drawn so many, he ordered to fall back, in a slanting line, they declined to fight, that they might serve as a corps of reserve in case of need. This disposition of their few but resolute forces, succeeded according to the wish of the Theban general Epaminondas advanced with his left wing tending it obliquely, to draw the enemy's main body from the main body; and Pelopidas charged with such desperate speed and fury, at the head of his battalion, before they could reunite, their horse were forced back upon their infantry, which threw the whole into the greatest confusion: so that though the Spartans were of a Greek the most expert in recovering from surprize, yet their skill on this occasion proved them; for the Thebans, observing the impetuosity they had made with their horse, pushed fully upon the Spartan king, who fell with numbers of his troops. Upon the death of Cleombrotus, and several officers of note, the

levelled the night with double fury, to record, which was such an established point as they could not give up without the disgrace. Epaminondas chose rather to die in that point, than to hazard the second onset; and, leaving them in possession of their king's corpse, marched straight against another wing, commanded by Archidamus, consisting chiefly of such auxiliaries as were so discouraged by the death of the rest of that wing, that they themselves to flight, and were presently attacked by the rest of the army. The Thebans, pursued them so closely, that they conducted dreadful slaughter among them; completed Epaminondas's victory, who was master of the field, and erected a trophy of it. In this famous battle of Leuctra the Lacedaemonians lost 4000 men, and were only 300.

**LEVEL**, a town of Laconia. *Strabo*, l. 8, c. 2. *E. n. f.* (Fr.) 1. The time of rising, or the course of those who crowd round a river in a morning.—

*d'it thou be first minister of state; thy levees crowded with resort, pending, gaping, servile court; Dryden.* of her Sylvan subjects made their court, and couches pass'd without resort.

**LEVEL**, *adj.* [*l. fel*, Saxon.] 1. Even; one part higher than another.—

The doors ample spaces o'er the smooth pavement. *Milton.* arden, seated on the level floor, behind. *Dryden.*

th any thing else; in the same line with — thing lies level to our wish. *Shak.*

haves with level wing the deep. *Milton.* a knowledge which is very proper to lies level to human understanding. 3. Having no gradations of superiority, in preferments, and you will soon be your learning. *Bentley.*

**LEVEL**, *n. f.* [from the adjective.] 1. A surface without protuberances or indentations. After draining of the level in Northampton, innumerable mice did upon a sudden. *Hale.*—Those bred in a mountainous crize those that dwell on low levels.

Rate; standard; customary height.—made us raise up our thoughts above level of the world. *Sidney.*—The military men inspired me with thoughts ordinary level. *Dryden.* 3. Suitable or its height.—

but perhaps advance their minds so far above level of subjection. *Daniel.* of equality.—The time is not far off all be upon the level. *Atterbury.*—Providence, the most part, sets us upon a level, as proportion in its dispensations to *Spectator.*—I suppose, by the file of, and the like, it must be somebody own level. *Swift.* 5. An instrument

whereby masons adjust their work.—The level is from two to ten feet long, that it may reach over a considerable length of the work: if the plumb-line hang just upon the perpendicular, when the level is set flat down upon the work, the work is level; but if it hangs on either side the perpendicular, the floor or work must be raised on that side, till the plumb-line hang exactly on the perpendicular. *Moxon.* 6. Rule; plan; scheme: borrowed from the mechanick level.—

Be the fair level of thy actions laid, As temperance wills, and prudence may persuade. *Prior.*

7. The line of direction in which any missile weapon is aimed.—

I stood i' th' level Of a full charg'd confederacy. *Shak.*

As if that name, Shot from the deadly level of a gun, Did murder her. *Shak.*

Thrice happy is that humble pair, Beneath the level of all care. *Waller.*

8. The line in which the fight passes.—From the bounded level of our mind Short views we take, nor see the lengths behind. *Pope.*

(3.) LEVEL is also an instrument wherewith to draw a line parallel to the horizon, by means of which the true level, or the difference of ascent or descent between several places, may be found, for conveying water, draining fens, &c. There are several instruments of different contrivance and matter, invented for the perfection of levelling; all of which, for the practice, may be reduced to the following:

(4.) LEVEL, AIR.—The air level is that which shows the line of level, by means of a bubble of air inclosed with some liquor in a glass tube of an indeterminate length and thickness, whose two ends are hermetically sealed. When the bubble fixes itself at a certain mark, made exactly in the middle of the tube, the plane or ruler wherein it is fixed is level. When it is not level, the bubble will rise to one end. This glass tube may be set in another of brass, having an aperture in the middle, whence the bubble of air may be observed. The liquor wherewith the tube is filled is oil of tartar, or aqua secunda; these not being liable to freeze as common water, nor to rarefaction and condensation, as spirit of wine is. This application of a bubble of air was the invention of Dr Hooke. There is one of these instruments made with sights, being an improvement upon the above, which, by the addition of more apparatus, becomes more commodious and exact. It consists of an air-level, (*fig. 1. Plate CCI.*) about 8 inches long, and 7 or 8 lines in diameter, set in a brass tube, 2, with an aperture in the middle, C. The tubes are carried in a strong straight ruler, a foot long; at whose ends are fixed two sights, 3, 3, exactly perpendicular to the tubes, and of an equal height, having a square hole, formed by two fillets of brass crossing each other at right angles, in the middle whereof is drilled a very little hole, through which a point on a level with the instrument is descried. The brass tube is fastened on the ruler by means of two screws; one whereof, marked 4, serves to

at pleasure, for bringing  
 e top of the ball and sock-  
 ruler that springs, one end  
 h screws to the great ruler,  
 has a screw, 5, serving to  
 instrument when nearly level.  
 nt, however, is still more  
 though the holes be ever  
 still take in too great a  
 determine the point of level precisely.  
 of an air-level, with telescope sights.  
 f. 2. is like the last; with this diffe-  
 at, instead of plain sights, it carries a  
 to determine exactly a point of level at  
 distance. The telescope is a little brass  
 about 15 inches long, fastened on the same  
 he level. At the end of the tube of the  
 , marked 1, enters the little tube 2, car-  
 eye-glass and a hair horizontally placed  
 -ocus of the object-glass, 2; which little  
 r be drawn out, or pushed into the great  
 he telescope to different sights:  
 the telescope is placed the ob-  
 w 3, is for raising or lower-  
 for carrying the hair, and  
 a the bubble of air when the  
 and the screw 4, is for mak-  
 r, D or E, agree with the te-  
 is fitted to a ball and socket.  
 to be the first inventor of this  
 has this advantage, that it may be  
 by turning the ruler and telescope half  
 id if then the hair cut the same point  
 before, the operation is just. A tele-  
 may be added to any kind of level, by ap-  
 plying it upon, or parallel to, the base or ruler,  
 when there is occasion to take the level of remote  
 objects. See § 10—13.

(5.) LEVEL, ARTILLERY FOOT, is in form of a  
 square, having its two legs or branches of an e-  
 qual length; at a juncture whereof is a little hole,  
 whence hangs a thread and plummet playing on a  
 perpendicular line in the middle of a quadrant.  
 It is divided into twice 45 degrees from the mid-  
 dle. Fig. 7. This instrument may be used on other  
 occasions, by placing the ends of its two branches  
 on a plane; for when the thread plays perpen-  
 dicularly over the middle division of the quadrant,  
 that plane is assuredly level. To use it in gunnery,  
 place the two ends on the piece of artillery, which  
 you may raise to any proposed height, by means  
 of the plummet, whose thread will give the degree  
 above the level.

(6.) LEVEL CARPENTER'S AND PAVIOR'S, con-  
 sists of a long rule, in the middle whereof is fit-  
 ted, at right angles, another somewhat bigger, at  
 the top of which is fastened a line, which, when  
 it hangs over a fiducial line at right angles with  
 the base, shows that the said base is horizontal.  
 Sometimes this level is all of one board. Fig. 8.

(7.) LEVEL, DR. DESAGULIERS'S. Dr Desaguliers  
 contrived an instrument, by which the differ-  
 ence of level of two places, which could not be  
 taken in less than 4 or 5 days with the best tele-  
 scope levels, may be taken in as few hours—To  
 the ball C (fig. 3. Plate 201.) is joined a recurve  
 tube BA, with a very fine bore, and a small bub-  
 ble at top A, whose upper part is open. It is e-

vident from the make of this instrument, that  
 it be inclined in carrying, no prejudice will  
 done to the liquor, which will always be rig-  
 both in the ball and tube, when the instrument  
 set upright. If the air at C be so expanded w-  
 heat, as to drive the liquor to the top of the tu-  
 the cavity A will receive the liquor, which w-  
 come down again and settle at D, or near it,  
 cording to the level of the place where the inst-  
 ment is, as soon as the air at C returns to t  
 same temperament as to heat and cold. To p-  
 serve the same degree of heat, when the differ-  
 observations are made, the machine is fixed in  
 tin vessel EF, filled with water up to g b, abo-  
 the ball, and a very sensible thermometer has a  
 its ball under water, that one may observe the  
 quor at D, in each experiment, when the th-  
 mometer stands at the same height as before. T-  
 water is poured out when the instrument is e-  
 ried; which may be done conveniently by me-  
 of the wooden frame, which is set upright by t  
 three screws, S, S, S, fig. 4. and a line and p-  
 ment PP, fig. 5. At the back part of the woo-  
 en frame, from the piece at top K, hangs t  
 plument P, over a brass point at N; M m a  
 brackets to make the upright board K N contin-  
 at right angles with the horizontal one at N. Fig  
 6. represents a front view of the machine, sup-  
 ing the fore part of the tin-vessel transparent; as  
 here the brass-socket of the recurve-tube, in  
 which the ball is screwed, has two wings at H  
 fixed to the bottom, that the ball may not beat  
 the tube by its endeavour to emerge when the w-  
 ter is poured in as g b. After the Doctor ha-  
 contrived this machine, he considered, that as t  
 tube is of a very small bore, if the liquor shou-  
 rise into the ball at A, fig. 3. in carrying the in-  
 strument from one place to another, some of it  
 would adhere to the sides of the ball A, and up-  
 on its descent in making the experiment, l  
 much might be left behind, that the liquor wou-  
 not be high enough at D to show the differenc-  
 of the level: therefore to prevent that inconven-  
 ency, he contrived a blank screw, to shut up t  
 hole at A, as soon as one experiment is mad-  
 that, in carrying the machine, the air in A m-  
 balance that in C, so that the liquor shall not r-  
 up and down the tube, whatever degree of he-  
 and cold may act upon the instrument, in go-  
 from one place to another. Now because one e-  
 periment may be made in the morning, the wat-  
 may be so cold, that when a second experime-  
 is made at noon the water cannot be brou-  
 to the same degree of cold it had in the morning  
 therefore, in making the first experiment, wa-  
 water must be mixed with the cold, and when t  
 water has stood some time, before it comes to  
 as cold as it is likely to be at the warmest part  
 that day, observe and set down the degree of t  
 thermometer at which the spirit stands, and fill  
 wise the degree of the water in the barometer.  
 D; then screw on the cape at A, pour out t  
 water, and carry the instrument to the place wh-  
 level you would know; than pour in your wat-  
 and when the thermometer is come to the sa-  
 degree as before, open the screw at top, and t-  
 serve the liquor in the barometer. The Doctor's se-  
 for the barometer is ten inches long, and divid-

; so that such an instrument will serve  
ght not exceeding ten feet, each tenth  
answering to a foot in height. The  
ide no allowance for the decrease of  
he air, because he did not propose this  
r measuring mountains (though, with  
lowance for the decreasing density of  
ill do very well), but for heights that  
to be known in gardens, plantations,  
onveyance of water, where an expe-  
answers 2 or 3 feet in a distance of 20  
render this a very useful instrument.

EL, GUNNER'S, for levelling cannons  
s, consists of a triangular brass plate,  
inches high, fig. 9. at the bottom of  
portion of a circle, divided into 45 de-  
cimum number is sufficient for the highest  
f cannons and mortars, and for giving  
atest range: on the centre of this seg-  
ment is screwed a piece of brass, by means of  
ay be fixed or screwed off at pleasure:  
this piece of brass is made so as to serve  
ument and index, in order to show the  
grees of elevation of pieces of artillery,  
ment has also a brass foot to set upon  
mortars, so as, when those pieces are  
the instrument will be perpendicular,  
f this instrument is to be placed on the  
e elevated, in such a manner, as that  
of the plummet may fall on the pro-  
: this is what they call *levelling the piece*.  
EL, MASON'S, is composed of three  
ined as to form an isosceles rectangle,  
like a Roman A; at the vertex whereof  
a thread, from which hangs a plummet,  
over a fiducial line, marked in the  
the base, when the thing to which the  
ied is horizontal; but declines, from the  
n the thing is lower on the one side  
: other.

VEL, MR HUYGENS'S, Mr Huygen's in-  
sists of a telescope *a*, fig. 11. in form  
er going through a ferril, in which it is  
the middle. This ferril has two flat  
s, one above, and the other below: at  
hereof are fastened little moving pieces,  
y two rings, by one of which the tele-  
pended to an hook at the end of the  
id by the other a pretty heavy weight  
d, to keep the telescope *in equilibrio*,  
it hangs in the box *s*, which is almost  
linsced oil, oil of walnuts, or other  
t will not easily coagulate, for more  
g the balance of the weight and tele-  
he instrument carries two telescopes  
ery parallel to each other; the eye-glass  
being against the object glass of the o-  
ne may see each way without turning  
In the focus of the object-glass of each  
little hair must be strained horizontal-  
ised and lowered as occasion requires  
crew. If the tube of the telescope be  
evel when suspended, a ferril or ring,  
a it, and is to be slid along till it fixes

The hook on which the instrument is  
ed to a flat wooden cross; at the ends  
m whereof there is a hook serving to  
lescope from too much agitation in using

or carriage. To the flat cross is applied another  
hollow one, that serves as a case for the instru-  
ment; but the two ends are left open, that the  
telescope may be secured from the weather and  
always in a condition to be used. The foot of  
this instrument is a round brass plate, to which are  
fastened three brass ferrils, moveable by means of  
joints whereon are put staves, and on this foot is  
placed the box. Fig. 12. marked *l*; is a balance  
level; which being suspended by the ring, the two  
sights when *in equilibrio*, will be horizontal, or on  
a level.

(11.) LEVEL, PLUMB, OR PENDULUM, that  
which shows the horizontal lines by another line  
perpendicular to that described by a plummet or  
pendulum. This instrument, fig. 10. consists of  
two legs or branches, joined together at right an-  
gles, whereof that which carries the thread and  
plummet is about a foot and a half long; the  
thread is hung towards the top of the branch, at  
the point *a*. The middle of the branch where the  
thread passes is hollow, so that it may hang free  
every where: but towards the bottom, where  
there is a little blade of silver, whereon is drawn  
a line perpendicular to the telescope, the said cr-  
vity is covered by two pieces of brass, making as  
it were a kind of case, lest the wind should agitate  
the thread; for which reason the silver blade is  
covered with a glass *G*, to the end that it may be  
seen when the thread and plummet play upon the  
perpendicular: the telescope is fastened to the o-  
ther branch of the instrument, and is about two  
feet long; having an hair placed horizontally across  
the focus of the object glass, which determines the  
point of the level. The telescope must be fitted  
at right angles to the perpendicular. It has a ball  
and socket, by which it is fastened to the foot,  
and was invented by M. Picard.

(12.) LEVEL, REFLECTING, that made by  
means of a pretty long surface of water represent-  
ing the same object inverted which we see erected  
by the eye, so that the point where these two ob-  
jects appear to meet is level with the plate where  
the surface of the water is found. This is the inven-  
tion of M. Marriotte. There is another reflecting  
level consisting of a mirror of steel, or the like,  
well polished, and placed a little before the object-  
glass of a telescope, suspended perpendicularly.  
This mirror must make an angle of  $45^{\circ}$  with the  
telescope, in which case the perpendicular line of  
the telescope is converted into a horizontal line,  
which is the same with the line of level. This is  
the invention of M. Cassini.

(13.) LEVEL, SPIRIT. The most accurate le-  
velling instrument, and that possessed of the greatest  
essential advantages in use, is the spirit level;  
which was first constructed by the late Mr Sisson,  
and to which some small additions and improve-  
ments have been since made. The following is a  
description of one of the best of these levels, as  
made by the principal mathematical instrument  
makers. Fig. 13. is a representation of the instru-  
ment mounted on its complete staves, copied (ex-  
cept the letters) from Mr Adams's Graphical Ef-  
says, Plate xvii. fig. 3. The telescope (ABC) is  
made from 15 inches to 2 feet in length, as may  
be required. It is achromatic, of the best kind,  
and shows the objects erect. In the focus of the

eye-glasses are exceedingly fine cross wires, the intersection of which is evidently shown to be perfectly in the axis of the tube; for by turning it round on its two supporters DE, and looking through the telescope, the intersection of the wires will constantly cut the same part of the object viewed. By turning the screw *a* at the side of the telescope, the object glass at *g* is moved; and thus the telescope is exactly adapted to the eye. If these cross wires are at any time out of their adjustment, which is discovered by their intersection not cutting the same part of the object during the revolution of the telescope on its axis, they are easily adjusted by means of the four screws *bbb*, placed on the telescope about an inch from the end for the eye. These screws act in perpendicular directions to one another, by unscrewing one and tightening the other opposite to the wire, so that if connected with it, it may be moved either way at pleasure; and in this manner the other wire perpendicular to it may be moved, and thus the intersection of the wires brought exactly in the axis of the tube. To the telescope is fixed, by two small screws *cc*, the level tube containing the spirits, with a small bubble of air: This bubble of air, when the instrument is well adjusted, will settle exactly in the same place, in or near the middle of its tube, whether the telescope be reversed or not on the supporters, which in this case are kept unmoved. It is evident, that the axis of the telescope, or the intersection of the wires, must be in this case truly level. In this facile mode of adjustment consists the new improvement of the instrument; and it is hereby capable of being adjusted by only one station and one object, which will at the same time determine it to be in a true level. If by change of weather, accident, or otherwise, the instrument should have lost its level adjustment, or state, it may thus be readily restored and readjusted at the first station; which is an advantage none of the other instruments formerly made have been capable of. The two supporters DE, on which the level rests and turns, are shaped like the letter Y. The telescope rests within the upper part of them; and the inner sides of each of these Ys are tangents to the cylindrical tube of the telescope, which is turned to a true cylinder, and each touches it but at one place only. The lower end of these supporters are inserted into a strong brass plate, FE, and so as to stand perpendicularly on it. One is kept fast by a tightening screw G, and to the other is applied a fine threaded screw H, to adjust the tube when on its supporters to a true level. To the supporter, D, is sometimes applied a line of tangents as far as 12 degrees, in order to take an angle of depression or elevation to that extent. Between the supporters is also sometimes fixed a compass box I, divided into 360 degrees, and again into four 90°; having a centre pin and needle, and trigger, at *d*, to throw off the needle from the centre when not used; so in this manner it constitutes a perfect circumference, connected with all the foregoing improvements. This plate is fixed on a conical brass ferrul K, which is adapted to the bell-metal frustum of a cone at top of the brass head of the slaves, having a ball and socket, with three bell-metal joints, two strong brass parallel plates LL,

the four screws *eee* for adjusting the horizontal motion, a regulating screw M to this motion; a fastening screw N, to lighten it on the cone when necessary. The fastening screw N, and the regulating screw M, by which the whole instrument moved with accuracy through a small space in horizontal direction, was an addition of Mr Rarden's. To adjust it at the first station, The whole level being placed steadily on its slaves, it must be rendered parallel to the axis of the telescope before adjusting the horizontal motion. To this end the telescope must be placed in a line with two of the screws *ee*, and then levelled thereby till the bubble of air in the spirit-tube keeps its position in the middle, while turned about to three points making nearly right angles at the centre to one another. The horizontal motion being thus adjusted, the rims *ff* of the Ys are to be opened, the telescope taken off and laid the contrary way on the supporters. If the bubble of air then rests exactly the same, the level and telescope are rightly adjusted to one another; but if the bubble does not remain the same, the end to which the bubble goes must be noticed, and the distance of it from the telescope altered; correcting one half the error by the screws *cc*, and the other half by the screws *ee*. Now the intersection of the wires being directed to any distant object, it may be one of the vanes of the slaves hereafter described; they continue to be against it precisely while the telescope is turned round on its Ys, it proves, as before mentioned, that the axis of the telescope coincides with the intersection of the wires, and thus the instrument will give the true level direction. The operation of levelling requiring the strictest accuracy, and the best instrument when out of its adjustment being of little use, it is absolutely necessary that every person using such an instrument should have it readily in his power to correct it, and the one above described appears to be the best adapted for that purpose of any hitherto contrived.

(14.) LEVEL, WATER, that which shows the horizontal line by means of a surface of water or other liquor; founded on this principle, that water always places itself level. The most simple made of a long wooden trough or canal, whose sides are parallel to the base; so that being equally filled with water, its surface shows the line of level. This is the chorobates of the ancients. S. CHOROBATA. It is also made with two cups fastened to the two ends of a pipe, 3 or 4 feet long, about an inch in diameter, by means whereof the water communicates from the one to the other cup; and this pipe being moveable on its stand by means of a ball and socket, when the two cups become equally full of water, their two surfaces mark the line of level. This instrument, instead of cups, may also be made with two short cylinders of glass 3 or 4 inches long, fastened to each extremity of the pipe with wax or mastic. Into the pipe is poured some common or coloured water, which shows itself through the cylinders, by means whereof the line of level is determined; the height of the water with respect to the centre of the earth, being always the same in both cylinders; this level, though very simple, is yet very convenient for levelling small distances.

(1.) \* To LEVEL. *v. a.* [from the adjective.]

to even; to free from inequalities: as, he walks. 2. To reduce to the same height mething else.—

Let's bright the moon,  
opposite in level'd west was set. *Milton.*  
will thy foes with silent shame confound,  
their proud structures level with the ground.

*Sandys.*  
lay flat.—All downright rains dis sever the  
of outrageous winds, and beat down and  
swelling and mountainous billows of the  
leigs.—  
levels mountains, and he raises plains.

*Dryden.*  
ring to equality of condition.—Reason can  
sent to the admission of those brutish ap-  
which would over-run the soul, and level  
rior with its inferior faculties. *Decay of*  
5. To point in taking aim; to aim.—  
Each at the head

of his deadly aim. *Milton.*  
aim for shame level their canon lower.

*Dryden.*  
on globe's which on the victor hoist  
of with such impetuous fury smote.

*Milton.*  
construction I believe is not, globes level'd  
not, but globes level'd smote on the hoist.  
direct to any end.—A few men, whose de-  
om the first were levelled to destroy both  
and government. *Saunders.* 7. To suit to  
ion.—

Thence, like limbecks, rich ideas draw,  
t the level'd use of humankind. *Dryden.*

To LEVEL. *v. n.* 1. To aim at; to bring  
or arrow to the same direction with the  
The glory of God, and the good of his  
was the thing which the apostles aimed  
therefore ought to be the mark whereat  
level. *Hooker.* 2. To conjecture; to at-  
o guess.—I pray thee overname them; and  
namest them I will describe them; and  
ng to my description level at my affection.  
3. To be in the same direction with a

to his engine flew,  
rais'd it till it level'd right,  
aft the glow-worm tail of kite. *Hudibras.*  
nake attempts; to aim.—  
nbitious York did level at thy crown. *Sbat.*  
fface distinction or superiority; as infamy  
is trying to level.

LEVELLER. *n. s.* [from level.] 1. One who  
any thing even. 2. One who destroys su-  
y; one who endeavours to bring all to the  
ate of equality.—You are an everlasting  
; you won't allow encouragement to ex-  
ary merit. *Collier.*

LEVELLERS. See ENGLAND, § 49.

LEVELLING, *n. s.* may be defined, the art  
nstructs us in finding how much higher or  
ny given point on the surface of the earth  
another; or, in other words, the differ-  
their distance from the centre of the earth.  
actice of levelling therefore consists, 1. In  
and marking two or more points that shall  
be circumference of a circle whose centre  
of the earth. 2. In comparing the points

thus found with other points, to ascertain the dif-  
ference in their distances from the earth's centre.—  
With regard to the theory of levelling, we must  
observe, that a plumb-line, hanging freely in the  
air, points directly towards the centre of the earth;  
and a line drawn at right angles, crossing the di-  
rection of the plumb-line, and touching the earth's  
surface, is a true level only in that particular spot;  
but if this line which crosses the plumb be conti-  
nued for any considerable length, it will rise a-  
bove the earth's surface, and the apparent level will  
be above the true one, because the earth is glo-  
bular; and this rising will be as the square of the  
distance to which the said right line is produced;  
that is to say, however much it is raised above  
the earth's surface at one mile's distance, it will  
rise four times as much at the distance of two  
miles, nine times at the distance of three, &c.  
This is owing to the globular figure of the earth;  
and this rising is the difference betwixt the true and  
apparent levels; the real curve of the earth being  
the true level, and the tangent to it the apparent  
level. Hence it appears, that the less distance we  
take betwixt any two stations, the truer will be  
our operations in levelling; and so soon does the  
difference betwixt the true and apparent levels be-  
come perceptible, that it is necessary to make an  
allowance for it, if the distance betwixt the two  
stations exceeds two chains in length. The fol-  
lowing is an infallible rule for determining the al-  
lowance to be made:—"Multiply the number of  
Gunter's decimal statute chains, that are contain-  
ed in length between any two stations where the  
levels are to be taken, by itself, and the product  
arising therefrom again by 124; which is a com-  
mon multiplier for all manner of distances for this  
purpose on account of the earth's curvature: then  
divide the second product arising therefrom by  
100,000; or which is also the same, with the dash  
of the pen cut off five figures on the right hand  
side of the product, and what remains on the left  
side is inches, and the five figures cut off decimal  
parts of an inch."

TABLE of CURVATURE of the EARTH showing  
the quantity below the apparent LEVEL at the end  
of every number of chains to 100.

Chains.	Inches.	Chains.	Inches.	Chains.	Inches.	Chains.	Inches.
1 0'00	125	14 0'24	17 0'93	40	2'00		
2 0'005		15 0'28	18 0'98	45	2'28		
3 0'01125		16 0'32	19 1'05	50	3'12		
4 0'02		17 0'36	20 1'12	55	3'78		
5 0'03		18 0'40	21 1'19	60	4'50		
6 0'04		19 0'45	22 1'27	65	5'31		
7 0'06		20 0'50	23 1'35	70	6'12		
8 0'08		21 0'55	24 1'44	75	7'03		
9 0'10		22 0'60	25 1'53	80	8'00		
10 0'12		23 0'67	26 1'62	85	9'03		
11 0'15		24 0'72	27 1'71	90	10'12		
12 0'18		25 0'78	28 1'80	95	11'28		
13 0'21		26 0'84	29 1'91	100	12'60		

(2.) LEVELLING is either *simple* or *compound*. The former is when the level points are determined from one station, whether the level be fixed at one of the points or between them. *Compound levelling* is nothing more than a repetition of many simple operations. An example of *simple levelling* is given *plate CC. fig. 1.* where AB are the station points of the level; CD the two points ascertained. Let the height from A to C be 6 feet: from B to D 9 feet: the difference, 3 feet shows that B is three feet lower than A. If the station points of the level are above the line of sight, as in *fig. 2.* and the distance from A to C be 6 feet, and from B to D 9 feet, the difference will still be 3 feet which B is higher than A.

(3.) LEVELLING STAVES, instruments used in levelling, serving to carry the marks to be observed, and at the same time to measure the heights of those marks from the ground. They usually consist of two mahogany staves 10 feet long, in two parts, that slide upon one another to about five or 10th feet for the more portable carriage. They are divided into 1000 equal parts, and numbered at every tenth division by 10, 20, 30, &c. to 1000; and on one side the feet and inches are also sometimes marked. See *plate 200. fig. 3.* A vane, A, slides up and down upon each set of these staves, which by brass springs will stand at any part. These vanes are about 10 inches long and 4 inches broad; the breadth is first divided into three equal parts, the two extremes painted white, the middle space divided again into three equal parts, which are left; the middle one of them is also painted white, and the two other parts black; and thus they are suited to all the common distances. These vanes have each a brass wire across a small square hole in the centre, which serve to point out the height correctly, by coinciding with the horizontal wire of the telescope of the level.

\* LEVELNESS. *n. f.* [from *level*.] Evenness; equality of surface. 2. Equality with something else.—The river Tiber is expressed lying along, for so you must remember to draw rivers, to express their *levelness* with the earth. *Peacbam.*

(1.) \* LEVEN *n. f.* [*levain*, French. Commonly, though less properly written *leaven*; see LEAVEN.] 1. Ferment; that which being mixed in bread makes it rise and ferment. 2. Any thing capable of changing the nature of a greater mass.—The matter fermenteth on the old *levain*, and becometh more acrid. *Wifeman.*—The pestilential *levains* conveyed in goods. *Arbutnot.*

(2.) LEVEN, in geography, [from *Le Gael. soft*, and *Avon*, a river,] a river of Scotland, in Dunbartonshire, remarkable for the softness and clearness of the water. It was anciently called LEVINAI, and by Ptolemy, LELANONIUS. It rises from the great lake of LOCH-LOMOND, of which it is the overflowing at Balloch, and after running a meandering course through a beautiful valley, adorned with gentlemen's seats, farms, woods, and plantations, falls into the Frith of Clyde at Dunbarton castle. Its whole course, owing to its various windings, will measure above 9 miles, tho' in a direct line it does not exceed 6. It is navigable for one half of the year above a 3d of its length by long and narrow vessels constructed on purpose. It produces salmon, reckoned the best

in Scotland, parr, and various kinds of trout have been taken in it weighing 45 lb.

(3.) LEVEN, a river of Argyllshire, in the north of Lismore, which falls into the Atlantic.

(4.) LEVEN, a river of Fifeshire, which from Loch Leven runs through several joins the Orr, 2 miles below Markinch, and to the Frith of Forth at the town of Leven. It produces salmon, pikes, trouts, eels, &c.

(5.) LEVEN, a river of England, in Lancashire, which runs through the lake Winander. It falls into Morecambe Bay in the Irish Sea.

(6.) LEVEN, a borough of Scotland, in Fifeshire, E. of Dyfart, on the Frith of Forth. It has fairs in April, June, July, Sept. and Oct.

(7.) LEVEN, a village in Yorkshire.

(8, 9.) LEVEN, BLACK, and WHITE, two rivers in Cumberland, which unite and fall into the Kirkcubbin.

(10, 11.) LEVEN, LOCH. See LOCH-LEVEN.

(12.) LEVEN SEAT, a hill of Scotland, in Lancashire, 1200 feet above the level of the sea.

LEVENANT, a river of Wales, in Cardiganshire, which runs into the Dovy.

LEVENNY, 2 rivers of Wales; 1. in Caeronshire; 2. in Denbighshire, running into the Clwyd, near Ruthin.

LEVENS, or LEVENEZ, a town of Hungary, near the Gran; where the Turks were defeated by Gen. Souches, in 1644. It is 84 miles from Vienna.

LEUENSTEDE, a town of Holstein.

LEVENTEN, a lake of Prussia.

LEVENTINA. See LEVANTINA.

(1.) \* LEVER. *n. f.* [*levier*, French.]—A second mechanical power, is a balance supported by a hypomochlion; only the centre is not in the middle, as in the common balance, but near one end; for which reason it is used to elevate a great weight; whence come the names *Harris*.—Have you any levers to lift me up being down? *Shak.*—

Some draw with cords, and some the lever drive

With rolls and levers.

—In a lever, the motion can be continued a short space, as may be answerable to the distance betwixt the fulcrum and the weight, which is always by so much lesser, as the portion betwixt the weight and the power is greater, and the motion itself more easy. *Wilk Magick.*—

Some hoisting levers, some the wheel and axle.

(2.) LEVER, in mechanics, is a bar of wood, one part of which being supported by a prop, all other parts turn upon that prop, which is the centre of motion. This instrument is of two sorts, the common sort, where the weight is fixed to raise, rests at one end of it, our strength is applied at the other end, and the prop is between both. When we stir up the fire with a poker, we make use of this lever; the poker is the weight, which rests upon one of the bars of the grate as the incumbent fire is the weight to be overcome and the other end held in the hand is the power. In this as in all the rest, we have to increase the distance between the fire and

prop to give the man that works the instrument greater power. The lever of the 2d kind, has the prop at one end, the strength is applied to the other, and the weight to be raised rests between them. Thus in raising the water plug in the streets, the workman puts his iron lever through the hole of the plug till he reaches the ground on the other side, and, making that his prop, lifts the plug with his strength at the other end of the lever. In this lever also, the greater the distance of the prop from the strength, the greater is the workman's power. These instruments assist the strength; but sometimes a workman is obliged to act at a disadvantage, in raising either a piece of timber or a ladder upon one end. We cannot, with grammatical propriety, call this a *lever*, since such a piece of timber in fact in no way contributes to raise the weight. In this case, the man, who is the strength or power, is in the middle, the part of the beam already raised is the weight, the part yet at the ground is the prop on which the beam turns or rests. Here the man's strength will be diminished, in proportion to the weight it sustains. The weight will be greater the farther it is from the prop, therefore the man will bear the greater weight the nearer he is to the prop. See MECHANICS.

(3, 4.) LEVER. See HETERODROMUS, and HETERODROMUS.

(5.) LEVER, Sir Ashton, a late celebrated collector of curiosities in Natural History, was the son of Sir D'Arcy Lever, Kt. of Alcaene, gentleman commoner of Corpus Christi College. On leaving it, he soon rendered his family seat famous by the best aviary in the kingdom. He afterwards extended his plan to all branches of Natural History and thus rendered his museum one of the most complete in the world. He died in 1788. The LEVERIAN MUSEUM was sold by lottery, and is now on the Surrey side of Blackfriars Bridge.

(1.) \* LEVERET. [*lievret*, Fr.] A young hare. Their travels o'er that silver field does show, Like track of leverets in morning snow. *Waller*.  
(2.) LEVERET, among sportsmen, is a hare in the first year of her age. See LEpus.

(3.) LEVERET, a township of Massachusetts, in Hampshire county, near the Connecticut, 95 m. N. of Boston. It has a copper mine, and had 524 inhabitants in 1795.

LEVERIAN MUSEUM. See LEVER, N<sup>o</sup> 5.

\* LEVEROOK. † *n. f.* [*lusfire*, Saxon.] This word is retained in Scotland, and denotes the lark. The smaller birds have their particular seasons; and the leverook. *Wulson's Angler*.—If the lust faa will simoure aw the *lev. ooks*. † *Scotch Prov.*

(1.) LEVET, a town of France, in the dep. of Cher, 6 miles S. of Bourges, and 12 SSE. of Chateaufort.

(2.) \* LEVET. *n. f.* [from *lever*, French.] A salt on the trumpet; probably that by which the trumpeters are called in the morning.—

He that led the cavalcade,

VOL. XIII. PART I.

† Dr JOHNSON generally blunders when he attempts to write in the Scotch dialect, which, by the by, is only obsolete English, and was once the language of the English court. LEVEROOK should be spelt Laverock, or Laverick. His assertion from our proverbs, too, is horribly mis-spelt. Lust for list, faa for ta, and aw for a, would be unintelligible in this side of the Tweed, were it not for the connection. The Doctor however, speaks his property elsewhere. *W. LIT.*, d. 5.

Wore a fowgelder's flaggell,  
On which he blew as strong a *Levet*;  
As well-see'd lawyer on his breviate. *Hudibras*  
LEUGAST, a town of Franconia, in Bamberg; 24 miles ENB of Bamberg.

LEVI. [לֵוִי, Heb. *i. e.* joined.] the son of Jacob by Leah, and the progenitor of the priests and LEVITES, was born about A. M. 2254. His treacherous and bloody combination with Simon, to murder the Schechemites, is recorded in Gen. xxxiv: as well as Jacob's detestation of it, and his curse denounced against them for it, on his death-bed, at the very time that he pronounced blessings on Judah, Joseph, and the rest of his sons. (See Chap. xlix, 5—7.) Those who view the old Testament history, as containing not only a record of facts, but also an allegorical prefiguration of the most important events, that are to take place in the Christian church to the end of time, for which they think they have St Paul's authority, in Gal. iv 24; (See ALLEGORY;) consider this shocking transaction as an emphatic type of the horrid consequences of the union of the civil and ecclesiastical powers; which, from the establishment of the Romish church by Constantine, to the repeal of the edict of Nantes, (to descend no later) has been productive of the most dreadful scenes of treachery, cruelty, persecution and massacre. Peuben having forfeited his birth-right, by his abominable incest, they consider Simon, the next eldest son, as the proper representative of the *civil* power; and, if this be granted, the propriety of supposing Levi the type of the *ecclesiastical* will hardly be disputed, as his posterity enjoyed it for so many ages exclusively. Levi died A. M. 2391, aged 137.

\* LEVIABLE. *adj.* [from *levy*.] That may be levied.—The sums which any agreed to pay, and were not brought in, were to be *leviable* by course of law. *Bacon*.

(1.) \* LEVIATHAN. *n. f.* [לֵוִיָּאֲתָן.] A water animal mentioned in the book of *Job*. By some imagined the crocodile, but in poetry generally taken for the whale.—

We may, as bootless, spend our vain command

Upon th' enraged foldiers in their spoil,  
As send our precepts to the *leviathan*,  
To come ashore. *Shak.*  
—Canst thou draw out *leviathan* with an hook? *Job*.—

More to embroil the deep; *leviathan*,  
And his unwieldy train, in dreadful sport  
Tempest the loolen'd brine. *Toung's Winter*.

(2.) LEVIATHAN. Zoologists and commentators have been much puzzled to determine what genus of animals the *leviathan* belongs to. Some suppose it to be the whale; others a species of land dragon, said to frequent the banks of the Red Sea; others the crocodile; while a 4th class do not reckon it an animal at all, but a *whirlpool*. This last opinion is too abused to require refutation, as the whole description

Y

tion

tion, in Job xli: of his parts, passions, motions, strength, invulnerability, &c. evidently refer to an animated being, and not to a collection of dead matter, such as a whirlpool. Of the dragon nothing yet certainly known; the description of the leviathan: (See DRACO, N<sup>o</sup>. III.) As to the whale, many parts of the description, particularly verses 6th and 7th, cannot, by any construction of language, be made to apply to it; for it is well known that the whale's "skin" is often "filled with barbed irons," and "his head with *fish-spears*;" and that those engaged in the whale-fishery "part him" (his blubber, bones, spermaceti, &c.) "among the merchants."—In a word no animal, that we have any certain knowledge of, comes any thing near the grand and majestic description given of the leviathan, by his Creator, except the crocodile; who, it is well ascertained, cannot be "drawn out," or taken "with an hook," or his "jaws bored through with a *storn*;"—whose "teeth are indeed terrible round about,"—whose scales may be said to be "his pride, shut up together as with a close seal;—one fo near to another, that no air can come between them;—so joined one to another, and sticking together, that they cannot be sundered," &c. See LACERTA, § II: N<sup>o</sup>. 2, 8, and 11.

LEVICO, a lake of Austria, in Tirol.

LEVIE, a town of the French republic, in the dep. and island of Corsica; 13 miles NW. of Porto Vecchio.

LEVIER, a town of France, in the dep. of the Doubs; 9 miles S. of Ornans.

\* To LEVIGATE. *v. a.* [*levigo*, Lat.] 1. To rub or grind to an impalpable powder. 2. To mix till the liquor becomes smooth and uniform.—The chyle is white, as consisting of salt, oil, and water, much *levigated* or smoothed. *Arbutnot.*

(1.) \* LEVIGATION. *n. s.* [from *levigate*.]—*Levigation* is the reducing of hard bodies, as coral, tutty, and precious stones, into a subtile powder, by grinding upon marble with a muller; but unless the instruments are extremely hard, they will so wear as to double the weight of the medicine. *Quincy.*

(2.) LEVIGATION, in pharmacy and chemistry, is performed by grinding hard and ponderous bodies to an impalpable powder, on a porphyry, or in a mill. A new method of reducing powders to a great degree of fineness has lately been invented by means of a fanner. This has the advantage over the other methods, in being much more expeditious, and attended with less trouble and expence; the degree of fineness to which they are reducible being thus also in a manner unlimited. The construction of the fanner employed for this purpose is different from that employed for winnowing clay; the blast net being collected into a small compass as in the latter, but diffused over a considerable space, left a violent blast should hurry off both coarse and fine together. For this purpose, the leaves of the fanner are made as long in the direction parallel to the axis as can be done conveniently. In the other direction projecting from it, they differ not from the ordinary length, nor do they in the general situation with respect to each other. Before the leaves is a wooden partition reaching half way up, to prevent the gross powder from falling in among the leaves, which

reach about half way from bottom to about two feet or less from this, according to the size of the fanner, is another partition in direction, reaching from the bottom of the box near the top. The whole is inclosed in a box 6 or 7 feet long, having in the end a slit equal to the space between the top of the box and the sloping already mentioned. On the top of this box, extending from the farthest end former to the hopper which holds the powder, with a hole in the end nearest to it and upon this another box, &c. as long as found that the air carries off with it any of powder. This will be best understood by the following description of the figure; A represents the fanner itself, having a hopper for the admission of the air, as usual first wooden division, to prevent the powder upon the leaves of the fanner. A second division reaching not quite to the top of the box. Its use is to direct the current produced by the fanner obliquely upwards it strikes the powder, falling down from the hopper, in the same oblique direction, and the fine parts, first through the aperture which some of them are lodged in the box, still finer particles are carried through the box into the second box E, where part of them are lodged: they next pass through the aperture to the box F, and through G into the box H, the powder becoming still finer and in small quantity as it ascends into the higher boxes, until the waste becomes so trifling, that the air is allowed to pass off entirely through the box in the fourth or some other box, as most convenient. Thus it is evident we may obtain powders of every degree of fineness, as neither sieve nor levigating mill can. Washing over with water may indeed produce powders equally fine; but the length of time requisite for settling, and the trouble of drying again, must decidedly give the preference to the fanner; especially when we consider, that not any occasion for taking out the powder in small quantities, as is the case in fitting, or levigating; but it may be allowed to remain as much is collected in the boxes as desired. The principal difficulty in the construction of the fanner is the letting down the powder in a manner, so that the stream of air, which is not to be very strong, may freely pass through. For this purpose, the hopper must not be in a large body, as in winnowing of corn, but a long and thin sheet, which can easily be directed. The best method seems to be to let the hopper extend the whole breadth of the box, leaving a narrow slit at bottom. Close on each part of this slit, a fluted roller ought to be placed, which shutting up the aperture exactly, will allow any powder to pass but what does not pass in consequence of the hollow flutes of the roller. It would be proper also that the fluted roller should be smooth round one would allow nothing to pass. It would be proper also that the fluted roller should be thin and nearly continued, so that the powder be always descending: for this purpose the tribute greatly to the fineness of the powder.

ccount the powder ought, before it is put  
opper, to be passed through a lawn sieve.  
gure, *e* represents the hopper, and *f* the  
ller. Motion is easily communicated to  
r by means of a wheel fastened on the ax-  
fanner. The coarse powder is kept back  
artition *C*, and descends through a slit i  
ttom of the lowermost box, into a recep-  
which may be removed occasionally. All  
s and seams of the machine must be very  
r the fine powder is very penetrating; for  
on also the hopper ought to have a lid.  
GNAC, a town of France, in the dep. of  
er Garonne,  $7\frac{1}{2}$  miles SW. of Grenade,  
NNW. of Toulouse.

LEVITE. [*Levita*, Latin, from *Levi*.] 1.  
he tribe of Levi; one born to the office of  
d among the Jews.—In the Christian  
the office of deacons succeed in the place  
*evites* among the Jews, who were as minist-  
l servants to the priests. *Ayliffe*. 2. A  
sed in contempt.

EVITES, in a general sense, include all the  
nts of LEVI, among whom were the Jew-  
s. In a more particular sense, the *Levites*  
order of officers in the Jewish church,  
re employ'd in performing the manual ser-  
ve temple. They were obedient to the  
be descendants of Aaron, in their ministrat-  
d brought them wood, water, and other  
es for the sacrifice. They sung and play-  
instruments in the temple and other place  
ey applied themselves to the study of the  
were the ordinary judges of the country,  
ye subordinate to the priests. Their sub-  
was the tythes of corn, fruit, and cattle,  
ut Israel: but the priests were entitled to a  
their tythes, by way of first-fruits to the  
8 cities were assigned for the residence  
vites, of which the priests claimed 13,  
of were appointed cities of refuge. They  
secrated, before they entered upon their  
by shaving their flesh, washing their  
and sprinkling with the water of expia-  
position of hands was used in consecra-  
l two bullocks were offered at the door  
bernacle. They waited weekly, and by  
the temple, beginning their attendance  
abbath and ending the next: During this  
were maintained out of the offerings,  
the time of Solomon, the number of *Le-*  
m the age of 20, capable of serving, was

TTICAL. *adj.* [from *levite*.] Belonging  
vites; making part of the religion of the  
by the *Levitical* law, both the man and the  
were stoned to death; so heinous a crime  
tery. *Ayliffe*.

o called from its continuing the laws and  
ns relating to the priests, Levites, and fa-

TTY. *n. s.* [*Levitas*, Latin.] 1. Lightness;  
iness: the quality by which any body has  
ght than another.—He gave the form of  
that which ascended; to that which de-  
scended, the form of gravity. *Raleigh*.—This bub-  
reason of its comparative *levity* to the fluid

dity that enclaves it, would ascend to the top.  
*Bentley*. 2. Inconstancy; changeableness.—They  
every day broached some new thing; which ref-  
lects *levity* they did interpret to be their growing  
in spiritual perfection. *Hooker*.—

Where wigs with wigs, with sword-knots  
sword-knots strive,  
Beaus banish beaus, and coaches coaches drive,  
This erring mortals *levity* may call. *Pop.*  
3. Unsteadiness; laxity of mind.—  
I unbosom'd all my secrets to thee;  
Not out of *levity*, but over-pow'r'd  
By thy request. *Milton*.

4. Idle pleasure; vanity.—He never employed his  
omnipotence out of *levity* or ostentation, but as  
the necessities of men required. *Calamy*. 5. Tri-  
fling gaiety; wanting of seriousness.—

Our graver business frowns at this *levity*. *Shak.*  
—Hopton abhorred the licence, and the *levities*,  
with which he saw too many corrupted. *Clarend.*  
—That spirit of religion and seriousness vanished,  
and a spirit of *levity* and libertinism, infidelity and  
profaneness, started up in the room of it. *Atterb.*

LEVIZANO, a populous town of the Italian  
republic, in the dep. of Panaro, and district (late  
duchy) of Modena; 6 miles SE. of Modena.

LEUK, a town of Switzerland, almost in the  
middle of the VALAIS; remarkable for its natural  
strength, for the assembly of the states that often  
met there, and for its baths, whose water is so  
hot that it will boil eggs. Lon. 7. 39. E. Lat. 46  
12. N.

LEUN, or LEIN, a town of Germany, in the  
circle of the Upper Rhine and county of Solms  
Braunfels, on the Lahn; 4 m. NE. of Weilburg.

LEUNCLAVIUS, John, a learned German,  
descended of a noble family, and born at Amel-  
brun in Westphalia, in 1533. He travelled through  
most countries in Europe. While he was in Tur-  
key, he collected good materials for a *History of*  
*the Ottoman Empire*; which he published, and sev-  
eral other pieces concerning it, in Latin. He al-  
so translated Xenophon, Zosimus, &c. into Latin.  
To a knowledge of the learned languages he add-  
ed that of the civil law. He died at Vienna in  
1593, aged 60.

LEUPUSCH, a town of Silesia, in Niesse.

LEVRARA, an island of Maritime Austria, in  
the prov. of Quarnero, 4 miles in circumference,  
abounding with rabbits.

LEURE, a river of France, which runs into the  
Loire, below Old St Florent, in the dep. of Maine  
and Loire.

LEVROUX, an ancient town of France, in the  
dep. of the Indre; 17 miles E. of Chatillon, and  
35 SW. of Bourges. Lon. 1. 40. E. Lat. 46. 59. N.

LEUSCHEIDT, a town of Westphalia, in the  
duchy of Berg, 9 miles ESE. of Blankenberg.

LEUSDEN, John, a celebrated philologist, born  
in 1624. He studied the learned languages and  
mathematics at Utrecht; and then went to Am-  
sterdam, to converse with the rabbis, and perfect  
himself in the Hebrew tongue. After which he was  
professor of Hebrew at Utrecht, where he acqui-  
red a great reputation, and died in 1699. He  
wrote many valuable works; the principal of  
which are, 1. *Onomasticum Sacrum*, 8vo. 2. *Gla-*  
*vis Hebraica & Philologica Veteris Testamenti*, 4to.

3. *Novi Testamenti Clavis Græca, cum Annotationibus Philologicis*, 8vo. 4. *Compendium Biblicum Veteris Testamenti*, 8vo. 5. *Compendium Græcum Novi Testamenti*; the best edition of which is that of London, in 1668, 12mo. 6. *Philologus Hebraus*, 4to. 7. *Philologus Hebraeo-mixtus*, 4to. 8. *Philologus Hebraeo-Græcus*, 4to. 9. Notes on Jonas, Joel, Hosea, &c. He also gave correct editions of several learned works.

LEUSE, a town of the French republic, in the dep. of Gemappes, and ci-devant province of Austrian Hainault, seated on the Dender; 14 miles NW. of Mons. Lon. 3. 45. E. Lat. 50. 35. N.

LEUTENBERG, a town of Upper Saxony, on the Sorbitz, near mines of silver and copper; 12 miles SSE. of Rudolstadt.

LEUTH, a town of the French republic, in the dept. of the Ourte, and late bishopric of Liege; 2 miles S. of Stockem.

LEUTHER, a river of Scotland, in Kincardineshire, which rises in the Grampians, runs through the parish of Lawrencekirk, and falls into the North Esk.

LEUTKIRCH, or } an imperial town of Suabia,  
LEUTKIRK, } in Algow, on a rivulet that falls into the Iller. Lon. 10. 10. E. Lat. 47. 53. N.

LEUTMERITZ. See LEITMERITZ, N<sup>o</sup> 1, 2.

LEUTMISCHL, a town of Bohemia.

(1.) LEUTSCH, a town of Carniola.

(2.) LEUTSCH, a town of Hungary.

LEUTZBURG, a town of the Helvetic republic, in the canton of Bern, 6 miles S. of Brugg.

LEUWENHOEK, Anthony DE, F. R. S. a celebrated Dutch physician and naturalist, born at Delft in 1632. He was of an ancient family, and acquired great reputation throughout all Europe, by his experiments and discoveries. He particularly excelled in making glasses for microscopes and spectacles, and died in 1723. His letters to the royal society of London were printed at Leyden, in 1722, in 4to.

\* LEVY. *n. f.* [from the verb.] 1. The act of raising money or men.—Every new *levy* they make must be at the expence of their farms and commerce. *Addison*. 2. War raised.—

Treason has done his worst: nor steel, nor poison,

Malice domestick, foreign *levy*, nothing  
Can touch him further. *Shak.*

\* To LEVY. *v. a.* [*lever*, French.] 1. To raise; to bring together; applied to men.—He resolved to finish the conquest of Ireland, and to that end *levied* a mighty army. *Davies*. 2. To raise, applied to war. This sense, though *Milton's*, seems improper.—

They live in hatred, enmity, and strife,  
Among themselves, and *levy* cruel wars. *Milt.*  
3. To raise: applied to money.—*Levy* a tribute unto the Lord of the men of war. *Numbers*.—Instead of a ship he should *levy* upon his country such a sum of money. *Clarendon*.

LEFUZE, or LEUSE. See LEUSE.

LEWARDE, a town of France, in the dep. of the North, 4 miles E. of Douay, and 7 NW. of Bouchain.

LEWARDEN, a handsome, rich, and strong town of the Batavian republic, in the dep. of the

Eems, and late capital of Ostergow, West Sevenwolden, and W. Friesland. It was the place of residence of the Stadtholder; and in ings, as well public as private, is very magnificent. It has several canals running through the which are of great service to trade, especially they are continued to the sea and to the most considerable towns of the department. Lon. 5 Lat. 53. 12. N.

LEWCKOCE, a town of Poland, in Po  
\* LEWD. *adj.* [*Leawde*, Saxon.] 1. Le clerical; from *lead*, Saxon, *people*. It is son grofs: ignorant. Obsolete.—For *leawd* m book I writ. *B. Groffthead*.—

So these great clerks their little wifdo  
To mock the *leawd*, as learn'd in this as

2. Wicked; bad; dissolute.—If some be ad into the ministry, either void of learning, in life, are all the rest to be condemned? —Before they did oppress the people, only our of a *leawd* custom, they did afterwards same oppressions by warrant. *Davies*. 3. I libidinous.—

He is not lolling on a *leawd* love-bed,  
But on his knees at meditation. *R*  
Then *leawd* Anchemolus he laid in du  
Who stain'd his stepdame's bed with  
lust.

\* LEWDLY. *adv.* [from *leawd*.] 1. Wi naughtily.—

A sort of naughty persons, *leawdly* be  
Have practis'd dangerously against you

2. Libidiously; lustfully.—  
He lov'd fair lady Eltred, *leawdly* lov  
Whose wanton pleasures him too m  
please,  
That quite his heart from Guendeline i

So *leawdly* dull his idle works appear,

Those that betray them do no teache  
LEWELLYN I. and II. Princes of Wal

of the last of these, Wales was annexed to the crown of England. See ENGLAND, § 27; and § 28.

**LIN**, a town of Bohemia, in the circle of Moravia; 8 miles NE. of Leitmeritz.

**LENTZ**, a town of Upper Hungary, in the county of Gran, and on the river so named, where the Hungarians were defeated in 1644. Lon. 18. 19. E. 45. N.

**LEWIS**, an ancient, large, and well-built town, situated on an eminence on the banks of the River Thames, 50 miles from London. A bloody battle was fought near it, wherein K. Henry III. was killed and taken prisoner by the barons. K. Henry III. appointed two mint-houses here; and in the reign of Edward the Confessor, it had 127 burgesses. It is a borough by prescription. The streets are chosen yearly. It has handsome streets and suburbs, with six parish churches. It carries on a good trade; and the Ouse, which runs through it, brings goods in barges from a port 8 miles from London.

On this river are several iron works, and lead mines, &c. are cast. A charity school was founded in 1711, where 28 boys are taught, and maintained. The soil is the richest in the county. The market is on Saturday, and on May 6, Whitsun-Tuesday, and Oct. 2. The corn is prodigiously large, and are sometimes carried to Maidstone and other places on the river, on a sort of carriage called a *tug*, by which they are then left for other tugs to carry it to London; and a tree is sometimes two or three years old when it is cut down; because, the roads being so bad, the rain is once set in, sometimes a summer is not dry enough to make the soil fertile. Living being cheap, and the town frequented by gentlemen, it is reckoned an agreeable retreat for half-pay officers. It sends members to parliament, and lies 30 miles E. of London, and 49 S. of London. Lon. 0. 5. E. 45. N.

**LEWIS**, [LOUIS, Fr.] the name of 16 kings of France. See FRANCE. Of these we shall only take notice of the following:

**VII.** A. D. 1137, was the first who had the courage to oppose the encroachments of the papal authority: Pope Innocent II. threatened him for appointing an Abp. of Sens, but Lewis defended his prerogatives, and put the priests to death who had been the authors of the quarrel. In 1147, he marched with an army of 20,000 men against the Saracens, (see § 24.) but was defeated; and returning was taken by the Greeks, but rescued by the emperor of Sicily. He died in 1180, aged 60.

**IX.** or **ST LEWIS**, was one of the greatest monarchs of France; equally memorable for his piety and his virtues, but unfortunately, misled by the superstition of the times, he sacrificed his private interest, and the welfare of his kingdom, to the policy of crusading. He succeeded his father, Louis IX. in 1226. In 1248, leaving France to the care of his son, he embarked for Egypt, attended by his three brothers, and the flower of the French nobility. At first his victories were great; he took Damietta in 1249; but in 1250 he was defeated and taken prisoner by the Turks, his nobles, and the greatest part of his

army. The sultan demanded an exorbitant sum for his ransom, and his answer deserves to be recorded: "Tell the sultan, that a king of France is not to be ransomed with money; I will give the sum required for my people, and Damietta for myself." These terms were accepted, and a peace of ten years ensued. Upon his return to France, he diminished the taxes, revoked those which the financiers had introduced; issued several salutary edicts; founded several churches and hospitals; and effectually overturned the ecclesiastical jurisdiction of the court of Rome, by his pragmatic sanction in 1269, which established the independency of the Gallican church. Thirteen years residence in his capital indemnified his subjects for his absence; but his pious zeal prevented the enjoyment of this happiness: he embarked for the sixth crusade in 1270; and died the same year, at the siege of Tunis, aged 55.

**LEWIS XI.** was one of the greatest tyrants that ever existed. He began to reign A. D. 1461. His oppressions obliged his subjects to enter into a league against him, styled "*Ligue de bien publics*," in which his brother the duke of Berri and some of the principal nobility were concerned: they solicited succours from John duke of Calabria, who joined them with 500 Swiss; the first introduction of Swiss soldiers into the French armies. His reign was almost one continued scene of civil war; and it is computed that 4000 of his subjects were executed in public and private, either for being in arms against him, or suspected by him. In his last illness, he drank the warm blood of children, in the vain hope of restoring his decayed strength. He died in 1483, aged 60. The posts for letters were established in his reign, owing to his eagerness for news; the first institution of this nature in Europe.

**LEWIS XII.** A. D. 1492, styled *the Just*, and *the Father of his people*, is memorable for his valour in the field, and his wisdom in the cabinet. A great general, but unfortunate towards the end of his reign, when he did not command his troops in person: his orders transmitted from home were misunderstood, or wilfully disobeyed; and he had the mortification, before he died, to see the total expulsion of the French from the possessions he had acquired for them by his personal bravery. At 53 years of age, he married the princess Mary of England, sister of Henry VIII. and being of a delicate constitution, fell a victim (according to the French historians) to an atrocious dalliance; for he died about 2 months after his nuptials, in 1515.

**LEWIS XIII.** A. D. 1610, increased the military reputation of his country, and made considerable additions to its domains. The beginning of his reign was occupied in civil wars with his mother and his Protestant subjects; in which he was excited to continue by his famous minister cardinal Richelieu, who attended him to the siege of Rochelle, the bulwark of the Hugonot party; which surrendered in 1628, after a siege of more than a year. Upon this and other occasions, the king gave proofs of great personal bravery. His attachment to his ally the duke de Nevers, who succeeded to the duchy of Mantua, but was refused the investiture by Charles VI. emperor of Germany, involved him in a war with that prince, the Spaniards,

Spaniards, and the duke of Savoy; in which Lewis was victorious; and obtained a treaty of peace, by which the duke of Mantua was guaranteed in the possession of his dominions. In 1635, a new war broke out between France and Spain, and the emperor took part with the latter: it lasted 13 years against the emperor, and 25 against Spain, with various success; and the military experience acquired by the different armies kept on foot, in the Low Countries, on the frontiers of France, and in Italy, paved the way for the successes of Lewis XIV. Lewis XIII. died in 1643, aged 41.

LEWIS XIV. falsely styled THE GREAT, became king at 5 years of age, in 1643. He was at first styled *Dieu-donne*, because the French considered him as the *gift of heaven*, granted to their prayers after the queen had been barren 22 years. This princess (Anne of Austria) was declared regent by Lewis XIII. and saw herself under a necessity to continue the war against Philip IV. king of Spain, her brother. The duke d'Enguin was made general of the French armies; and so signal was the success of this renowned warrior (afterwards prince of Condé, and known by the style of *the Great Condé*), that his victories brought on the advantageous treaties of Munster in 1648, between France, the emperor Ferdinand III. and Christina queen of Sweden: the basis of the aggrandisement of France in this reign, the principal events of which, and of the next, will be found related under the articles ENGLAND, § 69-83; FRANCE, § 46-49; UNITED PROVINCES, &c. Lewis XIV. died in 1715, aged 77.

LEWIS XV. great-grandson of the preceding, succeeded in 1715. He was styled, in the course of his reign, *the well-beloved*, which he lost some years before he died, and was detested and despised by his subjects for his shameful attachment to Madame Pompadour, the wife of M. DE TOULOUSE, who, by the ministry of her patron the duke d'Albion, governed the kingdom, and invaded the rights of the people. He died in 1774, in the 64th year of his age and 50th of his reign.

LEWIS XVI. the last French monarch of the race of CAPET, and house of BOURBON, succeeded his grandfather in 1774. We cannot stile him the *last monarch of France*, now that Napoleon Bonaparte is elected First Consul *for Life*. The principal events of this unfortunate king's reign to the revolution, in 1789, are related under FRANCE, § 50-57. His character is universally allowed to have been such, as, in times of less disturbance, would have insured him a high degree of popularity to the end of his life. He was naturally of a mild and humane disposition; and has the peculiar merit of having been the first who instituted a society for the instruction and employment of the blind; an example of benevolence which has been since successfully followed in this and other countries. He was also an author, and translated 5 vols. of *Gibbons's History*, and *Walpole's Historical Doubts* into French. His last will and testament, written by himself, exhibits a strong picture of his piety, resignation, and affection for his relations. At his trial, he showed an uncommon degree of spirit, recollection, and undaunted fortitude. On the 21<sup>st</sup> of Jan. 1793, this unfortunate monarch,

one of the best of his race, and whose projects, as well as his repeated concessions to subjects, merited a better fate, fell by the guillotine, a sacrifice to that democratic jealousy, and popular fury,—which exhausted its rage by off many of the greatest men in France.

(17-21.) LEWIS is also the name of 3 m of Germany:

LEWIS I. emperor of Germany and France, succeeded his father Charlemagne, but was very unfortunate. (See FRANCE) He died in 841.

LEWIS II, the only son of Lothaire I, and son of Lewis I. was made king of Italy and succeeded his father as emperor in 854, and drove the Saracens out of Italy, (see ITALY) and died in 875.

LEWIS III, grandson of Lewis II. by his sister Ermengarde, succeeded his brother, Ch in 877, at 10 years of age. Berenger displaced imperial throne with him, and having taken prisoner at Verona, put out his eyes. He died in 879.

LEWIS IV. the son of the emperor Arn succeeded his father A. D. 900, and 103 years, during which the empire was one scene of desolation; and was dreadfully invaded by the Hungarians. He died in 911.

LEWIS V. the son of Lewis D. of Bavaria Matilda daughter of the emp. Rodolph I. was elected emperor in 1314; but his election was disputed by Frederick, whom he deposed, took prisoner, and compelled to renounce his claim to the empire. But in 1322, he was deposed by pope John XXII, on which he fled to Rome, and was crowned emperor by the pope Peter de Colbiere. He was killed from his horse in 1347.

(22.) LEWIS, King of Poland. See POLAND.  
(23.) LEWIS, John, M. A. & learned Divine, born at Baffel, in 1675, and educated at Exeter college, Oxford. Altho' Tenison was the vicar of Miffon in the life of Than published, 1. The Life of John Wickliffe 8vo, 1721. 2. The History and Antiquities of the Isle of Thanet; 4to, 1721. 3. History of the bay and Church of Faversham; 4to, 1727. 4. The History of the Isle of Thanet, from the first settlement in 8vo. 5. A complete history of the Isle of Thanet into English; 8vo. He also translated Wickliffe's Translation; and died in 1751.

(24.) LEWIS, in geography, one of the islands of the Western Islands of Scotland, extends about 60 miles in length from N. to S. and 12 to 14 in breadth, consisting of a great number of hills and rocks, and connected by an 6 or 6 miles with the Isle of Harris. See HARRIS. Lewis belongs to the county of Inverness, and is divided by several channels, distinguished by different names, and partitioned out among different proprietors; but *Lewis*, strictly so called, is about 36 miles in length, from the N. to the S. Bowling-head to the S. extremity of Huf Harris. The air is moderately cold, not unhealthy; great part of the low ground is covered with lakes; the soil is fertile in many places, and produces oats, barley, rye, flax, and hemp; but the best part is a light sand, which is

nature with foot and sea-ware; but great the island is covered with heath. The people dig the land with spades, and the clods with small harrows, the foremost which are made of wood, and the remainder heath, which smooths what the oxe broken; and this harrow is drawn by a horse, having a strong trace of horse-hair across it. Of their corn they not only make malt but likewise a strong spirit called *tre-flareg*, which is whisky 3 times distilled. Lewis abounds in convenient bays and harbours, in which are in great plenty, cod, ling, and herring: of different sizes are also often driven into the bays, and killed with harpoons. These bays contain plenty of shell-fish, such as clams, cockles, muscles, limpets, welks, and such a quantity of spout-fish is sometimes driven from the sand off Loch-tua, that they in-crease, and render it unhealthy to the neighbouring inhabitants, who are not able to consume either as food, or manure. Some of these islands likewise produce small corals and shells. The fresh water lakes are well stored with trout and eels, and the rivers yield plenty of salmon. Along the coast are numbers of caves, which serve as shelter for seals and otters, which are hunted by the inhabitants; and vast numbers of seals build upon the rocks and promontories. Lewis is well stocked with horses, cows, sheep, hogs, and deer, of a diminutive size; but the beef, mutton, and pork, are juicy and delicious; the horses are hardy: the deer, which are of the red kind, confine themselves to the chase of Oservaul, which is 5 miles in compass, which affords tolerable sport; but in winter, when the ground is covered with snow, these animals feed on sea-ware, and are all the rigour of the season, without shelter from wood or copse, for there is not a tree to be seen; and though roots of very large trees have been cut by the ax, are found in dis-places. There is likewise a small grove of hazel on the SW. side of Loch-Stornaway. The inhabitants of Lewis are well-proportioned, fair, sanguine, strong, and healthy. They are in general sober, circumspect, and hos- pitable; dexterous in shooting, swimming, and sailing; bold and skilful mariners: and so temperate that they will sleep at the oar all day, without any other provision than bread and water. On this coast are several natural mounts or hills called *Duns*; such as Dun-rowly, Dun- galloway, and Dun-sisten. There are also the remains of several castles, and other monuments of antiquity. At Stornaway village are the ruins of a castle destroyed by the English garrison sent by Oliver Cromwell. To the N. of Brage is a round tower built of large stones, 12 feet high, tapering to the top, with a double spiral and a circular staircase between, by which you go quite round the building. On the top of the hills there are several cairns. In the bay of Barvas there is a single stone called the standing stone, standing upright, above 20 feet high, and is much in breadth. Three stones, about 10 feet high each, stand on the N. side of Loch- tua; and many others standing singly at great distances, and in remote parts of the island. But

the most remarkable monument of this kind ap- pears by the village of Claskniss. Here we find 39 pyramidal stones standing upright, about 6 or 7 feet high from the surface, each about 2 feet in breadth. They are placed in form of an avenue, 8 feet wide; the distance between every stone be- ing 6 feet, and a single piece stands at the en- trance. This avenue leads to a circle of 12 stones of the same dimensions, with one in the centre 13 feet in length, and shaped like a rudder: on the E. S. and W. sides of this circle, are 4 stones forming three lines, or as it were rays from the body of the circle. This is supposed to have been a Druid temple; and tradition reports, that the chief Druid stood by the large stone in the centre, and harangued the audience. At the distance of a quarter of a mile there is another circle of the same nature; but without the range and avenue. In all probability, these were places of worship erected by the Druids in time of Pagan supersti- tion. The chief town is STORNAWAY. There is a considerable number of inferior adjacent isles and rocks, such as Garve at the mouth of Loch Carlvay, Berinsfay, Fladda, Bernera Minor and Ma- jor, Kialisy, Cavay, Carvay, Grenim, Pabbay, Shi- rem Vexay, Wuya Larger and Lesser, the isle of Pigmies, and the Flannan islands, which the sea- men denominate the *northern hunters*. These are visited every summer by the inhabitants of the Lewis, who go thither in quest of fowls, eggs, down, quills, and feathers, as well as to shear or kill the sheep that are kept here for pasture. In the largest island are the ruins of a chapel dedi- cated to St Flannan, from whom the isles derive their name. Lewis is divided into the two pa- rishes of Barvas and Eye, and in each of these one minister is settled; but there is a great number of churches and chapels dedicated to different saints, in the different isles which compose this cluster. All these were sanctuaries before the reformation, but now they are divested of that privilege. The people of these islands are Presbyterians, with a few Protestants of the English communion, and a still smaller number of Roman Catholics. The Protestants observe the festivals of Christmas, Good Friday, Easter, and Michaelmas; on the last of which the individuals of both sexes perform an anniversary cavalcade.

(25, 26.) LEWIS, two towns of Virginia; the one 23 miles E. of West Point; the other 30 miles WNW. of Richmond.

(27.) LEWIS, a town of Vermont, SW. of Lem- ington; 8 miles S. of the Canada Line.

(1.) LEWISBURG, a town of N. Carolina, the capital of Franklin county, on the Tar River, 56 miles from Tarborough, and 411 from Philadel- phia.

(2.) LEWISBURG, a county of S. Carolina.

(3.) LEWISBURG, or TARTOWNS, a town of Pennsylvania, on the W. bank of the Susquehan- na, 7 miles above Northumberland.

(4.) LEWISBURG, a post town of Virginia, capi- tal of Greenbrier county; 250 miles W. by N. of Richmond.

(5.) LEWISBURG. See LOUISBURG.

LEWIS CREEK, a small river of Delaware, which runs into Delaware Bay.

\* LEWIS D'OR. *n. f.* [French.] A golden Plover

coin, in value 12 livres, now settled at 17 shillings.  
*Dis.*

**LEWISHAM**, a large village in Kent, on the road to Seven-Oaks; 5 miles SE. by S. of London.

(1.) **LEWISTOWN**, a town of Delaware, late capital of Sussex county, seated on Lewis Creek, 4 miles above Delaware bay, and 113 S. of Philadelphia.

(2.) **LEWISTOWN**, a town of Pennsylvania, capital of Mifflin county, on the N. bank of the Juniata, 115 miles WNW. of Philadelphia. Lon. 77.38. W. Lat. 40.35. N.

**LEWUNAKHANNEK**, a town of N. America on the Ohio, inhabited by Christian Indians, settled under the care of Moravian missionaries.

(1.) **LEX, LAW.** See *LAW*, Part I. The Roman laws were of three kinds: 1st, Such as were made by their kings. 2d, The laws of the XII tables brought by the *Decemviri* from Athens, &c. And, 3d, Such as were proposed by the superior magistrates in the times of the republic.

Romans made laws by his sole authority; but his successors sought the approbation of the people. The laws of the 3d class were enacted in the following manner. No law could be proposed but by some of the following magistrates, viz. the *Pretor*, *Consul*, *Dictator*, *Interrex*, *Decemviri*, *Military Tribunes*, *Triumviri*, *Tribunes* of the people. If any of these proposed a law, it was first committed to a *Comitia*, and privately examined as to its utility and probable consequences, by persons qualified for the task; sometimes it was referred to the whole senate for their sentiments. It was then being up publicly for 3 market days, that all the people might have time to examine it, and consider its tendency: This was called *legis promulgatio*, *quasi promulatio*. If the person who framed the bill did not in the mean time drop it, the people were convened in *comitia*, and he addressed them in an oration, being also seconded by his friends, setting forth the expediency and probable utility of such a law: This was called *rogatio legis*, because the address was always preface with this petitionary form of words, *Velitis, jubetisne, Quirites?* "Will you, O Romans, consent and order this law to pass?" This being done, those that disliked the motion delivered their sentiments in opposition to it. An urn was then brought to certain priests who attended upon the occasion, into which were cast the names of the tribes, centuries, or *curia*, as the *COMITIA* happened to be *tributa*, *centuriata*, or *curiata*. (See *COMITIA*, § 3—5.) The names were shaken together; and the first drawn tribe or century was called *pr. rogativa*, because their suffrages were first asked. The *curia* first drawn was called *principium* for the same reason. The other tribes, centuries, &c. were called *tribus jure vocata*, *centurie jure vocatae*, &c. In this situation, the *velis* or negative voice of the tribunes of the people might put an end to the proceedings, and dissolve the assembly. The tribune's interference was called *intercessio*. The consul also had it in his power to stop further proceedings, by commanding any of the holidays called *ferie imperatorie* to be observed. The *comitia* would also be dissolved by any person being seized with the falling sickness, or upon the appearance of any unlucky omen. If it met with no interruption of this sort, the people were presented with two tables of which was written A. on the other U. disapprobation of the bill was expressed by throwing into an urn the tablet inscribed A. Their assent by throwing in the one marked U. According to the majority of these tables the law passed or not. If it passed, it was upon record, and carried into effect; if not, it was called *legem ferre*. After it was engraved upon plates of brass and in the most public and conspicuous place, it was termed *legem figere*, and a future law this was *legem referere*. If a law passed *mitis curiata*, it was called *lex curiata*, *comitia centuriata*, it had the name of *lex curiata*; but if it passed in the *comitia tributa* termed *plebis citum*. The laws, too, gen. the names of the proposers, as *lex Elia*, &c.

(2.) **LEX RHODIA.** See *LAW*, § 9.

**LEXAWACSEIN**, a river of Persia which rises in Northampton county, side of Mount Ararat, and falls into the Caspian Sea, 174 miles above Philadelphia.

**LEXIARCHI**, at Athens, six officers or 30 inferior ones, whose business it was to preside at the public assemblies, an scrutiny among such as were present. They were a register of the age, manners, and abilities of the citizens, who were enrolled at the age of 18.

\* **LEXICOGRAPHER.** *n. f.* [*λεξικον* & *lexicographe*, French.] A writer of dictionaries, a harmless drudge, that busies himself with the original, and detailing the signification of words.—Commentators, and *lexicographers*, are acquainted with the Syriac language, and give these hints in their writings on scripture.

\* **LEXICOGRAPHY.** *n. f.* [*λεξικον* & *γραφω*.] The art or practice of writing dictionaries.

\* (1.) **LEXICON.** *n. f.* [*λεξικον*.] A dictionary, a book teaching the signification of words. A linguist should pride himself to have a tongue that Babel cleft the world into had not studied the solid things in the as the words and *lexicons*, he were much to be esteemed a learned man a man competently wise in his mother di.  
*Milton.*

(2.) **LEXICON** is chiefly used in foreign Greek dictionaries: it is derived from *λεξω*, a word, or *λεξικον*.

(1.) **LEXINGTON**, a town of Massachussetts Middlesex county, 10 miles NW. of Boston famous for being the scene of the first battle between the British and Americans at the commencement of the American war, on the 19th of April 1775. (See *AMERICA*, § 14.) It contains a church and about 1000 citizens in 1794. 42. E. of Philadelphia. Lat. 42. 31. N.

(2.) **LEXINGTON**, a town of Georgia, on the bank of the Ogeechee, 3 miles from Milledgeville.

(3.) **LEXINGTON**, a county of S. Carolina, in the district of Orangeburgh.

(4.) **LEXINGTON**, a flourishing town in Kentucky, formerly capital of the state,

pearance of any unlucky omen. DEN, (in Latin LUGDUNUM BATA- ae of the largest and finest cities of the public, in the department of Delft, and x of S. Holland, abounding with ca- which are rows of lofty trees, that af- leasant walks. A small branch of the through it. Over the canals are 145 ily of stone or brick. The university

in the republic, and has a library rich yfic garden well stocked with exotic anatomy hall, and an observatory. The who are generally very eminent, read res 4 times a week, for which they ney, but about three guineas are paid : of private lectures, which lasts 4 year. es are from 100l. to 200l. a-year; and es are in Latin. The cloth manufac- rily-flourished to such a degree, that eces have sometimes been made in a city sustained a long and severe siege

ainst the Spaniards. That illustrious Adrian de Verf, when the citizens re- o him the havoc made by the famine siege, and insisted upon his surrend- rds (said he) here is my body, divide ou to satisfy your hunger, but banish s of surrendering to the cruel and per- niard." They took his advice, and aniards, they would hold out as long l one arm to eat and another to fight. some fine churches, and many long, dsome streets. The citizens opened to the French under Gen. Pichegru, 1 Jan. 1795. It is 15 miles S. of Haar- o SW. of Amsterdam. Lon. 4. 33. E. . N.

DEN, an island on the coast of Java.

DEN, Lucas VAN. See LUCAS.

DEN PHIAL, a phial coated on the in- side with tinfoil, or other proper con- stance, and furnished with a brass wire for giving the electrical shock. See IRY, *Index*.

N, a town of Germany in the circle er Rhine; 8 miles S. of Heidelberg.

a town of Bohemia, in Leitmeritz.

II. PART I.

LEYRE, a town of Spain, in Navarre.

LEYRIA, a city of Portugal, in Estremadura.

LEYSERA, in botany, a genus of the polyga- mia superflua order, belonging to the syngesia class of plants; and in the natural method rank- ing under the 49th order, *Compositae*. The recep- tacle is naked; the pappus paleaceous; that of the disc plumy; the calyx scarious.

LEYSSARD, a town of France, in the depart- of the Ain, 5 m W. of Nantua, and 10; E. of Bourg.

LEYTA, or LEYTHA. See LEITA.

LEYTE, or LEITE, one of the Philippine islands, in the East Indian Ocean, about 40 leagues long, and in circumference about 90 or 100. Its soil on the E. side is very fruitful; but there are very high mountains which almost divide it, and oc- casion so great a difference in the air, that when it is winter on the N. side, it is summer on the S. When the inhabitants on the one side reap, the o- thers sow; and they have two plentiful harvests in the year. It contains about 9000 inhabitants, who pay tribute to the Spaniards in rice, wax, and quilts. Lon. 118. 0. E. Lat. 11. 0. N.

LEZANDRIEUX, a town of France, in the dep. of the North Coasts; 5 m. N. of Pontreuc.

LEZARS, an Indian nation, who reside in the North Western Territory, between the mouths of the Wabash and Ohio.

LEZAT, a town of France, in the dep. of Ar- rierge, 26 miles N. of Mirepoix.

LEZAY, a town of France, in the dep. of the Two Seves; 6 miles ENE. of Melle.

LEZOUX, a town of France, in the dep. of Puy de Dome, 13½ miles E. of Clermont.

LHAN, a river of Germany, which rises in Hesse, and passing Marburg, Wetzlar, and Nas- sau, falls into the Rhine above Coblenz.

(1.) LHOYD, } or LHWYD, Humphrey, a learn- (1.) LHUYD, } ed antiquarian of the 17th cen- tury, born at Denbigh, who applied to the study of physic; and living mostly within the walls of Denbigh castle, practised there as a physician; and died in 1570, with the character of a well- bred gentleman. He wrote and translated several pieces relative to history and antiquities; in particular, the *History of Cambria*, now called *Wales*, from Caradoc of Langarvan, &c. but died before it was finished: however, Sir Henry Sidney, lord president of Wales, employed Dr David Powel to finish it, who published it in 1584. A new and improved edition of this work was published in 1774.

(2.) LHUYD, Edward, keeper of the Museum at Oxford, was a native of S. Wales, the son of Charles Lhuyd, Esq. of Lhanvordc. He was edu- cated at Jesus College, Oxford, where he was created M. A. July 21, 1701: He was bred un- der Dr Plot, whom he succeeded as keeper of the Ashmolean museum, and had the use of all Vaughan's collections. With incessant labour and great exactness he searched into the Welsh anti- quities; perused or collected a great deal of an- cient and valuable matter from their MSS.; tran- scribed all the old charters of their monasteries that he could find; travelled several times over Wales, Cornwall, Scotland, Ireland, Armoric Bre- tagne, countries inhabited by the same people,

Z. com-

compared their antiquities, and made observations on the whole; but died in July 1709, before he had digested them into the form of a discourse, as he intended, on the ancient inhabitants of this island. His untimely death prevented the completing of many admirable designs. For want of proper encouragement; he did very little towards understanding the British bards, having seen but one of those of the 6th century and not being able to procure access to two of the principal libraries in the country. He communicated many observations to Bp. Gibson, whose edition of the *Britannia* he revised; and published "*Archæologia Britannica*, giving some account, additional to what has been hitherto published, of the languages, histories, and customs of the original inhabitants of Great Britain, from collections and observations in travels through Wales, Cornwall, Bas Bretagne, Ireland, and Scotland. Vol. I. Glosography, Oxford, 1707," fol. He left in MS. a Scottish or Irish-English dictionary, proposed to be published in 1732 by subscription, by Mr David Malcolm, a minister of the church of Scotland, with additions; as also the elements of the said language; with necessary and useful informations for propagating more effectually the English language, and for promoting the knowledge of the ancient Scottish or Irish, and very many branches of useful and curious learning. Lhuyd, at the end of his preface to the *Archæologia*, promises an historical dictionary of the British persons and places mentioned in ancient records. It seems to have been ready for the press, though he could not set the time of publication. His collections for a 2d volume, which was to give an account of the antiquities, monuments, &c. in the principality of Wales, were numerous and well chosen; but, on account of a quarrel between him and Dr Wynne, then fellow, afterwards principal of the college, and Bp. of St Asaph, he refused to buy them, and they were purchased by Sir Thomas Scabright, of Beachwood in Hertfordshire, in whose library the greatest part still remain, but so indigested, and written with so many abbreviations, that nobody can undertake to publish them. They consist of about 40 volumes in folio, 10 in 4to, and above 100 smaller, all relating to Irish or Welsh antiquities, and chiefly in those languages. Cante made extracts from them about or before 1736; but these were chiefly historical. Sir John Scabright gave to Mr Pennant 23 of Lhuyd's MSS. Latin and English. Many of his letters to Lister, and other learned contemporaries, were given by Dr Fothergill to the university of Oxford, and are now in the Ashmolean museum. Lhuyd undertook more for illustrating this part of the kingdom than any one man but he ever did, or than any one man can be equal to.

LI, a town of China, in the province of Chenli.

\* LIABLE. *n. f.* [*liable*, from *lier*, old French.] Omit us; not exempt; subject; with *to*.—

But what is strength without a double share

O' wife's?—wait, in wild, burthenome,

Pronely's figure, yet *liable* to fall

By weaker subtleties.

Milton.

—The English boast of Spenser and Milton, who neither of them wanted genius or learning; and

yet both of them are *liable* to man Dryden.—This, or any other scheme from a private hand, might be *liable* to sects. *Swift*.

LIANCOURT, a town of France, in of the Oise, 4 miles S. of Clermont.

LIANE, a river of France, which runs Sea, near Boulogne.

\* LIAR. *n. f.* [from *lie*. This word analogically be *lier*; but this orthography is disapproved, and the convenience of distinguishing, he who lies down, is sufficient to distinguish.] One who tells falsehood; one who swears.

She's like a *liar*, gone to burning  
'Twas I that kill'd her.

He approves the common *liar*, false  
Who speaks him thus at Rome.

—I do not reject his observation as unavailing, unless condemn the person himself as a *liar*, soever it seems to be contradicted. *Boylston*

Thy better soul abhors a *liar's* pain

\* LIARD. *adj.* 1. Mingled roan. *Milton*  
*Liard* in Scotland denotes gray-haired; *liard* old man.

LIART, a town of France in the department of the Gers, 12 miles SW. of Rocroy.

LIBANIUS, a famous Greek rhetorician and sophist in the 4th century, born at Antioch, had a great share in the friendship of the Emperor Constantine, who offered him the dignity of *Prætorius*; but Libanius refused it, and preferred the name of *sophist*, or *professor of eloquence*, more honourable. There are full extant copies of his letters and Greek orations, by which he acquired great reputation; but his style is somewhat affected and obscure. He was a pupil of Chrysostom, and his disciples at Antioch were 360. His letters were published at Antwerp, 1738; his orations at Venice, in 1753.

LIBANOMANTIA, in antiquity, a divination performed with frankincense, if it presently caught fire, and sent forth a sweet odour, was esteemed a happy omen, and a sign of good success.

LIBANUS, a chain of mountains of Syria, which lie between Syria Proper and the Mediterranean, extending from W. to E. from the Mediterranean sea as far as Arabia. The mountains are always covered with snow, but below them are very pleasant and fertile valleys. They were formerly famous for great numbers of cities, but now there are very few remaining. The chain is distinguished into *Libanus* and *Libanus*; the latter of which lies on the eastern side of the valley, rising near the ruins of Hama, and terminates at others in Arabia, in the Gulf of Persia. They are separated from each other at intervals by a distance throughout; by a country, called *Calo-Syria*.

(1.) \* LIBATION. *n. f.* [*libatio*, Lat.] An act of pouring wine on the ground in honour of some deity.—In digging new earth pour wine, that the vapour of the earth and comfort the spirits, provided it be not a heathen sacrifice, or *libation* to the earth. 2. The wine so poured.—They had no objection to offer up *libations*, and the smoke of incense to dead men. *Stillingfleet*.—

e goblet then she took, with nectar  
rown'd,  
king the first libations on the ground.

*Dryden.*

LIBATION, amongst the ancient Greeks  
nans, was an essential part of solemn sa-

It was also performed alone, as a drink  
by way of procuring the protection and  
of the gods, in the ordinary affairs of life.

According to the different attributes of  
s in honour of whom they were made,  
l of different liquids, but wine was the  
l. It was always unmixed with water.

s of water, of honey, of milk, and of oil;  
led *νεβδα ληα*. They were all made with  
deportment and solemn prayer. At sa-

the libations, after it had been tasted by  
st, and handed to the bystanders, was  
upon the victim. At entertainments, a

ic was generally poured out of the cup,  
ic liquor began to circulate, to show their  
e to the gods for the blessings they en-

Libations were also in use among the He-  
who poured an hin of wine on the victim  
was killed, and the several pieces of the  
were laid on the altar, ready to be burnt.

U, or } a sea-port town of Courland, on  
W, } the coast of the Baltic, consisting  
of wooden houses. Lon. 21. 27. E. Lat.  
N.

LIBARD. *n. f.* [*liebard*, German; *leopardus*,  
leopard.—  
Make the libbard stern,  
roaring, when in rage he for revenge did  
earn.

*Spens.*  
libbard and tiger, as the mole  
the crumbled earth above them threw.

*Milton.*  
horrid parts of Africk are by Piso resem-  
a libbard's skin, the distance of whose  
resent the disperseness of habitations, or  
Africk. *Brewerwood.*

LIBBERTON, a parish of Scotland in  
ire, united with that of QUOTHQUAN,  
7 miles long from N. to S. and 4 broad.

part of this united parish is a deep rich  
ich being often overflowed by the Clyde,  
ed uncommonly fertile without any ma-

he E. part is a striking contrast to it, be-  
and covered with heath. The air is dry  
p, but healthy. Of above 6000 acres,  
e parish contains, 2,500 are barren, and  
ler cultivation. Of these 2,123 were under

1791; 1188 in pasture, and 189 under  
tax, turnips, and potatoes. The num-  
orics was 219; sheep 1149, and black  
s. The population, in 1791, was 750;  
12, since 1755. In this parish, Gilbert,  
merville, an ancestor of the present lord,

ed K. James V. with his court, at his  
Cathalkey for several weeks. There is  
it camp and several other antiquities in  
l. See QUOTHQUAN.

LIBERTON, a village in the above parish,  
of considerable note, having been sur-  
with a strong earthen mound, and ves-  
being visible of 3 large panned vaults.

Near it are relics of a strong fortification and 3  
tumuli.

(3, 4.) LIBBERTON. See LIBERTON, N° 1  
and 2.

(1.) \* LIBEL. *n. f.* [*libellus*, Lat. *libelle*, Fr.] 1.  
A satire; defamatory writing; a lampoon.—Are we  
reproached for the name of Christ? that ignomi-  
ny serves but to advance our future glory; every  
such libel here becomes panegyrick there. *Decay  
of Piety.*—

Good heav'n! that fots and knaves should  
be so vain,

To with their vile resemblance may remain!  
And stand recorded, at their own request,

To future days, a libel or a jest. *Dryden,*

2. [In the civil law.] A declaration or charge in  
writing against a person exhibited in court.

(2.) LIBEL, [LIBELLUS FAMOSUS], taken in  
its largest and most extensive sense, signifies any  
writing, picture, or the like, of an immoral or  
illegal tendency; but, in a peculiar sense, is used

to denote a malicious defamation of any person,  
and especially a magistrate, made public by either  
printing, writing, signs or pictures, in order to  
provoke him to wrath, or expose him to public  
hatred, contempt, and ridicule. The direct ten-

dency of these libels is the breach of the public  
peace, by stirring up the objects of them to re-  
venge, and perhaps to bloodshed. The commu-  
nication of a libel to any one person is a publica-

tion in the eye of the law: and therefore the send-  
ing an abusive private letter to a man is as much  
a libel as if it were openly printed, for it equally  
tends to a breach of the peace. With regard to

libels in general, there are two remedies; one  
by indictment, and another by action. The for-  
mer for the public offence; for every libel has a  
tendency to break the peace, or provoke others

to break it: which offence is the same whether  
the matter contained be true or false; and there-  
fore the defendant, on an indictment for publish-  
ing a libel, is not allowed to allege the truth of it

by way of justification. But in the remedy by  
action on the case, which is to repair the party in  
damages for the injury done him, the defendant  
may, as for words spoken, justify the truth of the

facts, and show that the plaintiff has received  
no injury at all. What was said with regard to  
words spoken, will also hold in every particular  
with regard to libels by writing or printing, and

the civil actions consequent thereupon: but as to  
signs or pictures, it seems necessary always to  
show, by proper innuendos and averments of the

defendant's meaning, the import and application  
of the scandal, and that some special damage has  
followed; otherwise it cannot appear, that such  
libel by picture was understood to be levelled at

the plaintiff, or that it was attended with any re-  
asonable consequences. In a civil action, then, a  
libel must appear to be false, as well as scanda-  
lous; for, if the charge be true, the plaintiff has

received no private injury, and has no ground to  
demand a compensation for himself, whatever  
offence it may be against the public peace: and  
therefore, upon a civil action, the truth of the  
accusation may be pleaded in bar of the suit. But,  
in a criminal prosecution, the tendency which all

libels have to create animosities, and to disturb the public peace, is the sole consideration of the law. And therefore, in such persecutions, the only points to be considered are, first, the making or publishing of the book or writing; and, secondly, whether the matter be criminal: and, if both these points are against the defendant, the offence against the public is complete. The punishment of such libellers, for either making, repeating, printing, or publishing the libel, is a fine, and such corporal punishment as the court in its discretion shall inflict; regarding the quantity of the offence, and the quality of the offender. By the law of the XII tables at Rome, libels, which affected the reputation of another, were made a capital offence: but, before the reign of Augustus, the punishment became corporal only. Under Valentinian it was again made capital, not only to write, but to publish, or even to omit destroying them. Our law, in this and many other respects, corresponds rather with the middle age of Roman jurisprudence, when liberty, learning and humanity, were in their full vigour, than with the cruel edicts that were established in the dark and tyrannical ages of the ancient decemviri, or the latter emperors. In this, and other instances, where blasphemous, immoral, treasonable, schismatical, seditious, or scandalous libels are punished by the English law, some with a greater, others with a less degree of severity; the *liberty of the press*, properly understood, is by no means infringed or violated. See LIBERTY, § 6.

(1.) \* *To LIBEL. v. a.* [from the noun.] To satirise; to lampoon.—Is the peerage of England dishonoured when a peer suffers for his treason? if he be *libelled*, or any way defamed, he has his *scandalum magnatum* to punish the offender. *Dryden.*—

But what so pure which envious tongues will spare?

Some wicked wits have *libelled* all the fair. *Pope.*

(2.) \* *To LIBEL. v. n.* To spread defamation; written or printed; it is now commonly used as an active verb, without the preposition *against*.—

Sweet crawls to fly about the streets of Rome:  
What's this but *libelling against* the senate? *Shak.*

He, like a privileg'd spy, whom nothing can,  
Discredit, *libels* now 'gainst each great man.

*Donne.*

(1.) LIBELLA, a piece of money amongst the Romans, being the tenth part of the denarius, and equal in value to the as. It was called *libella*, as being a little pound, because equal to a pound of brass. Its value in our money is 1 ob. 1 qu. or a half-penny farthing. See MONEY.

(2.) LIBELLA, or LIBELLULA, in zoology, a genus of four-winged flies, called in English *dragee flies* or *adder flies*. The characters are these: The mouth is furnished with jaws; the feelers are shorter than the breast; and the tail of the male terminates in a kind of hooked forceps. See *Plate CC.* There are 21 species, chiefly distinguished by their colour. They have all two very large and reticulated eyes, covering the whole surface of the head. They fly very swiftly; and prey upon the wing, clearing the air of innumerable small flies. They are found in Aug. and Sep. in our fields and gardens, especially near

places where there are waters, as they have their origin from worms living in that element. The great ones usually live all their time about water, but the smaller are common among hedges, and the smallest frequent gardens. The smaller kind often settle upon bushes, or upon the ground. But the large ones are almost always upon the wing, so that it is very difficult to take them. Their eyes are beautiful objects for the microscope. The largest species is produced from a water-worm that has six feet, which, while young and very small, is transformed into a chrysalis, that has its dwelling in the water. Some think they have gills like fishes. It wears a mask as perfectly formed as those worn at a masque; and this mask, fastened to the insect's neck, and which it moves at will, serves to hold its prey while it devours it. The period of transformation being come, the chrysalis makes to the water side, swims in search of a convenient place; fastens on a plant, or sticks fast to a bit of dry wood. Its skin, grown parched, splits at the upper part of the thorax. The winged insect issues forth gradually, throws off its slough, expands its wings, flutters, and then flies off with gracefulness and ease. The elegance of its slender shape, the richness of its colours, the delicacy and resplendent texture of its wings, are admirable. The few parts of the libellulæ are differently situated in the male and female. It is under the body at the joining of the thorax, that those parts are discovered in the males: those of the females are known by a slit placed at the extremity of the body. Their amours conclude in a rape. The male, while hovering about, watches, and seizes the female by the head with the pincers with which the extremity of his tail is armed. The ravisher travels thus through the air, till the female yielding to superior strength, or inclination, forms her body into a circle that terminates at the genital of the male. These kind of rapes are common. Libellulæ are seen thus coupled in the air, exhibiting the form of a ring. The female deposits her eggs in the water, from whence spring water-worms, which afterwards undergo the same transformations.

\* LIBELLER, *n. f.* [from *libel*.] A defamer; writing; a lampooner.—Our common *libellers* are as free from the imputation of wit, as of morality. *Dryden.*—The squibs are those who, in the common phrase, are called *libellers* and lampooners. *Tatler.*—The common *libellers*, in their invective, tax the church with an insatiable desire of power and wealth. *Swift.*

(1.) LIBELLI, was the name given to the bills which were put up amongst the Romans, given notice of the time when a show of gladiators was to be exhibited, with the number of combatants, and other circumstances. This was called *manus promunciare* or *proponere*.—These bills were sometimes termed *edicta*. These public notices were given to the person who designed to oblige the people with the show, and were frequently attended with pictures representing the engagement of some celebrated gladiators. This custom is alluded to in Horace, lib. ii. sat. vii. ver. 96, &c.

(2.) LIBELLI FAMOSI, defamatory libels, *Serca* calls them *contumeliosi libelli*, infamous rhymes which

by a Roman ordinance were punishable with death.

**LIBELLOUS.** *adj.* [from *libel*.] Defamatory; the most malicious surmise that had ever spread, howsoever countenanced by a *libel*-ephet. *Wotton*.

**LIBELLA.** See **LIBELLA**, N° 2.

**LIBELLUS**, in the civil law, signifies declaration of the prosecutors charge against the defendant; and it has the same signification in our courts.

**LIBENTINA**, a surname of Venus, who had a temple at Rome, where young girls, arrived at puberty, dedicated their juvenile toys. *Varro*.

**LIBER**, in botany, the bark or rind, principle of trees. This is conceived as consisting of a number of cylindrical and concentric surfaces. The texture is reticular, and in some trees plain-fibre every way, as the fibres are soft and pliable.

While in this condition, they are either regular canals, or have interstitial spaces which serve the office of canals. The nutritious matter which they are continually receiving, remain part in them, makes them grow in thickness, and strengthens and brings them closer together; and thus the texture which before reticular becomes an assemblage of fibres ranged vertically and parallel to each other; that is, as they are thus altered become another, they by degrees become a new wood, more woody, called *blea*.

**LIBER**, [Lat. *i. e.* free.] in mythology, a name conferred on **BACCHUS** in memory of the boon which he granted to the people of Bœotia, perhaps, because wine, whereof he was reputed deity, delivers men from care, and enlarges their mind at ease and freedom.

**LIBERA**, in mythology, a goddess whom **Cicero** in his book *De Nat. Deor.* styles the daughter of **Jupiter** and **Ceres**. **Ovid** in his *Fæsti* says her name was given by **Bacchus** to **Ariadne**. She is exhibited on medals as a kind of female figure, crowned with vine leaves.

**LIBERAL.** *adj.* [*liberalis*, Lat. *liberal*, Fr.] mean; not low in birth; not low in mind. denoting a gentleman. 3. Munificent; generous; not parsimonious.—

Her name was **Mercy**, well-known over all, and she is both gracious and eke *liberal*. *Spenser*.  
The name of his way should be most *liberal*,  
As 're set here for examples. *Henry VIII.*

Needs must the pow'r  
Be made us, and for us this ample world,  
Be infinitely good, and of his good  
Be liberal and free, as infinite. *Milton*.  
The liberal are secure alone. *Granv.*

is of before the thing, and to before the thing.—There is no art better than to be *liberal* in commendation to others, in that a man's self hath any perfection. *Bacon*.  
All clergy-men, otherwise little fond of obtrusiveness, are in their sermons, very *liberal* of those which they find in ecclesiastical writers, and were our duty to understand them. *Swift*.

**LIBERAL ARTS**, are such as depend more on labour of the mind than on that of the hand, or, that consist more in speculation than in practice; and have a greater regard to amuse-

ment and curiosity than to necessity. The word is derived from the Latin *liberalis*, which among the Romans signified a person who was not a slave; and whose will, of consequence, was not checked by the command of any master. Such are grammar, rhetoric, painting, sculpture, architecture, music, &c. See **ART**, § 1, 3; 8—12.

**LIBERALIA**, feasts celebrated by the ancient Romans, in honour of **LIBER**, or **BACCHUS**, the same with those which the Greeks called **DIONYSIA**, and *Dionysia*. **Varro** derives the name of this feast from *liber*, considered as a noun adjective, and signifying *free*; because the priests were free from their function, and eased of all care, during the time of the *liberalia*: as the old women officiated in the ceremonies and sacrifices of these feasts. See **LIBER**, N° 2.

\* **LIBERALITY.** *n. f.* [*liberalitas*, Lat. *liberalité*, Fr.] Munificence; bounty; generosity; generous profusion.—

Why should he despair, that knows to court  
With words, fair looks, and *liberality*? *Shak.*  
That *liberality* is but cast away,  
Which makes us borrow what we cannot pay.

*Denham*.  
\* **LIBERALLY.** *adv.* [from *liberal*.] 1. Bountifully; bountifully; largely.—If any of you lack wisdom, let him ask of God, that giveth to all men *liberally*, and upbraideth not. *James*, i. 5.  
2. Not meanly; magnanimously.

**LIBERIA**, in Roman antiquity, a festival observed on the 16th of the kalends of April, at which time the youth laid aside their juvenile habit for the *togâ virilis*, or habit peculiar to grown men. See **TOGA**.

**LIBERTAS.** See **LIBERTY**, § 3.

**LIBERTE**, PORT LA, a seaport town, fort, and jurisdiction of Hispaniola, formerly called *Port Dauphin*. See **DAUPHIN**, N° 6—8.

**LIBERTICIDE.** *adj.* [from *libertas*, and *cædo*, to kill.] killing or conspiring against liberty, a word originally applied to the combined powers by the French democrates. This word, which owes its origin to the French revolution, in all probability will perish with it; as liberty seems no-where more completely murdered than it is now (1802) in the French republic.

(1.) \* **LIBERTINE.** *adj.* [*libertin*, Fr.] Licentious; irreligious.—There are men that marry not, but chuse rather a *libertine* and impure single life, than to be yoked in marriage. *Bacon*.—Might not the queen make diligent enquiry, if any person about her should happen to be of *libertine* principles or morals? *Swift's Project*.

(2.) \* **LIBERTINE.** *n. f.* [*libertin*, Fr.] 1. One unconfined; one at liberty.—

When he speaks,  
The air, a charter'd *libertine*, is still. *Shak.*  
2. One who lives without restraint or law.—

Man, the lawless *libertine*, may rove,  
Free and unquestion'd. *Rowe's Jane Shore*.  
—Want of power is the only bound that a *libertine* puts to his views upon any of the sex. *Clarissa*.  
3. One who pays no regard to the precepts of religion.—

They say this town is full of cozenage,  
Disguis'd cheaters, prating mountebanks,  
And many such like *libertines* of sin. *Shak.*

—That

—That word may be applied to some few *libertines* in the audience. *Collier's View of the Stage*.—4. [In law; *libertinus*, Latin.] A freedman; or rather the son of a freedman.—Some persons are forbidden to be accusers on the score of their sex, as women; others on the score of their condition, as *libertines* against their patrons. *Apliffs*.

(3.) **LIBERTINES, LIBERTINI**, in ecclesiastical history, a religious sect, which arose in 1525, whose principal tenets were, that the Deity was the sole operating cause in the mind of man, and the immediate author of all human actions; that, consequently, the distinctions of good and evil, which had been established with regard to those actions, were false and groundless, and that men could not, properly speaking, commit sin; that religion consisted in the union of the spirit or rational soul with the Supreme Being; that all those who had attained this happy union, by sublime contemplation and elevation of mind, were then allowed to indulge, without exception or restraint, their appetites or passions; that all their actions and pursuits were then perfectly innocent; and that, after the death of the body, they were to be smited to the Deity. They likewise said that Jesus Christ was nothing but a mere *je ne sçai quoi*, composed of the spirit of God, and of the opinion of men.—These maxims occasioned their being called *Libertines*; and the word has been used in an ill sense ever since. They spread principally in Holland and Brabant. Their leaders were Quintin, Picard, Pockefius, Ruffus, and Chopin, who joined with Quintin, and became his disciple. This sect obtained a footing in France through the favour of Margaret, Q. of Navarre, and sister to Francis I. and found patrons in several of the reformed churches.

(4.) **LIBERTINES OF GENEVA**, were a cabal of rakes rather than of fanatics; for they made no pretences to any religious system, but pleaded only for the liberty of leading voluptuous and immoral lives. This cabal was composed of a certain number of licentious citizens, who could not bear the severe discipline of Calvin, who punished with rigour not only dissolute manners, but also whatever bore the aspect of irreligion and impiety. In this turbulent cabal there were several persons who were not only notorious for their dissolute manner of living, but also for their atheistical impiety, and contempt of all religion. To this class belonged one Gruet, who denied the divinity of the Christian religion, the immortality of the soul, the difference between moral good and evil, and rejected with disdain the doctrines that are held most sacred among Christians; for which impieties he was at last brought before the civil tribunal, in 1550, and condemned to death.

\* **LIBERTINISM**. *n. f.* [from *libertine*.] Irreligion; licentiousness of opinions and practice.—That spirit of religion and seriousness vanished all at once, and a spirit of liberty and *libertinism*, of infidelity and profaneness, started up in the room of it. *Atterbury*.

**LIBERTINUS**. See **LIBERTUS**.

(1.) **LIBERTON**, an extensive parish of Mid Lothian, S. of Edinburgh, comprehending 4,140 acres of arable land. The population, in 1792, was 3,457 souls, of whom 755 resided in the vil-

lage of *Gilmerton*, and 131 were carters. Its increase, since 1755, was 664. Craigmillar a favourite residence of Q. Mary, is in this (see **CRAIGMILLAR**;) as well as the seats of Somerville and Mr Wauchope of Niddry. There are 8 mills in the parish, and 3 lime-stone quarries, which have yielded 100,000 bolls yearly. The quarry at Gilmerton produces 600,000 bolls annually, and employs 35 men. Greasers are also employed at the collieries. There are above 20 seams of coal at Gilmerton fit to 10 feet thick.

(2.) **LIBERTON**, or **KIRK LIBERTON**, a town nearly in the centre of the above parish, 3 miles S. of Edinburgh; with an ancient castle seated on the slope of a rising ground, which affords a magnificent prospect of the metropolis and surrounding country.

(3.) **LIBERTON DAMS**, } three of  
(4.) **LIBERTON, NETHER**, and } lages in  
(5.) **LIBERTON, UPPER**, } above parish  
within a mile of Liberton, the 1st within a quarter of a mile.

(6, 7.) **LIBERTON**. See **LIBERTON**.  
**LIBERTUS**, or **LIBERTINUS**, among the Romans, a freed man, or a person set free from legal servitude. These still retained some of their ancient state: he who made a slave finding a right of patronage over the *libertus*; if the latter failed of showing due respect to his patron, he was restored to his servitude; the *libertus* died without children, his patrimony went to his heir. See **SLAVE**. In the beginning of the public, *libertinus* denoted the son of a *liber* freedman; but afterwards, before the time of Nero, and under the emperors, the terms *liber* and *libertinus*, as Suetonius remarks, were used synonymously.

(1.) \* **LIBERTY**. *n. f.* [*liberté*, Fr. *libertas*.] Freedom, as opposed to slavery.—My master knows of your being here, and hath threatened to put me into everlasting slavery, if I tell you for he swears he'll turn me away. *Shak.*

O Liberty! thou goddess, heav'nly birth,  
Profuse of bliss, and pregnant with delight,  
Eternal pleasures in thy presence reign.

2. Exemption from tyranny or inordinate government.—

Justly thou abhorrest

The son, who, on the quiet state of man,  
Such trouble brought, affecting to subvert  
Rational liberty; yet know withal,  
Since thy original lapse, true liberty  
Is lost, which always with right reason

3. Freedom, as opposed to necessity.—Liberty is the power in any agent to do, or forbear, a particular action, according to the determination of thought of the mind, whereby either of two things is preferred to the other. *Locke*.—As it is in the motions of the body, so it is in the thoughts of the mind: where any one is such, that we have to take it up, or lay it by, according to the preference of the mind, there we are at *liberty*.

4. Privilege: exemption; immunity.—His father gave not an intire country to any, much less he grant jura regalia, or any extraordinary liberties. *Darwin*. 5. Relaxation of restraint: as, I will give myself at *liberty*, to change his condition.—

License they mean, when they cry *liberty*.

ave; permission.—I shall take the *liberty* to  
 der a third ground, which, with some men,  
 the same authority. *Locke*.

LIBERTY (§ 1, *def.* 1, 2.) may be consider-  
 either *natural* or *civil*.

LIBERTY, NATURAL. The absolute rights  
 n, considered as a free agent, endowed with  
 nment to know good from evil, and with  
 of choosing those measures which appear  
 n to be most desirable, are usually summed  
 one general appellation, and denominated  
*natural liberty of mankind*. This natural liber-  
 nists properly in a power of acting as one  
 fit, without any restraint or controul, un-  
 y the law of nature; being a right inherent  
 by birth, and one of the gifts of God to man  
 creation, when he endued him with the fa-  
 of free-will. But every man, when he en-  
 to society, gives up a part of his natural li-  
 , and, in consideration of receiving the ad-  
 ges of mutual commerce, obliges himself to  
 m to those laws which the community has  
 ht proper to establish. And this species of  
 obedience and conformity is infinitely more  
 able than that wild and savage liberty which  
 rished to obtain it. For no man, who con-  
 a moment, would wish to retain the abso-  
 uncontrouled power of doing whatever  
 as: the consequence of which would be,  
 very other man would also have the same  
 r; and then there would be no security to  
 duals in any of the enjoyments of life.

LIBERTY, POLITICAL, therefore, or CIVIL  
 TY, which is that of a member of society,  
 other than natural liberty, so far restrained  
 man laws (and no farther) as is necessary  
 pedient for the general advantage of the  
 . Hence we may collect, that the law,  
 restrains a man from doing mischief to his  
 citizens, though it diminishes the natural,  
 ses the civil liberty of mankind: but every  
 n and causeless restraint of the will of the  
 k, whether practised by a monarch, a nobi-  
 or a popular assembly, is a degree of tyran-  
 Ny, that even laws themselves, whether  
 with or without our consent, if they regu-  
 d constrain our conduct in matters of mere  
 nce, without any good end in view, are  
 destructive of liberty: whereas, if any pub-  
 rantage can arise from observing such pre-  
 , the controul of our private inclina-  
 in one or two particular points will con-  
 to preserve our general freedom in others  
 ore importance, by supporting that state  
 icty which alone can secure our independ-  
 . Thus the statute of Edward IV. which  
 d the fine gentlemen of those times (under  
 egre of a lord) to wear pikes upon their  
 or hoods of more than two inches in length,  
 law that favoured of oppression; because,  
 ver ridiculous the fashion then in use might  
 r, the restraining it by pecuniary penalties  
 l serve no purpose of common utility. But  
 atute of Charles II. which prescribes a thing  
 ngly as indifferent, *viz.* a dress for the dead,  
 were all ordered to be buried in woollen, is

a law consistent with public liberty; for it encour-  
 ages the staple trade, on which in great measure  
 depends the universal good of the nation. So  
 that laws, when prudently framed, are by no  
 means subversive, but rather introductive, of li-  
 berty; for (as Mr Locke has well observed) where  
 there is no law there is no freedom. But on the  
 other hand, that constitution or frame of govern-  
 ment, that system of laws, is alone calculated to  
 maintain civil liberty, which leaves the subject en-  
 tire master of his own conduct, except in those  
 points wherein the public good requires some di-  
 rection or restraint. The idea and practice of this  
 political or civil liberty flourish in their highest  
 vigour in these kingdoms, where it falls little short  
 of perfection, and can only be lost or destroyed  
 by the folly or demerits of its owner; the legisla-  
 ture, and of course the laws of Britain, being pe-  
 culiarly adapted to the preservation of this ines-  
 timable blessing even in the meanest subject. Ve-  
 ry different from the modern constitutions of o-  
 ther states on the continent, and from the genius  
 of the imperial law; which in general are calcu-  
 lated to vest an arbitrary and despotic power, of  
 controuling the actions of the subject, in the  
 prince, or in a few grandees. And this spirit of  
 liberty is so deeply implanted in our constitution,  
 and rooted even in our very soil, that a slave or a  
 negro, the moment he lands in Britain, falls un-  
 der the protection of the laws, and so far becomes  
 a freeman; though the master's right to his ser-  
 vice may possibly still continue. The absolute  
 rights of every Briton (which, taken in a political  
 and extensive sense, are usually called their *liber-  
 ties*), as they are founded on nature and reason, so  
 they are coeval with our form of government;  
 though subject at times to fluctuate and change,  
 their establishment (excellent as it is) being still  
 human. At some times they have been depressed  
 by tyrannical princes; at others, so luxuriant as  
 even to tend to anarchy, a worse state than tyran-  
 ny itself, as any government is better than anar-  
 chy. But the vigour of our free constitution has  
 always delivered the nation from these embarrass-  
 ments: and, as soon as the convulsions consequent  
 on the struggle have been over, the balance of our  
 rights and liberties has settled to its proper level;  
 and their fundamental articles have been from  
 time to time asserted in parliament, as often as  
 they were thought to be in danger; first, by the  
 great charter of liberties, which was obtained,  
 sword in hand, from King John, and afterwards,  
 with some alterations, confirmed in parliament  
 by Henry III. his son. (See MAGNA CHARTA.)  
 Which charter contained very few new grants;  
 but, as Sir Edward Coke observes, was for the  
 most part declaratory of the principal grounds of  
 the fundamental laws of England. Afterwards,  
 by the statute called *confirmatio cartarum*, where-  
 by the great charter is directed to be allowed as  
 the common law; all judgments contrary to it are  
 declared void; copies of it are ordered to be sent to  
 all cathedral churches, and read twice a-year to  
 the people; and sentence of excommunication is  
 directed to be as constantly denounced against all  
 those that by word, deed, or counsel, act contra-  
 ry thereto, or in any degree infringe it. Next  
 by a multitude of subsequent corroborating sta-  
 tutes

...ckons 32), from Ed-

 ... by inheritance or purchase, the rights of all man-  
 ... kind; but in most other countries in the world,  
 ... being now more or less debased and destroyed,  
 ... they at present may be said to remain, in a pecu-  
 ... liar and emphatical manner, the rights of the peo-  
 ... ple of Britain. And these may be reduced to three  
 ... principal or primary articles; the right of personal  
 ... security, the right of personal liberty, and the  
 ... right of private property: because, as there is no  
 ... other known method of compulsion, or of a-  
 ... bridging man's natural free-will, but by an in-  
 ... fringement or diminution of one or other of these  
 ... important rights, the preservation of these invio-  
 ... late may justly be said to include the preservation  
 ... of our civil immunities in their largest and most  
 ... extensive sense. See RIGHTS. In vain, however,  
 ... would these rights be declared, ascertained, and  
 ... protected by the dead letter of the laws, if the  
 ... constitution had provided no other method to se-  
 ... cure their actual enjoyment. It has therefore es-  
 ... tablished certain other auxiliary subordinate rights  
 ... of the subject, which serve principally as barriers  
 ... to protect and maintain inviolate the three  
 ... great and primary rights, of personal security,  
 ... personal liberty, and private property. These  
 ... are, 1. The constitution, powers, and privile-  
 ... ges of parliament. See PARLIAMENT. 2. The  
 ... limitation of the king's prerogative, by bounds

so certain and notorious, that it is impossible he  
 should exceed them without the consent of the  
 people; as to which, see PREROGATIVE. The  
 former of these keeps the legislative power in due  
 health and vigour, so as to make it improbable  
 that laws should be enacted destructive of gene-  
 ral liberty: the latter is a guard upon the exe-  
 cutive power, by restraining it from acting either  
 beyond or in contradiction to the laws that are  
 framed and established by the other. 3. A third  
 subordinate right of every Briton is that of applying  
 to the courts of justice for redress of injuries.  
 Since the law is, in this realm, the supreme arbiter  
 of every man's life, liberty, and property, courts  
 of justice must at all times be open to the sub-  
 ject, and the law be duly administered therein.  
 The emphatical words of *magna charta*, spoken  
 in the person of the king, are these: *Nulli vendemur, nulli negabimus, aut differemus rectum vel justitiam*; "and therefore every subject (says Sir Edw. Coke) for injury done to him *in bonis, in terris, vel persona*, by any other subject, be he ecclesiastical or temporal, without any exceptions, may take his remedy by the course of the law, and have justice and right for the injury done to him, freely without sale, fully without any denial, and speedily without delay." It were endless to enumerate all the *affirmative* acts of parliament, wherein justice is directed to be done according to the law of the land; and what that law is, every subject knows, or may know if he pleases; for it depends not upon the arbitrary will of any judge, but is permanent, fixed, and unchangeable, unless by authority of parliament. We shall however just mention a few *negative* statutes, whereby abuses, perversions, or delays of justice, especially by the prerogative, are restrained. It is ordained by *magna charta*, that no freeman, shall be outlawed, that is, put out of the protection and benefit of the laws, but according to the law of the land. By 2 Edw. III. c. 8. and 11 Ric. II. c. 10. it is enacted, that no commands or letter shall be sent under the great seal, or the little seal, the signet or privy seal, in disturbance of the law; or to disturb or delay common right: and, though such commandments should come, the judge shall not cease to do right: which is also made part of their oath by a statute 18 Edw. III. st. 1. And by 1 W. & M. st. 2. c. 2. it is declared, that the pretended power of suspending or dispensing with laws, or the execution of laws, by regal authority without consent of parliament, is illegal. Not only the substantial part or judicial decision of the law, but also the formal part or method of proceeding, cannot be altered but by parliament; for, if once those outworks were demolished, they would be an inlet to all manner of innovation in the body of the law itself. The king, it is true, may erect new courts of justice; but then they must proceed according to the old established forms of the common law. For which reason it is declared in stat. 1 Car. I. c. 10. upon the dissolution of the court-chamber, that neither his majesty, nor his council, have any jurisdiction, power or authority, by English bill, petition, articles, libel (were the course of proceeding in the star-chamber, borrowed from the civil law), or by any other arbitrary way whatsoever, to examine, or

into question, determine, or dispose of the lands or goods of any subjects of this kingdom; but that the same ought to be tried and determined in the ordinary courts of justice, and by *course of law*. 4. If there should happen any uncommon injury, or infringement of the rights before mentioned, which the ordinary course of law is too defective to reach, here still remains a 4th subordinate right, appertaining to every individual, namely, the right of petitioning the king, or house of parliament, for the redress of grievances. In Russia Peter the Great established a law, that no subject might petition the throne till he had first petitioned two different ministers of state. In case he obtained justice from neither, he might then present a petition to the prince; but upon pain of death, if found to be in the wrong. The restrictions, for some there are, which are laid upon petitioning in Britain, are of a nature extremely different; and while they promote the spirit of peace, they are no check upon that of liberty. Care only must be taken, lest, under the pretence of petitioning, the subject be guilty of any riot or tumult; as appeared in the opening of the memorable parliament in 1640: and, to prevent this, it is provided by the statute 13 Car. II. ft. 1. c. 5. that no petition to the king, or either house of parliament, for any alteration in church or state, shall be signed by above 20 persons, unless the matter thereunto be approved by three justices of the peace, or the major part of the grand jury, in the county; and in London, by the lord mayor, aldermen, and common council: nor shall any petition be presented by more than 10 persons at a time. But under these regulations, it is declared by the statute, 1 W. & M. ft. 2. c. 2. that the subject hath a right of petition; and that all commitments and prosecutions for such petitioning are illegal. 5. The 2d and last auxiliary right of the subject, that shall mention, is that of having arms for their defence, suitable to their condition and degree, and such as are allowed by law: Which is also declared by the same statute, 1 W. & M. ft. 2. c. 2. to be indeed a public allowance, under two restrictions, of the natural right of resistance and self-preservation, when the sanctions of society and laws are found insufficient to restrain the violence of oppression. In these several articles concerning the *rights or liberties of Britons*: liberties more generally talked of, than thoroughly understood; and yet highly necessary to be perfectly known by every man of rank or property, lest his ignorance of the points whereon they are founded should hurry him into faction and licentiousness on the one hand, or a pusillanimous indifference to criminal submission on the other. So long as the rights of personal security, personal liberty, and private property, remain inviolate, the subject is perfectly free; for every species of compulsory tyranny and oppression must act in opposition to one or other of these rights, having no other way upon which it can possibly be employed. To reserve these from violation, it is necessary that the constitution of parliament be supported in its full vigour; and limits, certainly known, not to the royal prerogative. And, lastly, to vindicate these rights, when actually violated or

Vol. XIII. PART I.

attacked, the subjects of Britain are entitled, in the first place, to the regular administration and free course of justice in the courts of law; next, to the right of petitioning the king and parliament for redress of grievances; and, lastly, to the right of having and using arms for self preservation and defence. And all these rights and liberties it is our birthright to enjoy entire; unless where the laws of our country have laid them under necessary restraints: Restraints in themselves so gentle and moderate, as will appear upon farther inquiry, that no man of sense or probity would wish to see them slackened. For all of us have it in our choice to do every thing that a good man would desire to do; and are restrained from nothing, but what would be pernicious either to ourselves or our fellow citizens. So that this review of our situation may fully justify the observation of a learned French author, who indeed generally both thought and wrote in the spirit of genuine freedom; that the British is the only nation in the world where political or civil liberty is the direct end of its constitution. The United States of America, need hardly be mentioned as an exception, as the spirit of liberty which pervades their constitution owes its origin to that of Britain: We shall therefore close our remarks upon it with the expiring wish of the famous Father Paul to his country, "ESTO PERPETUA!"

(3.) LIBERTY, in mythology, was a goddess both among the Greeks and Romans. Among the former she was invoked under the title ELEV-  
THERIA, and by the latter she was called LIBERTAS, and held in singular veneration; temples, altars, and statues, were erected in honour of her. A very magnificent temple was consecrated to her on mount Aventine, by Tiberius Gracchus, before which was a spacious court, called *atrium libertatis*. The Romans also erected a new temple in honour of Liberty when Julius Cæsar established his empire over them, as if their liberty had been secured by an event which destroyed it. The French have acted a similar part by installing Bonaparte *First Consul for life*, upon the 14th July 1802, the anniversary of that liberty which they had established in 1791, and which he has totally overthrown. In a medal of Brutus, Liberty is exhibited under the figure of a woman, holding in one hand a cap, the symbol of Liberty, and two poniards in the other, with the inscription IDIVS MARTIIS.

(4.) LIBERTY, in geography, a post town of Virginia, 15 miles from New London, and 35 from Martinsburg, and Fincastle.

(5.) LIBERTY AND NECESSITY. See METAPHYSICS.

(6.) LIBERTY OF THE PRESS. The art of printing, soon after its introduction, was looked upon in England, as well as in other countries, as merely a matter of state, and subject to the coercion of the crown. It was therefore regulated with us by the king's proclamations, prohibitions, charters of privilege and licence, and finally by the decrees of the court of star-chamber, which limited the number of printers, and of presses which each should employ, and prohibited new publications unless previously approved by proper licensers. On the demolition of this odious jurisdiction in 1641, the long parliament of Charles I. after their

assumed the same power and exercised with respect books: and in 1643, 1647, 1649, 1714, ii. 88. 230.) issued purpose, founded printer's decree of 1637. In statute 13 & 14 Car. II. c. alterations, was copied ordinances. This act expired revived by statute 1 Jac. I. till 1692. It was then longer by statute 4 W. III. frequent attempts were made to revive it, in the subseq. Dom. Journ. 11 Feb. 1694, 1696, 9. Feb. 1697, 31 parliament resisted it so expired, and the press became a free state, of a free state, criminal matter in laying no previous laws. Every freeman has what sentiments he pleases; to forbid this, is to destroy press: but if he publishes what evous, or illegal, he must take his own tenuity. See LIBEL, as to the restrictive power above mentioned, is to prevent to the prejudices the arbitrary and iniquitous points in learning, re- But to punish (as the writings which, when published, shall, on a fair and impartial trial, be adjudged of a pernicious tendency, is necessary for the preservation of peace and good order, of government and religion, the only solid foundations of civil liberty. Thus the will of individuals is still left free; the abuse only of that free-will is the object of legal punishment. Neither is any restraint hereby laid upon freedom of thought or inquiry; liberty of private sentiment is still left; the disseminating or making public of bad sentiments, destructive of the ends of society, is the crime which society corrects. A man (says a fine writer on this subject) may be allowed to keep poisons in his closet, but not publicly to vend them as cordials. And to this we may add, that the only plausible argument heretofore used for restraining the just freedom of the press, "that it was necessary to prevent the daily abuse of it," will entirely lose its force, when it is shown (by a reasonable exertion of the laws) that the press cannot be abused to any bad purpose without incurring a suitable punishment: whereas, it can never be used to any good one when under the controul of an inspector. So true will it be found, that to censure the licentiousness, is to maintain the liberty of the press.

(7.) LIBERTY, PORT, a port of Guadaloupe.

(8.) LIBERTY TOWN, a town of Maryland, in Frederick county, 42 miles WNW. of Baltimore; near some copper mines.

(9.) LIBERTY, WEST, a town of Virginia, capital of Ohio county, seated at the head of Short

Creek, 6 m. from Ohio, 2 W. of the Pennsylvania Line, 18 NW. of Wheeling, 23 W. of Washington in Pennsylvania, and 348 from Philadelphia.

LIBETHRA, in ancient geography, a town and fountain of Thessaly. The latter was called the fountain of song, and was situated in Magnesia a district of Macedonia annexed to Thessaly. The town stood on Mount Olympus, where it verge towards Macedonia; hence the Muses are called LIBETHRIDES. (*Virgil.*) Strabo places on Helicon, not only Hippocrene, and the temple of the Muses, but also the caves of the nymphs Libethrides.

LIBETHRIDES. See last article.

LIBETHRIUS MONS, } in ancient geography  
LIBETHRUS, } a mountain of Bœotia 40 stadia from Coronea; where stood the statues of the Muses, and of the *Libethrides*. It was either conjoined with, or at least very near to, Helicon.

\* LIBIDINOUS. *n. f.* [*libidinosus*, Lat.] Lewd; lustful.—If wanton glances and *libidinous* thoughts had been permitted by the gospel, they would have apostatized nevertheless. Bentley.

\* LIBIDINOUSLY. *adv.* [from *libidinosus*.] Lewdly; lustfully.

LIBITINA, in the Roman mythology, a goddess who presided over funerals. She was the same with the *Venus infera* or *Epithymia* of the Greeks. She had a temple at Rome, where was lodged a certain piece of money for every person who died, whose name was recorded in a register called *Libitine ratio*. This practice was established by Servius Tullius, in order to obtain an account of the number of annual deaths in the city of Rome, and consequently the increase or decrease of its inhabitants. All things requisite for funerals were sold in the temple of Libitina.

LIBITINARII, [from LIBITINA,] were undertakers whose office it was to take care of funerals, prepare all things necessary upon the solemn occasion, and furnish every article required. They kept a number of servants to perform the work part of the profession, such as the *polintiores*, *pillones*, &c. See FUNERAL, § 9.

LIBNA, in ancient geography, a sacerdotal city in the tribe of Judah, a place of strength, as it appears from Sennacherib's laying siege to it. 2 Kings ix. If. xxxvii. In Jerome's time, it was a village called LOBNA, in the territory of Eleutheropolis.

LIBON, a Greek architect who built the celebrated temple of Jupiter Olympius. He flourished about A. A. C. 450.

LIBOURNE, a town of France, in the department of Gironde, and late province of Guienne, contains about 5000 citizens. It is a trading town, seated on the Dordogne, 20 m. NE. of Bourdeaux, and 2 S. by W. of Paris. Lon. c. 10. W. Lat. 44. 55.

(1.) LIBRA, OR BALANCE, one of the mechanical powers. See BALANCE.

(2.) LIBRA, in astronomy, one of the 12 signs of the zodiac, exactly opposite to Aries; so called because when the sun is in this sign at the autumnal equinox, the days and nights are equal, as weighed in a balance. See ASTRONOMY, § 54.

(3.) LIBRA also denotes the ancient Roman pound, borrowed from the Sicilians, who call it *lira*. The libra was divided into 12 *uncia* ounces, and the ounce into 24 scruples. The divisions of the libra were, the *uncia*, one twelfth

one sixth; *quadrans*, one fourth; *triens*, 1; *quincunx*, five ounces; *semiss*, the half; 6 oz. *septans*, seven; *bes*, eight; *dodrans*, *strans*, ten; *denus*, eleven; lastly, the *as* 12 oz. or one libra. The Roman libra in France for the proportion of their the time of Charlemagne, or perhaps of Philip I. in 1093, their sols being so used, as that 20 of them were equal to

By degrees it became a term of account; thing of the value of 20 sols was called Hence 100 L. stands for pound Sterling, or a pound in weight.

**LIBRA PUNSA**, in law books, denotes a money in weight. It was anciently only to tell the money but to weigh it: many cities, lords, and bishops, having it, coined money, and often bad, or too for which reason, though the pound contained shillings, they always weighed it.

**LIBRALIS**, *adj.* [*libralis*, Latin.] Of a pound weight.

**LIBRARIAN**, *n. f.* [*librarius*, Latin.] 1. One the care of a library. 2. One who transcribes books.—Charybdis thrice swall thrice refunds, the waves: this must be of regular tides. There are indeed tides in a day, but this is the error of the *Broome*.

**LIBRI**, among the ancients, were a sort of who transcribed in beautiful or at least characters, what had been written by the notes and abbreviations.

**LIBRARY**, *n. f.* [*libraris*, Fr.] A large of books, publick or private.— as they gan his library to view, tique registers for to advise, chanced to the prince's hand to rise lent book, hight Briton's monuments.

*Fairy Queen.*

given you the library of a painter, and a of such books as he ought to read. *Dryd.* **LIBRARY** signifies also an edifice or apartment for holding a considerable number placed regularly on shelves. Some authors sign of libraries to the Hebrews; and obtain the care they took to preserve their laws, and the memory and actions of their became an example to other nations, by to the Egyptians. Of mandyas, king is said to have taken the hint first; who, to Diodorus, had a library built in his ith this inscription over the door,  $\Psi\text{TKH}\Sigma$

Nor were the Ptolemies, who reigned the country, less curious and magnificent

A library of the kings of Persia, called a *rolls*, or books, is mentioned in Ezra vi. i. we imagine to have consisted of the history of the nation, and of memoirs of the affairs of it seems rather to have been a depositary charters, and ordinances of the kings. In 7. it is called *the king's treasure house*. with more certainty, call that a library, l in the 2d of Esdras to have been built uah, in which were preserved the books phets, and the letters of their kings. The rrected a library at Athens, was the tyr- ratus; though Strabo ascribes the ho-

nour to Aristotle. That of Pisistratus was transported by Xerxes into Persia, and was afterwards brought back by Seleucus Nicator to Athens. Long after, it was plundered by Sylla, and re-established by Adrian. Plutarch says, that under Eumenes there was a library at Pergamus, containing 200,000 books. Tyrannion, a celebrated grammarian, contemporary with Pompey, had a library of 30,000 volumes. That of Ptolemy Philadelphus, according to A. Gellius, contained 700,000, all in rolls, burnt by Caesar's soldiers. Constantine, and his successors, erected a magnificent one at Constantinople; which in the 8th century contained 300,000 volumes, all burnt by order of Leo III; and among the rest, one wherein the Iliad and Odysey were written in letters of gold, on the guts of a serpent. The most celebrated libraries of ancient Rome, were the Ulpian, and the Palatine. Those of Paulus Emilius, who conquered Perseus; of Lucilius, Lucullus, of Asinius Pollio, Asinius, Julius Severus, Domitius Serenus, Pamphilius Martyr, and the emperor Gordian and Trajan, are also much celebrated. Anciently, every large church had its library; as appears by the writings of St Jerome, Anastasius, and others. Pope Nicholas laid the foundation of that of the Vatican, in 1450. It was destroyed by the constable Bourbon, in the sack of Rome; restored by Pope Sixtus V. and considerably enriched with books from that of Heidelberg, plundered by Count Tilly in 1688. One of the most complete libraries in Europe, was said to be that erected at Florence by Cosmus de Medicis, over the gate whereof is written, **LABOR ASSQUE LABOR**; though it was afterwards exceeded by that of the French king, begun by Francis I. augmented by Cardinal Richelieu, completed by M. Colbert, and now the national library. The emperor's library at Vienna, according to Lambecius, consists of 80,000 volumes, and 3,940 curious medals. The BODLEIAN library at Oxford, built on the foundation of that of Duke Humphry, exceeds that of any university in Europe, and even those of all the sovereigns of Europe, except the emperor's and the French one, which are each of them older by 100 years. It was first opened in 1602, and has since found a great number of benefactors; particularly Sir Robert Cotton, Sir H. Savil, Abp. Laud, Sir Kenelm Digby, Mr Allen, Dr Pococke, Mr Selden, and others. The Vatican, the Medicean, that of Beffarion at Venice, and those just mentioned, exceed the Bodleian in Greek MSS. but in oriental MSS. it excels them all. As to printed books, the Ambrosian at Milan, and that of Wolfenbuttle, are two of the most famous, and yet both inferior to the Bodleian. There are also many public libraries belonging to the colleges at Oxford and Cambridge. The principal public libraries in London, besides that of the Museum, are those of the college of Herolds, of the college of physicians, of Doctors Commons, to which every bishop, at the time of his consecration, gives at least 20 l. sometimes 50 l. for the purchase of books; those of the Gray's Inn, Lincoln's Inn, Inner Temple; and Middle Temple; that of Lambeth, founded by Abp. Bancroft in 1610, for the use of succeeding archbishops of Canterbury, and increased by the

benefactions of ~~James~~ Abbot, Sheldon, and Tenison, and said to consist of at least 15,000 printed books, and 617 volumes in MS.; that of Red-Cross Street, founded by Dr Daniel Williams, a Presbyterian divine, and since enriched by many private benefactions; that of the Royal Society, called the *Arundelian* or *Norfolk library*, because the principal part of the collection formerly belonged to the family of Arundel, and was given to the society by Henry Howard, afterwards duke of Norfolk, in 1666, which library has been increased by the valuable collection of Francis Aston, Esq; in 1713, and is still increasing by the numerous benefactions of the works of its learned members, and others; that of St Paul's, of Sion College; the queen's library, erected by Q. Caroline in 1737; and the surgeon's library, kept in their hall in the Old Bailey, &c. In Edinburgh there is a good library belonging to the university, well furnished with books; which are kept in good order. There is also a noble library of books and MSS, belonging to the faculty of advocates. See *ADVOCATE*, and *EDINBURGH*, § 37. There are likewise several valuable public libraries in the different colleges belonging to the Universities of Glasgow, Aberdeen, and St Andrews, wherein are many curious and beautifully illuminated ancient MSS.

(3.) *LIBRARY, THE COTTONIAN*, originally consisted of 958 volumes of original charters, grants, instruments, letters of sovereign princes, transactions between this and other kingdoms and states, genealogies, histories, registers of monasteries, remains of Saxon laws, the book of Genesis, thought to be the most ancient Greek copy extant, and said to have been written by Origen in the 2d century, and the curious Alexandrian MS. copy, in Greek capitals. This library is kept in the British Museum, with the large and valuable library of Sir Hans Sloane, amounting to upwards of 42,000 volumes, &c.

(4.) *LIBRARY, THE KING'S*, at St James's, was founded by Henry, eldest son of James I. and made up partly of books, and partly of MSS. with many other curiosities, for the advancement of learning. It has received many additions from the libraries of Isaac Casaubon and others.

*LIBRASIO*, a town of the Italian republic, in the department of the Upper Po, and district (late duchy) of Cremona; seated on the canal of Oglio.

\* *To LIBRATE*. *v. a.* [*libro*, Latin.] To poise, to balance; to hold in equipoise.

(1.) \* *LIBRATION*. *n. f.* [*libratio*, Latin; *libration*, French.] 1. The state of being balanced.—This is what may be said of the balance, and the *libration*, of the body. *Dryden*—

Their pinions still

In loose *librations* stretch'd.

*Thomson*.

2. [In astronomy.]—*Libration* is the balancing motion or trepidation in the firmament, whereby the declination of the sun, and the latitude of the stars, change from time to time. Astronomers likewise ascribe to the moon a *libratory* motion, or motion of trepidation, which they pretend is from E. to W. and from N. to S. because that, at full moon, they sometimes discover parts of her disk which are not discovered at other times. *These kinds are called*, the one a *libration* in lon-

gitude, and the other a *libration* in latitude. If this, there is a third kind, which is an apparent *libration*, and which consists that when the moon is at her greatest distance from the south, her axis being then perpendicular to the plane of the ecliptic, she must enlighten towards the north pole some parts which she did not before; that, on the contrary, some parts of the moon are enlightened towards the opposite pole; and this produces the same effect as the *libration* in latitude does. *DiS. Tre* planets which move upon their axis, do not make intire revolutions; for the moon only a kind of *libration*, or a reciprocation on her own axis. *Greav*.

(2.) *LIBRATION*, § 1. *def. 2.* See *ASTRONOMY, Index*; under *MOON*.

\* *LIBRATORY*. *adj.* [from *libro*, Latin.] *Libratory*, playing like a balance.

*LIBUN*, a town of Bohemia, in Bole.

*LIBURNA*, or *LIBURNICA*, denoted a light and swift skiff, used by the Liburnians, for which they were noted.

*LIBURNIA*, in ancient geography, a country of Illyricum, extending towards the Adriatic, between Istria on the W. Dalmatia on the E. and mount Albus on the N.

*LIBURNIANS*, } *LIBURNI*, the people of }  
*LIBURNII*, or } *BURNIA*. The emperor Augustus, who was at the command of the Roman army, summoned the people from the country called *Liburnii*, because generally from thence they sailed.

*LIBURNUM* was a species of little boats, or form of Liburnian skiffs, wherein the soldiers of Rome were carried, and where they ate, either reading or writing. *Juvena*.

(1.) *LIBURNUS*, in ancient geography, a town of Campania.

(2.) *LIBURNUS*, an ancient port of Italy, now called *LIVORNO*, or *LEGHORN*.

(1.) *LIBYA*, in a general sense, a name which the Greeks, denoted Africa, a name derived from the thirst, being a dry and thirsty country. See *Pliny*.

(2.) *LIBYA*, in a more restrained sense, the middle part of Africa, extending N. and S. according to Pliny; between the Mediterranean N. and Ethiopia on the E. and was divided into the *Hither* or *Exterior Libya*; and the *Farther* or *Interior Libya*. The former lay between the Nile on the N. and the *Farther Libya*, which was beyond Egypt on the S. (*Ptolemy*) The *Farther* or *Interior Libya*, was a vast country lying between the *Hither Libya* on the N. the Atlantic ocean on the W. the Ethiopic and Ethiopia beyond Egypt on the E.

(3.) *LIBYA*, in a still more restrained sense, for distinction's sake, *Libya Propria*, the northern district of Africa, and a part of the *Farther Libya*; situated between Egypt on the Mediterranean on the N. the Syrtis Major Regio Tripolitana on the W. the Garar Regio on the E. Ethiopia beyond Egypt on the S. novus domus and desert of Barea. This Libya was subdivided into *Libya* taken in the strictest sense, and into Marmarica and Cyrenai.

(4.) *LIBYA* in the strictest sense, or *Exterior*, was the most eastern part of

xt to Egypt, with Marmarica on the W.iterranean on the N. and the Nubi, now LUBIA on the S.—*Ptolemy*.

ANS, the natives of Lybia, or Africa.

CUM MARE, the LIBYAN SEA, a part ofiterranean on the coast of Cyrene.

SSA, a town and river of Bithynia, whereb of Hannibal the Great was visible inime.

TES, an ancient people of Germany inia, now part of Ssabria and Bavaria.

VO, a town of the French republic, in thepartment of Corfica; 20 miles E. of

E, the plural of *louse*.—

lammy dew, that loathsome *lice* beget; he slow creeping evil eats his way. *Dryd.*

EBANE. *n. f.* [*lice* and *bane*.] A plant.

GNANO, a river of Naples, which runs Gulph of Gaeta, 2 m. NW of the Volturmo.

ENCE. *n. f.* [*licentia*, Latin; *licence*, Fr.]

bitant liberty; contempt of legal and ne-restraint.—Some of the wifer seeing that a licence is indeed the many-headed tyrantailed with the rest to make *Mufidorus* ief. *Sidney*.—

Taught my faults  
such full licence, as both truth and malice  
power to utter. *Shak.*  
ence they mean, when they cry liberty. *Milton.*

e privilege that antient poets claim,  
turn'd to licence by too just a name. *Rofcommon.*

ugh this be a state of liberty, yet it is not  
of licence. *Locke*. 2. A grant of permission.

sent some to bring them a licence from the  
*Judith* xi. 14.—Those few abstract names

schools forged, could never yet get ad-e  
to common use, or obtain the licence of

approbation. *Locke*.—We procured a li-  
he duke of Parma to enter the theatre and

*Addison*.—It is not the manner of the

to deliver any man to die before that  
h is accused have the accusers face to

nd have licence to answer for himself.

LICENCE. *v. a.* [*licencier*, French.] 1. To  
by a legal grant.—

Wit's Titans brav'd the skies,  
the prefs groan'd with *licenc'd* blasphemies. *Pope.*

ifmis; to send away. Not in use.—He  
play well, and willingly, at some-games of

attention, which shewed, that when he  
could *license* his thoughts. *Wotton*.

ENSER. [from *license*.] A granter of per-  
; commonly a tool of power.

LICENSER OF THE PRESS. See LIBERTY,

LICENTIATE. *n. f.* [*licentiatus*, low La-  
A man who uses licence. Not in use.—

entiates somewhat licentiously, left they  
prejudice poetical liberty, will pardon

res for doubling or rejecting a letter, if the  
ll aptly. *Camden*. 2. A degree in Spanilh

ties.—A man might, after that time, sue

for the degree of a *licentiate* or master in this fa-  
culty. *Ayliff*.

2.) LICENTIATE, in England, usually means a  
physician who has a licence to practise, granted  
by the college of physicians.

(3.) LICENTIATE (§ 1, def. 2.) The greatest  
number of the officers of justice in Spain are dis-  
tinguished by no other title than that of *licentiate*.  
To pass *licentiate* in common law, civil law, and  
physic, they must have studied 7 years, and in di-  
vinity 10.

\* To LICENTIATE. *v. a.* [*licencier*, French.] To  
permit; to encourage by license.—We may not  
hazard either the stifling of generous inclinations, or  
the *licentiating* any thing that is coarse. *L'Esfrange*.

\* LICENTIOUS. *adj.* [*licenciosus*, French; *li-*  
*centiosus*, Lat.] Unrestrained by law or morality.

Later ages pride, like corn-fed steed,  
Abus'd her plenty, and fat swoln encrease,

To all *licentious* lust. *Spenser's F. Queen.*

How would it touch thee to the quick,  
Should'st thou but hear I were *licentious*? *Shak.*

1. Presumptuous; unconfined.—

The Tyber, whose *licentious* waves,  
So often overflow'd the neighbouring fields,  
Now runs a smooth and inoffensive course.

\* LICENTIOUSLY. *adv.* [from *licentious*.]  
With too much liberty; without just restraint.—

The *licentiates* somewhat *licentiously*, will pardon  
themselves. *Camden's Remains*.

\* LICENTIOUSNESS. *n. f.* [from *licentious*.]  
Boundless liberty; contempt of just restraint.—

One error is so fruitful, as it begetteth a thousand  
children, if the *licentiousness* thereof be not time-

ly restrained. *Raleigh*.—This custom has been al-  
ways looked upon, by the wisest men, as an effect

of *licentiousness*, and not of liberty. *Swift*.—Dur-  
ing the greatest *licentiousness* of the press, the cha-  
racter of the queen was insulted. *Swift*.

LICETUS, a celebrated physician of Italy, born  
at Rappollo, in Genoa, in 1577. He came into

the world, before his mother had completed the  
7th month of her pregnancy; but his father, be-  
ing an ingenious physician, wrapped him up in

cotton, and nurtured him so, that he lived to be  
77 years of age. He was trained with great care,

and became a very distinguished man in his pro-  
fession; and was the author of a great number of

works: his book *De Monstris* is well known. He  
was professor of philosophy and physic at Padua,

where he died in 1655.

(1.) LICH, a town of Germany, in the circle  
of the Upper Rhine, on the Wetter, 12 miles

ESE. of Wetzlar, and 36 NE. of Mentz.

(2.) \* LICH. *n. f.* [*lice*, Saxon.] A dead car-  
case; whence *lichwake*, the time or act of watch-

ing by the dead; *lichgate*, the gate through which  
the dead are carried to the grave; *Lichfield*, the

field of the dead, a city in Staffordshire, so na-  
med from martyred christians. *Salve magna pa-*

*rens*. *Lichwake* is still retained in Scotland in the  
same sense. †

LICHART, a river of Scotland, in Ross-shire,  
which rises on the borders of Gairloch, joins the  
Meig, and forms one of the head waters of the  
Connon. See CONNON, N<sup>o</sup> 2.

LICH-

† LATE WAKE, not LICHWAKE, is the term still used in Scotland.

**LICHEN**, LIVER WORT, in botany; a genus of the natural order of algæ, belonging to the cryptogamia class of plants. The male receptacle is roundish, somewhat plain and shining. In the female the leaves have a farina or mealy substance scattered over them. There are about 130 species, all found in Britain. The following are among the most remarkable.

1. **LICHEN APHTHOSUS**, the green ground liverwort with black warts, grows upon the ground at the roots of trees in woods, and other stoney and mossy places. It differs very little from the **CANINUS**, (see N<sup>o</sup> 6.) and according to some is only a variety of it. Linnæus informs us, that the country people of Upland in Sweden give an infusion of this lichen in milk to children that are troubled with the *thrush* or *apthæ*, which induced that ingenious naturalist to bestow upon it the trivial name of *apthosus*. He also says, that a decoction of it in water purges upwards and downwards, and destroys worms.

2. **LICHEN BARBATUS**, the bearded lichen, grows upon the branches of old trees in thick woods and pine-forests. The stalks or strings are slightly branched and pendulous, from half a foot to two feet in length, little bigger than a common sewing thread; cylindrically jointed towards the base; but surrounded every where else with numerous, horizontal, capillary fibres, either simple or slightly branched. Their colour is a whitish green. This has an astringent quality. When steeped in water, it acquires an orange colour; and, according to Dillenius, is used in Pennsylvania for dyeing that colour.

3. **LICHEN CALCAREUS**, the black-nobbed dyer's lichen, is frequent on calcareous rocks; and hath a hard, smooth, white, stoney, or tartareous crust, cracked or tessellated on the surface, with black tubercles. Dillenius says, that this species is used in dyeing, in the same manner as the **TARTARIUS**. See N<sup>o</sup> 19.

4. **LICHEN CALICARIS**, the beaked lichen, grows sometimes upon rocks, especially on the-coasts, but is not very common. It is smooth, glossy, and whitish, producing flat or convex shields, of the same colour as the leaves, very near the summits of the segments, which are acute and rigid, and, being often reflected from the perpendicular by the growth of the shields, appear from under their limbs like a hooked beak. This will dye a red colour; and promises, in that intention, to rival the famous *Lichen Rocollâ* or *Argol* which is brought from the Canary Islands, and sometimes sold at the price of 80l. per ton. It was formerly used instead of starch to make hair-powder.

5. **LICHEN CANDELARIUS**, or yellow farinaceous lichen, is common upon walls, rocks, boards, and old pales. There are two varieties. The first has a farinaceous crust of no regular figure, covered with numerous, small, greenish yellow, or olive shields, and grows commonly upon old boards. The other has a smooth, hard, circular crust, wrinkled and lobed at the circumference, which adheres closely to rocks and stones. In the centre are numerous shields of a deeper yellow or orange colour, which, as they grow old, swell in the middle, and assume the figure of tubercles. The inhabitants of Sinaland in Sweden scrape this

lichen from the rocks, and mix it with their tallow, to make golden candles to burn on festival-days.

6. **LICHEN CANINUS**, the ash-coloured ground liverwort, grows upon the ground among moists, at the roots of trees in shady woods, and in heaths and stoney places. The leaves are large, gradually dilated towards the extremities, and divided into roundish elevated lobes. Their upper side, in dry weather, is ash-coloured; in rainy weather, of a dull fuscous green colour; the under side white and hoary, having many thick downy nerves, from which descend numerous, long, white, pencil-like radicles. The plectæ, or shields, grow at the extremities of the elevated lobes, shaped like the human nail; of a roundish oval form, convex above, and concave beneath; of a chocolate colour on the upper side, and the same colour with the leaves on the under. There are two varieties, the one called *reddish*, and the other *many-fingered*, ground liverwort. The former is most common. This species was recommended by the celebrated Dr Mead, as an infallible preventative of the dreadful consequences attending the bite of a mad dog. He directed half an ounce of the leaves dried and pulverised to be mixed with two drachms of powdered black pepper; divided into 4 doses, one to be taken by the patient every morning fasting, for 4 mornings successively, in half a pint of warm cow's milk; after which to use the cold bath every morning for a month. But the success hath not always answered the expectation.

7. **LICHEN COCCIFERUS**, the scarlet-tipped cup lichen, is frequent in moors and heaths. It has in the first state a granulated crust for its ground, which is afterwards turned into small lacinated leaves, green above, and hoary beneath. The plant assumes a very different aspect, according to the age, situation, and other accidents of its growth; but may be in general readily distinguished by its fructifications, which are fungous tubercles of a fine scarlet colour, placed on the rim of the cup, or on the top of the stalk. These tubercles, steeped in an alkaline lixivium, are said to dye a fine durable red colour.

8. **LICHEN GEOGRAPHICUS**, is frequent in rocks, and may be readily distinguished at a distance. The crust or ground is of a bright greenish yellow colour, sprinkled over with numerous plain black tubercles; which frequently run into one another, and form lines resembling the river in a map, from which circumstance it has its trivial name.

9. **LICHEN ISLANDICUS**, the eatable Iceland lichen, or rock grass, grows on many mountains both of the Highlands and Lowlands of Scotland. It consists of nearly erect leaves about two inches high, of a stiff substance when dry, but soft and pliant when moist, variously divided without order into broad distant segments, bifid or trifid at the extremities. The upper or exterior surface of the leaves is concave, chestnut colour, smooth and shining, but red at the base; the under or exterior surface is smooth and whitish, a little pitted and sprinkled with very minute black warts. The margins of the leaves and all the segments from bottom to top are ciliated with small, short, stiff hair-like spinules, of a dark chestnut colour, turn

tards the upper side. The shields are very produced. The Icelanders use it as an esherb. See ICELAND, § 10. Made into or gruel, it is said to be very useful in and consumptions; and, according to Hal-Scopoli, is much used in these complaints na.

LICHEN JUNIPERINUS, the common *yellow lichen*, is common upon the trunks and boughs and many other trees. Linnæus says very common upon the juniper. The Goth-wedes dye their yarn of a yellow colour, and give it as a specific in the jaundice.

LICHEN OMPHALOIDES, the *dark-coloured lichen*, is frequent upon rocks. It forms a widely expanded crust of no regular figure, of numerous imbricated leaves of a or dark purple colour, divided into small parts. The margins of the shields are a little raised and turned inwards, and their outsidess outward. The lichen is much used by the Icelanders in dyeing a reddish brown colour. To keep it in urine for a considerable time, till it becomes soft and like a paste: then, forming the into cakes, they dry them in the sun, and use them for use as they do the TARTARIUS.

19. LICHEN PARELLUS, the *crawfish-eye lichen*, upon walls and rocks, but is not very common. The crusts spread closely upon the place they grow, and cover them to a considerable extent. They are rough, tartareous, and coloured, of a tough coriaceous substance. Shields are numerous and crowded, having of ash-coloured, shallow, plain discs, with margins. This is used by the French for a red colour.

LICHEN PARIETINUS, the common yellow lichen, is very common upon walls, rocks, houses, and trunks of trees. It generally forms in circles of 2 or 3 inches diameter, and is dyed a good yellow or orange colour with

LICHEN Plicatus, the *official stringy lichen*, on the branches of old trees, but is not very common. The stalks are a foot or more in length, thick, rigid, and string-shaped, very irregularly branched, the branches entangled together, greenish or ash-colour, brittle and stringy if dried short, otherwise tough and pliant, and dependent from the trees on which they grow. Shields grow generally at the extremities of 2 inches, are nearly flat, or slightly concave, ash-coloured above, pale brown underneath, striated with fine rigid fibres. As the plant grows old, the branches become covered with a rough, warty crust; but the young ones are smooth. It was formerly used in the medicine as an astringent to stop hæmorrhagies, and in the treatment of ruptures; but is out of the modern practice. Linnæus says, the Laplanders apply it to the feet to relieve the excoriations occasioned by walking.

LICHEN PRUNASTRI, the common *ragged lichen*, grows upon all sorts of trees, but is most commonly white and hoary on the snow and on the trees, or upon old pales. This is the variable of the whole genus, appearing dif-

ferent in figure, magnitude, and colour, according to its age, place of growth, and sex. The young plants are of a glaucous colour, slightly divided into small acute crested segments. As they grow older, they are divided like a stag's horn, into more and deeper segments, somewhat broad, flat, soft, and pitted on both sides, the upper surface of a glaucous colour, the under one white and hoary.—The male plants are short, seldom more than an inch high, not hoary on the under side; and have pale glaucous shields situated at the extremities of the segments, standing on short peduncles, which are only small stiff portions of the leaf produced.—The females have numerous farinaceous tubercles both on the edges of their leaves, and the wrinkles of their surface. The pulverised leaves have been used as a powder for the hair, and also in dyeing yarn of a red colour.

16. LICHEN PULMONARIUS, the *lung-wort lichen*, grows in shady woods upon the trunks of old trees. The leaves are as broad as a man's hand, of a kind of leather-like substance, hanging loose from the trunk on which it grows, and lacinated into wide angular segments. Their natural colour, when fresh, is green; but in drying, they turn first to a glaucous and afterwards to a fuscous colour. It has an astringent, bitter taste; and, according to Gmelin, is boiled in ale in Siberia, instead of hops. The ancients used it in coughs and asthmas, &c. but it is not used in modern practice.

17. LICHEN RANGIFERINUS, the *rein-deer lichen*, is common in woods, heaths, and mountainous places. Its general height, when full grown, is about two inches. The stalk is hollow, and very much branched from bottom to top: the branches are divided and subdivided, and at last terminated by 2, 3, 4, or 5 very fine, short, nodding horns. The axillæ of the branches are often perforated. The whole plant is of a hoary white or grey colour, covered with white farinaceous particles, light and brittle when dry, soft and elastic when moist. The fructifications are very minute, round, fuscous, or reddish-brown tubercles, which grow on the very extremities of the finest branches; but these tubercles are very seldom found. The plant seems to have no foliaceous ground for the base, nor scarcely any visible roots. Linnæus says, that in Lapland this moss grows so luxuriant that it is sometimes found a foot high. There are many varieties of this species, of which the principal is the *sylvaticus*, or *brown-tipt rein-deer lichen*. The most remarkable difference between them is, that the *sylvaticus* turns fuscous by age, while the other always continues white. For the uses of this species, see LAPLAND, § 11 and 13.

18. LICHEN SAXATILIS, the *grey-blue pitted lichen*, is very common upon trunks of trees, rocks, tiles, and old wood. It forms a circle 2 or 3 inches diameter. The upper surface is of a blue-grey and sometimes of a whitish ash colour, uneven, and full of numerous small pits or cavities; the under side is black, and covered all over, even to the edges, with short simple hairs or radicles. A variety sometimes occurs with leaves tinged of a red or purple colour. This is used by ducks and other small birds in constructing the outside of their curiously formed nests.

**ARIUS**, the large *yellowish* frequent on rocks, both in lowlands of Scotland. The *gh*, either white or greenish rough warted surface. The *buff*-coloured, of various in's head to the diameter of its margins are of the same *rust*. This lichen is much used by dyeing a fine claret or pom-  
CROTEL, and CUTBEAR.

**ROSUS**, the *red spangled tartarous lichen*, hath a hard tartarous crust, cracked and tessellated on the surface, of a pale yellow colour when fresh, and a light olive when dry. The tubercles are of a blood-red colour at top, their margin and base of the same colour as the crust. The texture and appearance of this, (says Light-foot), indicate that it would answer the purposes of dyeing as well as some others of this tribe, if proper experiments were made.

21. **LICHEN VULPINUS**, the *gold-wiry lichen*, grows upon the trunks of old trees, but is not very common. It is produced in erect tufts, from half an inch to two inches in height, of a fine yellow or lemon colour, which readily discovers it. The filaments which compose it are not cylindrical, but a little compressed and uneven in the surface, variously branched, the angles obtuse, and the branches straggling and entangled one with another. Linnæus informs us, that the inhabitants of Smaland in Sweden dye their yarn of a yellow colour with this lichen; and that the Norwegians destroy wolves by stuffing dead carcases with this moss reduced to powder, and mixed with pounded glass, and so exposing them in the winter season to be devoured by those animals.

**LICHFIELD**. See LITCHFIELD.

(1.) \* **LICHOWL**. *n. f.* [*lich* and *owl*.] A sort of owl, by the vulgar supposed to foretel death.

(2.) **LICH-OWL**. See STRIX, N° 7.

**LICHSTALL**. See LICHTSTALL.

**LICHTENBERG**. See LICHTENBERG.

**LICHTENAU**, the name of six towns of Germany: viz. 1. in Austria, 6 miles SE. of Aigen: 2. in ditto, 12 miles W. of Krems: 3. in Franconia, with a fort, 22 miles SW. of Nuremberg: 4. in Hanau, 12 miles NE. of Straßburg: 5. in Hesse-Cassel, 13 m. SE. of Cassel: and 6. in the bishopric of Paderborn, 9 miles SSE. of Paderborn.

(1.) **LICHTENBERG**, a town and castle of France, in the dep. of the Lower Rhine, and late prov. of Alsace; seated on a rock, near the Vosges, and considered as impregnable. It is 12 miles NNW. of Haguenau. Lon. 7. 35. E. Lat. 48. 55. N.

(2.) **LICHTENBERG**, a town of the French republic, in the dep. of Mont Tonnere, and ci-devant duchy of Deux Ponts.

(3.) **LICHTENBERG**, a town of Silesia.

(4.) **LICHTENBERG**, a town of Upper Saxony.

**LICHTENBURG**, a town of Franconia, in the margravate of Cullembach. Lon. 12. 0. E. Lat. 50. 26. N.

(1.) **LICHTENFELS**, a town of Austria, on the Kamp, 7 miles E. of Zwetl.

(2.) **LICHTENFELS**, a town of Franconia, in the bishopric of Bamberg, on the Mayne. Lon. 11. 10. E. Lat. 50. 20. N.

**LICHTENHAIN**, and } two towns of  
**LICHTENHANNA**, } Saxony.

(1.) **LICHTENSTEIN**, a principality many, in Suabia, near lake Constance.

The multitudinous tongue; let them  
The sweet which is their poison. *S*

3. **To LICK UP**. To devour.—Now shall many *lick up* all that are round about us, *licketh up* the grass. *Numb. xxii. 4.*

When luxury has *lick'd up* all thy p  
Curs'd by thy neighbours, thy trustees  
Think how posterity will treat thy nar

\* **LICKERISH**. **LICKEROUS**. *adj.* [a glutton, Saxon. This seems to be the pro of spelling the word, which has no affi *liquour*, but with *like*.] 1. Nice in the food.—Voluptuous men sacrifice all subistisfactions to a *liquorish* palate. *L'Espr.* : greedily to swallow; eager not with hu gust.—It is never tongue-tied, where fit dation, whereof womankind is so *licker*fered unto it. *Sidney*.—

Strephon, fond boy, delighted, did r

It was love that shin'd in shining maid;  
It lick'rous, poison'd, fain to her would go.

*Sidney.*

ain rare manuscripts, fought in the most re-  
marks by Erpenius, the most excellent lin-  
ad been left to his widow, and were upon  
the Jesuits, *liquorish* chapmen of all such  
*Watson.*—

vain he proffer'd all his goods to save  
body, destin'd to that living grave;  
*liquorish* hag rejects the pelf with scorn,  
nothing but the man would serve her turn.

*Dryden.*

one provinces they were so *liquorish* after  
less, that they would suck the blood as it  
in the dying man. *Locke.* 3. Nice; deli-  
empting the appetite. This sense I doubt,  
ould'st thou seek again to trap me here

*lickerish* baits, fit to ensnare a brute? *Mil-  
KERISHNESS.* *n. f.* [from *lickerish*.] Nice-  
palate.

LICKING, a navigable river of Kentucky,  
runs N. through a mountainous country  
miles, then turns NW. and falls into the  
24 miles below Pittsburg. It is 200 yards  
t its influx into the Ohio, and is navigable  
s up.

LICKS, in geography, a name given to fe-  
ces in the United States of America, par-  
ticularly in the N. Western Territory, abounding  
t springs; where the earth is furrowed up  
y curious manner by the deer and buffa-  
bich lick it on account of the saline par-  
ith which it is impregnated. Streams of  
water run through these licks, the soil of  
s a soft clay. They are distinguished by  
names; but the most remarkable are

LICKS, BIG BONE, lying on each side of  
e Creek, a river of Kentucky, so named  
umber of extraordinary large bones found

These bones, which are said by the na-  
belong to the *Mammoth*, still puzzle the  
rned zoologists to determine what animal  
e belonged to. A thigh-bone, found here  
Parsons, measured 49 inches in length.  
of this animal is deposited in Yale College.  
rson, (now president of the United States,)  
xamined the skeleton of one of these ani-  
s, that "The bones bespeak an animal of  
times the cubic volume of an elephant, as  
on has admitted. Of this animal the na-  
ans have the most extravagant traditions,  
affirm that it was carnivorous, which is  
ral opinion, and was admitted by the late  
er of London after examining the tusks."

MEMOTH. Big Bone Licks lie 8 miles a-  
mouth of Big Bone Creek; which falls  
Ohio, in Lon. 85. 54. W. Lat. 39. 17. N.  
Y, a river of Ireland, in Waterford, run-  
o the Black-water, 4 miles N. of Yough-

LENA, a town of Spain, in Arragon.

LEON, in the Dionysian solemnities, the  
van of Bacchus; a thing so essential to  
lemnities of this god, that they could not  
celebrated without it. See DIONYSIA.  
LOPHORI, in the Dionysian solemnity,  
so carried the LICNON.

XIII. PART I.

LICOLA, a lake of Naples, formerly famous  
for plenty of excellent fish; but in 1538 an ex-  
plosion of a volcano changed one part of it into a  
mountain of albes 1000 feet high, and 4 miles in  
circumference, and the other into a morass. It  
was anciently called LUCRINUS LACUS.

LICONIA, in botany, a genus of the digynia  
order, belonging to the pentandria class of plants.  
There are 5 petals inlaid in the pit of the nectar-  
ium at its base; the capsule is bilocular and seed-  
bearing.

(1.) \* LICORICE. *n. f.* [*γλυκύριζα*; *liquoricia*, I-  
talian.] A root of sweet taste.—*Liquorice* root is  
long and slender, externally of a dusky reddish  
brown, but within of a fine yellow, full of juice;  
and of a taste sweeter than sugar; it grows wild  
in many parts of France, Italy, Spain and Ger-  
many. The inspissated juice of this root is brought  
to us from Spain and Holland; from the first of  
which places it obtained the name of Spanish juice.  
*Hill's Mat. ria Medica*

(2.) LICORICE. See GLYCIRRHIZA.

LICOSTAMO, a town of European Turkey;  
in Thessaly; 16 miles ESE. of Larissa.

LICQUES, a town of France, in the dep. of  
the Straits of Calais; 10½ miles S. of Calais.

(1.) \* LICTOR. *n. f.* [Latin.] A beadle, that at-  
tended the consuls to apprehend or punish cri-  
minals.—

Saucy *licōrs*

Will catch at us like strumpets. *Ant. and Cleop.  
Licōrs* and rods the ensigns of their power.

*Milton:*

Though in his country town no *licōrs* were;  
Nor rods, nor ax; nor tribune. *Dryd.*

(2.) LICATORS, among the ancient Romans, were  
officers established by Romulus, who attended the  
consuls when they appeared in public. The du-  
ties of their office were these: 1. *Submotio*, or  
clearing the way for the magistrate they attend-  
ed: this they did by word of mouth; or, if there  
was occasion, by using the rods they always car-  
ried along with them. 2. *Animadvertio*, or caus-  
ing the people to pay the usual respect to the ma-  
gistrate; as, to alight, if on horse back or in a  
chariot; to rise up, uncover, make way, and the like.  
3. *Præstitio*, or walking before the magistrates: this  
they did, not confusedly, or all together, nor by  
two or three abreast, but singly following one an-  
other in a straight line. They also preceded the  
triumphal car in public triumphs; and it was al-  
so part of their office to arrest criminals, and to  
be public executioners in beheading, &c. Their  
ensigns were the FASCES and SECURIS. As to  
the number of lictors allowed each magistrate, a  
dictator had 24; a master of the horse 6; a con-  
sul 12; a prætor 6; and each vestal virgin, when  
she appeared abroad, had one.

(1.) LID, or LYD, a river of Devonsh. which runs  
into the Tamar, 4 miles NNW. of Tavistock; at  
Lidford bridge it is pent up with rocks, and has  
made itself so deep a fall, by its continual work-  
ing, that passengers only hear the noise of the wa-  
ter without seeing it.

(2.) \* LID. *n. f.* [*blid*, Saxon; *lied*, Ger.] 1. A  
cover; any thing that shuts down over a vessel;  
any stopple that covers the mouth, but not enters  
it.—Hope, instead of flying off with the rest, stuck

B b

65

so close to the *lid* of the cup, that it was shut down upon her. *Addison*. 2. The membrane that, when we sleep or wink, is drawn over the eye.—

Do not for ever with thy veiled *lids*,  
Seek for thy noble father in the dust. *Shak.*  
Our eyes have *lids*, our ears still open we keep. *Darvies.*

That eye dropp'd sense distinct and clear,  
As any muse's tongue could speak;  
When from its *lid* a pearly tear  
Ran trickling down her beautiful cheek. *Prior.*

The rod of *Hermes*  
To sleep could mortal eye-*lids* fix,  
And drive departed souls to *Styx*:  
That rod was just a type of *Sid's*,  
Which o'er a British senate's *lids*  
Could scatter opium full as well,  
And drive as many souls to hell. *Swift.*

(1.) *LIDA*, a river of Sweden, which runs into lake *Wenner* at *Lidkiöping*.

(2.) *LIDA*, a town of Lithuania, in *Wilna*.

*LIDD*. See *LYDD*.

*LIDDAL*. See *LIDDEL*, N<sup>o</sup> 2.

(1.) *LIDDEL*, *Duncan*, M. D. professor of mathematics and medicine in the university of *Helmstadt*, was born in 1561 at *Aberdeen*, where he received the first part of his education. About the age of 18, he went to the university of *Francfort*, where he spent three years in studying mathematics and philosophy. From *Francfort* he proceeded to *Breslaw*, where he made uncommon progress in mathematics, under prof. *Paul Wittichius*. After a year he returned to *Francfort*, where he studied physic for three years. A contagious distemper having broke out at that place, *Liddel* retired to the university of *Rostock*; where he renewed his studies, rather as a companion than a pupil of the celebrated *Brucæus*; whom, though an excellent mathematician, he instructed in the more perfect knowledge of the *Copernican* system, and other astronomical subjects. In 1590 he returned again to *Francfort*. But having there heard of the increasing reputation of the *Academia Julia*, established at *Helmstadt* by *Henry duke of Brunswick*, he removed thither; and soon after his arrival was appointed to the lower professorship of mathematics. From thence he was promoted to the more dignified mathematical chair, which he occupied for 9 years, with much credit to himself and to the *Julian Academy*. In 1596 he obtained the degree of M. D. began to teach physic, and by his teaching and writings became the chief support of the medical school at *Helmstadt*; was employed as first physician at the court of *Brunswick*, and had much practice among the principal inhabitants. Having been several times elected dean of the faculties both of philosophy and physic, he, in 1604, was chosen pro-rector of the university. But neither academical honours, nor the profits of an extensive practice, abroad, could make him forget his native country. In 1600 he took leave of the *Academia Julia*; and after travelling through *Germany* and *Italy*, at length settled in *Scotland*. He died in 1613, in the 52d year of his age. By his last will he bestowed certain lands near *Aberdeen* upon the university there, for the education of 6 poor scholars. Among various regulations and injunctions for the

management of this charity, he appointed 12 magistrates of *Aberdeen* his trustees, and solemnly pronounced the curse of God on any person who should abuse or misapply it. His works are, *putationes Medicinales. Helmstadt, 1603, 4.* *Ars Medica succinæ et perspicue explicata. burgi, 1607, 8vo.* dedicated to *K. James V* divided into 5 books, viz. *Introductio in totam medicinam; De Physiologia; De Pathologia; de morum doctrina; De Therapeutica.* 3. *De Libri tres, Hamburgi, 1610, 12mo.* 4. *Tractatus de dente aureo, Hamburgi, 1628, 12mo.* This last was published to refute a ridiculous story the current, of a poor boy in *Silesia*, who, at 7 years of age, having lost some of his teeth, brought to the astonishment of his parents, a new tooth of pure gold. *Jacobus Horstius, M. D. et c.* of the *Academia Julia*, had published a book, he dedicated to the Emperor *Rudolphus* prove that this wonderful tooth was a present from heaven to encourage the German at war with the Turks, &c. The imposture soon after discovered to be a thin plate of gold skilfully drawn over the natural tooth by a surgeon of that country, to excite the public admiration and charity. 5. *Artis conservandi Sanitatem, sive Medicinae, Aberdeen, 1651, 12mo;* a posthumous work, the style is plain and perspicuous, and somewhat elegant.

(2.) *LIDDEL*, a river of *Scotland*, which rises at the upper extremity of *Liddisdale*, and runs the course of 24 miles, in the parish of *Castletown* on the borders of *Cumberland*; 3 miles of *Langholm*, in *Dumfriesshire*; after which it united stream runs SW. 7 miles and falls into *Solway Frith*.

*LIDDEN*, a river of *England*, which runs into the *Severn*, at *Gloucester*.

*LIDDISDALE*, an extensive district of *Scotland* so named from the *LIDDEL*, which runs from E. to W. & S. It was anciently styled *Liddisdale*; and *lordship*, and comprehends the whole *Scottish* angle of *ROXBURGHSHIRE*. The greater part of it is contained in the parish of *Castletown*; *CASTLETOWN*, N<sup>o</sup> 1. and 2. Being mountainous, it is chiefly adapted for pasture, though the soil of the low land is excellent, and produces very good crops of wheat, barley, oats, flax, turnips, potatoes, and clover. The principal mountains are *Tudhope*, *Windhead*, *moor*, *Dun*, *Dod*, *Hermitage*, *Carby*, *Lav*, *Tinnis*; and *Lariston*, *Millenwood*, *Peel*, and *Fells*. The number of sheep fed upon there in 1793, was 36,000; and that of black cattle *Limestone* abounds, and there are many *Druidical* temples, *Pictish* camps, and other antiquities in this district, besides a natural bridge and other curiosities. See *BRIDGES*, § 10; *PENNING WATER*, &c.

*LIDFORD*, a village of *Devonshire*, 3 miles E. of *Brent Tor*, formerly a town, with a castle, which was always open to men of quality, and twice sent burgesses to parliament. It was sadly shattered by the *Dartmoor* in 1797; and though now only a village, the manor in which it lies may, for lands and liberties, compare with any in the kingdom, the whole of *Dartmoor* being in the verge of it.

*LIDKIO*.

OPPING, a town of Sweden, in W. on the S. side of Lake Wenner, at the he Lida; 42 miles ENE. of Udterval-SW. of Orebro. Lon. 13. 40. E. Lat. Perhaps it is the same with LINDKIO-

1. Y, a town of Gloucestershire, 71 miles on, seated on the W. bank of the Seas two fairs. Near it are the remains Roman encampment, with foundations ancient buildings, among which are the Roman hypocaust of an oval form; and antiquities and coins are often found in pits. Mr Bathurst has a fine seat called Yark, with extensive woods adjoining. O, a district of Maritime Austria, in S. of Venice.

DI SOTTOMARINO, a town of Maritima, near Chioggia, containing 2600 souls; it is built on a bank, which separates it from the sea, and protected by a wall, with walls composed of enormous freestone, 32 feet thick, and many fathoms high.

E. n. f. [*lie*, French.] Any thing imputed to some other body; as, soap or salt. *Sake* lie breads fleas like a loach. *Sake* lie things concocted by heat become yellow, wort, &c. *Peucham on Drawing*.

E. n. f. [*lige*, Saxon.] 1. A criminal

and a lieft, abhorred tyrant; with my sword I will cut the *lie* thou speak'st.

*Sake*.—The *lie* properly an outward signification of the contrary to, or at least beside, the intention of the mind; so that when one thing is expressed, and the same thing not intended, that is properly a *lie*. *South*.—The *lie* is the object of our understanding, as good or ill; and the understanding can no more be deceived with a *lie*, than the will can be deceived with evil. *Dryden*.—When I hear my neighbour say that which is not true, and I say to him that it is not true, or this is false, I only contradict the naked idea of his error; this is the *lie*: but if I say it is a *lie*, the word *lie* is a secondary idea; for it implies both the truth of the speech, and my reproach and the speaker. *Watts*.

2. A charge of *lie*. *South*.—The *lie* is a formulary phrase.—The *lie* shall lie so heavy on my sword, shall render vengeance and revenge; the *lie* giver, and that *lie*, rest shall be quiet as thy father's skull. *Sake*.

3. A contradiction to suppose, that whole nation should unanimously give the *lie* to him who is most invincible evidence, every man knew to be true. *Locke*.—Men will give the *lie*, rather than admit of disagreeing with these tenets. *Locke*.

4. This sense is ludicrous.—The *lie* and fox, the fool and knave imply; the *lie* is moral, though the tale a *lie*. *Dryden*. in morals, § 2. def. 1, 3. Mr Paley, observes, that there are falsehoods of lies; that is, which are not crimes are lies which are not literally and

5. I. Cases of the first class are those,

1. Where no one is deceived: as for instance in parables, fables, novels, jests, tales to create mirth, or ludicrous embellishments of a story, in which the declared design of the speaker is not to inform, but to divert; compliments in the subscription of a letter; a prisoner's pleading not guilty; an advocate asserting the justice, or his belief of the justice, of his client's cause. In such instances no confidence is destroyed, because none was reposed; no promise to speak the truth is violated, because none was given or understood to be given.

2. Where the person you speak to has no right to know the truth, or more properly where little or no inconvenience results from the want of confidence in such cases; as where you tell a falsehood to a madman for his own advantage; to a robber to conceal your property; to an assassin to defeat or to divert him from his purpose. It is upon this principle, that, by the laws of war, it is allowed to deceive an enemy by feints, false colours, spies, false intelligence, and the like: but, by no means, in treaties, truces, signals of capitulation, or surrender: and the difference is, that the former suppose hostilities to continue, the latter are calculated to terminate or suspend them. II. As there may be falsehoods which are not lies, so there may be lies without literal or direct falsehood. An opening is always left for this species of prevarication, when the literal and grammatical signification of a sentence is different from the popular and customary meaning. It is the wilful deceit that makes the lie; and we wilfully deceive, when our expressions are not true, in the sense in which we believe the hearer apprehends them. Besides, it is absurd to contend for any sense of words, in opposition to usage; for all senses of all words are founded upon usage, and upon nothing else. Or a man may *act* a lie; as by pointing his finger in a wrong direction, when a traveller inquires of him his road; or when a tradesman shuts up his windows, to induce his creditors to believe that he is abroad: for to all moral purposes, and therefore, as to veracity, speech and action are the same; speech being only a mode of action.

(1.) \* To LIE. v. n. [*leogan*, Saxon; *liegen*, Dutch.] 1. To utter criminal falsehood.—I know not where he lodges; and for me to devise a lodging, and say, He lies here, or he lies there, were to lie in mine own throat. *Sake*.—If a soul lie unkind to his neighbour in that which was delivered him to keep, he shall restore that which was delivered. *Lev*.—Should I lie against my right? *Job*, xxxiv. 6. 2. To exhibit false representation.—

Inform us, will the emperor treat?

Or do the prints and papers lie? *Swift*.

(2.) \* To LIE. v. n. pret. I lay; I have lain or *lein*. [*liegan*, Saxon; *liggen*, Dutch.] 1. To rest horizontally, or with very great inclination against something else. 2. To rest; to press upon.—

Death lies on her like an untimely show'r

Upon the sweetest flow'r of all the field. *Sake*.

Lie heavy on him, earth, for he

Laid many a heavy load on thee.

*Epitaph on Vanbrugh*

3. To be repositied in the grave.—All the kings of the nations lie in glory, every one in his own house. *Isa*. xiv. 18.—I will lie with my fathers,

and thou shalt carry me out of Egypt, and bury me in your burying-place. *Gen.* xlvii. 30. 4. To be in a state of decumbiture.—How many good young princes would do so; their fathers *lying* so sick as you are at this time is? *Sbak.*—My little daughter *lieth* at the point of death: I pray thee come and lay thy hands on her, that she may be healed. *Mark.* 5. To pass the time of sleep.—

The watchful traveller,  
That by the moon's mistaken light did rise,  
Lay down again, and clos'd his weary eyes.

*Dryden.*

Forlorn he must, and persecuted lie;  
Climb the steep mountain, in the cavern lie.

*Prior.*

6. To be laid up or reposit.—I have seen where copperas is made great variety of them, divers of which I have yet *lying* by me. *Borle.* 7. To remain fixed.—The Spaniards have but one temptation to quarrel with us, the recovering of Jamaica; for that has ever *lied* at their hearts. *Temple.* 8. To reside.—If thou dost well, shalt thou not be accepted? and if thou dost not well, sin *lieth* at the door. *Gen.* iv. 7. 9. To be placed or situated, with respect to something else.—Deserts, where there *lay* no way. *Wisdom.*—

I fly

To those happy climes that lie,  
Where day never shuts his eye.

*Milton.*

There *lies* our way, and that our passage home.

*Dryden.*

Envy *lies* between beings equal in nature, though unequal in circumstances. *Collier on Envoys.*—The business of a tutor, rightly employed, *lies* out of the road. *Locke.*—What *lies* beyond our positive idea towards infinity, *lies* in obscurity, and has the undeterminate confusion of a negative idea. *Locke.* 10. To press upon afflictively.—Thy wrath *lieth* hard upon me, and thou hast afflicted me with all thy waves. *Psalms.*—

He that commits a sin shall find

The pressing guilt *lie* heavy on his mind. *Creech.*—Shew the power of religion, in abating that particular anguish which seems to *lie* so heavy on Leonora. *Addison.* 11. To be troublesome or tedious.—Suppose kings, should have spent their time, at least what *lay* upon their hands, in chemistry, it cannot be denied but princes may pass their time advantageously that way. *Temple.*—I would recommend the studies of knowledge to the female world, that they may not be at a loss how to employ those hours that *lie* upon their hands. *Addison.* 12. To be judicially imputed.—If he should intend his voyage towards my wife, I would turn her loose to him; and what he gets more of her than sharp words, let it *lie* on my head. *Sbak.* 13. To be in any particular state.—If money go before, all ways do *lie* open. *Sbak.*—The highways *lie* waste, the wayfaring man ceaseth. *Isa.*—The seventh year thou shalt let it rest and *lie* still. *Exod.*—Do not think that the knowledge of any particular subject cannot be improved, merely because it has *lain* without improvement. *Watts.* 14. To be in a state of concealment.—Many things in them *lie* concealed to us, which they who were concerned understood at first sight. *Locke.* 15. To be in prison.—

Your imprisonment shall not be long  
I will deliver you, or else *lie* for you.

16. To be in a bad state.—Why will you *ying* and pinching yourself in such a lonsefaring course of life? *L'Esfrange.*—The gene mankind *lie* pecking at one another, till one they are all torn to pieces. *L'Esfrange* the gods to do your drudgery, and you *lie* ing with your finger in your mouth? *L'1* 17. To be in a helpless or exposed state.—a hated person superior, and to *lie* under guile of a disadvantage, is far enough from lion. *Collier.*—It is but a very small coin a plain man, *lying* under a sharp fit of tl for a week, receives from this fine f *Villoison.*—As a man should always be guard against the vices to which he is posed, so we should take a more than care not to *lie* at the mercy of the weather moral conduct. *Addison.*—The mainten the clergy is precarious, and collected most miserable race of farmers, at whol every minister *lies* to be defrauded. *Swift.* consist.—The image of it gives me content; and I trust it will grow to a most prosper section.—It *lies* much in your holding up—He that thinks that diversion may not *lie* labour, forgets the early rising, and hav of huntsmen. *Locke.* 19. To be in the to belong to.—Do'st thou endeavour, a as in thee *lies*, to preserve the lives of a *Duppa's Rules for Devotion.*—He shews very malicious if he knows I deserve cre yet goes about to blast it, as much as in *Stillingfleet.*—

Mars is the warrior's god; in him it

On whom he favours to confer the priz  
20. To be valid in the court of judicature action *lieth* against one. 21. To cost; a me in more money. 22. To *LIE* at. To tune; to teaze. 23. To *LIE* by. To rest main still.—

Ev'n the billows of the sea,

Hung their heads, and then *lay* by.

24. To *LIE* down. To rest; to go into a repose.—The leopard shall *lie* down with *Isa.* xi. 6.—The needy shall *lie* down in saf xiv. 30. 25. To *LIE* down. To sink i grave.—His bones are full of the sin of hi which shall *lie* down with him in the du xx. 11. 26. To *LIE* in. To be in child for all other good women that love to do tle work, how handsome it is to *lie* in an *Spenser.*—You confine yourself most unrea Come; you must go visit the lady that *Sbak.*—She had *lain* in, and her right b been apostemated. *Wijeman.*—The doct practised both by sea and land, and t cures the green sickness and *lyings* in. *Spee*

When Florimel design'd to *lie* private  
She chose with such prudence her pi  
conceal,

That her nurse, nay her midwife, scarc  
her once squeal.

—Hysterical affections are contracted by ac in *lying* in. *Sabatnot.* 27. To *LIE* und be subject to; to be oppressed by.—A g

ill *lie under* a great disadvantage. *Small-ermans*.—This mistake never ought to be to Dryden, but to those who suffered so genius to *lie under* necessity. *Pope*.—Eu-then *under* a deep lethargy. *Attrib.* 28. *yon*. To become the matter of obligati-ty.—These are not places merely of fa-charge of souls *lies upon* them. *Bacon*. *ld lie upon* him to make out how matter, ected motion, could at first necessarily out ever erring or miscarrying, into such formation of human bodies. *Bentley*. 29. *with*. To converse in bed.—

Pardon me, Bassanio,  
r this ring she *lay with* me. *Shak*.  
ay be observed of this word in general,  
ommonly implies something of sluggish-  
tion, or steadiness, applied to persons;  
e gravity or permanency of condition, ap-  
things.

ENAU; 4 towns of Germany; viz 1. in  
2. in Stiria; 3. and 4. in Silesia.

ENTHAL; 3 towns of Germany, in Bo-  
hil-stia and Stiria.

STADT, a town of Prussia, in Oberland,  
afte built in 1329. It suffered much in  
dish wars.

HTENAU, a town of Franconia, in the  
te of Anspach, subject to Nurenburg.  
c. E. Lat. 48. 43. N.

ERBACH, a river of Germany, in the  
the Upper Rhine, which runs into the

LIEF. *adj.* [*leaf*, Sax.; *lief*, Dutch.] Dear;  
Obsolete.—

*liefst* lord she thus beguiled had,  
: was flesh; all flesh doth faintly breed.

*Fairy Queen*.

You, with the rest,  
cfs have laid disgraces on my head;  
with your best endeavour have stir'd up  
*liege* to be mine enemy. *Hen. VI*.  
LIEF. *adj.* Willingly: now used only in fa-  
veech.—To say the truth, I had as *lief*  
: soppery of freedom, as the moral-  
: risonment. *Shak*.

LENSHOEK, a fort of the Batavian re-  
in the dep. of the Meuse, and late prov.  
h Flanders; seated on the W. side of the  
opposite Fort LILLO; 7 miles NW. of  
e. Lon. 4. 22. E. Lat. 51 17. N.

EGE, a ci-devant principality and bishop-  
rmanly, in the circle of Westphalia, ced-  
he French republic, by the treaties of  
Forinjo and Luneville, and finally annex-  
by the peace of 1801—2. It was bound-  
e N. by the late Austrian Brabant, on the  
ampagne and Luxemburg, on the E. by

and Juliers, and on the W. by Brabant,  
nd Hainault. It is very unequal both in  
nd breadth; the former being in some  
ave 90 miles, in others not half so much;  
atter in some places 45, in others hardly  
e air is very temperate; and the soil fer-  
m, wine, wood, and pasture. It has al-  
of lead and iron, pits of coal, quarries  
e and stone, and some celebrated mineral  
as those of Spa and Chau-fontaine. The

principal rivers are the Meuse, the Sambre, and the  
Ourte. The manufactures are chiefly beer, arms,  
nails, serge, leather, &c. This country is very  
populous and extensive, and before the late war  
co-tained 1500 parishes, 24 walled towns, 400 vi-  
lages, 52 baronies, besides counties and seignio-  
ries, 17 abbeys for men, and 11 for ladies. It  
was over-run by the French in 1792, by the allies  
in 1793, and by the French again in 1794. It was  
annexed to the French republic, in 1796, and  
now forms the department of the OURTE.

(2) LIEGE, a town of the French republic, ca-  
pital of the department of the Ourte, as it formerly  
was of the ci-devant bishopric of Liege (N<sup>o</sup> 1.)  
is 4 miles in circumference, and is seated on the  
Meuse, in a fine valley surrounded with hills and  
woods. The Meuse at this city is divided into 3  
branches, which after passing through it, under  
several bridges, unite again below it. It was a  
free imperial city of Germany, and one of the larg-  
est and most eminent in Europe. Though it is 100  
miles from the sea by water, the Meuse is navigable  
up to it. The city has 16 gates; 17 bridges,  
some of them very handsome; 154 streets, many  
of them straight and broad; a fine episcopal pa-  
lace; a very large stately cathedral, in which, be-  
sides five great silver coffers full of reliques, are  
(or at least *were* before the late war,) several sil-  
ver statues of saints, and a St George on horse-  
back of many gold, presented to the cathedral by  
Charles the Bold, by way of atonement for using  
the inhabitants cruelly, in 1468. Of the ten  
churches, that of St Paul is the most remarkable,  
both for structure and ornaments in painting and  
marble. The city is well fortified, and there are  
also two castles on the mountain of the Holy Wal-  
burg for its defence. Besides a great number of  
other convents of both sexes, it had a college of  
English Jesuits, founded in 1616, and a fine nun-  
nery of English ladies. Churches, convents, and  
other religious foundations, take up the greater  
part of it, whence it was called the *paradise of*  
*priests*, but the *purgatory of men* and the *hell of*  
*women*. It is divided into the old and new, or  
the upper and lower town; and the latter again  
into the island, and the quarter beyond the Meuse.  
The houses are high, and built of bluish marble.  
In the town and suburbs are 12 public squares, 10  
hospitals, a beguin-house, and two fine keys,  
planted with several rows of trees; great part of  
the city within the walls is taken up with orch-  
ards and vineyards. In St William's convent,  
without the city, is the tomb of the famous Eng-  
lish traveller Sir John Mandeville. Near it are  
kept the saddle, spurs, and knife, that he used in  
his travels. After having seen most of the cities  
of any note in the world, he made choice of Liege  
to end his life in. At this place is made a great  
quantity of fire-arms, which are exported to dif-  
ferent countries. It was bombarded in 1691, and  
delivered up to the French in 1701. The allies  
retook it in 1702, and the French besieged it a-  
gain in 1705, but were obliged to raise the siege,  
on the approach of the duke of Marlborough. In  
1734 a fire happened in it, which consumed the  
bishop's palace, with all the furniture and MSS.  
In 1789, the inhabitants having complained of  
the oppression which they experienced under the go-

vernment of their bishop, at last insisted upon a charter of privileges. As the bishop and chapter did not comply with their demands, they had recourse to arms; and the bishop, apprehensive for his safety, left the city, and appealed to the imperial chamber of Wetzlar. That chamber issued decrees in his favour: the king of Prussia, in 1790, seemed to act as a mediator for the citizens: the sentences, however, issued by the imperial chamber against the insurgents, were followed by requisitorial letters, addressed to the government of the Austrian Netherlands, desiring that his imperial majesty's troops would assist those of the electoral princes in enforcing their decrees; in consequence of which the Austrians entered Liege in 1791, restored the old magistracy who had been expelled, to their functions, and reinstated the bishop and chapter. In Nov. 1792, the French, under Dumouriez, took the city, and effected another revolution; but being driven thence by the allies in March 1793, the citizens were once more obliged to submit. But early in 1794, it was again taken by the French under Pichegru, and finally annexed to the republic in 1796. Liege is 15 miles S. of Maastricht, and 62 SW. of Cologne. Lon. 5. 40. E. Lat. 50. 37. N.

(3.) \* LIEGE, *adj.* [*liege*, French; *ligio*, Italian; *ligius*, low Latin.] 1. Bound by some feudal tenure; subject: whence *liegeman* for subject. 2. Sovereign. [This signification seems to have accidentally risen from the former, the lord of *liege men*, being by mistake called *liege lord*.]—Did not the whole realm acknowledge Henry VIII. for their king and *liege lord*? *Spenser*.—

My lady *liege*, said he,

What all your sex desire is sovereignty. *Dryd.*  
—A devotedness unto God our *liege lord*, so as to act in all things according to his will. *Grew*.

(4.) \* LIEGE, *n. f.* Sovereign; superior lord: scarcely in use.—

O pardon me, my *liege!* but for my tears  
I had forestall'd this dear and deep rebuke.

*Shakef.*

For that my sovereign *liege* was in my debt.

*Shakef.*

The natives, dubious whom  
They must obey, in consternation wait  
Till rigid conquest will pronounce their *liege*.

*Philips.*

(5.) LIEGE, in law, properly signifies a vassal, who holds a kind of fee, that binds him in a closer obligation to his lord than other people. The term seems to be derived from the French *lier to bind*; on account of a ceremony used in rendering faith or homage; which was by locking the vassal's thumb or his hand in that of the lord, to show that he was fast bound by his oath of fidelity. Cujas, Vignere, and Bignon, choose rather to drive the word from the same source with *leudis* or *lodi*, i. e. *loyal* or *faithful*. But Du Cange agrees with those who derive it from *liti*, a kind of vassals, so firmly attached to their lord, on account of lands or fees held of him, that they were obliged to do him all manner of service, as if they were his domestics. He adds, this was formerly called *litium servitium*, and the person *litge*. In this sense, the word is used, *Lege*. *Edw. cap. 29. Judei sub tutela regis ligean debent esse*, that is,

wholly under his protection. By liege homage a vassal was obliged to serve his lord towards: against all, excepting his father. In which sense the word was used in opposition to simple homage, which last only obliged the vassal to pay the usual and accustomed dues to his lord; and not to take arms against the emperor, prince, or other superior lord; so that liege man was a person devoted to his lord, and entirely under his command *Omnibus, &c. Reginaldus, rex Insuper salutem. Sciatis quod deveni homo ligeus regis Anglie Johannis, contra omnes mortales deum vivere; &c.* MS. penes W. Dugdale. It must be observed, there were formerly two kinds of liege homage: the one, by which the vassal was obliged to serve his lord, against all out exception even of his sovereign; the other, which he was to serve him against all, such other lords as he had formerly owed homage to. In the old English statutes, liege liege people, are terms peculiarly appropriated to the king's subject; as being *liges, ligi*, or *liged*, obliged to pay allegiance to him; 8 Henry Hen. VIII. &c. though private persons had lieges too. Vide Lib. Rames.

\* LIEGEMAN, *n. f.* [from *liege* and *man* subject: not in use.—

This *liegeman* began to wax more bold.  
—The ancestors of those that now live,  
themselves then subjects and *ligemen*.

Stand, ho! who is there?

—Friends to this ground, *liegemen* to the

LIEGE-POUSTIE, in Scots law, is opposed to deathbed; and signifies a person's enjoyments in a state of health in which only he can dispose of his property at pleasure.

\* LIEGER, *n. f.* [more proper *legier*, or *legier*.] A resident ambassador.—

His passions and his fears

Lie *liegers* for you in his breast, and the  
Negotiate your affairs. *L*

LIEGNITZ. See LIGNITZ.

LIEN, the SPLEEN. See ANATOMY,

\* LIEN, the participle of *lie*—One of the spleen might lightly have *lien* with thy will xxvi. 10.

LIEN-HOA. See NYMPHÆA, N° II,

\* LIENTERICK, *adj.* [from *lientary*, pertaining to a lientery. There are many medicinal preparations of iron, but none equal to that prepared without acids; especially in ointments, and to strengthen the tone of the spleen in *lienterick* and other like cases. *Grew's M*

(1.) \* LIENTERY, *n. f.* [from *λυω, livo*, I loosen, and *ήνιον, intestinum*, gut; *lienteric*, French particular looseness, or diarrhœa, when food passes so suddenly through the stomach, as to be thrown out by stool with little alteration. *Quincy*.

(2.) LIENTERY. See MEDICINE, Index

LIENTZ. See LINTZ.

(1.) LIEOU-KIEOU, a kingdom of Asia consisting of 36 islands, subject to China, hitherto known to geographers, tho' they formed an immense and extensive empire; the inhabitants which are civilized. Father Gabil, a Jesuit, has furnished some interesting details respecting the

which he extracted from a Chinese work, published in 1721, in 2 vols by *Su-pao Koang* a Chinese Doctor, who was sent ambassador by the emperor *Koang-hi*, in 1719, to the king of Lieou. Being on the spot, he examined, according to the emperor's orders, whatever he considered interesting, respecting the number, situated productions of these isles; as well as their language, religion, manners, and customs of the natives. These isles are situated between *Comosa*, and Japan. The natives pretend, that the origin of their empire is lost in the remotest antiquity. They reckon up 25 successive dynasties, the duration of which forms a period of an 18,000 years. It would be useless to dispute the absurdity of these pretensions. It is not, that the existence of the country called *Lieou* was not known in China before the commencement of the Christian æra. In the course of the reign of *Yi*, one of the emperors of the dynasty of *Yi*, having heard of these isles, wished to know more of them. He first sent some Chinese for the purpose, but their expedition proved fruitless, and they returned without interpreters. They, however, brought back the islanders with them to *Signan*, the capital of *Chen-fi*, and the usual residence of the emperor of that dynasty. An ambassador of the king of Japan being then at court, he and his attendants knew the strangers to be natives of Lieou; but they described these isles as a barbarous and uncivilized country, the inhabitants of which had never been civilized. The emperor of China afterwards learned, that the principal island lay East of *Fou-tcheou*, the capital of *Fo-kien*; and that a passage of 3 days, one might reach the isle, and where the king kept his court. On the occasion of the emperor *Yang-ti* sent a party of interpreters, to summon the prince to do homage to the emperor of China, and to pay him tribute. The king of Lieou-kieou sent back the interpreters, telling them, sternly, that he acknowledged no prince to be his superior. This answer displeased the emperor, who caused a fleet to be sent to Fo-kien, in which he embarked 10,000 men. This fleet arrived in safety at *Napa-kiang*. The army, in spite of the effort made by the natives, landed on the isle; and the king, who had put himself at the head of his troops, having fallen in battle, the isle was pillaged, sacked, and burnt the royal city; more than 5000 slaves, and returned to the emperor of the dynasty of *Twang*, the first of the short dynasties that followed, (see § 7.) and those of the dynasty of *Song*, attempted to render these isles tributary.

*Chi-tsou*, emperor of the dynasty of *Yi*, wished to revive the pretensions of his ancestors. He fitted out a fleet to subdue the isles; but schemes of conquest had become disagreeable to the Chinese, since the disaster of their army in an expedition against *Lieou*. The fleet of *Chi-tsou* went no farther than the isles of *Pong-hou*, and the West coast of *Yi*, whence they returned to *Fo-kien*. But in the reign of *Hong-vou*, founder of the dynasty of *Ming*, these isles submitted voluntarily to the Chinese government. *Hong-vou* had ordered the grandees of his court to *Tsay-tou*,

then reigning at *Lieou-kieou*, to inform him of his accession to the throne. The Chinese ambassador acquitted himself of his commission with all the address of an able minister. In a private audience he exhorted *Tsay-tou*, to own himself a tributary of the empire, and laid before him various advantages he would derive from this step. His reasoning made so much impression on *Tsay-tou*, that he sent immediately to the emperor to demand the investiture of his states. *Hong-vou* received his envoys in a magnificent manner, and loaded them with presents. He solemnly declared *Tsay-tou* a vassal of the empire; and, after having received his first tribute (consisting of horses, aromatic wood, sulphur, copper, tin, &c.) he sent to this prince a golden seal, and confirmed the choice he had made of one of his sons for successor. *Hong-vou* afterwards sent 36 families, almost all from *Fo-kien* to *Lieou-kieou*. *Tsay-tou* assigned them lands near *Napa-kiang*, and appointed certain revenues for their use; at the same time that *Hong-vou* made them considerable remittances. These families first introduced into *Lieou-kieou* the learned language of the Chinese, the use of their characters, and the ceremonies practised in China in honour of *Confucius*. On the other hand, the sons of several of the grandees of the court of *Tsay-tou* were sent to *Nan-king*, to study Chinese in the imperial college, where they were treated with distinction, and maintained at the emperor's expence. The isles of *Lieou-kieou* had neither iron nor porcelain. *Hong-vou* caused a great number of utensils and instruments of iron to be made, which he sent thither, with a quantity of porcelain vessels. Commerce, navigation, and the arts soon flourished. These islanders learned to cast bells for their temples, to manufacture paper and the finest stuffs, and to make porcelain. The celebrated revolution which placed the Tartars on the imperial throne of China, (see *CHINA*, § 13.) produced no change in the conduct of the kings of *Lieou-kieou*. *Chang-tché*, who was then reigning, sent ambassadors to acknowledge *Chun-tchi*, and received a seal from him, on which were engraven some Tartar characters. It was then settled, that the king of *Lieou-kieou* should pay his tribute only every two years, and that the number of persons in the train of his envoys should not exceed 150. The emperor *Kang-hi* paid more attention to these isles than any of his predecessors. He caused a superb palace to be erected in honour of *Confucius*, and a college where he maintained masters to teach the sciences, and the Chinese characters. He also instituted examinations for the different degrees of the literati. He ordained, that the king of *Lieou-kieou* should send in tribute nothing but the productions of the country; particularly a fixed quantity of sulphur, copper, tin, shells, and mother of pearl, which is remarkably pretty in these islands; besides horse-furniture, pistol-cases, &c. which these islanders manufacture with great taste and neatness. It is above 900 years since the bonzes of China introduced at *Lieou-kieou* the principal books belonging to their sect, with the worship of *Fo*, which is now the established religion. There is in the royal city a magnificent temple, erected in honour of another idol of the Chinese, named *Tsin-fy*, which

which signifies *celestial queen*. These islands do not make promises or swear before their idols; but burn perfumes, present fruits, and stand respectfully before some stone, which they call to witness the solemnity of their engagements. Numbers of stones are to be seen in the courts of their temples, in most public places, and upon their mountains, appropriated to this purpose. They have also women consecrated for the worship of spirits, who are supposed to have great influence over these beings. They visit the sick, distribute medicines, and pray for their recovery. They respect the dead as much as the Chinese, and are no less ceremonious in mourning; but their funerals are neither so pompous, nor attended with so much expence. (See CHINA, § 36, and CHINESE, § 12.) Their coffins, which are of an hexagonal or octagonal figure, are 3 or 4 feet high. They burn the bodies of their dead, but preserve the bones. They never offer provisions to them, but place lamps round them, and burn perfumes. Families are distinguished in Licou-kieou by surnames, but a man and a woman of the same surname cannot marry. The king is not permitted to marry but in 3 grand families, which always enjoy the highest offices. There is a 4th of equal distinction with the 3 former; but neither the king nor the princes contract any alliances with this family; for it is doubtful, whether it be not sprung from the same stem as the royal line. A plurality of wives is allowed. Young men and women enjoy the liberty of seeing one another, and of conversing together; and their union is always in consequence of their own choice. The women are very reserved; they collect their hair on the top of their heads in the form of a curl, and fix it by long pins made of gold or silver. Besides his vast domains, the king receives the produce of all the sulphur, copper, and tin mines, and of the salt pits, together with what arises from taxes. From these revenues he pays the salaries of the mandarins and officers of his court. These salaries are estimated at a certain number of sacks of rice. There are 9 orders of mandarins, distinguished by the colours of their caps, or by their girdles and cushions. The greater part of the titles of these mandarins are hereditary, but some are only acquired by merit. In the royal city there are tribunals established for managing the revenue and affairs of all the islands. There are also particular tribunals for civil and criminal matters; and for regulating the affairs of religion, the public granaries, revenues, duties, commerce, manufactures, ceremonies, navigation, public edifices, literature, and war. The vessels built in this country are greatly valued by the people of China and Japan. In these the natives go to China, Tong-king, Cochinchina, Corea, Nangaza-ki, Satsuma, the neighbouring isles, and Formosa, where they dispose of their silk, cotton, paper, arms, copper utensils, mother of pearl, tortoise and other shells, coral and whet-stones, &c. which are in great request both in China and Japan.

(2.) LIEOU KIEOU, the principal and largest of the above islands, extends from N. to S. almost 440 lys, and 120 or 130 from E. to W.; but on the S. side, the extent from E. to W. is not 100 lys. The SE. part of it, where the court resides,

is called *Cheouli*; and Kint-ching, the city is situated in it. The king's palace, which is 12 miles in circumference, is by neighbouring mountain. It has 4 gates corresponding to the 4 cardinal points; and it fronts the W. forms the grand entry. In which this palace commands is most extensive and delightful; it reaches as far as the port of Kiang, at the distance of 20 lys, to the Kint-ching, and to a great number of other towns, villages, palaces, temples, and gardens, and pleasure houses. It stands 146° 26' E. and in lat. 26° 2' N.

\* LIER. *n. f.* [from *to lie*.] One that lies down; or remains concealed.—There was a French in ambush against him behind the city.

LIERE, a town of the French republic in the department of Deux Nattes, and late province of Austrian Brabant. On the 28th Nov. 1792, the French were defeated near it, by the British under the D. of York. It is seated on the Rhine, 10 miles SE. of Antwerp, and 18 N. of Brussels.

LIEREGNO, a town of Germany, in the principality of Trent, 7 miles E. of Trent.

LIERGANES, a town of Spain, in the province of Biscay.

LIERNA, a flourishing town of the French republic, in the department of the Lario, in the district of Como, seated on the E. bank of the lake of Como.

LIERNAIS, a town of France, in the department of Cote d'Or, 10 miles NW. of Auxerre.

LIES, a small town of Cumberland.

LIESHORN, a town of Westphalia.

LIESSE, a town of France, in the department of Aisne, and late province of Picardy, 4 ENE. of Laon, and 4 NW. of Sissonne. It is seated on the Somme.

LIESSER, a town of France, in the department of the Doubs, 4 miles S. of Ornans, and 10 E. of Salins.

LIETTRE, a town of France, in the department of the Straits of Calais; 3 miles S. of Arras.

(1.) \* LIEU. *n. f.* [French.] Place; or only used with *in*: *in lieu*, instead.—George III. had determined, *in lieu* of his former endeavours, to bestow the same by that justice which best befiecmeth him. *In lieu* of such an increase of dominion, business to extend our trade. *Addison*.

(2.) LIEU, or } in geography, a river  
LIEVE, } French republic, in the department of the Scheldt, and late province of Flanders, running from Damme, Scheldt at Ghent.

\* LIEVE. *adv.* [See LIEF.] Willingly, cheerfully, mouth it, as many of our players do, *lieve* the town crier had spoke my lines. Action is death to some sort of people, should as *lieve* hang as work. *L. Esfrang*

LIEVENS, John, a celebrated painter born at Leyden in 1607. He was the disciple of Schooten, and afterwards of Peter Lastman, excelled principally in portraits; but he painted several historical pieces with great success. He resided 3 years in England, and painted portraits of Charles I. the queen, the princess of Orange, and several of the nobility; after which he returned to Antwerp, where he met with full employment. There are several of his etchings extant,

ight, but masterly manner. The chiaro very skillfully managed in them, so as to a most powerful effect. His style of etchables that of Rembrandt; but is coarser finished.

GAUD, Joseph, M. D. counsellor of state physician at the court of France, was six in Provence, and resided principally he took his degree. After this he stumome years at Montpellier. He returned here he soon acquired extensive practice, me eminent for his literary abilities. He ere till 1750, when he was invited to actian to the royal infirmary at Versailles practised with such reputation and sucbe soon arrived at the head of his prood in 1774, upon the death of M. Senac, ppointed archiater. He published many works; particularly, 1. *Elementa Philo-Precis de la Medicines*. 3. *Pratique Precis de Medicale*. 4. *Essais Anatomiques*. 5. *Synop-se Praxois Medicines*. 6. *Historia Anato-ica*. He died at Versailles in 1780, aged 78.

LIEUTENANCY. *n. f.* [*lieutenance*, French; *tenant*.] 1. The office of a lieutenant.—icks as these strip you out of your leu: had been better you had not kissed your ers so oft. *Shak.* 2. The body of lieutenants.—The list of undisputed masters, is hard; as the list of the *lieutenancy* of our me-Felton.

LIEUTENANT. *n. f.* [*lieutenant*, Fr.] 1. ; one who acts by vicarious authority.—

Here the *lieutenant* comes. *Shak.* put you in mind of the lords *lieutenants*, by *lieutenants*, of the counties; their profor ordering the military affairs, in orpose an invasion from abroad, or a re-a sedition at home. *Bacon*.—Killing, as idered in itself without all undue ciras, was never prohibited to the lawful , who is the vicegerent or *lieutenant* of a whom he derives his power of life and ramball against *Hobbes*.—

by our new *lieutenant*, who in Rome, ce from me, has heard of your renown: to offer peace.

*Philips*. one who holds the next rank to a superior nomination; as, a general has his *lieutenants*, as a colonel his *lieutenant colonel*, ain simply his *lieutenant*.—It were meet captains only were employed as have erved in that country, and been at least there. *Spenser*.—According to military e place was good, and the *lieutenant* of l's company might well pretend to the nt captainship. *Watton*.—The earl of made *lieutenant* general of the army. —His *lieutenant*, engaging against his ders, being beaten by *Lyfander*, Alcias again banished. *Swift*.—

t thou so many gallant soldiers see, stains and *lieutenants* flight for me? *Gay*.

LIEUTENANT is an officer who supplies and discharges the offices of a superior ence. Of these, some are civil, as the tenants of kingdoms and counties; o-III. PART I.

thers military, as the lieutenant general; lieutenant colonel, &c.

(3.) LIEUTENANT, in the land service, is the second commissioned officer in every company of both foot and horse, next to the captain, and takes the command upon the death or absence of the captain.

(4.) LIEUTENANT COLONEL, the 2d officer of a regiment, who commands in the absence of the colonel. See COLONEL, § 2.

(5.) LIEUTENANT GENERAL is the next in command after the general; and provided he should die or be killed, the order is, that the oldest lieutenant general shall take the command. This office is the first military dignity after that of a general. One part of their function is, to assist the general with their counsel: they ought therefore, if possible, to possess the same qualities with the general himself; and the more, as they often command armies in chief. Lieutenant generals have been multiplied of late in Europe, in proportion as the armies have become numerous. They serve either in field or in the sieges, according to the dates of their commissions. In battle, the oldest commands the right wing of the army; the 2d the left wing, the 3d the centre, the 4th the right wing of the second line, the 5th the left wing, the 6th the centre; and so on. In sieges the lieutenant generals always command the right of the principal attack, and order what they judge proper for the advancement of the siege during the 24 hours they are in the trenches; except the attacks, which they are not to make without an order from the general in chief.

(6.) The LIEUTENANT GENERAL OF ARTILLERY ought to be a very good mathematician, and an able engineer; to know all the powers of artillery; to understand the attack and defence of fortified places, in all its different branches; how to dispose of the artillery in the day of battle to the best advantage; to conduct its march and retreat; as also to be well acquainted with all the numerous apparatus belonging to the train, and to the laboratory, &c.

(7.) LIEUTENANT GENERAL OF THE ORD-NANCE. See ORD-NANCE.

(8.) LIEUTENANT, LORD, OF IRELAND, before the Union, was properly a viceroy; and had all the state and grandeur of a king of England, except being served upon the knee. He had the power of making war and peace, of bestowing all the offices under the government, of dubbing knights, and of pardoning all crimes except high treason; he also called and prorogued the parliament, but no bill could pass without the royal assent. He was assisted in his government by a privy council; and on his leaving the kingdom, he appointed the lords of the regency, who governed in his absence.

(9.) LIEUTENANT OF ARTILLERY. Each company of artillery hath four; one first and 3 second lieutenants. The first lieutenant hath the same detail of duty with the captain; because in his absence he commands the company: he is to see that the soldiers are clean and neat; that their clothes, arms, and accoutrements, are in good and serviceable order; and to watch over every thing

thing else which may contribute to their health. He must attend to their being taught the exercise, see them punctually paid, their messes regularly kept, and visit them in the hospitals when sick. He must assist at all parades, &c. He ought to understand the doctrine of projectiles and the science of artillery, with the various effects of gun powder, however managed or directed; to enable him to construct and dispose his batteries to the best advantage; to plant his cannon, mortars, and howitzers, so as to produce the greatest annoyance to an enemy. He is to be well skilled in the attack and defence of fortified places; and to be conversant in arithmetic, mathematics, mechanics, &c.

(10.) LIEUTENANT OF ARTILLERY, SECOND, is the same as an ensign in an infantry regiment, being the youngest commissioned officer in the company, and must assist the first lieutenant in the detail of the company's duty. His other qualifications should be equal with those of the first lieutenant.

(11.) LIEUTENANT OF A SHIP OF WAR, the officer next in rank and power to the captain, in whose absence he is charged with the command of the ship, and the execution of whatever orders he may have received from the commander relating to the king's service. The lieutenant who commands the watch at sea, keeps a list of all the officers and men thereto belonging, in order to muster them when he judges it expedient, and reports to the captain the names of those who are absent from their duty. During the night-watch, he occasionally visits the lower decks, or sends thither a careful officer, to see that the proper centinels are at their duty, and that there is no disorder amongst the men; no tobacco smoked between decks, nor any fire or candles burning there, except the lights which are in lanthorns, under the care of a proper watch, on particular occasions. He is expected to be always upon deck in his watch, as well to give the necessary orders with regard to trimming the sails and superintending the navigation, as to prevent any noise or confusion; but he is never to change the ship's course without the captain's directions, unless to avoid an immediate danger. The lieutenant, in time of battle, must particularly take care that all the men are present at their quarters, where they have been previously stationed according to the regulations made by the captain. He should exhort them every where to perform their duty; and acquaint the captain at all times of the misbehaviour of any person in the ship, and of whatever else concerns the service. The youngest lieutenant in the ship, who is also styled *lieutenant at arms*, besides his common duty, is particularly ordered, by his instructions, to train the seamen to the use of small arms, and frequently to exercise and discipline them therein. His office, in time of battle, is chiefly to direct and attend them; and at all other times to have a due regard to the preservation of the small arms that they be not lost or embezzled, and that they be kept in good condition for service.

(12.) LIEUTENANT, REFORMED, he whose company or troop is broke or disbanded, but himself

continued in whole or half pay, still retains his right of seniority and rank in the army.

(13.) LIEUTENANTS, LORDS, OF COLOURS, are officers, who, upon any invasion or rebellion, have power to raise the militia, and to give commissions to colonels and other officers, to form them into regiments, troops, and companies. Under the lords lieutenants, are deputy lieutenants, who have the same power; these are chosen by the lords lieutenants, out of the gentlemen of each county, and presented to the king for his approbation.

\* LIEUTENANTSHIP. *n. s.* [from *lieutenant*]. The rank or office of lieutenant.

LIEUVILLER, a town of France, in the department of Oise, 7½ miles NNE. of Clermont.

(1.) \* LIFE. *n. s.* plural *lives*. [*visio*, to see]. 1. Union and co-operation of soul with body; animation, opposed to an *inanimate* existence.

On thy *life* no more.

—My *life* I never held but as a pawn.

To wage against thy foes. *Shak.*

She shews a body rather than a *life*.

A statue than a breather.

—Let the waters bring forth abundantly every living creature that hath *life*. *Gen. i. 20.*—The immortality of the same man consists in nothing but the participation of the same continued *life*, by the successive particles of matter, in successively united to the same organized body. 2. Present state; as distinct from other human existence.—

O *life*, thou nothing's younger brother,  
So like, that we may take the one for the other.

When I consider *life*, 'tis all a cheat,  
Yet fool'd by hope men favour the deceit.  
Live on, and think to-morrow will remain;  
To-morrow's falser than the former day;  
Lies more; and when it says we shall  
With some new joy, takes off what we  
Strange coz'nage! none would live again.

Yet all hope pleasure in what yet remains,  
And from the dregs of *life* think to remain;  
What the first sprightly running could  
I'm tir'd of waiting for this chemick gain,  
Which fools us young, and beggars grows  
old.

How'er 'tis well that while mankind  
Through *life*'s perverse meanders errs  
He can imagin'd pleasures find,  
To combat against real cares.

So peaceful shalt thou end thy bliss,  
And steal thyself from *life* by slow degrees.  
3. Enjoyment, or possession of existence; as opposed to *death*.—

Then avarice 'gan thro' his veins to  
His greedy flames, and kindle *life*'s  
fire. *Fa.*

Their complot is to have my *life*.  
Nor love thy *life*, nor hate; but what  
Live well, how long or short permit them.

—He entreated me not to take his *life*,  
a sum of money. *Broome on the Odyssey*.  
the supposed vehicle of life.—

ushing entrails smok'd upon the ground,  
warm *life* came inuing thro' the wound.

*Pope.*

It; manner of living with respect to vir-

—  
with perhaps in some nice tenets might  
og, his *life* I'm sure was in the right.

*Cowley.*

ry and Edward, brightest sons of fame,  
tuous Alfred, a more sacred name;  
*life* of glorious toils enur'd,  
heir long glories with a sigh.

*Pope.*

th my family to lead good *lives*. *Mrs*  
5. Condition; manner of living with re-  
ppiness and misery.—

was the *life*: the frugal Sabines led;  
us and his brother god were bred. *Dryd.*  
ance of our present state: as, half *life*  
in study.—Some have not any clear i-  
ir *lives*. *Locke.*—

rd and fierce the tyger still remains,  
his *life*: with biting on his chains. *Prior.*  
ministration of this bank is for *life*, and  
e hands of the chief citizens. *Addison.*  
ng form: opposed to *copies*.—That is  
it of beauty which a picture cannot ex-  
nor the first sight of the *life*. *Bacon.*—

fit eminent persons of great name a-  
he may tell how the *life* agreeth with  
*Bacon*.—He that would be a master,  
by the *life* as well as copy from origi-  
oin theory and experience together.  
Exact resemblance: with to before it.

no character of any person was ever  
n to the *life* than this. *Denham.*—  
y figure to the *life* express'd  
head's pow'r. *Dryden.*

r in order painted on the wall  
; that fame around the world had blown,  
: *life*, and every leader known. *Dryd.*  
l state of man.—

Studious they appear  
hat polish *life*; inventors rare!  
ul of their Maker. *Milton.*

All that cheers or softens *life*,  
er sister, daughter, friend, and wife.

*Pope.*

on occurrences; human affairs; the  
ings.—This I know, not only by read-  
es in my study, but also by experience  
ad in the world. *Afham.*—

To know

ich before us lies in daily *life*,  
ime wisdom. *Milt. Par. Lost.*

person.—  
should I play the Roman fool, and die  
wn sword? whilst I see *lives* the gashes  
r upon them. *Shak. Macbeth.*  
ive of a life past.—

Plutarch, that writes his *life*,  
that Cato dearly lov'd his wife. *Pope.*  
briskness; vivacity; resolution.—The  
t thitherward with a new *life* of resolu-  
r.—They have no notion of *life* and fire  
d in words. *Felton.*—

ith half the fire and *life*,  
ich he kiss'd Amphytrion's wife. *Prior.*

15. Animal, animated existence; animal being.—  
Full nature swarms with *life*. *Tbomson.*

16. System of animal nature.—

Lives through all *life*.

*Pope.*

17. *Life* is also used of vegetables, and whatever  
grows and decays.

(2.) LIFE, in the new system of medicine, is de-  
fined to be a *forced state*. See BRUNONIAN SYS-  
TEM, § 4. The author of that doctrine, after de-  
fining and illustrating EXCITABILITY, the EXCIT-  
ING POWERS, and their effects in producing EX-  
CITEMENT, &c. concludes thus, "From all that  
has hitherto been said, it is certain, that LIFE is  
not a *natural*, but a *forced state*; that the tenden-  
cy of animals every moment is to dissolution; that  
they are kept from it, not by any powers in them-  
selves, but by foreign powers, and even by these  
with difficulty, and only for a time; and then,  
from the necessity of their fate, they yield to  
death." (*Brown's Elem. of Med.* § lxxii.) In his  
lectures he sometimes enforced this doctrine, by  
quoting the original sentence pronounced on our  
common progenitor. (See *G. n.* iii. 19.) The cele-  
brated Dr Harvey, and the late J. Hunter, were  
of opinion, that the principle of animal life is in  
the blood. See ANATOMY, *Index*; and BLOOD,  
§ 12, 13.

(3.) LIFE ANNUITIES. See ANNUITIES, and  
SURVIVORSHIP.

(4.) LIFE, PROLONGATION OF. Lord Bacon,  
observes, that the prolongation of life is to be ex-  
pected, rather from stated diets, than either from  
any ordinary regimen, or any extraordinary medi-  
cines. See LONGEVITY.

(5.) LIFE, TREE OF. See THUJA.

(6.) LIFE, VEGETABLE. See PLANTS.

(7.) LIFE, WOOD OF. See GUAIAACUM, N° II.

\* LIFE BLOOD. *n. f.* [*life and blood*.] The blood  
necessary to life; the vital blood.—

This sickness doth infect

The very *lifeblood* of our enterprise. *Shak.*

How could't thou drain the *lifeblood* of the  
child? *Shak.*

His forehead struck the ground,  
*Lifeblood* and life rush'd mingled through the  
wound. *Dryden.*

—They loved with that calm and noble value  
which dwells in the heart, with a warmth like  
that of *lifeblood*. *Spectator.*—

Money, the *lifeblood* of the nation,

Corrupts and stagnates in the veins,

Unless a proper circulation,

Its motion and its heat maintains. *Swift.*

(1.) \* LIFE-EVERLASTING. An herb. *Ainsw.*

(2.) LIFE-EVERLASTING. See GNAPHALIUM.

\* LIFE GIVING. *n. f.* [*life and giving*.] Having  
the power to give life.—

His own heat,

Kindled at first from heav'n's *life-giving* fire.

*Spenser.*

He sat devising death

To them who liv'd; nor on the virtue thought  
Of that *life-giving* plant. *Milton.*

\* LIFE GUARD. *n. f.* [*life and guard*.] The guard  
of a King's person.

\* LIFELESSLY. *adv.* [from *lifeless*.] Without  
vigour; frigidly; jejunctly.

\* LIFELESS. *adj.* [from *life*.] 1. Dead; deprived of life.—

I who the triumph of to-day,  
May of to-morrow's pomp one part appear,  
Ghastly with wounds, and *lifeless* on the bier.  
*Prior.*

2. Unanimated; void of life.—

Was I to have never parted from thy side?  
As good have grown there still a *lifeless* rib! *Milt.*  
Thus began

Outrage from *lifeless* things. *Milton.*  
—If this power were suspended, they would become a *lifeless*, unactive heap of matter. *Chryse.*  
And empty words she gave, and sounding strain,

But senseless, *lifeless*! idol void and vain. *Pope.*

3. Wanting power, force, or spirit.—

Hopeless and helpless doth Ægeon wend,  
But to procrastinate his *lifeless* end. *Shak.*  
A *lifeless* king, a royal shade I lay. *Prior.*

4. Wanting or deprived of physical energy.—

The other victor-flame a moment stood,  
Then fell, and *lifeless* left th' extinguish'd wood.  
*Dryden.*

\* LIFE LIKE. *n. f.* [*life* and *like*.] Like a living person.—

Minerva, *life-like*, on embodied air  
Impres'd the form of Iphigæa the fair. *Pope.*

LIFE-RENT, in Scots law. When the use and enjoyment of a subject is given to a person during his life, it is said to belong to him in life-rent.

\* LIFE STRING. *n. f.* [*life* and *string*.] Nerve; strings imagined to convey life.—

These lines are the veins, the arteries,  
The undecaying *lifestrings* of those hearts  
That still shall pant. *Daniel.*

\* LIFETIME. *n. f.* [*life* and *time*.] Continuance or duration of life.—Jordan talked prose all his *life-time*, without knowing what it was. *Addison.*

\* LIFEWEARY. *adj.* [*life* and *wear*.] Wretched; tired of living.—

Let me have  
A dram of poison, such soon speeding geer,  
As will disperse itself through all the veins,  
That the *life-weary* taker may fall dead. *Shak.*

(1.) LIFF, a parish of Scotland, in Forfar-shire, united with that of BERVIE, in 1758, and with those of INVERGOWRIE and LOGIE, in the 17th century. The extent of the whole does not exceed 3 miles square, but the form is very irregular. The surface is agreeable, as it mostly rises with an easy ascent from the Tay, and has the hill of Balgay on the SE. The air is pure, the soil various, but fertile. The population, in 1792, was 1790; increase, 479 since 1755, owing to fees granted by Lord Duncau. The number of horses was 180; of cows 382. Coarse linens are the chief manufacture; 4,860 webs have been made in one year; worth L. 12,520. There are a Druidical temple, a Roman camp, and some other antiquities in these parishes.

(2.) LIFF, a village in the above parish, a mile from Bervie, and 4 NW. of Dundee.

LIFFEY. See ANNA-LIFFEY. This river, after passing through the Leinster aqueduct, under the grand canal, is precipitated from the rocks of *Leixlip*, forming a beautiful cataract; and thence

gliding through the county and city falls into Dublin Bay.

LIFFORD, a borough of Ireland, in seated on the Foyle, 11 miles SSW. of according to Mr Cruttwell; but according to Brookes and J. Walker, 24 miles NE. gal. Lon. 5. 45. W. Lat. 54. 47. N.

LIFFRE, a town of France, in the d and Vilaine, 9 miles NE. of Rennes, and of St Aubin.

\* LIFT. *n. f.* [from the verb.] 1. The act of lifting.—In the *lift* of the feet, when eth up the hill, the weight of the body rests most upon the knees. *Bacon.*—In races the large stride, or high *lift*, that makes *Bacon.* 2. The act of lifting.—The goat fox a *lift*, and out he springs. *L'Esstran* fort; struggle, *Dead lift* is an effort to with the whole force cannot be moved relatively any state of impotence and inaction.

Myself and Trulla made a shift  
To help him out at a *dead lift*.  
You freely must own, you were at

4. *Lift*, in Scotland, denotes a load or of any thing; as also, if one be disguised in liquor, they say, *He has got a great lift* (Scottish.) The sky: for in a starry night *How clear the lift is!* 6. *Lifts* of a sail to raise or lower them at pleasure.

(1.) \* To LIFT. *v. a.* [*lyfta*, Swedish Danish. I *lifted*, or *lift*; I have *lifted* 1. To raise from the ground; to heave up; to hold on high.—

Filial ingratitude?  
Is it not as this mouth should tear th  
For *lifting* food to't?

*Lift* up your countenance, as 'twere  
Of celebration of that nuptial.

Propp'd by the spring, it *lifts* aloft

2. To bear; to support. Not in use.—  
So down he fell, that th' earth him up  
Did groan, as feeble so great load to  
*F*

3. To rob; to plunder. Whence the *lifter*.—

So weary bees in little cells repose,  
But if night robbers *lift* the well-stor'd  
An humming thro' their waxen cit

4. To exalt; to elevate mentally.—My *lift* up in the ways of the Lord. 1 *Cbron*  
Of Orpheus now no more let poet  
To bright Cæcilia greater pow'r is giv'  
His numbers rais'd a shade from heav'n  
Here *lifts* the soul to heav'n.

5. To raise in fortune.—The eye of the *ed* up his head from misery. *Ecclus.* 6  
in estimation.—Neither can it be thought  
some lessons are chosen out of the A  
that we do offer disgrace to the word c  
*lift* up the writings of men above it. 1  
To exalt in dignity.—

See to what a godlike height  
The Roman virtues *lift* up mortal man

8. To elevate; to swell, as with pride.—

with pride. *Tim.* iii. 6.—Our successes have been great, and our hearts have been too much *lifted* up by them. *Atterbury.* 9. *Up* is sometimes emphatically added to *lift*.—He *lift up* his spear against *Ac*, whom he slew at one time. 2 *Sam.* xxiii. 8.—Arise, *lift up* the lad, and hold him in thine hand. *Genes.*

(1.) \* *To LIFT.* v. n. To strive to raise by strength.—

Pinch cattle of pasture while summer doth last,  
And *lift* at their tails ere a winter be past. *Tuff.*  
—The mind, by being engaged in a task beyond its strength, like the body strained by *lifting* at a weight too heavy, has often its force broken. *Lak.*

\* *LIFTER.* n. f. [from *lift*.] One that lifts.—  
Thou, O Lord, art my glory, and the *lifter* up of mine head. *Pf.* iii. 3.

*LIFTON*, a small town of Devonshire, 4 miles E. of Launceston, in Cornwall.

\* *To LIG.* v. n. [*leggen*, Dutch.] To lie.—

Thou kenst the great care  
I have of thy health and thy welfare,  
Which many wild beasts *liggen* in wait,  
For to entrap in thy tender state. *Spenser.*

\* *LIGAMENT.* n. f. [*ligamentum*, from *ligo*, Latin; *ligament*, French.] 1. *Ligament* is a white and solid body, softer than a cartilage, but harder than a membrane; they have no conspicuous cavities, neither have they any sense, lest they should suffer upon the motion of the joint: their chief use is to fasten the bones, which are articulated together for motion, lest they should be dislocated with exercise. *Quincy.*—

Be all their *ligament* at once unbound,  
And their disjointed bones to powder ground.

*Sandys.*  
—The *incus* is one way joined to the malleus, the other end being a process is fixed with a *ligament* to the stapes. *Holder.* 2. [In popular or poetical language.] Any thing which connects the parts of the body.—

Though our *ligaments* betimes grow weak,  
We must not force them till themselves they break. *Denham.*

3. Bond; chain; entanglement.—Men sometimes, upon the hour of departure, do speak and reason above themselves; for then the soul, beginning to be freed from the *ligaments* of the body, reasons for herself, and discourses in a strain above morality. *Spectator.*

(2.) *LIGAMENT*, in its general sense, denotes a by thing that ties or binds one part to another.

(3.) *LIGAMENT.* See ANATOMY, *Index.*

\* *LIGAMENTAL.* } n. f. [from *ligament*.]  
\* *LIGAMENTOUS.* } Composing a ligament.

—The *urachus* or *ligamental* passage is derived from the bottom of the bladder, whereby it discharges the watery and urinary part of its aliment. *Brown.*—The clavicle is inserted into the first bone of the sternon, and bound in by a strong *ligamentous* membrane. *Wise*man.

*LIGARIUS*, Quintus, a Roman proconsul in Africa, 49 B. C. Taking part with Pompey, he was forbid by Julius Cæsar to return to Rome: to obtain his pardon, Cicero made that admired oration in his defence, which has immortalized the

memory of the client with that of his celebrated advocate.

\* *LIGATION.* n. f. [*ligatio*, Latin.] 1. The act of binding. 2. The state of being bound.—The slumber of the body seems to be but the waking of the soul: it is the *ligation* of sense, but the liberty of reason. *Addison.*

(1.) \* *LIGATURE.* n. f. [*ligature*, French; *ligatura*, Latin.] 1. Any thing tied round another; bandage.—He deludeth us also by philters, *ligatures*, charms, and many superstitious ways in the cure of diseases. *Brown.*—If you slit the artery, and thrust into it a pipe, and cast a strait *ligature* upon that part of the artery; notwithstanding the blood hath free passage through the pipe, yet will not the artery beat below the *ligature*; but do but take off the *ligature*, it will beat immediately. *Ray.*—The many *ligatures* of our English dress check the circulation of the blood. *Spectator.*—I found my arms and legs very strongly fastened on each side to the ground; I likewise felt several slender *ligatures* across my body, from my armpits to my thighs. *Swift.* 2. The act of binding.—The fatal noose performed its office, and with most strict *ligature* squeezed the blood into his face. *Arbut.*—Any stoppage of the circulation will produce a dropsy, as by strong *ligature* or compression. *Arbut.* 3. The state of being bound. Not very proper.—Sand and gravel grounds easily admit of heat and moisture, for which they are not much the better, because they let it pass too soon, and contract no *ligature*. *Mortimer.*

(2.) *LIGATURE*, in surgery, is a cord, band, or string; or the binding any part of the body with a cord, band, fillet, &c. whether of leather, linen, or any other matter. *Ligatures* are used to extend or replace bones that are broken or dislocated; to tie the patients down in lithotomy and amputations; to tie upon the veins in phlebotomy, on the arteries in amputations, or in large wounds; to secure the splints that are applied to fractures; to tie up the processes of the peritoneum with the spermatic vessels in castration; and, lastly, in taking off warts or other excrescences by *ligature*.

(3.) *LIGATURE* is also used for a state of impotency, in respect to venery, pretended to be caused by some charm. *Kœmpfer* tells of a kind of *ligature* or knotting, used among the people of Massacar, Java, Malaja, Siam, &c. whereby a man binds up a woman, and a woman a man, so as to put it out of their power to have to do with any other person. *M. Marshall* also mentions a ridiculous form of *ligature*, which he received from a bramin at Indostan for this superstitious purpose. See *Pbil. Transf.* N° 268.

(4.) *LIGATURE*, in the Italian music, signifies a binding together of notes. Hence syncopes are often called *ligatures*, because they are made by the *ligature* of many notes. There is another sort of *ligatures* for breves, when there are many of these on different lines, or on different spaces, to be sung to one syllable.

(5.) *LIGATURES*, among printers, are types consisting of two letters or characters joined together; as *ß*, *Œ*, *ff*, *ſſ*, *ſſ*. The old editions of Greek authors are extremely full of *ligatures*; those

those

Some of the most beautiful  
lately printed without  
any ligatures at all; there was a design to ex-  
plode them quite out of printing. Had this suc-  
ceeded, the finest ancient editions would in time  
have grown useless; and the reading of old MSS.  
would have been rendered almost impracticable to  
the learned themselves.

(1.) **LIGER**, Lewis, a French author, born at  
Auxerre in 1658. He published some tracts on  
gardening; a Paris Guide, &c. He died in 1717.

(2.) **LIGER**, or } a large river of ancient Gaul,  
**LIGERIS**, } now called the **LOIRE**.

**LIGH**, a village in Wilts, near Westbury.

(1.) \* **LIGHT**. *adj.* [*lcobt*, Sax.] 1. Not tend-  
ing to the center with great force; not heavy.—

Hot and cold were in one body fixt,  
And soft with hard, and *light* with heavy mixt.

*Dryden.*

—These weights did not exert their natural gra-  
vity till they were laid in the golden balance, in-  
fomuch that I could not guess which was *light* or  
heavy whilst I held them in my hand. *Addison.*

2. Not burdensome; easy to be worn, or carried,  
or lifted; not onerous.—

Horse, oxen, plough, tumbrel, cart, waggon,  
and wain,

The *lighter* and stronger the greater thy gainc.

*Tupper.*

It will be *light*, that you may bear it. *Shak.*  
—A king that would not feel his crown too hea-  
vy, must wear it every day; but if he think it too  
*light* he knoweth not of what metal it is made.  
*Bacon.* 3. Not afflictive; easy to be endured.—  
Every *light* and common thing incident into any  
part of man's life. *Hooker.*

*Light* suff'rings give us leisure to complain;  
We groan, but cannot speak, in greater pain.

*Dryden.*

4. Easy to be performed; not difficult.—  
Well pleas'd were all his friends, the task was  
*light*;

The father, mother, daughter, they invite. *Dryd.*

5. Easy to be acted on by any power.—  
Apples of a ripe flavour, fresh and fair,  
Mellow'd by winter from their cruder juice,  
*Light* of digestion now, and fit for use. *Dryden.*

6. Not heavily armed.—Paulus Bachitius, with a  
company of *light* horsemen, lay close in ambush,  
in a convenient place for that purpose. *Knolles.*

7. Active; nimble.—  
He so *light* was at legerdemain,  
That what he touch'd came not to *light* again.

*Spenser.*

—Asahel was as *light* of foot as a wild roe. 2 *Sam.*  
ii. 18.—

There Stamford came, for his honour was lame  
Of the gout three months together;

But it prov'd, when they fought, but a running  
gout,

For his heels were *lighter* than ever. *Denham.*

*Light* bounding from the earth at oncè they  
rise,

Their feet half viewless quiver in the skies. *Pope.*

8. Unencumber'd; unembarrassed; clear of im-  
pediments.—Unmarried men are best masters, but  
not best subjects; for they are *light* to run away.

*Bacon.* 9. Slight; not great.—A *light* erro-  
r manner of making the following trials was  
to render some of them unsuccessful. *Boyl.*  
Not dense; not gross.—Our soul loathe  
*light* bread. *Numb.* xxi. 5.—

*Light* fumes are merry, grosser fumes a  
Both are the reasonable soul run mad.

11. Easy to admit any influence; unstead-  
fettled; loose.—False of heart, *light* of ear.

These *light* vain persons still are drunk a  
With fancifings, and pleasures of their

—They are *light* of belief, great listener  
news. *Howell.*—There is no greater argu-  
a *light* and inconsiderate person, than pri-  
to scoff at religion. *Tillotson.* 12. Gay;  
wanting dignity or solidity; trifling.—Sene-  
not be too heavy, nor Plautus too *light.* S.

Forgive

If fiction's *light* I mix with truth divine.

13. Not chaste; not regular in conduct.—

Let me not be *light*,

For a *light* wife doth make a heavy husband.

14. [From *light*. *n. f.*] Bright; clear.—  
as the morning was *light*, the men were sent  
*Gen.* xiv. 3.—The horses ran up and down  
their tails and mains on a *light* fire. *Knolles.*

Not dark; tending to whiteness.—In painting  
*light* and a white colour are but one and the  
thing: no colour more resembles the a  
white, and by consequence no colour w  
*lighter.* *Dryden.*—Two cylindrical bodies w  
mular fulci, found with sharks' teeth, and  
shells, in a *light* coloured clay. *Woodward.*

(II.) \* **LIGHT**. *adv.* [for *lightly*, by col-  
corruption.] Lightly; cheaply.—Shall  
*light* by that custom of reading, from who

precious a benefit hath grown? *Hooker.*

(III. 1.) \* **LIGHT**. *n. f.* [*lhoght*, Saxo  
That material medium of sight; that b  
which we see; luminous matter.—*Light*  
pagated from luminous bodies in time, and  
about seven or eight minutes of an hour in  
from the sun to the earth. *Newton.* 2. 5  
the elements, in which things become visibl  
posed to *darkness*.—God called the *light* d  
the darkness he called night. *Genesis.*

So alike thou driv'st away

*Light* and darkness, night, and day.

3. Power of perceiving external objects  
eye: opposed to *blindness*.—My strength  
me; as for the *light* of mine eyes, it also  
from me. *Psalms.*

If it be true that *light* is in the soul,

She all in every part, why was the *light*

To such a slender ball as th' eye confin'

So obvious and so easy to be quench'd,

And not as feeling through all parts dis-

That she might look at will through ev'

4. Day.—The murderer rising with the *light*  
the poor. *Job.*

Ere the third dawning *light*

Return, the stars of morn shall see him

Out of his grave, fresh as the dawning

Infants that never saw *light*. *Job*.—  
roll the years, and rise the expected  
n!  
to *light*, auspicious babe be born!

*Pope*.  
Illumination.—Seven lamps shall give  
b. 7. Illumination of mind; instructive  
ledge.—Of those things which are for  
f all the parts of our life needful, and  
ble to be discerned by the *light* of na-  
are there not many which few men's  
pacity hath been able to find out?  
*light* may be taken from the experiment  
te-tooth ring, how that those things  
age the strife of the spirits, do help  
strary to the intention desired. *Bacon*.  
place within them as a guide  
are conscience, whom if they will hear  
er *light* well us'd they shall attain.

*Milton*.  
I Ariosto in Italian, and the very first  
gave me *light* to all I could desire.  
f internal *light*, or any proposition  
take for inspired, be conformable to  
les of reason, or to the word of God,  
attested revelation, reason warrants it.  
ie ordinary words of language, and our  
se of them, would have given us *light*  
ature of our ideas, if considered with  
*Locke*.—The books of Varro concern-  
tion are lost, which no doubt would  
us great *light* in those matters. *Ar*.

The part of a picture which is drawn  
t colours, or in which the light is sup-  
fall.—Never admit two equal *lights* in  
icture; but the greater *light* must strike  
those places of the picture where the  
figures are; diminishing as it comes  
borders. *Dryden*. 9. Reach of know-  
ntal view.—*Light*, and understanding,

CHEMISTRY, and ELECTRICITY, *Indexes*; FIRE,  
HEAT, OPTICS, &c.

(3.) LIGHT, ANCIENT OPINIONS RESPECTING.  
The nature of light hath been a subject of specu-  
lation from the earliest ages of philosophy. Some  
of the most ancient philosophers doubted whether  
objects became visible by means of any thing pro-  
ceeding from them, or from the eye of the spec-  
tator. The fallacy of this notion must soon have  
become apparent, because, in that case, men ought  
to see as well in the night as in the day. The o-  
pinion was therefore qualified by Empedocles and  
Plato; who maintained, that vision was occasion-  
ed by particles continually flying off from the sur-  
faces of bodies, which met with others proceed-  
ing from the eye; but Pythagoras ascribed it tole-  
ly to the particles proceeding from the external  
objects and entering the pupil of the eye.

(4.) LIGHT, DIFFERENT MODERN THEORIES  
OF. Among the moderns there have been two  
celebrated opinions, viz. the Cartesian and New-  
tonian. According to the former, light is an in-  
visible fluid present at all times and in all places,  
but which requires to be set in motion by an ig-  
nited or otherwise properly qualified body in or-  
der to make objects visible to us. "HUYGENS,"  
(says Dr Thomas Thomson of Edinburgh) "con-  
sidered it as subtile fluid filling a space, and ren-  
dering bodies visible by the undulations into which  
it is thrown. According to his theory, when the  
sun rises it agitates this fluid, the undulations gra-  
dually extend themselves, and at last striking a-  
gainst our eye we see the sun. This opinion was  
adopted also by EULER, who exhausted the whole  
of his consummate mathematical skill in its de-  
fence." (*Syst. of Chem.* 1802, vol. i. p. 240.) The  
Newtonians maintain, that light is not a fluid par-

it, but consists of a vast number of exceedingly small particles shaken off in all directions from the luminous body with inconceivable velocity by a repulsive power; and which most probably never return again to the body from which they were emitted. These particles are also said to be emitted in right lines by the body from which they proceed: and this rectilinear direction they preserve until they are turned out of their original path by the attraction of some other body near which they pass, and which is called INFLECTION; by passing through a medium of different density, which is called REFRACTION, or by being thrown obliquely or directly forward by some body which opposes their passage, and which is called REFLECTION; or, lastly, till they are totally stopped by the substance of any body into which they penetrate, and which is called their EXTINCTION. (See OPTICS.) A succession of these particles following one another in an exactly straight line is called a *ray of light*; and this ray, in whatever manner it hath its direction changed, whether by refraction, reflection, or inflection, always preserves its rectilinear course; neither is it possible by any art whatever to make it pass on in the segment of a circle, ellipsis, or other curve.—From some observations on the eclipses of Jupiter's satellites, and also on the ABERRATION of the fixed stars, it appears that the particles of light move at the rate of little less than 200,000 miles in a second. See ASTRONOMY, *Index*. To this doctrine concerning the nature of light several objections have been made; the most considerable of which is, That in this case, as rays of light are continually passing in different directions from every visible point, they must necessarily interfere with and destroy each other in such a manner as entirely to confound all distinct perception of objects, if not to destroy the sense of seeing altogether; not to mention the continual waste of substance which a constant emission of particles must occasion in the luminous body, and which since the creation ought to have greatly diminished the sun and stars, as well as increased the bulk of the earth and planets by the vast quantity of particles of light absorbed by them in such a long period of time. In answer to this, Mr Melville gives some ingenious illustrations concerning the extreme subtilty of light, or the smallness of the particles of which it consists, and of which few persons, even of those who admit the hypothesis, have any idea. He observes, that there is probably no physical point in the visible horizon that does not send rays to every other point, unless where opaque bodies interpose. Light, in its passage from one system to another, often passes through torrents of light issuing from other suns and systems, without ever interfering or being diverted in its course, either by it, or by the particles of that elastic medium which some phenomena give us reason to suppose are diffused through all the mundane space. To account for this fact and others similar to it, he concludes, that the particles of which light consists must be incomparably rare, even when they are the most dense; that is, that the semidiameters of the two nearest particles, in the same or in different beams, soon after their emission, are incomparably less than their distance from one ano-

ther. This difficulty concerning the non-interference of the particles of light is not solved by supposing with Mr Boscovich and others, that each particle is endued with an insuperable impulsive force; because, in that case, their spheres of impulsion would even be more liable to interfere and they would on that account be more likely to disturb one another. The difficulty, according to Mr Canton, will nearly vanish, if a very small portion of time be allowed between the emission of every particle and the next that follows in the same direction. Suppose, for instance, that one lucid point of the sun's surface emits 150 particles in a second, which are more than sufficient to give continual light to the eye without the least appearance of intermission; yet still the particles of which it consists, will on account of their great velocity be more than 1000 miles behind each other, and thereby leave room enough for others to pass in all directions.

(5.) LIGHT, EXPERIMENTS TO DETERMINE THE MOMENTUM OF. To determine whether light consists of particles emitted from the luminous body, or only in the vibrations of a subtle fluid, it has been attempted to find out its momentum, or the force with which it moves. The first who set about this matter with any tolerable pretensions to accuracy was M. Mairan. Haffoeker and Homberg, had indeed pretended, that in certain cases this momentum was very perceptible; but M. Mairan proved, that the effects mentioned by them were owing to currents of heated air produced by the burning-glasses used in their experiments, or to some other cause overlooked by these philosophers. To decide the matter therefore, he began with trying the effect of rays collected by lenses of 4 and 6 inches diameter, and thrown upon the needle of a compass, but the result was nothing more than some tremulous motion from whence he could draw no conclusion. After this, he and Mr du Fay constructed a kind of mill of copper, which moved with an exceeding slight impulse; but though they threw upon it the focus of a lens of 7 or 8 inches diameter, they were still unable to draw any conclusions from the result. M. Mairan afterwards procured a horizontal wheel of iron three inches in diameter, having six radii, at the extremity of each of which was a small wing fixed obliquely. The axis of the wheel, which was also of iron, was suspended by a magnet. The wheel and the axis together did not weigh more than 30 grains, but though a motion was given to this wheel when the focus of the burning glass was thrown upon the extremities of the radii, yet it was so irregular, that he could not but conclude that it was occasioned by the motion of the heated air. He then intended to have made his experiment *in vacuo*, but he concluded that it was unnecessary: For, besides the difficulty of making a vacuum, he was persuaded that there was in our atmosphere a thinner medium which freely penetrates even glass itself, the existence of which he imagined he had fully proved in his treatise on the aurora borealis. See AURORA BOREALIS, &c. Mr Michell some years ago endeavoured to ascertain the momentum of light in a manner still more accurate. The instrument he made use of con-

of a very thin plate of copper, a little more than an inch square, which was fastened to one end of a slender harpsichord wire about ten inches long.

To the middle of this was fixed an agate needle as is commonly used for small mariner's compasses, after the manner of which it was intended to turn; and at the other end of the wire was fixed middling sized shot corn, as a counterpoise to the copperplate. The instrument had also fixed in the middle, at right angles to the length of the wire, and in an horizontal direction, a bit of a very slender sewing needle, about half an inch or perhaps half an inch long, which was magnetical. In this state the whole instrument weighed about 10 grains. It was placed very sharp-pointed needle, on which the agate needle turned extremely freely; and to prevent it from being disturbed by any motion of the air, it was enclosed in a box, the lid and front of which were of glass. This box was about 12 inches long and 7 inches deep, and about as much in diameter as the needle standing upright in the middle.

At the time of making the experiment, the box was placed, that a line drawn from the sun at right angles to the length of it; and the instrument was brought to range in the same direction with the box, by means of the magnetical needle above mentioned, and a magnet produced on the outside, which would retain the needle with extremely little force, in any situation. The rays of the sun were now thrown upon the copperplate from a concave mirror of about 20 feet diameter, which, passing through the glass of the box, were collected into the focus of the mirror upon the plate. In consequence of this the plate began to move, and in a short time of about an inch in a second of time, and moved through a space of about two inches and a half, when it struck against the back of the box. The mirror being removed, the instrument returned to its former situation by means of the needle and magnet; and the rays of the sun being then again thrown upon it, it again moved, and struck against the back of the box before; and this was repeated 3 or 4 times with the same success. The instrument was then placed the contrary way in the box to that in which it had been placed before, so that the end of the copperplate was affixed, and which in the former experiment, towards the end, now lay towards the left; and the sun being again thrown upon it, it began to move with a slow motion, and struck against the back of the box as before; and this was repeated once or twice with the same success. At this time the copperplate was so much altered in its form, by the extreme heat which it was in each experiment, and which brought it into a state of fusion, that it became vehement, and the more so as it had been supported by the middle, half of it lying half below the wire to which it was

By these means it now varied so much in its vertical position, that it began to act in a manner as the sail of a windmill, being by the stream of heated air which moved towards it, with a force sufficient to drive it in any direction to the impulse of the rays of light. *See* KILL, PART I.

we impute (says Dr Priestley) the motion produced in the above experiment to the impulse of the rays of light, and suppose that the instrument weighed ten grains, and acquired a velocity of one inch in a second, we shall find that the quantity of matter contained in the rays falling upon the instrument in that time amounted to no more than one 1200 millionth part of a grain, the velocity of light exceeding the velocity of one inch in a second in the proportion of about 1,200,000,000 to 1. The light was collected from a surface of about three square feet, which reflecting only about half what falls upon it, the quantity of matter contained in the rays of the sun incident upon a square foot and an half of surface in one second of time, ought to be no more than the twelve-hundred-millionth part of a grain, or, upon one square foot only, the 1800 millionth part of a grain. But the density of the rays of light at the surface of the sun is greater than at the earth in the proportion of 45,000 to 1; there ought, therefore, to issue from one square foot of the sun's surface in one second of time, in order to supply the waste by light, one 40,000th part of a grain of matter; that is, a little more than two grains in a day, or about 4,752,000 grains, or 670 pounds avoirdupois nearly, in 6000 years; a quantity which would have shortened the sun's semidiameter no more than about ten feet, if it was formed of the density of water only." The Newtonians, besides the answer just given to the most formidable objections of their opponents, have endeavoured to prove the impossibility of light being a vibration in any fluid. Sir Isaac in his *Principia*, demonstrates, that no rectilinear motion can be propagated among the particles of a fluid unless these particles lie in right lines; and that all motion propagated through a fluid diverges from a rectilinear progress into the unremoved spaces. Hence he concludes, "a pressure on a fluid medium (i. e. a motion propagated by such a medium beyond any obstacle, which impedes any part of its motion), cannot be propagated in right lines, but will be always infecting and diffusing itself every way, to the quietest medium beyond that obstacle. The power of gravity tends downwards; but the pressure of water rising from it tends every way with an equal force, and is propagated with equal ease, and equal strength, in curves, as in straight lines. Waves, on the surface of the water, gliding by the extremes of any very large obstacle, infect and dilate themselves, still diffusing gradually, into the quietest water beyond that obstacle. The waves, pulses, or vibrations of the air, which in sound consists, are manifestly infected, though not so considerably as the waves of water; and sounds are propagated with equal ease, though crooked tubes and through straight lines; but light was never known to move in any curve, nor to infect itself *ad unbram*." To this Mr Rowning adds another proof: "The Cartesian notion of light (says he), was not that it is propagated from luminous bodies by the emission of small particles, but that it was communicated to the organ of sight by their pressure upon the *materia subtilis*, with which they supposed the universe to be full. But according to this hypothesis, it could never be

use, when a fluid sustains any pressure, fills all the space it takes up, absolutely, leaving any pores, which is the case of the *ateria subtilis*, then that pressure must be communicated equally and instantly to every part. And therefore, whether the light is above or below the horizon, the pressure is equal, and consequently the light, would be the same. And farther, as the pressure would be the same, so would the light, which is contained in the receiver, as is collected from the eclipses of Jupiter's satellites." But whatever side we take of the nature of light, many, indeed almost all, circumstances concerning it, are incomprehensible, and beyond the reach of human understanding.

**LIGHT, EXPERIMENTS UPON THE PRODUCTION OF, BY INFLAMMATION.** In the *Philos. Trans.* for 1776, Dr Fordyce gives an account of experiments upon the light thus produced. He was made to determine, whether there is any light produced by the inflammation independent of ignition. Substances, he observed to be luminous in the dark when the temperature is between 6 and 700 degrees of Fahrenheit's thermometer. If the substances be coloured, they first emit a red light; then a red mixed with yellow; and lastly, with a great degree of heat, a pure white. This whiteness, however, depends greatly upon the density of the substance, or the vapour at the end of flame urged by a w-pipe is not visibly luminous, though its heat is sufficiently great to give a white heat to the colour of the ignited matter, according to our author, has an effect upon the colour of the light emitted. Thus, during the calcination of zinc, the calx of which is white, a light is produced scarce inferior in beauty to that of the sun himself. A beautiful green is communicated by the green calx of copper to the flame of a fire into which it is thrown; and the yellow empyreumatic oil into which tallow or any common oil is converted in burning, communicates a part of its own colour to the flame, which very much alters the appearance of bodies seen by candle-light from what is by day-light. But this does not always hold good; for the flame of burning iron is intensely white; and yet neither the metal itself nor any of its calces are of that colour. Light produced by the decomposition of bodies by inflammation without ignition is always blue, and produces very little heat. Thus phosphorus of urine is decomposed by mere exposure to the air, and gives but very little heat, though a considerable light is emitted. The following proof is adduced by our author that this emission of light is a true inflammation. "Take a receiver of white glass, capable of holding 6 or 8 gallons; put into it a drachm of phosphorus finely powdered, and half an ounce of water; cork the mouth of the receiver, and tie it over with a bladder, so as to exclude the external air; incline the receiver to all sides gently, and afterwards set it to rest; the powder will adhere to the sides, and the water will drain from it. As soon as the water is sufficiently drained off, the particles of the phosphorus will become luminous, and emit a thick smoke: this will continue for some days; but at last no

more light or vapour will appear. Open the receiver, and the air will have contracted, as it does from the inflammation of a candle in Van Helmont's experiment; that is, about a 20th part. It is become unfit for inflammation; for if a lighted candle be immersed in it, it will be extinguished as well as the phosphorus, and an animal will be suffocated by it. The air then has suffered the same change as that which has served for the inflammation of other bodies; and the phosphorus is partly decomposed. Blow fresh air into the receiver, and the light and smoke will immediately re-appear. In like manner sulphur will burn and give light without heat sufficient for ignition. Take a piece of iron heated nearly red hot, and throw a little gun-powder upon it. If the heat be of a proper degree, the sulphur will burn with a blue flame, without heat sufficient for ignition; for if such heat had been produced, the gun-powder would certainly have taken fire.

It is the inflammation and decomposition of the sulphur, and not its evaporation, which produces the light; for if we sublime sulphur in vessels of the most transparent glass, no light will be visible except at the very beginning, when a small portion of it burns till the air in the vessel be saturated, and rendered unfit for inflammation." Our author is of opinion, that the light produced by inflammation is of a blue colour, from whatever body it is derived. This he endeavours to prove from an observation on the flame of a candle, the lower part of which, where the inflammation is, always appears of a blue colour. "Or (says he) take a candle which has burned for some time; extinguish it by applying tallow to the wick, and let it stand to cool; afterwards set it on fire by the flame of another candle; at first no more vapour will arise than can be acted upon by the air at once; inflammation, therefore, will go on in the whole small flame, and it will be blue. When the candle burns, the following process takes place. The tallow boils in the wick; and is converted into empyreumatic oil, rising from it in the form of vapour. As it rises from every part of the wick, the volume is increased till it comes to the top, and gives to the lower part of the flame the form of the frustum of an inverted cone. The air is applied to the outer surface of the column of vapour; and there decomposing the empyreumatic oil, produces heat and blue light: the frustum of vapour, within the outer burning surface is heated white-hot; the heat diminishes toward the centre, which, if the flame be large, is scarce red hot; as the column rises, decomposition takes place constantly on its surface, it necessarily diminishes, and the upper part of the flame is conical.

(7.) LIGHT, HYPOTHESIS OF MR MORGAN RESPECTING. In the 75th vol. of the *Transactions* Mr Morgan treats the subject of light at some length. As a foundation for his reasoning he assumes the following data. 1. That light is a body, like all others, subject to the laws of attraction. 2. That light is an heterogeneous body and that the same attractive power operates with different degrees of force on its different parts. That the light which escapes from combustible when decomposed by heat, or by any other means, was, previous to its escape, a component part

stances. Hence he concludes, that when ractive force by which the several rays of e attached to a body is weakened, some e rays will escape sooner than others; it rident that those which are detained by allest power will soonest go off when the attractive force is weakened. This he il- s by the example of a mixture of spirit of water, and other more fixed substances. plication of a gentle heat will carry off the wine only; a heat not much greater will ate the spirits and water mixed together; ill greater degree will carry off a mixture the particles together. "In like manner :), when the surface of a combustible is in of decomposition, those parts of it which least fixed, or which are united with the ree, will be separated first. Among these igo rays of light will make the earliest ap- x. By increasing the heat, we shall mix let with the indigo: by increasing it still we shall add the blue and the green to the ; till at length we reach that intensity of igh will cause all the rays to escape at the ant, and make the flame of a combustible y white. By examining the flame of a a candle, we may observe, that its lowest ick, or the part in which the black colour icks terminates, discharges the least heat; s, as the vertex of the flame is approached, five order of parts is passed through, in e lowest is continually adding to the heat hich is just above it, till we come to the e flame, near which all the heat is collec- a focus. At the lowest extremity, how- ere the heat is inconsiderable, a blue co- r always be observed; and from this ap- , amongst others, I think it may be con- that the blue rays are some of those which rom combustibles in an early period of omposition; and that if the decomposi- d be examined in a period still more ear- colour of the flame would be violet." etc and other facts Mr Morgan infers: ht, as a heterogeneous body, is gradually sed during combustion; that the indigo pe with the least heat, and the red with est; and from this again he explains the y flames assume different colours." He s the subject with a criticism upon Sir wton's definition of flame, viz. that it is heated red hot. In his opinion, "flame ance of combustion whose colour will be ed by the degree of decomposition which ce. When very imperfect, only the most le rays will appear. If very perfect, all will appear, and its flame will be brilli- ortion." Thus we have a most elabor- y for solving phenomena which seem y to admit of any solution. The data h he builds his system are altogether hy- al. That light is subject to the laws of n, cannot be proved, unless we could ex- independent of any other substance what- at is to say, in a perfect vacuum. But in perfect vacuum that can be formed, we om being certain that no other matter is Light is inflected and turned out of its

course in many different ways when acting in the common atmosphere, but we have no reason to suppose that it would be the same in a perfect vacuum; at least we have no right to lay it down as a principle to argue from, unless it were verified by experience. His 3d position, that the light emitted by combustible bodies formed part of their substance before combustion, seems still worse founded; for instead of being fixed in solid substances, all the light and heat proceeding from combustion seem entirely to come from the air. See COMBUSTION, FIRE, FLAME, &c.

(8.) LIGHT, MR MORGAN'S EXPERIMENTS ON ELECTRICAL. In the same paper Mr Morgan has some curious observations upon the electric light. There is neither fluid nor solid, he says, through which the electric fluid in its passage will not appear luminous, if we do not make the quantity, through which it has to pass, too great. In his experiments on fluids, he puts them into a tube about  $\frac{3}{4}$ ths of an inch diameter and  $\frac{1}{4}$  inches long. The orifices are then stopped up with two corks, through which two pointed wires are thrust, so that the points may approach within  $\frac{1}{2}$  of an inch of each other; and in this case the electric matter which passes through the fluid is always luminous, provided a sufficient force be used. The experiment, however, is dangerous, unless great care be taken; and the tube, unless it be very strong, will be broken by a very slight discharge. With acids the experiment succeeds more difficultly; they must be put into capillary tubes, and the wires placed very near to each other. Some of his experiments with gold leaf, &c. are described under ELECTRICITY. The better a conductor than any substance is, the greater is the difficulty of making the electric spark visible in it. The rarity of any body greatly increases the ease with which the electric spark is made visible in it; as appears from discharging a vial through rarefied air, the vapour of either, spirit of wine, or water. In the prosecution of his experiments, our author cemented a ball of iron into the orifice of a tube  $\frac{1}{8}$  inches long, and two thirds of an inch diameter, so that it could bear the weight of the quicksilver with which the tube was filled all to a small space at the open end, which contained a few drops of water. Having inverted the tube, and plunged the open end of it into a basin of mercury, that in the tube stood nearly half an inch lower than in a barometer with which it was compared at the same time, owing to the vapour which was formed by the water; but the spark passed as brilliant through the rarefied water as it does through rarefied air. If spirit of wine be employed instead of water in this experiment, the spark will not be so luminous. In the vapour of ether a great force is requisite to make the spark luminous, but good ether will press the mercury down as far as 16 or 17 inches. By rarefying the vapour, however, the spark will pass through it with more ease. On examining the mineral acids *in vacuo*, Mr Morgan could not find that any vapour escaped from them. To give them the requisite degree of tenuity, therefore, he traced a line upon glass about an eighth part of an inch broad, with a camel's hair pencil dipped in the acids: the line extended sometimes to

the length of 27 inches; in which case, the electric spark would pass over the whole with great brilliancy. If by widening the line, however, or putting on a drop of acid in any particular part, the quantity was increased, the spark never appeared in that part. The brightness of the electric light is always in proportion to its condensation. Thus, if a spark taken from a powerful electrical machine divides itself into brushes, or throws out sparks from the sides, by which the light is diffused over a larger surface, it thus becomes less brilliant; and in all cases in which any diffusion of light, whether electric or not, takes place, the case will be same. In some cases, Mr Morgan is of opinion, that even with the electric fluid, only the more refrangible rays of light make their escape. Thus, the electrical brush is always of a purplish or bluish colour; and if you convey a spark through a Torricellian vacuum not very perfectly made, it will be of an indigo colour. This, however, does not seem to arise from any other cause than the mere weakness of the light, which, in passing through the vapours of the atmosphere; or perhaps through the humours of the eye itself, affects our organs of sight in that manner. He next examines the influence of media upon electric light; which, he says, is similar to their influence upon solar light, and serves to explain several phenomena. "Let a pointed wire (says he), having a metallic ball fixed to one of its extremities, be forced obliquely into a piece of wood, so as to make a small angle with its surface; and to make the point lie about one eighth of an inch below it. Let another pointed wire, which communicates with the ground, be forced in the same manner into the same wood, so that its point may in like manner be about  $\frac{1}{8}$  of an inch below the surface, and about two inches from the point of the first wire. Let the wood be insulated, and a strong spark, which strikes on the metallic ball, will force its way through the interval of wood which lies between the points, and appear as red as blood." Mr Morgan mentions some experiments which seem to militate against his hypothesis rather than to support it; viz. 1. If into a Torricellian vacuum of any length a few drops of ether are conveyed, and both ends of the vacuum stopped up with metallic conductors, so that a spark may pass thro' it, the spark in its passage will make the following appearances. When the eye is placed close to the tube, the spark will appear perfectly white; if the eye is removed 2 yards, it will appear green; but at the distance of 6 or 7 yards it will appear reddish. "These changes evidently depend (says our author) on the quantity of medium through which the light passes; and the red light more particularly, which we see at the greatest distance from the tube, is accounted for on the same principle as the red light of the beclouded sun, or lighted candle." 2. Dr Priestley long ago observed the red appearance of the electric spark, when passing through inflammable air. But this appearance is very much diversified according to the quantity of medium through which the spark is beheld. At a very considerable distance the red comes unmixed to the eye; but if the eye be placed close to the tube, the spark appears white

and brilliant. By increasing, however, the quantity of fluid conveyed through any inflammable air, or by condensing the spark may be made perfectly white explosions and sparks, viewed at a distance, have a reddish appearance. The reason that the weaker the spark or explosion it is disposed to assume a red colour at a distance. This seems to conform to what already been mentioned as a probability that the different colours of light arising to the medium through which they

(9.) LIGHT, MR MORGAN'S EXPERIMENT PHOSPHORIC. On phosphoric light makes some curious observations; but on the same principles: "Some shells prepared according to Mr Wilson (see PHOSPHORUS.) after being exposed to the flash of a battery, emit a green, and others a reddish light.

Wilson, we suppose that these shells of slow combustion, may we not think some are just beginning to burn, admitting the most refrangible rays: are in a more advanced state of combustion therefore emitting the least refrangible conclusion be right, the shells emitting the purple or green, must still be low, the orange, and the red, will make their appearance as soon as this is sufficiently increased." In confirmation Mr Morgan adduces the following viz. that if a shell, while emitting it be placed upon a warm shovel, it soon be changed into a yellow mix To the theory of slow combustion N objects, 1. "If phosphoric shells owe this cause, we must consider the variation, when applied to them, as in circumstances which usually attend on fire. On this supposition there is an increase of the heat as well as of the extension of the combustible. But neither place, for a phosphoric body never emits light entirely in a certain degree of losing the power of becoming phosphoric when it has been sufficiently cooled hot, the charge of the strongest battery over it has no effect. 2. When bodies by combustion, they can never be assume the appearances which they display. "No power (says he) can the phenomena of a burning coal. Phosphoric bodies are very different in this phosphoric shell may be made to become luminous as ever by exposure to Some bodies which are most beautiful, are at the same time the most conspicuous fire. "Let us now see (says the consequence of admitting the combustion, that the detention of those rays upon phosphoric is owing to some faults their immediate reflection, but quite to their entire absorption. However it be, cannot well be supposed with equal power on all these rays not the case, we cannot avoid con-

phoric shells will assume different colours, going to the earlier and later escape of the different rays of light. This conclusion is justified by an experiment already mentioned; viz. that when the force is such as to admit the escape of the purple, blue, and green, we have only to lessen that force, by warming the body, and the yellow, the orange, and red escape. Beccaria has proved, that there is scarcely any body which is not phosphoric, or may not become so by heat. But as the phosphoric force is most powerful when the heat rays only escape, so we are to conclude, that it is weakest when it is able to retain the red rays only. This is agreeable to several facts. Pearls, oyster-shells, together with those phosphoric bodies whose goodness has been very much impaired by long keeping, when finely powdered, and placed within the circuit of an electrical battery, will exhibit, by their scattered particles, a power of light; but these particles will appear white, or their phosphoric power will be sufficient only to detain the yellow, orange, and red rays. When spirit of wine is in a similar manner placed within the circuit of a battery, a similar result may be discovered: its particles diverge in several directions, displaying a most beautiful golden appearance. The metallic calces are rendered phosphoric with the greatest difficulty; but even these may be scattered into a shower of red luminous particles by the electric stroke." In a letter to this paper, by Dr Price, it is observed, that by phosphoric force, Mr Morgan seems to mean, not the force with which a phosphoric body emits, but that with which it absorbs and retains the light. This last force is proportioned to the degree of attraction between the phosphoric body and light; and therefore must, according to Morgan's theory, be weakest when it so frequently lets the light it has imbibed as not to retain the rays which adhere to it most strongly. According to Mr Morgan's theory, these are the rays which are the least refrangible. "It is, however," says Dr Price, "an objection to it, that the less refrangibility of rays seems to imply a less force of attraction between them and the substances which refract them; but it should be considered, possibly, the force of cohesion, which unites the rays of light to bodies, may be a different power from that which refracts them."

(10.) LIGHT, PECULIAR PROPERTIES; OF. Dr Thomson, above quoted, (§ 4.) after enumerating the general properties of light mentioned above, and under CHEMISTRY, ELECTRICITY, concludes thus: "Such are the properties of light as far as they have been examined. They are sufficient to convince us, that it is a body, and possesses many qualities in common with other bodies. It is attracted by them, and combines with them precisely as other bodies do. But it is distinguished from all other substances, by possessing three peculiar properties of which they are destitute: The first is the power which it has of exciting in us the sensation of vision, by moving from the object seen and entering the eye. The second is the phenomena of colours," (See CHROMATICS, &c.)—III. "and the prismatic spectrum, indicating the existence of 7 different species of light; and to what the difference of these species is owing,

has not been ascertained. We are altogether ignorant of the component parts of every one of these species. The 2d peculiar property of light is the prodigious velocity with which it moves, whenever it is separated from any body with which it was formerly combined." (See § 4, 5.) "This velocity it acquires in a moment, and in all cases, whatever the body be from which it separates. The 3d and not the least singular of its peculiar properties, is, that its particles are never found cohering together so as to form masses of any sensible magnitude. This difference between light and other bodies can only be accounted for, by supposing that its particles repel each other. This seems to constitute the grand distinction between light and other bodies. Its particles repel each other, while the particles of other bodies attract each other; and accordingly are found cohering together, in masses of more or less magnitude." *Syst. of Chem.* vol. I. p. 252, 253.

(11.) LIGHT, PHENOMENA RESPECTING, IN PLANTS. Most of the discous flowers, by some power unknown to us, follow the sun in his course. They attend him to his evening retreat, and meet his rising lustre in the morning with the same unerring law. If a plant is shut up in a dark room, and a small hole is afterwards opened, by which the light of the sun may enter, the plant will turn towards that hole, and even alter its own shape in order to get near it; so that though it was straight before, it will in time become crooked, that it may get near the light. It is not the heat but the light of the sun, which it thus covets; for, though a fire be kept in the room, capable of giving a much stronger heat than the sun, the plant will turn away from the fire to enjoy the sun's light.—The green colour of plants also depends on the sun's light being allowed to shine upon them; for without this they are always white.

(12.) LIGHT PROCEEDING FROM ANIMAL SUBSTANCES, &c. INDEPENDENT OF HEAT. In general, a very considerable degree of heat is requisite to the emission of light from any body; but there are several exceptions, especially in light proceeding from putrescent substances and phosphorus, together with that of luminous animals, and other similar appearances. Light proceeding from putrescent animal and vegetable substances, as well as from glow worms, is mentioned by Aristotle. Thomas Bartholin mentions 4 kinds of luminous insects, two with and two without wings; but in hot climates they are found in much greater numbers, and of different species. (See FIRE-FLIES and LAMPYRIS.) Columna, an industrious naturalist, observes, that their light is not extinguished immediately upon the death of the animal. The first distinct account that we meet with of light proceeding from putrescent animal flesh is that which is given by Fabricius ab Aquapendente; who says, that when three Roman youths, residing at Padua, had bought a lamb, and had eaten part of it on Easter day 1592, several pieces of the remainder, which they kept till the day following, shone like so many candles when viewed in the dark. Part of this luminous flesh was sent to Aquapendente, professor of anatomy in that city. He observed, that both the lean and the fat shone with a whitish kind of light;

light;

light; and that some pieces of kid's flesh, which had lain in contact with it, were luminous as well as the fingers of the persons who touched it. Those parts, he observed, shone the most which were soft to the touch, and seemed to be transparent in candle light; but where the flesh was thick and solid, or where a bone was near the outside, it did not shine. After this, we find no account of any similar appearance, before that which was observed by Bartholin, at Montpellier in 1641, when a poor old woman had bought a piece of flesh in the market, intending to make use of it the day following. But happening not to be able to sleep well that night, and her bed and pantry being in the same room, she observed so much light come from the flesh, as to illuminate all the place where it hung. A part of this luminous flesh was carried as a curiosity to the D. of Conde, governor of the place, who viewed it with astonishment. This light was whitish; and did not cover the whole surface of the flesh, but certain parts only, as if gems of unequal splendor had been scattered over it. This flesh was kept till it began to putrify, when the light vanished. Mr Boyle tried the effect of his air pump upon luminous substances, when he found that the light of the rotten wood was extinguished *in vacuo*, and revived again on the admission of the air, even after a long continuance *in vacuo*; but the extinguishing of this light was not so complete immediately upon exhausting the receiver, as some little time afterwards. He could not perceive, however, that the light of rotten wood was increased in condensed air; but the light of a shining fish, which was put into a condensing engine before the Royal Society, in 1668, was rendered more vivid. Mr Boyle's experiments were made in Oct. 1667. He observed, that change of air was not necessary to the maintenance of this light; for it continued a long time when a piece of the wood was put into a very small glass hermetically sealed, and it made no difference when this tube which contained the wood was put into an exhausted receiver. This he also observed with respect to a luminous fish, which he put into water, and placed in the same circumstances. He also found, that the light of shining fishes had other properties in common with that of shining wood; but the latter, he says, was presently quenched with water, spirit of wine, various saline mixtures, and other fluids. Water, however, did not quench all the light of some shining veal on which he tried it, though spirit of wine destroyed it instantly. Mr Boyle's observation of light proceeding from flesh was quite casual. On the 15th Feb. 1662, one of his servants was greatly alarmed with the shining of some veal, which had been kept a few days, but had no bad smell, and was in a state very proper for use. The servant immediately acquainted his master with this extraordinary appearance; and he examined it with the greatest attention. Suspecting that the state of the atmosphere had some share in producing this phenomenon, he takes notice, after describing the appearance, that the wind was S.W. and blustering, the air hot for the season, the moon past its last quarter, and the mercury in the barometer at 29t hree 16ths inches. Mr Boyle was

often disappointed in his experiments on fishes; finding that they did not always the very same circumstances, with others had shined before. At one time that they shined, he observed that the weather was able. In general he made use of whitening them the fittest for his purpose. In a dialogue however, upon this subject at the Royal in 1681, it was asserted, that, of all situations, the eggs of lobsters, after they had boiled, shone the brightest. Olig. Jacoba serves, that, upon opening a sea polypus, so luminous, as to startle several persons who saw it; and he says, that the more putrid the fish the more luminous it grew. The nails at the fingers of the persons who touched it, were luminous; and the black liquor which issued from the animal, and which is its bile, shone al with a very faint light. Mr Boyle draws a nute comparison between the light of l coals and that of shining wood or fish, showing what particulars they agree, and in what differ. He observes, that extreme cold extinguishes the light of shining wood, as appeared in a piece of it was put into a glass tube, and a frigorific mixture. He also found that wood did not waste itself by shining, and the application of a thermometer to it did not ever the least degree of heat. There is a remarkable shell-fish called PHOLAS, which forms itself holes in various kinds of stone, &c. This fish is luminous, was long ago noticed by and among the moderns, various experiments have been made upon it, by Mess. Reaumur, Bec Marfilus, Galeatius, Montius, &c. See P) Similar, in some respects, to the light of the pholas, was that which was observed to proceed from wood which was moist, but not in a putrid state, which was very conspicuous in the dark. Curious observations on the shining of fern and the pickle in which they were immersed were made by Dr Beal, in May 1665. Having put boiled mackerel into water, together with sweet herbs; when the cook was, some time stirring it, she observed, that, at the first, the water was very luminous; and that, when shining through the water added much light which the water yielded. The water was thick and blackish, rather than of any other color; and yet it shined on being stirred, the same time the fishes appeared more luminous than the water. Whenever the drops of water, after it had been stirred, fell to the bottom, they shined; and the children in the far neighborhood, who were taking the drops, were as broad as a penny, and running wit about the house. The cook observed, that she turned up that side of the fish that was next the water, no light came from it; and that, when the water had settled for some time, it did not shine at all. The day following, the water gave a little light, and only after a brisk agitation the fishes continued to shine as well from the inside as the outside, and especially about the head and such places as seemed to have been broken in the boiling. When, in the light of day, he examined, with a microscope, a piece of fish which had shined very much the

found nothing remarkable on its sur-  
 pt that he thought he perceived what  
*steam*, rather dark than luminous, aris-  
 very small dust from the fish, and here  
 a very small and almost imperceptible  
 Of the sparkles he had no doubt; but  
 it possible that the steam might be a  
 of the light, or some dust in the air.  
 the fish quite dry, he moistened it with  
 , and observed that it gave a little light,  
 ut for a short time. The fish was not  
 yet insipid to the best discerning palate.  
 he fishes he kept two or three days long-  
 ther trial: but, the weather being very  
 became fetid; and, contrary to his ex-  
 , there was no more light produced eie  
 agitation of the water or in the fish.

#### LIGHT PROCEEDING FROM SEA WATER.

sea is sometimes luminous, especially  
 in motion by the dashing of oars or the  
 it against a ship, has been observed  
 iration by many persons. Mr Boyle, af-  
 g all the circumstances of this appear-  
 ar as he could collect them from the ac-  
 navigators; as its being extended as far  
 could reach, and at other times being  
 ly when the water was dashed against  
 r body; that in some seas, this pheno-  
 accompanied by some particular winds,  
 others; and that sometimes one part  
 will be luminous, when another part,  
 om it, will not be so; concludes with  
 at he could not help suspecting that these  
 omena, belonging to great masses of  
 re in some measure owing to some cos-  
 or custom of the terrestrial globe, or  
 the planetary vortex. Father Bourzes,  
 age to the Indies in 1704, took particu-  
 of the luminous appearance of the sea.  
 was sometimes so great, that he could  
 l the title of a book by it, though he  
 o feet from the surface of the water.  
 s he could distinguish, in the wake of  
 the particles that were luminous from  
 werenot; and they appeared not to be all  
 ne figure. Some were like points of  
 ers like stars: Some were like globes,  
 r two in diameter; and others as big as  
 l. Sometimes they formed themselves  
 es of 3 or 4 inches long, and one or two  
 ometimes all these different figures were  
 the same time; and sometimes there  
 t he calls *vortices* of light which at one  
 time appeared and disappeared imme-  
 ke flashes of lightning. Nor did only  
 of the ship produce this light, but fish-  
 swimming, left so luminous a track be-  
 , that both their size and species might  
 uished by it. When he took some of  
 out of the sea, and stirred it ever so little  
 and, in the dark, he always saw in it an  
 mber of bright particles; he had the  
 arance when he dipped a piece of linen  
 and wrung it in a dark place; and when  
 s fell upon any thing that was solid, it  
 itinue shining for hours together. He  
 it depends very much upon the *quality*  
 r; and that this light is greatest when

the water is fattest, and fullest of foam. For sea  
 water is not always equally pure, and sometimes,  
 if linen be dipped in the sea, it is clammy when  
 it is drawn up again: When the wake of the  
 ship was the brightest, the water was the most fat  
 and glutinous, and linen moistened with it pro-  
 duced a great deal of light, if it was stirred or  
 moved briskly. In some parts of the sea, he saw  
 a substance like saw-dust, sometimes red and some-  
 times yellow; and when he drew up the water  
 in those places, it was always viscous and glutin-  
 ous. The sailors told him, that it was the spawn  
 of whales; that there are great quantities of it in  
 the north; and that sometimes, in the night, they  
 appeared all over of a bright light, without being  
 put in motion by any vessel or fish passing by them.  
 One day they took a fish called a *bonite*, the in-  
 side of the mouth of which was so luminous, that,  
 without any other light, he could read. The  
 mouth was full of a viscous matter, which, when  
 rubbed upon a piece of wood, made it immediat-  
 ly all over luminous; though, when the moisture  
 was dried up, the light was extinguished. The  
 abbe Nollet was much struck with the luminous-  
 ness of the sea, when he was at Venice in 1749;  
 and, after taking a great deal of pains to ascertain  
 the circumstances, of it, concluded that it was  
 occasioned by a shining insect; and having exam-  
 ined the water very often, he at length did  
 find a small insect, which he particularly describes,  
 and to which he attributes the light. The same  
 hypothesis had also occurred to M. Vianelli, pro-  
 fessor of medicine in Chiogga near Venice; and  
 both he and M. Grixellini, a physician in Venice,  
 have given drawings of the insects from which  
 they imagined this light to proceed. A similar  
 discovery and conclusion were made by Capt.  
 Cook, in his 2d voyage. (See Cook, N° III, §  
 9.) M. le Roi, making a voyage on the Mediter-  
 ranean, took notice, that in the day-time, the  
 prow of the ship in motion threw up many small  
 particles, which, falling upon the water, rolled  
 upon the surface of the sea for a few seconds be-  
 fore they mixed with it; and in the night they  
 had the appearance of fire. Taking a quantity of  
 the water, the same small sparks appeared when-  
 ever it was agitated; but every successive agita-  
 tion produced a less effect than the preceding, ex-  
 cept after being suffered to rest a while; for then  
 a fresh agitation would make it almost as lumi-  
 nous as the first. This water retained its prop-  
 erty of shining by agitation a day or two; but it  
 disappeared on being set on the fire, though it  
 was not made to boil. He concludes, that it is  
 not occasioned by shining insects, as the abbe  
 Nollet imagined; especially after carefully examin-  
 ing some of the luminous points, which he caught  
 upon an handkerchief, he found them to be round  
 like large pins heads, but with no appearance of  
 any animals though viewed with a microscope.  
 The mixture of a little spirit of wine with water,  
 just drawn from the sea, gave the appearance of  
 a great number of little sparks, which continued  
 visible longer than those in the ocean. All the  
 acids, and various other liquors, produced the  
 same effect, though not quite so copiously;  
 but no fresh agitation would make them luminous  
 again. M. le Roi is far from asserting that there

are no luminous insects in the sea. He even supposes that the abbé Nollet and M. Vianelli had found them. But he was satisfied that the sea is luminous chiefly on some other account, though he does not advance a conjecture what it is. M. Ant. Martin made many experiments on the light of fishes, with a view to discover the cause of the light of the sea. He thought that he had reason to conclude, from a great variety of experiments, that all sea-fishes have this property; but that it is not to be found in any that are produced in fresh water. Nothing depended upon the colour of the fishes, except that he thought that the white ones, and especially those that had white scales, were more luminous than others. This light, he found, was increased by a small quantity of salt; and also by a small degree of warmth, though a greater degree extinguished it. This agrees with another observation of his, that it depends entirely upon a kind of moisture which they had about them, and which a small degree of heat would expel, when an oiliness remained which did not give this light, but would burn in the fire. Light from the flesh of birds or beasts is not so bright as that which proceeds from fish. From some experiments made by Mr Canton, he concludes, that the luminousness of sea water is owing to the limy and other putrescent substances it contains. On the evening of the 14th June 1768, he put a small fresh whiting into a gallon of sea-water, in a pan which was about 14 inches in diameter, and took notice that neither the whiting nor the water, when agitated, gave any light. A Fahrenheit's thermometer, in the cellar where the pan was placed, stood at 54°. The 15th, at night, that part of the fish which was even with the surface of the water was luminous, but the water was dark. He drew the end of a stick through it, from one side of the pan to the other; and the water appeared luminous behind the stick all the way, but gave light only where it was disturbed. When all the water was stirred, the whole became luminous, and appeared like milk, giving a considerable degree of light to the sides of the pan; and it continued to do so for some time after it was at rest. The water was most luminous when the fish had been in it about 28 hours; but would not give any light by being stirred, after it had been in it 3 days. He then put a gallon of fresh water into one pan, and an equal quantity of sea-water into another, and into each pan he put a fresh herring of about 3 oz. The next night the whole surface of the sea-water was luminous, without being stirred; but it was much more so when it was put in motion; and the upper part of the herring, which was considerably below the surface of the water, was also very bright; while at the same time, the fresh water, and the fish that was in it, were quite dark. There were several very bright luminous spots on different parts of the surface of the sea-water; and the whole, when viewed by the light of a candle, seemed covered with a greasy scum. The third night, the light of the sea-water, while at rest, was very little, if at all, less than before; but when stirred, its light was so great as to discover the time by a watch, and the fish in it appeared as a dark substance. After this, its light was evidently decreasing, but

was not quite gone before the 7th night. Fresh water and the fish in it were perfectly during the whole time. The thermometer was generally above 60°. These experiments were made with sea water; but he now made use of fresh water, into which he put common salt, till found, by a hydrometer, that it was of the same specific gravity with the sea water; and, at the same time, in another gallon of water, he dissolved two pounds of salt; and into each of these waters he put a small fresh herring. The next evening the whole surface of the artificial sea water was luminous without being stirred; but gave more light when it was disturbed. It appeared exactly like the real sea water in the preceding experiment; its light lasted about the same time, and went off in the same manner: while the other water, which was almost as salt as it could be made, never gave any light. The herring which was taken out of it the 7th night, and washed from its salt, was found firm and sweet; but the other herring was very soft and putrid, much more so than that which had been kept as long in fresh water. If a herring, in warm weather, be put into 10 gallons of artificial sea water, instead of fresh water, he says, will still become luminous; but its light will not be so strong. Mr Canton observes, that though the greatest summer heat promotes putrefaction, yet 20 degrees more than that of the human blood seems to hinder it. By putting a small piece of a luminous fish into a glass ball, he found, that water of the heat of 100 degrees would extinguish its light in less than half a minute; but that, on taking it out of the water, it would begin to recover its light in about 10 seconds; but it was never afterwards so bright as before. Mr Canton observed, that several kinds of river fish could not be made to give light, in the same circumstances in which any sea-fish became luminous; but that a piece of carp made the water very luminous, though the outside, or scaly part of it, did not shine at all. He adds, that artificial sea water may be made without the use of an hydrometer, by the proportion of 400 avoirdupois of salt to 7 pints of water, wine-measure. From undoubted observations, however, it appears, that in many places of the ocean it is covered with luminous insects to a very considerable extent. Mr Dagelet, a French astronomer who returned from the Terra Australis in 1774, brought with him several kinds of worms which shine in water when it is set in motion; and M. Kirwan, in a paper inserted in the *Journal des Sçavans* in March 1770, affirms, that the luminous surface of the sea, from Brest to the Antilles, contains an immense quantity of little, round, shining polypuses of about a quarter of a line in diameter. Other learned men, who acknowledge the existence of these luminous animals, cannot, however, be persuaded to consider them as the cause of all the light and scintillation that appear on the surface of the ocean: they think that some subterranean phosphorus kind, arising from putrefaction, is a cause of this phenomenon. M. Godé published curious observations on the fish *bonite*; and though he has observed and described several of the luminous insects that are found in sea-water, he is, nevertheless, of opinion,

incandescence and flaming light of the sea proceed from the oily and greasy substances with which it is impregnated. The abbé Nollet was long of opinion, that the light of the sea proceeded from electricity, though he afterwards seemed inclined to think, that this phenomenon was caused by small animals, either by their luminous aspect, or at least by some liquor or effluvia which they emitted. He did not, however, exclude other causes; among these, the fry of fish deserves to be noticed. M. Dagelet, sailing into the bay of Antongil, in the island of Madagascar, observed a prodigious quantity of fry, which covered the surface of the sea above a mile in length, and which he at first took for banks of sand on account of their colour; they exhale a disagreeable odour, and the sea had appeared with uncommon splendour some days before. The same accurate observer, perceiving the sea remarkably luminous in the road of the Cape of Good Hope during a perfect calm, remarked, that the oars of the *casques* produced a whitish and pearly kind of lustre; when he took in his hand the water which contained this phosphorus, he discerned in it, for some minutes, globules of light as large as the heads of pins. When he pressed these globules, they appeared to his touch like a soft and thin pulp; and some days after the sea was covered near the coasts with whole banks of these little fish.

(14.) LIGHT, REMARKABLE APPEARANCES OF, IN THE FORM OF *IGNES FATUI*, &c. To putrefaction, some attribute that luminous appearance called *IGNIS FATUUS*, which is most frequently observed in boggy places and near rivers, though sometimes also in dry places. By its appearance beighted travellers are said to have been sometimes misled into marshy places, taking it for a candle at a distance; from which seemingly mischievous property it has been thought by the vulgar to be the spirit of a malignant nature, and been named accordingly *Will with a wisp*, or *Jack with a lantern*; for the same reason that it had its Latin name *ignis fatuus*. This light is frequent about burying places and dung-hills. Some countries are also remarkable for it, as about Bologna in Italy, and some parts of Spain and Ethiopia. Its appearances are so uncertain and variable that they can scarce be described, especially as philosophical observers seldom meet with it. Dr Derham, however, one night perceived one of them, and got so near that he had a very advantageous view of it. This is very difficult to be obtained; for, among other singularities of the *ignis fatuus*, it avoids the approach of any person, and flies from place to place as if it were animated. That which Dr Derham observed was in some boggy ground betwixt two rocky hills; and the night was dark and dim; by which means he was enabled to advance within 2 or 3 yards of it. It appeared like a complete body of light without any division, so that it was sure it could not be occasioned by insects. It kept dancing about a dead thistle, till a very slight motion of the air, occasioned, as he supposed, by his near approach to it, made it jump to another place; after which it kept flying before him as he advanced. M. Beccari obtained information that two of these lights appeared in the *aisis* about Bologna, the one N. the other S. of

that city, and were to be seen almost every dark night, especially that to the eastward, giving a light equal to an ordinary faggot. The latter appeared to a gentleman of his acquaintance as he was travelling; moved constantly before him for about a mile; and gave a better light than a torch which was carried before him. Both these appearances gave a very strong light, and were constantly in motion. Sometimes they would rise, sometimes sink; but commonly they would hover about six feet from the ground; they would also frequently disappear on a sudden; and appear again in some other place. They differed also in size and figure, sometimes spreading pretty wide, and then contracting themselves; sometimes breaking into two, and then joining again. Sometimes they would appear like waves; at others they would seem to drop sparks of fire: they were but little affected by the wind; and in wet and rainy weather were frequently observed to cast a stronger light than in dry weather: they were also observed more frequently when snow lay upon the ground, than in the hottest summer; but he was assured that there was not a dark night throughout the whole year in which they were not to be seen. The ground E. of Bologna, where the largest of these was observed, is a hard chalky soil mixed with clay, which retains moisture long, but breaks and cracks in hot weather. On the mountains, where the soil is looser, the *ignes fatui* were less. From the best information, M. Beccari found that these lights were very frequent about rivers and brooks. He concludes his narrative with the following singular account. "An intelligent gentleman travelling in the evening, between 8 and 9, in a mountainous road about 10 miles S. of Bologna, perceived a light which shone very strangely upon some stones which lay on the banks of the Rio Verde. It seemed to be about two feet above the stones, and near the water. In size and figure it had the appearance of a parallelopiped, above a foot in length, and half a foot high, the longest side being parallel to the horizon. Its light was so strong, that he could plainly see by it part of a neighbouring hedge and the water of the river; only in the E. corner of it, the light was rather faint, and the square figure less perfect, as if it was cut off or darkened by the segment of a circle. On examining it a little nearer, he was surprised to find that it changed gradually from a bright red to a yellowish, and then to a pale colour, in proportion as he drew nearer; and when he came to the place itself, it quite vanished. Upon this he stepped back, and not only saw it again, but found that the farther he went from it, the stronger and brighter it grew. When he examined the place of this luminous appearance, he could perceive no smell nor any other mark of fire." Another gentleman informed M. Beccari, that he had seen the same light five or six different times in spring and autumn; and that it always appeared of the same shape, and in the very same place. One night in particular, he observed it come out of a neighbouring field to settle in the usual place. A very remarkable account of an *ignis fatuus* is given by Dr Shaw in his *Travels to the Holy Land*. It appeared in the valleys of mount Ephraim, and attended him and his company for

above an hour. Sometimes it appeared globular, or like the flame of a candle; at others it spread to such a degree as to involve the whole company in a pale inoffensive light; then contracted itself, and suddenly disappeared, but in less than a minute it would appear again; sometimes running swiftly along, it would expand itself at certain intervals over more than two or three acres of the adjacent mountains. The atmosphere from the beginning of the evening had been remarkably thick and hazy; and the dew, as they felt it on the bridles of their horses, was very clammy and unctuous. Lights resembling the *ignis fatuus* are sometimes observed at sea, skipping about the masts and rigging of ships; and Dr Shaw informs us, that he has seen these in such weather as that just mentioned when he saw the *ignis fatuus* in Palestine. Similar appearances have been observed in various other situations; and we are told of one which appeared about the bed of a woman in Milan, surrounding it as well as her body entirely. This light fled from the hand which approached it; but was at length entirely dispersed by the motion of the air. Of the same kind also, most probably, are those small luminous appearances which sometimes appear in houses or near them, called in Scotland *Elf-candles*, and which are supposed to portend the death of some person about the house. In general these lights are harmless, though not always; for some of them have encompassed stacks of hay and corn, and set them on fire; so that they became objects of great terror to the country people. Of these it was observed, that they would avoid a drawn sword, or sharp-pointed iron instrument; and that they would be driven away by a great noise. Several philosophers have endeavoured to account for these appearances, but hitherto with no great success; nor indeed does there seem to be sufficient data for solving all their phenomena. Sir Isaac Newton calls it a vapour shining without heat; and supposes that there is the same difference between the vapour of an *ignis fatuus* and flame, that there is between the shining of rotten wood and burning coals. But though this seems generally to be the case, there are exceptions, as has been instanced in the vapours which set fire to the stacks of corn. Dr Priestley supposes that the light is of the same nature with that produced by putrescent substances; others that the electrical fluid is principally concerned; but none have attempted to give any particular solution of the phenomena. From the frequent appearance of the *ignis fatuus* in marshes, moist ground, burying places, and dunghills, putrefaction seems to be concerned in the production of it. This process is attended with the emission of an aqueous steam, together with a quantity of fixed, inflammable, and alkaline airs, mixed together in one common vapour. It is likewise attended with some degree of heat; and there are some vapours, that of sulphur particularly, which become luminous, with a degree of heat much less than that sufficient to set fire to combustibles. The putrid vapour, therefore, may be capable of shining with a still smaller degree of heat than that of sulphur, and consequently become luminous by that which putrefaction alone affords. This would account for the *ignis fatuus*, were it

only a steady luminous vapour arising from places where putrid matters are contained; but its extreme mobility, and flying from one place to another on the approach of any person, cannot be accounted for on this principle. If one quantity of the putrid vapour becomes luminous by means of heat, all the rest ought to do so likewise; so that though we may allow heat and putrefaction to be concerned, yet of necessity we must have recourse to some other agent, which can be no other than electricity. Without this it is impossible to conceive how any body of moveable vapour should not be carried away by the wind; but, so far is this from being the case, that the *ignis fatuus* described by M. Beccari were but little affected by the wind. It is besides proved by undoubted experiment, that electricity is always attended with some degree of heat; and this, however small, may be sufficient to give a luminous property to any vapour on which it acts strongly; not to add, that the electric fluid itself is no other than light, and may therefore by its action easily produce a luminous appearance independent of any vapour. We have a strong proof that electricity is concerned, or indeed the principal agent, in producing the *ignis fatuus* from an experiment related by Dr Priestley of a flame of this kind being artificially produced. A gentleman, who had been making many electrical experiments for a whole afternoon in a small room, on going out of it, observed a flame following him at some little distance. This, was doubtless, a true *ignis fatuus*, and the circumstances necessary to produce it were then present, viz. an atmosphere impregnated with animal vapour, and likewise strongly electrified: for the quantity of perspiration emitted by a human body is by no means inconsiderable; and it as well as the electricity would be collected by reason of the smallness of the room. In this case, however, there seems to have been a considerable difference between the artificial *ignis fatuus* and those commonly met with; for this flame followed the gentleman as he went out of the room; but the natural ones commonly fly from those who approach them. This may be accounted for, from a difference between the electricity of the atmosphere in the one room and the other; in which case the flame would naturally be attracted towards that place where the electricity was either different in quality or in quantity; but in the natural way, where all bodies may be supposed equally electrified for a great way round, a repulsion will as naturally take place. Still, however, this does not seem to be always the case. In those instances where travellers have been attended by an *ignis fatuus* we cannot suppose it to have been influenced by any other power than what we call attraction, and which electricity is very capable of producing. Its keeping at some distance is likewise easily accounted for; as we know that bodies possessed of different quantities of electricity may be attracted to attract one another for a certain space, then repel without having ever come into contact. On this principle we may account for the light which surrounded the woman at Milan, but not for the light which followed her, as it was not supplied from the hand of any other person. On the same principle may we account for these mischiefs

is vapours which set fire to the hay and corn stacks, but were driven away by presenting to them a pointed iron instrument, or by making a fire. Both these are known to have a great effect upon the electric matter; and, by means of which, lightning may occasionally be made to fall upon or to avoid particular places, according to circumstances by which the general mass happens to be affected. On the whole, therefore, it seems most probable, that the *ignis fatuus* is a collection of vapours of the putrescent kind, very much affected by electricity; according to the degree of which, it will either give a weak or strong light, or even set fire to certain substances. This notion seems to be confirmed from some luminous appearances observed in privies, where the putrid vapours have been collected into balls, and exploded violently on the approach of a candle, in its last effect, however, we cannot so well ascribe to the electricity, as to the accension of the inflammable air which abounds in such places. In the appendix to Dr Priestley's 3d volume of *Experiments and Observations on Air*, Mr Warltire gives an account of some very remarkable *ignis fatuus*, which he observed on the road to Bromwich, about 5 miles from Birmingham. The date of observation was the 12th of December 1781, before day-light. Many of these lights were playing in an adjacent field, in different directions; from some of which there suddenly sprung up bright branches of light, something resembling the explosion of a rocket that contained many brilliant stars, if the discharge was upwards, instead of the usual direction, and the hedge and trees on each side of the hedge were illuminated. This appearance continued but a few seconds, after which the jack-a-lanterns played as before. Mr Warltire was not near enough to observe if the apparent explosions were attended with any report. Cronstedt gives it as his opinion, that *ignis fatuus* as well as *falling stars*, are owing to sections of inflammable air raised to a great height in the atmosphere. But, with regard to the latter, the vast height at which they move evidently shows that they cannot be the effect of any grossening vapour whatever; for the lightest inflammable air is one 12th of that of the common atmosphere: and we have no reason to believe, that at the distance of 40 or 50 miles from the earth, the latter has near one 12th of its weight above the surface. From the account given by Mr Warltire, we should be apt to conclude, that there is a strong affinity betwixt the *ignis fatuus* and fire-balls, inasmuch that the one might be very easily converted into the other. Electricity may assume both these appearances, as is evident in the case of points; or even when the atmosphere is violently electrified, as around the string of an electrical kite, which always will appear to be surrounded with a blue flame in the night, if the electricity be very strong. On the whole, it appears, that electricity acting upon a small quantity of atmospherical air, with a certain degree of force, will produce an appearance resembling *ignis fatuus*; with a superior force it will produce a fire-ball; and a sudden increase of electrical power might produce those sparks and apparent explosions observed by Mr Warltire. With

regard to the uses of the *ignis fatuus* in the system of nature, we can only say, that they seem to be accidental appearances resulting from the motion of the electric fluid, and are, no doubt, like other meteors, subservient to the preservation of its equilibrium, and thus are useful in preventing those dreadful commotions which ensue when a proper medium for so doing is deficient. A light in some respects similar to those above mentioned has been found to proceed from that celebrated chemical production called *phosphorus*, which always tends to decompose itself, so as to take fire by the access of air only. See PHOSPHORUS. The easiest method of accounting for all these kinds of lights, is from electricity. If light consists in a certain vibration of the electric fluid, then it follows, that in whatever substances such a vibration takes place, there light must appear, whether in putrescent animal substances, sea-water, phosphorus, or any thing else. We know that the electric matter pervades all terrestrial substances, and is very liable to be set in motion from causes of which we are ignorant. The action of the air by which putrefaction is produced may be one of these causes; and it can by no means appear surprising, that the electric matter should act in the bodies of living animals in such a manner as to produce a permanent light, when we know it acts in some of them so powerfully as to produce a shock similar to that of a charged vial. When this vibration becomes so powerful as to penetrate the solid substance of the body itself, the luminous body then becomes transparent, as in M. Beccarius's experiment with the pholades in milk; (See PHOLAS.) but, when it is only superficial, the body, though it emits light, is itself opaque.

(15.) LIGHT SHINING IN THE DARK FROM DIAMONDS, &c. Among luminous bodies the diamond is to be reckoned; as some diamonds are known to shine in the dark. But on account of the feebleness of their splendor, it is necessary for the person who is to observe them, previously to stay in the dark about a quarter of an hour; that the pupil of the eye may be dilated and enlarged, and so rendered capable of receiving a larger quantity of the rays of light. M. du Fay has also observed, that the eyes ought to be shut for this time, or at least one of them; and that, in that case, the light of the diamond is afterwards only seen by that eye which has been shut. Before the diamond is brought into the dark room, it must be exposed to the sun-shine, or at least to the open day-light, to imbibe a sufficient quantity of rays; and this is done in one minute, or even less; 8 or 10 seconds having been found to furnish as much light as a stone is capable of receiving; and when brought into the dark, its light continues about 12 or 13 minutes, weakening all the while by insensible degrees. It is very remarkable, that in bodies so extremely similar to each other as diamonds are, some should have this property of imbibing the sun's rays, and shining in the dark, and that others should not; yet so it is found by experiment, and the most nearly resembling stones shall be found one to have this property, and another to be destitute of it; while many of the most dissimilar have the property in common. There seems to be no rule, nor even the least traces of

any imperfect rule of judging, which diamonds have, and which have not this property; their natural brightness, their purity, their size, or their shape, contribute nothing to it; and all that has been yet discovered of the least regularity among them, is, that all the yellow diamonds have this property. This may probably arise from their having more sulphur in their composition, and therefore illuminating more readily, or emitting a more visible flame. M. du Fay tried whether it was possible to make the diamond retain, for any longer time, the light it naturally parts with so soon; and found, that if the diamond, after being exposed to the light, be covered with black wax, it will shine in the dark, as well six hours afterwards as at the time it was first impregnated with the light. The imbibing light, in this manner, being a property not found in all diamonds, it was not to be supposed that it would be found in any other stones. On trial, the ruby, the sapphire, and the topaz, were found wholly destitute of it; but among a large number of rough emeralds, one was found to possess it. Such is the strange uncertainty of these accidents. All the other less precious stones were tried, and found not to possess this property of imbibing light from the daylight or sun-shine, but they all became luminous by the different means of heating or friction; with this difference, that some acquired it by one of these methods, and others by the other; each being unaffected by that which gave the property to the other. The diamond becomes luminous by all these methods. Beccarius also discovered, that diamonds have the property of the Bolognian phosphorus, about the same time that it occurred to M. du Fay. *Com. Boipn.* vol. ii. p. 276. M. du Fay observed, that the common topaz, when calcined, had all the properties of this phosphorus; and pursuing the discovery, he found the same property, in a great degree, in the belemnites, gypsum, lime-stone, and marble: though he was obliged to dissolve some very hard substances of this kind in acids, before calcination could produce this change in them; and with some substances he could not succeed even thus; especially with flint-stones, river sand, jaspers, agates, and rock-crystal.

(16.) LIGHT, SOURCES OF, Dr Thomson, in his *Syst. of Chem.* Vol. I. p. 253. enumerates 4 "different sources from which light is emitted in a visible form:" viz. "1. The SUN and STARS." (See ASTRONOMY, *Index*.) "2. COMBUSTION; 3. HEAT; and, 4. PERCUSSION. See these articles; and ELECTRICITY, *Ind.* FLINT, STEEL, &c.

(17.) LIGHT TRANSMITTED FROM PLANTS. In Sweden a very curious phenomenon has been observed on certain flowers by M. Haggern, lecturer in natural history. One evening he perceived a faint flash of light repeatedly dart from a marigold. Surprised at such an uncommon appearance, he resolved to examine it with attention; and, to be assured it was no deception, he placed a man near him, with orders to make a signal at the moment when he observed the light. They both saw it constantly at the same moment. The light was most brilliant on marigolds of an orange or flame colour; but scarcely visible on pale ones. The flash was frequently seen on the same flower two or three times in quick succession; but more com-

monly at intervals of several minutes: at several flowers in the same place emitted together, it could be observed at a considerable distance. This phenomenon was remarkably and August at sun-set, and for half an hour; when the atmosphere was clear; but after day, or when the air was loaded with vapour, it was seen. The following flow-  
 ted flashes, more or less vivid, in this or  
 The marigold, *galendula officinalis.* 2.  
 hood, *tropaolum majus.* 3. The orange li  
*bulbiferum.* 4. The Indian pink, *tagetes*  
*erecfa.* To discover whether some little i  
 phosphoric worms might not be the cau  
 the flowers were carefully examined, eve  
 microscope, without any such being foun  
 the rapidity of the flash, and other circ  
 there seems to be something of electricit  
 phenomenon. It is well known, that v  
 pistil of a flower is impregnated, the poll  
 away by its elasticity, with which electri  
 be combined. M. Haggern, after having  
 the flash from the orange lily, the an  
 which are a considerable space distant fro  
 tals, found that the light proceeded from t  
 only; whence he concludes, that this elec  
 is caused by the pollen, which, in flyi  
 scattered on the petals. Whatever be th  
 the effect is highly curious.

(18.) LIGHT, VELOCITY OF. See § 5

(IV.) LIGHTS, in painting, are those piece which are illuminated, or that lie the luminary, by which the piece is sup be enlightened; and which, for this re painted in bright vivid colours. In this se is opposed to shadow. Different lights l different effects on a picture, and occasi ference in the management of every part. deal therefore depends on a painter's cl proper light for his piece to be illumina a great deal more, in the conducting of and shadows, when the luminary is pitch The strength and reliev of a figure, as v gracefulness, depend entirely on the ma of the lights, and the joining of those t dows. The light a figure receives is eit or reflected; to each of which special re be had. The doctrine of lights and shado that part of painting called *chiaro obscuro*.

(1.) \* To LIGHT. *v. a.* [from *light*, To kindle; to inflame; to set on fire; flame.—Swinging coals about in the v roughly *lighted* them. *Boyle*.—This truti clear, that to go about to prove it, wen a candle to seek the sun. *Glauv.*—

m when they *lighted*, how they clung  
bracement. *Shak.*

—Plant trees and shrubs near home, for bees to  
pitch on at their swarming, that they may not be  
in danger of being loft for want of a *lighting* place.

*Mortimer.*  
(1.) \* To LIGHTEN. *v. a.* [from *light*.] 1. To  
illuminate; to enlighten.—  
Upon his bloody finger he doth wear  
A precious ring, that *lightens* all the hole. *Shak.*  
O light, which mak'st the light, which mak'st  
the day,  
Which sett'st the eye without, and mind within;  
*Lighten* my spirit with one clear heav'nly ray,  
Which now to view itself doth first begin. *Davies.*  
A key of fire ran all along the shore,  
And *lighten'd* all the river with a blaze. *Dryd.*  
Nature from the storm  
Shines out afresh; and through the *lighten'd* air  
A higher lustre, and a clearer calm,  
Diffusive tremble. *Thomson's Summer.*

2. To exonerate; to unload. [from *light*, *adj.*]  
—The mariners were afraid, and cast forth the  
wares that were in the ship into the sea, to *light-*  
*ten* it. *Jon.* i. 7. 3. To make less heavy.—  
Now I feel by proof,  
That fellowship in pain divides not smart,  
Nor *lightens* aught each man's peculiar load.

*Milton.*  
Strive  
In offices of love how we may *lighten*  
Each other's burden. *Milton.*

4. To exhilarate; to cheer.—  
A trusty villain, very oft,  
When I am dull with care and melancholy,  
*Lightens* my humour with his merry jest. *Shak.*  
—Few tragedies shall succeed in this age, if they  
are not *lightened* with a course of mirth. *Dryden.*

(2.) \* To LIGHTEN. *v. n.* [*bit light*, Saxon.] 1.  
To flash, with thunder.—  
This dreadful night,  
That thunders, *lightens*, opens graves, and roars  
As doth the lion. *Shak.*  
I have no joy of this contract to-night;  
It is too rash, too unadvis'd, too sudden,  
Too like the light'ning, which doth cease to be  
Ere one can say it *lightens*. *Shak.*  
—The lightning that *lighteneth* out of the one part  
under heaven, sheweth unto the other part.

2. To shine like lightning.—  
Yet looks he like a king: behold his eye,  
As bright as is the eagle's, *lightens* forth  
Controlling Majesty. *Shak.*  
3. To fall to light.—O Lord, let thy mercy *light-*  
*ten* upon us, as we do put our trust in thee. *Com-*  
*mon Prayer.*

(1.) \* LIGHTER. *n. f.* [from *light*, to make light].

A heavy boat into which ships are lightened or unloaded.—They have cock boats for passengers, and lighters for burthen. *Carew.*—

He climb'd a stranded lighter's height,  
Shot to the black abyss, and plung'd down-right. *Pope.*

(2.) LIGHTER, a large, open, flat-bottomed vessel, generally managed with oars, and employed to carry goods to or from a ship when she is to be laden or delivered.—There are also some lighters furnished with a deck throughout their whole length, to carry goods which would be damaged by rainy weather. These are usually called *close lighters*.

\* LIGHTERMAN. *n. s.* [*lighter* and *man*.] One who manages a lighter.—Where much shipping is employed, whatever becomes of the merchant, multitudes of people will be gainers; as shipwrights, butchers, carmen, and *lightermen*. *Child.*

\* LIGHTFINGERED. *adj.* [*light* and *finger*.] Nimble at conveyance; thievish.

(1.) LIGHTFOOT, John, D. D. a very learned English divine, was the son of a divine, and born in March 1602, at Stoke upon Trent in Staffordshire. Having finished his studies at Morton-green near Congleton, Cheshire, he went in 1617 to Cambridge, where he was thought the best orator of the under-graduates in the university. He also made an extraordinary proficiency in the Latin and Greek; but neglected the Hebrew. His taste for the oriental languages was not yet excited; and as for logic, the study of it, as then conducted among the academics, was too quarrelsome for his meek disposition. As soon as he had taken the degree of B. A. he left the university, and became assitant to a school at Repton in Derbyshire. About a years after he entered into orders, and became curate of Norton under Hales in Shropshire; near Bellaport, the seat of Sir Rowland Cotton; who, being his constant hearer, made him his chaplain, and took him into his house. This gentleman being a perfect master of the Hebrew language, engaged Lightfoot in that study; who soon became sensible that without that knowledge it was impossible to attain an accurate understanding of the scriptures. He therefore applied himself to it with extraordinary vigour, and quickly made great progress in it: and his patron removing with his family to London, at the request of Sir Allan Cotton his uncle, then lord-mayor, he followed him thither. But, wishing to improve himself by travelling, he went down into Staffordshire to take leave of his parents. Passing through Stone in that county, he found the place destitute of a minister: and the pressing solicitations of the parishioners prevailed upon him to undertake that cure. Laying aside his design therefore of travelling, he resolved to settle at home. During his residence at Bellaport, he had fallen acquainted with a daughter of William Crompton of Stonepark, Esq; and now, being in possession of that living, he married her in 1628. But his unquenchable thirst after rabbinical learning would not suffer him to continue there. Simon college library at London, he knew, was well stocked with books of that kind. He therefore quitted his charge at Stone, and removed with

his family to Hornsey, near London, where he gave the public a notable specimen of his advancement in those studies, by his *Erubini, or Mysteries Christian and Judaical*, in 1629. He was then only 27 years of age; and appears to have been well acquainted with the Latin and the Greek fathers, as well as with the classics. These fruits of his studies were dedicated to Sir Rowland Cotton; who, in 1632, presented him to the rectory of Ashley in Staffordshire. As he seemed now to be fixed for life, he built a study in the garden, to be out of the noise of the house; and applied himself with indefatigable diligence to searching the scriptures. Thus employed, many days passed very agreeably, till the great change which happened in the public affairs brought him into a share of the administration relating to the church; for he was nominated a member of the memorable assembly of divines at Westminster for settling a new form of ecclesiastical polity. This appointment was merely the effect of his distinguished merit; and he accepted it solely with a view to serve his country, as far as lay in his power. This induced him to resign his rectory, and having obtained the presentation for a younger brother, he set out for London in 1642. He has now satisfied himself in clearing up many of the abstrusest passages in the Bible, and therein provided the chief materials, as well as formed the plan, of his *Harmony*; which he embraced the opportunity of putting to the press, at London, where he had not been long before he was chosen minister of St Bartholomew's. The assembly of divines meeting in 1643, he attended regularly, and made a distinguished figure in their debates; where he used great freedom, and gave signal proofs of his courage as well as learning, opposing many of those tenets which some of the divines endeavoured to establish. His learning commended him to the parliament, whose votes having ejected Dr William Spurstow from the mastership of Catharine-hall in Cambridge, he presented Lightfoot in his place, in 1653; and he was presented to the living of Much-Munden in Bedfordshire, upon the death of Dr Samuel Walsley. Meanwhile he had his turn in preaching before the house of commons, most of which sermons were printed; and in them we see him warmly pressing the speedy settlement of the church in the Presbyterian form, which he cordially believed to be most agreeable to scripture. He was all the while employed in publishing the several branches of his *Harmony*, which afforded so many decisive proofs of the usefulness of learning to true religion: but he met with great discouragements in that work, chiefly from that anti-credulous spirit which prevailed, and even threatened the destruction of the universities. In 1655, he entered upon the office of vice-chancellor of Cambridge to which he was chosen that year, having taken the degree of D. D. in 1652, with great applause. He executed the office of vice-chancellor with exemplary diligence, and, at the commencement, he disposed of. At the same time he was employed with others in perfecting the Polyglott Bible in the press. At the Restoration he offered to resign the mastership of Catharine-hall; but, as

n no spirit of opposition to the king-  
 nt, a confirmation was granted him  
 vn, both of the place and of his li-  
 vter this he was appointed one of  
 at the conference upon the liturgy,  
 but attended only once or twice;  
 ufted at the heat with which that  
 was managed. However, he stuck  
 sign of perfecting his Harmony: and  
 uthy constitution, and exact tempe-  
 secuted his studies with vigour to  
 continued to publish, notwithstanding  
 difficulties he met with from the ex-  
 lided Dec. 6, 1675. He was twice  
 first wife brought him 4 sons and 2  
 his second wife was relict of Mr Auf-  
 uncle of Sir Thomas Brograve, Bart.  
 ire, a gentleman well versed in rab-  
 ag, and a particular acquaintance of  
 She also died before him, without  
 s buried in Munden church; where  
 was himself likewise interred. Dr  
 orks were collected and published  
 4, in two volumes folio. The  
 was printed at Amsterdam, 1686,  
 folio, containing all his Latin writ-  
 . Latin translation of those which  
 English. At the end of both  
 there is a list of such pieces as he  
 l. It is the chief of these, in Latin,  
 ip the 3d volume, added to the 2  
 3d edition of his works, by John  
 Jtretch, in 1699, fol. They were  
 d by Mr Strype, who, in 1700, pub-  
 : collection of these papers, under  
 Some genuine remains of the late pi-  
 ed Dr John Lightfoot."

IGHTFOOT. *adj.* [*light* and *foot.*] Nim-  
 3 or dancing; active.—  
 ar had born his *lightfoot* steed,  
 th wrath and fiery fierce disdain,  
 to follow was but fruitless pain.

*Fairy Queen.*  
 he troops of *lightfoot* Naiades  
 out to see her lovely face. *Spenser.*  
 HTFOOT. *n. f.* Venison. A cant

EADED. *adj.* [*light* and *head.*] 1. Un-  
 ; thoughtless; weak.—The English  
 pioussly and wisely soever framed,  
 eat opposition; the ceremonies had  
 upon *lightbeaded*, weak men, yet learn-  
 ed against some particulars. *Clarend.*  
 disordered in the mind by disease  
 EADEDNESS. *n. f.* Delirious; disor-  
 nd.

EARTED. *adj.* [*light* and *heart.*] Gay;  
 cheerful.

RSE. See HORSE, N° IV, § 3.

HTHOUSE. *n. f.* [*light* and *house.*] *Light*  
 ling, at the top of which lights are  
 ships at sea.—He charged himself  
 ie of such vessels as carried corn in  
 built a pharos or *lighthouse.* *Arbut.*  
 poles to the meridian, with immense  
 the top of them. *Arbutnot.*

HT-HOUSE is generally erected up-

on a cape or promontory on the sea-coast, or up-  
 on some rock in the sea, and has on its top in the  
 night-time a great fire, or light formed by can-  
 dles, which is constantly attended by some care-  
 ful person, so as to be seen at a great distance from  
 the land. It is used to direct the shipping on the  
 coast, that might otherwise run ashore, or steer  
 an improper course when the darkness of the night  
 and the uncertainty of currents, &c. might render  
 their situation with regard to the shore extremely  
 doubtful. Lamp lights are, on many accounts,  
 preferable to coal fires or candles; and the effect  
 of these may be increased by placing them either  
 behind glass hemispheres, or before properly dis-  
 posed glass or metal reflectors; which last method  
 is now very generally adopted. See BEACON,  
 § 3.

\* LIGHTLEGGED. *adj.* [*light* and *leg.*] Nim-  
 ble; swift.—*Lightlegged* Pas has got the middle  
 space. *Sidney.*

\* LIGHTLESS. *adj.* [from *light.*] Wanting  
 light; dark.

\* LIGHTLY. *adv.* [from *light.*] 1. Without  
 weight.—

This grave partakes the fleshly birth,

Which cover *lightly* gentle earth. *Ben. Jonson.*

2. Without deep impression.—

The soft ideas of the cheerful note.

*Lightly* receiv'd, were easily forgot. *Prior.*

3. Easily; readily; without difficulty; of course.

—If they write or speak publickly but five words,  
 one of them is *lightly* about the dangerous estate  
 of the church of England in respect of abused ce-  
 remonies. *Hooker.*—

Believe't not *lightly* that your son

Will not exceed the common. *Shak.*

Short summer *lightly* has a forward spring.

4. Without reason.—Flatter not the rich; neither

do thou willingly or *lightly* appear before great

personages. *Taylor's Guide.*—Let every man that

hath a calling be diligent in pursuance of its em-  
 ployment, so as not *lightly*, or without reasonable

occasion, to neglect it. *Taylor.* 5. Without de-  
 jection; cheerfully.—

Mid that welcome

Which comes to punish us, and we punish it,

Seeming to bear it *lightly.* *Shak.*

6. Not chastely.—If I were *lightly* disposed, I

could still perhaps have offers, that some, who

hold their heads higher, would be glad to accept.

*Swift.* 7. Nimble; with agility; not heavily or

tardily.—

Methought I stood on a wide river's bank;

When on a sudden, Torismond appear'd,

Gave me his hand, and led me *lightly* o'er.

*Dryden.*

8. Gaily; airily; without levity; without heed

or care.

\* LIGHTMINDED. *adj.* [*light* and *mind.*] Unset-  
 tled; unsteady.—He that is hasty to give credit is

*lightminded.* *Ecl.* xix. 4.

\* LIGHTNESS. *n. f.* [from *light.*] 1. Want

of weight; absence of weight; the contrary to

*heaviness.* Some are for masts of ships, as fir and

pine, because of their length, straightness and

*lightness.* *Bacon.*—Suppose many degrees of lit-  
 tleness

teness and *lightness* in particles, so as many might float in the air a good while before they fell. *Burnet*.

2. Inconstancy; unsteadiness.—

For, unto knight there is no greater shame,  
Than *lightness* and inconstancy in love. *F. Q.*  
—Of two things they must chuse one; namely,  
whether they would, to their endless disgrace,  
with ridiculous *lightness*, dismiss him, whose re-  
stitution they had in so importunate manner de-  
sired, or else condescend unto that demand. *Hook-*  
*er*.—

Commanded always by the greatest gust;  
Such is the *lightness* of you common men. *Shak.*

3. Unchastity; want of conduct in women.—Is  
it the disdain of my estate, or the opinion of my  
*lightness*, that emboldened such base fancies to-  
wards me? *Sidney*.—

Can it be,  
That modesty may more betray our sense,  
Than woman's *lightness*? *Shak.*

4. Agility; nimbleness.

(1.) \* LIGHTNING. *n. f.* [from *lighten*, *light-*  
*ening*, *lightning*.] 1. The flash that attends thun-  
der.—*Lightning* is a great flame, very bright, ex-  
tending every way to a great distance, suddenly  
darting upwards, and there ending, so that it is  
only momentaneous. *Muschenbroek*.—

Sense thinks the *lightning* born before the  
thunder;

What tells us then they both together are? *Davies*.

Salmoneus, suff'ring cruel pains I found  
For emulating *Jove*; the rattling sound  
Of mimic thunder, and the glitt'ring blaze  
Of pointed *lightnings*, and their forky rays. *Dryden*.

Like travellers by *lightning* kill'd,  
I burnt the moment I beheld. *Grave*.

2. Mitigation; abatement I beheld. [from *light-*  
*en*, to make less heavy.]—

How oft when men are at the point of death,  
Have they been merry? which their keepers  
call

A *lightning* before death. *Shak.*

—We were once in hopes of his recovery, but  
this only proved a *lightning* before death. *Addison*.

(2.) LIGHTNING (§1. *def.* 1.) is a bright and vivid  
flash of fire, suddenly appearing in the atmosphere,  
and commonly disappearing in an instant, some-  
times attended with clouds and thunder, and  
sometimes not.

(3.) LIGHTNING, ANCIENT SUPERSTITIONS  
RESPECTING. Lightning was looked upon as fa-  
cred both by the Greeks and Romans, and was sup-  
posed to be sent to execute vengeance on the  
earth. Hence persons killed with lightning, be-  
ing thought hateful to the gods, were buried by  
themselves, lest the ashes of other men should be  
polluted by them. Some say they were suf-  
fered to rot where they fell, because it was un-  
lawful for any man to approach the place. For  
this reason the ground was hedged in, lest any  
person should be polluted by it. All places struck  
with lightning were fenced round, from an opi-  
nion that Jupiter had either taken offence at them,  
and fixed upon them the marks of his displeasure,  
or that he had thus pitched upon them as sacred  
to himself. The ground thus fenced about was

called by the Romans *bidental*. Lightning  
much observed in augury, and was a good  
bad omen, according to the circumstances at-  
tending it.

(4.) LIGHTNING, DIFFERENT APPEARANCES  
OF. The phenomena of lightning are always  
prising, and sometimes very terrible; neither  
there any kind of natural appearance in wa-  
ter there is more diversity, not two flashes being  
observed exactly similar. In a serene sky, the li-  
gning, in this country at least, almost always has  
kind of indistinct appearance without any de-  
minate form, like the sudden illumination of  
atmosphere occasioned by firing a quantity  
loose gunpowder; but when accompanied  
thunder, it is well defined, and hath very  
a zig-zag form. Sometimes it makes one an-  
like the letter V, sometimes it hath several  
ches, and sometimes it appears like the arch  
circle. But the most formidable and destruc-  
form which lightning is ever known to assume  
that of balls of fire. (See BALL, § 27.) The  
motion of these is very often easily perceptible  
the eye; but wherever they fall, much mischief  
occasioned by their bursting, which they al-  
do with a sudden explosion like that of fire-  
Sometimes they will quietly run along, or roll  
a little upon any thing, and then break into  
ral pieces, each of which will explode; or  
whole ball will burst at once, and produce  
mischiefous effects only in one place. The  
to this in its destructive effects is the zig-zag  
for that which appears like indistinct flashes, of  
form cannot be readily observed, is seldom or  
ver known to do hurt. The colour of the li-  
gning also indicates in some measure its pow-  
do mischief; the palest and brightest flashes be-  
most destructive; such as are red, or of a dark  
colour, commonly doing less damage. Between  
these kinds of lightning, it is not uncommon  
to see flashes unattended by any report. These  
are always of the sheet kind; they happen  
frequently in windy weather; when the sky is  
clear; and likewise when the sky is cloudy  
mediately before a fall of rain or snow. The  
neral reason of these appears to be, that the  
tric fluid is the medium by which the vapour  
suspended in the atmosphere; and of consequence  
every separation of vapour, whether as rain, snow,  
or hail, must be attended with what is called  
*discharge* of electrical matter. The reason  
this kind of lightning is never attended with  
report is, that there is no particular object upon  
which the force of the flash is directed; it  
dissipates itself among the innumerable con-  
ing bodies with which the atmosphere always  
bounds. It is, however, in a manner impos-  
sible to explain the various ways in which this  
fluid acts. We know not, for instance, in what  
state it is, when acting as a medium of contact  
between the air and vapour, nor in what man-  
ner it *discharges* into other parts of the atmosphere  
ly consists. At any rate, we see that a  
lightning, however limited its extent may be,  
appear, diffuses its effects over a great space of  
atmosphere; for after one of these silent flashes  
is no uncommon thing to observe the sky become  
obscure though it had been quite serene before

f it had been cloudy, to see rain or snow begin to fall in a very few minutes. It is probable indeed, that no change whatever takes place in the atmosphere but by electricity; and that the silent discharges of this fluid from one part of the atmosphere to another, many of which are totally visible, ultimately occasion the whole phenomena of METEOROLOGY. See that article.

(5.) LIGHTNING, EXTRAORDINARY PROPERTIES AND EFFECTS OF. A very surprising property of lightning, the zig-zag kind especially when near, is its seeming omnipresence. If two persons are standing in a room looking different ways, and a loud clap of thunder accompanied with zig-zag lightning happens, they will both distinctly see the flash, not only by that indistinct illumination of the atmosphere which is occasioned by fire of any kind; but the very form of the lightning itself, and every angle it makes in its course, will be as distinctly perceptible, as if both had looked directly at the cloud from whence it proceeded. If a person happened at that time to be looking at a book, or other object which he held in his hand, he would distinctly see the form of the lightning between him and the object at which he looked. This property seems peculiar to lightning, and to belong to no other kind of fire whatever. The effects of lightning are seldom similar to those which accompany explosions of gun-powder, or inflammable air. Instances of this kind, however, have occurred; one of the most remarkable is related under ELECTRICITY, § 129. Upon that occasion, "a tent in a gentleman's garden was carried to the distance of 4000 paces; and a branch torn from a large tree, struck a girl in the forehead as she was coming into town, at the distance of 40 paces from the trunk of the tree, and killed her on the spot." These terrible effects seem to have been owing to the prodigious agitation in the air, occasioned by the emission of such a vast quantity of lightning at once; or perhaps to the agitation of the electric fluid itself, which is still more dangerous than any concussion of the atmosphere; for thunder storms do sometimes produce most violent whirlwinds, see ELECTRICITY, § 130—132. In August 1763, a most violent storm of thunder, rain, and hail happened at London, which did damage in the adjacent country, to the amount of 50,000*l*. Hailstones fell of an immense size, from two to ten inches circumference; but the most surprising circumstance was the sudden flux and reflux of the tide in Plymouth pool, exactly corresponding with the like agitation in the same place, at the time of the great earthquake at Lisbon. Instances are also occurred where lightning, by its own proper force, without any assistance from those common agitations of the atmosphere or electric fluid, hath thrown stones of immense weight at considerable distances; torn up trees by the roots, and broke them in pieces; shattered rocks; set down houses, and set them on fire, &c. The following singular effect of lightning is recorded in the 66th vol. of the *Philos. Transf.* upon a pyed bullock. "In the evening of Sunday, the 28th August, 1774, there was an appearance of a thunder storm, but we heard no report. A gentleman was riding near the marshes not far from this

town (Lewes) saw two strong flashes of lightning, running along the ground of the marsh, at about 9 o'clock P.M. On Monday morning, when the servants of Mr Roger, a farmer at Swanborough, went into the marsh to fetch the oxen to their work, they found one of them, a four-year-old steer, standing up, no appearance much burnt, and so weak as to be scarce able to walk. The animal seemed to have been struck by lightning in a very extraordinary manner. He is of a white and red colour; the white in large marks, beginning at the rump bone, and running in various directions along both sides; the belly is all white, and the whole head and horns white like wife. The lightning, with which he must have been undoubtedly struck, fell upon the rump bone, which is white, and distributed itself along the sides in such a manner as to take off all the hair from the white marks as low as the bottom of the ribs, but so as to leave a list of white hair, about half an inch broad, all round where it joined to the red, and not a single hair of the red appears to be touched. The whole belly is unburnt, but the end of the sheath of the penis has the hair taken off; it is also taken off from the dewlap; the horns and the curled hair on the forehead are uninjured; but the hair is taken off from the sides of the face, from the flat part of the jaw-bones, and from the front of the face in stripes. There are a few white marks on the side and neck, which are surrounded with red; and the hair is taken off from them, leaving half an inch of white adjoining to the red. The farmer anointed the ox with oil for a fortnight; the animal purged very much at first, and was greatly reduced in flesh, but is now recovering." In another account of this accident, the author supposes that the bullock had been lying down at the time he was struck; which shows the reason that the under parts were not touched. "The lightning, conducted by the white hair, from the top of the back down the sides, came to the ground at the place where the white hair was left entire." The author of this account says, that he inquired of Mr Tooth a farrier, whether he ever knew of a similar accident; and that he told him "the circumstance was not new to him; that he had seen many pyed bullocks struck by lightning in the same manner; that the texture of the skin under the white hair was always destroyed, though looking fair at first; but after a while it became sore, throwing out a putrid matter in pustules, like the small-pox with us, which in time falls off, when the hair grows again, and the bullocks receive no farther injury;" which was the case with the bullock in question. In a subsequent letter, however, the very same author informs us, that he had inquired of Mr Tooth "whether he ever saw a stroke of lightning actually fall upon a pyed bullock, so as to destroy the white hair, and show evident marks of burning, leaving the red hair uninjured? He said he never did; nor did he recollect any one that had. He gave an account, however, of a pyed horse, belonging to himself, which had been struck dead by lightning in the night time." The explosion was so violent, that Mr Tooth imagined his house had been struck, and therefore immediately got up. On going into the stable he found the horse al-

cause it hath an electricity opposite to that of the lightning itself. Those objects, therefore, which form the most perfect conductors between the electrified clouds and that zone of earth, will be struck by the lightning, whether they are high or low; and because we know not the conducting quality of the different terrestrial substances, the superstitious are apt to ascribe strokes of lightning to the divine vengeance against particular persons, whereas it is certain that this fluid, as well as others, acts according to invariable rules from which it is never known to depart.

(9.) LIGHTNING, NATURAL INSUFFICIENCY OF CONDUCTORS TO PREVENT DANGER FROM. Lightning, in severe thunder storms, is supposed to proceed from the earth, as well as from the clouds: but this hath never been well ascertained, and indeed from the nature of the thing it seems very difficult to be ascertained; for the motion of the electric fluid is so very quick, that it is altogether impossible to determine, by means of our senses, whether it goes from the earth or comes to it. In fact, there are in this country many thunder storms, in which it doth not appear that the lightning touches any part of the earth, and consequently can neither go to it nor come out from it. In these cases, it flashes either from an electrified cloud to one endowed with an opposite electricity, or merely into those parts of the atmosphere which are ready to receive it. But if not only the clouds, but the atmosphere all the way betwixt them and the earth, and likewise for a considerable space above the clouds, are electrified one way, the earth must then be struck. The reason of this will appear from a consideration of the principles laid down under the article ELECTRICITY, PART II. *Sec.* I, and VIII. It there appears, that the electric fluid is altogether incapable either of *accumulation* or *diminution* in quantity in any particular part of space. What we call *electricity* is only the motion of this fluid made perceptible to our senses. Positive electricity is when the current of electric matter is directed from the electrified body. Negative electricity is when the current is directed towards it. Let us now suppose, that a positively electrified cloud is formed over a certain part of the earth's surface. The electric matter flows out from it first into the atmosphere all round; and while it is doing so, the atmosphere is negatively electrified. In proportion, however, as the electric current pervades greater and greater portions of the atmospherical space, the greater is the resistance to its motion, till at last the air becomes positively electrified as well as the cloud, and then both act together as one body. The surface of the earth then begins to be affected, and it silently receives the electric matter by means of the trees, grass, &c. till at last it becomes positively electrified also, and begins to send off a current of electricity from the surface downwards. The causes which at first produced the electricity of the clouds, (See THUNDER,) still continuing to act, the power of the electric current becomes inconceivably great. The danger of the thunder storm now begins; for as the force of the lightning is directed to some place below the surface of the earth, it will certainly dart towards that place,

and shatter every thing to pieces which resists its passage. The benefit of conducting rods, will now also be evident: for the electric matter will in all cases take the way where it meets with the least resistance; and this is through the substance or rather *over* the surface, of metals. In such a case, therefore, if there happen to be a house furnished with a conductor directly below the cloud and at the same time a zone of negatively electrified earth not very far below the foundation of the house, the conductor will almost certainly be struck, but the building will be unhurt. If the house wants a conductor, the lightning will nevertheless strike in the same place, in order to get at the negatively electrified zone above mentioned; but the building will now be damaged, because the materials of it cannot readily conduct the electric fluid. This leads us to consider the dispute, Whether the preference is due to knobbed or pointed conductors for preserving buildings from strokes of lightning? Ever since the discovery of the identity of electricity and lightning, it hath been allowed by all parties, that conductors of some kind are essentially necessary for the safety of buildings in those countries where thunder storms are frequent. The principle on which they act hath been already explained; namely, that the electric fluid, when impelled by any power, always goes to that place where it meets with the least resistance, as all other fluids do. As metals, therefore, are found to give the least resistance to its passage, it will always choose to run along a metal rod, in preference to a passage of any other kind. We must, however, carefully consider a circumstance which seems to have been too much overlooked by electricians in their reasonings concerning the effects of thunder rods; namely, That lightning, or electricity, never strikes a body, merely for the sake of the body itself, but only because by means of that body it can readily arrive at the place of its destination. When a quantity of electricity is collected from the earth, by an electrical machine, a body communicating with the earth will receive a strong spark from the prime conductor. The body receives this spark, not because it is itself capable of containing all the electricity of the conductor and cylinder, but because the natural situation of the fluid being disturbed by the motion of the machine, a stream of it is sent off from the earth. The natural powers, therefore, make an effort to supply what is thus drained off from the earth; and as the individual quantity which comes out is most proper for supplying the deficiency, as not being employed in any natural purpose, there is always an effort made for returning it to the earth. No sooner, then, is a conducting body, communicating with the earth, presented to the electrical machine, than the whole effort of the electricity is directed against that body not merely because it is a conductor, but because it leads to the place where the fluid is directed by the natural powers by which it is governed at which it would find other means to; though that body were not to be presented. In this case, we may very easily satisfy ourselves, by presenting the very same conducting substance in an insulated state to the prime conductor of the machine; for then we shall

er, when lightning strikes a tree, a house, or under rod, it is not because these objects are in the neighbourhood of the cloud; but because they communicate with some place on the surface of the ground, against which the lightning is directed; and at that place lightning would certainly arrive, though the above-mentioned objects had been in the way.

The fallacy of that kind of reasoning is now employed concerning the use of thunder rods, and will now be apparent. Because a point produces an electrified body in our experiments, and draws off the electricity in a silent manner, therefore Dr Franklin and his followers conclude that a pointed conductor will do the same in a thunder cloud, and thus effectually remove any kind of danger from a stroke of lightning. Their reasoning on this subject, they think, is proved by the following fact among many others.

“ Dr Franklin’s house at Philadelphia was furnished with a rod extending 9 feet above the top of the chimney. To this rod was connected a wire of the thickness of a goose-quill, descended through the wall of the staircase, where an interruption was made, so that the ends of the wire, to each of which a little bell was attached, were distant from each other about six inches, an insulated brass ball hanging between the bells. The author was one night waked by a series of cracks, proceeding from his apparatus in the same manner as usual. He perceived, that the brass ball, vibrating as usual between the bells, was kept at a distance from both; while sometimes passed in very large quick cracks from bell to bell; and sometimes in a continuous white stream, seemingly as large as a river; by means of which the whole staircase was lightened, as with sun-shine, so that he could see to pick up a pin. From the apparent want of electric matter of which the cloud is evidently robbed, by means of the point, and of which a blunt conductor would deprive it, the author conceives, that the want of such conductors must considerably diminish the quantity of electric fluid contained in a roaching cloud, before it comes so near as to discharge its contents in a general stroke.” For this reason, Mr B. Wilson and his followers, who are of the opposite party, have determined to make use of pointed conductors is utterly unnecessary. They say, that in violent thunder storms the atmosphere is full of electricity; and attempts to exhaust the vast quantity there contained, are like attempting to clear away an inundation with a shovel, or to exhaust the atmosphere with a pair of bellows. They maintain, that though pointed bodies will effectually prevent the accumulation of electricity in any subject, yet if a non-electrified body is interposed between a point and the conductor of an electrical machine, the point will be struck at the same moment as the non-electrified body, and at a much greater distance than that at which a knob would be struck. They affirm also, that, by means of the solicitation of the lightning, inflammable substances such as gun-powder, tinder, and Kunkersphorus, may be set on fire; and for

these last facts they bring decisive experiments. From all this, say they, it is evident, that the use of pointed conductors is unsafe. They solicit a discharge to the place where they are; and as they are unable to conduct the whole electricity in the atmosphere, it is impossible for us to know whether the discharge they solicit may not be too great for our conductor to bear; and consequently all the mischiefs arising from thunder storms may be expected, with this additional and mortifying circumstance, that this very conductor hath probably solicited the fatal stroke, when without it the cloud might have passed harmless over our heads without striking at all. Here the reasoning of both parties seems equally wrong. They both proceed on this erroneous principle, That in thunder storms the conductor will always solicit a discharge, or that at such times all the elevated objects on the surface of the earth are drawing off the electricity of the atmosphere. But this cannot be the case, unless the electricity of the earth and of the atmosphere is of a different kind. Now, it is demonstrable, that until this difference between the electricity of the atmosphere and of the surface of the earth ceases, there cannot be a thunder storm. When the atmosphere begins to be electrified either positively or negatively, the earth, by means of the inequalities and moisture of its surface, but especially by the vegetables which grow upon it, absorbs that electricity, and quickly becomes electrified in the same manner with the atmosphere. This absorption, however, ceases in a very short time, because it cannot be continued without setting in motion the whole of the electric matter contained in the earth itself. Alternate zones of positive and negative electricity will then begin to take place below the surface of the earth, for the reasons mentioned under ELECTRICITY, § 269, 270. Between the atmosphere and one of these zones, the stroke of the lightning always will be. Thus supposing the atmosphere is positively electrified, the surface of the earth will, by means of trees, &c. quickly become positively electrified also; we shall suppose to the depth of 10 feet. The electricity cannot penetrate farther on account of the resistance of the electric matter in the bowels of the earth. At the depth of 10 feet from the surface, therefore, a zone of negatively electrified earth begins, and to this zone the electricity of the atmosphere is attracted; but to this it cannot get, without breaking through the positively electrified zone which lies uppermost, and shattering to pieces every bad conductor which comes in its way. We are sure, therefore, that in whatever places the outer zone of positively electrified earth is thinnest, there the lightning will strike, whether a conductor be present or not. If there is a conductor, either knobbed or sharp-pointed, the lightning will indeed infallibly strike it; but it would also have struck a house situated on that spot, without any conductor; and if the house had not been there, it would have struck the surface of the ground. Again, if we suppose the house with its conductor to stand on a part of the ground where the positively electrified zone is very thick, the conductor will neither silently draw off the electricity, nor will the lightning strike it, though

perhaps it may strike a much lower object, the surface of the ground itself, at no distance; the reason of which undoubtedly is, that there the zone of positively electrified air is thinner than where the conductor was. Franklinians therefore make their pointed conductors to be of too great consequence. To those on which they are fixed, no doubt, importance is very great: but in exhausting a cloud of its electricity, their use must be trifling; and to insist on it, ridiculous. In such objects, as trees, grass, &c. are all to draw off the electricity, as well as pointed conductors, if it could be drawn off; but of this there is an impossibility, because they have the same kind of electricity with themselves. The conductor hath not the power of *attracting* the lightning; a few feet of the direction which it would choose of. Of this we have a most decisive instance happened to the magazine at Purfleet in May 15, 1777. That house was furnished with a pointed conductor, raised above the highest part of the building; nevertheless, at 4 P. M. a flash of lightning struck an iron nail in the corner of the wall considerably lower than the top of the conductor, and only 64 feet a sloping line distant from the point.—This occasioned a long dispute with Mr Wilson concerning the propriety of using pointed conductors, and, by the favour of his majesty, he was allowed to construct a more magnificent edifice than any private person could be allowed to erect at his own expence, and of which some account is given under ELECTRICITY, § 204. The only new experiments, however, which this apparatus produced, were the firing of gunpowder by the electric *aura* as it is called; and a particularly violent shock which a person received when he held a small pointed wire in his hand, upon which the conductor was discharged. The electrified surface of the conductor was 620 feet; and we can have but little idea of the strength of sparks from a conductor of this magnitude, supposing it properly electrified. Six turns of the wheel made the discharge felt through the whole body like the strong shock of a Leyden vial; and nobody chose to make the experiment when the conductor had received a higher charge. A very strong shock was felt, when this conductor was discharged upon a pointed wire held in a person's hand, even though the wire communicated with the earth; which was not felt, or but very little, when a knobbed wire was made use of. To account for this difference may, perhaps, puzzle electricians; but with regard to the use of blunt or pointed thunder rods, both experiments seem quite inconclusive. Though a very great quantity of electric matter silently drawn off will fire gunpowder, this only proves that a pointed conductor ought not to pass through a barrel of gunpowder; and if a person holding a pointed wire in his hand received a strong shock from Mr Wilson's great conductor, it can thence only be inferred, that in the time of thunder nobody ought to hold the conductor in their hands; both which precautions common sense would dictate without any experiment. From the accident at Purfleet,

however, the disputants on both sides ought to have seen, that, with regard to lightning, neither points nor knobs can *attract*. Mr Wilson surely had no reason to condemn the pointed conductor for *soliciting* the flash of lightning, seeing it did not strike the point of the conductor, but a blunt cramp of iron; neither have the Franklinians any reason to boast of its effect in *silently drawing off* the electric matter, since all its powers were neither able to prevent the flash, nor to turn it 46 feet out of its way. The fact is, the lightning was determined to enter the earth at the place where the board-house stands, or near it. The conductor fixed on the house offered the easiest communication; but 46 feet of air intervening between the point of the conductor and the place of explosion, the resistance was less through the blunt cramp of iron, and a few bricks moistened with rain-water, to the side of the metalline conductor, than through the 46 feet of air to its point; for the former was the way in which the lightning actually passed. Mr Wilson and his followers seem also mistaken, in supposing that a pointed conductor can solicit a greater discharge, than what would otherwise happen. Allowing the quantity of electricity in the atmosphere during the time of a thunder storm to be as great as they please to suppose; nevertheless, it is impossible that the air can part with all its electricity at once, on account of the difficulty with which the fluid moves in it. A pointed conductor, therefore, if it does any thing at all, can only solicit the partial discharge which is to be made at any rate; and if none were to be made though the conductor was absent, its presence will not be able to effect any. An objection to the use of conductors, whether blunt or pointed, may be drawn from the accident which happened to the poor's house at Heckingham, which was struck by lightning though furnished with pointed conductors; but from an accurate consideration of the manner in which the conductors were situated, it appears, that there was not the possibility of their preventing any stroke. See *Philos. Transf.* Vol. LXXII. p. 361.

(10.) LIGHTNING, NEW SPECIES AND THEORIES. In a late publication on the subject of electricity by the E. of Stanhope (then Lord Mahon) we find a new kind of lightning mentioned, which he is of opinion may give a fatal stroke, even though the main explosion be at a considerable distance; a mile, for instance, or more. This he calls the *electrical returning stroke*; and exemplifies in the following manner, from some experiments made with a very powerful electrical machine the prime conductor of which (six feet long, and one foot diameter) would generally, when the weather was favourable, strike into a brass ball connected with the earth, to the distance of 100 inches or more. In the following account, the brass ball, which we shall call *A*, is supposed to be constantly placed at the *striking distance*; so that the prime conductor, the instant that becomes fully charged, explodes into it. Another large conductor, which we shall call the *cond. conductor*, is suspended, in a perfectly insulated state, farther from the prime conductor than the *striking distance*, but within its *electrical atmosphere*; at the distance of *six feet*, for instance.

standing on an insulating stool touches this conductor very lightly with a finger of his right hand; while with a finger of his left hand, he communicates with the earth, by touching very gently a second brass ball fixed at the top of a stand, on the floor, and which we shall call *B*. While the prime conductor is receiving electricity, sparks pass (at least if the distance between the two conductors is not too great) from the prime conductor to the insulated person's right hand, while similar and simultaneous sparks pass from the finger of his left hand into the stand, communicating with the earth. These sparks are part of the natural quantity of electric matter belonging to the second conductor, driven from them to the earth, through the ball *B*, and its stand, by the elastic pressure or action of the electrical fire of the prime conductor. The second conductor and the insulated person are hereby reduced to a negative state. At length, however, the prime conductor, having acquired its full charge, suddenly strikes into the ball *A*, of the stand, placed for that purpose at the distance of 17 or 18 inches. The explosion is made, and the prime conductor suddenly deprived of its electric atmosphere, its presence upon the second conductor, and on the insulated person, as suddenly ceases; and the latter instantly feels a smart returning stroke, though not direct or visible communication (except through the floor) either with the striking or struck body, which is placed at the distance of five or six feet from them. This returning stroke is evinced by the sudden re-entrance of the fire naturally belonging to his body and to the second conductor, which had before been expelled from them by the action of the charged prime conductor upon them; and which returns to their former place the instant that action of elastic pressure ceases. The author shows, that there is no reason to suppose that the electrical fire from the prime conductor should in this case divide itself at the instant of the explosion into two different ways, so as to strike the second conductor and insulated person in this manner at such a distance from it. When the second conductor and the insulated person are placed in the same part of the electrical atmosphere of the prime conductor, or just beyond the striking point, the effects are still more considerable; the returning stroke being extremely severe and sharp, and appearing considerably sharper than the main stroke itself, received directly from the prime conductor. This circumstance the author argues as an unanswerable proof that the effect which he calls the returning stroke, was not produced by the main stroke being any wise divided at the instant of the explosion, since no effect can ever be produced other than the cause by which it is immediately produced.—Living taken the morning, he felt a considerable pain across his chest during the evening, and a disagreeable sensation in his wrists all the next day. We come now to the application of this experiment, and of the results deduced from it, to what passes in natural

electricity, or during a thunder storm; in which there is reason to expect similar effects, but on a larger scale:—a scale so large indeed, according to the author's representation, that persons and animals may be destroyed, and particular parts of buildings may be considerably damaged, by an electrical returning stroke, occasioned even by some very distant explosion from a thunder cloud:—possibly at the distance of a mile or more. It is certainly easy to conceive, that a charged extensive thunder cloud must be productive of effects similar to those produced by the author's prime conductor. Like it, while it continues charged, it will, by the superinduced elastic electrical pressure of its atmosphere, to use the author's own expression, drive into the earth a part of the electric fluid naturally belonging to the bodies which are within the reach of its widely extended atmosphere; and which will therefore become negatively electrical. This portion too of their electric fire, as in the artificial experiments will, on the explosion of the cloud, at a distance, and the cessation of its action upon them, suddenly return to them; so as to produce an equilibrium and restore them to their natural state.

(II.) LIGHTNING, OBJECTIONS TO LORD STANHOPE'S THEORY OF. To this theory, the authors of the *Monthly Review* have made several objections: "We cannot, however, agree (say they) with the ingenious author, with respect to the greatness of the effects, or of the danger to be apprehended from the returning stroke in this case; as we think his estimate is grounded on an erroneous foundation.—' Since (says he) the density of the electrical atmosphere of a thunder cloud is so immense, when compared to the electrical density of the electrical atmosphere of any prime conductor, charged by means of any electrical apparatus whatsoever; and since a returning stroke, when produced by the sudden removal of even the weakest elastic electrical pressure of the electrical atmosphere of a charged prime conductor, may be extremely strong, as we have seen above; it is mathematically evident, that, when a returning stroke comes to be produced by the sudden removal of the very strong elastic electrical pressure of the electrical atmosphere of a thunder cloud powerfully charged; the strength of such a returning stroke must be enormous.'—' If indeed the quantity of electric fluid naturally contained in the body of a man, for instance, were immense, or indefinite, the author's estimate between the effects producible by a cloud, and those caused by a prime conductor, might be admitted. But surely an electrified cloud,—how great soever may be its extent, and the height of its charge when compared with the extent and charge of a prime conductor—cannot expel from a man's body (or any other body) more than the natural quantity of electricity which it contains. On the sudden removal, therefore, of the pressure by which this natural quantity had been expelled, in consequence of the explosion of the cloud into the earth; no more (at the utmost) than his whole natural stock of electricity can re-enter his body. But we have no reason to suppose that this quantity is so great, as that its sudden re-entrance into his body should

destroy or even injure him." The Reviewers urge several other arguments against the Earl's theory, for which we must refer to their work.

(12.) LIGHTNING, REPRESENTATIONS OF, OR ARTIFICIAL LIGHTNING. Before Dr Franklin discovered the identity of electricity and lightning, many contrivances were invented to represent this terrifying phenomenon in miniature. The corrugations of phosphorus in warm weather, the ascension of the vapour of spirit of wine evaporated in a close place, &c. were used in order to support the hypothesis which at that time prevailed; namely, that lightning was formed of some sulphureous, nitrous, or other combustible vapours, floating in long trains in the atmosphere, which, by some unaccountable means took fire, and produced all the destructive effects of that phenomenon. These representations, however, are now no more exhibited; and the only true artificial lightning is universally acknowledged to be the discharge of electric matter from bodies in which it is artificially set in motion by electrical machines. See ELECTRICITY, *Ind. x.*

(13.) LIGHTNING, SINGULAR ACCIDENT DURING A STORM OF. A late melancholy accident which happened in Scotland afforded Lord Stanhope several additional arguments in favour of his system. An account of this accident is given by Patrick Brydone, Esq; F. R. S. in the 77th vol. of the Phil. Transf. It happened on the 19th of July 1785, near Coldstream on the Tweed. The morning was fine, with the thermometer at 68°; but about 11 A. M. the sky became obscured with clouds in the SE.: and betwixt 12 and 1 a storm of thunder and lightning came on. This storm was at a considerable distance from Mr Brydone's house, the intervals between the flash and crack being from 25 to 30 seconds, so that the place of explosion must have been betwixt 5 and 6 miles off: but while our author was observing the progress of the storm, he was suddenly surprised with a loud report, neither preceded nor accompanied by any flash of lightning, which resembled the explosion of a great number of muskets, in such quick succession, that the air could scarcely discriminate the sounds. On this the thunder and lightning instantly ceased, the clouds began to separate, and the sky soon recovered its serenity. In a little time Mr Brydone was informed, that a man with two horses had been killed by the thunder; and, on running out to the place, our author found the two horses lying on the spot where they had been first struck, and still yoked to the cart. As the body of the man who was killed had been carried off, Mr Brydone had not an opportunity of examining it, but was informed by Mr Bell, minister of Coldstream, who saw it, that the skin of the right thigh was much burnt and shrivelled: that there were many marks of the same kind all over the body, but none on the legs: his clothes, particularly his shirt, had a strong smell of burning; and there was a zig-zag line of about an inch and a quarter broad, extending from the chin to the right thigh, and which seemed to have followed the direction of the buttons of his waistcoat. The body was buried in two days without any appearance of putrefaction. Mr Brydone was informed by another person who accompanied him

that was killed, of the particular circumstance. They were both driving carts loaded with wood, and James Lauder, the person who had the charge of the foremost cart, was sitting on the fore part of it. They had crossed the Tweed a few minutes before at a deep ford, and had almost gained the highest part of a bank about 65 or 70 feet above the bed of the river when he was stunned with the report of lightning, and saw his companion with the cart fall down. On running up to the spot he found him quite dead, with his face pale, his clothes torn in pieces, and a great swelling about him. At the time of the explosion he was about 24 yards distant from Lauder, and had him full in view when he fell, and was not shocked, neither did he perceive any flash of fire. At the time of the explosion the horses turned round, and broke their harness, and the horses had fallen on their left side, and had made a deep impression on the dirt when on lifting them up, showed the exact fracture of the leg, so that every principle of life seemed to have been extinguished at once, without the appearance of any convulsive motion. The hair was never the greatest part of their bodies, but was perceptible on their belly and legs. The eyes were dull and opaque, as if they had been struck, though Mr Brydone saw them in half an hour after the accident happened. The joints were stiff, and he could not observe that any of the bones were broken or dissolved, as is said to be the case with those who are killed by lightning. The left shaft of the cart was broken, and had been thrown off in many places; and the timber of the cart was connected by iron bolts or cramps of iron. Many pieces of the cart were thrown to a considerable distance; and some of them had the appearance of being scorched by fire. Lauder's hat was torn into many small pieces; some part of his hair was united to those which had composed the top of his head. About 4½ feet behind each wheel he observed a circular hole of about 20 inches diameter, the centre of which was exactly in the track of each wheel. The earth was raised up by violent blows of a pick-axe; and stones and dust were scattered on each side of the road. The tracks of the wheels were filled in the dust, both before and behind the cart, but did not in the smallest degree appear to have scorched themselves for upwards of a foot. There were evident marks of fusion on the rims of the wheels; the surface of the whole breadth of the wheel, and for the most part about three inches, was become bluish, and its polish and smoothness, and was full of small drops which projected sensibly, and in a conical form; but the wood did not appear to be injured by the heat which the iron received. To determine whether these marks were produced by the explosion which had torn up the cart, the cart was pushed back on the same track it had described on the road; and the marks of fusion were found exactly to correspond to the centres of the holes. They had made a revolution after the explosion; which is ascribed to the cart being pulled a little

l of the horses. Nothing remarkable was ed on the opposite part of the wheel. The ground had a smell something like that of the soil itself was very dry and gravelly. The catastrophe was likewise observed by a shepherd at the distance of about 200 or 300 yards from the spot. He said, that he was looking at two carts going up the bank when he heard the noise, and saw the foremost man and horses fall; but observed no lightning, nor the least appearance of fire, only he saw the dust rise about the

There had been several flashes of lightning that from the SE.; whereas the accident happened to the NW. of the place where he stood. It is not sensible of any shock. Our author gives an account of several phenomena which happened the same day, and which were evidently connected with the explosion. A shepherd driving his flock in the neighbourhood, observed a dog drop down; and said, that he felt at the time as if fire had passed over his face, though lightning and claps of thunder were at a considerable distance. He ran up to the creature immediately, but found it quite dead; on which he struck it with his knife, and the blood flowed freely from the earth was not torn up; nor did he observe any dust rise, though he was only a few yards from the spot. This happened about a quarter of an hour before Lauder was killed, and the place was about 300 yards distant. About an hour before the explosion, two men standing in the middle of the Tweed, fishing for salmon, were caught in a violent whirlwind, which felt sultry and hot, and most prevented them from breathing. They could not reach the bank without much difficulty; but the whirlwind lasted only a very short time, and was succeeded by a perfect calm. A man making hay, near the banks of the river, suddenly to the ground, and called out that he had received a violent blow on the foot, could not imagine from whence it came; and the minister above mentioned, when walking in his garden, a little before the accident happened to Lauder, felt several times a tremor in the earth. The conclusion drawn from these facts is, that at the time of the explosion an equilibrium between the earth and the atmosphere seems to have been completely restored, as no thunder was heard nor lightning observed; the clouds were dispelled, and the atmosphere resumed the most perfect tranquillity: "But this vast quantity of electric matter (says he) being discharged from the one element to the other without any appearance of fire, I shall not attempt to examine. From the whole it would seem, that the earth had acquired a great superabundance of electrical matter, which was every where endeavouring to fly off into the atmosphere, and it might be accounted for from the excess of dryness of the ground, and for many months past total want of rain, which is probably the cause that nature employs in preserving the equilibrium between the two elements."

LIGHTNING, STANHOPE'S EXPLANATION OF THE ABOVE ACCIDENT, BY A RETURNING OF THE ELECTRICITY. Earl Stanhope, whose observations on this accident are published in the same volume, gives to establish the following positions as  
XIII. PART I.

facts. 1. That the man and horses were not killed by any direct main stroke of explosion from a thunder cloud either positively or negatively electrified. 2. They were not killed by any transmitted main stroke either positive or negative. 3. The mischief was not done by any lateral explosion. All these are evidently true, at least with respect to lightning at that time falling from the clouds; for all the lightning which had taken place before was at a great distance. 4. They were not suffocated by a sulphureous vapour or smell which frequently accompanies electricity. This could not account for the pieces of coal being thrown to a considerable distance all round the cart, and for the splinters of wood which were thrown off from the cart. 5. It might be imagined by some that they were killed by the violent commotion of the atmosphere, occasioned by the vicinity of the electrical explosion, in a manner similar to that, whereby fatal wounds sometimes have been known to have been given, by the air having been suddenly displaced by a cannon ball, in its passage through the atmospherical fluid, though the cannon ball itself had evidently neither struck the person wounded nor grazed his clothes. The dust that rose at the time of the explosion might be brought as an argument in favour of the opinion, that a sudden and violent commotion of the air did occasion the effects produced. But such an explanation would not account for the marks of fusion on the iron of the wheels, nor for the hair of the horses being singed, nor for the skin of Lauder's body having been burnt in several places. 6. From these different circumstances his Lordship is of opinion, that the effects proceeded from electricity; and that no electrical fire did pass immediately, either from the clouds into the cart, or from the cart into the clouds. From the circular holes in the ground, of about 20 inches diameter, the respective centres of which were exactly in the tract of each wheel, and the corresponding marks of fusion in the iron of the wheels, it is evident that the electrical fire did pass from the earth to the cart, or from the cart to the earth, through that part of the iron of the wheels which was in contact with the ground. From the splinters which had been thrown off in many places, particularly where the timber was connected by nails or cramps of iron, and from various other effects mentioned in Mr Brydone's account, it is evident, that there must have been a great commotion in the electrical fluid in all, or at least in different parts of the cart, and in the bodies of the man and horses, although there were no lightning. 7. All these phenomena, his lordship argues, may be explained in a satisfactory manner from the doctrine already laid down concerning the returning stroke. Before entering upon the subject of the main explosion, however, he takes notice of the other phenomena mentioned in Mr Brydone's account. With regard to the case of the lamb, his lordship is of opinion, that it belongs to the most simple class of returning strokes, viz. that which happens at a place where there is neither thunder nor lightning near; and that it may be produced by the sudden removal of the elastic electrical pressure of the electrical atmosphere of a single main cloud, as well as of an assemblage of clouds. It appears (says he) by Mr

Brydone's account, that the shepherd, who saw the lamb fall, was near enough to it to feel, in a small degree, the electrical returning stroke at the same time that the lamb dropped down.—The blow which the woman received on the foot was unquestionably the returning stroke. When a person walking, or standing, out of doors, is knocked down or killed by the returning stroke, the electrical fire must rush in, or rush out, as the case may be, through that person's feet, and through them only; which would not be the case were the person to be killed by any main stroke of explosion either positive or negative. 8. To account for the manner in which the man and horses were killed, his lordship premises, that, according to Mr Brydone's account, the cloud must have been many miles in length; inasmuch as just before the report, the lightning was at a considerable distance, viz. between 5 and 6 miles. The loud report resembled the firing of several muskets so close together, that the ear could scarcely separate the sounds, and was followed by no rumbling noise like the other claps. This indicates, that the explosion was not far distant, and likewise that it was not extremely near: for, if the explosion had been very near, the ear could not at all have separated the sounds. 9. Let us now suppose a cloud, 9, 10, or 12 miles in length to be extended over the earth, and let another cloud be situated betwixt that and the earth; let them also be supposed charged with the same kind of electricity, and both positive. Let us farther suppose the lower cloud to be near the earth, only a little beyond the striking distance; and the man, cart, and horses, to be situated under that part of the cloud which is next the earth, and to be exactly as described by Mr Brydone, viz. near the summit of a hill, and followed by another a little farther down; and let us suppose the two clouds to be near each other just over the place where the man and horses are: Let the remote end of the cloud approach the earth, and discharge its electricity into it. In this case the following effects will take place: 10. When the upper cloud discharges its electricity into the earth from the remote end, the lower cloud will discharge its electricity into the nearer end of the upper cloud, which is supposed to be directly over the place of the cart and horses, or nearly so. This accounts for the loud report of thunder that was unaccompanied by lightning. The report must be loud from its being near; but no lightning could be perceived, by reason of the thick cloud situated immediately between the spectator and the space betwixt the two clouds where the lightning appears. 11. As the lower cloud gradually approached towards the earth, that part of the latter where the man and horses were, must of course become superinduced by the elastic electrical pressure of the electrical atmosphere of the thunder cloud; which superinduced elastic electrical pressure must gradually have increased as the cloud came closer to the earth, and approached nearest to the limit of the striking distance. 12. Hence, if any conducting-body (not having prominent or conducting points) were to be placed upon the surface of the earth, and there electrically insulated; then such conducting body, by the laws of electricity, must, at its upper extre-

mity (namely the part nearest to the positive cloud) become *negative*; at its lower extremity it must become *positive*; and, at a certain intermediate point, it will be neither *plus* nor *minus*. This insulated conducting body, thus situated, will be in three opposite states at the same time, that is to say, it will be, at the same time positively electrified, negatively electrified, and not electrified at all.—For a demonstration of this proposition, his lordship refers to his *Principles of Electricity*; but it is an established fact in electricity. 13. If this conducting body on the surface of the earth be not insulated, or be but imperfectly insulated, then the whole of such body, from its being immersed in the electrical atmosphere of the positive cloud, will become negative; because part of the electricity of the conducting body will in this case pass into the earth; and the conducting body will become the more negative, as it becomes the more deeply immersed into the denser part of the elastic electrical atmosphere of the approaching thunder cloud. 14. When the lower cloud comes suddenly to discharge with an explosion its superabundant electricity into the upper one, then the elastic electrical atmosphere of the former will cease to exist; consequently the electrical fluid, which had been gradually expelled into the common stock from the conducting body on the surface of the earth, must, by the sudden removal of the superinduced elastic electrical pressure of the electrical atmosphere of the thunder cloud, suddenly return from the earth into the said conducting body, producing a violent commotion similar to the pungent shock of a Leyden jar in its sensation and effects. 15. This, which his lordship calls *the electrical returning stroke*, he supposes to have been what killed the man and horses in the present case, they having become strongly negative before the explosion. The man, according to Mr Brydone's account, was sitting when he received the stroke, and his legs were hanging over the fore part of the cart at the time of the explosion. The returning stroke, therefore, could not enter his body through the legs; and this accounts for the skin of his legs not having been at all burnt or shrivelled, as the skin was on many other parts of his body; and it likewise shows the reason why the zig-zag line, which was terminated by the chin, did not extend lower than the thigh. 16. Mr Brydone likewise informs us that the hair of the horses was much singed over the greatest part of their bodies, but was most perceptible on the belly and legs. This is easily accounted for by the returning stroke; for the lower part of the bodies of these animals must of course have been more affected than any other part, as the electrical fire must have rushed suddenly into their bodies through their legs, which had made a deep impression on the dust. 17. The various effects produced on the cart may be explained also from the returning stroke with equal facility. The splinters were thrown off by the interruption of good conductors; the wood being a much less perfect conductor than the iron. It is also evident that it was the electrical returning fire that produced the marks of fusion on that part of the iron of the wheels which was in contact with the ground; inasmuch as the whole electricity, at th

of the explosion, did enter at these places. A person in the least versed in the principles of electricity can hesitate to assent to the proposition that the electrical returning stroke must exist in circumstances similar to those explained above; but it may be objected, as the reviewers have done, that the quantity of electricity contained in the body of a man, &c. is too small to produce such violent effects. For answer to this objection, his lordship refers to the following remarks: 19. No person can possibly conclude, that the force of a returning stroke must always be weak when produced by the disturbed electrical fluid of a man's body; by reason that a man's body contains but a small quantity of electricity; for it has never been proved that a man's body contains only a small quantity of electrical fluid; neither is there the slightest reason to believe such an hypothesis, appears, on many accounts, to be erroneous; and if that hypothesis be erroneous, the objection to the strength of an electrical returning stroke remains altogether unsupported by argument. "When a body is said to be positive (says his lordship), it simply means, that the body contains more than its natural share of electricity, but does not say that it is completely saturated with it. In like manner, when a body is said to be minus or negative, it only signifies, that the body contains less than its natural share of electricity; but does not imply that such a body is entirely exhausted of the electricity which it contains in its natural state. Now (says he), the quantity of natural electricity is so immense, when compared with the very weak effects of our largest artificial contrived electrical machines, that I conceive cannot, by means of artificial electricity, produce from a man's body, the thousandth, or the ten-thousandth part of the electrical fluid that it contains when in its natural state." 20. The hypothesis, which easily accounts for any natural phenomenon, has a much better claim to our attention than an opposite one, which prevents it from being intelligibly explained. There is no reason to conclude that any electrical machine, of any size, is capable of rendering a conductor either completely plus or completely minus; or otherwise. And it would have been as long ago as any person some years ago (when electrical machines were not brought to their present perfection) have maintained, that those very imperfect machines were capable of rendering a body either completely positive or completely negative, as for us to attempt to do it at this day. We evidently do not, with our machines, even approach the limit of electrical strength, particularly in relation to the returning stroke: for it is remarkable, by the laws of electricity, the strength of the returning stroke, near the limit of the striking distance, does increase in a greater ratio than the strength of the main stroke from the distance; and the body producing the elastic electrical atmosphere superinduced. Thus, let us attempt to produce the returning stroke by means of a metallic conductor of about 20 or 21 inches in length and about 2 inches in diameter; and by means of a metallic body of equal dimensions pla-

ced parallel to the prime conductor, just out of the limit of the striking distance; and let the prime conductor be charged by one of the common glass globes of less than 9 inches in diameter; the returning stroke in this case will be so weak, that it can hardly be said to exist: but if the experiment be made by a large cylinder, and a metallic prime conductor of about 3 feet 4 inches long, by nearly 4½ inches diameter, and also by another metallic body of equal dimensions with this prime conductor, then there will be no comparison betwixt the strength of the returning stroke obtained out of the striking distance, and the strength of the main stroke received immediately from the prime conductor; the sharpness and pungency of the returning stroke being so much superior. The returning stroke in this case is like the sudden discharge of a weakly electrified Leyden jar, provided due attention be paid to the rules for obtaining a strong returning stroke. 21. In the case of a returning stroke, the strength depends, according to his lordship's hypothesis, not so much on the quantity of the electric fluid, as on its velocity; whence also it depends less on the quantity of surface used than on the strength of the electrical pressure of the elastic electrical atmosphere superinduced upon the body struck previous to the explosion. But the electrical pressure of the elastic electrical atmosphere of the great thunder cloud which produced the mischief on the present occasion, must have been immensely greater than that of a metallic prime conductor; and it is not surprising that the effects should be proportioned to the causes. 22. His lordship next accounts for the returning stroke not being felt by the man who followed Lauder's cart. This, he thinks, may in some degree be accounted for by the latter having been higher up the bank; though it may better be done by supposing the cloud to have been pending nearer the earth over the spot where Lauder was killed, than over the place where his companion was; for, in order to receive a dangerous returning stroke, it is necessary that he should be immersed, not merely in the cloud's atmosphere, but in the dense part of the cloud's electrical atmosphere. It may also be accounted for by supposing that the cart were either better connected with the common stock, or better insulated; for either of these circumstances will weaken a returning stroke prodigiously. Now Mr Brydone mentions, that there had been an almost total want of rain for many months. He also says, that the ground, at the place where Lauder was killed, was remarkably dry, and of a gravelly soil. This state of the ground was particularly adapted to the production of the electrical returning stroke, when produced upon the large scale of nature, where the elastic electrical pressure is so powerful.

(15.) LIGHTNING, STANHOPE'S THEORY OF, OBJECTED TO. To the above theory of his lordship, some objections have been made; and founded on experiments published in the *Genl. Mag.* for 1785. These were made with an insulated rod of iron of considerable length, rising some feet higher than a common conductor placed at the other end of the house. A set of bells were affixed to the former, which in a thunder storm, even when the thunder was 4 or 5 miles distant, were

ring by the electricity of the atmosphere; but whenever a flash of lightning burst from the cloud, even though at the distance just mentioned, the *faucibus* passed through the conductor also, and the balls ceased to ring sometimes for several seconds; then they began again, and continued to ring till they were stopped by another flash. This flash was undoubtedly what earl Stanhope calls *the returning stroke*; of which we shall give some explanation. In considering the whole doctrine of that stroke, with the explanation laid down by his lordship, the following observations occur.

1. In the experiments made by his lordship to demonstrate the existence of the returning stroke, there is a deception, of which the reviewers take notice, viz. that the man touches a large prime conductor, which, by the operation of the machine, becomes negatively electrified as well as himself. Hence when the discharge is made, all the fire returning to that conductor must pass through his body as well as that of which his body itself is supposed to be deprived; and this, though no other cause intervened, must nearly double the strength of the shock. To make the experiment more fairly, it would be necessary to take away this second conductor, and let the man only touch the brass ball communicating with the earth.

2. In this experiment there is another deception, not taken notice of by the reviewers, viz. that any body immersed in a positive electrical atmosphere becomes negative. Hence the 2d conductor, by being applied to the air positively electrified by the machine, becomes almost as strongly negative as if another machine had been applied to it on purpose; and this negative electricity will be the stronger in proportion to the strength of electricity in the air surrounding it. Again, a plate of air may be charged by two smooth pieces of metal held at a small distance from each other, one of them connected with an electrical machine, and the other with the earth. Now supposing, instead of the usual communication, that a man standing upon an insulating stool, held the lower metallic plate in one hand, and with the other hand touched the earth, or a conductor communicating with it, it is plain, that by touching the upper plate, the electricity acquired by the air between them would be discharged, and that the man would feel what earl Stanhope calls *the returning stroke*; but which in truth is the shock of a charged electric substance, and would therefore be proportionably pungent. Now, in his lordship's experiments, the two conductors answer exactly to the two metallic plates above mentioned; the air between them receives a charge, and is discharged by the explosion from the prime conductor, because this conductor forms one of the charging plates. It is true, that the round shape of the conductors renders them unfavourable for trying the experiment; and this is one reason why it requires a great power of electricity to make the returning stroke sensible. The thickness of the plate of air interposed betwixt the two conductors is another reason: but this makes no difference as to the principles; for his lordship's experiment is undoubtedly no other than that of the Leyden phial. Were his lordship to use two flat plates instead of round con-

ductors, the deception would then be removed, and we may venture to determine *a priori*, that the returning stroke would then be not only very severe, but even *dangerous*, with a very powerful machine and large plates.

3. Though the 2d conductor were entirely removed, yet there would still be a deception in this experiment, for then the surface of the man's body would act in some measure as one of the metallic plates; so that still the experiment would be on the principles of the Leyden phial, though much weaker than before.

4. To make this experiment absolutely without deception, the man should stand upon the ground without touching any thing; and in that case we may venture to affirm, that he would feel no returning shock. His being insulated varies the nature of the experiment entirely, as will easily be understood from the following considerations. Under the article ELECTRICITY, it is shown, that *positive* electricity does not consist in an *accumulation*, nor *negative* electricity in a *deficiency*, of the fluid; but that all electric phenomena are to be accounted for from the mere *motion* of the fluid; and that this motion is always a circulation. It is proved, that in the working of a common machine, the electric fluid comes from the earth; that it is accumulated around the prime conductor; evaporates in the air; and is then silently absorbed by the earth, and reconducted to the machine. Hence, in the charging of a machine which works positively, the earth, and all bodies on its surface, for some way round, are in a negative state; because they are absorbing the electrical fluid from the atmosphere. That part of the earth indeed directly under the feet of the machine, and perhaps some little way farther, is *positive*; because it is *giving out* electricity: but the negative portion will be much more extensive. When the conductor is discharged by a spark, then the circulation ceases in a great measure by the collision of the two opposite streams of electric matter. All bodies on the surface of the earth then, as far as it was negatively electrified, must receive what his lordship calls *the returning stroke*; but the electricity being diffused among such a number, and over such a wide extent, it is no wonder that it should be insensible. If, however, we insulate a large conducting body, and then make another part of it communicate with the earth by means of a good conductor, we instantly put it in a situation fit for transmitting more than its share of the electricity of the atmosphere, and reducing it to the state of the insulated rubber of an electrical machine, through which the whole quantity of electricity must pass to the phial held towards it, in order to be charged negatively. In proportion to this quantity transmitted the shock must be, not because the conductor has lost a large share of its *natural* electricity, but because a large quantity is *artificially* made to pass through it. We may therefore safely venture to assert that, in thunder storms, unless a body transmits *more than its natural proportion* of electric matter no shock will be felt; much less can the person be killed.

5. In his explanation of the accident which happened to Lauder, his lordship is reduced to the great difficulty, and makes one of the most metaphysical mistakes in the world; no less

of arranging the clouds of heaven, not to fact, but according to his own imagination. He supposes the existence of two clouds, the other, and ascribes to them various situations; but who knows whether clouds ever existed? His Lordship does not say that any body ever saw them; and he does not say into what is termed by logicians a *de*: he first assumes data, purposely accord with his hypothesis, and then he deduces his hypothesis from the data. 6. Granting the arrangement of the clouds, and every thing his lordship desires, the main requisite thing, viz. a flash of lightning at a distance from the returning stroke. According to the account of the distant flash and returning stroke must be the same; but Mr Brydone mentions no such thing; on the contrary, there had been no such thing some little time before: and the immense quantity of the electric fluid will not allow us to suppose that it would take up the usual time between claps in travelling 5 or 6 miles. 7. Mr Brydone accounts for no lightning being seen at the explosion in a very arbitrary manner, by supposing it to have come from a discharge of the one imaginary cloud to the other; and that it was not seen on account of the thickness of the lower cloud. A more natural supposition must be, that it was below the cart-wheels, but was not accounted of its being day-light, and the dust which it raised. The succession of explosions, indicated a succession of explosions, some of which would be less easily observed than the single large one. 8. It seems altogether inconsistent, that the return of any quantity of electricity into a body should shatter that body into pieces. In the present case, the fire entered a small part of the iron of the wheels, and that part was melted. His lordship does not say, that the fusion was a proof, that the fire belonging to the cart, man, and horse, at least to the cart and man, had entered that part of the wheels, and consequently that the iron naturally belonged to that small part. The same evidence, however, will hold good in regard to every other part. We grant that the fire entered the man's body by his right hand; his might have therefore been burnt by the fire belonging to the whole body; but he ought then to have quietly diffused itself through the other parts of his body, or at least if it had been done, it ought to have been diffused to the internal parts. Instead of this, the zig-zag line upon his body indicated a quantity of electric matter running along the length of the body without entering the body at all. In like manner his hat being torn in pieces, indicated an explosion of electric matter at his head, and he ought to have been little or no external wound could be wanted there except that his hat had parted with; and it is ridiculous to suppose that hats part with such quantities of electricity as would tear them in pieces by themselves. The shivering of the cart, the burning about of the coals, and all the circumstances of the case, also point out in the most manifest manner, not a quantity of electric

matter returning to supply any natural deficiency, but an enormous explosion of that matter from the earth overwhelming and destroying whatever stood in its way. That two explosions were made from the earth is very evident, because there were two holes in it; and the very size of these holes indicates a much greater discharge of electricity than we can reasonably suppose to have been lost by the man, horses, and cart. We shall now consider the experiment quoted from the correspondent in the *Genl. Mag.* These, as well as the accident under consideration, undoubtedly show, that, during the time of a thunder storm, both atmosphere and earth are affected for a very considerable way. With regard to the quantity of this electrical affection, however, though it must undoubtedly be excessive when taken all together, we can by no means agree that it is so taken partially. From an experiment related in the Magazine above quoted, it appears, that the electricity of a violent thunder storm extends sometimes over a circle of 100 miles diameter. "Electricity (says the author) seldom appeared without a shower; but I was surpris'd, on the 5th of June 1784, that the bells rang with thin and very high clouds, and without the least appearance of rain, till the next post brought me an account of a violent thunder storm, and very destructive hail, at a village 50 miles distant." We cannot suppose, that all this space was electrified like a charged phial; otherwise, great as the explosions of lightning are, they would still be much greater. This is evident even in our electrical machines. A single phial may be charged much higher than a battery, as appears by the electrometer; but the battery, though less charged, will have incomparably more power than a single phial. His lordship appears to have deceived himself in this matter, by mistaking the extent of the electrified surface for the quantity of charge in every part of it. The surface of the earth in a thunder storm is exactly similar to that of a charged conductor. According to the extent of electrified surface, the spark will be great or small; and just so it is with lightning, for some kinds of it are much more destructive than others. In all cases, however, the quantity of electricity in a particular spot is very inconsiderable. Lightning strikes bodies, not because they are highly electrified, but because they afford a communication betwixt the atmosphere and some place below the surface of the earth. This stroke is the aggregate of the whole electricity contained in a circle of probably many miles in diameter; but the returning stroke, if bodies are in their natural state, can only be in proportion to the quantity of electricity in each substance contained within that space. It is in fact the lightning itself diffused through the earth which makes the returning stroke; and it is impossible that every substance within two or three miles of the explosion can receive the whole flash, or another equal to it. It is only in cases where the quantity of electricity, diffused through a great space, happens to discharge itself through a human body or other conducting substance of no great bulk, that the effects upon the latter can be any way considerable. This was undoubtedly the case with the thunder

rod mentioned by the correspondent in the Magazine; for it received either from the atmosphere or from the earth, at the time of every flash, the whole quantity of electricity which had been diffused for a considerable way round. Pointed bodies, we know, draw off electricity very powerfully; inasmuch that an highly charged jar may be deprived of almost all its power by merely presenting a needle to it. We can be at no loss therefore to understand why a pointed conductor should draw off the electricity from a large portion of the surface of the earth, or from a considerable portion of atmosphere. We must now, however, inquire into the reason of these appearances of sparks in places at such distance from the explosion of the lightning. To understand this, we must always keep in our eye that principle so fully explained under ELECTRICITY, viz. that there never is, nor can be, a real deficiency of the electric fluid in any substance or in any place. It is to be considered as an absolute *plenum*, and of consequence it can have no other motion than a circulatory one. At every discharge of lightning therefore from the clouds into the earth, or from one cloud into another, there must be a return of the same quantity to those clouds which have made the discharge. In the vast extent of electrified surface, some part of these returns must undoubtedly be made at great distances from the place where the explosion of lightning happens. As long as matters remain in their natural state, the electric matter will return by innumerable passages in such small streams, that no perceptible effect upon any single substance can take place. But if a body be so situated, that a large portion of the electric matter must return through it from the earth, then such body will undoubtedly be more affected by every flash than the rest of the substances around it; and if the communication with the earth, be interrupted, a flash of fire will be perceived betwixt the conducting substance and the earth at the time that a flash bursts out from the cloud. The strength of such a flash, however, must by no means be supposed equivalent to that of the main stroke of lightning, unless we could suppose the whole electrical power of the vast circle already mentioned to be discharged through the conductor. But though this may explain the reason of the sparks or flashes observed in the case of the thunder rod just mentioned, we cannot from this principle account for the accident which befel the man and horses. There was indeed at that time a very violent emission of electricity from the earth, but no distant flash of lightning happened at the same moment with it, to expel the electricity from the earth. It appears therefore, that the electricity had in this case been accumulating in the earth itself, in a manner similar to that which produces earthquakes; and which is fully explained under that article. (See EARTHQUAKE, § 22.) The thunder storm was the natural means employed to supply that part of the earth with electricity, which was in the state of charging; and the moment that the quantity thus supplied was thrown back, all signs of electricity must cease, as much as when that thrown in upon one side of a Leyden phial is again thrown off. Hence, when the flash burst out of the earth, and

killed the man and horses, that portion which absorbed the electricity till then it no longer; and of consequence the storm occasioned by this absorption nullified. That this disposition to an earth really prevail in the earth at that time, from the tremor which Mr Bell felt on when walking in his garden. The first the woman received on the foot, the d lamb, and many similar circumstances, to show that there was an attempt to equilibrium from the earth, as has been related. The same disposition to an however, was afterwards renewed; on 11th of August that same year, a smart earthquake did actually take place, done informs us.

(16.) LIGHTNING, ULTIMATE CAUSE RAIN and THUNDER.

LIGHT-ROOM, a small apartment, in glass windows, near the magazine of a ship. It is used to contain the lights by which the crew and his assistants are enabled to fire the powder to be ready for action.

\* LIGHTS. *n. s.* [Supposed to be called their lightness in proportion to their breathings; the organs of breathing: we find in other animals, and *lungs* of men.—The word was chiefly from the *lights*, a part as of sense, so no seat for any sharp disease.

\* LIGHTSOME. *adj.* [from *light*.] Not dark; not obscure; not of other the sun, nor any thing sensible is itself, which is the cause that things as though it make itself, and all things else. *Raleigh*.—White walls make rooms more than black. *Bacon*.—Equal posture, spirits, are required to make colour. *Bacon*.—

The sun

His course exalted through the ram  
Through Taurus, and the *lightsome*  
love.

2. Gay; airy; having the power to cheer. It suiteth so fitly with that *lightsome* joy, wherein God delighteth when his him. *Hooker*.—The *lightsome* passion not that which now often usurps the trivial, vanishing, superficial thing that the apprehension, and plays upon the soul. *South*.

\* LIGHTSOMENESS. *n. s.* [from 1. Luminousness; not opacity; not obscurity.—It is to our atmosphere variety of colours, which are painted on the *lightsomeness* of our air, and the t owing. *Cheyne*. 2. Cheerfulness; merriness.

LIGNAC, a town of Germany, in Silesia.  
(1.) LIGNAC, a town of France, in the department of Indre, 13½ miles SW. of Argentan.  
(2.) LIGNAC, Joseph Adrian DE, a French mathematician, born at Poitiers, who published works, particularly Letters to an American concerning Buffon's Natural History. Rome in 1762.

\* LIGNALOE. *n. s.* [*lignum aloes*.] The aloes wood.—The valleys spread forth

er's side, as the trees of *lignales* which hath planted, and as cedar trees beside : *Numb.* xxiv. 6.

ANA, a town of the French republic, in the province of Piedmont, and late lordcell; 6 miles WSW. of Vercelli.

ANE, a town of France, in the dep. of the Loire, 9 miles NW. of Ancenis.

ANE, a town of the French republic, in the department of Gemappes, and late province of Hainault, on the Dender, 12 miles Mons, and 20 N. of Valenciennes. Lon. Lat. 50. 35. N.

ANE SUR USSEAU, a town of France, in the department of Vienne, 7 miles N. of Châtelleraud 17½ ESE. of Loudun.

NEOUS. *adj.* [*lignous*, Lat. *ligneus*, Fr.] wood; wooden; resembling wood.—It is tried with shoots of vines, and roots of ; for it may be they, being of a more *lignure*, will incorporate with the tree itself. Ten thousand seeds of the plant hartsardly make the bulk of a pepper-corn: covers, and the true body of each seed, chymous and *lignous* part of both, and of those parts, multiplied one by another a hundred thousand millions of forms, but how many more we cannot determine.

EROLLES, a town of France, in the department of the Allier, 4 miles S. of Montluçon.

ET, *n. f.* among goldsmiths, a longitudinal iron mould, made for receiving melted gold or silver. It has a large hollow for the iron, and a small one for the latter. See

2. This word is by some derived from wood; ingots of gold and silver having usually at first thrown into lignets made of hard wood; till their rapid consumption melted metal had shown the necessity of them of more durable stuff. They are made of iron, and are also called *ingots*.

EVILLE, a town of France, in the department of Vosges, 6 miles NW. of Darney, and Marche.

CENSIS TERRA, in the materia medica, now bole dug in many parts of Germany, particularly about Emeric in Westphalia, and used in medicinal and astringent complaints.

NIERE, or } a town of France, in the }  
NIERES, } department of Cher, and }  
nce of Berry, with a castle, 24 miles S. }  
N, and 13½ SE. of Issoudun. Lon. 2. 24. }  
N. 47. N.

NIERES CHATELAIN, a town of France, in the department of Somme, 18 miles W. of Amiens.

NIERES LA DOUCELLE, a town of France, in the department of Maine, 12 miles N. of Alençon, and 1½ NW. of Alençon.

NON, a river of France, which runs near Tours.

NON, a town of France, in the department of Sarthe, 9 miles S. of Vitry.

IM, [*Lat. wood.*] forms part of the name of plants, and vegetable substances; as, *LIQUOR ALOES*. See *EXCORIARIA*.

(2.) LIGNUM CAMPECHENSE. See *HÆMATOPYLUM*.

(3.) LIGNUM COLUBRINUM. See *OPHIORRHIZA*.

(4.) LIGNUM NEPHRITICUM. See *GUILANDINA*.

(5.) LIGNUM RHODIUM, or ROSEWOOD, in the materia medica; a wood, or root, chiefly brought to us from the Canary islands. The writers on botany and the materia medica are much divided about the lignum rhodium, not only with regard to the plant which affords it, but likewise in their accounts of the drug itself; and have described, under this name, simples manifestly different. This confusion seems to have arisen from an opinion, that the RHODIUM, and the ASPALATHUS, an article of considerable esteem among the ancients, but with regard to which the moderns are very much at a loss, are the same; whence different woods brought into Europe for the unknown aspalathus, were sold again by the name of *rhodium*. In those modern pharmacopœias which admit the lignum rhodium, different Linnean names are given to it: thus the authors of the *Dispensatorium Brunsvicensis* suppose it to be the *Rhodiola rosea* of Linnæus; and those of the *Pharmacopœia Rossica*, the *Genista Canariensis*. As to *Aspalathus*, the ancients themselves disagree; Dioscorides meaning by this appellation the wood of a certain shrub freed from the bark, and Galen the bark of a root. At present we have nothing under this name in the shops. What was heretofore sold among us as aspalathus, were pieces of a pale coloured wood brought from the East Indies, and more commonly called *calambour*. The aspalathus, calambour, and lignum aquilæ, are supposed to be woods of the nature of agallochum, or lignum aloes, but weaker in quality. The lignum rhodium of the shops is usually in long crooked pieces, full of knots, which when cut appear of a yellow colour like box, with a reddish cast: the largest, smoothest, most compact, and deepest coloured pieces, should be chosen; and the small, thin, or pale ones, rejected. The taste of this wood is lightly bitterish, and somewhat pungent; its smell is very fragrant, resembling that of roses: long kept, it seems to lose its smell: but on cutting, or rubbing one piece against the other, it smells as well as at first. Distilled with water, it yields an odoriferous essential oil, in very small quantity. Rhodium is at present in esteem only upon account of its oil, which is employed as a high and agreeable perfume in scenting pomatums and the like. But if we may reason from analogy, this odoriferous simple might be advantageously applied to more useful purposes; a tincture of it in rectified spirit of wine, which contains in small volume the virtue of a considerable deal of the wood, bids fair to prove a serviceable cordial, equal perhaps to any thing of this kind.

(6.) \* LIGNUM VITÆ. [*n. f. Latin.*] Guaiacum; a very hard wood.

(7.) LIGNUM VITÆ. See *GUIACUM*.

(1.) LIGNY, a town of France, in the department of the Meuse, and late duchy of Bar, with a castle on the Orney, 9 miles SE. of Bar Le Duc, and 125 SE. of Paris. Lon. 5. 26. E. Lat. 48. 39. N.

(2.) LIGNY

(2.) LIGNY LE CHATEAU, a town of France, in the dep. of Yonne, 9 miles NE. of Auxerre.

LIGON, a sea port of Siam, in Malacca, capital of a territory so named, with a magazine belonging to the Dutch E. India Company, on the E. coast. Lon. 100. 5. E. Lat. 7. 40. N.

(1.) LIGONIER, John, Earl Ligonier, a brave English general, and field marshal, in the British army, born in 1678. He served in all Q. Anne's wars, under the great D. of Marlborough, with high reputation, and was employed in several succeeding wars. He died in 1770, aged 92.

(2.) LIGONIER, a fort of Pennsylvania, 36 miles E. of Pittsburg. Lon. 79. 15. W. Lat. 40. 16. N.

LIGOR, a kingdom of Asia, with its capital of the same name, subject to Siam.

LIGUEIL, a town of France, in the department of Indre and Loire, 9 miles SW. of Loches, and 21 SE. of Tours. Lon. 0. 52. E. Lat. 47. 3. N.

LIGUEUX, a town of France, in the department of Dordogne, 9 miles NNE. of Périgueux.

LIGULATED, *adj.* among botanists, an appellation, given to such siliques as have a straight end turned downwards, with three indentures, but not separated into segments.

LIGUNY, a town of Poland, in Samogitia.

(1.) \* LIGURE. *n. f.* A precious stone.—The third row a *ligure*, an agate, and an amethyst. *Exod.*

(2.) The LIGURE, in Hebrew antiquity, was the first stone in the 3d row of the high priest's breastplate, and had the name of *Gad* inscribed on it. *Exod.* xxviii. 19. It is said to have been spotted like the ounce. Some suppose it to be the jacinth.

(1.) LIGURIA, in ancient geography, a country of Italy, bounded on the S. by the Mediterranean sea, on the N. by the Appennine mountains, on the W. by part of Transalpine Gaul, and on the E. by Etruria.

(2.) LIGURIA, or the *l* in modern geography, LIGURIAN REPUBLIC, the modern as well as the ancient name of the ci-levant republic of Genoa, since its constitution was new-modelled in 1797, upon the French plan, then existing, by Gen. Bonaparte. See FRANCE, § 61; and GENOA, § 1, 3, and 5. Of its present constitution we can say nothing, as, like most of the other modern republics, it appears to be still in a revolutionary state; and, if we may credit the public papers, is reverting fast back to the old system; in so much that the aristocratic title of *Doge* is lately restored to the first magistrate; as a prelude, perhaps, to the restoration of the royal title of *King*, to the executive power in France. For a recapitulation of the chief events that occurred in this state during the late war, See REVOLUTION, and WAR.

LIGURIANS, the ancient inhabitants of LIGURIA. There is a great disagreement among authors concerning their origin, though most probably they were descended from the Gauls. Some carry up their origin as far as the fabulous heroes of antiquity; while others trace them from the *LIGYES*, a people mentioned by Herodotus as attending Xerxes in his expedition against Greece. They are by some ancient geographers placed in Calchis; by others, in Albania. According to Diodorus Siculus, the Ligurians led a very wretched

life; their country being entirely overgrown with woods, which they were obliged to pull by the roots, in order to cultivate their land, and was also encumbered with great stones, and being naturally barren, made but very poor ret for all their labour. They were much add to hunting; and, by a life of continual exertion and labour, became so strong, that the whole of Liguria was generally an overmatch for the strongest and most robust among the Gauls. Women are said to have been almost as strong as the men, and to have born an equal share in all their laborious enterprises. With all their bravery however, they were subdued by the Romans about A. A. C. 211.

LIGUSTICÆ ALPES, that part of the Alps which borders on the Ligurian republic; called the MARITIME ALPS.

1. LIGUSTICUM, in botany, *LOVAGE*, genus of the digynia order, in the pentandria of plants; and in the natural method ranking under the 45th order, *Umbellatæ*. The fruit is long, and quinquefalcated on each side; the rays are equal; the petals involuted or rolled wards and entire. There are 7 species: the remarkable are these:

1. LIGUSTICUM LEVISTICUM, the common *lovage*, is a native of the Apennine mountains of Italy. It has a thick fleshy, deeply perennal root, crowned by very large, many-corded, radical leaves, with broad lobes, having serrations at top, upright, strong channelled branches 6 or 7 feet high, and all the branches terminated by yellow flowers in large umbels. The root agrees nearly in quality with the *ANGELICA*: the principal difference is, that the *lovage* root has a stronger smell, and a what less pungent taste, accompanied with a durable sweetness, the seeds being rather more than the root; but although certainly capable of being applied to useful purposes, is not used in the present practice.

2. LIGUSTICUM SCOTICUM is a native of Scotland, and grows near the sea. It has a thick, fleshy, penetrating, perennal root, crowned with large doubly trifoliated leaves, with broad, indented lobes, upright round stalks, half a foot high, terminated by small yellow umbels. The leaves are sometimes eaten raw as a salad, or used as greens, by the inhabitants of the Hebrides. The root is reckoned a good carminative. It gives an infusion of the leaves in whey to calves to purge them. Both these species are easily propagated by seeds sown in spring and autumn.

(II.) LIGUSTICUM MARÆ, the N. part of the Tyrrhene Sea; now called the Gulf of Genoa. See GENOA, § 4.

LIGUSTRUM, PRIVET, in botany, a genus of the monogynia order, belonging to the pentandria class of plants; and in the natural method ranking under the 44th order, *Scpiarie*. The corolla is quadrid; the berry tetraspermous. There is but one species; of which there are two varieties, viz.

1. LIGUSTRUM DECIDUUM, the deciduous

2. LIGUSTRUM SEMPERVIRENS, the evergreen *privet*. They are hardy plants, rising from 1

et high, adorned with oblong entire leaves, spikes of infundibuliform oblong white flowers, succeeded by black berries. They are easily propagated by seed, layers, suckers, or cuttings. They are used for making hedges. The purple is upon cards is prepared from the berries. In the addition of alum, these berries are said to be wool and silk of a good durable green; for which purpose they must be gathered as soon as they are ripe. The leaves are bitter and slightly astringent. Oxen, goats, and sheep, eat the plant; and refuse it.

**LYCIES**, an ancient nation of Asia, who inhabited the country between the Phasis and Caucasus, though some place them elsewhere. *Herodot.*  
2. See **LESCUIS**, and **LIGURIANS**.

**LYRGUM**, a mountain of Arcadia.

**LONS**, a town of France, in the dep. of the north; 9 miles SSW. of Peronne, and 18 E. of Arras. Lon. 20. 25. E. Ferro. Lat. 50. 15. N.

**KAVA**, a town and fort of Hungary.

**L I K E**. *adj.* [*lic*, Saxon; *liik*, Dutch.] Resembling; having resemblance.—Whom art thou like in thy greatness? *Ezek.* xxxi. 2.—His son, or one of his illustrious names, shall be like the former, and almost the same! *Dryd.* The earth was designed for the being of men, might not all other planets be created for the same, each for their own inhabitants? *Bentley.* His plan, as laid down by him, looks liker an artificial art than a distinct logic. *Baker on Lurn.*  
2. Equal; of the same quantity.—More clerical were impoverished by the late war, than in the like space before. *Spratt.* 3. [For *like*—probable; credible.—The trials were made, that is like that the experiment would have been successful. *Bacon.* 4. Likely; in a state that gives rise to probable expectations. This is, I think, an improper, though frequent use.—If the duke continues these favours towards you, you are like to be much advanced. *Shak.*—He is like to die for want of bread. *Fer.* xxxviii. The yearly value thereof is already increased more than of that it was within these few years, and it is daily to rise higher. *Darvies.*—Hopton refused to visit Waller's quarter, that he might know whether he were like to pursue his purpose. *Madon.*—Many were not easy to be governed, but like to conform themselves to strict rules. *Clarend.*—If his rules of reason be not better suited to his mind than his rules for health are fitted to his body, he is not like to be much followed.

**L I K E**. *adv.* 1. In the same manner; in the same manner as: it is not always easy to determine whether it be adverb or adjective.—The joyous nymphs, and lightfoot fairies, which thither came to hear their musick sweet, when they were hearing them so heavily lament, were so heavily lamenting from them went. *Spens.*—As a father pitieth his children, so the Lord pitieth them that fear him. *Psal.* ciii. 13.—Are we not malicious, malicious and revengeful?—We are to be like-minded with Christ, who was lowly? *Tillotson.*

What will be my confusion, when he sees me rejected, and forsaken like himself. *Phillips.*

They roar'd like lions caught in toils, and rag'd like *Waller.*

2. In such a manner as befits.—Be strong, and quit yourselves like men. 1 *Sam.* iv. 9. 3. Likely; probably. A popular use, not analogical.—

I like the work well, ere it be demanded,

As like enough it will, I'd have it copied. *Shak.*

(3.) \* **L I K E**. *n. s.* [This substantive is seldom more than the adjective used elliptically; *the like* for *the like thing, or like person.*] 1. Some person or thing resembling another.—

He was a man, take him for all and all,  
I shall not look upon his like again. *Hamlet.*

Every like is not the same, O Cæsar! *Shak.*

—Though there have been greater fleets for number, yet for the bulk of the ships never the like. *Bacon.*—Aibeit an eagle did bear away a lamb in her talons, yet a raven endeavouring to do the like was held entangled. *Hayward.*

One offers, and in offering makes a stay;  
Another forward sets, and doth no more;

A third the like. *Daniel.*

His desire  
By conversation with his like to help,  
Or solace his defects. *Milton.*

—Two likes may be mistaken. *L'Estrange.*

This might their mutual fancy strike,  
Since ev'ry being loves its like. *Swift.*

2. Used with *bad*; near approach; a state like to another state. A sense common but not just; perhaps *bad* is a corruption for *near*.—Report being carried secretly from one to another in my ship, *bad* like to have been my utter overthrow. *Raleigh.*

(1.) \* **T O L I K E**. *v. a.* [*lican*, Saxon; *liikēn*, Dutch.] 1. To chuse with some degree of preference.—As nothing can be so reasonably spoken as to content all men, so this speech was not of them all liked. *Knollet.*—He gave such an account as made it appear that he liked the design. *Clarend.*—We like our present circumstances well, and dream of no change. *Atterbury.*—2. To approve; to view with approbation, not fondness.—Though they did not like the evil he did, yet they liked him that did the evil. *Sidney.*—He grew content to mark their speeches, then to marvel at such wit in shepherds, after to like their company. *Sidney.*—He proceeded from looking to liking, and from liking to loving. *Sidney.*

For several virtues  
I have lik'd several women; never any  
With so full soul. *Shak.*

I look'd upon her with a soldier's eye;  
That lik'd, but had a rougher task in hand  
Than to drive liking to the name of love. *Shak.*  
—Scarce any man passes to a liking of sin in others; but by first practising it himself. *Soub.*

Beasts can like, but not distinguish too;  
Nor their own liking by reflection know. *Dryd.*

3. To please; to be agreeable to. Now disused.—

Well hoped he, ere long that hardy guest,  
If ever covetous hand, or lustful eye,  
Or lips he laid on thing that lik'd him best,  
Should be his prey. *Fairy Q.*

Say, my fair brother now, if this device  
Do like you, or may you to like entice. *Hubb.*  
—This desire being recommended to her majesty

is liked her to increase the fame within one entire leaf. *Bacon*.—He li dwell where it liketh him best. *Deut*.—

There let them learn, as likes them, to despise God and Messiah. *Milton*.

(2.) \* TO LIKE. *v. n.* 1. To be pleased with: with of before the thing approved. Obsolete.—Of any thing more than of God they could not by any means like. *Hooker*.—The young soldiers did with such cheerfulness like of this resolution, that they thought two days a long delay. *Knotles*. 2. To chuse; to list; to be pleased.—The man likes not to take his brother's wife. *Deut*.—He that has the prison doors set open is perfectly at liberty because he may either go or stay, as he best likes. *Locke*.

\* LIKELIHOOD. } *n. s.* [from *like*.] 1 Ap-

\* LIKELINESS. } pearance; shew. Obsolete.

What of his heart perceive you in his face,

By any likelihood he shew'd to-day? *Shak*.

2. Resemblance; likeness. Obsolete.—

As by a low, but loving likelihood,

Were now the general of our gracious empress,

As in a good time he may, from Ireland coming,

How many would the peaceful city quit

To welcome him? *Shak. Hen. V.*

—There is no likelihood between pure light and black darkness, or between righteousness and reprobation. *Raleigh*. 3. Probability; verisimilitude; appearance of truth.—As it noteth one such to have been in that age, so had there been more, it would by likelihood as well have noted many. *Hobbs*.—Many of likelihood informed me of this before. *Shak*.—

It never yet did hurt,

To lay down likelihood, and forms of hope. *Shak*.

—As there is no likelihood that the place could be so altered, so there is no probability that these rivers were turned out of their courses. *Raleigh*.

—Where things are least to be put to the venture, as the eternal interests of the other world ought to be; there every, even the least, probability, or likelihood of danger, should be provided against. *South*.

—There are predictions of our Saviour recorded by the evangelists, which were not completed till after their deaths, and had no likelihood of being so when they were pronounced by our blessed Saviour. *Addison*.—Thus, in all likelihood, would it be with a libertine, who should have a visit from the other world: the first horror it raised would go off, as new diversions come on. *Aterbury*.

(1.) \* LIKELY. *adj.* [from *like*.] 1. Such as may be liked; such as may please. Obsolete.—

These young companions make themselves believe they love at the first looking of a likely beauty. *Sidney*.—Sir John, they are your likeliest men; I would have you served with the best. *Shak*.

2. Probable; such as may in reason be thought or believed; such as may be thought more reasonably than the contrary: as, a likely story, that is a credible story.

(2.) \* LIKELY. *adv.* Probably; as may reasonably be thought.—While man was innocent, he was likely ignorant of nothing that imported him to know. *Glavin*.

\* TO LIKEN. *v. a.* [from *like*.] To represent as having resemblance; to compare.—The prince

broke your head for likening him to a finger of Windfor. *Shak*.—

For who, though with the tongue Of angels, can relate? or to what things Liken on earth conspicuous, that may lift Human imagination to such height Of God-like power?

\* LIKENESS. *n. s.* [from *like*.] 1. Resemblance.—

They all do live, and moved are To multiply the likeness of their kind. —Translation is a kind of drawing after where there is a double sort of likeness, one and a bad one. *Dryden*.—There will be a better likeness, and a worse; and the best constantly to be chosen. *Dryden*. 2. For appearance.—Never came trouble to my heart the likeness of your grace; for trouble being comfort should remain. *Shak*.—It is safer upon our guard against an enemy in the likeness of a friend, than to embrace any man for a friend the likeness of an enemy. *L'Esrange*. who resembles another; a copy; a counterfeit. Poor Cupid, sobbing, scarce could find Indeed mamma, I do not know yet: Alas! how easy my mistake? I took you for your likeness Cloe.

\* LIKEWISE. *adv.* [like and *wise*.] In the same manner; also; moreover; too.—Jesus said to them, I also will ask you one thing, which tell me, I likewise will tell you by what I do these things. *Matt. xxi. 24*.—So was the decay of the Roman empire, and likewise the empire of Almaine, after Charles the Great the bird taking a feather. *Bacon*.—Spirit of sea-salt poured to pure unmixed serum, coagulate it had been boiled. Spirit of sea-salt makes perfect coagulation of the serum likewise, but some different phenomena. *Arbutnot*.

LI-KIANG-TOU, a city of China of the first rank, in the prov. of Yan-nan, near the mouth of the Yang-Cong-Kiang; surrounded by mountains abounding with pine apples, amber, gold, &c. It is 1150 miles SW. of Peking. Lat. 50. E. Ferro. Lat. 26. 52. N.

(1.) \* LIKING. *adj.* [Perhaps because likeness is agreeable to the sight.] Plump; inflated; of plumpness. I fear my lord the king, who appointed your meat and your drink; I should he see your faces worse liking, than children which are of your sort. *Dan. i.*

(2.) \* LIKING. *n. s.* [from *like*.] 1. Growth of body; plumpness.—I'll repent and that I shall, while I'm in some liking; I shall be heart shortly, and then I shall have no further repent. *Shak*.—Their young ones are in liking; they grow up with corn. *Job, xx.* Cappadocian slaves were famous for their plumpness; and, being in good liking, were sold, when exposed to sale, to shew the plumpness of their body. *Dryden*. 2. State of tranquillity.—The royal soul, that, like the lab'rinth By charms of art was hurried down; Fore'd with regret to leave her native land Came but a while on liking here.

3. Inclination.—

Why do you longer feed on loathed food Or liking find to gaze on earthly mold? (3.)

**L I K I N G.** *n. f.* [from the *verbr.*] Delight  
ure in: *to.*—He who has no *liking* to the  
ught in reason to be excluded from cen-  
the parts. *Dryden.*

**L I L A C H.** *n. f.* [*ilac, li'as, Fr.*] A tree.—  
te thorn is in leaf, and the *lilach* tree.

**L I L A C H,** or **L I L A C.** See **S Y R I N G A.**

**L A,** a town of Achaia, on the Cephissus.  
**J R N E,** John, an enthusiastic English re-  
born in 1618, and descended of an an-  
ily in Durham. He was bred a clothier,  
ing Puritan, he gave up business in 1636,  
me assistant to Dr **B A S T W I C K,** in whose  
s he shared. For going to Holland to get  
s *Merry Liturgy* printed, he was on his  
n 1637, tyrannically punished by the star-  
court; being put in the pillory, whipped,  
ed imprisoned, loaded with heavy irons,  
sing pamphlets, reflecting on the church  
nd and its bishops, particularly *Prynne's*  
*on Ipswich.* In 1641, he was released by  
parliament; and from that period, made  
ormidable to all parties, by his bold, at-  
minus. He signalized himself in the par-  
s army, in which he was made a major in  
d a colonel in 1644. He was at one time  
t friend and confident of Cromwell, and  
er his avowed enemy and accuser; so that,  
Cromwell found it his interest to silence  
a grant of 3000*l.* out of some forfeited e-  
Yct after this, he grew outrageous a-  
e protector's government; became chief  
vellers; and was twice tried for high trea-  
acquitted by the juries. The last was  
ning from exile, having been banished by  
ament. After this he settled at Eltham,  
e joined the Quakers; and died Aug. 29,  
ed 59. His funeral was attended by 4000

His brother Robert was a Major-Gener-  
omwell's army. He wrote his *Christian*  
*trial,* in 1637, 4to, and many similar pieces  
prison.

**L I C E O U S,** *adj.* in botany, an appellation  
such flowers as resemble those of the lily.  
**L I E D.** *adj.* [from *lily.*] Embellished with

mphs and shepherds dance no more  
idy Ladon's *lilied* banks. *Milton.*

**L I N S T E I N,** a town of Upper Saxony.

**L I E N T H A I,** Michael, a learned Prof-  
o was professor at Konigsberg and wrote  
dissertations, on various subjects, inserted  
emoirs of the Academy at Berlin; with o-  
rks. He died in 1750.

**L I E N T H A L,** a town of Saxony, in Meissen.  
**L I N,** a town of China, in Hou-Quang.

**L I M,** the **L I L Y,** in botany, a genus of the  
nia order, belonging to the hexandria class  
5; and in the natural method ranking un-  
oth order *Coronariae.* The corolla is hex-  
s, and campanulated, with a longitudinal  
rous line or furrow; the capsules connect-  
nall cancellated hairs. There are many  
all bulbous-rooted, herbaceous, flowery  
is, rising with erect annual stalks 3 or 4  
1, garnished with long narrow leaves, and

terminated by clusters of large, bell-shaped, hex-  
apetalous flowers of exceeding great beauty, of  
white, red, scarlet, orange, purple, and yellow  
colours. All the species are propagated by sow-  
ing the seeds; and if care is taken to preserve these  
seeds from good flowers, very beautiful varieties  
are often produced. The manner of sowing them  
is as follows: Some square boxes should be pro-  
cured, about 6 inches deep, with holes bored in  
the bottoms to let out the wet; these must be fil-  
led with fresh, light, sandy earth; and the seeds  
sown upon them pretty thick in the beginning of  
August, and covered over about half an inch  
deep with light sifted earth of the same kind.  
They should then be placed where they may have  
the morning sun; and if the weather proves dry,  
they must be watered at times, and the weeds  
carefully picked out. In October the boxes are  
to be removed to a place where they may have as  
much sun as possible, and be secured from the N.  
and NE. winds. In spring the young plants will  
appear, and the boxes are then removed into their  
former situation. In August the smallest roots are  
to be emptied out of these boxes, strewed over a  
bed of light earth, and covered with about half an  
inch depth of the same earth sifted over them. Here  
they must be watered, shaded at times, and defend-  
ed from the severity of winter by a slight covering  
of straw in the hardest weather. In Feb. the sur-  
face of the bed should be cleared, and a little light  
earth sifted over it. When the leaves are decayed  
the earth should be a little stirred over the roots;  
and in the month of Sept. following some more  
earth sifted on. In the September of the follow-  
ing year, the roots must be transplanted to the  
places where they are to remain, and set at the  
distance of eight inches; the roots being placed 4  
inches below the surface: this should be done in  
moist weather. They will now require the same  
care as in the preceding winters; and, the second  
year after they are transplanted, the strongest roots  
will begin to flower. The fine ones should then  
be removed at the proper season into flower beds,  
and planted at great distances from one another  
that they may flower strong. The roots of the  
white lily are emollient, maturating, and greatly  
suppurative. They are used externally in cata-  
plasmis for these purposes. The common form of  
applying them is boiled and bruised; but some  
prefer roasting them till tender, and then beating  
them to a paste with oil, in which form they are  
said to be excellent against burns. Gerard recom-  
mends them internally against dropsies.

**L I L I U M K A M T S C H A T E N S E,** or *Kamtschatka*  
*lily,* called there **S A R A N N E,** makes a principal part  
of the food of the Kamtschatkans. Its roots are  
gathered by the women in August, dried in the  
sun, and laid up for use: they are the best bread  
of the country; and after being baked are reduced  
to powder, and serve instead of flour in soups and  
several dishes. They are sometimes washed, and  
eaten as potatoes; are extremely nourishing, and  
have a pleasant bitterish taste. Our navigators  
boiled and eat them with their meat. The natives  
often parboil and beat them up with several sorts  
of berries, so as to form a very agreeable confec-  
tion. Providentially it is an universal plant there,

and all the grounds bloom with its flower during the season. Another remarkable circumstance is, that while fish are scarce the saranne is plentiful; and when it is scarce the rivers abound with fish. A species of mouse saves the Kamtschatkan women a great deal of trouble. The saranne forms part of their winter provisions; they not only gather them in the proper season, and lay them up in their magazines, but bring them out in sunny weather to dry them, lest they should spoil. The natives search for their hoards, but leave part for the owners, being unwilling to suffer such useful caterers to perish.

LILLE. See LISTE.

LILLEBONNE, a town of France, in the dep. of the Lower Seine; 16½ miles E. of Havre.

LILLERS, a town of France, in the dep. of the Straits of Calais, and ci-devant province of Artois; ceded to France by Spain at the peace of the Pyrenees, when its fortifications were demolished. It is seated on the Navez, 6 miles NW. of Bethune, and 17 of Arras. Lon. 2. 35. E. Lat. 50. 30. N.

LILLIARD'S EDGE, a ridge of a hill in Roxburghshire, in the parish of Ancrum, and bordering on that of Maxton, famous for a great victory gained by a small body of the Scots, under the earls of Angus and Arrian, about 1545, over an army of 5000 Englishmen, under Sir Ralph Rivers and Sir Bryan Laiton. Much of the glory of this victory is ascribed to the intrepidity of a Scottish Amazon of the name of *Lilliard*, who fought with masculine courage, and fell in the action, covered with many wounds. The memory of this young lady's patriotism is better preserved in the name of the ridge than on her tomb-stone, which however is still to be seen. *Sir J. Sinclair's Stat. Acc.* III. 278; and X. 294.

LILLIENFELD, a town of Austria, on the Trafen, 14 miles S. of St Polcen.

(1.) LILLIES-LEAF, a parish of Scotland, in Roxburghshire, 5½ miles long, and from half a mile to 1½ broad; containing about 7500 acres. The river *Ale* runs through the head of it, and bounds it on the N. and E. It abounds with fine trouts. The soil is partly clay, rich loam, and partly light gravel. The crops are oats, pease, barley, grass, hay, turnips, and potatoes. The population, in 1793, was 630, and had increased 109 since 1755; the number of horses was 175; black cattle, 580; sheep, 1394; and swine, 29. Relics of a Roman invasion have been found.

(2.) LILLIES-LEAF, a village in the above parish, 7½ miles WNW. of Jedburgh. Spinning and weaving are the chief manufactures.

LILLIPUT, a town of N. Carolina, on the river Fear, 2 miles N. of Brunswick.

(1.) LILLO, George, an excellent dramatic writer, born at London in 1693. He was a jeweller by profession, and followed his business for many years in that neighbourhood with reputation. He was at the same time strongly attached to the Muses, but laid it down as a maxim, that they ought always to tend to the promotion of virtue, morality, and religion. In pursuance of this aim, Lillo was happy in the choice of his subjects, and showed great power of affecting the heart, by working up the passions to such a height, as to render the

distresses of common and domestic life equally interesting as those of kings and heroes; and the ruin brought on private families by an indulgence of avarice, lust, &c. as the havoc made in states and empires by ambition, cruelty, and tyranny: His *George Barnwell*, *Fatal Curiosity*, and *Arden of Feversham*, are all planned on common and well-known stories; yet they have perhaps oftener drawn tears from an audience, than the more pompous tragedies of *Alexander the Great*, *All for Love*, &c. In the prologue to *Elmeric*, which was not acted till after his death, it is said, that when he wrote that play, he "was depressed by want," and afflicted by disease; but in the former particular there is a mistake, as he left an estate of 60 l. a-year, besides moveables to a considerable value. He died in 1737, in the 47th year of his age. His works were published, with his life, in 2 vols 12mo, by Mr T. Davis.

(2.) LILLO, a fort of the Batavian republic, in the dep. of the Meuse, and late prov. of Dutch Brabant, on the E. side of the Scheldt. It was built in 1584; and attacked in 1588, by the Spaniards under M. de Rieisbourg, who were repulsed with the loss of 2000 men. It was taken by the French in 1793; evacuated soon after; but finally retaken by them in 1794. It lies 9 miles NW. of Antwerp, and 12 S. of Bergen op Zoom. Lon. 4. 18. E. Lat. 51. 18. N.

(3.) LILLO, a town of Spain, in New Castile.

(1.) LILLY, or LYLLEY, John, a dramatic poet, born in the wilds of Kent, about 1553, and educated in Magdalen college, Oxford, where he took the degree of A. B. in 1573, and that of M. A. in 1575. From Oxford he removed to Cambridge, and thence to London, where he became acquainted with some of Queen Elizabeth's courtiers, by whom he was caressed as a poet and a wit; and, on particular festivals, the queen honoured his dramatic pieces with her presence. He wrote 9 plays, but his first publication, printed in 1580, was a romance called *Euphues and his England*, which was universally read and admired. This romance, which Blount, the editor of six of his plays says, introduced a new language, particularly among the ladies, is, according to Berkenhout, a most contemptible piece of *affectation* and *nonsense*; though in that respect he could not exceed many writers of the present age; and it is certain, that it was in high esteem among the women of fashion, who, we are told by Whalley, the editor of Ben Jonson's works, had all the phrases by heart, so that those who did not speak *Euphuesism* were as little regarded at court as if they could not speak French. In fact, he is considered by some, as the *first reformer* of the English language, by purging it of obsolete and uncouth expressions. "He was (says Oldys) a man of great reading, good memory, ready faculty of application, and uncommon eloquence; but he ran into a vast excess of allusion." When or where he died is not known. Wood says he was living in 1597, when his last comedy was published. After attending the court of Queen Elizabeth 13 years, notwithstanding his reputation as an author, he was under a necessity of petitioning the queen for support in his old age. His two letters to her majesty on that subject are preserved in MS.

(2.) LILLY,

LY, William, a noted English astrologer in Leicestershire in 1603; where his being able to give him more learning than arithmetic, he resolved to seek his fortune. He arrived in 1620, and lived a servant to a mantua-maker; after which he went into the service of Mr Wright, master of a company, who not being able to read, he kept his books. In 1627, his master died, he married the widow, with a fortune of 1000*l.* being now his own master, he followed several nautical preachers; and, turning his mind to astrology, became pupil to one Evans, an Irishman, in that pretended art. Getting the *Ars notitia* of Corn. Agrippa, he applied to the doctrine of the magic circle, and the doctrine of spirits, with great eagerness. He was the author of the *Book of Fortune*; *Merlinus junior*; *The Supernatural Sight*; and *The Prophecy*. In him we have an instance of a general superstition that prevailed during the interval between Char. I. and his parliament: he consulted this astrologer, to know in what manner he should conceal himself, if he could not escape from Hampton court; and Gen. Fairfax, after his flight, sent for him to ask, whether with their aid they should march to London, or whether they should march to the north, and their cause? Lilly, assuring them that God would be with him and

In 1648, he published his *Treatise of Astrology* seen the preceding winter; and also a judgement upon a conjunction of Mars and Venus. This year the council of state granted him a pension of 100*l.* per annum, and a pension of 200*l.* per annum, and then resigned the office. In June 1660, he was taken by a fever, and died the next day, by whom he was succeeded in the person who cut off the head of king Charles I. The same year he obtained his pardon under the great seal of England, and in 1666, he removed to his estate at Hertham; and in 1666 was examined before a committee of commons concerning the fire of London, which happened in September that year. He studied physic, and, by means of a recommendation, obtained from Abp. Sheldon a licence to practise it. He adopted for his son, by his first wife, one Henry Coley, a physician, who gave him the property of his almanac, which had been printed for 36 years. He died of a dead palsy. Mr Ashmole erected a monument over his grave in the church of Walpole. His *Observations on the Life of Charles, late King of England*, if we believe the astrological nonsense, may be read with much satisfaction as more celebrated history being not only well informed, but impartial. This work, with the *Lives of Ashmole*, written by themselves, were printed in 2 vol. 8vo, in 1774, by Mr Burman. **LILY**. *n. f.* [*Lilium*, Latin.] A flower.—32 species of this plant, including white lilies, red lilies, and martagons of various sorts. —

*In this quotation from Shakespeare, is an adjective, used figuratively for white, and, like many other adjectives brought by Dr JOHNSON, affords no proper illustration of his subject. LILY, adj. ought to have had a distinct article, which this quotation would have fully authorized.*

Oh! had the monster seen those *lily* hands †  
Tremble, like aspen leaves, upon a lute,  
And make the silken strings delight to kiss them;  
He would not then have touch'd them for his  
life! Shak.

Like the *lily*,  
That once was mistress of the field, and flourish'd,

I'll hang my head, and perish. Shak.  
—Arno, a river of Italy, is drawn like an old man, by his right side a lion, holding forth in his paw a red *lily*, or flower-de-luce. *P. ucbam*—

Take but the humblest *lily* of the field;  
And if our pride will to our reason yield;  
It must by sure comparison be shown,  
That on the regal seat great David's son,  
Array'd in all his robes, and types of power,  
Shines with less glory than that simple flower.

Prior.  
For her the *lilies* hang their heads, and die.

(18.) LILY, ZEYLON. See AMARYLLIS, N<sup>o</sup> 6.

LILYBÆUM, in ancient geography, a city of Sicily, seated on the most westerly cape of Sicily, and said to have been founded by the Carthaginians, on their expulsion from Motya by Dionysius tyrant of Syracuse. It sustained 3 sieges; one by Dionysius, another by Pyrrhus king of Epirus, and the 3d by the Romans. The two first failed in their attempts, but the Romans made themselves

der of it, though with no small difficulties remains of this once stately city are now, except some aqueducts and temples; it was standing in Strabo's time.

LILYE, William, the grammarian, was born at Oldham in Hampshire; and in 1566 admitted a semi-commoner of Magdalen in Oxford. Having taken the degree at the university, and travelled to Jerusalem thence, he continued 5 years there he studied the Greek, several times having retired thither after taking of the plague. From Rhodes he travelled to Constantinople, where he improved himself in the Greek languages, under Sulpitius and P. Sannas. He returned to London, where for some years he taught a private grammar-school, the first person who taught Greek in that city. Dr Colet founded St Paul's school, where he pointed the first master; at which school he was married and had many children. In 1570 he had laboured 12 years seized by the plague, which he died in Feb. 1573, and was buried in St Paul's. He had the character of an excellent grammarian, and a successful teacher in several learned languages. His principal work is *una institutio, seu ratio grammaticæ cognoscendæ*. Lond. 1573, very often reprinted, and translated into English under the title of *Lilye's grammar*. The English written by Dr Colet, dean of St Paul's, in the preface to the first edition, by Thomas Digges. The Latin syntax was chiefly written by Erasmus. The rest was written by the author. See Ward's preface to his edition of Lilye's grammar, 1732.

(2.) LILYE, George, eldest son of the preceding, was born at London, and educated at Magdalen College, Oxford. He afterwards went to Rome, where he was patronized by Cardinal Pole, and became eminent for his learning. On his return he was made canon of St Paul's, and prebendary of Canterbury. He wrote several books on English history, and published the first exact map of Britain. He died in 1559.

(3, 4.) LILYE; Peter, the 2d son of William, was also a dignitary in the church of Canterbury, and father of Peter Lilye D. D. prebendary of St Paul's, and arch deacon of Taunton. He died in 1614, and his Sermons were published by his widow.

\* LILYLIVERED. *adj.* [*lily* and *liver*.] White-livered; cowardly.—A base *lilylivered*, action-taking knave. *Shak.*

(1.) LIMA, a province, or as some geographers affect to style it, an *audience*, of S. America in Peru, bounded on the N. by Quito, E. by the Andes, S. by the prov. of Charcos, and W. by the S. Pacific Ocean. It was erected in 1542, and contains one archbishopric, viz. *Lima*, which has 15 jurisdictions; and 4 bishoprics, viz. Arequipa with 6 jurisdictions, Truxillo with 7, Guamanga with 9, and Cusco with 14. Near the mountains it abounds with very large tawny tigers, panthers, and other wild beasts, as fierce as those of Africa.

(2.) LIMA, a city of Peru, of which it is capital, in the above province, with an university. It gives name to the principal audience of Peru; and is surrounded with brick walls, fortified with

several ramparts and bastions 8 yards high. The streets are handsome, and as straight as a line; but the houses are generally only one story high, on account of the earthquakes. However, they are well adorned, having long galleries on the front. One part of the roofs are covered with coarse beaver cloth, and the others only with reeds, which is not inconvenient as it never rains; but the richest inhabitants cover theirs with fine mats, or beautiful cotton cloths. There are trees planted all round their houses, to keep off the heat of the sun. What the houses want in height they have in length and depth; for some of them are 200 feet long, and proportionally broad, so that they have 10 or 12 large apartments on the ground floor. The royal square is very handsome, and in the middle is a fountain of bronze, with an image of Fame spouting up water. On the E. and W. sides are the public structures, which are well built. From the river which crosses Lima, there are canals which run to the most of the houses, to serve to water their gardens, &c. All the churches and convents are extremely rich; and many images of the saints are of massy gold, adorned with jewels. This city is 14 miles long, and a broad and is divided into 8 parishes; yet it contains only 28,000 inhabitants, whereof 9000 are Spaniards. They use mules to draw their coaches, and in these there are about 5000. It is the seat of a viceroy, and contains the courts of the viceroy; the archbishop, the inquisition, the *alcaldes*, and the wills. Earthquakes are here very frequent; some of which have done this city great deal of damage; particularly in 1582, 1586, 1609, 1620, 1655, 1678, 1687, 1697, 1699, 1732, 1734, 1745, and 1746. Of these the most dreadful happened in 1586, 1620, 1687, and 1746; by all of which it was almost destroyed.

It abounds with corn, wine, oil, sugar, indigo, flax, &c. The inhabitants are so rich, that when the viceroy, who was duke of Palata, and came out from Spain to Peru in 1672, made his public entrance into this city, they paved the way for him as he was to pass through with ingots of silver. They are very debauched, extremely superstitious, and have great faith in the power of charms. About a 4th part of the people are monks and nuns, who are not a jot more chaste than the rest; and if any one rivals a monk, he is in danger of his life. The nuns are such libertines, that it is hard to find one of them free from the venereal disease of which they sometimes die for want of good physicians. The greatest sinners think they are free for all their faults by hearing a mass, and kissing the robe of St Francis or St Dominic. Lima is seated in a large, pleasant, fertile plain, on a river near the sea. Lon. 68. 45. W. Lat. 12. 10.

(3.) LIMA, or RIMAC, an extensive valley of Peru, in the above province, N<sup>o</sup> 1.

(4.) LIMA, a river in the above province.

(5.) LIMA, a river of Spain, which rises in the Portuguese prov. of Entre Duero-e-Minho, and runs into the Atlantic, 1 1/4 miles below *Via* was anciently called *Bello*. See BELLIO.

LIMALE, a town of the French republic in the dep. of the Dyle, and ci-devant prov. of Brabant, seated on the Dyle; 12 m. S. of Louvain, 15 SE. of Brussels. Lon. 4. 42. E. Lat. 50.

LIMA

**LIMASSOL**, or **LIMISSO**, a town of Cyprus, the island. Of the ancient city no remains remain; though it was a celebrated city under the government of the dukes. It was the conqueror of the last of these vast empire, razed it in 1191, and it was rebuilt. It was anciently called **AMATHUS**, *Amathus*; famous, as Pausanias tells us, for the worship of Venus and Adonis. It was the residence of the first kings of Cyprus: among these was subjected by Artabanus, the Persian. It was erected into an archbishopric of the Christians, and has produced a number of personages celebrated for their learning.

Near it are several copper mines, which the Turks have been forced to abandon. See the notice of its metals in his *Metamorphosis*, X. ver. 220, and 531: where he styles it, *gravidamque Amathunta metallis*; he relates the metamorphosis of its inhabitants into wild bulls, on account of their ferocity in sacrificing all strangers to Juno. (vi.) The place where Limassol now formerly had the name of *Nemofia*, from woods which surrounded it. Richard I. of England, having destroyed Amathonte, the bishop of Luffignan in the 12th century laid the foundations of that new city, which the Greeks call **OPOLEOS**. The family of Luffignan, who were used to embellish and fortify it, built several Greek and Latin churches; and erected a seat of a bishop. When Cyprus was seized by the Turks in July 1570, they plundered this city. At present it is a wretched place; scarcely any remains of its ancient edifices to be seen. It is governed by a commander in chief; the latter judges causes previously before they are carried to the superior court at Nicosia. The harbour is very commodious, being sheltered from impetuous winds; it affords a safe asylum to vessels overtaken by storms. The carob tree is very abundant; quantities of its fruit are exported. The port wine is also salt, procured from a lake near the city. Cotton, garden stuffs, wheat, barberry trees, are plentiful in this part of the island. The best Cyprus wine is made from the hills of Limassol. All the wines of the island are collected in this city to be sent to Larica, where there are the largest

**LIMATURE**, *n. f.* [*limatura*, Lat.] Filings of the particles rubbed off by a file.

**LIMAVADY**, or **NEWTON LIMAVADY**, a town in Derry, 106 miles from Dublin.

**LIMB**, or **NAKED SNAIL**; a genus of worms belonging to the order of vermes mollusca; the body is oblong, fitted for crawling, covered with a muscular coat on the upper part; the feet are plain. They have 4 tentacula, or feelers, extended above the mouth, which they exert at pleasure.—This reptile is always in its shell; but, besides that its skin is more of a greater consistency than that of the black naked slug, has a furrowed back as thick and as hard as leather, and withdraws its head as within a shell. It is distinguished from the breast by a

black line. In its head and back the snail stone is found; which is a small pearly and sandy stone, of the nature of lime stones: according to a popular opinion, it cures the tertian ague, if fastened to the patient's arm. These slugs move on slowly, leaving every where clammy and shining marks of their passage. They come together about the end of spring. The organs of generation are placed, as in the snail, on the right side of the neck. The male implement unfolds with the same mechanism as the finger of a glove when turned inside out. They are sometimes met with hanging in the air with their heads downwards; and their tails, united by a kind of viscous and thick tie, grappled to the branch of a tree. In this situation they remain for 3 hours, which is the time of impregnation. They deposit their eggs in the earth. There are 3 species, distinguished entirely by their colour; as the *black*, the *white*, the *red*, the *ash*, the *ash-coloured slug*, &c. The black slug is hermaphrodite, both sexes being in each individual, and in the coitus both impregnate and are impregnated at the same time. A black slug powdered over with snuff, salt, or fugar, falls into convulsions, casts forth all its foam, and dies. See **REPRODUCTION**.

**LIMAY**, a town of France, in the dep. of Seine and Oise; on the Seine, opposite Mantes.

(1.) \* **LIMB**, *n. f.* [*lim*, Saxon and Scottish; *lem*, Danish.] 1. A member; a jointed or articulated part of animals.—

A second Hector, for his grim aspect,  
And large proportion of his strong knit limbs.

*Shak.*

O! that I had her here, to tear her limb meal!

*Shak.*

Now am I come each limb to survey,  
If thy appearance answer loud report. *Milton.*  
2. [*Limbe*, Fr. *limbus*, Lat.] An edge; a border. A philosophical word.—By moving the prisms about, the colours again emerged out of the whiteness, the violet and the blue at its inward limb, and at its outward limb the red and yellow. *Newton.*

(2.) **LIMB**, in anatomy, (*§ 1. def. 1.*) is used solely of the extremities of the arms and legs.

(3.) **LIMB**, (*§ 1. def. 2.*) in astronomy, botany, mathematics, &c. is used of the edge of the sun, the moon, of a quadrant, of a leaf, &c.

(4.) **LIMB**, in theology. See **LIMBUS**.

\* **To LIMB**, *v. a.* [from the noun.] 1. To supply with limbs.—

As they please,

They limb themselves, and colour, shape, and size  
Assume, as likes them best, condense, or rare.

*Milton.*

2. To tear asunder; to dismember.

**LIMBACH**, a town of Saxony, in Erzgebürg.

**LIMBAT**, a periodical wind common in Cyprus, and of great service in moderating the excessive heat of the climate. According to Abbé Mariti, it begins to blow at 8 A. M. the first day; increases as the sun advances till noon; then gradually weakens, and at 3 falls entirely. On the 2d day it arises at the same hour; but it does not attain its greatest strength till 1 P. M. and ceases at 4. On the 3d day it begins as before; but falls at 5. On the five succeeding days, it follows the same progression as on the 3d; but a little before

it ceases, becomes extremely violent. At the end of 5 days it commences a new period like the former. These winds arise in the beginning of summer, last during the period when the heat is most insupportable, and end about the 15th of Sept.

LIMBE, a village of Hispaniola, 21 miles W. by S. of St Domingo.

(1.) \* LIMBECK. *n. f.* [corrupted by popular pronunciation from *alembeck*.] A still.—

Her cheeks, on which this streaming nectar fell,  
Still'd through the *limbeck* of her diamond eyes.

*Fairfax.*

Fires of Spain, and the line,  
Whose countries *limbecks* to our bodies be,  
Canst thou for gain bear?

*Donne.*

Call up, unbound,  
In various shapes, old Proteus from the sea,  
Drain'd thro' a *limbeck* to his naked form. *Milt.*  
—The earth, by secret conveyances, lets in the  
fea, and sends it back fresh, her bowels serving  
for a *limbeck*. *Hosuel.*—

He first survey'd the charge with careful eyes,  
Yet judg'd, like vapours that from *limbecks* rise,  
It would in richer showers descend again. *Dryd.*

The warm *limbeck* draws  
Salubrious waters from the nocent brood.

*Philips.*

(2.) LIMBECK. See ALSEMBICK, and CHEMISTRY, *Index*.

\* LIMBED. *adj.* [from *limb*.] Formed with regard to limbs.—

A steer of five years age, large *limb'd*, and fed,  
To Jove's high altars Agamemnon led. *Pope.*

\* LIMBER. *adj.* Flexible; easily bent; pliant; lithe.—

You put me off with *limber* vows. *Shak.*

—I wonder how, among the jealousies of court and state, Edgar Atheling could subsist, being the indubitate heir of the Saxon line: but he had tried, and found him a prince of *limber* virtues; so as though he might have some place in his caution, yet he reckoned him beneath his fear. *Watton.*—

At once came forth whatever creeps the ground,

Insect, or worm: those wav'd their *limber* fans  
For wings. *Milton.*

—She durst never stand at the bay, having nothing but her long soft *limber* ears to defend her. *Morgan Atbeism.*—The muscles were strong on both sides of the aspera arteria, but on the under side, opposite to that of the œsophagus, very *limber*. *Lay on Creation.*

LIMBERG, a town of Germany, in Stiria, 12 miles S. of Voitsberg.

\* LIMBERNESS. *n. f.* [from *limber*.] Flexibility; pliancy.

LIMBEY, a town of Nottinghamshire, near the Lime, W. of Sherwood Forest.

\* LIMBO. *n. f.* [*Eo quod sit limbus inferorum. Du Cange.*] 1. A region bordering upon hell, in which there is neither pleasure nor pain. Popularly hell.—

No, he is in tartar *limbo*, worse than hell,  
A devil in an everlasting garment hath him,  
One whose hard heart is button'd up with steel.

*Shakefp.*

Oh what a sympathy of woe is this!  
As far from help as *limbo* is from bliss. *Shak.*

All these up-whirl'd ale  
Fly o'er the back side of the world  
Into a *limbo* large, and broad, since  
The paradise of fools. *Milton.*

2. Any place of misery and restraint.—  
Trulla straight brought on the cl  
And in the self-same *limbo* put  
The knight and squire, where he v

—Fris, thou art come off thyself, but  
left in *limbo*. *Dryden's Spanish Fryar.*

LIMBORCH, Philip, a learned w  
the Remonstrants, born at Amsterd  
After having made great proficiency in  
he was, in 1655, licensed to preach, w  
first at Haerlem. He was chosen minist  
ja, whence he was called to Amsterd  
pointed professor of divinity, in whic  
acquired great reputation. He had a  
genius, and a tenacious memory; and  
ed with the most eminent men of h  
letters to Mr Locke are printed with t  
celebrated author. He was a sincere  
an example of every virtue, and prest  
gour of body and mind till he died, in  
79. He wrote many works, the princip  
are, 1. *Amica collatio de veritate relig  
ane cum erudito Judæo*, in 12mo. 2.  
body of Divinity, according to the o  
doctrines of the Remonstrants. 3. t  
the Inquisition; since translated into  
Dr Samuel Chandler. He also publishe  
of EPISCOPUS, who was his great-  
mother's side. In 1694, he recover  
lady to Christianity, who had been p  
Judaism by a rabbi, while he was int  
in Hebrew.

(1.) LIMBURG, a ci-devant prov  
Austrian Netherlands, annexed to the  
public, in 1796, and included in the  
Oulte. It was bounded by the ci-de  
of Juliers on the N. and E. by Luxem  
S. and by the late bishopric of Liege  
being about 50 miles long, and 25 bro  
sists of good arable and pasture lan  
plenty of wood, and some iron mines

(2.) LIMBURG, a town of the Fren  
in the dep. of Oulte, and late capita  
devant duchy (N° 1.), is seated on a  
near the Vesse, among shady woods;  
chiefly of one broad street. It is str  
most inaccessible; but was taken by  
in 1675, and by the confederates und  
of Marlborough in 1702. It is famo  
cheese; and lies 15 miles SE. of Liege  
of Aix la Chapelle, and 46 N. of I  
Lon. 6. 8. E. Lat. 50. 40. N.

(3.) LIMBURG, a town of the Fren  
in the dep. of the Roer, and ci-deva  
Juliers; 2 miles NW. of Sittart.

(4.) LIMBURG, a town of Germany  
cle of the Lower Rhine, and archt  
Treves, on the Lahn, 26 miles N. of  
75 ENE. of Treves.

(5.) LIMBURG, or HOFEN LIMBUR  
and county of Germany, in Westph  
town is 4 miles NNW. of Altena.

LIMBUS, in the church of Rome

rent senses: 1. The *Limbus Patrum*, or *be patriarchs*, is said to be the place where archs waited the redemption of mankind: *ace* they suppose our Saviour's soul conom the time of his death to his resurrec-

IE, a town of Connecticut, 7 miles W.  
ondon.

IE, BROOK. See VERONICA, N° 1.

ME TREE, or LINDEN. *n. f.* [*Lind, Sax.*  
1. The linden tree.—The flower con-  
eral leaves, placed orbicularly, in the  
ose, having a long narrow leaf growing  
stalk of each cluster of flowers, from  
rises the pointal, which becomes testi-  
one capsule, containing an oblong seed.

III. PART 1.

The timber is used by carvers and turners. The  
trees continue found many years, and grow to a  
considerable bulk. Sir Thomas Brown mentions  
one, in Norfolk, 16 yards in circuit. *Miller.*—

For her the limes their pleasing shades deny,  
For her the lilies hang their heads, and die. *Pope.*  
2. A species of lemon. [*lime, French.*]

Bear me, Pomona! to thy citron groves!  
To where the lemon and the piercing lime,  
With the deep orange glowing thro' the green,  
Their lighter glories blend. *Townson's Summers*

(7.) LIME TREE, § 4, def. 1. See TILIA.  
(8.) LIME TREE, § 4, def. 2. See CITRUS.

\* To LIME. *v. a.* [from *lime*.] 1. To entangle;  
to ensnare.—

Oh bosom, black as death!  
Oh limed soul, that, struggling to be free,  
Art more engaged. *Shakesp.*

—Example, that so terribly shows in the wreck of  
maidenhood, cannot, for all that, dissuade succe-  
sion, but that they are limed with the twigs that  
threaten them. *Shak-sp.*—

The bird that hath been limed in a bush,  
With trembling wings misdoubteth ev'ry bush;  
And I, the hapless male to one sweet bird,  
Have now the fatal object in my eye,  
Where my poor young was lim'd, was caught,  
and kill'd. *Shakesp.*

2. To smear with lime.—

I myself have lim'd a bush for her,  
And plac'd a quire of such enticing birds,  
That she will light to listen to their lays. *Shak.*

—Those twigs in time will come to be limed, and  
then you are all lost if you do but touch them.  
*L'Estr.* 3. To cement. This sense is out of use.

I will not ruinate my father's house,  
Who gave his blood to lime the stones together,  
And set up Lancafter. *Shak.*

4. To manure ground with lime.—Encouragement  
that abatement of interest gave to landlords and  
tenants, to improve by draining, marling, and  
liming. *Child.*—All sorts of peate love limed or  
marled land. *Mortimer.*

\* LIMEKILN. *n. f.* [*lime and kiln*.] Kiln where  
stones are burnt to lime.—The counter gate is as  
hateful to me, as the reek of a lime-kiln. *Shakesp.*  
—They were found in a lime-kiln, and having pas-  
sed the fire, each is a little vitrified. *Woodward.*

(1.) LIMERICK, a county of Ireland, in the  
province of Munster, bounded on the E. by Tip-  
perary, W. by Kerry, N. by the Shannon, and S.  
by Cork. It is fruitful and populous; the soil re-  
quiring little or no manure in most places: besides  
excellent pasture for cattle it produces rich crops  
of all kinds of corn, with rape and some hemp.  
It contains 375,320 Irish plantation acres, about  
56 churches, a great number of parishes, 6 ba-  
ronies, and 3 boroughs. It has some clay, furze,  
fern, and mountain lands, and is famous for good  
cyder! It was much benefited by the palatines,  
who settled there and cultivated husbandry. It  
is well watered; the Shannon runs on the N. side  
of the county, and fertilizes its banks. The fuel  
is chiefly turf. At Loughill, there is a mine of coal  
or culm, chiefly used in kilns. The chief lake is  
Lough Gur; and the principal hills are, Knock-  
greny, Knockany, Knockring, and Tory, but

patrick. This county is about 42 broad. Before the Union it was a county palatine, and sent members to parliament.

**LOUGH-MEATH**, a market town in the county of Wick, the name of which is common to the county as well as of the town. It is seated on the Shannon, and was once the stronghold of the Danes. Its ancient name was *Lough Meath*. In the first ages it was much frequented by merchants, and after the conquest it was a place of considerable trade.

In the 13th century it was plundered by the Danes, and in the 14th century by the brother of Brian Borom, after the battle of Clontarf, in 970; and Brian afterwards exacted from the Danes of this city 365 tons of wine as a tribute, which shows the extensive traffic carried on by those people in that article. About A. D. 550, St Munchin founded a bishopric and built a church, which, however, was destroyed by the Danes on their taking this port in 853, and remained in ruins until their conversion in the 10th century; when the church of St Munchin was rebuilt, and the bishopric re-established. Donald O'Brien, about the time of the arrival of the English, founded and endowed the cathedral; and Donat O'Brien, Bp. of Limerick, in the 13th century, contributed much to the opulence of the see. About the close of the 12th century, the bishopric of Innis-Cathay was united to that of Limerick. It was besieged by king William III. in 1690, but without being taken. On the 21st Sept. 1691, it was besieged by the English and Dutch, and surrendered on the 14th October, after losing many men; but the garrison had very honourable terms. At that period, it was reckoned the 2d city in Ireland, but has since lost its rank, not because it thrives less, but because Cork thrives more.

It is composed of the *Irish* and *English* towns; the latter stands on the King's island, formed by the Shannon. It is 3 miles in circumference; has markets on Wed. and Sat. and fairs on Easter Tuesday, 1st July, 4th Aug. and 12th Dec. During 15 days, that the fair lasts in August, no person can be arrested in the city or liberties, on any process issuing out of the Tholsel court of Limerick. It is governed by a mayor, sheriffs, recorder, aldermen, and burgeses; there is also a barrack, a military governor and town-major. It had once the privilege of coinage: and different parliaments have been held in it. It was formerly walled, and in 1760, there were 17 of the gates standing; but to the great improvement of the place they are now all demolished, except the water-gate of king John's castle. Linen, woollen, and paper manufactures, are carried on here to great extent, and the export of provisions is considerable. It has many hospitals and public buildings, besides the cathedral and churches. A charter was granted to it by king John, and confirmed in succeeding reigns. About six miles from this is the famous *Castleconnellspa*. Limerick obtained the privilege of having mayors 10 years before that right was allowed to the citizens of London. Its first provost was John Stafford, in 1195 and 1197; and during the provostship of Henry Troy, a charter was granted, by Richard I. whereby the citizens were allowed to choose

mayors and bailiffs, Adam Servant, in 1197, being the first mayor. It continued to be governed, until the office of bailiff was changed that of sheriff, in 1609. Limerick is 50 miles S. of Cork, 50 S.E. of Galway, 73 W.N.W. of London, and 94 S.W. of Dublin. Lon. Lat. 52. 35. N.

(3.) **LIMERICK**, a town of Ireland, in the county of Leinster. It has 4 fairs.

(4.) **LIMERICK**, a township of the United States, in the district of Maine, and county of York, 10 miles N. of Boston.

(5.) **LIMERICK**, a township of Pennsylvania, in Montgomery county.

(1.) \* **LIMESTONE**. *n. f.* [*lime* and *stone*] A kind of stone of which lime is made.—Fire stone, if broken small, and laid on cold laid, is of advantage. *Mortimer*.

(2.) **LIMESTONE**, a post town of Kentucky, on a creek of the Ohio, the general landing place for emigrants, who sail down that river.

**LIMEUIL**, a town of France, in the department of Dordogne, 20 miles S. of Périgueux.

(1.) \* **LIME-WATER**. *n. f.* [*lime* and *water*] A medicine prepared by pouring water upon quick lime, with other ingredients to take off its ill savour, and great service internally in all cutaneous and diseases of the lungs. *Hill's Mat.* tried an experiment on wheat infused in water alone, and some in brandy and lime-water, and had from each grain a great increase of produce. *Husbandry*.

(2.) **LIME WATER**. See **PHARMACY**, **LIMIGANTES**. See **CONSTANTINOPLE**, **LIMINGTON**. See **LYMINGTON**, **LIMISSO**. See **LIMASSOL**.

(1.) \* **LIMIT**. *n. f.* [*limite*, Fr. *limite*] Bound; border; utmost reach.—The width of the mountain round about shall be 12 cubits. *Exod. xliii. 12.*

We went, great emperor, by thy city, to view the utmost limits of the land.

(2.) **LIMIT**, in a restrained sense, is used by mathematicians for a determined quantity, and a variable one continually approaches; in this sense, the circle may be said to be the limit of inscribed and circumscribed polygons.

(3.) **LIMIT**, in algebra, is applied to quantities, one of which is greater and the other less than another quantity; and in this sense, in speaking of the limits of equations, their solution is much facilitated.

\* **To LIMIT**. *v. a.* [*limiter*, French, *limiter*, Latin.] 1. To confine within certain bounds; to refrain; to circumscribe; not to leave loose. —They tempted God, and limited the land of Israel. *Psal. lxxviii. 41.*

There is boundless theft in limited professions.

—If a king come in by conquest, he is a limited monarch. *Swift*. 2. To restrain or moderate in general signification: as, *toe unweakened limited to this earth*.

\* **LIMITANEOUS**. *adj.* [from *limite*, Latin.] Pertaining to the bounds. *Dictionary*.

\* **LIMITARY**. *adj.* [from *limite*, Latin.] Pertaining to boundaries as a guard or superintendent

n, when I am thy captive, talk of chains,  
*limitary* cherub! *Milton.*

**LIMITATION.** *n. f.* *limitation.* French; *limitin.*] 1. Restriction; circumscription.—*tion* of each creature, is both the perfect-preservation thereof. *Hooker.*—

Am I yourself,  
is it were, in sort of *limitation*? *Shak.*  
sir, how this *limitation* of Adam's em-  
is line and posterity, will help us to one  
his *limitation*, indeed, of our author, will  
e the labour, who would look for him  
ie race of brutes; but will very little con-  
o the discovery amongst men. *Locke.*—  
come in by conquest, he is no longer a  
ionarch; if he afterwards consent to li-  
he becomes immediately king de jure.  
1. Confinement from a lax or undetermi-  
ort.—The cause of error is ignorance,  
raints and *limitations* all principles have  
to the matter whereunto they are ap-  
*Hooker.*

**LIMAT,** a river of the Helvetic republic,  
les in the Alps, 11 miles S. of Glarus,  
is called **LINTH**; and, after passing Gla-  
the Mat, near lake Wellenstadt, where it  
*Limmat*; after which it runs through the  
urich, and joins the Aar 3 miles N. of

**E,** a town of Kent, near Hithe, 4 miles  
nney, formerly a port, till choked up  
sds. It has still the horn, mace, and o-  
ns of its ancient grandeur; having been  
where the lord warden of the cinque  
-sworn at his entrance upon his office.  
an road from Canterbury, called **STANE-**  
ended here; and from the brow of the  
be seen the ruinous Roman walls almost  
tom of the marshes. Its ancient castle  
nverted into a farm house. It has great  
ntiquity, as well as the adjoining church.  
**MEER.** *n. f.* A mongrel.

[**LMN.** *v. a.* [*enluminer*, French, to adorn  
h pictures.] To draw; to paint any

eye doth his effigies witness,  
ily *limn'd*, and living in your face. *Shak.*  
is *limned* in lively colours. *Peacbam.*—  
he glories of the field spun, and by what  
they *limned* in their unaffected bravery?

**E,** in ancient geography; 1. a fortified  
ac borders of Laconia and Messina: 2.  
the Thracian Chersonesus.

**TIDIA,** a festival held in honour of  
*imnæ.*

**ER.** *n. f.* [corrupted from *enulmineur*,  
r of books with initial pictures.] A  
picture-maker.—That divers *limners*  
e, without either copy or design, should  
me picture to an undistinguishable ex-  
more conceivable than that matter,  
diversified, should frame itself so un-  
ccordingly to the idea of its kind.

are *limners* of another kind,  
out ideas in the mind;

Words are the paint by which their thoughts  
are shown,

And nature is their object to be drawn. *Granv.*  
**LIMNING,** the art of painting in water-co-  
lours, in contradistinction to painting which is  
done in oil colours. Limning is the most ancient  
kind of painting. Till John Van Eick found out  
the art of painting in oil, the painters all painted  
in water and in fresco. (See **ETICK.**) When they  
used boards, they usually glued a fine linen cloth  
over them, to prevent their opening; then laid on  
a ground of white; and lastly mixed up their  
colours with water and size, or with water and  
yolks of eggs, well beaten with the branches of a  
fig-tree, the juice whereof thus mixed with the  
eggs; and with this mixture they painted their  
pieces. In limning, all colours are proper, ex-  
cept the white made of lime, which is only used  
in fresco. The azure and ultramarine must al-  
ways be mixed with size or gum; but there are  
always applied two layers of hot size before the  
size-colours are laid on: the colours are all ground  
in water each by itself; and, as they are required  
in working, are diluted with size-water. When  
the piece is finished, go over it with the white of  
an egg well beaten; and with varnish, if requir-  
ed. To limn, or draw a face in colours: having  
all the materials in readiness, lay the prepared co-  
lour on the card even and thin, free from hairs  
and spots over the place where the picture is to  
be. The ground being laid, and the party placed  
in a due position, begin the work which is to be  
done at three sittings. At the first you are only  
to dead-colour the face, which will require about  
two hours. At the 2d sitting, go over the work  
more cursoriously, adding its particular graces or  
deformities. At the 3d sitting, finish the whole;  
carefully remarking whatever may conduce to  
render the piece perfect, as the cast of the eyes,  
moles, scars, gestures, and the like. See **DRAW-**  
**ING,** *Sec.* V.—VII.

**LIMNUS,** in ancient geography, an island be-  
tween Pembrokeshire and Ireland, now called  
**RAMSEY.**

**LIMOGES,** an ancient trading town of France,  
capital of the dep. of Upper Vienne; lately in the  
prov. of Guienne, and ci-devant capital of Limo-  
sin. Its horses are in great esteem. It is seated  
on the Vienne, 50 miles NE. of Perigueux, and  
110 E. of Bourdeaux: containing about 13,000  
citizens. Lon. 1. 20 E. Lat. 45. 50. N.

**LIMONADE,** a town of Hispaniola, 12 miles  
SW. of Port Liberty.

(1.) **LIMONE,** a town of the French republic,  
in the military dep. of Piedmont, and late county  
of Tenda; 6 miles NE. of Tenda, and 10 S. of  
Coni.

(2.) **LIMONE,** a town in Negropont isle.

(1.) **LIMONES,** a river in the isle of Cuba.

(2.) **LIMONES,** a town of Cuba, 50 miles S. of  
Havanna.

**LIMONIA,** an island 6 m. W. of Rhodes.

**LIMONUM,** a town of ancient Gaul, after-  
wards called **PICTAVI**, now **POICTIERS.**

**LIMOSIN,** a province of France, bounded on  
the N. by La Marche, E. by Auvergne, S. by  
Quercy, and W. by Perigord and Angoumois.

It was divided into the Upper and Lower; the former of which is very cold, but the latter temperate. It is covered with forests of chefnut trees; and contains mines of lead, coppier, tin, and iron; but its principal trade is in cattle and horses. It now forms the dep. of Upper Vienne.

LIMOUGNE, a town of France, in the dep. of Lot, 9 m. N. of Caylus, and 13½ E. of Cahors.

LIMOURES, a town of France, in the dep. of Seine and Oise, 9 miles S. of Versailles, and 17 SSW. of Paris.

\* LIMOUS. *adj.* [*limofis*, Latin.] Muddy; slimy.—That country became a gained ground by the muddy and *limous* matter brought down by the Nilus, which settled by degrees unto a firm land. *Brown*.—They esteemed this natural melancholick acidity to be the *limous* or slimy feculent part of the blood. *Floyer*.

LIMOÛX, a town of France, in the dep. of Aude, and ci-devant prov. of Languedoc. It is famed for its wine, called *la Blanquette de Limoux*, or the *Perry of Limoux*, and has a cloth manufactory. It is seated on the Aude, 37 miles W. by S. of Narbonne, and 50 SE. of Toulouse. Lon. 2. 16. E. Lat. 50. 24. N.

LIMOZINIÈRE, a town of France, in the dep. of Lower Loire; 9 miles E. of Machecoul.

\* LIMP. *adj.* [*limpio*, Italian.] 1. Vapid; weak. Not in use.—The chub eats waterish, and the flesh of him is not firm, *limp* and tasteless. *Walton's Angler*. 2. It is used in some provinces, and in Scotland, for *limber*, flexible.

\* To LIMP. *v. n.* [*limpen*, Saxon.] To halt; to walk lamely.—

An old poor man,  
Who after me hath many a weary step  
*Limp'd* in pure love. *Shak.*

Son of sixteen,  
Pluck the lin'd crutch from thy old *limping* fire. *Shak.*

How far  
The substance of my praise doth wrong this shadow  
In underprising it; so far this shadow  
Doth *limp* behind the substance. *Shak.*

—When Plutus, with his riches, is sent from Jupiter, he *limps* and goes slowly; but when he is sent by Pluto, he runs, and is swift of foot. *Bacon*.

*Limping* death, lash'd on by fate,  
Comes up to shorten half our date. *Dryd.*

The *limping* smith observ'd the fadden'd feast,  
And hopping here and there put in his word. *Dryd.*

Can syllogism set things right?  
No: majors toon with minors fight:  
Or both in friendly consort join'd,  
The consequence *limps* false behind. *Prior.*

LIMPACH, a town of Germany in Austria, 4 miles NNE. of Altenmark.

(1.) \* LIMPET. *n. f.* A kind of shell fish. *Ainsw.*

(2.) LIMPET. See PATELLA, N° II.

\* LIMPID. *adj.* [*limpide*, Fr. *limpidus*, Lat.] Clear; pure; transparent.—The springs which were clear, fresh, and *limpid*, become thick and turbid, and impregnated with sulphur as long as the earthquake lasts. *Woodward*.—

The brook that purls along  
The vocal grove, now fretting o'er a rock,  
Gently diffus'd into a *limpid* plain. *Thomson.*

\* LIMPIDNESS. *n. f.* [from *limpidus*] purity.

\* LIMPINGLY. *adv.* [from *limp*.] halting manner.

(1.) LIMPURG, a barony of Ger Franconia, inclosed almost entirely with and seated on the S. of Hall. It is about long, and 8 broad. Gaildorf and Shon which is the castle of Limpurg, are towns.

(2.) LIMPURG, a town of Germany, in the electorate of Treves, but now a the French republic, by the treaties of and Amiens. It appears to be includ dep. of the Rhine and Moselle. It is the Lhon. Lon. 8. 13. E. Lat. 50. 18.

\* LIMY. *adj.* [from *lime*.] 1. Vifco nous.—

Striving more, the more in laces ft  
Himself he tied, and wrapt his wings

In *limy* snares the subtil loops amon  
2. Containing lime.—A human skull co  
the skin, having been buried in some  
was tanned, or turned into a kind o  
*Grew*.

LIMYRA, an ancient town of Lycia  
LIMYRUS, a river in Lycia.

(1.) LIN; or LINN, *n. f.* [Gael. *leu*  
leap or fall.] a cataract, cascade, or  
This word is nearly obsolete, but is  
as part of the names of several catara  
country. See N° 2; BONNITON, N°  
N° 4; &c.

(2.) LIN OF CAMPSEY, a cataract of  
in the W. end of the parish of Cargi  
mile from Kinclaven, where the river  
a rugged basaltic dike. It is very deep  
tains great quantities of fine salmon, w  
about 30l. a-year to Lord Dunmor  
prietor.

\* To LIN. *v. a.* [*ablinnan*, Saxon.]  
to give over.—

Unto his foe he came,  
Resolv'd in mind all suddenly to wir

Or soon to lose before he once woul  
LINACRE, Thomas, M. D. was be

terbury about 1460, and there educated  
learned William Selling: thence he re  
Oxford, and in 1484 was chosen fello  
Souls college. Selling, being appointe  
dor from K. Henry VII. to the Pope, I

compained him to Rome, where he at  
highest perfection in Greek and Latin,  
ed Aristotle and Galen, in the original  
return to Oxford, he was graduated, a  
professor of medicine. He was soon a  
to court by Henry VII. to attend Prin

as his tutor and physician. He was  
appointed physician to the king, and on  
to Henry VII. He founded two medic  
at Oxford, and one at Cambridge; and  
lized his name by being the first foun  
college of physicians in London. Obs

wretched state of physic, he applied to  
Wolsey, and obtained a patent in 15  
porating the physicians of London, i  
prevent illiterate and ignorant medica  
practising the art. Dr Linacre was the

and held the office as long as he lived. Meetings were held in his own house in rider street, which house he bequeathed to college. When he was about the age of 16, he took it into his head to study divinity; and entered into orders; and was collated, in 1509, to the rectory of Mertham; installed prebendary of the same in 1518; prebendary of York, and in 1519 appointed precentor of that cathedral, which he held for other preferments. He died of the plague, Oct. 1524, aged 64; and was buried in St. Dunstons Church. Dr Caius, or Kay, 33 years after his death, caused a monument to be erected to his memory, with a Latin inscription, containing the particulars of his life and character. He was a man of liberal parts, a skilful physician, a programmer, and one of the best Greek and Latin scholars of his time. Erasmus in his epistles highly of his translations from Galen, preferring them even to the original Greek. His works, 1. *De emendata structura Latini sermone*; Lond. printed by Pynson, 1524, 2. *id* by Stephens, 1527, 1532. 2. The rules of grammar, for the use of the princess by Pynson. Buchanan translated it into French, Paris, 1536. He likewise translated into elegant Latin, several of Galen's works, chiefly abroad at different times. Also *Diadocbi sphaera*, from the Greek; Venet. 1500.

AN, a river of Wales, in Carnarvonshire.

ANGE. See LEININGEN.

ANT, Michael, a French poet of the 18th century, who published many pieces of considerable merit. He was an intimate friend of M. de Voltaire, and obtained the Royal Academy's prize in 1749. He died in 1749.

ARES, a town of Spain, in Arragon.

ANARIA. See ANTIRRHINUM, N° 4.

ANARIA in zoology. See FRINGILLA, N° 7.

ARYD, a town of Sweden, in Smaland.

ATO, a town of the Italian Republic, in the prov. of Olona, and district (ci-devant duchy) of Milan.

BARES, a town of Portugal, in the prov. of Alentejo, 20 miles S. of Mirandola.

CASII, an ancient people of Gallia Narbonensis.

CELLES. See LINSSELLES.

CHAN, a town of China, in Honan.

CHANCHI, a town of Mexico, in Yucatan, 10 m. from Selem. Lon. 87. 50. W. Lat. 21. 0. N.

CHE, or LINKE, a strong town of France, in the prov. of the North, and ci-devant prov. of Flanders, 10 m. SW. of Dunkirk. Lon. 2. 51. 0. N.

CHIPPIN. *n. f.* An iron pin that keeps the wheel on the axle-tree. *Dist.*

COLN, or LINCOLN-SHIRE, a maritime county of England, 77 miles long and 48 broad from E. to W. by the German ocean, W. by the Humber, N. by Yorksh. and S. by Rutland, Northampton, and Cambridge shires. It contains 590 houses, 24,340 inhabitants, 631 parishes, and 31 market towns, whereof 5 send 2 members each to parliament, which, with two members from the county, make 12 in all. The principal ri-

vers are the Humber, Trent, Witham, Nene, Great Ouse, and Dun. It is divided into three parts, Lindsey, Kestoven, and Holland; the air of which last is unwholesome, on account of the fens and marshes. The soil of the N. and W. parts is very fertile, and abounds in corn and pastures. The E. and S. parts are not proper for corn; but abound with fish and fowls particularly ducks and geese. By its inland navigation, this county has communication with the rivers Mersey, Dee, Ribble, Aulsebrook, Severn, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles through diverse counties.

(2.) LINCOLN, the capital of the above county, is seated on the side of a hill; at the bottom of which runs the Witham in 3 small channels, over which are several bridges. The name is derived by some from *Lindi Colonia*, the colony of Lindum, contracted first to LINDOCOLNIA, and afterwards to Lincoln, which seems a very probable etymology. The ancient LINDUM, of the Britons, which stood on the top of the hill, as appears from the vestiges of a rampart, and deep ditches still remaining, was taken and demolished by the Saxons; who built a town upon the S. side of the hill down to the river side, which was several times taken by the Danes, and as often retaken by the Saxons. In Edward the Confessor's time, it appears, from the Doomsday book, to have been a very considerable place; and in the time of the Normans, Malmesbury says, it was one of the most populous cities in England. William I. built a castle upon the summit of the hill above the town. Though the other churches are mean, the cathedral is a most magnificent piece of Gothic architecture. It has a prodigious large bell, called *Tom of Lincoln*, near 5 tons in weight, and 23 feet in compass. The hill on which the church stands is so high, and the church so lofty, that it may be seen 50 m. to the N. and 30 to the S. Besides other tombs, it contains one of brass, in which are the entrails of Queen Eleanor, wife of Edward I. There were anciently 52 churches, now reduced to 14. Such is the magnificence and elevation of the cathedral, that the monks thought the sight of it must be very mortifying to the devil; whence it came to be said of one who was displeas'd, *that he looked like the devil over Lincoln*. The declivity, on which the city is built, being steep, the communication betwixt the upper and lower town is very troublesome, and coaches, and horses are obliged to make a circuit. Edward III. made this city a staple for wool, leather, lead, &c. It was once burnt; once besieged by King Stephen, who was here defeated and taken prisoner; and once taken by Henry III. from his rebellious barons. There is a great pool here, formed by the river on the W. side of it, called *Swan-pool*, because of the multitude of swans on it. The Roman N. gate remains entire under the modern name of *Newport Gate*. It is one of the noblest of this fort in Britain. It is a vast semicircle of stone of very large dimensions laid without mortar, connected only by their uniform shape. This magnificent arch is 16 feet in diameter, the stones are 4 feet thick at the bottom; and on both sides are laid horizontal stones of great dimensions, 10 or 12 feet long. There are also fragments of the old Roman Wall. Over against

against the castle entrenchment cast up by king Stephen; and the arms are carved the arms of John of Gaunt D. of Lancaster, who lived here like a king, and had a mint. The city communicates with the Trent, by a canal called the *Foss-dyke*. In the centre of the old castle there is a handsome modern structure for holding the assizes. Its walls are very substantial; the principal tower is situated on a high and very steep mount, which continues in its original state, but the remains of the tower on it are only 3 or 6 yards high. The outer walls of the castle are of very considerable height; which, appears still higher from their lofty situation and the moat below. The great gateway is still entire. This city is a county of itself, and has a vicountial jurisdiction for 20 miles round; and a privilege that no other city in England can equal. It consists principally of one street above two miles long, well paved, besides several populous cross and parallel streets. It has some handsome modern buildings, but more antique ones; upon the whole, it has an air of venerable grandeur arising from the ruins of ancient monasteries; most of which are now converted into stables, out-houses, &c. Upon the hill, in the castle are the ruins of bishop's palace. The city is supplied with water by several conduits, among which is a modern one in the pyramidal style, enriched with sculpture. It is governed by a mayor, 12 aldermen, two sheriffs, a recorder, four chamberlains, 4 coroners, and about 40 common council men. It has 4 charity schools, where 120 poor children are taught by the widows of clergymen. The neighbouring course is noted for its horse-races. On the down of Lincoln, that rare fowl the bustard is seen sometimes. The markets are on Tuesday and Friday; and there are 4 fairs. David king of Scots met king John here, on the 22d Nov. and performed homage to him, for his English territories, in presence of the Abps. of Canterbury, and Ragusa, 13 bishops, and a vast number of temporal lords and knights. Henry VII. kept his court here at Easter in 1586. The Jews were once its chief inhabitants, till they were forced to remove, after having impiously crucified the child of Grantham, and thrown it into a well, to this day called *Grantham's Well*. Lincoln is 32 m. NE. of Nottingham, and 144 N. of London. Lon. o. 17. W. Lat. 53. 16. N.

(3.) LINCOLN, a county of Kentucky, bounded on the N. by Mercer, NE. by Maddison, S. by Logan, and NW. by Washington counties. By the census taken in 1790, it contained 5454 citizens and 1094 slaves. Stanford is the capital.

(4.) LINCOLN, a town of Kentucky, in Mercer county, E. of Dicks River.

(5.) LINCOLN, a large maritime county in the district of Maine: bounded N. by Canada, E. by Hancock county, S. by the Atlantic, and W. by Cumberland county. It is 250 miles long and 70 broad; and comprehended 34 townships, and 29,962 citizens, in 1795.

(6.) LINCOLN, a county of N. Carolina, in Morpau district; bounded NE. by Iredell, E. by Cabarras, W. by Rutherford, and NW. by Burke counties. It contained 8,289 citizens, and 955 slaves, in 1795. It abounds with iron mines and *mineral waters*,

(7.) LINCOLN, a town of New Hampshire Grafton county.

(8.) LINCOLN, a town of Massachusetts, in Middlesex county; 16 miles NW. of Boston, containing 740 citizens in 1795.

(9.) LINCOLN, a township of Vermont, in Addison county.

(10.) LINCOLN, DIOCESE OF, an extensive shiopic of England. Though the bishopric was taken out of it by Henry II. and transferred to Peterborough and Oxford by Henry VII. it still vastly large, containing the counties of Northampton, Bedford, and part of Huntingdon, making 1255 parishes.

(11.) LINCOLN HEATH, an extensive heath in Lincolnshire, above 50 miles long, viz. from Lincoln to Ancaster S. to the Humber N. though it is but 3 or 4 miles over where broadest, it is 100 miles from Boston on this heath, the late King John Despenfer built a tower for the direction of the heath. It is a lofty square building with a square roof, which terminates in a flat roof, and the base is a square court-yard. Great part of this heath is now inclosed.

(12.) LINCOLNSHIRE. See N<sup>o</sup> 1.

LINCOLNTOWN, a town of N. Carolina, the capital of Lincoln county; 718 m. S. by W. of Philadelphia.

\* LINCTUS. *n. f.* [from *lingo*, Lat.] Muddled up by the tongue.

LIND, James, M. D. a late eminent physician; author of several valuable Treatises on Medicine; particularly one on the *Diseases of the Tongue*: Lond. 8vo. He died in 1794.

(1.) LINDAU, an imperial city of Germany, in Suabia, on an island in the lake of Constance, connected with the continent by a bridge. An arm of the lake runs through it, and forms of it into another island, consisting chiefly of gardens and vineyards; whence it has been called the *Venice of Suabia*. The natives are most of them Catholics. It has a celebrated abbey of Carthusians, whose abbess is a princess of the empire. It has also an ancient castle erected by Tiberius, and a wall erected by Constantine Chlorus. It was 4 times burnt, viz. in the 11th, 13th, 14th centuries; and in 1647, was a siege of 9 weeks by the Swedes. Its jurisdiction extends over 14 villages. It lies 19 miles S. of Constance, and 46 ENE. of Zurich. Lon. E. Lat. 47. 33. N.

(2.) LINDAU, a town of Germany, in Electoral Palatinate.

(3.) LINDAU, a town and fort of Hungary, in the county of Sáros.

(4.) LINDAU, a town of Saxony, in Anhalt.

(1.) LINDE, a town of France, in the department of Dordogne, 10½ miles E. of Bergerac.

(2.) LINDE, a town of Germany, in Upper Palatinate.

(3.) LINDE, a town of Sweden, in West Gothland.

LINDEBEUF, a town of France, in the department of the Lower Seine; 12 m. SE. of Caudebec, NW. of Rouen.

LINDECK, a town of Stiria, 8 m. N. of Graz.

(1.) \* LINDEN. *n. f.* [Lind, Sax.] Linden tree. See LIME.—

Hard box, and *linden* of a softer grain.

Two neighbouring trees, with walls past'd round,

One a hard oak, a softer *linden* one.

NDEN TREE. See TILIA.

INDENAU, a town of Prussia, in the Natangen; 32 miles SSW. of Koningf-

NDENAU, a town of Silesia, in Neisse.

ENBRONN, a town of Franconia.

ENBRUCH, Frederic, a learned critic, 17th century, who published editions of Terence, and other classics.

ENFELD, or } a town of Germany, in  
ENFELS, } the palatinate of the  
4 miles NNE. of Mannheim.

ER, a town of Maritime Austria, in Istria, 15 miles NE. of Pedena.

ESNESS. See NAZE.

IL. See GELA.

ISFARN, the ancient name of Holy Island, called from the rivulet *Lindi*, or *Landis*, which runs into the sea, and from the Celtic *Island*, i. e. recess. See HOLY ISLAND.

KOPING. See LINKIOPING, N° 1.

LEY, a town of New York, 2 miles N. of Pennsylvania line, and 64 SE. of Hartford.

LO, in modern geography, a city of anciently called LINDUS, stands at the foot of the hill. A bay, of considerable wideness, serves as a harbour. Ships find good anchorage there in 20 fathoms water, being safely sheltered from the SW. winds, which constantly blow through the severest season of the year. In the beginning of winter, they cast anchor off a large named Mallary. Before the build-up of the 17th century, Lindus was the harbour which received the fleets of Egypt and Tyre. It was once a place of great commerce. Mr Savary says, a judicious government, by taking advantage of its happy situation, might yet restore it to its former state.

OCOLNIA, a name of LINCOLN.

NDOW, a town of Pomerania.

LINDOW, two towns of Brandenburg.

LENDSAI, Sir David, a celebrated Scots noble descended of an ancient family, and who reigned of James IV. at his father's seat of *Mount*, near Cupar in Fifeshire. He was educated at St Andrews; and, after making a tour of Europe, returned to Scotland in 1514. On his arrival, he was appointed gentleman of the bed-chamber to the king, and tutor to the prince, afterwards James V. He enjoyed several honourable employments at court; but in 1533, was deprived of them all, except the office of *king at arms*, which he held till his death. His disgrace was probably owing to his writings against the clergy, which are frequent. After the decease of James V. he became a favourite of the regent earl of Arran; but the abbot of Paisley did not suffer him to be long in favour with the earl. He then returned to his paternal estate, and spent the remainder of his days in rural tranquillity. He died in 1558. His poetical talents, considering the age in which he lived, were not contemptible; he treats of the clergy with great severity, and writes in a plain style: but he takes such liberties with stretching, or shortening them for measure, that we still have a proverb, for an expression, *There is nae sic a word in a'*

*David Lindsay*. Mackenzie tells us, he knew nothing of dramatic rules, but that his comedies afforded abundance of mirth. Some fragments of these are still preserved in MS. He also wrote several tragedies, and first introduced dramatic poetry into Scotland. One of his comedies was played in 1515. He was cotemporary with John Heywood, the first English dramatic poet. His poems are printed in one volume; and fragments of his plays, in MS. are in Mr William Carmichael's collection.

(2.) LINDSAY, David, a relation of the poet (N° 1.) born in 1527. He was a zealous promoter of the reformation; and wrote a History of Scotland, from 1437 to 1542. He died in 1593.

(3.) LINDSAY, John, a learned English clergyman, born in 1686, and educated at Oxford. He preached many years to a nonjurant congregation in Aldergate Street, London. He published, 1. The Short History of the Regal Succession: 2. Remarks on Whiston's Scripture Politics; 8vo. Lond. 1720: 3. A translation of Mason's Vindication of the Church of England; 1726: and some sermons. He died 21st June, 1768, aged 82.

(4.) LINDSAY, the Hon. Colin, 3d brother to the Earl of Balcarras, and a major general in the British army. His first commission was that of Ensign in the 4th Reg. of foot, in 1771; in 1773, he was made lieutenant of the 55th; in 1778, captain; in 1780, major of the 2d battalion in the 73d, with which he served during the memorable siege of GIBRALTAR: and in 1783, lieutenant colonel of the 46th. On the 12th March 1795, he commanded the troops in Grenada, then in a critical situation, by the revolt of the negroes and mulattoes, aided by the French. On the morning of the 15th he attacked and defeated them, but from the fatigue of the march, and the approach of night, was not able to follow out the victory; and next morning the incessant rain rendered every movement impracticable. His anxiety and impatience at the delay occasioning a temporary insanity, he put an end to his life on the 22d, at 5 A. M. at the post before Balvidere. As he paid uncommon attention to the minutest wants of the soldiers he was much beloved, and regretted sincerely by them. He was a man of letters, and published The Military Miscellany, in 2 vols 8vo, 1793.

LINDSEY, the third and largest division of Lincolnshire. On the E. and N. it is washed by the sea, into which it projects with a large front; on the W. it is bounded by York and Nottinghamshires, from which it is parted by the Trent and Dun; on the S. by Kesteven, from which it is separated by the Witham and the Foss-dyke, which is 7 miles long, and was cut, by Henry I. between the Witham and the Trent, for the convenience of carriage. It had its name from LINCOLN, which stands in it, and was by the Romans called LINDUM, by the Britons *Lindcoit*, by the Saxons *Lindo-collune*, probably from its situation on a hill, and the lakes or woods that were anciently thereabouts; but the Normans called it *Nicol*.

LINDUM, an ancient town of Britain, on or near the site of Lincoln, possessed by the Horesti; mentioned by Richard of Cirencester, along with

ALAUHA and VICTORIA, as the 3 principal cities of that people. If the conjectures of the moderns are just, that *Alauna* was ALNWICK, *Lindum*, LINCOLN, and *Victoria*, PERTH, the dominions of the Horcſi muſt have been very extenſive. See ALAUNA, HOREſTI, LINCOLN, N<sup>o</sup> 2; and VICTORIA. But ſome geographers make LINDUM the ancient name of LINLITHGOW.

LINDUS, in ancient geography, a town of Rhodes, ſituated on a hill on the W. ſide of the iſland. It was built by Tlepolemus the ſon of Hercules, according to Diodorus Siculus; by *Lindus*, one of the Heliades, grandſons of Apollo, according to Strabo. It was the native place of Cleobulus, one of the 7 wiſe men. It had a famous temple of Lindian Minerva, built by the daughters of Danaus. Cadmus enriched it with many ſplendid offerings. The citizens dedicated and hung up here the 7th of Pindar's Olympic odes, written in letters of gold. The ruins of that ſuperb edifice are ſtill to be ſeen on the top of a high hill which overlooks the ſea. Relics of the walls conſiſting of ſtones of an enormous ſize, ſtill ſhow it to have been built in the Egyptian ſtyle. The pillars and other ornaments have been carried off. On the moſt elevated peak of the rock are the ruins of a caſtle, which may have ſerved as a fortrefs to the city. Its circumference is very extenſive, and is filled with rubbiſh.

(1.) \* LINE, *n. ſ.* [*linea*, Latin.] 1. Longitudinal extension.—Even the planets upon this principle, muſt gravitate no more towards the ſun; ſo that they would not revolve in curve *lines*, but fly away in direct tangents, till they ſtruck againſt other planets. *Bentley*. 2. A ſlender ſtring.—

Well ſung the Roman bard; all human things,  
Of deareſt value, hang on ſlender ſtrings;  
O ſee then the ſole hope, and in deſign  
Of heav'n our joy ſupported by a *line*. *Waller*.  
—A *line* ſeldom holds to ſtrain, or draws ſtreight  
in length, above 50 or 60 feet. *Maxon*. 3. A thread  
extended to direct any operations.—

We as by *line* upon the ocean go,  
Whoſe paths ſhall be familiar as the land. *Dryd*.  
4. The ſtring that ſuſtains the angler's hook.—  
Victorious with their *lines* and eyes,  
They make the fiſhes and the men their prize. *Waller*.

5. Lineaments, or marks in the hand or face.—  
Long is it ſince I ſaw him.

But time hath nothing blurrd thoſe *lines* of favour  
Which then he wore. *Shak*.  
—I ſhall have good fortune; go to, here's a ſimple  
*line* of life; here's a ſmall triſt of wives. *Shak*.—

Here, while his carting drone-pipe ſcand  
The myſtic figures of her hand,  
He tipples palmeftry, and dines  
On all her fortune telling *lines*. *Cleveland*.  
6. Delineation; ſketch.—This is not enough to-  
wards the raiſing ſuch buildings as I have drawn  
you here the *lines* of. *Temple*.—The inventors  
meant to turn ſuch qualifications into perſons as  
were agreeable to his character, for whom the *line*  
was drawn. *Pope*. 7. Contour; outline.—

Oh laſting as thoſe colours may they ſhine,  
Free as thy ſtroke, yet faultleſs as thy *line*! *Pope*.

8. As much as is written from one margin  
to other: a verſe.—In the preceding *line*,  
ſpeaks of Nauticaa, yet immediately chan-  
ges words into the maſculine gender. *Broomer*.

In moving *lines* theſe few epigrams tell  
What fate attends the nymph who lo-  
well.

9. Rank of ſoldiers.—  
They pierce the broken foe's remotel

10. Work thrown up; trench.—  
Now ſnatch an hour that favours thy  
Unite thy forces, and attack their *lines*.

11. Method; diſpoſition.  
The heavens themſelves, the planets, &  
center,  
Obſerve degree, priority, and place,  
Inſiſture, courſe, proportion, ſeaſon, for  
Office and cuſtom, in all *line* of order.

12. Extension; limit.—  
Eden ſtretch'd her *line*  
From Au an eaſtward to the royal tow  
Of great Seleucia.

13. Equator; equinoctial circle.—  
When the ſun below the *line* deſcend  
The one long night continued darkneſs

14. Progeny; family, aſcending or deſcend  
Propbet-like,

They hail'd him father to a *line* of king  
He ſends you this moſt memorable *line*  
In ev'ry branch truly demonſtrative,  
Willing you overlook this pedigree.  
—Some *lines* were noted for a ſtern, rigid  
ſavage, haughty, pariſimonious and unpopu-  
lars were ſweet and affable. *Dryden*.—

His empire, courage, and his boaſted  
Were all prov'd mortal. *Rofc*

A golden bowl  
The queen commanded to be crown  
wine,  
The bowl that Belus us'd and all the  
*line*.

The years  
Ran ſmoothly on, productive of a *line*  
Of wiſe heroic kings.

15. A *line* is one tenth of an inch. *Locke*.  
the plural.] A letter: as, I read your *lim*  
Lint or flax.

(2.) LINE, in geometry, (§ 1. def. 1.) a q  
extended in length only, without any bre-  
thickness. It is formed by the flux, or  
of a point. See FLUXIONS, and GEOMET

(3.) LINE alſo denotes a French meaſure  
taining the 12th part of an inch, or the 14.  
of a foot. Geometricians conceive the l  
divided into ſix points. The French *line*  
to the Engliſh barley-corn.

(4.) LINE, in genealogy, (§ 1. def. 14.) S  
SANGUINITY, § II. 2; DESCENT, § IV,  
INHERITANCE, § 3.

(5.) LINE, in modern metaphorical lang-  
used in a ſenſe quite different from all th  
17 definitions, given by Dr Johnson, in §  
in this modern ſenſe it is now ſo general  
both in ſpeaking and writing, that many  
will be ſurpriſed to find it ridiculed by t  
dicious critic, the late prof. J. H. BEAT

ue between Swift and Mercury; whom  
ices as advising the Dean, if he wishes to  
*honorable English*, to "avoid concienefs,  
s many words as possible. When you  
man's conduct, you must always call it  
*conduct*. Every thing is now a *line*. You  
say, He is in the army, but, He is in the  
*re*, or in the *army line*; nor, He is bred  
*is*, but, he is bred in a *professional line*.  
of, He is a hair-dresser, clergyman, prin-  
ner, merchant, fisherman, &c. you will  
at, if you do not say, He is in the *hair-*  
*ce*, in the *clerical line*, in the *printing line*,  
*amery line*, in the *mercantile line*, in the  
&c." See BRATTIE, § 2; To FEEL,  
O, § 2; &c.

E, in the art of war, (§ 1. def. 9.) is the  
of an army ranged in order of battle,  
but extended as far as may be, that it  
e flanked.

E EQUINOCTIAL. (§ 1. def. 13.) See  
MY, INDEX; EQUATOR, § 1; EQUINOC-  
5; and GEOGRAPHY, Sect. IV.

L, FISHING. See FISHING-LINE.

E, GUNTER'S, a logarithmic line, usu-  
ated upon scales, sectors, &c. It is also  
*line of lines* and *line of numbers*; being only  
ms graduated upon a ruler which there-  
to solve problems instrumentally in the  
as logarithms do arithmetically. It is  
ded into 100 parts, every tenth where-  
red; beginning with 1 and ending with  
if the first great division, marked 1,  
re tenth of any integer, the next divi-  
1 2, will stand for two tenths, 3, three  
so on; and the intermediate divisions  
ke manner represent 100th-parts of  
teger. If each of the great divisions  
o integers, then will the lesser divisions  
tegers; and if the greater divisions be  
ch 100, the subdivisions will be each  
*find the product of two numbers*. From  
e compasses to the multiplier; and the  
, applied the same way from the mul-  
ill reach to the product. Thus if the  
4 and 8 be required, extend the com-  
1 to 4, and that extent laid from 8 the  
will reach to 32, their product. 2. *To*  
*number by another*. The extent from  
to unity will reach from the dividend  
ient: thus to divide 38 by 4, extend  
ies from 4 to 1, and the same extent  
rom 36 to 9, the quotient sought. 3.  
*en numbers to find a fourth proportional*.  
: numbers 6, 8, 9: extend the com-  
6 to 8; and this extent, laid from 9  
17, will reach to 12, the fourth pro-  
quired. 4. *To find a mean proportional*  
*two given numbers*. Suppose 8 and  
the compasses from 8, in the left; and  
line; to 32 in the right; then bisection-  
tance, its half will reach from 8 for-  
om 32 backward, to 16, the mean  
l sought. 5. *To extract the square*  
*number*. Suppose 25: bisection the dis-  
e 1 on the scale and the point repre-  
then the half of this distance, set off  
l give the point representing the root

L, PART L

5. In the same manner the cube root, or that  
of any higher power, may be found by dividing the  
distance on the line between 1 and the given num-  
ber into as many equal parts as the index of the  
power expresses; then one of those parts, set  
from 1, will find the point representing the root  
required.

(10.) LINE, HORIZONTAL; in geography and af-  
tronomy, a line drawn parallel to the horizon of  
any part of the earth.

(11.) LINE, MERIDIAN. See GEOGRAPHY,  
SECT. IV.

(12.) LINE OF BATTLE is the disposition of  
the fleet in the day of engagement, on which oc-  
casion the vessels are usually drawn up as much  
as possible in a straight line, to gain and keep the  
advantage of the wind and to run the same board:  
See NAVAL TACTICS.

(13.) LINES, in Heraldry. See HERALDRY;  
*Chap. II. Sect. III.*

(14.) LINE, SHIP OF THE, a vessel large enough  
to be drawn up in the line, and to have a place in  
a sea-fight.

\* To LINE. *v. a.* [supposed by *Juvius* from *li-*  
*num*, linings being often made of linen.] 1. To  
cover on the inside.—A box *lin'd* with paper to  
receive the mercury that might be spilt. *Boyle*.

2. To put any thing in the inside: a sense rather  
ludicrous.—The charge amounteth very high for  
any one man's purse, except *lined* beyond ordina-  
ry, to reach unto. *Correw.*—Her women are about  
her: what if I do *line* one of their hands? *Shak.*—  
He, by a gentle bow, divin'd

How well a cully's purse was *lin'd*. *Swift*

3. To guard within.—Notwithstanding they had  
*lined* some hedges with musquetters, they were  
totally dispersed. *Clarendon*. 4. To strengthen by  
inner works.—

*Line* and new repair our towns of war

With men of courage, and with means defen-  
dant. *Shak.*

5. To cover with something soft.—

Son of sixteen,

Pluck the *lin'd* crutch from thy old limping fire.  
*Shak.*

6. To double; to strengthen with help.—

Who *lin'd* himself with hope,

Eating the air, on promise of supply. *Shak*

My brother Mortimer doth stir

About his title, and hath sent for you

To *line* his enterprise. *Shak*

—The two armies were assigned to the leading of  
two generals, both of them rather courtiers, and  
affured to the state, than martial men; yet *lined*  
and assisted with subordinate commanders of great  
experience and valour. *Bacon*. 7. To impregnate:  
applied to animals generating.—

Thus from the Tyrian pastures *lin'd* with Jove

He bore Europa, and still keeps his love. *Creech*.

LINEA ALBA, in anatomy, the concurrence  
of the tendons of the oblique and transverse muscles  
of the abdomen; dividing the abdomen in two,  
in the middle. It is called *linea*, line, as being  
straight; and *alba*, from its colour, which is white.  
The *linea alba* receives a twig of a nerve from the  
intercostals in each of its digitations or indentings,  
which are visible to the eye, in lean persons espe-  
cially.

\* **LINEAGE**. *n. f.* [*linage*, Fr.] Race; progeny; family, ascending or descending.—

Both the *lineage* and the certain fire  
From which I sprung, from me are hidden yet.

*Spenser.*

—Joseph was of the house and *lineage* of David.  
*Luke ii. 4.*—The Tirsan cometh forth with all his generation or *lineage*, the males before him, and the females following him; and if there be a mother from whose body the whole *lineage* is descended, there is a traverse where she fitteth. *Bacon.*—

Men of mighty fame,

And from th' immortal gods their *lineage* came.

*Dryden.*

No longer shall the widow'd land bemoan

A broken *lineage*, and a doubtful throne. *Addis.*  
—This care was infused by God himself, in order to ascertain the descent of the Messiah, and to prove that he was, as the prophets had foretold, of the tribe of Judah, and of the *lineage* of David. *Atterbury.*

\* **LINEAL**. *adj.* [*linealis*, from *linea*, Latin.]  
1. Composed of lines; delineated.—When any thing is mathematically demonstrated weak, it is much more mechanically weak; errors ever occurring more easily in the management of gross materials than *lineal* designs. *Wotton.* 2. Descending in a direct genealogy.—To re-establish, de facto, the right of *lineal* succession to paternal government, is to put a man in possession of that government which his fathers did enjoy, and he by *lineal* succession had a right to. *Locke.* 3. Hereditary; derived from ancestors.—

Peace be to France, if France in peace permit  
Our just and *lineal* entrance to our own. *Shak.*

4. Allied by direct descent.—

Queen Isabel, his grandmother,

Was *lineal* of the lady Ermengere. *Shak.*

O that your brows my laurel had sustain'd!

Well had I been depos'd if you had reign'd!

The father had descended for the son;

For only you are *lineal* to the throne. *Dryden.*

\* **LINEALLY**. *adv.* [from *lineal*.] In a direct line.—If he had been the person upon whom the crown had *lineally* and rightfully descended, it was good law. *Clarendon.*

(1.) \* **LINEAMENT**. *n. f.* [*lineament*, French; *lineamentum*, Lat.] Feature; discriminating mark in the form.—

Noble York

Found that the issue was not his begot;

Which well appeared in his *lineaments*,

Being nothing like the noble duke, my father.

*Shaksp.*

Six wings he wore, to shade

His *lineaments* divine.

*Milton.*

Man he seems

In all his *lineaments*, though in his face

The glimpses of his father's glory shine. *Mil.*

—There are not more differences in men's faces, and the outward *lineaments* of their bodies, than there are in the makes and tempers of their minds; only there is this difference, that the distinguishing characters of the face, and the *lineaments* of the body, grow more plain with time, but the peculiar physiognomy of the mind is most discernible in children. *Locke.*—I may advance religion and morals, by tracing some few *lineaments* in the cha-

rafter of a lady, who hath spent all her li practice of both. *Swift.*—The utmost boiling water is not able to destroy the str the tenderest plant: the *lineaments* of a v will remain after the strongest decoction.

(2.) **LINEAMENT**, among painters, is the outlines of a face.

(1.) \* **LINEAR**. *adj.* [*linearis*, Lat.] C of lines; having the form of lines.—When is freed from the sand stone, it is covered w stræ, tending towards several centres. *Wj*

(2.) **LINEAR NUMBERS**, in mathematics relate to length only; such is a number v presents one side of a plain figure. If the gure be a square, the linear figure is calle

(3.) **LINEAR PROBLEM**, that which ma ved geometrically by the intersection of t lines. This is called a *simple problem*, an able but of one solution.

\* **LINEATION**. *n. f.* [*lineatio*, from *lin* Draught of a line or lines.—There ar horney ground two white *lineations*, wit a pale red. *Woodward.*

(1.) \* **LINEN**. *adj.* [*lineus*, Lat.] 1. Mi nen.—A *linen* stock on one leg, and a kee hose on the other. *Shaksp.* 2. Resembli

Death of thy soul! those *linen* cheek  
Are counsellors to fear.

(2.) \* **LINEN**. *n. f.* [*linum*, Lat.] Cloth hemp or flax.—Here is a basket, he may throw foul *linen* upon him, as if going to *Shaksp.*—

Unseen, unfelt, the fiery serpent ski

Between her *linen* and her naked limb

(3.) **LINEN**, in commerce, is chiefly FLAX.—Linen was not worn by the Jews or Romans, as any part of their ordin Under tunicks of a finer texture supplied of shirts: Hence the occasion for frequent Alexander Severus was the first emperor v a shirt; but the use of so necessary a gar not become common till long after him.

(4.) **LINEN, BLEACHING OF**. See BLE M. Chaptal, in a memoir presented to tional Institute at Paris, in June 18c1, a new method of bleaching linen in 2 day half the usual expence, by putting it in closed stone vat, with a small quantity alkaline ley.

(5.) **LINEN FLOWERED WITH GOLD** I Lewis informs us of a manufacture estal London, for embellishing linen with fl ornaments of gold leaf. The linen, he f whiter than most of the printed linens; is extremely beautiful, and bears wash He had seen a piece which had been wa 4 times, with only the same precautio are used for the finer printed linens; and the gold continued entire, and of great

(6.) **LINEN, FOSSILE**, is a kind of ar which consists of flexible, parallel, stiff f which has been celebrated for the uses it has been applied, of being woven, and an INCOMBUSTIBLE CLOTH. Paper a wicks for lamps, have been made of it. ANTHUS, ASBESTOS, § 3, 4; and INCO BLE, § 2, 3.

(7.) **The LINEN MANUFACTURE** was

int

ced into Britain with the first settlements  
Romans. The flax was certainly first plant-  
ed nation in the British soil. The plant  
seed appears to have been originally a na-  
tive east. The woollen drapery would na-  
be prior in its origin to the linen; and the  
plants from which the threads of the latter  
duced, seems to have been first noticed  
rked by the inhabitants of Egypt. In E-  
deed, the linen manufacture appears to  
en very early: for even in Joseph's time it  
n to a considerable height. From the E-  
s the knowledge of it proceeded probably  
Greeks, and from them to the Romans.  
this day the flax is still imported from  
rn nations; the western kind being a de-  
species. To succeed in the linen manu-  
one set of people should be confined to  
and preparing the soil, sowing and co-  
he seed, weeding, pulling, rippling, and  
are of the flax till it is lodged at home:  
x, § 3, 8—13.) others should be employ-  
ying, breaking, scutching, and heckling  
to fit it for the spinners; (see FLAX-  
G.) and others in spinning and reeling it,  
or the weaver: others should be concern-  
ing due care of the weaving, bleaching,  
and finishing the cloth for the market. It  
ible to think, that if these several branches  
nufacture were carried on by distinct deal-  
tland and Ireland, where our home made  
manufactured, the several parts would  
executed, and the whole would be af-  
reaper, and with greater profit.

**WASHING, STAINING OF.** Linen receives a  
dye with much more difficulty than  
or cotton. The black struck on linen  
mon vitriol and galls, or logwood, is ve-  
table, and soon washes out.—Instead of  
l, a solution of iron in four strong beer  
made use of. This is well known to all  
ers; and by the use of this, which they  
iron liquor, and madder-root, are the  
d purples made which we see on printed  
The method of making this iron-liquor is  
as: A quantity of iron is put into the four  
er; and, to promote the dissolution of  
l, the whole is occasionally well stirred,  
r drawn off, and the rust beat from the  
r which the liquor is poured on again.  
of time is required to make the impreg-  
nfect; the solution being reckoned unfit  
ll it has stood at least a year. This solu-  
s the linen of a yellow, and different  
buff-colour; and is the only known sub-  
which these colours can be fixed on lin-  
e cloth stained deep with the iron liquor,  
wards boiled with madder, without any  
lition, becomes of the dark colour which  
on printed linens and cottons; which,  
nfect black, has a very near resemblance  
thers are stained paler with the same li-  
sted with water, and come out purple.  
ay also be stained of a durable purple by  
of gold in aqua regia. The solution for  
ose should be as fully saturated as possi-  
ould be diluted with three times its  
of water; and if the colour is required

deep, the piece, when dry, must be repeatedly  
moistened with it. The colour does not take  
place till a considerable time, sometimes several  
days, after the liquor has been applied: to hasten  
its appearance, the subject should be exposed to  
the sun and free air, and occasionally removed to  
a moist place, or moistened with water. When  
solution of gold in aqua regia is soaked up in li-  
nen cloths, the gold may be recovered by drying  
and burning them. The ANACARDIUM nut,  
which comes from the East Indies, is remarkable  
for its property of staining linen of a deep black  
colour, which cannot be washed out either with  
soap or alkaline ley. The stain is at first of a red-  
dish brown, but afterwards turns to a deep black  
on exposure to the air. The cashew nut, called  
the *anacardium of the West Indies*, differs from the  
oriental anacardium in its colouring quality. The  
juice of this nut is much paler than the other, and  
stains linen or cotton only of a brownish colour;  
which indeed is very durable, but does not at all  
change to black.—There are, however, trees, na-  
tives of our own colonies, which appear to con-  
tain juices of the same nature with those of India.  
Of this kind are several, and perhaps the greater  
number, of the species of the toxicodendron or poi-  
son tree. (See RHUS, N<sup>o</sup> 7.) Mr Catesby, in his *His-  
tory of Carolina* describes one called there the *poison-  
-ash*, from whose trunk flowed a liquid as black as  
ink, and supposed to be poisonous; which reputed  
poisonous quality has hitherto prevented the inhabi-  
tants from collecting or attempting to make any use  
of it. In the *Philos. Transf.* for 1755, the abbé Ma-  
zeas gives an account of 3 sorts of the toxicoden-  
dron raised in a botanic garden in France, con-  
taining in their leaves a milky juice, which in dry-  
ing became quite black, and communicated the  
same colour to the linen on which it was dropped.  
The linen thus stained was boiled with soap, and  
came out without the least dis-  
inution of colour; nor did a strong ley of wood-ashes make any  
change in it. Several of these trees have been  
planted in the open ground in England, and some  
still remain in the Bp. of London's garden at Ful-  
ham. That species called by Mr Miller the *true  
lac tree*, was found by Dr Lewis to have proper-  
ties of a similar kind. It contains in its bark, and  
the pedicles and ribs of the leaves, juice somewhat  
milky, which soon changed in the air to a reddish-  
brown, and in 2 or 3 hours to a deep blackish col-  
our: wherever the bark was cut or wounded, the  
incision became blackish; and on several parts of  
the leaves the juice had spontaneously exuded,  
and stained them of the same colour. This juice  
dropped on linen gave at first little or no colour,  
looking only like a spot of oil; but by degrees,  
the part moistened with it darkened in the same  
manner as the juice itself. On washing and boil-  
ing the linen with soap, the stain not only was not  
discharged, but seemed to have its blackness ra-  
ther improved; as if a brown matter, with which  
the black was manifestly debased, had been in  
part washed out, and left the black more pure.  
As the milky juice of some of our common plants  
turn dark-coloured or blackish in drying, the Doctor  
was induced to try the effects of several of them  
on linen. The juice of wild poppies, garden pop-  
pies, dandelion, hawk-weed, and sow-thistle, gave

town of France, in the dep. of  
es SW. of Angoulesme.

MENT. *n. f.* [*liniment*, Fr. *liniment*-  
ment: balsam; unguent.—The  
ngular arteries, ought to be a-  
orning with this *liniment* or bal-  
The wife author of nature hath  
e rump two glandules, which the  
ld upon with her bill, and squeezes  
p or *liniment*, fit for the inunction  
s. *Ray*.

MENT, in pharmacy, is somewhat  
an unguent, and thicker than an oil,  
uting different parts of the body;  
is proper for composing liniments are,  
ams, and whatever enters the com-  
gents and plasters.

*n. f.* [from *line*.] 1. The inner co-  
y thing; the inner double of a gar-

deceived, or did a fable cloud  
th her silver *lining* on the night. *Milt*.  
is in the grille of the nose is covered  
g, which differs from the facing of the  
row.—

gown with stiff embroid'ry shining,  
sharming with a slighter *lining*. *Prior*.

ining of his coffers shall make coats  
our soldiers for these Irish wars. *Shak*.

*n. f.* [*gelencke*, German.] 1. A single  
chain.—

Roman state whose course will yet go on  
ay it takes, cracking ten thousand curbs  
se strong *links* asunder, than can ever  
if in your impediment. *Shak*.

—The moral of that poetical fiction, that the up-  
permost *link* of all the series of subordinate causes  
is fastened to Jupiter's chair, signifies an useful  
truth. *Hale*.—Truths hang together in a chain of  
mutual dependance; you cannot draw one *link*  
without attracting others. *Glanvill*.—

While she does her upward flight sustain,  
Touching each *link* of the continued chain,  
At length she is oblig'd, and forc'd to see  
A first, a source, a life, a deity. *Prior*.

2. Any thing doubled and closed together.—  
Make a *link* of horse hair very strong, and fasten  
it to the end of the stick that springs. *Mortimer*.—  
3. A chain; any thing connecting.—

Nor airless dungeon, nor strong *links* of iron,  
Can be retentive to the strength of spirit. *Shak*.

I feel  
The *link* of nature draw me; flesh of flesh,  
Bone of my bone thou art. *Milt*.

Fire, flood and earth, and air, by this were  
bound,  
And love, the common *link*, the new creation  
crown'd. *Dryden*.

4. Any single part of a series or chain of conse-  
quences; a gradation in ratiocination; a propo-  
sition joined to a foregoing and following a  
proposition.—The thread and train of consequences  
in intellectual ratiocination is often long, and  
chained together by divers *links*, which cannot be  
done in the imaginative ratiocination by some at-  
tributed to brutes. *Hale*. 5. A series: this sense  
is improper. *Addison* has used *link* for chain.—

Though I have here only chosen this single *link*  
of martyrs, I might find out others among those  
names which are still extant, that delivered down  
this account of our Saviour in a successive tradi-  
tion. *Addison*. 6. [From *λινος*.] A torch made  
of pitch and hards.—O, 'thou art an everlasting  
bonfire light; thou hast saved me a thousand  
marks in *links* and torches, walking with thee  
in the night betwixt tavern and tavern. *Shak*.—  
Whereas history should be the torch of truth,  
he makes her in divers places a fuliginous *link* of  
lies. *Howel*.—

Round as a globe, and liquor'd every chink,  
Goodly and great he sails behind his *link*. *Dryd*.

One that bore a *link*  
On sudden clapp'd his flaming cudgel,  
Like linstock, to the horse's touch-hole. *Hudib*.  
7. Perhaps in the following passage it may mean  
lamp-black.—

There was no *link* to colour Peter's hat. *Shak*.  
\* To LINK. *v. a.* [from the noun.] 1. To com-  
plicate; as, the links of a chain.—

With *linked* thunderbolts  
Transfix us to the bottom of this gulph. *Milt*.

Notes, with many a winding bought  
Of *linked* sweetness long drawn out. *Milton*.

2. To unite; to conjoin in concord.—  
They're so *link'd* in friendship,

That young prince Edward marries Warwick's  
daughter. *Shak*.

3. To join; to connect.—  
*Link* towns to towns with avenues of oak,  
Inclose whole downs in walls, 'tis a  
So from the first eternal order  
And creature *link'd* to creature

4. To join by confederacy or contract.—They make an offer of themselves into the service of that enemy, with whose servants they *link* themselves in so near a bond. *Hooker*.—

Be advised for the best,  
Ere thou thy daughter *link* in holy band  
Of wedlock, to that new unknown guest.

*F. Queen.*

Blood in princes *link'd* not in such fort,  
As that it is of any pow'r to tye.

*Daniel.*

5. To connect, as concomitant.—

New hope to spring  
Out of despair; joy, but with fear yet *link'd*.

*Milton.*

—God has *linkt* our hopes and our duty together. *Decay of Piety*.—So gracious hath God been to us, as to *link* together our duty and our interest. *Tillotson*. 6. To concatenate in a regular series of consequences.—These things are *linked*, and, as it were, chained one to another: we labour to eat, and we eat to live, and we live to do good; and the good which we do is as seed sown, with reference unto a future harvest. *Hooker*.—

There I'll *link* th' effect;

A chain, which fools to catch themselves project!

*Dryden.*

—By which chain of ideas thus visibly *linked* together in train, *i. e.* each intermediate idea agreeing on each side with those two, it is immediately placed between, the ideas of men and self-determination appear to be connected. *Locke*.

\* LINKBOY. LINKMAN. *n. f.* [*Link* and *boy*.]

A boy that carries a torch to accommodate passengers with light.—What a ridiculous thing it was, that the continued shadow of the earth should be broken by sudden miraculous disclusions of light, to prevent the officiousness of the *linkboy*! *More*.—

Though thou art tempted by the *linkman's* call,

Ye trust him not along the lonely wall. *Gay*.

In the black form of cinder-wench the came,

O may no *linkboy* interrupt their love! *Gay*.

LINKE. See LINCHE.

LIN-KIANG, a city of China, of the first rank, in the prov. of Kiang-Si, on the Yu-ho; 737 miles S. of Peking.

(1.) LINKIOPING, or LINKOPING, a town of Sweden, capital of *West* Gothland, with a bishop's see; seated on the lake Wenner; 12 miles NW. of Skar, and 178 SW. of Stockholm. *Brookes*. Lon. 13. 5. E. Lat. 58. 85. N.

(2.) LINKIOPING, a town of Sweden, in *East* Gothland, on the Stœng, near lake Roxen; with a bishop's see, 3 churches, and a castle; 96 miles SW. of Stockholm. *Crutwell*. Lon. 15. 28. E. Lat. 58. 24. N.—If there are not two towns of this name, as above stated, in E. and W. Gothland, either Dr Brookes or Mr Crutwell is in a mistake.

\* LINKMAN. See LINKBOY.

LINKNESS, a cape of Scotland, on the NW. coast of the isle of Stronfay.

(1.) LINLITHGOW, a parish of Scotland, in W. Lothian, or Linlithgow-shire, 5 miles long from E. to W. and 3 broad; containing 7,600 Scots acres; bounded on the W. by the Avon, which separates the county from Stirlingshire. The surface rises in a gradual ascent to 500 feet

above the sea level. The soil is various, but ground, in general, is well cultivated, and entirely inclosed with plantations. All the crops are raised, but very little flax. There are 4 lint and 4 corn mills. The population, in 1792, was 3221; and had decreased 75, since 1755. There is a silver mine in the S. extremity of the parish, formerly very productive. There are a bleachfield, printfield, and several distillers.

(2.) LINLITHGOW, [from *Lin*, Gael. *i. e.* *linn*, a twig, and *gow*, a dog;] a royal borough in the above parish, capital of the county. The name is said to allude to a black bitch, which according to tradition was found tied to a tree in an island, on the E. side of the lake, near which the town stands. This etymology seems confirmed from the figure of the black bitch making part of the town's armorial bearing, on its public seal. Others, however, derive the name from *linn*, a lake, *linn*, a flag or clove, and *gow*, a vale, which seems confirmed from its situation. Linlithgow is supposed to be the ancient LINDUM of Ptolemy. It was a royal borough in the time of David I. On the accession of the house of Stuart it became a royal residence. James IV. was attached to it, and built the E. part of the palace, which has been peculiarly magnificent. Six queens of Scotland had it as their jointure. It is all of polished stone, and covers an extensive ground. It was originally built, as Sibbald supposes, on the site of a Roman station. It is a square with towers at the corners, and stands on a gentle eminence, with the lake behind it. It was greatly ornamented by James V. and VI. Within it is a handsome square, the side of which was built by James VI. and I. in good repair till 1746, when it was accidentally damaged by the king's troops making fires at the hearths, by which the joists were burnt. In the middle of the square is an ornamented fountain in the middle of the 17th century. The other three sides of the square are more ancient. In one is a well 95 feet long, 30 feet 6 inches wide, and 3 feet deep. At one end is a gallery with 3 arches. The other three galleries run quite round the old part, to prevent communications with the rooms; in one of the rooms the unfortunate Q. Mary was born. The palace consists of one open street of stone houses, 1/2 mile long, with lanes on each side, and 3 streets on the N. and on the S. On the N. side is a high street, on an eminence E. of the palace. St Michael's church. In the market place is another fountain of two stories with 8 spouts surmounted like the former with an iron crown. The gallery, whence the regent I. was shot, is still to be seen. The house of the Melites, founded in 1290, was destroyed by the reformers in 1559. This borough is governed by a provost, 4 bailies, dean of guild, treasurer, 12 aldermen, 8 chant councillors, and 8 deacons of inceptions. The population, in 1793, was 2282. A market is on Friday, and there are 6 fairs annually. Considerable trade is carried on, in leather, wool, stockings, linen, porter, ale, &c. Tanning and dressing of leather employs 48 people; the shoe-making 100, who make about 24,000 annually; the printfield, in 1792, employed 100 people. Linlithgow is 2 miles S. of Borrow

its port, and 16 W. of Edinburgh. Lon. W. Lat. 56. 0. N.

LINLITHGOW, or } See LOTHIAN, WEST.  
LITHGOWSHIRE. }

LN, a town of Pennsylvania, in Northamp-

LNÆUS, Sir Charles, the justly celebrated  
ner of botany and natural history, was born  
ay 24, 1707, in a village called *Rosbult* in  
nd, where his father, Nicolas Linnæus, was  
ricar. We are told, that on the farm where  
eus was born, there yet stands a large lime-  
from the botanical names of which, *TILIA*  
NDEN, his ancestors took the surnames of  
der, *Lindelius*, and *Linneus*; and that this  
of surnames, from natural objects, is fre-  
t in Sweden. But the fact is, that, the name  
ed by this great man, even in his *Latin*  
s, is neither *Tiliander*, *Lindelius*, nor even  
us, but *LINNE*, which seems to be the real  
lth name of the family. In his Latin works,  
ed in Sweden, he styles himself *Carolus a Lin-*  
*How* he came to be styled *Linneus* by for-  
ers, is therefore not easily accounted for.  
eminent man, whose talents enabled him to  
n the whole science of natural history, ac-  
lated, very early in life, some of the highest  
ns in medical science. He was made pro-  
of physic and botany, in the university of  
, at the age of 34; and at 40, physician to  
Adolphus-Frederick. Linnæus's taste for  
y seems to have been imbibed from his fa-  
who cultivated a garden plentifully stored  
plants, by way of amusement. Young  
us soon became acquainted with these, as  
s with the indigenous ones in his neighbour-

Yet from the narrowness of his father's  
e, Charles was on the point of being des-  
to a mechanical employment, though for-  
ly the design was over-ruled. In 1717, he  
nt to school at Wexio; where, as his op-  
nities were enlarged, his progress in all his  
ite pursuits was proportionably extended;  
ven at this early period he began to study  
ural history of insects. Professor Stobæus,  
whom he received the first part of his ac-  
al education at Lund, in Scania, favoured  
ffection to natural history. He removed in  
to Upsal, where he contracted a close friend-  
with Arctedi, a native of Angermania, who  
een 4 years a student in that university, and  
strong bent to natural history, particularly  
ology. Soon after his residence at Upsal,  
ained the favour of several gentlemen of  
ished character in literature. He was par-  
rily encouraged in the pursuit of his studies  
r Olaus Celsius, then professor of divinity,  
he restorer of natural history in Sweden;  
being struck with the accuracy of Linnæus  
scribing the plants of the garden at Upsal,  
only patronized him, but admitted him to  
use, his table, and his library. Under his  
agement, Linnæus made such a rapid pro-  
g that in two years, he was thought quali-  
to give lectures occasionally from the botanic  
h, in the room of professor Rudbeck. In  
s, the Royal Academy of Sciences at Upsal,  
a view to improve the natural history of Swe-

den, at the instance of professors Celsius and Rud-  
beck, deputed Linnæus to make the tour of Lap-  
land, and explore the natural history of that ar-  
ctic region. He left Upsal the 13th of May, and  
took his route to Gevalia, the capital of Gestrucia,  
45 miles from Upsal; travelled through Helsing-  
land into Medalpadiä, where he ascended a re-  
markable mountain, before he reached Hudwick-  
swald, the capital of Helsingland. Thence he  
went through Angermanland to Hernosand, a sea-  
port on the Bothnic gulf, 70 miles from Hudwick-  
swald; where he visited the remarkable caverns  
on the summit of mount Skula, at the hazard of  
his life. Arriving at Uma, in W. Bothnia, he  
quitted the public road, and took his course  
through the woods westward, to traverse the most  
southern parts of Lapland. Though a stranger  
to the language and manners of the people, and  
without any associate, he trusted to the hospitality  
of the inhabitants, and experienced it fully. He  
mentions, with peculiar satisfaction, the innocence  
and simplicity of their lives. He reached the  
mountains towards Norway, and, after encoun-  
tering great hardships, returned to W. Bothnia;  
visited Pitha and Lula, on the gulf of Bothnia;  
from which last place he took a western route,  
proceeding up the river Lula, and visited the  
ruins of the temple of Jockmock in Lappmark:  
thence he traversed the *Lapland Desert*, destitute  
of all villages, cultivation, roads, or any conve-  
niences; inhabited only by a few straggling peo-  
ple, originally descended from the Finlanders,  
and who settled in this country in remote ages,  
being entirely a distinct people from the Lapland-  
ers. In this district he ascended a mountain  
called *Wallevari*, where he found a singular and  
beautiful new plant (*ANDROMEDA tetragona*) when  
travelling within the arctic circle, with the sun in  
his view at midnight, in search of a Lapland hut.  
Thence he crossed the Lapland Alps into Finmark,  
and traversed the shores of the north sea as far as  
Sallero. These journeys were made on foot, at-  
tended by two Laplanders, as his interpreter and  
guide. In descending a river, he narrowly escap-  
ed perishing by the oversetting of the boat, and  
lost many of the natural productions he had col-  
lected. Linnæus spent the greater part of the  
summer in examining this arctic region, and those  
mountains on which, four years afterwards, the  
French philosophers secured immortal fame to  
Sir Isaac Newton. At length, after having suffer-  
ed incredible fatigues and hardships, in climbing  
precipices, passing rivers in miserable boats, under  
the vicissitudes of extreme heat and cold, and of-  
ten of hunger and thirst, he returned to Tornoa  
in September. Having resolved to visit and ex-  
amine the country on the E. side of the gulf: his  
first stage was to Ula in E. Bothnia; thence to  
Old and New Carleby, 84 miles S. of Ula. He  
continued his route through Wasa, Christianstadt,  
and Biornburgh, to Abo, a small university in  
Finland. As winter was now setting in apace;  
he crossed the gulf by the island of Aland, and  
arrived at Upsal in November, after having per-  
formed, mostly on foot, a journey of ten degrees  
of latitude in extent, exclusively of numberless  
deviations. In 1733, he visited and examined the  
mines in Sweden; and made himself so well ac-

quainted

quainted with mineralogy and the docimastic art, that he was qualified to give lectures on those subjects upon his return to the university. The outlines of his system on mineralogy appeared in the early editions of the *Systema Naturæ*; but he did not exemplify the whole until 1768. In 1734, he was sent by baron Reuterholm governor of Dalecarlia, with several other naturalists in that province, to investigate the productions of that part of the Swedish dominions; and in this journey he first laid the plan of an excellent institution, which he afterwards executed, with the assistance of many of his pupils, and published the result under the title of *Pan Suecicus*, in the 2d volume of the *Amnitates Academicæ*. After this expedition, Linnæus resided some time at Fahlun, the chief town in Dalecarlia; where he taught mineralogy, and practised physic; and was hospitably treated by Dr More, the physician of the place. He contracted at this time an intimacy with a daughter of that gentleman, whom he married about 5 years afterwards. In this journey he extended his travels quite across the Dalecarlian Alps into Norway. In 1735, he travelled over many parts of Sweden, Denmark and Germany, and fixed in Holland, where he chiefly resided until his return to Stockholm, about 1739. In 1735, he also took his degree of M. D. and published the first sketch of his *Systema Naturæ*, in a compendious way, in the form of tables, in 12 pages, folio. By this it appears, that he had, before he was 24 years old, laid the basis of that grand structure which he afterwards erected to the increase of his own fame, as well as of natural science. In 1736, he came to England, and visited Dr Dillenius, at Oxford, whom he justly considered as one of the first botanists in Europe. He mentions his civilities, and the privilege he gave him of inspecting his own and the Sherardian collections of plants. He also visited Dr Martyn, Mr Rand, Mr Miller, and Dr Isaac Lawton; and contracted an intimate friendship with Mr Peter Collinson, which was reciprocally increased by a multitude of good offices, and continued to the last without diminution. Dr Boerhaave had given him letters to Sir Hans Sloane; but, they did not procure him the reception he and the Dr merited. One of the most agreeable circumstances that happened to Linnæus in Holland, arose from the patronage of Mr Clifford, in whose house he lived a considerable part of his time, and with whom he enjoyed pleasures and privileges scarcely at that time to be met with elsewhere in the world; that of a garden excellently stored with the finest exotics, and a library furnished with almost every botanic author of note. He was also recommended by Boerhaave to fill the place, then vacant, of physician to the Dutch settlement at Surinam; but he declined it on account of his having been born in so opposite a climate. He was also befriended by Dr John Burman, professor of botany at Amsterdam, to whom he dedicated his *Bibliotheca Botanica*, having been greatly assisted in compiling that work by the free access he had to that gentleman's excellent library; also by John Frederick Gronovius of Leyden, editor of Clayton's *Flora Virginitica*, who very early adopted Linnæus's system; by Baron Van Swieten, late physician to the Empress Queen;

by Dr Isaac Lawton, afterwards physician to the British army, who died at Oosterhout in 1747; by Kramer, since well known for an excellent treatise on the docimastic art; by Van Royen botanic professor at Leyden; and by Lieberkuhn of Berlin, famous for his skill in microscopical instruments and experiments: as well as by the celebrated Albinus and Gaubius. Early in 1738 Linnæus had a long and dangerous fit of sickness, and upon his recovery went to Paris, where he was entertained by the Jussieus, then the first botanists in France. The opportunity this gave him of inspecting their Herbaria, as well as those of Saurian and Tournesort, afforded him great satisfaction. He did not fail to avail himself of every advantage that access to the several museums of this country afforded him, in every branch of natural history; and the number and importance of his publications, during his absence from Sweden, demonstrate that fund of knowledge which he had accumulated before, as well as his extraordinary application. These were, *Systema Naturæ*, *Fundamenta Botanica*, *Bibliotheca Botanica*, and *Genera Plantarum*; the last of which is justly considered as the most valuable of all his works. What immense application had been bestowed upon it, the reader may easily conceive, on being informed, that before the publication of the first edition the author had examined the characters of 8000 flowers. The last book he published, during his stay in Holland, was the *Classes Plantarum*, which is a copious illustration of the 2d part of the *Fundamenta*. About the end of 1738, or beginning of 1739, he settled as a physician at Stockholm; where he seems to have met with considerable opposition, and was oppressed with many difficulties; but all of these at length he overcame, and got into extensive practice; and soon after his settlement, married Miss More. By the interest of Count Tessin, who was afterwards his great patron, and even procured medals to be struck in honour of him, he obtained the rank of physician to the fleet, and a salary for giving lectures on botany. And what was highly favourable to the advancement of his character and fame, was the establishment of the Royal Academy of Sciences at Stockholm; of which he was constituted the first president, and to which establishment the king granted several privileges, particularly that of free postage to all papers directed to the secretary. By the rules of the academy, the president held his place but three months. At the expiration of that term, Linnæus made his *Oratio de memorabilibus in Insectis*, Oct. 3, 1739; in which he endeavours to excite an attention to entomology, by displaying the many singular phenomena of insects, and by pointing out, in various instances, their usefulness to mankind, and to the economy of nature in general. In 1743, upon the resignation of Roberg, he was constituted joint professor of physic and physician to the king with Rosen, who had been appointed in 1740 on the death of Rudbeck. These two colleagues divided the medical departments between them; Rosen took anatomy, physiology, pathology, and the therapeutic part; Linnæus, natural history, botany, materia medica, the dietetic part, and the diagnosis morborum. the best libraries were open to him; and he col-  
lated the MSS. of ancient authors. He lived 23  
years at Leyden; during which he composed and  
published what he esteemed his best works; but  
settled at Louvain, where he taught polite litera-  
ture with great reputation. He was remarkable  
for unsteadiness in religion, fluctuating often be-  
tween the Protestants and Papists; but he became  
finally a bigoted catholic. He died at Louvain  
in 1606; and his works are collected in 6 vols.  
folio.

LIPSO, an island in the Grecian Archipelago,  
6 miles SSE. of Patmos.

LIPSTADT. See LIPPE, N° 2.

LIPUDA, a river of Naples, in Calabria.

\* LIPWISDOM. *n. f.* [*lip* and *wisdom*.] Wis-  
dom in talk without practice.—I find that all is  
but *lipwisdom*, which wants experience. *Sidney*.

\* LIQUABLE. *adj.* [from *liquo*, Latin.] Such  
as may be melted.

\* To LIQUATE. *v. n.* [*liquo*, Latin.] To melt;  
to liquefy.—If the salts be not drawn forth before  
the clay is baked, they are apt to *liquate*. *Wood-  
ward*.

\* LIQUATION. *n. f.* [from *liquo*, Latin.] 1.  
The act of melting. 2. Capacity to be melted.—  
The common opinion hath been, that chrysal is  
nothing but ice and snow concentered, and, by du-  
ration of time, congealed beyond *liquation*. *Brown*.

LIQUE, a town of France, in the dep. of the  
Straits of Calais and ci-devant prov. of Artois, 12  
m. W. of St Omer, Lon. 2. o. E. Lat. 50. 45. N.

(1.) \* LIQUEFACTION. *n. f.* [*liquefactio*, Lat.  
*liquefaction*, Fr.] The act of melting; the state  
of being melted.—Heat dissolveth and melteth bo-  
dies that keep in their spirits, as in divers *lique-  
factions*; and so doth time in honey, which by  
age waxeth more liquid. *Bacon*.—The burning of  
the earth will be a true *liquefaction* or dissolution  
of it, as to the exterior region. *Bornet*.

(2.) LIQUEFACTION is an operation by  
which a solid body is reduced into a liquid; or  
the action of fire or heat on fat and other fusible  
bodies, which puts their parts into a mutual in-  
terstine motion.—The liquefaction of wax, &c. is  
performed by a moderate heat; that of salt tartar,  
by the mere moisture of the air. All salts liquefy  
and, mixed with alkalis, becomes liquefied by  
a reverberatory fire, in the making of glass. In  
speaking of metals, instead of liquefaction, we or-  
dinarily use the word *fusion*.

\* LIQUEFIABLE. *adj.* [from *liquify*.] Such  
as may be melted.—There are three causes of  
fixation, the ever spreading of the spirits and  
tangible parts, the closeness of the tangible parts,  
and the jejuneness or extreme comminution of spi-  
rits; the two first may be joined with a nature  
*liquefiable*, the last not. *Bacon*.

(1.) \* To LIQUEFY. *v. a.* [*liquefier*, French;  
*liquefacio*, Latin.] To melt; to dissolve.—That  
degree of heat which is in lime and ashes, being  
a smothering heat, is the most proper, for it doth  
neither *liquefy* nor rarefy; and that is true matu-  
ration. *Bacon*.

(2.) \* To LIQUEFY. *v. n.* To grow liquid.  
—The blood of St Januarius *liquefied* at the ap-  
proach of the saint's head. *Addison*.

completed and published by his son. On his death a general mourning took place at Upsal, and his funeral was attended by the whole university, and the pall supported by 16 doctors of physic, all of whom had been his pupils. The king lamented his death in his speech to the States; and ordered a medal to be struck, of which one side exhibits Linnæus's bust and name, and the other Cybele, in a dejected attitude, holding in her left hand a key, and surrounded with animals and plants; with this legend, *Deam luctus angit amissi; and beneath, Post obitum Upsalæ, die x. Jan. M.DCC.LXXVIII. Rege jubente.* Nor was Linnæus honoured only in his own country. The late worthy professor of botany at Edinburgh, Dr Hope, not only pronounced an eulogium in honour of him before his students, at the opening of his lectures in spring 1778, but also erected a monument to his memory, in the botanic garden there. As to the personal character of this illustrious naturalist, his stature was diminutive and puny; his head large, and its hinder part very high; his look was ardent, piercing, and apt to daunt the beholder; his ear insensible to music; his temper quick, but easily appeased. But his personal defects were amply compensated by the endowments of his mind. He possessed a lively imagination, a strong judgment, the most retentive memory, an unremitting industry, and the greatest perseverance in all his pursuits; as is evident from that continued vigour, with which he prosecuted the design he formed early in life, of totally reforming and renovating the whole science of natural history. This fabric he raised, and gave to it a degree of perfection unknown before; and had the pleasure of seeing it rise above all others, notwithstanding every discouragement and opposition. Neither has any writer more cautiously avoided that common error of building his own fame on the ruin of another man's. He every where acknowledged the merits of each author's system, and was sensible of the partial defects of his own. Those anomalies which had principally been the objects of criticism, he well knew every artificial arrangement must abound with: and having laid it down as a firm maxim, that every system must finally rest on its intrinsic merit, he willingly committed his own to the judgment of posterity. Perhaps there is no circumstance of Linnæus's life which shows him in a more dignified light than his conduct towards his opponents. Disavowing controversy, he replied to none, numerous as they were at one period. He had a happy command of the Latin tongue, which is the most useful language of science; and no man ever applied it more successfully, or gave to description such copiousness, united with such precision and conciseness. His ardour for the study of natural history led him to regret, that this study was not established, as a public institution, in universities; and he often displayed, in a lively and convincing manner, the relation it hath to the public good; to incite the great to countenance it; to encourage and allure youth into its pursuits, by opening its manifold sources of pleasure to their view, and showing them how greatly this agreeable employment would add, in a variety of instances, both to their comfort and emolument. He also laboured to inspire

the great and opulent with a taste for this study; and wished particularly that such as were devoted to an ecclesiastic life should share a portion of natural science; not only as a means of sweetening their rural situation, but as leading to discoveries, which only such situations could give rise to, and which the learned in great cities have no opportunities to make. Linnæus lived to enjoy the fruit of his labour. Natural history arose in Sweden, under his culture, to a state of perfection unknown elsewhere; and was thence disseminated through all Europe. His pupils dispersed themselves all over the globe; the sovereigns of Europe established public institutions in favour of this study; and professorships were erected in various universities for cultivating it.

(1.) LINNE, a town of Germany, in the circle of the Lower Rhine, 2 miles S. of Ordingen, and 32 NNW. of Cologne.

(2.) LINNE. See LINNÆUS.

(1.) \* LINNET. *n. f.* [*linnet*, French *linnette*, Latin.] A small singing bird.—The swallows make use oelandine, the *linnet* of euphrasia, for the repairing of their sight. *More.*—

Is it for thee the *linnet* pours his throat? *More.*  
(2.) LINNET, in ornithology. See PARUS, N° 2. These birds build in hedges, as well as in furze bushes on heaths, but with very different materials. In hedges, they use the slender twigs of the roots of trees, and the down of heather and thistles; but on heaths, they use moss principally for the outer part, finishing it with such things as the place affords. They lay young ones 3 or 4 times a year, especially if they are taken away before they are able to leave the nests. When linnets are to be taught to whistle, or to imitate the notes of any other bird, they must be taken from the old one when they are not above 4 days old; for at this time they have no idea of the note of the old ones, and may be readily taught to modulate their voice like any thing that is most familiar to their ears, and within the compass of their throats. *More.* Care is required in feeding them when taken thus young, than when they are left in the nest to be nearly fledged; but they will be reared very well upon a food half bread and half rape seed boiled and bruised: this must be given them several times a-day. It must be made fresh every day, and given sufficiently moist, but not in the extreme. If it be in the least sour, it gripes and kills them; and if too stiff it is as mischievous by binding them up. They must be hung up as soon as taken from the nest, under the bird whose note they are intended to learn; or, if they are taught to whistle, it must be done by giving them lessons at the time of feeding; for they will profit more, while young, in a few days, than in a long time afterward, and will take in the whole method of their notes before they are able to crack hard seeds. Some have attempted to learn them to speak, and they often arrive at some perfection in it.

LIN-NGAN, a town of China, in Tche-kiang.  
LINNICH, a town of Germany, in the duchy of Juliers, now annexed to the French public, and included in the dep. of the Roer: 12 miles NNW. Juliers. Lon. 23. 49. E. Ferro. Lat. 51. 2. N.

TON, or LINTON, a parish of Scot- xburghshire, 9 miles long and 3 broad, n the W. by the Kail. The climate is ; the soil various; the surface mostly level, e being only one hill; but there are two lakes - an extensive moss in the parish. Agriculture uch improved.

) LINTON, a village in the above parish.

(6-12.) LINTON, the name of 7 English villages; in Derby, Devon, Gloucester, Hereford, Kent, Northumberland, and York shires.

LIN-TONG, a town of China, in Chep-si.

(1.) LINTRATHEN, or GLENTATHEN, a parish of Scotland, in Angus-shire, 8 miles long from N. to S. and 4 broad; elevated on the skirts of the Grampians, from 500 to 100 feet above the level of Strathmore. Hence the surface has a bleak and barren aspect, consisting of mountains, hills and valleys; though some parts are well cultivated and fertile, producing good crops of oats and barley. The old system of husbandry prevails, and improvements are prevented by *short*, or rather *no leases*, and heavy servitudes. The *schoolmaster* has a "miserable salary of 6 or 7 bolls of oats," and "the hut in which he resides is hardly fit to accommodate the meanest beggar." (*Sir J. Sinclair's Stat. Acc.* xiii. 566.) The population, in 1793, was about 900: decrease 265, since 1755.

(2.) LINTRATHEN, or GLENTATHEN, a vil- lage in the above parish, seated on a small cata- ract of the MELGAM, near a circular lake a mile in diameter. Vestiges of the hangman's habita- tion and other relics of feudal barbarism, are still visible.

LINTREY, a town of France, in the dep. of the Meurthe; 4½ miles NW. of Blamont, and 9 E. of Lunéville.

LINTSEED. See LINSEED.

LINTSTOCK. See LINSTOCK.

(1.) LINTZ, the capital of Upper Austria, with two fortified castles. It has a hall in which the states meet, a bridge over the Danube; and several manufactories. It was burnt in 1342. It was taken by the French in 1741, but retaken by the Austrians in 1742. It is seated at the conflux of the Danube and Traen; 42 miles SE. of Passau,

and 100 W. of Vienna. Lon. 14. 3. E. 15. N.

(2.) LINTZ, a town of Germany, in of the Lower Rhine, and electorate of seated on the E. side of the Rhine: 10 n of Bonn, and 23 SSE. of Cologne. Lon. Lat. 50. 31. N.

LINTZENEGG, a town of Austria.

LINUM, FLAX; a genus of the pent- der, belonging to the pentandria class and in the natural method ranking unde order, *Grinales*. The calyx is penta the petals are five, the capsule is quin and decemlocular; and the seeds are There are 21 species.

1. LINUM CATHARTICUM, the purg- hath leaves opposite and lanceolate; th furcated, and the corolla acute. This p above 4 or 5 inches high, and is found chalky hills and in dry pleasure ground- tue is expressed in its title; an infusion or whey of a handful of the fresh leaves, of them in substance when dried, purge inconvenience.

2. LINUM PERENNE, the perennial Sib- hath a fibrous perennial root, sending upright, strong, annual stalks, branchi feet high; garnished with small narro shaped, alternate leaves of a dark green and terminated by umbellate clusters of flowers in June, succeeded by seeds in This species is raised from seed in a bed of common garden earth, in shallow drill afunder; when the plants are 2 or 3 in thin them to the same distance; and plant them out where they are wanted.

3. LINUM USITATISSIMUM, the co- nual FLAX; hath a taper fibrous root slender, unbranched stalks, 2½ feet high; ed with narrow, spear-shaped, alternat loured leaves; and the stalks divided into at top, terminated by small blue crenat in June and July; succeeded by large r fules of ten cells, containing each one species may justly be looked upon as most valuable of the whole vegetable kin from the bark of its stalks is manufactur or flax for making all sorts of linen cloth rags of the linen is made paper; and seeds is expressed the lintseed oil, so painting and other trades. The seeds. cellent emollient and anodyne; they ar ternally in cataplasms, to assuage the p flamed tumors; internally, a slight i them by way of tea, in coughs, is an exc toral, and of great service in pleurifies, complaints, and suppressions of urine. cultivation, dressing, &c. of his species, § 1, 11, 3, 7-13; and ELAX-DRESSING

LINUS, in classical history, a native c cotemporary with Orpheus, and one o ancient poets and musicians of Greece. ing to Abp. Usher, he flourished about and he is mentioned by Eusebius among who wrote before the time of Moses. Siculus tells us, from Dionysius of Mit historian, who was cotemporary with C Linus was the first among the Greeks w

and music, as Cadmus first taught them. He likewise attributes to him an account exploits of the first Bacchus, and a treatise reek mythology, written in Pelasgian character which were also those used by Orpheus, Pronapides the preceptor of Homer. Diodorus says that he added the string *lichanos* to the lyre; and ascribes to him the invention of and melody; which Suidas, who regards the most ancient of lyric poets, confirms. He says that Linus invented cat-gut for the use of the lyre, which, before his time, was strung with thongs of leather, or with threads of flax strung together. He had disciples of great renown; among whom Hercules, Thamyris, and, some add, Orpheus. Hercules, says Diodorus, in learning from him to play upon the lyre, being extremely dull, provoked his master to strike him; he enraged the young hero, that instantly he beat out his lyre of the musician, he beat out his with his own instrument.

YEOU, a town of China, in Chen-si.

YAK, a lake of Thibet, 30 miles round.

YER, a town of France, in the dep. of Somme, 18 miles W. of Amiens.

LION. *n. f.* [*lion*, Fr. *leo*, Latin.] 1. The

and most magnanimous of fourfooted animals. King Richard's surname was *Cœur-de-lion* for his lion-like courage. *Camden*—

*lion* mettled; proud, and take no care to chafe, who frets, or where conspirers are;

Woe shall never vanquish'd be. *Shak.*

A sphinx, a famous monster in Egypt, had the head of a virgin, and the body of a lion.

*n.*—

They rejoice  
with their kind, *lion* with lioness;  
Lay them in pairs thou hast combin'd. *Milton.*

See *lion* hearted Richard,  
Lion valiant, like a torent swell'd  
in wintry tempests. *Philips.*

See *lion* in the zodiac.—

The *lion* for the honours of his skin,  
Squeezing crab, and stinging scorpion shine  
adorning heaven, when giants dar'd to brave  
threat'ned stars. *Creech.*

LION, in zoology. See FELIS, N° VIII. The roaring of the lion, says Mr Sparman, is in a hoarse inarticulate sound, which at the same time seems to have hollowness in it, as if proceeding from a speaking trumpet. The sound is between that of a *u* and an *o*, being drawn to a great length and appearing as if it came from out of the distance; at the same time that, after listening with the greatest attention, I could not exactly determine what quarter it came. The sound of the voice does not bear the least resemblance to that of a lion, as M. de Buffon, tom. ix. p. 22. from the observations of Boullage le Gouz, affirms it does. In the appearance it made to me to be neither peculiarly loud nor tremendous; yet, from its slow pronote, joined with nocturnal darkness, and the idea one is apt to form to one's self of the animal, it made one shudder, even in such

places as I had an opportunity of hearing it in with more satisfaction, and without having the least occasion for fear."

LIONCELLES, in heraldry, a term used for several lions born in the same coat of arms.

LION D' ANGERS, a town of France in the dep. of Maine and Loire, 10 miles NNW. of Angers.

\* LIONESSE. *n. f.* [feminine of *lion*.] A she lion.

Under which bush's shade, a lioness  
Lay couching head on ground, with catlike  
watch

When that the sleeping man should stir. *Shak.*  
The furious lioness,

Forgetting young ones, through the fields doth  
roar. *Mary.*

The greedy lioness the wolf pursues,  
The wolf the kid, the wanton kid the browse.

*Dryden.*

—If we may believe Pliny, lions do, in a very severe manner, punish the adulteries of the lioness.

*Aylffe.*  
(1.) \* LIONLEAF. *n. f.* [*Leontopetalon*, Lat.] A plant. *Miller.*

(2.) LIONLEAF. See LEONTICE.

LION MOUNTAIN, a mountain of Africa, near the Cape of Good Hope, said to resemble the Lion.

(1.) LIONS, a town of France, in the dep. of the Eure, 9 miles N. of Andelys, and 15 E. of Rouen. Lon. 19. 8. E. of Ferro. Lat. 49. 19. N.

(2.) LIONS. See LYONS.

(3.) LIONS, GULF OF, a bay of the Mediterranean, extending from Spain to Italy, and which has given its name to the town, (N° 1.) being often disturbed with tempests roaring like lions.

LION'S-FOOT. See CATANANCHE.

\* LION'S-MOUTH. } LION'S-TOOTH. *n. f.* [from  
\* LION'S-PAW. } *lion*.] The name of an

(1.) \* LION'S-TAIL. } herb.

(2.) LION'S-TAIL, in botany. See LEONURUS.

LIORAC, a town of France, in the department of Dordogne, 7 miles ENE. of Bergerac.

LIOSK, a town of Lithuania, in Troki.

LIOTARD, an eminent painter, born at Geneva, in 1722, and by his father designed for a merchant; but his genius inclined him to painting. He went to Paris in 1726, and in 1738 accompanied the marquis de Puifieux to Rome, where he was taken notice of by lords Sandwich and Duncannon, who engaged him to go with them to Constantinople. There he became acquainted with lord Edgumbe, and Sir Everard Fawkener, who brought him to England, where he staid two years. In his journey to the Levant he adopted the eastern habit, and wore it in Britain with a very long beard, whence he was called *the Turk*. After his return to the continent, he married a young wife, and sacrificed his beard to Hymen. He came again to England in 1772, and brought a collection of pictures of different masters, which he sold by auction, and some pieces of glass painted by himself, with surprising effect of light and shade, but mere curiosities, as it was necessary to darken the room before they could be seen to advantage. He engraved some Turkish portraits, one of the empress queen and the eldest arch-duchess in Turkish habits, and the heads of the emperor and empress. He painted

admira-

bly

ature; and finely in ena-  
practised it. But he is  
ks in crayons. His like-  
possible, and too like to  
him; thus he had great  
and very little the second.  
and one would think of  
der nothing but what he  
ckles, marks of the small-  
its place; not so much  
le he could not conceive  
g that appeared to him.  
us works, grace in few or

tolo, and Tila Navi. Pare, Ratto and Uffico, ar  
considerable. Volcano, a desert but habitable  
lies S. of Lipari: Salini lies WNW. of it: L  
di nearly in the same direction, but 20 mile  
ther distant; and Alicudi, 20 miles SW. of  
cudi, are inhabited. Panari is E. of Lipari  
famous Stromboli NE. and both are inhab  
Basiluzzo was formerly inhabited; and  
might be inhabited; and Exambianca has  
remains of ancient dwellings; but Eganera  
many others are nothing but bare rocks.  
Fermicoli, (a word signifying ants,) are a ch  
small black cliffs which run to the NE. of  
ri, within a little of Exambianca and Eic  
rising more or less above the water, according  
sea is more or less agitated. Ancient autho  
not agreed with respect to the number of t  
pari islands. Few of those by whom the  
mentioned appear to have seen them: a  
places such as these, where subterraneous fire  
u the earth and raise the ocean from it  
... ble changes must sometimes take place,  
canello and Volcano were once separated, b  
lava and ashes having filled up the interv  
strait, they are now united into one island  
have thus become much more habitable. Th  
volcanic eruption in the Lipari islands, recon  
hi ory, is that which Callias mentions in h  
te. y of the wars in Sicily. Callias was co  
po ary with Agathocles. That eruption conti  
without interval for several days and nights  
threw out great stones, which fell above  
distant. The sea boiled all around the i  
1 ring the consulship of Æmilius Lepidus:  
2 relius Orestes, A. A. C. 126, these islands  
affected with a dreadful earthquake. The  
ing of Ætna was the first cause of it. A  
Lipari and the adjacent islands, the air was  
fire. Vegetables were burnt up; animals  
and fusible bodies, such as wax and resin, b  
liquid. If the inhabitants of Lipari, from  
Callias received those facts, and the writer  
have handed them down to us, have not  
gerated matters, the sea boiled around the i  
the earth became so hot as to burn the cab  
which vessels were fixed to the shore, and  
sumed the planks, the oars, and even the  
boats. Pliny (lib. ii. cap. 106.) speaks of  
milar event, which happened 30 or 40 ye  
terwards, in the time of the war of the  
states of Italy against Romo. One of the 2  
islands, says he, was on fire as well as th  
and that prodigy continued to appear, till  
nate appeased, by a deputation, the wrath  
gods. From the time of that war, which h  
ed A. A. C. 86. till A. D. 144, we have  
count of an eruption of these volcanoes  
from that period again, till 1444, we hear  
explosion from them for 1300 years. But,  
time, both Sicily and these isles were agita  
dreadful shocks of earthquakes; the Volca  
poured forth streams of flame and smoke  
rose to an amazing height. After that it di  
ed enormous stones which fell above 6 mil  
tant. In 1550, the ashes and stones discl  
from its crater filled up the strait betwe  
cano and Volcanello. In 1739, there was a  
ruption. The byrings of the volcanic fir

To lip a wanton, and suppose her chaste. *Shak*.  
(1.) LIPA, a town of Croatia, on Dobra.  
(2.) LIPA, a town of Lithuania.

LIPARA, in ancient geography, the principal of  
the islands called ÆOLIAE, situated between Sic-  
ily and Italy, with a cognominal town, so power-  
ful as to have a fleet, and the other islands in sub-  
jection to it. Diodorus Siculus says, it was fa-  
mous for excellent harbours and medicinal wa-  
ters; and that it suddenly emerged from the sea  
about the time of Hannibal's death. The name is  
Punic, according to Bochart: and given it, be-  
cause being a volcano, it shone in the night. It  
is now called LIPARI, and gives name to 9 o-  
thers in its neighbourhood. See LIPARI, N° 1.  
and 2.

LIPARESE, the natives of LIPARI.

(1.) LIPARI, the general name of a cluster of  
islands, in the Mediterranean, of which 11 are either  
inhabited, or habitable; and rank in the following  
order, according to their sizes, viz. LIPARI, (N° 2.)  
STROMBOLI, VOLCANO, SALINI, Felicudi, or Feni-  
cidi, Alicudi or Alicor, Panari, Vacheleusi, Liffa, Dut-

uer eyes.

from that period again, till 1444, we hear  
explosion from them for 1300 years. But,  
time, both Sicily and these isles were agita  
dreadful shocks of earthquakes; the Volca  
poured forth streams of flame and smoke  
rose to an amazing height. After that it di  
ed enormous stones which fell above 6 mil  
tant. In 1550, the ashes and stones discl  
from its crater filled up the strait betwe  
cano and Volcanello. In 1739, there was a  
ruption. The byrings of the volcanic fir

ended with a noise so dreadful, that it was  
 as far as Melazzo in Sicily. In 1779, the  
 island was shaken; subterraneous thunder  
 heard, and considerable streams of flame with  
 ice, stones, and vitreous lava, issued from the  
 cr. Lipari was covered over with ashes, and  
 t of these was conveyed by the winds all  
 way into Sicily. In April 1780, there issued  
 an explosion from Volcano; the smoke was  
 the flocks constant, and the subterraneous  
 is very frequent. In 1783, the isles of Lipari  
 is agitated anew by that fatal earthquake which  
 aged Calabria, and part of Sicily, on the 5th  
 February. (See EARTHQUAKE, § 16.) These  
 isles lie N. of Sicily, between Lon. 14. 1. and 15.  
 E. and between Lat. 38. 20. and 38. 40. N.

LIPARI, the largest, and most populous of  
 the above islands, (N<sup>o</sup> 1.) and which gives name  
 to the whole cluster. It is about 15 miles in cir-  
 cumference, and abounds in corn, figs, and grapes;  
 as well as in bitumen, sulphur, alum, and mineral  
 salts. In this island oxen of a remarkably beau-  
 tiful species are employed in plowing the ground.  
 The ancient plough is still used. The mode of a-  
 griculture is very expeditious. One man traces a  
 furrow, and another follows to sow in it grain and  
 &c. The ploughman, in cutting the next fur-  
 row, covers up that in which the seed has been  
 sown; and thus the field is both plowed and sown  
 in one day. Vegetation is here more luxuriant, and  
 the soil more gay and healthful, than almost any  
 other. Near the city of Lipari, the travel-  
 lers deep narrow roads, of a very singular  
 appearance. The whole island is an assemblage  
 of mountains, consisting of ashes or lava discharg-  
 ed from the depths of the volcano by which it  
 was first produced. The particles of this puz-  
 zled, or ashes, are not very hard; the action of  
 rain water has accordingly cut out trenches  
 along the mountains; and these trenches, being  
 the surface less uneven than the rest of the surface,  
 of consequence been used as roads by the  
 inhabitants, and have been rendered much deeper  
 by being worn so many ages. These roads are  
 more than 5 or 6 fathoms deep, and not more than  
 3 feet wide. They are crooked, and have fe-  
 deral arches. They appear like narrow streets with-  
 out doors or windows. Their depth and windings  
 protect the traveller from the sun, while passing  
 through them; and he finds them deliciously cool.  
 The baths of St Calogero, in this island, are  
 situated where sulphureous exhalations, known to  
 be of a salutary nature, ascend out of the earth by  
 several spiracles. A range of apartments are  
 built around the place where the exhalations arise.  
 The heat is communicated through those apart-  
 ments in such a way, that when entering at one  
 end you advance towards the other, the heat  
 increases till you gain the middle apartment,  
 and then diminishes in the same manner as you  
 proceed from the middle to the other end of the  
 several chambers. In consequence of this dis-  
 position of these apartments, the sick person can  
 choose of that temperature which best suits  
 him. There are a few huts and a small  
 inn for the accommodation of the patients.  
 Physicians are ready to attend them. Physi-  
 cians attend when the disease is such as to render

their attendance requisite, and the patient rich  
 enough to afford handsome fees; as there is no  
 physician settled in the place. Besides these, dry  
 baths, there are baths of hot water, called St Calo-  
 gero's baths. There are around them buildings  
 sufficient to lodge a considerable number of sick  
 people with their attendants. The baths consist  
 of two halls; one square, the other round. The  
 former has been built by the Romans; it is arch-  
 ed with a cupola, and 12 feet in diameter; it has  
 been repaired: The other is likewise arched with  
 a cupola within and without. The water comes  
 very hot into the first. It gushes up from among  
 pieces of lava, which compose a part of the moun-  
 tain at the foot of which these baths are built.  
 The sick persons either sit down on the lava or  
 immerse themselves in the intervening cavities  
 which are filled with water. They approach  
 nearer to, or remain at a farther distance from,  
 the spring, according as their physician directs.  
 The place serves also as a stove. The hot vapours  
 arising from the water communicate to the sur-  
 rounding atmosphere a considerable degree of  
 heat. It is not inferior to that of the hot baths  
 of TERMINI. In these baths, therefore, a person  
 can have the benefit of either bathing in the hot  
 water, or exposing himself to the vapour, the heat  
 of which is more moderate. The *Dry bath*, be-  
 fore mentioned, is also a stove; but the hot vapour  
 with which it is filled issues directly from the vol-  
 cano. The place of the bath is, however, at such  
 a distance from the volcanic focus, that the heat  
 is tolerable. The mountain at the foot of which  
 these baths are situated is round, and terminates  
 at the summit in a rock of petrified ashes, which  
 are very hard and of a very fine grain. This pe-  
 trification consists of pretty regular strata, and ap-  
 pears to have been greatly prior in its origin to  
 the adjacent rocks; which consist likewise of ash-  
 es, but which have been deposited at a much later  
 period. From this rock proceeds likewise a stream  
 of hot water, by which some mills in the neigh-  
 bourhood are driven. It appears surprising, that  
 springs affording so great a quantity of water  
 should be placed nearly on the summit of a volca-  
 nic mountain. To account for this phenomenon  
 would be worthy of some ingenious naturalist.  
 On the same hill, about a mile distant, there is a  
 spring of cold water, which rises from the summit  
 of the same rock; that on the NW. produces 3  
 hot springs. The cold water is very pleasant, and  
 much used both by men and cattle. Among  
 these mountains there are many enormous loose  
 masses of lava. M. Houel informs us, that the lava  
 of the volcano of Lipari is of a much greater  
 diversity of colours, richer and more lively, than  
 that of Vesuvius and Etna. It is in some places,  
 for several miles, of a beautiful red colour, and  
 contains in great abundance small black crys-  
 tallized scoriæ, as well as the small white grains com-  
 monly found in lava. Among the eminences  
 which overlook the city of Lipari, there are some  
 rocks of a species which is very rare in Europe.  
 These are large masses of vitrified matter, which  
 rise 6 or 8 feet above the surface of the ground,  
 and extend to a great depth under it. They ex-  
 ist, through that range of mountains, in enormous  
 masses, mixed with lavas of every different colour,  
 and

attached and insulated. The confit might be employed in manufactures. It is readily be easily purified. It is transparent. Agriculture is of the inhabitants. A few are of great importance. More land are planted with vines: they are dried, and sent mostly to the island of PASSOLA. There are three sorts of raisins: one kind called the *black* is from a particular kind of grapes; berries are uncommonly and exported to Marseilles, Holland, and Trieste. The vines are in small arbours, which rise only to 2½ feet above the ground. Under those arbours grow beans, gourds, and other leguminous plants. In so hot a climate, the shade of the vines does not injure but protect the vegetables growing under it; otherwise they would be withered. The method of drying *passola* and *passolina* is curious: they first make a lixivium of common ashes; after boiling this, they pass it through a cloth or a sieve; they then put it again on the fire; and when it is observed to boil hard, suddenly immerse the grapes, but instantly bring them out again, and expose them to the sun to dry on broad frames of cane. When sufficiently dry, the raisins are put into casks and barrels to be sold and exported. The number of casks of different sorts of raisins annually exported from Lipari are estimated at 10,000. Some white malmsey and red wine are also exported. About 80 or 100 years ago, sulphur was a great article of commerce: but that trade has been given up; from an idea which the Liparise entertain, that sulphur infects the air so as to injure the fertility of the vines. The same prejudice prevails in Sicily; but seems to be ill-founded. There are courts of justice in Lipari, of the same powers and character with those in Sicily. Causes of more than ordinary importance are carried to Palermo. This island is free from every kind of imposition. The king receives nothing from it; because Count Roger anciently bestowed on its bishop all his rights of royalty over Lipari. The bishop there received annually from the inhabitants a 10th part of the product of their lands. They afterwards, to prevent fraud, estimated the value of that tithe for one year; and on condition of their paying annually a sum of money equal to what that year's tithe was valued at, he not only gave up his right to the tithe, but ceded to them a considerable extent of land.

(3.) LIPARI, an ancient and very strong city, capital of the above island, (N<sup>o</sup> 2.) with a bishop's see. It was ruined by Barbarossa in 1544, who carried away all the inhabitants into slavery, and demolished the place; but it was rebuilt by Charles V. The castle stands on a rock on the E. quarter of the island. The way to it from the city leads up a gentle declivity. There are several roads to it. It makes a part of the city; and on the summit of the rock is the citadel, in which the governor and the garrison reside. The cathedral stands in the same situation. Here the ancients had built the temple of a tutelary god. Their citadel commands the whole city; and it is accessible only at

one place. Were an hostile force to be sent on the island, the inhabitants would treat sithier, and be secure against all but the ancient inhabitants had also for place. Considerable portions of the ancient are still standing in different places, particularly towards the S. Their structure is Grecian; the stones are exceedingly large, and very heavy. The layers are 3 feet high, which show they have been raised in some very remote times. These recesses are surrounded with modern walls. The remains of walls are still to be seen here, which have belonged to temples and to all the sorts of buildings which the ancients used. The vaults, which are in a better state of preservation than any of the other parts of the island, are now converted into a prison. In this city there are convents of monks of two orders; but there are no convents or cloisters, which women are confined. Those who wish to live in a state of piety are at liberty to engage in a monastic life, without the concurrence of their confessors; they put on the sacred habit, and vow perpetual virginity, but continue to live with their mothers, and mix in society like other people. The vow and the habit even enlarge the sphere of their activity. This, says M. Houel, was the way in which the virgins of the primitive church lived. The practice of shutting them up together did not begin till the 5th century. The life of these religious is less gloomy, than that which those who take the same vows lead in other countries. Their clothes of particular colours, according to the order they belong to this or that order. They do not have them a right to frequent the church more than an hour; and the voice of slander affirms, that young ladies assume the habit with no other view, but that they may enjoy greater freedom. The archiepiscopal palace, and in that of the Count de Monizzio, there are some noble paintings by Sicilian painters.—A St Paul disputing with the adulterous woman, the incredulity of the Jews, &c. Lon. 15. 30. E. Lat. 38. 35.

LIPARINA, a town of Croatia.

LIPEZAN, a town of Turkey, in Asia.

\* LIPLABOUR, *n. s.* [*lip* and *labour*]. A mode of fasting of the lips without concurrence of the words without sentiments.—Fasting, when the words are not directed to its own purposes, is called *lip labour*. *Taylor*.

LIPNO, a town of Poland, in Dobruza.

LIPPO, a town China, in Quang-si.

LIPORANO, a town of Naples in Calabria.

LIPOTHYMYA, FAINTING, may arise from several causes; as too violent exercise, flux of the menses, or other accustomed evacuations, &c. See MEDICINE, *Index*.

\* LIPOTHYMOUS, *adj.* [*λίπω* at *lip* and *θυμός* at *thymos*]. Swooning; fainting.—If the patient be affected with a *lipothymous* languor, and great oppression about the stomach and hypochonders, relief from cordials. *Hartweg*.

\* LIPOTHYMY, *n. s.* [*λίποθυμία*]. Fainting fit.—The senators falling into a swoon, or deep swooning, made up this page with a representing of it unto life.

*thyms*, or swoonings, he used the friction of his finger with saffron and gold. *Brown*.  
 a town of Hungary, with a castle, seat-nountain, near the Maros. It was taken by the Turks in 1552; by the Imperialists in 1691; and by the Turks again in 1691; who pulled it in 1693, after having demolished the town. It is 75 m. NE. of Belgrade. Lon. 45. 51. N.

**LIPPE**, a county of Germany in Westphalia, W. of the bishopric of Paderborn. It is fertile but not very. The chief towns are Lemgo, and Lemgow; the chief rivers are the Lippe, Emmer, and Werra.

**LIPPE**, or **LIPSTADT**, the capital of the county, (N<sup>o</sup> 1.) seated on the river (N<sup>o</sup> 3.) is the residence of the chief branch of the family of Lippe. It now belongs to the king of Prussia, and carries on a good trade in timber and shipping vessels on the Rhine. Lon. 8. 30. E. 53. N.

**LIPPE**, a river in the above county, which flows into the Rhine, below Paderborn, and into the Wesel.

**LIPPE**, a fort of Portugal, near Elvas.

**LIPPE**, *adj.* [from *lip*.] Having lips.

**RODE**, a town of Germany in the county of Lippe, 2 miles ENE. of Lipstadt.

Lorenzo, or Laurence, a painter of historical portraits, was born in 1606, and learned the principles of painting from Matthew Roselli, an exquisite genius for music and poetry, as for painting; and in the latter, his genius was so great, that some of his compositions of the historical style were taken for those of Titian.

He afterwards adopted the manner of Raphael, who was excellent both in design and truth in his compositions than any other of that time. At Florence Lippi painted grand designs for the chapels and churches, which he enlarged his reputation; and at Vienna, he painted a great number of portraits of the first nobility, which were much admired. Although he imitated simple and without any embellishments, his works are held in the highest esteem for the graceful airs of the figures, for the correctness of his outline, and the elegant disposition of the figures. He died in 1655.

**LIPTITUDE**, *n. f.* [*lippitude*, Fr. *lippitudo*.] Redness of eyes.—Diseases that are attended with this, such as are in the spirits and not so much in the humours, and therefore pass easily from one to the other; such are pestilences and fevers. *Bacon*.

**LIPRING**, a town of Germany in Paderborn, the source of the Lippe, 4 miles N. of Lipstadt.

**LIPSTADT**. See **LIPPE**, N<sup>o</sup> 2.

**LIZZO**, a town of Naples, in the province of Terra di Lavoro; 17 miles WSW. of Manfredonia.

**L. JUSTUS**, a learned critic, born at Nish, near Brussels, in 1547. After having distinguished himself in literature, he became cardinal de Granvella at Rome, where he died in 1600.

III. PART I.

the best libraries were open to him; and he translated the MSS. of ancient authors. He lived 28 years at Leyden; during which he composed and published what he esteemed his best works; but settled at Louvain, where he taught polite literature with great reputation. He was remarkable for unsteadiness in religion, fluctuating often between the Protestants and Papists; but he became finally a bigoted catholic. He died at Louvain in 1606; and his works are collected in 6 vols. folio.

**LIPSO**, an island in the Grecian Archipelago, 6 miles SSE. of Patmos.

**LIPSTADT**. See **LIPPE**, N<sup>o</sup> 2.

**LIPUDA**, a river of Naples, in Calabria.

\* **LIPWISDOM**, *n. f.* [*lip* and *wisdom*.] Wisdom in talk without practice.—I find that all is but *lipwisdom*, which wants experience. *Sidney*.

\* **LIQUABLE**, *adj.* [from *liquo*, Latin.] Such as may be melted.

\* **To LIQUATE**, *v. n.* [*liquo*, Latin.] To melt; to liquefy.—If the salts be not drawn forth before the clay is baked, they are apt to *liquate*. *Woodward*.

\* **LIQUATION**, *n. f.* [from *liquo*, Latin.] 1. The act of melting. 2. Capacity to be melted.—The common opinion hath been, that chrysolite is nothing but ice and snow congealed, and, by duration of time, congealed beyond *liquation*. *Brown*.

**LIQUE**, a town of France, in the dep. of the Straits of Calais and ci-devant prov. of Artois, 12 m. W. of St Omer. Lon. 2. 0. E. Lat. 50. 45. N.

(1.) \* **LIQUEFACTION**, *n. f.* [*liquefactio*, Lat. *liquefaction*, Fr.] The act of melting; the state of being melted.—Heat dissolveth and melteth bodies that keep in their spirits, as in divers *liquefactions*; and so doth time in honey, which by age waxeth more liquid. *Bacon*.—The burning of the earth will be a true *liquefaction* or dissolution of it, as to the exterior region. *Burnet*.

(2.) **LIQUEFACTION** is an operation by which a solid body is reduced into a liquid; or the action of fire or heat on fat and other fusible bodies, which puts their parts into a mutual intestine motion.—The liquefaction of wax, &c. is performed by a moderate heat; that of sal tartari, by the mere moisture of the air. All salts liquify; sand, mixed with alkalis, becomes liquified by a reverberatory fire, in the making of glass. In speaking of metals, instead of liquefaction, we ordinarily use the word *fusion*.

\* **LIQUEFIABLE**, *adj.* [from *liquefy*.] Such as may be melted.—There are three causes of fixation, the ever spreading of the spirits and tangible parts, the closeness of the tangible parts, and the jejuneness or extreme comminution of spirits; the two first may be joined with a nature *liquefiable*; the last not. *Bacon*.

(1.) \* **To LIQUEFY**, *v. a.* [*liquefacio*, French; *liquefacio*, Latin.] To melt; to dissolve.—That degree of heat which is in lime and ashes, being a smothering heat, is the most proper, for it doth neither *liquefy* nor rarely; and that is true maturation. *Bacon*.

(2.) \* **To LIQUEFY**, *v. n.* To grow liquid.—The blood of St Januarius *liquefyed* at the approach of the saint's head. *Addison*.

LIQUENTIA, in ancient geography, a river of Gallia Cisalpina, running into the Adriatic; now called LIVENZA. *Plin. lib. iii. c. 17.*

\* LIQUESCENCY. *n. f.* [*liquefcentia*, Latin.] Aptness to melt.

\* LIQUESCENT. *adj.* [*liquefcentis*, Latin.] Melting.

(1.) \* LIQUID. *adj.* [*liquide*, Fr. *liquidus*, Lat.]  
1. Not solid; not forming one continuous substance; fluid.—

Gently rolls the liquid glass. *Dr Daniel.*  
2. Soft; clear.—

Her breast, the sug'rd nest  
Of her delicious soul, that there does lie,  
Bathing in streams of liquid melody. *Crawshaw.*

3. Pronounced without any jar or harshness.—  
The many liquid consonants give a pleasing sound to the words, though they are all of one syllable. *Dryden.*

Let Carolina smooth the tuneful lay,  
Lull with Amelia's liquid name the nine,  
And sweetly flow through all the royal line. *Pope.*

4. Dissolved, so as not to be obtainable by law.—If a creditor should appeal to hinder the burial of his debtor's corpse, his appeal ought not to be received, since the business of burial requires a quick dispatch, though the debt be entirely liquid. *Ayliffe.*

(2.) \* LIQUID. *n. f.* Liquid substance; liquor.—  
Be it thy choice, when summer heats annoy,  
To sit beneath her leafy canopy,  
Quaffing rich liquors. *Phillips.*

(3.) A LIQUID (§ 2.) is a body which has the property of fluidity, besides a peculiar quality of wetting other bodies immersed in it, arising from some configuration of its particles, which disposes them to adhere to the surfaces of bodies contiguous to them. See FLUID.

(4.) LIQUIDS, among grammarians, (§ 1. def. 3.) are the 5 consonants, *l, m, n, r, and f*; called also, *semi-vowels*, while all the other consonants are MUTES. They are called *liquids* from their sounding soft and as it were melting in the mouth. Some grammarians enumerate no fewer than 13 liquids. See ALPHABETS, § 3.

LIQUIDAMBAR, SWEET GUM TREE, in botany; a genus of the polyandria order, belonging to the monœcia class of plants; and in the natural method ranking with those of which the order is doubtful. The male calyx is common, and triphyllous; there is no corolla, but numerous filaments; the female calyxes are collected into a spherical form, and tetraphyllous; there is no corolla, but 7 styles; and many bivalved and monospermous capsules collected into a sphere. There are only two species, both deciduous, viz.

1. LIQUIDAMBAR PEREGRINUM, *Canada liquidambar*, or *spicewood-leaved gale*, is a native of Canada and Pennsylvania. The young branches are slender, tough, and hardy. The leaves are oblong, of a deep green colour, hairy underneath, and have indentures on their edges alternately very deep. The flowers come out from the sides of the branches, and they are succeeded by small roundish fruit, which seldom ripens in England.

2. LIQUIDAMBAR STYRACIFLUA, the *Virginia* or *maple-leaved liquidambar*; a native of the rich

moist parts of Virginia and Mexico. It shoots in a regular manner to 30 or 40 feet high, having its young twigs covered with a smooth, light-brown bark, while those of the older are of a darker colour. The leaves are of a lucid green, and grow irregularly on the young branches, on long foot-stalks: They resemble those of the common maple in figure; the lobes are all serrated; and from the base of the leaf a strong mid-rib runs to the extremity of each lobe that belongs to it. The flowers are of a kind of saffron colour: They are produced at the ends of the branches in the beginning of April, sometimes sooner; and are succeeded by large round brown fruit, which looks singular. Both species may be propagated either by seeds or layers; but the first method is the best. 1. The seeds arrive from America in spring. A fine bed, in a warm well sheltered place, should be prepared. If the soil be sandy, it should be wholly taken out near a foot deep, and the vacancy filled up with earth taken up a year before from a fresh pasture with the sward, as well rotted and mixed by being often turned, and afterwards mixed with a sixth part of drift or sea-sand. In a dry day early in March, let the seeds be sown, and the finest of this compost riddled over them a quarter of an inch deep. When the hot weather in spring comes on, the beds should be shaded, and watered often, but in very small quantities, only a very small sprinkling, at a time. Millar says, the seeds of these plants never come up under two years. But, Hanbury says with this easy management, he hardly ever knew longer than the end of May before the young plants made their appearance. The plants being come up, shading should still be afforded them a summer, and a watering every other night; which will promote their growth, and render them stronger by the autumn. In autumn, the bed should be hooped to be covered with mats in the severe frosts. These mats, however, should always be taken off in open weather. This is the management they require during the first winter. The succeeding summer they only require weeding; though, if it should prove a dry one they will need a little water now and then. In autumn they will be strong enough to resist the cold of the following winter, without the trouble of matting, if the situation is well sheltered; not, it will be proper to have the hoops prepared and the mats ready, against the northern frost which would endanger at least their losing the tops. After this, weeding only will be wanted; and in the spring following, that is, three years from their first appearance, they should be taken up and planted in the nursery a foot asunder, at two feet distant in the rows. Hoeing the weeds in the rows in summer, and digging them in the winter, is all the trouble they will afterwards require until they are finally planted out. 2. The are easily increased by layers. The operation must be performed in autumn, on the young summer's shoots; and the best way is by sitting them at a joint, as is practised for carnations. In a strong dry soil, they will be often two years more before they take root; though, in a soft light soil, they will be found to take freely enough.—The leaves emit their odoriferous particles

as to perfume the circumambient air; sole tree exudes such a fragrant transpiration, as to have given occasion to its being for the sweet storax. (See STYRAX.) They, therefore, are very proper to be planted in large opens, that they may amply their fine pyramidal growth, or to be planted near seats, pavilions, &c. They are particularly of great use as a perfume.

QUIDATE. *v. a.* [from *liquid.*] To loosen; to lessen debts.

DILITY. *n. f.* [from *liquid.*] Subtlety; the spirits, for their *liquidity*, are more than the fluid medium, which is the vehicle of sounds, to persevere in the continued vibration of vocal airs. *Glanv.*

DNESNESS. *n. f.* [from *liquid.*] Quality of being fluent; fluency.—Oil of anniseeds, in a cooled state, is condensed into the consistence of white butter, with the least heat, resumed its former *liquor*.

LIQUOR. *n. f.* [*liquor*, Lat. *liqueur*, Fr.] A liquid: it is commonly used of fluids or impregnated with something, or in solution.—

Nor envied them the grape  
Which that turbulent liquor fills with  
its

into the soul, is like a liquor pour'd  
; so much of it as it fills, it also seasons.  
Strong drink; in familiar language.

LIQUOR. The principal beverage amongst  
the Greeks and Romans, in  
antiquity, was water, milk, and the juices  
of plants infused therein. For a long time,  
the commonwealth of Rome, wine was so  
valued in their sacrifices to the gods the  
libation made with milk only. Wine did not  
become common there till A. U. C. 600, when  
it was first to be planted.

LIQUOR OF FLINTS. See CHEMISTRY, *Ind.*  
LIQUOR OF HOFFMAN, MINERAL ANO-  
LIS is a composition of highly rectified  
alcohol, vitriolic ether, and a little of the  
oil of vitriol. It is made by mixing an  
equal spirit of wine, which rises first in the  
distillation of ether, with as much of the liquor  
as will be distilled, and afterwards by dissolving  
the mixture which rises next, and which  
contains ether, 12 drops of the oil which rises  
last is passed. This has the same virtue  
as ether, and is now generally disused,  
ether being substituted in its place.

LIQUOR OF LIBAVIUS, SMOKING. See  
INDEX.

LIQUOR. *v. a.* [from the noun.] To drench  
—Cart wheels squeak not when they are  
well oiled.

LICE. See GLYCYRRHIZA.  
LE-VECH. See ASTRAGALUS, and

river of the Helvetic and Italian republics  
rises in the former, and runs into the  
Ligurian sea, in the latter.

LIQUOR. town of the French republic, in the  
department of Two Nethes, and late prov. of Austra-  
li-Nethes; 9 miles N. of Mechlin, and 12 SE.  
of London. Lon. 4. 16. E. Lat. 31. 9. N.

(1.) \* LIRICONFANCY. *n. f.* A flower.

(2.) LIRICONFANCY is a name given the *Lily of the Valley*. See CONVALLARIA.

LIRINUS. See LERINA.

LIRIODENDRON, the TULIP-TREE, in botany; a genus of the polygynia order, belonging to the polyandria class of plants; and in the natural method ranking under the 52d order, *Condu-nate*. The calyx is triphyllous; there are nine petals; and the seeds imbricated in such a manner as to form a cone.—There is but one species, viz.

LIRIODENDRON TULIPIFERA, a deciduous tree, native of most part of America. It rises with a large upright trunk, branching 40 or 50 feet high. The trunk, which often attains to a circumference of 30 feet, is covered with a grey bark. The branches, which are not very numerous, of the two-years-old wood, are smooth and brown; while the bark of the summer's shoots is smoother and shining, and of a bluish colour. They are very pithy. Their young wood is green, and when broken emits a strong scent. The leaves grow irregularly on the branches, on long footstalks. They are of a particular structure, being composed of 3 lobes, the middlemost of which is shortened in such a manner that it appears as if it had been cut off and hollowed at the middle: The other two are rounded off. They are about 4 or 5 inches long, and as many broad. They are of two colours; their upper surface is smooth, and of a stronger green than the lower. They fall off pretty early in autumn; and the buds for the next year's shoots soon after begin to swell and become dilated, inasmuch that, by the end of December, those at the ends of the branches will become near an inch long and half an inch broad. The outward laminae of these leaf-buds are of an oval figure have several longitudinal veins, and are of a bluish colour. The flowers are produced with us in July, at the ends of the branches: They somewhat resemble the tulip, which occasions its being called the TULIP TREE. The number of petals of which each is composed, like those of the tulip, is six; and these are spotted with green, red, white and yellow, thereby making a beautiful mixture. The flowers are succeeded by large cones, which never ripen in England. The propagation is very easy, if the seeds are good; for by these, which we receive from abroad, they are to be propagated. No particular compost need be sought for; neither is the trouble of pots, boxes, hot-beds, &c. required. They grow exceedingly well in beds of common garden mould, and the plants will be hardier and better than those raised with more care. Therefore, as soon as the seeds arrive, which is generally in February, and a few dry days have happened, so that the mould will work freely, sow the seeds, covering them three quarters of an inch deep; and observe to lay them lengthwise, otherwise, by being very long, one part, perhaps that of the embryo plant, may be out of the ground soon, and the seed be lost. This being done, let the beds be hooped; and as soon as the hot weather and drying winds come on in spring, let them be covered from 10 A. M. till sun-set. If little rain happens, they must be duly watered every other day; and by the end of May the plants will come up. Shade and watering in

the hottest summer must be afforded them, and they will afterwards give very little trouble. The next winter they will want no other care than, at the approach of it, sticking some furze-bushes round the bed, to break the keen edge of the black frosts, for it is found that the seedlings of this sort are very hardy, and seldom suffer by any weather. After they have been two years in the seed-bed, they should be taken up and planted in the nursery, a foot asunder, and two feet distant in the rows. After this, the usual nursery care of hoeing the weeds, and digging between the rows in the winter, will suffice till they are taken up for planting out. The tulip tree, in those parts of America where it grows common, affords excellent timber for many uses; particularly, the trunk is frequently hollowed, and made into a canoe sufficient to carry many people; and for this purpose no tree is thought more proper by the inhabitants of those parts. It may be stationed among trees of 40 feet growth.

LIRIS, in ancient geography, a river of Italy in Campania, which it separated from Latium, and falling into the Mediterranean; now called GARIGLIANO.

(1.) LIRON, John, a learned Benedictine, who published two curious works: 1. *Bibliothèque des Auteurs Chartrains*; 2. *Les Aménités de la Critique*. He died in 1749.

(2.) LIRON, a river of France, which runs into Orb, at Beziers.

LIRY, a town of France, in the dep. of the Ardennes; 6 miles S. of Vouziers.

(1.) LIS, or LYS, JOHN VANDER, painter of history, landscapes, and conversations, born at Oldenburgh in 1570. He went to Haerlem to study under Hen. Goltzius, and as he was endowed with great natural talents, he soon distinguished himself in that school, and imitated the manner of his master with great success. He adhered to the same style till he went to Italy; where, having visited Venice and Rome, he studied the works of Titian, Tintoretto, Paul Veronese, and Dominic Fetti, so effectually, that he improved his taste, and altered his manner entirely. He soon received marks of public approbation; and his compositions became universally admired. His subjects usually were sacred histories, or rural sports, marriages, balls, and villagers dancing, dressed in Venetian habits; all which he painted in a small as well as a large size, with a number of figures, well designed, and touched with a great deal of delicacy. A capital picture of his is, Adam and Eve lamenting the death of Abel; which is extremely admired, both for the expression, and the beauty of the landscape. His paintings are very rare. He died in 1629.

(2.) LIS, JOHN VANDER, of Breda, a historical painter, born at Breda about 1601. He became a disciple of Cornelius Polenburg, whose manner he imitated with extraordinary exactness, in the tints of his colouring, his neatness of pencilling, and the choice of his subjects. His most capital performance in England, is said to be in the possession of Viscount Middleton. His portrait, painted by himself, in the possession of Horace Walpole, Esq; is described as being worked up equal to the smoothness of enamel.

(3.) LIS, a river of France. See LYON.

(4, 5.) LIS, a river and lake of Russia.

LISANE, a town of Ireland, in Down.

LISARA, a town of Turkey, in All.

LISBELLAW, a town of Ireland, in

ty of Fermanagh and province of Ulster.

LISBERG, a town of Hesse, 3 m. S.

(1.) LISBON, the capital of Portugal

ted in the province of Estremadura, on

of the Tagus. It was anciently called

*Lisippo*, and *Ulyssipo*, from ULYSSES, who

to have founded it; (*Plin.* and *Solinus*)

derive these names from the Phœnicia

or *Oliisippo*, signifying in that tongue

bay, such as that on which this city

first became considerable in the reign of

manuel; since whose reign it hath been

tal of the kingdom, the residence of its

the seat of the chief tribunals, and of

metropolitan, the university, and the

of the richest merchandize of the East

Indies. Its air is excellent; being re-

delightful breezes, from the sea and

The city extends two miles along the

its breadth is inconsiderable. Like any

it stands on seven hills; but the streets

are narrow and dirty, and some of

steep; and they are not lighted at

churches, in general, are very fine; but

the centre of the city, upon one of the

is the castle, which commands the w-

large and ancient, and having always

ments of foot. The cathedral is a vast Gothic kind; it contains great riches finely adorned within. The square is large, and surrounded with magnificent buildings. The whole city is under the equal jurisdiction of the patriarch, who was elected in 1717. Here is also an archbishop, who at least had, before the erection of the papacy, a revenue of 40,000 crusadoes, or scudi. The university, which was removed for some time to Coimbra, but afterwards restored to its original seat, makes a considerable figure, inferior to that of Coimbra. Lisbon is 10 miles from the mouth of the Tago, 178 W. by N. E. and 255 S. by W. of Madrid. Lon. 9. 42. N. Lat. 38. 42. N.

**LISBON**, a town of Pennsylvania, in York county, on a creek of the Susquehanna, 18 miles from Philadelphia.

**LISLE**, a town of France, in the dep. of the Eure, at the source of the Lys, 10 miles W. of Aire.

**LISLURN**, a town of Ireland, in Antrim, 73 miles from Dublin. It was burnt down about 1700, but is now rebuilt in a handsome manner, and has a large linen manufactory. It has fairs on the 1st of Oct. 5; and is seated on the Laggan. Lon. 10. 15. W. Lat. 54. 41. N.

**LISYAN**, and **LISYANIAN**, } two of the small LIPARIAN ISLANDS.

**LISANO**, a town of Naples, in Otranto.

**LISAK**, a river of Carinthia.

**LISLE**, ST., a town of France, in the dep. of the Eure, and late prov. of Coufrevans, seated on the Eure, 10 miles SE. of Auch, and 390 S. by W. of Paris. Lon. 1. 15. E. Lat. 42. 56. N.

**LISLEUX**, a considerable town of France, in the dep. of Calvados, and late prov. of Upper Normandy.

The churches and public buildings are handsome. It is a trading place; and is seated at the confluence of the Arbeck and Gaffi. Lon. 10. 20. W. Lat. 49. 11. N.

**LISNANA**, a town of Ulster.

**LISKARD**. See **LESKARD**.

**LILLE**, or **LILLE**, a large, rich, handsome, and ancient town of France, in the dep. of the Nord, and ci-devant prov. of French Flanders, in which it was the capital. It is called *L'Isle*, i. e. the Island, because it was formerly insulated in a lake, which has been since drained. It has a citadel, and a citadel built by Vauban, said to be the finest in Europe, as well as the best fortified square in France. The large square, and the public buildings, are very handsome. The citizens manufacture silks, cambrics, camblots, and other stuffs, with great perfection. Lille has 170 streets, and 20,000 houses. The population, before the late war, was estimated at 56,000. Its castle was destroyed in 640. In 1007, the town was enlarged by Baldwin IV; and was walled by his son Baldwin V. In 1577, the castle was demolished by the citizens during the war with Philip II. of France.

In 1645, the French besieged it in vain; but in 1667, it was taken by Lewis XIV. In 1713, it was taken by the duke of Marlborough, after a three months siege and the loss of many thousand men; but restored in 1713, by the treaty of Utrecht, in consideration of the demolition of

the fortifications of Dunkirk. It was besieged, in 1792, by the Austrians under the D. of Saxe-Teschen, and bombarded. The siege commenced Sept. 19, but so brave a defence was made, that it was raised on the 8th Oct. during which time above 6,000 bombs and 30,000 red hot balls were thrown into the city, which was greatly damaged, and about 500 people were killed, chiefly women and children. Lille is seated on the river Deule, 14 miles W. of Tournay, 32 SW. of Ghent, 37 NW. of Mons, and 130 N. of Paris. Lon. 3. 9. W. Lat. 50. 38. N.

(2.) **LISLE**, a town of France, in the dep. of Dordogne, 9 miles NW. of Perigueux.

(3.) **LISLE**, a town of France, in the dep. of the Yonne, 7½ m. NNE. of Avallon, and 24 SE. of Auxerre.

(4.) **LISLE**, Claudius DE, a learned historiographer, born at Vancouleurs, in 1644. He studied among the Jesuits at Pontamousson; took his degrees in law, and afterwards studied history and geography; and to perfect himself in those sciences went to Paris, where the D. of Orleans, afterwards regent, and the principal lords of the court became his scholars. He wrote, 1. An historical account of the kingdom of Siam. 2. A genealogical and historical Atlas. 3. An abridgement of universal history. He died at Paris in 1720.

(5.) **LISLE**, William DE, son of the above, and the most learned geographer France has produced, was born at Paris in 1675. He became first geographer to the king, royal censor, and member of the academy of sciences. He died in 1726. He published a great number of excellent maps, and wrote many pieces in the Memoirs of the Academy of Sciences.

(6.) **LISLE**, Sir John, a brave loyalist in the time of the civil wars, was the son of a bookseller in London, and was educated in the Netherlands. He signalized himself upon many occasions, particularly in the last battle of Newbury; where, in the dusk of the evening, he led his men to the charge in his shirt, that his person might be more conspicuous. The king, who was an eye-witness of his bravery, knighted him in the field of battle. In 1648, he was one of the royalists who so obstinately defended Colchester, and who suffered for the defence of it. He was executed Aug. 28, 1648.

(7.) **LISLE**, Joseph Nicholas DE, a celebrated French astronomer, born at Paris in 1688. He was the intimate friend of Newton and Halley, and was a member of most of the learned academies in Europe. In 1726, he was invited to Russia, and remained there till 1747. His principal work is his *Memoirs of the History of Astronomy*. Unlike many modern French philosophers, he joined unaffected piety to the love of science. He died in 1768.

**LISLENA**, a town of Sweden, in Upland.

(1.) **LISMORE**, a borough and market town of Ireland, in Waterford, anciently called *Liffmore* or *Lias-mor*, Gael. i. e. the great inclosure, or large gardens. It formerly had an university. St Carthagh or Mochuda, in the beginning of the 7th century founded an abbey and school in it, which were much resorted to by the Britons and Saxons, as well as by the natives, during the middle ages. The site of Lismore was in early ages denominated

minated *Magbiskia*, or *the chafen field*, being the situation of a dun or fort, of the ancient chieftains of the Decies, one of whom granted it to St Carthagh on his expulsion from the abbey of Ratheny in W. Meath. Afterwards it obtained the name of *Dunsginne*, or *the fort of the Saxons*, from the number of Saxons which resorted to its university. The bishopric was united to that of Waterford in 1363, 730 years after its foundation. St Carthagh, who retired to this place with some of his religious in 636, to avoid the fury of the then Irish monarch, tied his disciples to a most strict rule of life; they never were allowed the use of flesh, fish, or fowl, but only vegetables. The castle was built by K. John, in 1195, on the ruins of the abbey of St Carthagh; it belonged to the D. of Devonshire, and gave birth to the great philosopher Robert Boyle. (See *BOYLE*, N<sup>o</sup> 5.) In 1189, it was demolished by the Irish, who took it by surprise. Being afterwards rebuilt, it was for many years an episcopal residence, till Myler Magrath, Abp. of Cathel, and Bp. of this see, granted the manor of Lismore to Sir Walter Raleigh, in the reign of Q. Elizabeth, at the yearly rent of 13l. 6s. 8d. After his murder, in the reign of James I. it fell into the hands of Sir Richard Boyle, who purchased all Sir Walter's lands; he added many buildings to it, most of which were burned down in the Irish rebellion; when it was besieged by 5000 Irish under Sir R. Beling, and defended by Lord Broghill, who obliged them to raise the siege. The castle is seated on the verge of a rocky hill, rising almost perpendicularly to a considerable height over the Black-water. The entrance is by an avenue of trees. Over the gate are the arms of the E. of Cork. Opposite to it is a modern portico of the Doric order, by Inigo Jones. Most of the buildings have remained in ruins since the rebellion in the 17th century; but the cathedral and offices that make up two sides of the square are kept in repair. At each angle is a tower, the chief relic of its former magnificence. In Oct. 1785, the late duke of Rutland, then lord lieutenant, issued proclamations from this castle. Here is a fine bridge over the BLACKWATER, erected by the D. of Devonshire, remarkable for its principal arch, which is 102 feet wide. Below the town is a rich fishery for salmon, which is the greatest branch of trade here. It has fairs on the 25th May and Sept. and 12 Nov. Lismore lies 6 miles NE. of Cork, 31 WSW. of Waterford, and 100 from Dublin. Lon. 7. 50. W. Lat. 52. 5. N.

(2.) LISMORE, one of the Hebrides, or Western Islands of Scotland, seated at the mouth of Loch-Linnhe, or a capacious lake in Argyleshire, navigable for the largest ships to Fort William. This island is 10 miles long, and from one to two miles broad. It abounds in limestone; from which, however, it derived little advantage, owing to the want of fuel, before the repeal of the duty on coals carried coastwise. Its population 1791, was 1121. It was anciently the residence of the bishops of Argyle, and gives name to the extensive parish in which it lies. (See N<sup>o</sup> 3.) It formerly abounded with deer, and elks horns of a large size have been discovered in it. It was frequented by FINGAL and his heroes, of whom relics are still pointed out.

(3.) LISMORE, a parish of Scotland, in Argyleshire, to which that of Appin is united. See APPIN. These united parishes comprehend the districts of LISMORE, *Airds*, APPIN, DURROZ, *Glencreren*, GLENCO, and *Kingerloch*; are watered by the rivers *Creren*, *CONA*, *Coinich*, *Durroz*, *BALICHELISH*, *Laroch*, and *LEYEN*; and intersected by considerable arms of the Atlantic. The chief crops are oats, barley, and potatoes. The lakes abound with marl from 10 to 16 feet deep; and the rocks with lime-stone. The population of both parishes, in 1791, was 3526; increase 714 since 1755. There are 4 churches, viz. at Lismore, Appin, Glenco, and Kingerloch.

LISNACON, a town of Ireland, in Cork.

LISNASKEA, a town of Ireland, in Fermanagh, 70 miles from Dublin. Lon. 7. 40. W. Lat. 54. 14. N.

\* LISNE. *n. f.* A cavity; a hollow.—In the *lisne* of a rock at Kingscote in Gloucestershire, I found a bushel of petrified cockles, each near as big as my fist. *Hale*.

LISNEGAR, a town of Ireland, in Cork.

LISNOVER, a town of Ireland, in Cavan.

LISOLA, Francis DE, a French writer born at Bezançon in 1639. He resided 4 years in London, as ambassador from the emperor Ferdinand III. and was afterwards envoy at Madrid. He wrote *Bouclier d'Etat et de Justice*; and died about 1670.

LISONZA, or } a river of Maritime Austria,  
LISONZO, } which rises in Carniola, near Gortz; passes by it, and Lucinissa, Gradisca, &c. and after joining the Natifone, falls into the Adriatic near Trieste.

\* LISP. *n. f.* [from the verb.] The act of lisping.—I overheard her answer, with a pretty *lisp*. O! Strepthon, you are a dangerous creature. *Tail*.

\* To LISP. *v. a.* [*tlisp*, Saxon.] To speak with too frequent appulses of the tongue to the teeth or palate, like children.—Come, I cannot cog, and say thou art this and that, like many of these *lisp*-ing hawthorn buds, that come like women in men's apparel, and smell like Bucklersbury in simpling time. *Shak.*—

Scarce had she learnt to *lisp* the name

Of martyr. *Crafsaw.*

They ramble not to learn the mode,

How to be drest, or how to *lisp* abroad.

*Cleaveland.*

—Appulse partial, giving some passage to breath, is made to the upper teeth, and causes a *lisp*ing sound, the breath being strained through the teeth. *Holder.*—

As yet a child, nor yet a fool to fame,

I *lisp*'d in numbers, for the numbers came. *Pope.*

\* LISPER. *n. f.* [from *lisp*.] One who lisps.

LISPOLE, a town of Ireland, in Kerry.

LISPOND, or } a weight used in Orkney and  
LISPUND, } Shetland, consisting of 12 lb. Dutch, but by various arts gradually raised to 30 lb. Butter is sold, and paid in rent, by the *lisp*-pund.

LISS, a town of the Batavian republic, in the dep. of Delft and late prov. of S. Holland; 8 miles N. of Leyden.

(1.) LISSA, an island of Maritime Austria, on the coast of Dalmatia, 30 miles in circumference, containing

owns and several villages. It abounds  
l, fish, fruits, and excellent wine;  
les W. of Ragusa. Lon. 17. o. E.

in architecture, a little square mould-

ing, otherwise called a FILLET, LISTEL, &c. See  
*Plate, XX. fig. 1.*

(3.) LIST, in commerce, (§ 1. *def.* 6.) the bor-  
der of cloth or stuff; serving not only to show  
their quality, but to preserve them from being  
torn in fulling, dying, &c.

(4.) LIST, in gardening, a border used by gar-  
deners, for securing their wall-trees.

(5.) LIST, (§ 1. *def.* 2.) was so called, as being  
hemmed round with pales, barriers, or stakes, as  
with a list. Some of these were double, one for  
each cavalier; which kept them apart, so that  
they could not come nearer each other than a  
spear's length. See DUEL, JUST, TOURNA-  
MENT, &c.

(6.) LIST, CIVIL, in the British polity. The  
expences defrayed by the civil list are those that  
in any shape relate to civil government; as, the  
expences of the household; all salaries to officers  
of state, to the judges, and the king's servants;  
the appointments to foreign ambassadors; the  
maintenance of the queen and royal family; the  
king's private expences, or privy purse; secret  
service money, pensions, and other bounties:  
which sometimes have so far exceeded the reve-  
nues appointed for that purpose, that application  
has been made to parliament to discharge the  
debts contracted on the civil list; as particularly  
in 1724, when one million was granted for that  
purpose by stat. 11 Geo. I. c. 17. and in 1769,  
when half a million was granted by stat. 9. Geo.  
III. c. 34. The civil list is indeed properly the  
whole of the king's revenue in his own distinct  
capacity; the rest being rather the revenue of the  
public, or its creditors, though collected and dis-  
tributed in the name and by the officers of the  
crown: it now standing in the same place, as the  
hereditary income did formerly; and as that has  
gradually diminished, the parliamentary appoint-  
ments have increased. The whole revenue of Q.  
Elizabeth did not exceed 600,000l. a-year; that  
of K. Charles I. was 800,000l. that voted for K.  
Charles II. was 1,200,000l. though it was said,  
in the first years at least, that it did not amount to  
so much. But under these sums were included all  
kinds of public expences; among which Lord Cla-  
rendon, in his speech to the parliament, computed,  
that the charge of the navy and land forces a-  
mounted annually to 800,000l. which was ten  
times more than before the former troubles. The  
same revenue, subject to the same charges, was set-  
tled on king James II.: but by the increase of trade,  
and more frugal management, it amounted on an  
average to 1,500,000l. per annum; besides other  
additional customs granted by parliament, which  
produced an annual revenue of 400,000l. out of  
which his fleet and army were maintained at the  
yearly expence of 1,100,000l. After the revolu-  
tion, when the parliament took into its own hands  
the annual support of the forces, both maritime  
and military, a civil list revenue was settled on K.  
William and Q. Mary, amounting, with the heredi-  
tary duties, to 700,000l. per annum; and the  
same was continued to Q. Anne and K. George I.  
That of K. George II. was nominally augmented  
to 800,000l. and in fact was considerably more;  
but that of his present majesty is expressly limited  
to

to that sum; though 100,000l. hath been since added. Upon the whole, it is doubtless much better for the crown, and also for the people, to have the revenue settled upon the modern footing rather than the ancient: for the crown, because it is more certain, and collected with greater ease; for the people, because they are thus delivered from the feudal hardships, and other odious branches of the prerogative. See REVENUE.

(1.) \* To LIST. *v. a.* [from *list*, a roll.] 1. To enlist; to enrol or register.—For a man to give his name to Christianity in those days, was to *list* himself a martyr, and to bid farewell not only to the pleasures, but also to the hopes of this life. *South.*

They *list* with women each degenerate name  
Who dares not hazard life for future fame.

*Dryden.*

2. To retain and enrol soldiers; to enlist.—The lords would, by *listing* their own servants, persuade the gentlemen in the town to do the like. *Clarend.*—The king who raised this wall appointed a million of soldiers, who were *listed* and paid for the defence of it against the Tartars. *Temple.*

Two hundred horse he shall command;

These in my name are *listed*.

*Dryden.*

3. [From *list*; enclosed ground.] To enclose for combats.—

How dares your pride presume against my laws,

As in a *listed* field to fight your cause?

Unaid'd the royal grant.

*Dryden.*

4. [From *list*, a shred or border.] To sew together, in such a sort as to make a particoloured shew.—Some may wonder at such an accumulation of benefits, like a kind of embroidering or *listing* of one favour upon another. *Wotton.* 5. [Contracted from *listen*.] To hearken to; to listen; to attend.—

Then weigh, what loss your honour may sustain,

If with too credent ear you *list* his songs. *Shak.*

I, this found I better know:

*List!* I would I could hear mo. *B. n. Jonson.*

(2.) \* To LIST. *v. n.* [*Lyftan*, Sax.] To chuse; to desire; to be disposed; to incline.—

To fight in field, or to defend this wall,

Point what you *list*, I nought refuse at all. *F. Q.*

—Them that add to the word of God what them *listeth*. *Hooker.*—They imagine, that laws which permit them not to do as they would, will endure them to speak as they *list*. *Hooker.*—Let other men think of your devices as they *list*, in my judgment they be mere fancies. *Whitgift.*—

Now by my mother's son, and that's myself,

It shall be moon, or star, or what I *list*. *Shak.*

Kings, lords of times, and of occasions, may

Take their advantage when, and how, they *list*.

*Daniel.*

When they *list*, into the womb

That bred them they return; and now, and

gnaw

My bowels, their repast. *Milt. Par. Lost.*

(3.) To LIST, or ENLIST, SOLDIERS. See § 1, *def.* 2.) Persons listed either as volunteers, or by any kind of compulsion, must be carried within 4 days, but not sooner than 24 hours after, before the next justice of peace of any county, riding, city, or place, or chief magistrate of any city or

town corporate (not being an officer in and if before such justice or magistrate from such enlisting, and return the money, and also 20 shillings in lieu of all depended on them; they are to be discharged persons refusing or neglecting to return such money within 24 hours, shall be duly listed, as if they had assented thereto the proper magistrate; and they shall, it be obliged to take the oath, or, upon refusal shall be confined by the officer who list till they do take it.

LISTA, an ancient town of the Sabini.  
\* LISTED. *adj.* Striped; particoloured streaks.—

A dewy cloud, and in the cloud a  
Conspicuous, with three *listed* colours  
Betok'ning peace from God.

As the show'ry arch

With *listed* colours gay, or, azure, green,  
Delights and puzzles the beholder's

LISTEL, *n. f.* See LIST, § 2.

(1.) \* To LISTEN. *v. a.* To hear; obsolete.—

Lady, vouchsafe to *listen* what I say  
One cried, God bleis us! and, another,

As they had seen me with these hangings  
*Listening* their fear, I could not say.

He, that no more must say, is *listen*  
Than they whom youth and ease has  
to close.

The wonted roar was up amidst them  
And fill'd the air with barbarous din  
At which I ceas'd and *listen'd* them a

(2.) \* To LISTEN. *v. n.* To hearken; attention.—

*Listen* to me, and if you speak me  
I'll tell you news.

—Antigonus used often to go disguised, at the tents of his soldiers; and at a time some that spoke very ill of him: when said, If you speak ill of me, you should farther off. *Bacon's Apoph.*—*Listen*, O me, and hearken, ye people. *Isa. xlii.* we have occasion to *listen*, and give a particular attention to some sound, the tyndrawn to a more than ordinary tension.

On the green bank I sat, and *listen'd* to

He shall be receiv'd with more regard

And *listen'd* to, than modest truth is he.

—To this humour most of our late courtiers succeed: the audience *listens* after else. *Addison.*

\* LISTENER. *n. f.* [from *listen*.] One who listens: a hearer.—They are light of belief *listeners* after news. *Hazel.*—*Listeners* as well of themselves. *Leffrange.*—If he attends the tea, and be a good *listener* make a tolerable figure, which will serve in the young chaplain. *Swift.*—The king when spoke by any brother in a lodge, warning to the rest to have a care of *listening*.

(1.) LISTER, Sir Matthew, M. D. physician to Anne of Denmark, James VI's queen,

l. was president of the College of Physicians one of the greatest practitioners of his age; died about 1637.

STEEN, Martin, M. D. and F. R. S. nephew preceding, was born in Bucks, in 1638, and bred at Cambridge. He afterwards travelled abroad, and at his return practised physic at Oxford afterwards at London. In 1683, he succeeded M. D. and became fellow of the colledge of Physicians in London. In 1698, he attended the Earl of Portland, in his embassy from King William III. to France; of which journey he published an account at his return, and was afterwards physician to Q. Anne. He also published, *De animalium Angliæ*, 4to. 2. *Conchyliologia*, fol. 3. *Coclearum & limacum exercitativa*, 4 vols 8vo. 4. Many pieces in *Philosophical Transactions* and other works.

TLESLY. *adv.* [from *listless*.] Without attention; without attention.—To know this pertrach him at play, and see whether he be active, or whether he lazily and listlessly away his time. *Locke on Education.*

TLESNESS. *n. f.* [from *listless*.] Inattention of desire.—It may be the palate of the disposed by *listlessness* or sorrow. *Taylor.*

TLESS. *adj.* [from *list*.] 1. Without inclination without any determination to one thing in another.—Intemperance and sensuality of the spirits, make them gross, *listless*, and *Tillotson*.—

our care to wheat alone extend,  
Tessa with her sisters first descend,  
: you trust in earth your future hope,  
: expect a *listless*, lazy crop. *Dryd. Virg.*

Lazy lolling sort  
: *listless* loit'ers, that attend  
use, no trust. *Pope.*

*listless*, and desponding. *Gulliver*. 2. Careless: with *of*.—

: sick for air before the portal gasp,  
: e in their empty hives remain,  
abd' with cold, and *listless* of their gain. *Dryden.*

TOWEL, a parish and post town of Ire-Kerry, 131 miles from Dublin, anciently *is-Tuathal*, i. e. the fort of Tuathal, from the 1st century, whose life forms a bill in the ancient Irish history. Not far from the town are the ruins of a castle, pleated on the Feale, which was taken in 1600, by Sir Charles Wilmot, being then for Lord Kerry against Q. Elizabeth. It is *to*.

TUEN, a town of China, in Chen-Si.  
TUSY SUR OURCO, a town of France, on the Seine and Marne, seated on the miles NE. of Meaux.

T, the preterite of *light*; whether *to light* *to happen*, or *to set on fire*, or *guide with*

love thyself, thy eyes,  
first insun'd, and *lit* me to thy love.  
: stars, that still must guide me. *Soutberne.*  
: y pipe with the paper. *Addison's Spect.*

TBRUM, a town of Hispania Tarraconensis called *Buitrago*. *Liv. l. 32. c. 14.*

TDA, a town in Negrepoint island.

L. XIII. PART I.

LITANA, or LITANA SILVA, in ancient geography, a wood of the Boii, in Gallia Togata, or Cispadana, where the Romans, under L. Posthumus Albinus, had a great defeat, scarce ten escaping of 25,000, and their general's head being cut off by the Boii, and carried in triumph into their temple. (*Livy*.) Holstenius supposes, this happened above the springs of Scuitenna, in a part of the Apennine, between Cersinianum and Mutina: Now called *Selva di Luca*.

(1.) \*LITANY. *n. f.* [*λειτουργία*; *litaniæ*.] A form of supplicatory prayer.—Supplications, with solemnity for the appeasing of God's wrath, were, of the Greek church, termed *litaniæ* and rogations of the Latin. *Hooker*.—Recite humbly and devoutly some penitential *litaniæ*. *Taylor.*

(2.) LITANY is derived from *λειτουργία*, I beseech, the expression repeated by the people, in the service. At first litaniæ were not fixed to any stated time, but were only employed as exigencies required. They were observed with ardent supplications and fastings, to avert the threatening judgments of fire, earthquakes, inundations, or hostile invasions. About A. D. 400, litaniæ began to be used in processions, the people walking barefoot, and repeating them with great devotion. The days on which these were used were called *rogation days*: these were appointed by the canons of different councils, till it was decreed by the council of Toledo, that they should be used every month throughout the year; and thus by degrees they came to be used weekly on Wednesdays and Fridays, the ancient stationary days for fasting. To these the rubric of the church of England has added Sundays. Before the last review of the common prayer, the litany was a distinct service by itself, and used some time after the morning prayer was over; at present it is made one office with the morning service, being ordered to be read after the third collect for grace, instead of the intercessional prayers in the daily service.

(1.) LITCHFIELD, a city of Staffordshire, in a low situation about 3 miles from the Trent. Its ancient name was *Licidfeld*, i. e. a field of carcases, from a great number of Christians having suffered martyrdom here in the persecution under Dioclesian. In the Saxons time, it was a bishoprick, and is now united with Coventry. It is divided into two parts by a rivulet and a shallow lake, over which are two causeways with sluices. It is a long straggling place, but has some very handsome houses, and well paved streets. The part on the S. side of the rivulet is called the *city*, and the other the *close*. The *city* is much the largest, and contains several public structures. It was incorporated by Edward VI. and is both a town and county, governed by a bailiff chosen yearly out of 24 burgesses, a recorder, sheriff, a steward, and other officers. The city has power of life and death within its jurisdiction; a court of record; a pie-powder court; a gaol, a free school, and a well endowed hospital for a master and 12 brethren. The county of the city is 10 or 12 m. in compass, which the sheriff rides yearly on the 8th of Sept. and then visits the corporation and neighbouring parishes. The *close* is so called from its being inclosed with a wall and a deep dry ditch

on all sides, except towards the city, where it is defended by a great lake or marsh formed by its brook. The cathedral, which stands in the clove, was originally built by Offius king of Northumberland about 300. It was rebuilt and enlarged by Offa king of Mercia in 766. In 1148 it was rebuilt, and greatly enlarged in 1296. At the reformation, Coventry was divided from it. In the civil wars its spire was destroyed, and it converted into a stable. In 1776 a beautiful painted window, by the benefaction of Dr Adenbrook, was set up at the W. end of the cathedral. In the civil wars it was several times taken and retaken, and thereby suffered much; but was so repaired after the restoration, at the expence of 20,000 l. that it was one of the noblest structures of the kind in England. It is walled in like a castle, and stands so high as to be seen 10 miles round. It is 450 feet long, of which the choir is 100, and the breadth in the broadest place 80. Its portico is hardly to be paralleled in England. On the top, at each corner of it, is a stately spire, besides a fine high steeple on the middle of the church. The choir is paved in great part with alabaster and cannel-coal. In 1789, it underwent a general repair. It merits attention on account of the elegant sculpture about the windows, and the embattled gallery that runs beneath them. There are 3 other churches; one of which, St Michael's, has a church-yard of 6 or 7 acres. In the neighbourhood are frequent horse-races. There are 6 fairs, and the markets are on Tuesday and Friday. This city communicates with the Mersey, by which it has an inland navigation, of above 300 miles. (See MERSEY.) Litchfield sends two members to parliament. It is 14 miles SE. of Stafford, and 119 NW. of London. Lon. 1. 44. W. Lat. 52. 54. N.

(2.) LITCHFIELD, a hilly county of Connecticut, bounded on the N. by Massachusetts, E. by Hartford county, S. by Newhaven and Fairfield, and W. by New York. It is 39 miles long from S. to N. 25 broad, and is divided into 22 townships; containing 38,522 citizens, and 233 slaves in 1795; which was 207 fewer slaves than it had in 1774, and above 12,000 more freemen.

(3.) LITCHFIELD, the capital of the above county (N<sup>o</sup> 2.) is a handsome town with a large area in the middle, a court house, a church, 3 iron manufactories, an oil mill, and several others for grain, &c. It lies 34 miles W. of Hartford, 42 NNW. of New-haven, and 201 NE. by N. of Philadelphia.

(4.) LITCHFIELD, a township of Maine district, in Lincoln county, 220 miles NE. of Boston.

(5.) LITCHFIELD, a township of New Hampshire, E. of the Merrimack and 54 miles W. of Portsmouth.

LITCHIN, a town of China, in Chau-Si.

(1.) \* LITERAL. *adj.* [*literal*, French; *litera*, Latin.] 1. According to the primitive meaning; not figurative.—Through all the writings of the antient fathers, we see that the words, which were, do continue; the only difference is, that whereas before they had a *literal*, they now have a metaphorical use, and are as so many notes of remembrance unto us, that what they did signify

in the letter, is accomplished in the truth. *H*—A foundation, being primarily of use in a lecture, hath no other *literal* notation but belongs to it in relation to an house, or building; nor figurative, but what is found that, and deduced from thence. *Harmonia* Following the letter, or exact words.—The for publick audience\* are such as, follow middle course between the rigour of *literal* lations and the liberty of paraphrases, do greater shortness and plainness deliver the ring. *Hooker*. 3. Consisting of letters; as, *literal* notation of numbers was known to peans before the cyphers.

(2.) \* LITERAL. *n. f.* Primitive or literal ing.—How dangerous it is in sensible things metaphorical expressions unto the people, what absurd conceits they will swallow in *literals*, an example we have in our professe *Brown*.

\* LITERALITY. *n. f.* [from *literal*.] Original meaning.—Not attaining the true deuterion and second intention of the words, they are to omit their superconsequences, coherence gures, or tropologies, and are not sometimes suaded beyond their *literalities*. *Brown*.

\* LITERALLY. *adv.* [from *literal*.] According to the primitive import of words; figuratively.—That a man and his wife are flesh, I can comprehend; yet *literally* taken, a thing impossible. *Swift*. 2. With close rence to words; word by word.—Endeavor to turn his Nifus and Euryalus as close as able, I have performed that episode too *Dryden*.—So wild and ungovernable a poet not be translated *literally*; his genius is too f to bear a chain. *Dryden*.

(1.) \* LITERARY. *adj.* [*Litarius*, Lat.]pecting letters; regarding learning. *Literary* tory, is an account of the state of learning of the lives of learned men. *Literary* con tion, is talk about questions of learning. *Lit* is not properly used of missive letters. It m said, this *epistolary* correspondence was pol oftener than *literary*.

(2.) LITERARY FUND FOR RELIEF OF THORS AND THEIR FAMILIES. Among the ny charitable, philanthropic, and beneficent tutions, for which the present age is so emi ly conspicuous, none surely merits the atter and patronage of *Literary Gentlemen*, and *A Letters*, more than that which is the subject of present article. We shall here, however, give a very brief account of this excellent in tion, referring the reader, for farther partic to the article SOCIETY. The Literary I though but lately instituted, amounted at anniversary meeting held on the 7th May: at the Free Mason's Tavern, London, to upv of 1000 l. a-year; and has been hitherto most fully administered. Sir James Bland Burges was in the chair on that occasion; and the Lord of Somerset presided at the last anniversary ring, on the 7th May 1802. From this fund, relief is given to men of genius, depressed by indisposition, or pety, with the most del regard to their feelings; and the institution is e

managed without expence, as the council and committees tranfact the whole of the business gratuitously."

(3.) LITERARY PROPERTY, or COPY-RIGHT, is that right or property, which an author has in his own original literary compositions; so that no other person, without his permission, may publish copies thereof. When a man, by the exertion of his rational powers, has produced an original work, he has clearly a right to dispose of that work as he pleases; and any attempt to take it from him, or vary the disposition he has made of it, is an invasion of his right of property. Now the identity of a literary composition consists entirely in the sentiment and the language; the same conceptions, clothed in the same words, must necessarily be the same composition; and whatever method be taken of conveying that composition to the ear, or the eye of another, by writing, or by printing, in any number of copies, it is always the identical work of the author which is so conveyed; and no other man (it hath been thought) can have a right to convey or transfer it without his consent, either tacitly or expressly given. His consent may perhaps be tacitly given when an author permits his work to be published without any reserve of right, and without stamping on it any marks of ownership; it is then a present to the public, like the building of a church, or the opening out a new highway: but in case of a bargain for a single impression, or a total sale or gift of the copy-right; in the one case the reversion hath been thought to continue in the original proprietor; in the other the whole property, with its exclusive rights, to be perpetually transferred to the grantee. On the other hand, it is urged, that though the exclusive right of the M. S. and all which it contains, belongs undoubtedly to the owner before it is printed or published; yet from the instant of publication, the exclusive right of an author or his assigns, to the sole communication of his ideas, immediately vanishes and evaporates; being a right of too subtle and unsubstantial a nature to become the subject of property at the common law, and only capable of being guarded by positive statute and special provisions of the legislature. The Roman law adjudged, that if a man wrote any thing, though ever so elegant, on the paper or parchment of another, the writing should belong to the original owner of the materials on which it was written: meaning certainly nothing more thereby than the mere mechanical operation of writing, for which it directed the scribe to receive a satisfaction; especially in works of genius and invention, such as a picture painted on another man's canvas, the same we gave the canvas to the painter. We find no other mention in the law of any property in the works of the understanding, though the sale of literary copies, for the purposes of recital or multiplication, is certainly as ancient as the times of Terence, Martial, and Statius. Neither with us in Britain hath there been (till lately) any final determination upon the right of authors at the common law. It was determined in the case of *Millar v. Taylor B. R. Pasch. 9. Geo. III. 1769*, that an exclusive copy-right in authors subsisted by common law. But afterward, in the case of *Donaldson*

*v. Becket*, before the house of Lords, which was finally determined Feb. 22, 1774, it was decided that no copy-right subsists in authors, after the expiration of the several terms fixed by the *Stat. 8 Ann. c. 19*. This statute declares, that the author and his assigns shall have the whole liberty of printing and reprinting his works, for the term of 14 years, and no longer, and also protects that property by additional penalties and forfeitures; directing farther, that if, at the end of that term, the author himself be living, the right shall then return to him for another term of the same duration.

(4.) LITERARY THEFT. See PLAGIARISM.

(5.) LITERARY THEIF. See PLAGIARY.

(1.) \* LITERATI. *n. f.* [Italian.] The learned. — I shall consult some *literati* on the project sent me for the discovery of the longitude. *Spectator*.

(2.) LITERATI, (*tetrads*, lettered,) an epithet given to such persons among the CHINESE, as are able to read and write their language. The literati alone are capable of being made mandarins, See CHINA, § 17.

(2.) LITERATI is also the name of a particular sect, in religion or philosophy, consisting principally of the learned men of China, among whom it is called *jukiao*, i. e. *learned*. It had its rise A. D. 1400, when the emperor, to awaken the attention of the people to knowledge, which had been quite neglected during the civil wars, and to stir up emulation among the mandarins, chose 42 of their ablest doctors, and ordered them to compose a body of doctrine agreeable to that of the ancients, which was then the standard of the learned. This they accordingly did, though some allege, that they rather drew up a system of *modern* than of *ancient* doctrines. For instance, although they say, The Deity is a pure, perfect principle, without beginning or end; the source of all things and the cause of every being, who determines it to be what it is; yet they make God the *Joul* of the world; and say, he is *disfused through all matter*, and produces all the changes that happen there. In short, it is not easy to determine, whether they resolve GOD into NATURE, or lift up NATURE into God. This doctrine introduced a refined kind of atheism, similar to that which, (in spite of the restoration of Popery by Bonaparte) prevails at present among the literati of France. The work however, being composed by so many learned persons, and approved by the emperor, was received with great applause. Many were pleased with it, because it seemed to subvert all religion; others approved it, because the little religion that it left them could not give them much trouble. The court, the mandarins, persons of fortune and quality, &c. are generally literati; but a great part of the people still hold to their worship of idols. The literati freely tolerate the Mahometans, because they adore, with them, the king of heaven, and author of nature; but they bear a perfect aversion to all sorts of idolaters, and it was once resolved to extirpate them. But the disorder this would have occasioned prevented it, and they content themselves with condemning them, in general, as heretics; which they do solemnly every year at Peking.

\* LITERATURE. *n. f.* [*literatura*, Lat.] Learn-

dom hath been famous  
pre eminent attend deser-  
Bacon.—When men of  
knowledge of the world,  
literature, and convince  
usefulness. *Addison.*

See LINTERNUM.

**PIT COAL**, or **PIT COAL**, is a black  
mineral, bituminous substance; not  
flammable, but, when once inflamed,  
and more intensely than any other  
See **COAL**, N<sup>o</sup> III, § 5. Of this sub-  
stance are distinguished by authors. The  
first after combustion is black; the  
second is spongy, and like pumice  
the residuum of the third is whitish ashes.  
coal, by long exposure to air, falls in  
powder, from which alum may be

coal by distillation yields, 1. a

acid liquor; 2. a thin

coloured, or reduced to coaks. See

**COAK.** Pit coal affords **TAR**, and, on that and  
other accounts, is ranked by modern chemists among  
vegetable substances. See **CHEMISTRY**,  
*Index.*

(1.) **LITHARGE**, *n. f.* [*litarge*, Fr. *litargyron*,  
Lat.]—*Litharge* is properly lead vitrified, either  
alone or with a mixture of copper. This recre-  
ment is of two kinds, *litarge* of gold, and *litarge*  
of silver. It is collected from the furnaces where  
silver is separated from lead, or from those where  
gold and silver are purified by means of that met-  
al. The *litarge* sold in the shops is produced in  
the copper works, where lead has been used to pu-  
rify that metal, or to separate silver from it. *Hill.*  
—I have seen some parcels of glass adhering to  
the test or cupel, as well as the gold or *litarge*.

*Boyle.*—If the lead be blown off from the silver  
by the bellows, it will, in great part, be collected  
in the form of a darkish powder; which, because  
it is blown off from the silver, they call *litarge*  
of silver. *Boyle.*

(2.) **LITHARGE** is a preparation of lead, usually  
in form of soft flakes, of a yellowish reddish col-  
our. If calcined lead be urged with a hasty fire,  
it melts into the appearance of oil, and on cool-  
ing concretes into litharge. According to the de-  
gree of fire and other circumstances, it proves of  
a pale or deep colour; the former called *litarge*  
of silver, the latter *litarge* of gold. In the new  
chemical nomenclature, it is called *Semi-vitreous*  
*oxide of Lead*. See **CHEMISTRY**, *Index*, & *Vol. I.*

**LITHAY**, a town of Camiola, on Savc.

\* **LITHE**, *adj.* [*lithe*, Saxon.] Limber; pliant;  
easily bent.—

Th' unwieldy elephant,

To make them mirth, us'd all his might and  
wreath'd

His *lithe* proboscis. *Milton.*

\* **LITHENESS**, *n. f.* [from *lithe*.] Limberness;  
flexibility.—

\* **LITHER**, *adj.* [from *lithe*.] Soft; pliant.—

Thou antick death,

Two Talbots winged through the *lithe* sky,

In thy despite shall 'scape mortality. *Shak.*

2. [*Lytber*, Saxon.] Bad; sorry; corrupt. It is  
in the work of Robert of Gloucester written *lytber*.

**LITHGOW**, William, a Scotsman, whose suf-  
ferings by imprisonment and torture at Malaga,  
and whose travels, on foot, over Europe, Asia,  
and Africa, seem to raise him almost to the rank  
of a martyr and a hero, published an account of  
his peregrinations and adventures. Though he  
deals much in the marvellous, the horrid account  
of the strange cruelties of which, he tells us, he  
was the subject, have an air of truth. Soon after  
his arrival in England from Malaga, he was car-  
ried to Theobald's on a feather-bed, that king  
James might be an eye-witness of his martyr'd  
anatomy, as he styles his wretched body, mangled  
and reduced to a skeleton. The whole court crowd-  
ed to see him; and the king ordered him to be  
taken care of, and sent him twice to Bath at his  
expense. By the king's command, he applied to  
Gondamor, the Spanish ambassador, for the re-  
covery of the money and other things of value,  
which the governor of Malaga had taken from  
him, and for 1000*l.* for his support. He was pro-  
mised full reparation, but the perfidious minister  
never performed his promise. When he was upon  
the point of leaving England, Lithgow upbraided  
him with the breach of his word in the presence-  
chamber. This occasioned their fighting upon  
the spot. Lithgow, for his spirited behaviour,  
was sent to the Marshalsea, where he continued a  
prisoner 9 months. At the conclusion of the 2<sup>nd</sup>  
edition of his *Travels* he informs us, that, "his  
painful feet have traced over (besides passages of  
seas and rivers), 36,000 and odd miles, which  
draweth near to twice the circumference of the  
whole earth." His description of Ireland is cu-  
rious. This, together with the narrative of his  
sufferings, is reprinted in Morgan's *Phoenix Bri-  
tannicus*.

**LITHIASIS**, or the **STONE**. See **MEDICINE**,  
*Index.*

**LITHIATE**, *n. f.* [from *λίθος*, Gr. a stone.] a  
neutral salt, formed by the combinations of the  
lithic acid with various bases. See **CHEMISTRY**,  
*Index*, and *Vocab. II.*

**LITHIC ACID**, an acid extracted from the ur-  
inary calculus. See **CHEMISTRY**, *Index.*

(1.) \* **LITHOGRAPHY**, *n. f.* [*λίθος* and *γραφω*]  
The art or practice of engraving upon stones.

(2.) **LITHOGRAPHY**. See **ENGRAVING**, § II, III.  
**LITHOLOGIC**, or } *adj.* [from *Lithology*.] Of  
**LITHOLOGICAL**, } or belonging to Litho-  
logy; partaking of the nature of stones or earth.

**LITHIOLOGY**, *n. f.* [from *λίθος*, Gr. a stone,  
and

lifecourse.] The science which treats of earths; or that branch of mineralogy, of which consists in the study of stones.

The celebrated M. Chaptal allots the his Elements of Chemistry to Lithology, divides the whole objects of it into 3 z. 1. Earths combined with acids: 2. Earths combined with each other: and, 3. Mixtures. See CHEMISTRY, Part IV. LITHOLOGY. The word *Lithology* is not ioned in Dr Thomson's Elements of

**THOMANCY.** *n. f.* [ $\lambda\theta\alpha\varsigma$  and  $\mu\alpha\theta\eta\iota\alpha$ .] by stones.—As strange must be *litho-* lination, from this stone, whereby He- rophet foretold the destruction of Troy.

**HOMANCY,** } in antiquity, a species of  
**MANTIA,** } divination performed with  
sometimes the stone called **SIDERITES**  
this they washed in spring water in the  
indle-light; the person that consulted  
e purified from all manner of polluti-  
o have his face covered: this done, he  
ertain prayers, and placed certain cha-  
n appointed order; and then the stone  
tself, and in a soft gentle murmur, or  
like that of a child, returned an an-

**LITHONTRIPTICK.** *adj.* [ $\lambda\theta\alpha\varsigma$  and  
*triptique*, Fr.] Any medicine proper  
the stone in the kidneys or bladder.

**LITHONTRIPTICS,** is derived from  $\lambda\theta\alpha\varsigma$   
*lithon* to break. Soap ley, taken at first  
ses, in broth free from fat, succeeds in  
which require an alkaline solvent. The  
y begin with 20 drops, and gradually  
e dose. By repeating it three times a  
8, or 12 months, the wished for effects  
w.

**PHYTA,** the name of Linnæus's third  
ermes. See ZOOLOGY.

**SPERMUM, GROMWELL,** a genus of  
ynia order, in the pentandria class of  
d in the natural method ranking un-  
ft order, *Asperifolæ*. The corolla is fun-  
y, with the throat perforated and na-  
alyx quinquepartite. There are several  
ut the only remarkable ones are these:

**OSPERMUM ARVENSE,** the *Baylard* Al-  
vs in corn fields.

**OSPERMUM OFFICINALE,** the *common*  
rows in a dry gravelly soil. The seeds  
1 to be of service in calculous cases.  
says, that they have so much earth in  
osition, that they effervece with acids;  
is the case, it must be attributed rather  
line than an earthy quality. Both are  
Britain.

**STROTION,** in natural history, a spe-  
l coral, composed of a great number of  
nder columns, sometimes round, some-  
lar, joined nicely to one another, and  
adiated surface at their tops. These are  
onsiderable quantities in the N. and W.  
is kingdom, sometimes in single, some-  
mplex specimens. See Plate CC.

**STROTON,** among the Romans, was

a pavement of Mosaic work, consisting of small  
pieces of cut marble of different kinds and co-  
lours. The *lithostrota* began to be used in the  
time of Sylla, who made one at Præneste in the  
temple of Fortune. At last they were used in pri-  
vate houses; and were brought to such perfection,  
that they exhibited most lively representations of  
nature, with all the exactness of the finest paint-  
ing.

**LITHOTOME.** See AMMONIUS.

\* **LITHOTOMIST.** *n. f.* [ $\lambda\theta\alpha\varsigma$  and  $\tau\epsilon\mu\alpha\omega$ .] A  
chirurgian who extracts the stone by opening the  
bladder.

(1.) \* **LITHOTOMY.** *n. f.* [ $\lambda\theta\alpha\varsigma$  and  $\tau\epsilon\mu\alpha\omega$ .]  
The art or practice of cutting for the stone.

(2.) **LITHOTOMY.** See SURGERY.

**LITHRUS,** a town of Armenia Minor.

(1.) **LITHUANIA,** or **LITWA,** a large country  
of Europe, anciently governed by its grand dukes,  
of whom Ringold, in the 13th century was the  
first. In the end of the 14th, the grand duke Ja-  
gello, united it to **POLAND,** by his marriage with  
Hedwige, the widow of Lewis K. of Poland and  
Hungary: and in 1569, the countries were still  
more closely united under one elective king. It is  
bounded on the S. by Volhinia, on the W. by Lit-  
tle Poland, Polachia, Prussia, and Samogitia; on  
the N. by Livonia and Russia, which last bounds  
it on the E. It is 300 miles long and 250 broad.  
Its principal rivers are, the Dnieper, Dwina, Ne-  
man, Pripecz, and Bog. It is a flat country, is  
fertile in corn, abounds with honey, wood, pitch,  
&c. and feeds vast numbers of sheep. It has also  
excellent little horses, which are never shod, their  
hoofs being very hard. There are vast forests, in  
which are bears, wolves, elks, wild oxen, lynxes,  
beavers, &c. and eagles and vultures are very com-  
mon. In the forests, large pieces of yellow am-  
ber are frequently dug up. The country swarms  
with Jews, who, though numerous in every  
other part of Poland, seem to have fixed their  
head quarters in this duchy; and this, perhaps,  
is the only country in Europe where the Jews cul-  
tivate the ground. The peasants are in a state of  
the most abject vassalage. In 1772, the empress  
Catharine II. compelled the Poles to cede to her  
all that part of Lithuania bordering upon Russia,  
and including at least one 3d of the country. This  
she erected into the two governments of **POLOTSK**  
and **MOHILFF.** In 1793, in conjunction with the  
king of Prussia, she effected another partition of  
Poland, in consequence of which she extended her  
dominion over the greater part of Lithuania. The  
language is a dialect of the Slavonic. Lithuania  
was formerly divided into 9 palatinates, and com-  
prehended also **SAMOGITIA** and **COURLAND.** Of  
the palatinates 6 are now annexed to Russia; viz.  
**Polocz,** **Novogrodek,** **Witeplik,** **Brzeik,** **Miczi-**  
**slaw,** and **Minsk.** The other 3 were **Wilna,** **Tro-**  
**ki,** and **Livonia.** The chief towns are **Memel** and  
**Insterburg.**

(2.) **LITHUANIA, PROPER,** called by the Poles  
*Litwa Sana,* comprehends the palatinates of **Wil-**  
**na** and **Troki.** Mr Cruttwell does not mention  
distinctly whether it is a different district or the  
same with

(3.) **LITHUANIA, PRUSSIAN, OR LITTLE LI-**  
**THUANIA,** a territory about 100 miles long, and

50 broad. It was anciently over-run with woods, and in 1710, it was almost depopulated by a pestilence; but in 1720, K. Frederick-William I. at the expence of 5 millions of rixdollars induced 20,000 Swifs, French Protestants, Palatines and Franconians to settle in it; by whose industry it has been well cultivated, and various manufactures established in it.

(1.) \* LITIGANT. *adj.* [*litigans*, Lat. *litigant*, French.] Engaged in a juridical contest.—Judicial acts are those writings and matters which relate to judicial proceedings, and are sped in open court at the instance of one or both of the parties *litigant*. *Ayliffe*.

(2.) \* LITIGANT. *n. f.* One engaged in a suit of law.—The cast *litigant* sits not down with one cross verdict, but recommences his suit. *Decay of Piety*.—The *litigants* tear one another to pieces for the benefit of some third interest. *L'Esfrange*.

(1.) \* To LITIGATE. *v. a.* [*litigo*, Latin.] To contest in law; to debate by judicial process.

(2.) \* To LITIGATE. *v. n.* To manage a suit; to carry on a cause.—The appellant, after the interposition of an appeal, still *litigates* in the same cause. *Ayliffe*.

\* LITIGATION. *n. f.* [*litigatio*, Latin; from *litigatus*.] Judicial contest; suit of law.—Never one clergyman had experience of both *litigations*, that hath not confessed, he had rather have three suits in Westminster-hall, than one in the arches. *Clarendon*.

\* LITIGIOUS. *adj.* [*litigieux*, Fr.] 1. Inclined to law-suits; quarrelsome; wrangling.—

Soldiers find wars, and lawyers find out still *litigious* men, who quarrels move. *Donne*.

—His great application to the law, had not infected his temper with any thing positive or *litigious*.

*Adijon*. 2. Disputable; controvertible.—In *litigious* and controverted causes, the will of God is to have them to do whatsoever the sentence of judicial and final decision shall determine. *Hooker*.—

No fences, parted fields, nor marks, nor bounds,

Distinguish'd acres of *litigious* grounds. *Dryd*

\* LITIGIOUSLY. *adv.* [from *litigious*.] Wranglingly.

\* LITIGIOUSNESS. *n. f.* [from *litigious*.] A wrangling disposition; inclination to vexatious suits.

LITISCONTESTATION, *n. f.* [from *lis*, Lat. a dispute or action at law, and *contestor*, to call to witness;] a process admitted to proof. *Litem contestari* literally signifies, to put in the plaintiff's claim and the defendant's answer. *Cic*. See LAW, PART III, Chap. III. *Sec. I.* § 28.

LITIZ, a flourishing town of Pennsylvania, chiefly inhabited by Moravians; 8 miles from Lancaster, and 66 W. by N. of Philadelphia.

LITMUS, or LACMUS, in the arts, is a blue pigment, formed from ARCHIL. It is brought from Holland at a cheap rate; but may be prepared by adding quick lime and putrified urine, or spirit of urine distilled from lime, to the archil previously bruised by grinding. The mixture having cooled, and the fluid evaporated, becomes a mass of the consistence of a paste, which is laid on boards to dry in square lumps. It is only used in miniature paintings, and cannot be well depended on, because the least approach of acid changes

it instantly from blue to red. The is very apt to change and fly. See AW

LITOWISCH, a town of Poland, situate of Volhynia, 56 miles SW. of

; not none: in this sense it always stands  
the article and the noun.—I leave him to  
these contradictions, which may plenti-  
ound in him, by any one who will but  
a *litt'* attention. *Locke.*

LITTLE. *adv.* 1. In a small degree.—The  
definition of names should be changed as  
ossible. *Watts.* 2. In a small quantity.—

poor sleep *little.* *Otway.*

ie degree, but not great.—Where there  
at a thinness in the fluids, subacid sub-  
re proper, though they are a *little* af-

*Arbutinot.* 4. Not much.—The tongue  
t is as choice silver; the heart of the wic-  
le worth. *Prov.* x. 20.—Finding him *lit-*

ts, she chose rather to endure him with

conversative qualities of youth; as, dancing and  
fencing. *Wotton.*—That poem was infamously bad;  
this parallel is *little* better. *Dryden.*—Several cler-  
gymen, otherwise *little* fond of obscure terms, yet  
in their sermons were very liberal of those which  
they find in ecclesiastical writers. *Swift.*

(4.) \* LITTLE. *n. f.* 1. A small space.—

Much was in *little* writ; and all convey'd

With cautious care, for fear to be betray'd.

*Dryden.*

2. A small part; a small proportion.—He that de-  
spiseth *little* things, shall perish by *little* and *little.*

*Ecclus.*—The poor remnant of human seed which  
remained in their mountains, peopled their coun-  
try again slowly, by *little* and *little.* *Bacon.*—By

freeing the precipitated matter from the rest by  
filtration, and grinding the white precipitate with  
water, the mercury will *little* by *little* be gathered

into drops. *Boyle.*—I gave thee thy master's house,  
and the house of Israel and Judah; and if that had  
been too *little*, I would have given thee such and  
such things. 2 *Sam.* xii. 8.—They have much of  
the poetry of Mæcenas, but *little* of his liberality.

*Dryden.*—

Nor grudge I' thee the much that Grecians  
give,

Nor mur'm'ring take the *little* I receive. *Dryd.*

—There are many expressions, which, carrying  
with them no clear ideas, are like to remove but

*little* of my ignorance. *Locke.* 3. A slight affair.

As if 'twere *little* from their town to chafe,

I thro' the seas pursued their exil'd race. *Dryd.*

I view with anger and disdain,

How *little* gives thee joy or pain. *Prior.*

4. Not much.—These they are fitted for, and *lit-*  
*tle* else. *Cheyne.*

LITTLEBOROUGH, 3 small towns of Eng-  
land, in Lancast. Lincoln and Nottingham shires.

LITTLE ISLAND, two isles of Ireland: 1. in the  
Lee, 6 miles E. of Cork; 2. in the Suire, 2 miles  
below Waterford.

\* LITTLENESS. *n. f.* [from *little.*] 1. Small-  
ness of bulk.—

All trying, by a love of *littleness*,

To make abridgements, and to draw to less.

*Donne.*

—We may suppose a great many degrees of *little-*  
*ness* and lightness in these earthy particles, so as  
many of them might float in the air. *Burnet.* 2.

Meanness; want of grandeur.—The English and  
French, in verse, are forced to raise their language  
with metaphors, by the pompousness of the whole

phrase, to wear off any *littleness* that appears in  
the particular parts. *Addison.* 3. Want of digni-  
ty.—The angelick grandeur, by being concealed,  
does not awaken our poverty, nor mortify our

*littleness* so much, as if it was always displayed.  
*Coller.*

LITTLEPORT, a town in the isle of Ely.

(1.) LITTLE RIVER, a river of Connecticut,  
which joins the Shetucket, and forms the Thames.

(2.) LITTLE RIVER, a river of N. Carolina,  
which rises at the foot of Caraway Mountain, and  
runs into the Yadkin, 12 miles N. of the S. Caro-  
lina line.

(1.) LITTLETON, Adam, an eminent lexico-  
grapher, descended from an ancient family in  
Shropshire. He was born in 1527, educated at

Westminster,

Westminster school, and went to Oxford a student of Christ-church, whence he was ejected by the parliament's visitors in 1648. Soon after, he became usher of Westminster school, and in 1648 was made 2d master. After the restoration he taught a school at Chelsea, of which church he was admitted rector in 1664. In 1670 he took his degrees in divinity, being then chaplain to Charles II. In 1674, he became prebendary of Westminster, of which he was afterwards sub-dean. Besides the well known *Latin and English Dictionary*, he published several other works. He died in 1694. He was an universal scholar; and extremely charitable, humane, and affable.

(2.) LITTLETON, Edward, LL. D. a learned English divine, educated at Cambridge in 1716. In 1729, he was elected fellow of Eton College, and presented to the living of Maple Derham, Oxford. In 1730, he took his degree, and was appointed chaplain to K. George I. He died in 1734, and his *Discourses* were printed for the benefit of his family, under the patronage of Q. Caroline. His celebrated Poem *on a Spider*, and other fugitive pieces, are preserved in Doddley's Collection.

(3.) LITTLETON, or LYTTLETON, Sir Thomas, judge of the common pleas, was the eldest son of Thomas Westcote, Esq; of Devonshire, by Elizabeth, sole heiress of Thomas Littleton of Frankley in Worcestershire, at whose request he took the name and arms of that family. He was educated at Oxford or Cambridge; and was afterwards, by Henry VI. made steward of the court of the palace. In 1455, he was appointed king's serjeant; and in 1466, a judge of the common pleas, under Edward IV. In 1474 he was created knight of the Bath. He died in 1481; and was buried in the cathedral of Worcester, where a marble tomb, with his statue, was erected to his memory. He was author of the *Treatise upon Tenures*, on which Sir Edward Coke wrote a comment, well known by the title of *Coke upon Littleton*.

(4—6.) LITTLETON. See LYTTLETON.

(7—19.) LITTLETON, the name of 13 English towns and villages; viz. of one each in Cambridge, Hants, Middlesex, Somerset, Surry, and Suffex; of two each in Gloucester and Wilts; and of 3 in Worcestershire.

LITTLEWORTH, a village in Berks.

\* LITTORAL. *adj.* [*littoralis*, Latin.] Belonging to the shore.

LITUBIUM, an ancient town of Liguria.

(1.) \* LITURGY. *n. f.* [*λύσις*; *liturgie*, F.] Form of prayers; formulary of public devotion.

—We dare not admit any such form of *liturgy* either appointeth no scripture at all, or to be read in the church. *Hooker*.—The use of mortal wights began to be imported into a great part of divine *liturgy* was attributed to her. *Howel*.—It is the greatest and most powerful *liturgy* for impetration in this world.

(2.) LITURGY is derived

from *λύσις*, *work*; and includes all that is said in public worship.

In a more strict signification, *liturgy* is used

to signify the *mass*; as

the *Book of common prayer*. All who have been on *liturgies* agree, that in the primitive church the service was exceedingly simple, consisting of very few ceremonies, and consisting of but a few number of prayers; but, by degrees, the number of external ceremonies, and the number of new prayers, to make the office look more and venerable to the people. At length the service were carried to such a pitch, that it was proper to put the service, and the manner of performing it, into writing. *Liturgies* have been different at different times, and in different countries. There are *liturgies* of St Chrysostom, St Peter, St James, St Basil, of the Maronites, the Coptæ; the Armenian, Roman, Ambrosian, Spanish, African, and English, &c. In the early ages of the church the bishop had a power to form a *liturgy* for his diocese; and if he kept to the analogy and doctrine, all circumstances were left to his own discretion. Afterwards the whole church followed the metropolitan church, which was the general rule of the church; and the

wood acknowledges to be the common *liturgy* of the church; intimating, that the use of *liturgies* in the same province, which was the custom in England, was not to be warranted but by custom. The *liturgy* of the church of England was composed in 1547, and established in the year of Edward VI. In his 5th year, it was viewed; because some things were contained in it, which showed a compliance with the doctrine of those times, and which were objected by Calvin, and some learned men at home; alterations were made in it; the general confession and absolution were added, and the communion was made to begin with the ten commandments. The use of oil in confirmation, extreme unction were kept out; also prayers for souls departed, and what tended to a denial of Christ's real presence in the eucharist.

The *liturgy*, so reformed, was established by act 6 Ed. VI. cap. 1; abolished by Q. Mary II. cap. 2. Some farther alterations were introduced by order of K. James I. in the 16th year of his reign; particularly in the order of baptism, in several rubrics, &c. In the 17th year of 3 or 6 new prayers and thanksgivings were added; that part of the catechism which relates to the doctrine of the sacraments. The *liturgy* of the common prayer, thus altered, was established in the 11th year of K. James I. cap. 5.

The last revision of the *liturgy* was made in the 13th year of K. James I. cap. 11. The last set of alterations was made in the 13th year of K. James I. cap. 11. The last set of alterations was made in the 13th year of K. James I. cap. 11.

The last set of alterations was made in the 13th year of K. James I. cap. 11. The last set of alterations was made in the 13th year of K. James I. cap. 11.

The last set of alterations was made in the 13th year of K. James I. cap. 11. The last set of alterations was made in the 13th year of K. James I. cap. 11.

The last set of alterations was made in the 13th year of K. James I. cap. 11. The last set of alterations was made in the 13th year of K. James I. cap. 11.

that of those who *live* by labour. *Temple*.—He had been most of his time in good service, and had something to *live* on now he was old. *Temple*.

11. To be in a state of motion or vegetation.—

In a spacious cave of *living* stone,  
The tyrant Æolus, from his airy throne,  
With pow'r imperial curbs the struggling winds.

*Dryden.*

Cool groves and *living* lakes

Give after toilsome days a soft repose at night.

*Dryden.*

12. To be unextinguished.—

These gifts the greedy flames to dust devour.  
Then on the *living* coals red wine they pour.

*Dryden.*

LIVE-EVER, in botany. See SEDUM, N° 9.

\* LIVELESS. *adj.* [from *live*.] Wanting life; rather, *lifeless*.—

Description cannot suit itself in words,

To demonstrate the life of such a battle,

In life so *liveless* at it shews itself. *Shak.*

\* LIVELIHOOD. *n. f.* [It appears to be corrupted from *livelode*.] Support of life; maintenance; means of living.—

Ah! luckless babe! born under cruel star,

Full little weenest thou what forrows are,

Left thee for portion of thy *livelihood*. *Fairy Q.*

—That rebellion drove the lady from thence, to find a *livelihood* out of her own estate. *Clarendon.*

—He brings disgrace upon his character, to submit to the picking up of a *livelihood* in that strolling way of canting and begging. *L'Esrange.*—It is their possession and *livelihood* to get their living by practices, for which they deserve to forfeit their lives. *Soub.*—They have been as often banished out of most other places; which must very much disperse a people, and oblige them to seek a *livelihood* where they can find it. *Addison.*—Trade employs multitudes of hands, and furnishes the poorest of our fellow-subjects with the opportunities of gaining an honest *livelihood*. *Addison.*

LIVELY. See LIVELY, § 2.

\* LIVELINESS. *n. f.* [from *lively*.] 1. Appearance of life.—That *liveliness* which the freedom of the pencil makes appear, may seem the living hand of nature. *Dryden.* 2. Vivacity; sprightfulness.—Extravagant young fellows, that have *liveliness* and spirit, come sometimes to be set right, and so make able and great men. *Locke.*

\* LIVELODE. *n. f.* [*live* and *lode*, from *lead*]; the means of leading life.] Maintenance; support; livelihood.—

She gave like blessing to each creature,

As well of worldly *live-lode* as of life,

That there might be no difference nor strife.

*Hubbard.*

\* (1.) LIVELONG. *adj.* [*live* and *long*.] 1. Tedious; long in passing.—

There have fate

The *livelong* day, with patient expectation

To see great Pompey pass. *Shak.*

The obscure'd bird clamour'd the *livelong*

night. *Shak.*

Young and old come forth to play,

Till the *livelong* day-light fail. *Milton.*

Seek for pleasure to destroy

The forrows of this *livelong* night. *Prior.*

How could she fit the *livelong* day,  
Yet never ask us once to play?

2. Lasting; durable. Not used.—

Thou, in our wonder and astonish

Hast built thyself a *livelong* monumet

come :

And let my *liver* rather heat with w

Than my heart cool with mortifying

Reason and respect

Make *livers* pale, and lustilood deje

(2.) LIVER, in anatomy. See ANATOMY, *Index*. Plato, and others of the ancients, fix the principle of love in the liver; whence the Latin proverb, *Cogit amare jecur*: and in this sense Horace frequently uses the word, as when he says, *Si torrere jecur queris Idoneum*. The Greeks, from its concave figure, called it *νεφρὸν*, vaulted or suspended; the Latins, *jecur*, q. d. *juxta cor*, as being near the heart. The French call it *foye*, from *foyer*, *focus*, a fire place; agreeable to the doctrine of the ancients, who believed the blood to be boiled and prepared in it.—Erasistratus, at first, called it *παρεγχυμα*, i. e. *effusion* or *mass of blood*; and Hippocrates, by way of eminence, frequently calls it the *hypochondrium*.

(3.) LIVER OF ANTIMONY. See CHEMISTRY, *Index*, and *Vocabulary I*.

(4.) LIVER OF ARSENIC, a combination of white arsenic with liquid fixed vegetable alkali, or by the humid way. Arsenic has in general a strong disposition to unite with alkalis. Mr Macquer, in his *Memoirs upon Arsenic*, mentions a singular kind of neutral salt, which results from the union of arsenic with the alkaline basis of nitre, when nitre is decomposed, and its acid is disengaged in close vessels, by means of arsenic. This salt he named *neutral arsenical salt*. The liver of arsenic, although composed, like the neutral arsenical salt, of arsenic and fixed alkali, is very different from that salt. The operation for making liver of arsenic is easy and simple. To strong concentrated liquid fixed alkali, previously heated, the powder of white arsenic must be added. This arsenic easily disappears and dissolves, and as much of it is to be added till the alkali is saturated, or has lost its alkaline properties, although it is still capable of dissolving more arsenic superabundantly. While the alkali dissolves the arsenic in its operation, it acquires a brownish colour, and a singular and disagreeable smell; which, however, is not the smell of pure arsenic heated and volatilized. This mixture becomes more and more thick, and at length of a gluey consistence. This matter is not crystallizable as the neutral arsenical salt is. It is easily decomposed by the action of fire, which separates the arsenic. This does not happen to the arsenical salt. Any pure acid is capable of separating arsenic from the liver of arsenic, in the same manner as they separate sulphur from liver of sulphur: whereas the neutral arsenical salt cannot be decomposed but by the united affinities of acids and metallic substances. Thus arsenic may be combined with fixed alkali in two very different manners. In the new nomenclature, the liver of arsenic is called *Arsenical Acid of Potash*; and the neutral arsenical salt, *Acidulous Arseniate of Potash*. See CHEMISTRY, *Index*, and *Vocabulary I* and *II*.

(5.) LIVER OF SULPHUR. See CHEMISTRY, *Index*, and *Vocabulary I*.

\* LIVERCOLOUR. *adj.* [*liver* and *colour*.] Dark red.—The uppermost stratum is of gravel; then clay of various colours, purple, blue, red, *livercolour*. Woodward.

LIVERDUN, a town of France, in the dep. of Meurthe, and late prov. of Lorraine; on a mountain near the Moselle, 8 miles N.E. of Toul. Lon. 6. 5. E. Lat. 48. 45. N.

\* LIVERGROWN. *adj.* [*liver* and *grown*.] Having a great liver.—I enquired what other casualties was most like the rickets, and found that *livergrown* was nearest. Graunt.

LIVERNON, a town of France, in the dep. of Lot, 21 miles ENE. of Cahors.

(1.) LIVERPOOL, a large, flourishing, and populous town of England, in Lancashire, situated at the mouth of the Mersey. This town has so much increased in trade since the commencement of the last century, that it is now the greatest seaport in England, except London. The merchants trade to all parts of the world except Turkey and the East Indies; but their chief trade is to Guinea and the West Indies for slaves, by which many of them have acquired very large fortunes. On this subject Mr Walker says, "The merchants of Liverpool have disgraced themselves more than any other people in Europe, by their iniquitous exertions in the *Man-trade*." (*Univ. Gazet.*) Liverpool carries on more foreign trade than any town in England. About 3,000 vessels are annually cleared from that port to different parts of the world. There are several manufactories of China-ware; besides salt works, glass houses, and upwards of 50 breweries, from some of which large quantities of malt liquor are exported. Many of the buildings are formed in the most elegant manner, but the old streets are narrow. This defect, however, will soon be removed, the principal streets being lately rebuilt. Liverpool contains 10 churches, besides meeting houses for presbyterians, independents, anabaptists, quakers, methodists, &c. The exchange is a noble structure, built of white stone in the form of a square, with piazzas where the merchants assemble to transact business. Above it are the mayor's offices, the sessions-hall, the council-chamber, and two elegant ball-rooms. The expence of erecting this building amounted to 30,000*l.* The custom-house is situated at the head of the old dock, and is a handsome and convenient structure. There are many charitable foundations, among which is an excellent grammar-school well endowed. The infirmary is a large edifice of brick and stone, situated on a hill in a pleasant airy situation, at one end of the town. In the town is a charity school, wherein 50 boys and 12 girls are clothed, educated, maintained, and lodged: several alms houses for the widows of seamen; and an excellent poor house, where upwards of 800 men, women, and children, are supported, and many of them employed in spinning cotton and wool. There are five large wet docks, three dry docks, and graving docks for repairing vessels. The quays which bound these docks are covered with warehouses; which enable the merchants to discharge their ships at a small expence. The new prison is a noble edifice, built on Mr Howard's plan for solitary confinement; and is esteemed the most convenient, airy, magnificent building of the kind in Europe. Liverpool received its charter from king John; and is governed by a mayor, recorder, an unlimited number of aldermen, two bailiffs, and a common-council of 40 of the principal inhabitants. It has a market on Saturday, and is distant from London 204 miles. The MERSEY, by which it has a very extensive inland navigation, supplies it with salmon,

salmon, cod, flounders, turbot, plaife, and smelts; and at full sea it is above two miles over. In the neighbourhood are frequent horse races on a five mile course, the finest for the length in England. The soil near the town is dry and sandy, and particularly favourable to potatoes, on which the farmers often depend more than on wheat or corn. Fresh water is brought into the town by pipes, from some springs 4 miles off. Liverpool sends two members to parliament. Lon. 2. 54. W. Lat. 53. 23. N.

(2.) LIVERPOOL, a town of Nova Scotia, on the S. coast, 20 miles NE. of Shelburn, and 45 SE. of Halifax.

LIVER-STONE, *lapis hepaticus*; a genus of inflammable substances, containing argillaceous, ponderous, and siliceous earth, united with vitriolic acid. See EARTH'S, § VI. N<sup>o</sup> 4. Mr Kirwan quotes an analysis of Sir T. Bergman, where it is said that 100 parts of it contain 33 of baroselenite, 38 of siliceous earth, 22 of alum, 7 of gypsum, and 5 of mineral oil.

(1.) \*LIVERWORT. *n. f.* [*liver* and *wort*; *lich-en.*] A plant.—That sort of *liverwort* which is used to cure the bite of mad dogs, grows on commons, and open heaths, where the grass is short, on declivities, and on the sides of pits. This spreads on the surface of the ground, and, when in perfection, is of an ash colour; but, as it grows old, it alters, and becomes of a dark colour. *Miller.*

(2.) LIVER-WORT, in botany. See LICHEN, and MARCHANTIA.

(3.) LIVER-WORT, MARSH. See RICCIA.

(4.) LIVER-WORT, NOBLE. See ANEMONE.

(1.) \*LIVERY. *n. f.* [*liverer*, French.] 1. The act of giving or taking possession.—

You do wrongfully seize H. Ford's right,

Call in his letters patents that he hath

By his attorneys general to sue

His *livery*, and deny his offered homage. *Shak.*  
2. Release from wardship.—Had the two houses first sued out their *livery*, and once effectually redeemed themselves from the wardship of the tumults, I should then suspect my own judgment. *K. Charles.* 3. The writ by which possession is obtained. 4. The state of being kept at a certain rate.—What *livery* is, we by common use in England know well enough, namely, that it is an allowance of horse meat; as they commonly use the word stabling, as to keep horses at *livery*; the which word, I guess, is derived of *livering* or *delivering* forth their nightly food so as in great houses, the *livery* is said to be served up for all night, that is, their evening allowance for drink: and *livery* is also called the upper weed which a serving man wears; so called, I suppose, for that it was delivered and taken from him at pleasure: so it is apparent, that, by the word *livery*, is there meant horse meat, like as by the coigny is understood, man's meat. Some say it is derived of coin, for that they used in their coignies not only to take meat but money; but I rather think it is derived of the Irish, the which is a common use amongst landlords of the Irish to have a common spending upon their tenants, who being commonly but tenants at will, they used to take of them what victuals they list; for of victuals they were

went to make a small reckoning. *Spenser land.* 5. The cloaths given to servants.—M for weeds your virtue's *livery* wears. *Sidney* haps they are by so much the more loth take this argument, for that it hath, tho' thing else, yet the name of scripture, to some kind of countenance more than the of *livery* coats affordeth. *Hooker.*—

I think, it is our way,

If we will keep in favour with the king  
To be her men, and wear her *livery*.

Yet do our hearts wear Timon's *liver*  
That see I by our faces.

Ev'ry lady cloath'd in white,  
And crown'd with oak and laurel ev'ry  
Are servants to the leaf, by *liveries* kno  
Of innocence.

On others int'rest her gay *liv'ry* fling  
Int'rest that waves on party-colour'd w

—If your dinner miscarries, you were te  
the footmen coming into the kitchen;  
prove it true, throw a ladleful of broth or  
two of their *liveries*. *Swift.* 6. A p  
dress; a garb worn as a token or consequ  
any thing.—

Of fair Urania, fairer than a green,

Proudly bedeck'd in April's *livery*.

Mistake me not for any complexion,  
The shadow'd *livery* of the burning sun  
To whom I am a neighbour, and near bre

At once came forth whatever creeps the  
Insect, or worm; whose way'd their lim  
For wings, and smallest lineaments exa  
In all the *liveries* deck'd of summer's pi  
With spots of gold and purple.

Now came still evening on, and twili  
Had in her sober *livery* all things clad.

(2.) LIVERY, (§ 1, *def.* 5.) in dress and e  
a certain colour and form of dress, by w  
blemen and gentlemen distinguish their  
*Liveries* are usually taken from fancy, an  
in families by succession. The ancie  
liers, at their tournaments, distinguish  
selves by wearing the *liveries* of their m  
thus people of quality make their de  
their *livery*. The Romish church has all  
veral colours and *liveries*; white, for c  
and virgins, and in times of rejoicing; bl  
the dead; red, for the apostles and marty  
or violet, for penitents; and green, in  
hope. *Liveries* were abolished in France  
Constituent National Assembly, as badge  
vitude, inconsistent with their system of

(3.) LIVERY OF SEISIN, in law, (§ 1, *de*  
nifies delivering the possession of lands, &c  
who has a right to them. See LAW, P  
*Chap.* II. *Señ.* III.

(1.) \*LIVERYMAN. *n. f.* [*livery* and *man*]  
One who wears a *livery*; a servant of an  
kind.—The witnesses made oath, that t  
heard some of the *liverymen* frequently r  
their mistress. *Arbutnot.* 2. [In London.  
man of some standing in a company.

(2.) The LIVERYMEN OF LONDON, (§ 1  
are a number of men chosen from among  
men of each company. Out of this b  
common council, sheriff, and other supe

re government of the city, are elected; none have the privilege of giving their members of parliament, from which the citizens are excluded.

*S. n. f.* [the plural of *life*.]

ort is life, that every peasant strives, in house or field, to have three *lives*.

*Donne.*

A, a town of France, in the dep. of the Yvelines;  $4\frac{1}{2}$  miles NE. of Puycerda.

the 2d wife of the emp. Augustus and Tiberius, a woman of great beauty and of monstrous depravity. She was the wife of L. Drusus Calpurnianus, and the wife of Claudius Nero, one of Antony's adherents; she was pregnant, when Augustus saw her fled from danger, and married her; for whose sake he divorced his wife Scribonia. On the succession to her son, she secretly procured the death of Augustus's grand-children, and her relations, and at last ungratefully made the dotting emperor himself; for which she obtained a return of equal ingratitude from her son. (See *ROME*.) She died A. D. 86.

*D. adj.* [*lividus*, Lat. *livide*, Fr.] Discoloured with a blow; black and blue.—It was a fever, not seated in the veins or humors that there followed no carbuncles, no livid spots, the mass of the blood not altered. *Bacon*.—

my livid lips bestow a kiss. *Dryden*.  
They beat their breasts with many a bruising blow,

they turn'd livid, and corrupt the snow.

*Dryden.*

*LIVIDITY. n. f.* [*lividité*, Fr. from *livid*.] A discoloration, as by a blow.—The signs of a tenacious state, are darkness or lividity of the countenance. *Arbutnot*.

*LIVAC, a town of France, in the dep. of 4 $\frac{1}{2}$  miles N. of Albin, and 9 E. of Figeac.*  
*LIVIANUS, John, a learned writer of the 16th born at Dendermond. He was deeply versed in the Greek language, and translated several Greek fathers into Latin. He died at Paris in 1599.*

*LIVING. part. adj.* 1. Vigorous; active; being in faith. 2. Being in motion; having vital energy, or principle of action; as, green, the living springs.

*LIVING. n. f.* [from *live*.] 1. Support; maintenance; fortune on which one lives.—The slaves were fought as in an unknown place, having their arms but in their hands; the Helots, as in the same place, fighting for their livings, wives, and children. *Sidney*.—All they did cast in of their lives; but she of her want did cast in all she had, even all her living. *Mark*. 2. Power of being alive.—There is no living without a body or other, in some cases. *L'Esprit*.

ourselves we may a living make. *Hubberd*.  
May I set the world on wheels, when she  
is for her living. *Shak*.—

and his wife, now dig for your life,  
thly you'll dig for your living. *Denham*.  
must represent such things as they are

capable to perform, and by which both they and the scribbler may get their living. *Dryden*.

4. Benefice of a clergyman.—Some of our ministers having the livings of the country offered unto them, without pains, will, neither for any love of God, nor for all the good they may do, by winning souls to God, be drawn forth from their warm nests. *Spenser*.—The parson of the parish preaching against adultery, Mrs Bull told her husband, that they would join to have him turned out of his living for using personal reflections. *Arbutnot*.

\* *LIVINGLY. adv.* [from *living*.] In the living state.—In vain do they scruple to approach the dead, who livingly are cadaverous. *Brown's V. E.*

(1.) *LIVINGSTONE, John, a Scottish presbyterian divine, born in 1603, and educated at Glasgow, where he took the degree of M. A. He was banished in 1663, for his adherence to Presbyterian principles; and went to Holland, where he died in 1672. He wrote several works on theology, which were popular when published.*

(2.) *LIVINGSTONE, a parish of Scotland, in Linlithgowshire,  $4\frac{1}{2}$  miles long, and from  $\frac{1}{2}$  to  $1\frac{1}{2}$  broad, containing near 4000 acres, all arable ground, and mostly inclosed. The climate, though moist, is salubrious, and "extreme longevity" is frequent. The soil is various, and husbandry is much improved, by draining, &c. introduced by Sir W. Cunynghame. The population, in 1798, was 420; the decrease 178, since 1755.*

(3.) *LIVINGSTONE, or Kirktoom of Livingstone, a village in the above parish, containing about 40 inhabitants, in 1798.*

*LIVINIÈRE, a town of France, in the dep. of the Herault, 24 miles W. of Beziers.*

(1.) *LIVIVS, Titus, the best of the Roman historians, was born at Patavium. Few particulars of his life have been handed down to us. Coming to Rome, he acquired the notice and favour of Augustus, and long resided there. He had previously written Dialogues, historical and philosophical, and some books on philosophy. It is probable, that he began his History as soon as he was settled at Rome; and he seems to have devoted himself entirely to that great work, as to be perfectly regardless of his advancement. The distractions of Rome frequently obliged him to retire to Naples. He used to read parts of his history, while he was composing it, to Mæcenas and Augustus; and the latter conceived so high an opinion of him, that he appointed him to superintend the education of his grandson Claudius, afterwards emperor. After the death of Augustus, Livy returned to the place of his birth, where he was received with all imaginable honour and respect; and where he died, in the 4th year of Tiberius's reign, aged above 70. Some say, he died on the same day with Ovid; it is certain he died the same year. Scarce any man was ever more honoured, in life or after his death, than this historian. Pliny relates, that a gentleman travelled from Gades, in Spain, merely to see Livy. A monument was erected to Livy in the temple of Juno, where was afterwards founded the monastery of St Justina; and where, in 1413, was discovered the following epitaph: *Offa Titi Livii Patavini, &c. i. e.* "The bones of Titus Livius of Patavium, a man worthy to be approved.*

proved by all mankind, by whose almost invincible pen the acts and exploits of the invincible Romans were written." Their bones are still preserved with high veneration, by the Paduans. In 1451, Alphonfus, king of Arragon, sent his ambassador, Anthony Panormita, to desire of the citizens of Padua the bone of that arm with which this their famous countryman had written his history: and, obtaining it, caused it to be conveyed to Naples with the greatest ceremony as a most invaluable relic. He is said to have recovered from an ill state of health by the pleasure he found in reading this history: and therefore, out of gratitude, took this method of doing extraordinary honours to the memory of the writer. Panormita also, who was a native of Palermo in Sicily, and one of the ablest men of the 15th century, sold an estate to purchase this work. The history of Livy is transmitted down to us exceedingly mutilated and imperfect. Its books were originally 142, of which only 35 are extant. The epitomes of it, from which we learn their number, all remain, except those of the 136th and 137th books. Livy's books have been divided into decades, which some will have to have been done by Livy himself, because there is a preface to every decade; while others suppose it to be a modern contrivance, as nothing about it is mentioned by the ancients. The first decade is extant, and treats of the affairs of 460 years. The 2d is lost; the years of which are 75. The 3d is extant, and contains the 2d Punic war, including 18 years. It is reckoned the most excellent part of the history. The 4th contains the Macedonian and Asiatic wars, which take up the space of about 23 years. The first 5 books of the 5th decade were found at Worms, by Simon Grynaeus, in 1431, but are very defective; and the remainder, which reaches to the death of Drusus in Germany in 746, together with the 2d decade, are supplied by Freinthemius. The encomiums bestowed upon Livy, by both ancients and moderns, are great and numerous. But his probity, candour, and impartiality, have distinguished him above all historians; for neither complaisance to the times, nor his particular connection with the emperor, could restrain him from speaking so well of Pompey, that Augustus called him a *Pompeian*. This we learn from Cremutius Cordus, in Tacitus; who relates also, much to the emperor's honour, that this gave no interruption to their friendship. But whatever eulogies Livy received as an historian, he has not escaped censure as a writer. His cotemporary, Ainius Pollio charged him with *Pataxinity*; which word has been variously explained, but is generally supposed to relate to his style. The most common opinion is, that Pollio, accustomed to the delicate language spoken in the court of Augustus, could not bear certain Paduan idioms, which Livy used in divers places of his history. Pignorius says that this Pativity regarded the orthography of certain words, wherein Livy used one letter for another, such as *sibe* and *quise* for *sibi* and *quasi*; which he attempts to prove by several ancient inscriptions. Neither the expressions, however, nor the orthography, are loaded with obscurity, and the classic scholar is as familiarly acquainted with these supposed provincialisms as with the purest Latinity.—Livy has been

censured too, and perhaps with justice, for being too credulous, and loading his history with superstitious tales. But though he mentions that milk and blood were rained from heaven, or that an ox spoke, or a woman changed her sex; yet he candidly confesses, that he recorded only what made an indelible impression upon the minds of a credulous age. Quintilian says, that he had a son to whom he addressed some excellent precepts of rhetoric. An ancient inscription speaks also of one of his daughters, named *Livia Quarta*: the same, perhaps, who espoused the orator Lucius Magius, whom Seneca mentions; and observes that the applauses he usually received from the public in his harangues, were not so much on his own account, as for the sake of his father-in-law. Livy's history has been often published with and without the supplement. The best editions are that of Gronovius, *cum notis variorum* & *juv.* Lugd. Bat. 1679, 3 vols 8vo; that of Le Clerc, Amsterdam, 1709, 10 vols 12mo; and that of Courcier, at Paris, 1735, 6 vols 4to. A fragment of Livy's history, lately discovered, was published in 1773 by Dr Bruns.

(2.) LIVIUS ANDRONICUS, a comic poet was flourished at Rome about A.A.C. 240. He was first who turned the personal satires and satirical verses, into the form of a proper dialogue and regular play. Though the character of a play was reckoned despicable among the Romans, Andronicus acted a part in his dramatical compositions, and engaged the attention of his audience by repeating what he had laboured after the manner of the Greeks. He was the freed man of Livius Salinator, whose children he educated. His poetry was grown obsolete in the age of Cicero, who would not even recommend the reading of it.

LIVONG, 2 towns of Sweden: 1. in E. Gothland, 8 miles NNW. of Linköping: 2. in Gothland, 8 miles S. of Uddevalla.

LIVOGNE, a town of the French republic in Piedmont, and late duchy of Aosta, 7 miles of Aosta.

LIVONIA, a large province or duchy of the Russian empire; bounded on the N. by the gulf of Finland, W. by that of Riga, S. by Courland and E. partly by Plescow, and partly by Novgorod. It is about 250 miles long from N. to S. and 150 broad. It is so fertile in corn, that it is called the *granary of the north*; and would produce a great deal more, if it were not so full of lakes, abounding in salmon, carp, pikes, flat fish, &c. In the forests there are wolves, bears, reindeer, stags, and hares. The domestic animals are very numerous; but the sheep bear coarse wool. Forests are numerous, and consist of birch trees, pines, and oaks. All the houses are built with wood. The merchandizes which they send abroad are flax, hemp, honey, wax, leather, skins, and potashes. The Swedes were formerly possessed of this province, but were obliged to abandon it to the Russians after the treaty of Pultowa; and it was ceded to them by peace of 1722, which was confirmed by a treaty in 1742. It is divided into two provinces, viz. Latonia and Esthonia; and two islands, *Oxel* and *Dagbo*, which are subdivided into several districts.

**LICA TERRA**, a kind of fine bole used in Germany and Italy; found in Livorno and other parts. It is generally brought in the shape of cakes, sealed with the impression of an escutcheon, with two cross keys.

**LIORNO**, a town of the French republic, in the prov. of Piedmont; 4 miles N. of Turin, and 11 N.E. of Chivasso.

**LIORNO**. See **LEGHORN**, & **LIBURNUS**, § 1.

**LIVRE**, a town of Sweden, in W. Gothland.

**LIVRE**. *n. f.* [French.] The sum by which they reckon their money, equal nearly to 5 s.

**LIVRE** contains 20 sols. See **MONEY**.

**LIVONIE**, a town of France, in the dep. of the Nord; 10 m. W. of Crest, and 10½ S. of Valence.

**LIVONIE**, a town of France in the dep. of the Oise, 9 miles NE. of Paris.

**LIVONIE**, an island of Sweden.

**LIVONIE**, a town of Poland, in Masovia.

**LIXUS**, in ancient geography, a town in the Atlantic, near the Lixus; a Roman colony by Claudius; famous in the time of the palace of Anteus and his death Hercules, (*Pliny*.) It is now called Lixus, 65 leagues S. of Gibraltar.

**LIXUS**, a town of France, in the dep. of the Moselle, 4 miles NE. of Metz, and 9 W. of Savern.

**LIXIVIAL**. *adj.* [from *lixivium*, Latin.] 1. Impregnated with salts like a lixivium.—The symptoms of an excretion of the bile vitiated, were a yellow colour of the skin, and a *lixivial* urine.

2. Obtained by lixivium.—Helmont con- sidered *lixivial* salts do not pre-exist in their natural form. *Boyle*.

**LIXIVIAL**. *adj.* [*lixivieux*, French; from *lixivium*.] Making a lixivium.—In these the salt is vitiated, with some portion of cho- lesterin, between the guts and the bladder.

*Lixivial* salts, to which pot-ashes be- long, are used in the preparation of the bodies of vegetables, dispose art readily with their tincture. *Boyle*.

**LIXIVIAL**. *n. f.* See **CHEMISTRY**, *Index*.

**LIXIVIAL**. *adj.* an appellation given to salts obtained from burnt vegetables by pouring water upon them.

**LIXIVIAL**. *n. f.* [Latin.] Lye; water im- pregnated with alkaline salt, produced from the calcination of vegetables; a liquor which has the power of dissolving.—I made a *lixivium* of fair water and wormwood, and having frozen it with salt, I could not discern any thing more of wormwood than to several other plants.

**LIXIVIAL**. See **CHEMISTRY**, *Index*.

**LIXIVIAL**, or } a barony and village of Ireland, in the county of Kerry. The village is the ancient seat of the earls of Kerry, and is pleasantly seated on the river Lixy, which is cut into several canals, that adorn the gardens. The improvements made in the garden, most of the vistas and avenues terminated by different buildings, seats, and farm-houses, the tide flows up to the gardens, where- of considerable burden may bring up the bridge near to the house. There are several bridges over the Lixy, the oldest of

which was built by Nicholas the 3d baron, who first made causeways to this place, the land being marshy. Lon. 9. 15. W. Lat. 52. 13. N.

**LIXURI**, a town in the isle of Cefalonia.

**LIXUS**. See **LIXA**.

**LI-YANG**, a town of China, in Kiang-Nan.

(1.) \* **LIZARD**. *n. f.* [*lizard*, French; *lacertus*, Latin.] An animal resembling a serpent, with legs added to it.—There are several sorts of lizards; some in Arabia of a cubit long. In America they eat lizards; it is very probable likewise that they were eaten in Arabia and Judæa, since Moses ranks them among the unclean creatures. *Calmet*.—

Thou'rt like a foul mis-shapen stigmatic,  
Mark'd by the destinies to be avoided,  
As venomous toads, or lizards dreadful stings.

*Shak.*

Adder's fork, and blind worm's sting,  
Lizard's leg, and owl's wing.

(2.) **LIZARD**. See **LACERTA**, § II, 1, 4-7; 15, 18, 22.

(3.) **LIZARD**, in geography, or the **LIZARD POINT**, a cape of Cornwall, reckoned the most southern point of land in England, seated at the N. entrance of the British Channel. Lon. 5. 15. W. Lat. 49. 58. N.

(4.) **LIZARD ISLAND**, one of the **DIRECTION ISLANDS**, in the South Sea, so named by Captain Cook from its abounding with these reptiles. It is 24 miles in circumference.

\* **LIZARDSTONE**. *n. f.* [*lizard and stone*.] A kind of stone.

(1.) \* **LIZARDTAIL**. *n. f.* A plant.

(2.) **LIZARD-TAIL**. See **PIPER**, and **SAURURUS**.

**LIZIER**, St. a town of France, in the dept. of Arriege, 2 miles N. of St Giron.

**LIZOU-TCHEOU**, a city of China, of the first rank, in the prov. of Quang-Si, on the river Long; 1037 miles SSW. of Peking. Lon. 126. 33. E. Ferro. Lat. 24. 12. N.

**LLAMELIN**, a town of S. America, in Lima.

**LLANARTH**. See **LANARTH**.

**LLANBEDER**, a town and river of S. Wales, in Cardigansh. 24 m. E. by N. of Cardigan, and 197 WNW. of London. Lon. 4. 13. W. Lat. 52. 15. N.

**LLANBERDARN VAWE**, a sea port of Cardiganshire, 2 miles E. of Aberystwith.

**LLANDAFF**. See **LANDAFF**.

**LLANELLY**, a town of Caermarthenshire, 13 miles S. by E. of Caermarthen, and 216 WNW. of London. Lon. 4. 13. W. Lat. 51. 43. N.

**LLANES**, a town of Spain, in Asturias.

**LLANGADOCK**, a town of Caermarthen- shire, between the Brane and the Sawthy, 18 miles NE. of Caermarthen, and 185 WNW. of London.

**LLANGOLLEN**, a town of N. Wales, in Denbighshire, with a beautiful bridge over the Dee, seated in the midst of very romantic scenery, 7 m. SW. of Wrexham, and 184 NW. of London.

**LLANIMDOVERY**, a town of Wales, in Caermarthen- shire, near the Towey; 26 miles NE. of Caermarthen, and 181 WNW. of London. Lon. 3. 53. W. Lat. 51. 56. N.

LLANOS, a town of Spain, in Grenada.

LLANRWST, a market town of N. Wales, in Denbighshire, 15 miles SW. of Denbigh, and 222 NW. of London. Lon. 3. 58. W. Lat. 53. 6. N.

LLANTRISSENT, an ancient town of Glamorgansh. among hills, 10 miles NW. of Elandaff, and 116 W. of London. Lon. 3. 26. W. Lat. 51. 37. N.

LLANVEDER, a river in Merionethshire.

LLANVILLING, a town of Montgomeryshire, among hills, near the Cane; 15 miles N. of Montgomery, and 179 NW. of London. Lon. 3. 8. W. Lat. 52. 40. N.

LLANYDLOS, a town of Montgomeryshire, with a great market for woollen yarn; 18 miles SW. of Montgomery, and 180 WNW. of London.

LLAUGHARN, a well built trading town of Caermarthenshire, on the mouth of the Towey; 7 miles SW. of Caermarthen, and 233 WNW. of London. Lon. 4. 33. W. Lat. 51. 57. N.

\* L L D. [*legum Doctor*.] A doctor of the canon and civil laws.

LLEDING, a river in Montgomeryshire.

LLERONY, a river in Caernarvonshire.

LLERENA, a town of Spain, in Eitremadura.

LLEYNGORYL, a river in Merionethshire.

LLIRIA, a town of Spain, in Valencia.

LLIGHOR, a river in Caermarthenshire.

LLORET, a town of Spain, in Catalonia.

(1.) LLOYD, Nicholas, a learned lexicographer, in the 17th century, born in Flintshire, and educated at Wadham college, Oxford. He was rector of Newington, near Lambeth in Surry, till his death, in 1680. His *Dictionary Historicum* is a valuable work, to which Hoffman and Moretti are greatly indebted.

(2.) LLOYD, Robert, an English poet, son of Dr Pierlon Lloyd, 2d master of Westminster school, where Robert was educated. He took his degree of M. A. at Cambridge. He published a poem, entitled *the Actor*, in 1760, the merit of which was so great, that when the *Rosciad* appeared he was supposed to be the author of it too. He was employed as usher at Westminster school, but lost it by his irregularities; and afterwards lived almost entirely by the generosity of his friend Churchill, the poet. He died in 1764. His poems were published by Dr Kenrick in two vols. 8vo. He also wrote *the Capricious Lover*, a comic opera; 1764, 8vo. and other dramatic pieces.

(3.) LLOYD, William, D. D. a learned English bishop, born in Berkshire, in 1627; and educated under his father, who was vicar of Tyle-hurft in Berkshire. He took orders at Oxford; in 1660, was made prebendary of Rippon; and in 1666 chaplain to the king. In 1667 he graduated; in 1672 he was installed dean of Bangor; and in 1680 was consecrated Bp. of St Asaph. He was one of the 7 bishops, who were imprisoned in the Tower, for subscribing a petition to the king against his declaration for liberty of conscience. Soon after the revolution he was made almoner to K. William and Q. Mary; in 1692, bishop of Litchfield and Coventry; and in 1699, of Worcester, where he sat till his death, in 1717, the 91st year of his age. Dr Burnet gives him a high character, and his works are much esteemed.

my prevailing arm. *Milton.*  
Mnestheus laid hard load upon his helm.

thing that depresses.—How a man can  
quiet and cheerful mind under a great bur-  
den load of guilt, I know not, unless he be  
nourant. *Ruy.* 5. As much drink as one  
r.—There are those that can never sleep  
t their load nor enjoy one easy thought,  
y have laid all their cares to rest with a  
*L'Esrange.*—

The thund'ring god,  
he withdrew to rest, and had his load. *Dryd.*  
LOAD. *n. f.* [more properly *lode*, as it was  
ly written; from *ladan*, Saxon, to lead.]  
iding vein in a mine.—The tin lay couch-  
first in certain strakes amongst the rocks,  
e veins in a man's body, from the depth  
t the main load spreadeth out his branches,  
ey approach the open air. *Carew.*—Their  
of working in the lead mines, is to follow  
t as it lieth. *Carew.*

LOAD, or LODE, (§ 2.) is used particularly  
tin mines, for any regular vein or course,  
r metallic or not; but most commonly for  
ilic vein. Mines in general are veins or  
within the earth, whose sides receding  
r approaching to each other, make them  
qual breadths in different places, some-  
orming large spaces, which are called *boks*;  
oies are filled like the rest with substances,  
whether metallic, or of any other nature,  
ed loads. When the substances forming  
ads are reducible to metal, the loads are  
English miners said to be *alive*, otherwise  
e termed *dead loads*. In Cornwall and De-  
e the loads all hold their course from E.  
though in other parts of England they fre-  
run from N. to S. The miners report,  
e sides of the load never bear in a perpen-  
but always overhang either to the N. or  
e. The mines seem to have been so many  
ls through which the waters pass within  
th; and like rivers they have their small  
es opening into them in all directions:  
e by the miners termed the *feeders* of the  
Most mines have streams of water running  
h them; and when they are found dry, it  
owing to the water having changed its  
; which it seems sometimes to have been  
led to do, by the load having fill'd up the  
and sometimes to have fallen into other  
any channels. The load is frequently inter-  
by the crossing of a vein of earth or stone,  
e other metalline substance; in which case it  
ly happens, that one part of the load is  
to a considerable distance on one side.  
ransient load is, by the miners, termed a  
; and the part of the load, which is moved,  
hem said to be *beaved*. This fracture or  
if a load, according to Mr Price, is prob-  
y a subsidence of the strata from their pri-  
ositions, which he supposes to have been  
ital or parallel to the surface of the earth,  
efore should more properly be called a  
ion than a heave. This heaving of the  
ould be an inexpressible loss to the miner,

.. XIII. PART I.

did not experience teach him, that as the loads  
always run on the sides of the hills, so the part  
beaved is always moved toward the descent of  
the hill; so that the miner, working toward the as-  
cent of the hill, and meeting a flogging, considers  
himself as working in the heaved part; wherefore,  
cutting through the flogging, he works upon its  
back up the ascent of the hill, till he recovers the  
load, and *vice versa*. See *MINE*.

(4.) LOAD is also used for nine dishes of ore,  
each dish being about half a hundred weight.

\* To LOAD. *v. a.* pret. *load'd*; part. *load:n* or  
*laden*. [*bladan*, Sax.] 1. To burden; to freight.—

At last, *laden* with honour's spoils,  
Returns the good Andronicus to Rome. *Shak.*  
—Your carriages were heavy *loaden*. *Isa.* xlvi. 1.  
2. To encumber; to embarrass.—He that makes  
no reflections on what he reads, only *loads* his  
mind with a rhapsody of tales, fit in winter nights  
for the entertainment of others. *Locke.* 3. To  
charge a gun.—A mariner having discharged his  
gun, and *loading* it suddenly again, the powder  
took fire. *Wifeman.* 4. To make heavy by some-  
thing appended or annexed.—

Thy dreadful vow, *loaden* with death, still  
sounds

In my stunn'd ears. *Addison.*

LOADED SHELL, an ingenious contrivance  
for saving the lives of people in imminent danger,  
on board a ship, when the vessel is either strand-  
ed, or in danger of being so, near the coast. It  
is a bomb shell filled with lead, wherin a staple or  
ring is fixed, to which a rope is fastened; and the  
shell, thus loaded, being thrown on shore, fixes  
itself in the ground, and the other end of the rope  
being fastened to the ship, the persons on board  
are thereby enabled to haul themselves a-shore. It  
was invented by John Bell, Serjeant of the R. Re-  
giment of Artillery, who obtained a premium for  
it, of 50 guineas, in 1792, from the *Society for the*  
*Encouragement of Arts*, &c. after exhibiting its u-  
tility and practicability before a committee of the  
Society. On this occasion a loaded shell weighing  
about 70 lb. was thrown on shore, from a small  
mortar fixed in a boat, moored in the Thames,  
about 200 yards from the coast. The shell falling  
about 100 yards within land, buried itself about  
18 inches in the gravel, when Bell and his assistant,  
on a raft, floated by casks, properly ballasted,  
hauled themselves a-shore in a few minutes, by the  
rope affixed to the shell.

\* LOADFR. *n. f.* [from *load*.] He who loads.

\* LOADSMAN. *n. f.* [*lode* and *man*.] He who  
leads the way; a pilot.

\* LOADSTAR. *n. f.* [more properly as it is in  
*Maunderville*, *lodestar*, from *ludan*, to lead.] The  
polestar; the cynosure; the leading or guiding  
star.—She was the *loadstar* of my life; the  
blessing of mine eyes; the overthrow of my  
desires, and yet the recompence of mine over-  
throw. *Sidney*.—My Helice, the *loadstar* of my  
life. *Spenser*.—

O happy fair!

Your eyes are *loadstars*, and your tongue sweet  
air! *Shak.*

That clear majesty

Which standeth fix'd, yet spreads her heavenly  
worth,

P p

Lodestone

and *loadstar* to all eyes.  
*Darvies.*  
*n. f.* [properly *loadstone* or *loadstone*.] The magnet; the compass needle is directed north and south.—  
 A peculiar and rich ore of iron, in masses, of a deep iron-grey where and often tinged with a brownish or red; it is very heavy, and considerably so; a great character is that of affecting the compass; iron is found in England, and in places where there are mines of that metal.—The use of the *loadstone* was kept secret, and was one of the other mysteries of the art.

**LOADSTONE.** See **MAGNET.**  
*n. f.* [from *blas* or *laf*, Sax.] 1. A loaf of bread as it is formed by the baker: a loaf of bread is as round as a cake.—

Easy it is to steal a shive we know. *Shak.*  
 In the town sufficed not for six months, when the soldiers entered into proportion; a good example, the lord Clinton lieth in a *leaf* a-day. *Hayward.*—With a *leaf* you may break a *leaf* of bread into parts, than a lump of lead of the same weight. *Digby.* 2. Any thick mass into which wine is wrought.—Your wine becomes that you may bottle it with a piece of wax. *Mortimer.*

**LOAM.** *n. f.* [*lim*, *luam*, Sax. *limus*, Lat. *limus*, a fen, *Junius*.] Fat unctuous tenacious marl.—

The purest treasure  
 Is spotless reputation; that away,  
 Men are but gilded *loam* or painted clay.

—Alexander returned to dust: the dust is earth; of earth we make *loam*; and why of that *loam* might they not stop a beer barrel? *Shak.*

(2.) **LOAM**, in natural history, is an earth composed of dissimilar particles, stiff, dense, hard, and rough to the touch; not easily broke while moist, readily diffusible in water, and composed of sand and a tough viscid clay. Of these loams some are whitish and others brown and yellow.

\* **To LOAM.** *v. a.* [from the noun.] To finish with loam, marl, or clay; to clay.—The joist ends, and girders which be in the walls, must be *loamed* all over, to preserve them from the corroding of the mortar. *Maxon.*

\* **LOAMY.** *adj.* [from *loam*.] Marly.—The mellow earth is the best, between the two extremes of clay and sand, if it be not *loamy* and binding. *Bacon.*—Auricula seedlings best like a *loamy* sand. *Evelyn.*

(1.) \* **LOAN.** *n. f.* [*blan*, Sax.] Any thing lent; any thing given to another, on condition of return or repayment.—The better such ancient revenues shall be paid, the less need her majesty ask subsidies, sittings, and *loans*. *Bacon.*—

Thy friend and old acquaintance dares disown  
 The gold you lent him, and forswear the *loan*.

(2.) **LOANS, PUBLIC.** See **FUND**, § 3; and **NATIONAL DEBT.**

(1.) **LOANDA**, a province of the kingdom of **ANGOLA**, in Africa. It is an island about 100 miles long, and 3 broad. It is supplied with fresh water from wells dug in it, which are not sunk more than a few feet, when they are filled with excellent water. It is remarkable, however, that the water of these wells continues good only during the time of high tide; for, as that sinks, the water becomes more and more brackish, till at last it is almost as salt as the sea itself. On the coast of this island are fish called the *zimbis*, or shells, used in several places in Africa instead of money; and with these shells, instead of coin, is carried on a great part of the traffic of this country. It is 18 miles long, but not 2 broad; contains one town and 7 villages; and abounds in cattle, corn, and fruits.

(2.) **LOANDA**, a town in the above island, capital of Angola, built by the Portuguese in 1575. It is large, populous, and pleasantly seated on the declivity of a hill near the sea-coast, facing the SW. It contains about 1000 white inhabitants and 4000 blacks and mulattoes. Lon. 12. 25. E. Lat. 8. 45. S.

(1.) **LOANGO**, a kingdom of Africa, about 180 geographical miles long from S. to N. from Cape St Catharine, in Lat. 2° S, to a small river called *Lovanda Louisa*, in Lat. 5° S. From W. to E. it extends from Cape Negro on the coast of Ethiopia towards the *Buchonalean* mountains, (so called on account of their vast quantity of ivory and great droves of elephants,) about 300 miles. It is divided into 4 principal provinces, viz. *Lovangin*, *Loango-mongo*, *Chilongo*, and *Piri*. The inhabitants are very black, well-shaped, and of a mild temper. The men wear long petticoats from the waist downwards, and have round the waist a piece of cloth half an ell or a quarter broad over which they wear the skin of some wild beast hanging before them like an apron. On their heads they wear a cap made of grass, and quilted with a feather a-top of it; and on their shoulder, or in their hand, they carry a buffalo's tail, to drive away the musketos. The women's petticoats are made only of straw, about an ell square, which leave the greatest part of their thighs and buttocks bare: the rest of their body is quite bare, except that on their legs they wear small strings of beads made of shells, and bracelets of ivory on the arms. They anoint themselves with palm-oil, mixed with a kind of red wood reduced to powder. Every man marries as many wives as he pleases, who are obliged to get their husbands a livelihood, as is the practice all along the African coast. The women, therefore, cultivate the land, sow and reap. The people are mild and tractable, and most of them are said to be converted to Christianity. This country abounds with poultry, oxen, cows, sheep, goats, elephants, tigers, leopards, civet-cats, and other animals; so that here are great quantities of elephant's teeth, and firkins, to be traded for.

(2.) **LOANGO**, the capital of the above kingdom, and the city where the king resides, is called also *Banza-Loangeri*, and, in the language of the negroes *Boavie*. It is situated 4½ miles from the sea-coast. It is a pretty large city, shaded and adorned with bananas, palm, and other trees. The king, who resides in a large palace in the middle

of it, has about 1500 concubines. If any is surpris'd in adultery she and her paramour instantly conveyed to the top of a very high mountain, whence they are hurled down headlong into the deepest place. The king's revenue consists of elephants teeth, copper, and a kind of stone made of palm-tree leaves, and called *gambu*; he has whole store-houses full of these; but his greatest riches consist in slaves.

40. E. Ferro. Lat. 4. 40. S.  
**OANO**, a ci-devant territory and lordship, formerly belonging to the King of Sicily, but united to the Ligurian republic, in 1797.

**OANO**, a town of the Ligurian republic, 6 W. of Finale.

**ORCA**, or **ORCA** a town of Spain, in Arragon, 13 miles S. of Jaca.

**LOATH**, *adj.* [*loath*, Saxon.] Unwilling; disinclined; not ready; not inclined.—These fresh and lively brooks, how slowly they slide away, as if they were the company of so many things united in one! *Sidney*.—

Her lofty eyes, half *loath* to look so low, she asked them in her disdainful wife, and other grace vouchsafed them to show.

*Fairy Queen*.  
 When he heard her answers *loath*, he knew secret sorrow did her heart detain.

*Fairy Queen*.  
 I speak to indirectly, I am *loath*; to speak the truth; but to accuse him so, is your part.

*Shak.*  
 I doth the stay, as *loath* to leave the land, whose soft side she first did issue make.

*Davies*.  
 Then wilt thou not be *loath* to leave this paradise, but shalt possess it more *loath* to be oblig'd by me. *Milton*.  
 I pardon willing, and to punish *loath*; I strike with one hand, but you heal with the other. *Waller*.  
 Æneas is forced to kill Lausus, the poet's name compassionate, and *loath* to destroy such a piece of nature. *Dryden*.—

The faint pilgrim standing on the shore, saw the torrent he would venture o'er; when his inn upon the farther ground, he waded through, and *loath* to go ground: *Dryden*.  
 How you shy to be oblig'd; I am more *loath* to be oblig'd by me. *Southern*.  
**LOATHE**, *v. a.* (from the noun.) 1. To look on with abhorrence.—Parthenia disdain'd both liking and misliking, loving and hating. *Sidney*.—

They with their filthiness disdain'd this same gentle soil long time, their own mother *loath*'d their beastliness. *Spenser*.  
 When I caught with an unwary oath, I reveal the secret which I *loath*! *Waller*.  
 Hee the lion *loaths* the taste of blood, and the lion hunts his female through the wood. *Dryden*.  
 His exalted spirit *loaths* the pleasures of food and cloaths. *Swift*.

2. To consider with the disgust of satiety.—  
*Loathing* the honey'd cakes, I long for bread. *Cowley*.

—Our appetite is extinguish'd with the satisfaction, and is succeeded by *loathing* and satiety. *Rogers*. 3. To see food with dislike.—*Loathing* is a symptom known to attend disorders of the stomach. *Quincy*.

(2.) \* **LOATHE**, *v. n.* 1. To create disgust; to cause abhorrence. Obsolete.—

Where I was wont to seek the honey bee,  
 The grisly toadstool grown there might I see,  
 And *loathing* paddocks lording on the same. *Spenser*.

2. To feel abhorrence or disgust.—The fish in the river shall die, and the river stink; and the Egyptians shall *loath* to drink of the water. *Exodus*.—

Why do I stay within this hated place,  
 Where every object shocks my *loathing* eyes? *Roue*.

\* **LOATHER**, *n. s.* [from *loath*.] One that *loaths*.

\* **LOATHFUL**, *adj.* [*loath* and *full*] 1. Abhorring; hating.—

Which he did with *loathful* eyes behold,  
 He would no more endure. *Hubbard*.

3. Abhorred; hated.—

Above the reach of *loathful* sinful lust. *Spenser*.  
 \* **LOATHINGLY**, *adv.* [from *loath*.] In a fastidious manner.

(1.) \* **LOATHLY**, *adj.* [from *loath*.] Hateful; abhorred; exciting hatred.—

An huge great dragon, horrible in sight,  
 Bred in the *loathly* lakes of Tartary,  
 With murder'ous ravin. *Fairy Queen*.

The people fear me; for they do observe  
 Unfather'd heirs, and *loathly* births of nature. *Shak.*

Sour-ey'd disdain, and discord shall bestow  
 The union of your bed with weeds so *loathly*,  
 That you shall hate it. *Shak.*

(2.) **LOATHLY**, *adv.* [from *loath*.] Unwillingly; without liking or inclination.—The upper streams make such haste to have their part of embracing, that the nether, though *loathly*, must needs give place unto them. *Sidney*.—

*Loathly* opposite I stood  
 To his unnatural purpose. *Shak.*

This shews that you from nature *loathly* stray,  
 That suffer not an artificial day. *Donne*.

\* **LOATHNESS**, *n. s.* [from *loath*.] Unwillingness.—

The fair soul herself  
 Weigh'd between *loathness* and obedience,  
 Which end the beam should bow. *Shak.*

Should we be taking leave,  
 As long a term as yet we have to give,  
 The *loathness* to depart would grow. *Shak.*

—After they had sat about the fire, there grew a general silence and *loathness* to speak amongst them. *Bacon*.

\* **LOATHSOME**, *adj.* [from *loath*.] 1. Abhorred; detestable.—

The fresh young fly  
 Did much disdain to subject his desire  
 To *loathsome* sloth, or hours in ease to waste. *Spenser*.

While

While they pervert pure nature's healthful rules

To loathsome sickness. *Milton.*

—If we consider man in such a loathsome and prostrating condition, was it not love enough that he was permitted to enjoy a being? *South.* 2. Causing satiety or fastidiousness.—

The sweetest honey

Is loathsome in its own deliciousness. *Shak.*

\* LOATHSOMENESS. *n. f.* [from *loathsome*.] Quality of raising hatred, disgust or abhorrence.—The catacombs must have been full of stench and loathsomeness, if the dead bodies that lay in them were left to rot in open niches. *Add. on.*

\* LOAVES, plural of loaf.—Democritus, when he lay a dying, caused loaves of new bread to be opened, poured a little wine into them; and so kept himself alive with the odour till a feast was past. *Bacon.*

\* LOB. *n. f.* 1. Any one heavy, clumsy, or sluggish.—

Farewell, thou lob of spirits, I'll be gone,  
Our queen and all her elves come here anon.

*Shak.*

2. Lob's pound; a prison. Probably a prison for idlers, or sturdy beggars.—

Crowd'ro, whom in irons bound,

Thou basely threw'st into lob's pound. *Hudib.*

3. A big worm.—For the trout, the dew worm, which also some call the lob worm, and the branding are chief. *Wolton.*

\* To LOB. *v. a.* To let fall in a slovenly or lazy manner.—

The horsemen sit like fixed candlesticks,

—And their poor jades

Lob down their heads, dropping the hide and hips. *Shak.*

LOBAU, or ) a town of Prussia, with a castle,  
(1.) LOBAW, } the residence of the bishop of Culm, 25 miles E. of Culm, according to Dr Brookes, but Mr Crutwell makes it 44.

(2.) LOBAW, a town of Germany, in Lusatia.

(1.) \* LOBBY. *n. f.* [*lube*, Ger.] An opening before a room.—

His lobbies fill with 'tendance,

Rain sacrificial whip'rings in his ear,

Make sacred even his stirrup. *Shak.*

—Before the duke's rising from the table, he stood expecting till he should pass through a kind of lobby between that room and the next, where were divers attending him. *Wotton.*—

Try your back stairs, and let the lobby wait,

A stratagem in war is no deceit. *King.*

(2.) A LOBBY, in architecture, is a small hall or waiting room; it is also an entrance into a principal apartment, where there is a considerable space between that and a portico or vestibule; and the length or dimensions will not allow it to be considered as a vestibule or an anteroom. See ANTICHAMBER.

(1.) \* LOBE. *n. f.* [*lobe*, French; *lobes*.] A division; a distinct part: used commonly for a part of the lungs.—

Nor could the lobes of his rank liver swell

To that prodigious mass, for their eternal meal.

*Dryd. n.*

—Air bladders form lobuli, which hang upon the

bronchia like bunches of grapes; these substitute the lobes, and the lobes the lungs. *not.*

From whence the quick reciprocating  
The lobe adhesive, and the sweat of dew

(2.) A LOBE, in anatomy, is any fleshy part, as the lobes of the lungs, of the LOBEDA, a town of Saxony, 3 miles Jena.

LOBEL, Matthias, M. D. physician a knight to king James I. was born at Lisse. He published several esteemed works, viz. *tarum seu Scirpium historia*, folio: 2. *Dilucidium medicamentorum explanationes, et synonymia*, 8cc. fol. *Icones Scirpium*, 4to. *explanatio*, 4to. *Scirpium illustrationes*, 4 died at London, in 1616, aged 78.

LOBELIA, CARDINAL FLOWER, a plant of the monogamia order, belonging to the 5th class of plants; and in the natural ranking under the 29th order, *Campylocalyx* is quinquefid; the corolla monopetalous; the capsule inferior, bilocular, circular. There are many species, but only a few cultivated in our gardens; of these, 2 are herbaceous plants for the open ground, shrubby plants for the stove. They are biennial or perennial, rising with erect stems from 2 to 3 or 6 feet high, ornamented with long, oval, spear-shaped, simple leaves; a beautiful, monopetalous, somewhat rimbed flowers, of scarlet, blue, and violet. They are easily propagated by seeds, or cuttings of their stalks. The tender kind require the common treatment of other exotic plants; the natives of America; from which they must be procured.

LOBELIA SIPHILITICA grows in moist places in Virginia, and stands our winter. There is an article of the materia medica. It is a small plant with an erect stalk 3 or 4 feet high, blue, milky juice, and a rank smell. The root is of white fibres about two inches long, and is apt to excite vomiting. It is used in North American Indains as a specific for the venereal disease. The form is by decoction, and is gradually increased till it brings considerable purging, then intermitted for a few days, and again used in a more moderate degree till cure be completed. The ulcers are all cured with the decoction, and the Indians spirit is used with the powder of the inner bark of the tree. The same strictness of regimen is as during a salivation by a mercurial course; benefit to be derived from this article has far as we know, been confirmed either in North America or Virginia; recourse being almost univocally to the use of mercury; and it is probably the reason that the London college have received it into their list. It seems, however, not to merit a trial.

LOBENSTEIN, a town of Upper Saxony

LOBERA, a town of Spain, in Arragon

LOBES, a town of Bohemia in Bolell

LOBETUM, an ancient town of Hispania

terior, said to have been built by the Libyan Hercules: (*P. inq.*) Now called ALBARAZIN; which see.

LOBINEAU, Guy Alexis, a Benedictine monk, born at Rennes, in 1666. He wrote several works of reputation: particularly, 1. *The history of Britanny*, 2 vols fol. 2. A continuation of *Felibi-n's History of Paris*, 9 vols folio. 3. *A history of Spain*. 4. *A translation of Polybius*. He died in 1727, aged 61.

LOBOLLO BAY, a bay on the W. coast of Antigua.

LOBMING, a town of Germany, in Stiria.

LOBNA. See LIBNA.

(1.) LOBO, Jerome, a famous Portuguese Jesuit, born at Lisbon. He travelled into Ethiopia, as a missionary, and continued there for a long time. At his return he was made rector of the college of Coimbra, where he died in 1678. He wrote *An historical account of Abyssinia*, which is reckoned, and was translated into French by Le Grand, and into English by Dr Johnson.

(2.) LOBO, Roderick Francis, a celebrated Portuguese poet, was born at Leiria, a small town of Estremadura. He wrote an heroic poem, sonnets, and a piece entitled *Euphrosyne*, which is the favourite comedy of the Portuguese. His works were collected and printed in Portuguese, in 1721, in folio. He flourished about 1610.

LOBOS, two clusters of islands on the coast of Fern, about 21 miles from each other, distinguished into *Windward* and *Leeward Lobos*, and called also *Sea Wolves* or *Seals Islands*. Lat. 6. 25. to 6. 45. S.

LOBRES, a town, of Spain in Grenada.

LOBSTADT, a town of Saxony, in Leipzig, 10 miles SSE. of Leipzig.

(1.) \* LOBSTER. *n. f.* [*lobster*, Saxon.] A crustaceous fish.—Those that cast their shell, are the lobster the crab, and craw fish. *Bacon*.—It happeneth often that a lobster hath the great claw of one side longer than the other. *Brown*.

(2.) LOBSTER, See CANCER, N<sup>o</sup> 2, 6, 10, 14, 18.

LOBURG, a town of Saxony, in Magdebourg.

LOCAGNANO, a town of the French republic, in the isle and dep. of Corsica, 12 miles N. of Bastia.

(1.) \* LOCAL. *adi.* [*locus* French; *locus*, Lat.]

1. Having the properties of place.—By ascending, after the sharpness of death was overcome, he took the very local possession of glory, and that to the use of all that are his, even as himself before had witnessed, I go to prepare a place for you. *Hooker*.—

A higher slight the vent'rous goddess tries.

Leaving material world, and local skies. *Prior*.

2. Relating to place.—The circumstance of local nearness in them unto us, might haply enforce in us a duty of greater separation from them than from those other. *Hooker*.—Where there is only a local circumstance of worship, the same thing would be worshipped, supposing that circumstance changed. *Stillingfleet*. 3. Being in a particular place.—

Dream not of their sight,

As of a cruel, or the local wounds

Of head, or heel.

*Milton*.

—How is the change of being sometimes there,

made by local motion in vacuum; without a change in the body moved? *Digby*.

(2.) LOCAL, in law, something fixed to the freehold, or to a certain place: thus, real actions are local, since they must be brought in the country where they lie; and local customs are those peculiar to certain countries and places.

(3.) LOCAL MEDICINES, those destined to act upon particular parts; as fomentations; epithems, vesicatories, &c.

\* LOCALITY. *n. f.* [from *local*.] Existence in place; relation of place, or distance.—That the soul and angels are devoid of quantity and dimension, and that they have nothing to do with greater locality is generally opinioned. *Glanv.*

\* LOCALLY. *adv.* [from *local*.] With respect to place.—Whether things, in their natures so divers as body and spirit, which almost in nothing communicate, are not essentially divided, though not locally distant I leave to the readers. *Glanv.*

LOCANA, a town of the French republic, in the prov. of Piedmont, on the Orco; 23 miles NNW. of Turin.

(1.) LOCARNO, LUCARNO, or LUGGARIS, one of the four ci-devant ITALIAN BAILEWICKS, annexed to the Cisalpine republic in 1797, and now included in the Italian republic; containing 74 square miles, and 30,000 souls, in 1797.

(2.) LOCARNO, LUCARNO, or LUGARIS, a town of the Italian republic, late capital of the above bailiwick, is seated at the N. end of lake Maggiore, near the river Magie; 23 miles SW. of Chiavenna; and carries on a great trade in wine, and fruits, &c. Lon. 8. 41 E. Lat. 46. 6. N.

(3.) LOCARNO, LAKE. See MAGGIORE.

\* LOCATION. *n. f.* [*locatio*, Lat.] Situation with respect to place; act of placing; state of being placed.—To say that the world is somewhere, means no more than that it does exist; this, though a phrase borrowed from place signifying only its existence, not *location*. *Locke*.

LOCCO, a town of Naples, in Abruzzo Citra, on the Pescara; 10 miles N. of Solmona.

(1.) LOCH, David, Esq. of Over Carnbee, in Fifeshire, a gentleman who merits to be commemorated in a work of this kind, not only as an author, but as one whose public-spirited writings contributed very much to rouse the then dormant spirit of his countrymen, to attend to the improvement of their native soil by cultivating its produce, and encouraging its manufactures. But however willing to dedicate a few lines to the memory of Mr Loch, we have to regret an uncommon deficiency of materials; as we find no memoir of him in any periodical work, not even in Sir J. Sinclair's Statistical Account, where many persons of inferior consideration are taken notice of. We can therefore only mention the few following particulars. Mr Loch was born about 1718 or 1720; and having been bred to business, engaged in trade with an uncommon degree of spirit and activity. At one period, he had the greater part of the trading ships of Leith employed in conveying his merchandize to the principal ports of Europe and America; and was in the high road to realize a fortune, when, in consequence of several successive losses by shipwrecks, bankruptcies, &c. he was obliged to stop payment; and his affairs

being

being involved with various partnerships, it was long before he got them reduced to order. But this his private misfortune proved beneficial to the public; for his active disposition now led him to employ his leisure hours, (no longer embarrassed by business,) in writing a number of essays on the trade, productions, and agriculture of Scotland, and in pointing out the great loss the country suffered, by its natural productions and advantages being neglected. These Essays were communicated to the public, in Letters addressed to Mr Ruddiman publisher of the *Edinburgh Weekly Magazine*, a work which was then universally read, and of which about 3000 copies were printed weekly. The subjects, he chiefly wrote upon, were agriculture in general; the improvement of the breed of our sheep, in particular; the manufacture of our own wool; the improvement and consumption of our own porter; the malt distilleries; the wearing of cloths of Scots manufacture; and, above all, the improvements of which the numerous natural harbours of Scotland were capable, if proper attention and encouragement were paid to our fisheries. His Essays on these great national objects, he afterwards collected and published by subscription, at Edinburgh, in 3 vols 12mo. And though he did not live to see the vast spirit of industry and exertion, that has since taken place, in most of these branches, yet he had the satisfaction to see the commencement of it, and that his labour was not lost, from the impression made by his writings on the late lords Gardenstone, Monbodo, and other gentlemen of fortune who cultivated his acquaintance, and wore nothing but cloth of Scots manufacture for many years before they died. Mr Loch died at Edinburgh, about 1784.

(2.)\* *LOCH. n. f.* A lake. Scottish.—A lake or *loch*, that has no fresh water running into it, will turn into a stinking puddle. *Cheyne.*

(3.) *LOCH*, in pharmacy. See *LOHOCH*, § 2.

*LOCHABER*, a district of Scotland, in Inverness-shire, bounded by Moydart on the W. Glengary on the N. Badenoch on the E. and Lorn on the S. It derives its name from the lake or loch *Aber*; and extends about 20 miles from E. to W. and 30 from N. to S. The country is barren, bleak, mountainous, and rugged. In one of the most barren parts of this country, near the mouth of the river *Aber*, in the centre between the West and North Highlands, stands *Fort William*, with the town of *Maryburgh*, built upon a navigable arm of the sea, near the foot of *Benevis*. See these articles. It is inhabited mostly by the *Macdonalds*, *Camerons*, and *Mackintoshes*, whose chiefs are generally persons of education, honour, and hospitality. *Macdonald of Glengary*, descended in a straight line from *Donald of the Isles*, possessed a seat or castle in this district, which was burnt and destroyed in 1715, in consequence of his declaring for the Pretender. The elegant house and gardens belonging to *Cameron of Lochiel* underwent the same fate, for the same reason, in 1746. The people are celebrated for their bravery, fidelity, and attachment to their chiefs. They speak the *Erse* language, and conform to the customs described under the article *HIGH-*

*LANDERS*. They pay little attention to agriculture, but that which consists in the sale of black cattle; and hunt fowl and fish as the permit, and as their occasions require. They fight in arms, which they learn to handle from their infancy; submit patiently to discipline the character of soldiers; and never fail to distinguish themselves in the field by their sobriety as well as their valour.

*LOCH-ACHASTIAL*, a bay on the W. of Argyllshire, 24 miles SW. of Inverary.

*LOCH-ALARICH*, a lake of Perthshire.

*LOCH-ALFARRIG*, a lake of Inverness-shire, 12 miles NW. of Fort Augustus.

*LOCH-ALORT*, a bay of Inverness-shire, 12 miles W. of Fort William.

*LOCHALSH*, a peninsular parish of Scotland, in Ross-shire, surrounded by the sea, on the N. by *Lochduich* and *Lochlong* on the S. a range of hills on the E.; about 10 miles long and 5 broad. The surface is hilly, though heathy nor rocky; the climate rainy, and rich, producing good oats, barley, pease, and excellent pasture. The population in 1792, was 1334; increase, 721: the number of sheep, 1789; lambs, 686; goats, 1011; and black cattle, 3115. The increase of population is ascribed to "the early marriage of the tenants, who are in easy circumstances, emancipated from feudal oppressions, under a liberal landlord," viz. *Mr M'Kenzie of Seaboard*.

*LOCHANNAN-CORP*, [*Gael. i. e. the lake bodies*] a lake of Perthshire, near *Benedi*, taken from a whole company attending a funeral, fallen through the ice and been drowned.

*LOCHAR*. See *LOCHER*.

*LOCH-ARCHAIG*, or *ARKEIG*, a lake of Scotland, in Inverness-shire, 16 miles long and one 12 miles N. of Fort-William. The river *Loch* runs from it, into *LOCH-LOCHY*.

*LOCH-ARD*, a lake of Perthshire, 3 miles N. of *Loch-Lochy*.

*LOCH-ASSINT*, a bay on the coast of Ross-shire, N. of *Loch-Aven*.

*LOCH-AVEN*. See *AVEN*, N<sup>o</sup> 4.

*LOCH-AVICH*. See *AVICH*, N<sup>o</sup> 1.

*LOCH-AW*, or *LOCHOW*. See *AW*, N<sup>o</sup> 1.

*LOCHAY*, a river of Perthshire. See *LOCH*.

*LOCHBOISDALE*, a bay of Scotland, on the coast of S. Uist. Lon. 4. 6. W. of Edinburgh 57. 11. N.

*LOCH-BORLEY*. See *BORLEY*.

*LOCH-BRACADALE*, a bay on the coast of Ross-shire, N. of *Loch-Lochy*.

*LOCH-BRANDY*, a lake of Forfarshire.

(1.) *LOCHBROOM*, [*Gael. Loch-Braon*] a bay of Scotland, in Ross-shire, so named from the river *Braon*, which runs through a great part of it. It is 36 miles long and 20 broad, and contains an agreeable variety of hills and dales, woods, waters, corn, and grass. The climate is though rainy; the soil light but fertile, produces rich crops, in the low grounds. The population in 1793, was 3500; the increase, since 1753, less than 1289; owing to the encouragement of the fisheries, the improvement of the navigation of bridges and villages. &c. Of the *LAPPOOL* is the most populous.

(2.) *LOCH-BROOM*, or *LOCH-BRAON*, a bay of Scotland, on the coast of Ross-shire, at the mouth of the *Braon*.

coast of Ross-shire; 8 miles long and 1, and 8 miles SE. of Udrigil Head; a- with herrings. See HERRING, N° II,

CH-BROOM, a town at the S. end of the c, 25 m. WNW. of Dingwall. (*Crutw.*) ably in the above parish, but is not men- the *Statistical Account* of it.

BRORA. See BRORA, N° I.

BROWN, a lake of Ayr-shire, which co- it 60 acres of ground, 3 miles NW. of

It is frequented by swans and wild geese. BRUIACH, a lake of Inverness-shire, 3 n Kiltarity, abounding with char, and 4 inds of trouts.

CALLADER, a lake of Aberdeenshire, in which produces a small species of sal- ut 8 lb. weight.

CHCARRON, a Highland parish of Scot- of-shire, so named from the lake, (N° 2.) miles long, and from 5 to 6 broad. The rty deep clay, partly light and sandy. ley, and potatoes, are the chief crops. ilation, in 1793, was 1068; increase 297, . The inhabitants, who, about 70 years : in such a barbarous state that the mi- obliged to go armed, are now quite ci- William, Alexander, and John Macken- celebrated Gaelic poets, whose works found in Macdonald's Collection, were iis parish.

CH-CARRON, a lake or arm of the sea, on of Ross-shire, into which the *Carron* falls, ver entirely in the above parish, which d salmon fishing.

CRINAN, a bay on the W. coast of Argyll.

DEE. See DEE, N° 4, 6; and LOCH-KEN.

DOCHART, a lake of Perthsh. 3 m. long. DOINE, a lake of Perthshire, 20 miles W.

UICH, a bay on the W. coast of Scot- ween Ross-shire and Inverness-shire.

EARN, or LOCH-ERNE. See ERNE, N° 3.

CK, a lake of Argyllshire, 6 miles long.

LE, or LOCHIEL, a lake and arm of the : SE. end of Inverness-shire, 8 miles long ad. The Lochy and Nevis run into it William.

EM, a town of the Batavian republic, in of the Rhine, on the Borkel, 10 miles E.

Lon. 6. 13. E. Lat. 52. 12. N.

CHER, or LOCHAR, a river of Scotland, es-shire, which, after dividing the parishes ies and Kirkmahoe, runs for 12 miles LOCHER MOSS, and falls into the Sol-

CHER, a river in Renfrewshire, which chwinnoch Muir, divides the parishes of och and Kilmalcom, and runs 9 miles hat of Kilbarchan, nearly parallel with and the Black Cart.

CHER MOSS, an extensive morafs of Scot- umfries-shire, 12 miles long and 3 broad. vast number of oak trees that have been 1 it, it is evident, that it has been an- great forest: and as canoes and anchors been found in it, it is supposed to have rily covered by the sea.

LOCH ERNE. See ERNE, N° 3.

LOCHES, a town of France, in the dep. of Indre and Loire, and late province of Touraine. It is defended by a strong castle, and was anciently famous, or rather infamous, for its horrid dun- geons, built by Lewis XI; in one of which Lewis Sforza, D. of Milan, after 10 years imprisonment, ended his days. It is seated on the Indre, 15 miles S. of Amboise and 20 SE. of Tours. Lon. o. 52. E. Lat. 47. 10. N.

LOCH-ETIVE, or } a navigable arm of the sea, in } Loch-ETIVE, } Argyllshire, 23 m. long, and } 1 broad; 15 miles N. of Inverary. At certain } periods the tide ebbs and flows at its mouth with } boisterous rapidity.

LOCHEUR, a town of France, in the dep. of Calvados, 9 miles SW. of Caen.

LOCH-EYNORT, the name of three bays of Scot- land; 1. on the NW. coast of Ross-shire: 2. on the E. coast, and 3. on the W. coast of the Isle of Sky.

LOCH-FAINISH, or } a lake and bay on the NW.

LOCH-FANNICH, } coast of Ross-shire, 9 miles } long.

LOCH-FRENCHY, a lake of Perthshire, 9 miles N. of Crieff.

LOCH-FYNE, or LOCHFINE. See FYNE.

LOCH-GARE, and } two bays on the W. coast

LOCH-GARRON, } of Ross-shire.

(1.) LOCH-GELLIE, a lake of Fife, 3 m. round.

(2.) LOCH-GELLIE, a village of Fife-shire, on the above lake, in Auchterderran parish, contain- ing 342 people, in 1791.

LOCH-GLASS, a navigable lake of Ross-shire, 5 miles long, 1 broad, and 6 from the sea.

LOCH-GOIL, an arm of the sea, in Argyllshire, which branches off to the NW. from Loch-Long, and intersects the S. division of LOCHGOIL-HEAD for 6 miles.

LOCHGOIL-HEAD, [from *Loch-goil*, Gael. *i. e.* an arm of the sea,] a parish of Argyllshire, seated on the head of LOCH-GOIL, and united with the parish of KILMORICH; about 30 miles long, and from 6 to 20 broad. These parishes abound in high mountains, and exhibit scenes tremendously wild and romantic, agreeably diversified with lakes, woods, rivers, rocks, hollow caverns, pas- tures, and frightful precipices. The climate is rainy and cloudy, and the transitions from heat to cold are sudden and excessive; yet the people are healthy, and some long-lived. Not above one 50th part is arable; oats, barley, hay, and pota- toes, are the only produce. Salmon, herrings, mackarel, &c. are taken in the lakes (Loch-fyne and Loch-long, &c.) and sent to Glasgow. L. 5000 were drawn for herrings alone, in 1791. Sun-fish 28 feet long have been caught, as well as sword- fish. Eagles of a prodigious size and strength fre- quent the hills. A lead mine was discovered some years ago, the ore of which contains more silver, than any in the W. of Scotland. The population, in 1791, was 1012; decrease 493, since 1755: owing to the increase of sheep-farming. The number of sheep, in 1791, was 26,500; of horses, 180; and black cattle, 2120.

LOCH-GRANARD, a bay on the N. coast of Ha.

LOCHIA, in midwifery, a flux from the uterus consequent to delivery. See MIDWIFERY.

LOCHEU

**LOCHIEL.** **LOCHINVAR,** a lake of Kirkcudbrightshire, 3 miles in circuit, which is an island, with the ruins of a castle and bridges, the ancient residence of the Gordons, knights of Lochinvar. It is 5 miles N. of Kirkcudbright.

**LOCH-KEN,** a lake of Kirkcudbrightshire, 5 miles long, connected with **LOCH-DEE**, whose waters lengthen the united stream to 10 miles. See **DEE**, N° 4, 6; and **KEN**, N° 5.

**LOCH-LAGGAN.** See **LAGGAN**, N° 2.  
 (1.) **LOCH-LEE**, a parish of Angus-shire, mostly surrounded and partly intersected by the Grampians, 12 miles long from E. to W. and 6 broad. The hills being steep and rocky, it contains little arable ground. Barley is the chief crop. The air, though cold, is salubrious. The population, in 1792, was 608; decrease 78, since 1755: the number of sheep was 9200; of goats, 130; horses, 192; and black cattle, 600.

(2.) **LOCH-LEE**, a lake in the above parish, to which it gives name, 11 miles NNW. of Brechin.  
**LOCH-LEGGAN**, a lake of Perthshire.

(1.) **LOCH-LEVEN**, a spacious and beautiful lake of Kinross-shire, about 15 miles in circumference and 4 in length, interspersed with islands of various appearance and extent. One of these, called **ST SERP'S ISLE**, contains 28 acres of good pasture. The ancient priory of Loch-Leven founded by Brudus, K. of the Picts, was seated in it: Two miles N. of it lies a small island almost covered with the ruins of a castle, anciently belonging to the Douglasses of Loch-Leven, and afterwards used as a state prison. In this castle, our unfortunate Q. Mary was kept a close prisoner, from June 16th, 1567, to May 2d, 1568. It is said to have been founded by Congal, the son of Dongart, K. of the Picts, and occasionally inhabited by K. Alexander III. Its whole circuit is 585 feet. Patrick Graham Abp. of St Andrews, and grandson of K. Robert III. died a prisoner here in 1468; and the E. of Northumberland was imprisoned in it from 1569 to the end of 1572. The island is ornamented with trees. The lake abounds with a great variety of different kinds of trouts, of a high flavour and bright red colour. Of these the silver-grey kind, with 4 or 5 spots on each side, is reckoned the original native species. The lake also abounds with eels, pikes, perches, &c. and the islands in it are frequented by herons, snipes, teals, swans, gulls, rails, kings-fishers, &c. The fishery rents at **L100**.

(2.) **LOCH-LEVEN**, a bay of Inverness-shire, 10 miles long and one broad, 9 miles S. of Fort William. It is an Eastern branch of **LOCH-LINNHE**.

**LOCH-LEYS**, a lake of Kincardineshire; 10½ miles NW. of Stonehaven.

**LOCH-LICHART**, a lake of Ross-sh. 4 miles long.

**LOCH-LINNHE**, a bay on the W. coast of Argyll-shire; 18 miles long and from 2 to 4 broad; 2½ miles NW. of Inveraray.

**LOCH-LOCHY**, a lake of Inverness-shire, between Fort Augustus and Fort William; 10 miles long and from one to 2 broad.

**LOCH-LOMOND.** See **LOMOND**, N° III.

**LOCH-LONG**, a bay on the W. coast of Argyllshire, 15 miles long and 1 broad between, Loch-Pyne and Loch-Lomond.

**LOCH-LOYAL**, a lake of Sutherlandsh.

**LOCH-LUBNAIG**, a lake of Perthshire, Gubieder parish, which often overflows.

**LOCH-LYDOCH**, and **LOCH-LYON**; } Two lakes in 1

**LOCHMABEN**, [*Geog. i. e. the lake of A*] parish of Dumfries-shire, in Annandale, long and about 3 broad. The soil is fertile, being watered by the Annan, Ae, E Kinnel, which often overflow their banks. The population, in 1792, was 3000: the increase since 1755. About 60,000 yds. of linen and swine reared to the value of **L1000**. There are 8 lakes in the parish. This was one of the scenes of the heroic actions celebrated Sir W. WALLACE.

(2.) **LOCHMABEN**, an ancient royal burgh in the above parish; governed by a provost, 12 aldermen, dean of Guild, treasurer, and 9 councillors. Its first charter granted by K. Robert I. destroyed with its records by the English, and granted by James VI. in 1612. This burgh consists of two suburbs, called *Borough roads*, containing 700 inhabitants. It has fairs in Jan. Apr. and Oct. and joins with Dumfries, Sanquhar, and Kirkcudbright, in sending a representative to the imperial parliament. It is a town surrounded with lakes, and is seated on the banks of the Annan, near its junction with the Kinnel; 8 miles NE. of Dumfries, and Annan. Lon. 3. 19. W. Lat. 55. 19. N.

(2.) **LOCHMABEN, CASTLES AND LOCH OF.** The site of a very ancient castle to the town, on a fine eminence, between *Castle* and *Kirk Lochs*, surrounded by a moat and fosse, is still visible. It was the seat of the Bruces, lords of Annandale, and place of K. Robert Bruce. The stones were used to build another castle, which stood on a peninsula in the *Castle Lochs*, and was the largest and strongest of any either on the English or Scottish borders, next to Carlisle, which it was a frontier garrison. It was destroyed by Robert I. It occupies about an acre, and contains 3 courts, strongly built of stone. The walls are 12 feet thick. It was filled with 3 deep fosses, filled with water, which met on each side. The whole enclosure contains about 13 acres. The river went through the castle, within which was a basin for the boats, to preserve them from the enemy and the weather. Before the Union, a garrison of 200 men was constantly kept in *Castle Loch*, on which it stands, is a bay on the S. side of the town, 1½ miles long and 1 broad. It has 15 or 16 different kinds of fish, among which one species, called *Carling*, is peculiar to this lake, is found elsewhere in Britain, and will not live in any other place as has been proved by repeated experiments.

**LOCH-MADDY**, a lake of Inverness-shire, 5 miles long and 1½ m. broad, and 17 NNW. of Fort Augustus.

**LOCH-MAHAFFE**, a lake of Perthshire, NNW. of Dumbane.

**LOCH-MARI**, a lake and bay of Ross-shire, 10 miles long, and 2 broad, containing several islands, ornamented with various trees. These, called *Island Mary*, or *Mary*, then

dent burying place, which is still used, a mineral well, much celebrated for its cures, and a Druidical temple.

LOCH-MERKLY, a lake of Inverness-shire.

LOCH-MERR, a lake of Perthsh. 7 miles N. of Blair in Athol.

LOCH-MIGDOL, a lake in Sutherlandshire.

LOCH-MILFORD, or MELFÖRT, a safe harbour on the coast of Argyllshire; 18 m. W. of Inverary.

LOCH MONAR, a lake of Ross-sh. 6 miles long.

(1.) LOCHMORE, a lake of Sutherland, 3 m. long and 1 mile broad. It never freezes, even in the worst season.

(2.) LOCHMORE, a large bay on the W. coast of Ross-shire; 9 miles E. of Udrigil Head.

LOCH MORROR, a lake of Inverness-sh. 10 m. long and not one broad; 16 m. NW. of Fort William.

LOCHNABER, a lake of Elginsh. 3 m. in circuit, an extensive forest, inhabited by red deer.

LOCHNELL, a lake of Argyllshire.

LOCHNELLAN, a lake of Inverness-sh. surrounded by hills, which form 3 very remarkable echoes. There is an islet in it, with a very ancient castle; the hills are entire.

LOCH-NESS, a large lake of Inverness-sh. 24 long and 2 broad, between Fort Augustus, and the Frith of Moray, into which its waters run. It never freezes, even in the most extreme cold. Sir, Pringle supposes this to be owing to its great depth, which, in some places, cannot be measured by the use of 500 fathoms; tho' in other places, he says, the common soundings are from 116 to 125, and in one place to 135". Another cause, he assigns is, that there is never any perfect calm upon the lake, and the wind, blowing always from one end to the other, makes such an undulation as must obstruct the setting of the water." This water is laxative.

Loch-NESS lies between 57° and 58° Lat. N.

LOCHNEWI, a town of Sweden, in Smaland.

LOCH-OICH, a lake of Inverness-shire, 4 miles long, and a quarter broad. It communicates with Loch-NESS, 4 miles SW. of Fort Augustus. See INVERNESS, N° 1.

LOCH-ORE, a lake of Fifeshire, 6 miles NE. of Perthshire. It is partly drained.

LOCH-ORR, or LOCH-URR, a lake of Dumfriesshire about 3 miles round. The river Orr rises from it.

LOCHOW. See AW, N° 3.

LOCH-PARTIN, a bay on the E. of N. Uist.

LOCH-QUICH, a lake of Inverness-shire, 16 m. long, of Fort William.

LOCH-RANNOCH, a lake of Perthsh. 8 m. long.

LOCHRIDA, or OCRIDA, a large town of European Turkey, in Albania; seated on a hill overlooking the lake Lochrida; 62 miles NE. of Durazzo. Lon. 20. 40. E. Lat. 41. 40. N.

LOCHRUSSEG, a bay of the Atlantic, on the W. coast of Ireland, and county of Donegal. Lon. 8. 23. W. Lat. 54. 46. N.

LOCHRUSMORE, a bay N. of Lochrusbeg.

(1.) LOCHRUTTON, a parish of Kirkcudbrightshire, 4 miles from Dumfries; 4½ miles long from N. to S. and 3 broad; containing 7000 acres. These 5,550 are arable or pasture land. The soil is chiefly light loam; The climate is cold but healthy. Oats and barley are the chief crops; and are partly exported. About 1450 acres are

under wood, waters, marshes and mosses. The population, in 1791, was 528; and decrease 36, since 1755: the number of sheep was 300; of horses, 125; and black cattle, 1040. There is a mineral spring, and a Druidical temple.

(2.) LOCH-RUTTON, [*Gael.* i. e. *the lake on the straight road.*] a lake in the above parish, to which it gives name, on the side of the great road to Ireland. It has an islet in the middle of it.

LOCHRYAN, a large lake and commodious bay, between Ayrshire and Wigtonshire, N. of Stranraer; 10 miles long from N. by W. to S. by E. and 2 miles broad at the mouth. It has several excellent anchoring bays; particularly CAIRN Bay, in which K. William III's fleet anchored in their passage to Ireland; Dalmennock, Soleburn, and Portmore Bays, &c. It abounds with haddocks, whittings, cod, lobsters, and various other fish.

LOCHS, a parish of Ross-shire, so named from the numerous *lochs* or lakes, and harbours in it, which are also called *lochs* throughout that country. Of these the chief are *Loch-Seaforth*, *Loch-Sbell*, and *Loch-Briport*. The parish is about 13 m. broad, and 27 long; but reckoning the extent of coast in all its winding directions, it will measure 135 English miles. The coast is bold and rocky, the climate moist but healthful; the surface mostly covered with heath; but as "there is no soil, but what the indefatigable industry of the inhabitants has forced into some cultivation, near the sea, very little corn is raised." Fishing of cod and ling, and pasturing cattle, are therefore the chief employments. About 50 tons of kelp are also made annually. The population, in 1795, was 1768; increase in 40 years, 501: the number of sheep was 4,000; horses 348; and black cattle 2,488, besides calves. The spinning of flax has been introduced by Mrs M'Kenzie of Seaforth, and promoted by premiums.

LOCH-SEAFORTH, a bay on the SE. coast of Lewis; 10 miles long, and 18 SW. of Stornoway.

LOCH-SHIELL, a bay between Argyll and Inverness-shires, 16 miles long and one broad.

LOCH-SHIN, a lake of Sutherlandshire, 20 m. long, and 2 broad; 13 miles W. of Dornoch.

LOCH-SKEEN, a lake of Dumfriesshire.

LOCH-SKENE, a lake of Aberdeenshire.

LOCH-SKIACH, a lake of Perthshire, in Strathbran, which produces excellent trouts weighing 10 or 12 lb.; 6 miles NW. of Dunkeld.

LOCH-SPEY. See INVERNESS, N° 1.

LOCHSTETT, a town of Prussia, in Smaland.

LOCHTA, a town of Sweden, with a good harbour on the Gulf of Bothnia; 90 miles S. of Tornia. Lon. 24. 16. E. Lat. 64. 20. N.

LOCH TAY, a beautiful and extensive lake of Perthshire, in Breadalbane, 15 miles long and one broad; the source of the river Tay. See TAY.

It abounds with salmon, trouts, char, pikes, perch, &c.

LOCHTURRET, a lake of Perthshire, in Glenturret.

LOCHTY, a small river in Fifeshire.

LOCHVITZE, a town of Russia, in Tschernigov, on the Sufa.

LOCHVOIL, a lake of Perthshire, 17 miles W. of Crieff, connected by the river Balvag with Loch-

DOINE and LOCH-LUBNAIG, and forming one of the sources of the Teith. In time of floods, these 3 lakes overflow the intermediate grounds, and form one continued sheet of water 22 miles long.

LOCH-URR. See LOCH-ORR.

(1.) LOCHWINNOCH, a parish of Renfrewshire, about 6 miles square; comprehending 5,476 acres of arable land; of which 1494 are annually in tillage. It is all enclosed with stone walls, hedges, or fences. The climate is moist; the soil various but fertile; the chief crops are oats, potatoes and flax. The population, in 1695, was only 290: in 1791, 2613; increase since 1755, 1083. The number of horses was 410; sheep 2,886; swine 42; and black cattle, 2,145. Coal, lime, and freestone abound. There is a very singular MAGNETIC ROCK two miles from Castle-Semple, which affects the compass very sensibly at 150 yards distant; but when brought near, the needle invariably points to one small space in the rock. Margaret Watton, who lived to the age of 118, was born in this parish. Seven large cotton mills were erected in it; within these 22 years.

(2.) LOCH-WINNOCH, a large lake in the centre of the above parish, so named from *St Winnoch*.

(3.) LOCHWINNOCH, a village in the above parish, which contained 1114 inhabitants in 1795, viz. exactly 357 of each sex.

(1.) LOCHY, a river of Inverness-shire, which rises from LOCH-LOCHY, joins the SPIAN, and after running 10 miles through Lochaber and the parish of Kilmanivaig, and receiving the waters of several rapid rivers, falls into the Atlantic near Fort William, with such force and rapidity, that it preserves its stream entire for a long way without mixture or taste of salt water.

(2.) LOCHY, or LOCHAY, a river of Perthshire, which rises in Breadalbane, runs 10 miles through the valley of Glendochart, and after joining the Dochart falls into LOCH-TAY.

(1.) \* LOCK, *n. s.* [*loc*, Saxon, in both senses.]

1. An instrument composed of springs and bolts, used to fasten doors or chests.—

No gate so strong, no lock so firm and fast,  
But with that piercing noise flew open quite or  
braff. *F. Queen.*

We have locks, to safeguard necessaries,  
And pretty traps to catch the petty thieves.

*Shak.*

—As there are locks for several purposes, so are there several inventions in locks in contriving their wards or guards. *Moxon.* 2. The part of the gun by which fire is struck.—A gun carries powder and bullets for seven charges and discharges: under the breech of the barrel is one box for the powder; a little before the lock, another for the bullets; behind the cock a charger, which carries the powder to the further end of the lock. *Greav.* 3. A hug; a grapple.—They must be practised in all the locks and grips of wrestling. *Milton.* 4. Any inclosure.—

Sergeantus, eager with his beak to peck  
Betwixt the rival gally and the rock,

Sluts up th' unwieldy centour in the lock. *Dryd.*

5. A quantity of hair or wool hanging together.—Well might he perceive the hanging of her hair in locks some curled, and some forgotten. *Sidney.* — A goodly cypress, who bowing her fair head o-

ver the water, it seemeth the lock into dressed her green locks by that running *Sidney.*—

His grizly locks long grown and unbr  
Disordered hung about his shoulders to

—The bottom was set against a lock of w  
the found was quite deaded. *Bacon.*—Th  
rish only a lock of hair on the crown of thei  
*Sandys.*—A lock of hair will draw more  
cable rope. *Greav.*—

Behold the locks that are grown whit  
Beneath a helmet in your father's battles

Two locks that graceful hang be  
In equal curls.

6. A tuft.—I suppose this letter will find t  
ing of daisies, or smelling to a lock of hay.

(2.) THE LOCK (§ 1. *def.* 1.) is reckon  
master-piece in smithery; a great deal of  
ingenuity being required in contriving an  
ing the wards, springs, bolts, &c. and a  
them to the places where they are to b  
and to the various occasions of using them.  
the various structure of locks, accommod  
their different intentions, they acquire  
names. Those placed on outer doors ar  
*stock locks*; those on chamber doors, *spring*  
those on trunks, *trunk locks*, *pad locks*, &  
these the spring lock is the most considerab  
for its frequency and the curiosity of its st  
Its principal parts are, the main-plate, the  
plate, and the pin-hole: To the main-plate  
the key-hole, top-hook, cross-wards, bol  
bolt-knab, drawback-spring tumbler, pin  
tumbler, and the staples; to the cover-plat  
the pin, main-ward, cross-ward, step-ward  
ward; to the pin-hole belong the hoo  
main cross-ward, shank, the pot or brea  
ward, and bit. As on the proper constru  
locks the security of the most valuable p  
property almost entirely depends, and s  
berless devices are continually fallen upon  
the utmost efforts of mechanical inventio  
respect, it is an object of so small importan  
vent a lock which it should be *impossible*  
except by its proper key. A treatise up  
subject has been published by Mr Joseph L  
who is confident that he has brought the  
to the requisite perfection, and that ev  
may rest assured of the security of his p  
when under the protection of a lock of hi  
tion. He begins with observing, that th  
ciple on which all locks depend, is the c  
tion of a lever to an interior bolt, by me  
communication from without; so that,  
latter, the lever acts upon the bolt, and r  
in such a manner as to secure the lid or do  
being opened by any pull or push from v  
The security of locks in general therefore c  
on the number of impediments we can i  
betwixt the lever (the key) and the bolt w  
cures the door; and these impediments a  
known by the name of *cardis*, the num  
intiacacy of which alone are supposed to  
guish a good lock from a bad one. If thes  
however, do not in an effectual manner p  
the access of all other instruments besides  
per key, it is still possible for a mechan

with the lock-maker to open it without the aid thus to elude the art of the author. (says Mr Bramah) have been constructed, & at present much used and held in great repute, from which the picklock is excluded: but the omission of false keys is an imperfection for no lock-smith has ever found a corrective; and this imperfection be remedied whilst the motion of the bolt is wholly confined to *fixed* wards. This position is proved by a remark, the wards, let them be as intricate as we must all be expressed on what is called the *web* of the key: and therefore, when all varieties that can be expressed on this bit or have been run through, every succeeding will be the counterpart of some other; and eventually the same key which opens one will be other also. This is evident from the usually put upon drawers; and which, if they should be made to resist the picklock still liable to be opened by ten thousand keys, besides that appropriated to each of them. But though the variety of wards could be extended to infinity, still there could be no defence against false keys; for as every one of them must be expressed on the web of the key, every key with a web quite plain be made to key-hole exactly, we have only to cover it with some colouring substance upon which the wards may make an impression; after which, the key to cut out the web in a proper manner, by fitting them, when the lock will be as easy to open by the false as by the true key. The person, according to our author, who had any merit in lock-making, is Mr Baron; whose merit he acknowledges to be by far more perfect than any that ever appeared before; and he still considers it as unfit for giving that security which is to be wished for. His merit consisted in the proper application of the tumblers. "These (says Mr Baron) are a kind of grapple; by which the bolt is held, as well in its active as in its passive state, and rendered immovable till set at liberty by the key. One of these instruments is commonly introduced into all locks that are of any value; it is lodged behind the bolt, and is held by a spring which acts upon the tumbler. The tumbler acts upon the bolt: the application of any force to the tumbler, which is sufficient to overcome the force of the spring, will cause it to hold, and set the bolt at liberty." In the method of applying these machines, however, matters nothing how far the tumbler is above the point at which it ceases to control; but it is otherwise in those of Mr Baron's locks. The action of his tumblers is circumscribed by a certain space cut in the centre of the bolt, of dimensions sufficient only to answer the purpose intended. The space in which the tumbler moves is an oblong square; and is not furnished with niches on the under side into which the hooks of the tumblers are forced by the key as in other locks, but is provided with independent niches on the other side, into which the hooks are driven, if any greater force be applied to the tumblers than what is just sufficient to disengage them from the bolt. Hence

it becomes absolutely necessary, in the making of a false key, to construct it in such a manner, that it may with the greatest exactness give the requisite degree of pressure, and no more. Mr Bramah allows that this is a very great improvement, but objects that it is still possible to frame a key which will open it as well as its own; nor will the addition of any number of tumblers preclude the possibility of opening it. "By giving (says he) an uniform motion to the tumblers, and presenting them with a face which exactly tallies with the key, they still partake, in a very great degree, of the nature of *fixed wards*; and the security of his lock is thereby rendered in a proportionable degree defective. Thus, suppose the false key to have passed the wards, and to be in contact with the most prominent of the tumblers, the impression, which the slightest touch will leave on the key, will direct the application of the file till sufficient space is prepared to give it a free passage. The key will then bear upon a more remote tumbler; which difficulty being in like manner got over, the lock will be as easily opened by the false as by the true key." This seemingly insuperable objection to the perfection of lock-making, however, our author removes with the greatest ease, by causing the tumblers which project unequally to present a *plane* surface: whence they would require a separate and unequal motion to disengage them; of consequence no distinct impression could be made by them upon the plane surface of the web that would give any idea of their positions with regard to one another, and the construction of a false key would be altogether impossible. But though the principal difficulty with regard to Mr Baron's lock be thus overcome, others still occur, *v. z.* the difficulty of making locks which are constructed with tumblers sufficiently durable. The tumblers themselves, he observes, must be but slightly made; and being exposed to perpetual friction by the key and their own proper motion, they must soon decay; and the keys of Mr Baron's locks, he also observes, are much less durable than those of any other locks he ever saw. With regard to the lock which Mr Bramah reckons absolutely perfect, he informs us, that the idea of constructing it was first suggested by the alarming increase of house robberies, which may reasonably be supposed to be perpetrated in a great measure by perfidious servants, or accomplished by their connivance; the locks, which might exclude ordinary house-breakers, being no security against faithless servants, who having constant access to the locks, might easily get false keys fabricated. In considering the subject, he was convinced, that his hope of success depended entirely upon his using means as dissimilar as possible to those by which the old locks were constructed. "As nothing (says he) can be more opposite in principle to *fixed wards* than a lock which derives its properties from the *motion* of all its parts, I determined that the construction of such a lock should be the subject of my experiment." In the prosecution of this experiment he had the satisfaction to find, that the least perfect of all his models fully ascertained the truth and certainty of his principle. The exclusion of wards made it necessary to cut off all communication between the

key and the bolt; as the same passage, which (in a lock *simply* constructed) would admit the key, might give admission likewise to other instruments. The office, therefore, which in other locks is performed by the extreme point of the key, is here assigned to a lever, which cannot approach the bolt till every part of the lock has undergone a change of position. The necessity of this change for the purposes of the lock, and the absolute impossibility of effecting it otherwise than with the proper key, are the points to be ascertained: and this Mr Bramah does in the following manner: *Fig. 1. plate CCII.* shows his first attempt to construct a lock upon this principle: which, to his surprise, turned out complete and perfect. *A* represents a common axis on which the six levers, crossing the face of the lock, are united as on a joint. Each of these rests upon a separate spring sufficiently strong to bear its weight; or, if depressed by a superior force, to restore it to its proper position when that force is removed. *B* represents a frame through which the levers pass by separate grooves, exactly fitted to their width, but of sufficient depth to allow them a free motion in a perpendicular direction. The part which projects from the opposite side of the joint *A*, and is inserted in the bolt *C*, is a lever to which two offices are assigned: one to keep the bolt in a fixed position, in the absence of the key; the other, to give it its proper motion upon the application of the key. *D* is a circular platform turning upon a centre. On this the joint or carriage of the levers, and the springs on which they rest, are fixed; and the motion of this platform impels the bolt, in either direction, by means of the lever which is projected from the joint *A*. The inviolable restraint upon this lock, by which means it is subjected only to the action of the key, is lodged in the part *E*, which is a thin plate, bearing at each extremity on a block, and having of course a vacant space beneath, equal in height to the thickness of the blocks on which it rests. By this plate the motion of the machine is checked in the following manner: On the edge of the plate which faces the movement there are six notches, which receive the ends of the levers projecting beyond the frame *B*; and while they are confined in this manner, the motion of the machine is so totally suspended as to defy every power of art to overcome. To understand how the proper key of this lock overcomes these obstacles, it must be observed, that each lever has a notch on its extremity, and that those notches are disposed as irregularly as possible. To give the machine a capacity of motion, these notches must be brought parallel to each other, and by a distinct but unequal pressure upon the levers, be formed into a groove in a direct line with the edge of the plate *E*, which the notches are exactly fitted to receive. The least motion of the machine, while the levers are in this position, will introduce the edge of the plate into the groove; which, controuling the power of the springs, will give liberty to the levers to move in an horizontal direction as far as the space between the blocks which support the plate *E* will admit, and which is sufficient to give the machine a power of acting on the bolt. The impossibility of thus bringing

the notches on the points of the levers into a direct line, so as to tally with the edge of the plate *E* by any other means than the motion and impulse of the key, is that which constitutes the principal excellency of this lock. The key exhibits six different surfaces, against which the levers are progressively admitted in the order of opening the lock: the irregularity of the faces shows the unequal and distinct degrees of pressure which each lever requires to bring it to their proper bearings, in order to put the machine in motion. Hence it appears, that the various heights of the surfaces express the bit of the key are exactly proportioned to the several distances necessary to bring the notches into a straight line with each other, they must be immovable; and (says our author) as one stroke of a file is sufficient to cause such a displacement as will prove an unsurmountable impediment to their motion, I may safely assert, that it is not possible to produce a key or other instrument, by which a lock, constructed upon this principle, can be opened." On this principle it would be a matter of great difficulty for any workman, however skilful, to construct a key for the lock open to his inspection: "for the levers being held, by the subjacent springs, to an equal distance in the frame *E*, present a *plane* surface; and frequently convey no direction that can be used in forming a tally to the *irregular* surfaces they present when acting in subjection to the bolt. Unless therefore we can contrive a method of bringing the notches on the points of the levers into a direct line with each other, and to retain them in that position till an exact impression of the particular surface, which the levers will then exhibit, has been taken; the workman will be unable to open the lock or to move the bolt. This must be rendered extremely troublesome and difficult, if the springs; and if such difficulties occur when the lock is open to the inspection of the workman, much more must we suppose them to be, when the power of one who has not access to the internal parts to make a false key to a lock of this kind. These difficulties render it unnecessary to say, that making locks of this kind not to fit the key, as is usual in other locks, but to fit the key to the lock. In this kind of lock, the key must be made first: and the inequality of the surface of the bit worked as chance may direct, without any reference to the key. The key being thus completed, and the surface of the levers, will, by a gentle force, force them to unequal distances from the common station in the frame *B*, and sink them to unequal depths into the space beneath the plate *E*. While the levers are in this position, the edge of the plate *E* will mark the precise point of the notch on each lever must be expressed by the notches being cut by this direction, the inequality which appears when the levers resume their position in the frame *B*, and the unequal recesses on the bit of the key will appear, and its corresponding impression. This is a lock contrived upon the same principle, and is more curious; and, in our author's opinion, more extensively useful. *Fig. 3.* repre-

Loxia Cærulea

block of metal divided from the centre into apartments, each containing a cell which a passage through the block, as is represented the small circles described on the flat surface. In each of these cells two grooves are cut oblique points, which open a communication to the centre at one point, and with the spherical face of the block or barrel at the other. The small circle, which marks the centre of the surface A, is the key-hole, which likewise a passage through the barrel in a parallel line to the cells which surround it. This figure represents the frame in which the active parts of the lock are deposited. *Fig. 4.* shows a spiral spring in the bottom of each cell, and occupying half of the space, the other being filled with a slider resting upon the spring, and represented in *Fig. 5.* the office of these sliders exactly corresponding with that of the levers in the lock already described. Thus, when lodged in their respective cells, they are sustained, like the levers, by the elasticity of the springs upon which they rest, and superior power be applied; and they are restored to their stations by the reaction of the springs when the weight is removed. The slider of each slider is projected beyond the circular surface, as represented *Fig. 6.* in a manner similar to the projection of the levers in the former lock. Point C is projected through the interior of the barrel into the space which forms the centre of the barrel, expressed on the flat surface A. *Fig. 7.* shows the key. When this is applied, it must necessarily encounter these interior projections; and pressed forward, the indented spaces on its surface, being unequal, will force the sliders to unobscure the spaces from their bearers; bringing the sliders expressed on their exterior projections in a straight line with each other, in a manner similar to that by which the effect is produced upon the sliders in the former lock. When the key is withdrawn, and the sliders resume their stations by the elasticity of the springs, the disposition of the notches will be irregular in the same proportion that the indentations on the point of the key are unequal, and they must necessarily fall again into a straight line when acted upon by the key. *Fig. 6.* shows the barrel completely fitted for action. Its end is capped with a plate, which unites the apartments, and confines the springs and sliders within the cells to which they belong. The cap plate proceeds the point A, which represents the lever by which the bolt is projected and drawn, according to the direction in which the key performs its revolution. *Fig. 8.* shows the surface of a thin plate, corresponding in its position with the part C of the former lock. The plate in its centre is exactly fitted to the spherical surface of the barrel; the circle describing its circumference, and the notches cut on its edge, corresponding with the projections of the sliders. The barrel when encircled with this plate at the middle of its spherical surface, has its motion totally arrested till the notches on the projections of the sliders are forced, by the pressure of the key, to coincide with each other: a groove being thus formed on the spherical surface of the barrel pa-

ralled to, and coinciding with, the edge of the cap plate, the machine is at liberty to perform a revolution in any direction, but returns to its confined state when the key is withdrawn. The parts of the movement being thus united, the interior end of the barrel is deposited in a bed represented *Fig. 9.* To this it is fastened at the angles of the plate represented at *Fig. 8.* by which the barrel is encircled. The station of the bolt is at A; the lever which acts upon it being projected on the other side. *Fig. 10.* is a cap or mask, which covers the face of the movement, and completes the lock.—On this lock our author observes, that it is excellent for street doors: “for no method of robbery (says he) is more practised, than gaining admittance into houses by those keys, which, as is well known, may be procured at the old iron shops to fit almost any lock in use. Such robberies are generally committed where the servants are allowed to take the key with them when sent on errands, it being impracticable while the key is fixed in the lock. The variations by which the production of correspondent keys is avoided, have two sources: the one arising from the changes that may be made in the disposition of the levers; the other from the number of points contained on the projected surface of each lever; by which the position of its notch may, in the smallest degree be varied. “The variations, produceable in the dispositions of six figures only, are 720: these, being progressively multiplied by additional figures, will increase by astonishing degrees; and eventually show, that a lock containing 12 levers will admit of 479,001,500 changes; which, with the addition of another lever, will increase to 6,229,019,500. These being again multiplied by the number of changes which the projected surface of the levers will admit in the disposition of the notches, their amount will exceed numeration, and may therefore be properly said to be infinite. (See CHANGES, § 2.) The slightest inspection will at once show, that their construction precludes all possibility of obtaining an impression of their internal parts, which is necessary for the fabrication of a false key; for it will be easily seen, that the positions into which the levers are forced by the pressure of the key in opening the lock, can no more be ascertained when the key is withdrawn, than the seal can be copied from its impression on a fluid or the course of a ship be discovered by tracing it on the surface of the waves. But inviolable security is not the only excellence they possess: the simplicity of their principle gives them likewise a great advantage over locks that are more complicated, in point of duration; for their essential parts being subject to no friction, nor exposed to any possible accident from without, they will be less affected by use, and less liable to stand in need of repair.”

(3.) **LOCK, or WEIR,** in inland navigation, the general name for all those works of wood or stone, made to confine and raise the water of a river: the banks also which are made to divert the course of a river, are called by these names in some places. But the term *lock* is more particularly appropriated to express a kind of canal inclosed between two gates; the upper called by workmen the *fluce*

fluid-gate, and the lower called the flood-gate. These serve in artificial navigations to confine the water, and render the passage of boats easy in passing up and down the stream. See CANAL.

(1.) \* To LOCK. *v. a.* [from the noun.] 1. To shut or fasten with locks.—

The garden, seated on the level floor,  
She left behind, and *locking* ev'ry door,  
Thought all secure. *Dryden.*

2. To shut up or confine, as with locks.—  
I am *lockt* in one of them;  
If you do love, you will find me out. *Shak.*

We do *lock*  
Our former sample in our strong barr'd gates. *Shak.*

Then seek to know those things which make us best,  
And having found them, *lock* them in thy breast. *Denham.*

The frighted dame  
The log in secret *lock'd*. *Dryden.*

—If the door to a council be kept by armed men, and all such whose opinions are not liked kept out, the freedom of those within is infringed, and all their acts are as void as if they were *locked in*. *Dryden.*—One conduces to the poet's completing of his work; the other slackens his pace, and *locks* him up like a knight-errant in an enchanted castle. *Dryden.*—

The father of the gods  
Confin'd their fury to those dark abodes,  
And *lock'd* 'em safe within. *Dryden.*

—If one third of the money in trade were *locked up*, must not the landholders receive one third less? *Locke.*—Always *lock* up a cat in a closet where you keep your china plates, fear the mice may steal in and break them. *Swift.*—

Your wine *lock'd* up,  
Plain milk will do the feat. *Pope.*

3. To close fast.—  
Death blasts his bloom, and *locks* his frozen eyes. *Gay.*

(2.) \* To LOCK. *v. n.* 1. To become fast by a lock.—

For not of wood, nor of enduring brass,  
Doubly parted it did *lock* and close,  
That when it *locked*, none might through it pass. *Fairy Queen.*

2. To unite by mutual insertion.—Either they *lock* into each other, or slip one upon another's surface; as much of their surfaces touches as makes them cohere. *Boyle.*

(1.) LOCKE, John, F.R.S. a most eminent English philosopher and writer, in the end of the 17th century, was son of Mr John Locke of Wrington near Bristol, in Somersetshire, and born at Wrington near Bristol, in 1632. He was sent to Christ-church in Oxford; but was dissatisfied with the course of studies then pursued in the university, where nothing was taught but the Aristotelian philosophy; and he had a great aversion to the disputes of the schools then in use. The works of Des Cartes first gave him a relish for philosophy, though he did not always approve of his notions. He applied himself with vigour to his studies, particularly to physics, in which he gained a considerable knowledge, though he never practised it. In 1664, he went to Germany as secretary to Sir Wil-

liam Swab, envoy from the English court elector of Brandenburg, and some other man princes. In 1695, he returned to England where he applied himself to natural philosophy as appears from a register of the changes of air, which he kept at Oxford, from June 24, to March 28, 1667. There he became acquainted with lord Ashley, who introduced him to the most eminent persons of that age. In 1670 he began to form the plan of his *Essay on the Understanding*. About this time he became acquainted with lord Ashley, now earl of Shaftesbury, and lord chancellor of England pointed him secretary of the presentation trade, worth 500*l.* a year; but that company was dissolved in 1674. The earl of Shaftesbury being sent prisoner to the tower, after his charge retired to Holland in 1682. Mr. Locke followed his patron thither. He had not been absent from England a year, when he was again at court of having written certain tracts for the government, which were afterward said to have been written by another; and in 1684, he was deprived of his place of steward of Christ-church. In 1685, the English envoy at Hague demanded him and 83 other persons delivered up by the States General; upon which he lay concealed till 1686; and during this time he formed a weekly assembly with Messrs. Lim Le Clerc, and other learned men at Amst. In 1689 he returned to England in the fleet brought over the princess of Orange. He esteemed a sufferer for revolution principles obtained the post of commissioner of a public character, as envoy at the court of emperor, the elector of Brandenburg, or any where he thought the air most suitable to him; but he waved all these, on account of the state of his health; which led him to purchase an apartment in their country seat at Oates, 25 miles from London. This place was perfectly agreeable to him in every respect; air restored him almost to a miracle, in a few hours after his return at any time from the country quite spent and unable to support himself; he found in lady Masham a friend and company exactly to his heart's wish; a lady of a conversative and studious turn, inured, from her inclination to deep speculations in theology, metaphysics and morality. In this family Mr Locke lived as much ease as if the whole house had been his own; and he had the additional satisfaction of seeing this lady breed up her only son upon the plan which he had laid down the best method of education; the success of which was such as seemed to give a sanction to his sentiment in the choice of that method. It was from the advantage of this situation, that he derived so much strength as to be able to execute his great talents to the last, writing the *Essay on the Understanding*, and on the ill state of the silver coin, and proposing remedies for it. In 1695 he was made a commissioner of trade and customs in 1695, which engaged him in the public business of the state. With regard

published a treatise the same year, to scheme which K. William had much a comprehension with the dissenters. ver, drew him into a controversy; scarcely ended, when he entered into defence of his essay, which held till after which, the asthma increasing years, he became so infirm, that, in signed his seat at the board of trade, l no longer bear the air of London or a regular attendance upon it. After inued constantly at Oates, where he e remaining years of his life entirely of the holy scriptures. He died in 73. Whoever is acquainted with the late of the philosophy of the human Mr Locke paved the way to a clear knowledge, and the proper methods of advancing it, will be surpris'd at this abilities; and discover how much we l to him for the improvements that ade since. His *Discourses on Govern-* *ment on Toleration* and his *Commentaries Paul's Epistles*, are justly held in the m.

E, a military township of New York, o county, 13 m. NE. of Cayuga lake.

JAW. See MEDICINE, *Index*.

ITZ, a town of Upper Saxony, in g; 16 miles NE. of Prenzlau.

CER, John, Esq. F. S. A. a learned Eng- remarkable for his skill in the modern was born in 1693; studied at Oxford, t Gray's Inn, and was called to the arried a daughter of Dr Stillingfleet e translated Voltaire's life of Charles ote the preface. He also made great e respecting Lord Bacon, which he con- o Dr Birch and Mr Mallet. He died 60.

GER. *n. f.* [from *lock*.] Any thing that h a lock; a drawer.—I made *lockers* at the end of the boat. *Robinson Crusoe*.

BIE, a thriving post town of Dum- originally seated between two lakes, l. It consists of a long street, joining and contained about 700 inhabitants in is 2 fairs, and 10 markets annually. o lambs, and 50 yds. of linen and old annually, chiefly to England.

ET. *n. f.* [*loquet*, French.] A small lock; r spring to fasten a necklace, or other

knights are kept in narrow lists, oden *lockets* 'bout their wrists. *Hudibr.* ART, a town of N. Carolina, 38 miles ifax.

ARTSBURG, a town of Pennsylvania.

KMAN, *n. f.* an officer in the Isle of executes the orders of government, ur sheriff depute.

MAN. See LOKMAN.

TZ, a river of Saxony, running into miles above Meissen.

AM. *n. f.* A sort of coarse linen. *Hamm.*

The kitchen malkin pins t *lockram* about her recky neck, ; the walls to eye him. *Shak.*

\* LOCKRON. *n. f.* A kind of ranunculus.

LOCLE, a small town of the Helvetic republic, in a district of the same name, adjacent to Neuchatel and Valengin, and united with another named *La Glauce de Fond*. Both these districts occupy some valleys formed by the mountains of Jura; the greatest part of which was some years ago one continued forest, but is now converted into fine pasture ground filled with flourishing villages. The population before the late war, was greatly increased, owing to the early marriages of the inhabitants; to the liberty allowed to every stranger, who brings a certificate of his good behaviour, to settle in the district: to follow any trade without restriction, and without an apprenticeship; to the want of taxes, and an unbounded freedom of commerce. The inhabitants were remarkable for industry and genius, and carried on an extensive commerce in lace, stockings, cutlery, and other merchandise of their own manufacture; particularly excelling in watch and clock making. They made all the utensils necessary in these arts, and invented several new ones; by which means that business was carried on to so great an extent, that 40,000 watches were computed to be annually made. They also invented several astronomical and mathematical instruments. One of the most eminent in this way was Jaquet Droz, whose son exhibited several surprising automatical figures in England. One of these played upon a harpsichord; another drew landscapes; and a third copied any word presented to it, or wrote down whatever was dictated. The inhabitants of these districts are very courteous to strangers; are in general well informed, and have circulating libraries in many of their villages. Their houses are plastered, white washed, well built, and furnished with a degree of elegance peculiarly striking in these sequestered mountains. "Such perfect ease and plenty (says Mr Coxe) reigns throughout these mountains, that I scarcely saw one object of poverty: the natural effects of industry under a mild and equitable government." We fear these districts now exhibit a melancholy reverse of this pleasing picture, in consequence of the devastations committed during the late war.

LOCMARIAQUER, a town of France, in the dep. of Morbihan, 6 miles S. of Auray.

LOCMINE, a town of France in the dep. of Morbihan, 11 miles S. of Pontivy.

\* LOCOMOTION. *n. f.* [*locus* and *motus*, Lat.] Power of changing place.—All progression, or animal *locomotion*, is performed by drawing on, or impelling forward, some part which was before at quiet. *Brown's V. Errors.*

\* LOCOMOTIVE. *adj.* [*locus* and *moveo*, Lat.] Changing place; having the power of removing or changing place.—I shall consider the motion, or *locomotive* faculty of animals. *Derham's Physico-Theology.*—

In the night too oft he kicks,

Or shows his *locomotive* tricks. *Prior.*

—An animal cannot well be defined from any particular, organical part, nor from its *locomotive* faculty, for some adhere to rocks. *Arbutnot.*

LOCRENAN, a town of France, in the dep. of Finisterre, 8 miles NW. of Quimper.

(1.) LOCRI, or LOCRI EPIZEPHYRII, in ancient

cient geography, a town of the Bruttii, on the Ionian sea: a colony of the Locri Ozolæ; (*Strabo.*) rather of the Epicnemidii, according to Virgil, who calls it *Naryxii Locri*, from Naryx a town of the Locri Epicnemidii. The epithet *Epizephyrii* is from its situation near the promontory Zephyrium. (*Strabo.*) See LOCRI, N° 1.

(2.) LOCRI, or LOCRENSES, the people of LOCRI. They are said to have been the first who used a code of written laws, compiled by ZALEUCUS from the laws of the Cretans, Lacedæmonians, and the Areopagitæ, adding an express penalty to each law, which was before discretionary, at the option of the judge. (*Strabo.*) Adultery was punished with the loss of both eyes. Zaleucus's own son being convicted of this crime, in order to maintain the authority of the law, and at the same time to pay some regard to the intercession of the people in favour of his son, Zaleucus suffered the loss of one eye, his son losing another. (*Ælian, Val. Maximus.*) See LOCRI, N° 2.

LOCRIDA. See LOCHRIDA.

(I.) LOCRI, the district or territory of the Locri, in Bruttii in Italy. See LOCRI, N° 1.

(II.) LOCRI; a country of Achaia, in Greece; twofold, and divided by mount Parnassus: into

1. LOCRI CITERIOR, occupied by the *Locri Ozolæ*, or *Zephyrii*, i. e. Western Locri, contained between Ætolia and Phocis, beginning at Naupaetum, and running in a narrow slip of land, scarce 200 stadia, along the sea to the borders of the Phocænes.

2. LOCRI ULTERIOR lay beyond Parnassus, running out towards Thermopylæ, and reaching to the Euripus of Eubœa; occupied by the *Locri Opuntii*, who dwelt on the Eubœan sea; and the *Locri Epicnemidii*, who occupied mount Cnemis; (*Strabo.*) and these two were the Eastern Locri.

LOCULAMENTA, and LOCULI, in botany; cells or pockets: The internal divisions of a capsule, or other dry seed-vessel. These cells contain the seeds; and differ in number in different plants.

LOCULUS is also sometimes used to express the minute divisions in some species of *anthers*, which contain the fine impalpable powder, supposed by the sexualists to be the principal agent in the generation of plants.

LOCUS GEOMETRICUS, a line by which a local or indeterminate problem is solved. Thus if a right line suffice for the construction of the equation, it is called *locus ad rectum*; if a circle, *locus ad circulum*; if a parabola, *locus ad parabolam*; if an ellipsis, *locus ad ellipsin*: and so of the rest of the conic sections.

(1.) \* LOCUST. *n. f.* [*locusta*, Lat.] A devouring insect.—The Hebrews had several sorts of *locusts*, which are not known among us: the old historians and modern travellers remark, that *locusts* are very numerous in Africa, and many places of Asia; that sometimes they fall like a cloud upon the country, and eat up every thing they meet with. Moses describes four sorts of *locusts*. Since there was a prohibition against using *locusts*, it is not to be questioned but that these creatures were commonly eaten in Palestine, and the neighbouring countries. *Galm-t.*—To-morrow will I bring the *locusts* into thy coast. *Exod.*—Air replete with the steams of animals rotting, has produced

pestilential fevers; such have likewise been produced by great quantities of dead *locusts*. *Art.*

(2.) LOCUST, in zoology. See GRYL.

(3.) LOCUST, in botany. See CERA.

(4.) LOCUST, AMERICAN, or FROG LOCUST. See CICADA.

(5.) LOCUST, BASTARD. See HYM.

LOCUST-EATERS. See ACRIDOPHA.

(1.) \* LOCUST-TREE. *n. f.* The *locust* a papilionaceous flower, from whose calyx the pointal, which afterwards becomes a singular hard pod, including roundish seeds, which are surrounded with a fungous substance. *Miller.*

(2-4.) LOCUST TREE. See GLEDITSIA, and ROBINIA.

LOCUTIUS. See AIUS.

LOCUTORIUM. The monks and laymen in monasteries, after they had dined in a common hall, had a withdrawing-room, where they met and talked together among themselves, which room, from that sociable use and conversation, they called *locutorium*, from *loquere*; as we call such a place in our houses the French *parler*; and they had another room, which was called *locutorium*, where they might talk with laymen.

LODAN, a river of Herefordshire, which runs into the Frome, 5 miles N. of Hereford.

(1.) LODDON, a town of Norfolk, 113 N. of Ipswich, and 113 NNE. of London. 18. E. Lat. 52. 36. N.

(2.) LODDON, a river in Berkshire, which runs into the Thames, 5 miles below Reading.

(1.) LODÉ, a town of Sardinia, 54 miles S. of Sassari, and 80 N. of Cagliari.

(2.) LODÉ, in mining. See LOAD.

LODER, a town of Germany, in Saxony.

LODESAN, a ci-devant territory of France, bounded on the W. and N. by the Milan, E. by Crema and the Cremona, S. by Placentia and Pavia; famous for its wine, which about 70,000 l. worth is exported annually. The capital is LODI. It is now included in the Italian republic and dep. of Olona.

\* LODESTAR. See LOADSTAR.

\* LODESTONE. See LOADSTONE.

LODEVE, a town of France, in the department of Hérault, containing about 4,200 citizens, 10 N. of Beziers, and 8 W. of Montpellier. 30. E. Lat. 42. 47. N.

LODEWITZ, a river of Upper Saxony.

(1.) LODGE, Thomas, M. D. an English physician and poet of the 17th century.

He was educated at Oxford, but graduated at He settled in London, and obtained great favour among the Roman Catholics, as he was in communion. He wrote two plays; *the* *of Civil War*, a tragedy; and, *A Letter for London*, a tragic-comedy: and assisted in some others. He died in 1625.

(2.) \* LODGE. *n. f.* [*logis*, French.]

A house in a park or forest.—He broke up his house and retired himself, with his wife and children, to a certain forest, which he called *the lodge*, wherein he hath built two fine lodges. He found him as melancholy as a *lodge* in a *Swiss*.—

He and his lady both are at the lodge. *Shak.*  
Thus at their shady lodge arriv'd, both stood.

*Milton.*

—Whenever I am turned out, my lodge descends upon a low-spirited family. *Swift.* 2. Any small house appendant to a greater; as, the porter's lodge.

(1.) \* *To LODGE.* *v. a.* [*logian*, Saxon; *loger*, French.] 1. To place in a temporary habitation.—When he was come to the court of France, the king filled him by the name of the duke of York; lodged him, and accommodated him, in great state. *Bacon.* 2. To afford a temporary dwelling; to supply with harbour for a night.—

Ev'ry house was proud to lodge a knight.

*Dryden.*

To place; to plant.—

When on the brink the foaming boar I met,  
And in his side thought to have lodg'd my spear,  
The desp'rate savage rush'd within my force,  
And bore me headlong with him down the rock.

*Orway.*

He lodg'd an arrow in a tender breast,  
That had so often to his own been prest. *Addi.*  
In viewing again the ideas that are lodg'd in the memory, the mind is more than passive. *Locke.*  
To fix; to settle.—

By whose fell working I was first advanc'd,  
And by whose pow'r I well might lodge a fear  
To be again displac'd. *Shak.*

I can give no reason,

More than a lodg'd hate, and a certain loathing  
I bear Antonio *Shak.*

To place in the memory.—This cunning the  
I would not understand, though he lodg'd it,  
Noted it, in some particulars. *Bacon.* 6. To  
hour or cover.—

The deer is lodg'd, I've track'd her to her  
covert;  
I wish in at once. *Addison.*

To afford place to.—The memory can lodge a  
her store of images than all the senses can pre-  
sent one time. *Cheyne.* 8. To lay flat.—

Though bladed corn be lodg'd, and trees  
blown down,  
High castles topple on their warders heads.

*Shak.*

We'll make foul weather with desp'ed tears;  
Our sighs, and they, shall lodge the summer corn,  
And make a dearth in this revolting land. *Shak.*

(2.) \* *To LODGE.* *v. n.* 1. To reside; to keep  
abode.—

Care keeps his watch in ev'ry old man's eye,  
And where care lodgeth sleep will never lie.

*Shakespeare.*

Nothing holy lodges in that breast. *Milt.*  
And dwells such rage in softest bosoms then?  
And lodges such daring souls in little men?

*Pope.*

To take a temporary habitation.—

Why commands the king,  
That his chief followers lodge in towns about  
him,  
While he himself keepeth in the cold field?

*Shak.*

Know not where he lodges. *Shak.*—Thy father  
man of war, and will not lodge with the peo-  
ple. 3. To take up residence at night.—

L. XIII. PART. I.

My lords

And soldiers; stay and lodge by me this night.

*Shak.*

—Oh, that I had in the wilderness a lodging place,  
of wayfaring men, that I might leave my people.  
*Jeremiah.*—Here thou art but a stranger travelling  
to thy country; it is therefore a huge folly to be  
afflicted, because thou hast a less convenient inn  
to lodge in by the way. *Taylor.* 4. To lay flat.—  
Long coarse wheat they reckon in Oxfordshire best  
for rank clays; and its straw makes it not subject  
of lodge, or to be mildew'd. *Mortimer.*

(1.) \* *LODGEMENT.* *n. f.* [from *lodge*; *logement*, French.] 1. Disposition or collocation in a  
certain place.—The curious lodgement and inof-  
culation of the auditory nerves. *Derbum.* 2. Ac-  
cumulation; collection.—An oppressed diaphragm  
from a mere lodgement of extravasated matter.  
*Sharp's Surgery.* 3. Possession of the enemy's work.  
—The military pedant is making lodgements, and  
fighting battles, from one end of the year to the  
other. *Addison.*

(2.) *LODGEMENT*, in military affairs, a work  
made by the besiegers in some part of a fortifica-  
tion (after the besieged have been driven out,) to  
maintain it, and be covered from the enemy's  
fire.—When a lodgement is to be made on the  
glacis, covert-way, or in a breach, there must  
be a great provision made of fascines, sand-bags,  
gabions, wool-packs, &c. in the trenches; and  
during the action, the pioneers, under the direction  
of an engineer, with fascines, sand-bags, &c.  
should be making the lodgement, in order to form  
a covering, while the grenadiers are storming the  
covertway.

\* *LODGER.* *n. f.* [from *lodge*.] 1. One who  
lives in rooms hired in the house of another.—  
Bafe tyke, call'st thou me host? now, I scorn the  
term; nor shall my Nell keep lodgers. *Shak.*—  
There were in a family, the man and his wife,  
three children, and three servants or lodgers.  
*Graunt.*—Those houses are soonest infected that  
are crowded with multiplicity of lodgers, and nar-  
ty families. *Harvey.*—The gentlewoman begged  
me to stop; for that a lodger she had taken in was  
run mad. *Tatler.*—Sylla was reproached by his  
fellow lodger, that whilst the fellow lodger paid  
£ 3 : 1 : ½ for the uppermost story, he paid for  
the rest £ 24 : 4 : 4½. *Arbut.* 2. One that resides  
in any place.—

Look in that breast; most dirty dear;

Say, can you find but one such lodger there? *Pope.*

\* *LODGING.* *n. f.* [from *lodge*.] 1. Temporary  
habitation; rooms hired in the house of another.

I will in Cassio's lodging lose this napkin,  
And let him find it. *Shak.*

—Let him change his lodging from one end of the  
town to another. *Bacon.*—

At night he came

To his known lodgings, and his country dame.

*Dryden.*

—He desired his sifter to bring her away to the  
lodgings of his friend. *Addison.*—

Wits take lodgings, in the sound of Bow. *Pope*

2. Place of residence.—

Fair bosom fraught with virtue's richest trea-  
sure,

The nest of love, the lodging of delight. *Spenser.*

R. 1

8. Harbour;

3. Harbour; — The hounds were uncoupled; and the stag thought it better to trust to the nimbleness of his feet, than to the slender fortification of his *lodging*. *Sidney*. 4. Convenience to sleep on.—Their feathers serve to stuff our beds and pillows, yielding us soft and warm *lodging*. *Ray on Creation*.

(1.) LODI, a large and strong city of the Italian republic, in the dep. of Olona, and district (late duchy) of Milan, seated on the Adda, containing about 20,000 citizens. It was built in the 12th century, by the emp. Frederick I. and was capital of the LODESAN, as well as of the late department of the Adda. It has a bridge over the Adda, 600 feet long, rendered famous by a bloody battle fought upon it, May 11th, 1796, between the French, under Bonaparte, and the Austrians under gen. Beaulien; wherein the former, by a desperate manœuvre, and with the loss of 700 men, completely routed the latter, in consequence whereof they got possession of all Austrian Lombardy. The Austrians lost 3000 men in the battle. Lodi has a cathedral, 19 churches, and 26 convents. It is 18 miles SE. of Milan, and 15 NW. of Placentia. Lon. 9. 26. E. Lat. 45. 15. N.

(2.) LODI VECCHIO, or OLD LODI, an ancient town of the Italian republic, in the dep. of Olona, district and late duchy of Milan, seated on the Silaro, 3 miles WSW. of Lodi. It was built by Pompey the Great, and named LAUS, or *Laudes POMPEII*, (i. e. *Pompey's Praise*;) and was a very flourishing city, when its prosperity excited the Milanese to destroy it, and expel most of the inhabitants. See LAUS, N° 4.

LODOMERIA, a large territory in the S. of Poland, forcibly seized by the emperor Joseph II. in 1772; and erected into a kingdom, along with another territory, named *Galicia*. (See GALICIA, N° 3.) The population of Galicia and Lodomeria, according to the enumeration made in 1776, was 2,580,796.

LODOSA, a town of Spain, in Navarre.

LODRONE, a town of Italy, in the bishopric of Trent, near which a bloody battle was fought, on the 12th Aug. 1796, between the French and Austrians; wherein the latter were defeated. It is seated at the influx of the Chiese into lake Idro, 25 miles NNE. of Brescia, and 25 SW. of Trent. Lon. 10. 46. E. Lat. 46. 0. N.

LODZICZE, a town of Lithuania, in Troki.

LOE, a river of England, in Cornwall.

LOEFLINGIA, in botany, a genus of the monogynia order, belonging to the triandria class of plants; and in the natural method ranking under the 22d order, *Caryophyllææ*.

LOEMEL, a town of the French republic, in the dep. of Deux Nattes, and ci-devant province of Austrian Brabant: 30 miles S. of Bois-le-duc, and 35 E. of Antwerp. Lon. 5. 22. E. Lat. 51. 18. N.

LOENEN, and } two towns of the Batavian  
LOESDRECHT, } republic, in the dep. of Am-  
stel, and late province of Holland, 9 miles S. of Naerden.

LOESELIA, in botany, a genus of the didynamia order, belonging to the angiospermia class of plants.

LOET, a river of France, which runs Juine, at Estampes.

LOEWENSTEIN, a town, fort, and of Germany, in Franconia.

LOFANGER, a town of Sweden, in

LOFFINGEN, a town of Suabia.

LOPSTA, a town of Sweden, in Upl  
mous for its iron works; 32 miles N. of

\* LOFT. *n. f.* [*loft*, Welsh; or from *lij*

floor.—Eutychus fell down from the th  
ABs.—There is a traverse placed in a *lo*

*Baron*. 2. The highest floor.—  
A trickling stream from high rock 1  
down,

And ever drizzling rain upon the *lof*

Mixt with a murmuring wind. *Fai*

3. Rooms on high.—

Hills of snow, and *lofts* of piled thunc

A weasel once made shift to sink

In at a corn *loft*, through a chink.

\* LOFTILY. *adv.* [from *lofty*.] 1. On

an elevated place. 2. Proudly; haughtily

speak *loftily*. *Pf.* lxxiii. 8. 3. With ele

language or sentiment; sublimely.—

My lowly verse may *loftily* arise,

And lift itself unto the highest skies.

\* LOFTINESS. *n. f.* [from *lofty*.] 1.

local elevation. 2. Sublimity; elevation

ment.—

Three poets in three distant ages be

The first in *loftiness* of thought surpass

The next in majesty; in both the last.

3. Pride; haughtiness.—Augustus and

had *loftiness* enough in their temper. *Col*

\* LOFTY. *adj.* [from *loft*, or *loft*.]

hovering; elevated in place.—

Cities of men with *lofty* gates and tow

See *lofty* Lebanon his head advance.

hin. *Calmet*.—A meat-offering mingled with oil one *log* of oil. *Lev.*

**LOG**, in the Jews with antiquities, is mentioned Kings vi. 25.) as the fourth part of a cubit. In Leviticus the word *log* is often met with, signifies that measure of oil, which lepers were to use at the temple after they were cured of leprosy.

**LOG**, a sea term, signifying a small piece of wood, *Plate CCIII. fig. 1.* of a triangular, sector or quadrantal, figure, on board a ship, generally about a quarter of an inch thick, and 5 or 6 inches from the angular point to the circumference.

It is balanced by a thin plate of lead, nailed on the arch, or circular side, so as to swim perpendicularly in the water, with about two thirds of an inch under the surface.

**LOG AND LINE**, or the **LOG-LINE**, a little or line, about 150 fathoms long, fastened to the ship by means of two legs *ab* (*fig. 2.*), one of which is fixed to the opposite side, while the other leg is fixed to the arch by a pin fixed into another part of the ship, so as to draw out occasionally. By these the log is hung in equilibrio; and the line unrolled to it is wound round a reel fixed at the corner of the gallery of the ship. This reel is from the distance of about 10, 12, or 15 fathoms off the log, has certain knots or divisions, and is thought to be at least 50 feet from each other, though it was the common practice at sea to have them above 42 feet asunder. The length of each knot ought to be the same part of a mile as half a minute is of an hour; and the measurement of Mr Norwood, who found a degree on a great circle of the earth to be 367,200 English feet, or about 69½ English miles, and, therefore, 1/8th part of it, nautical mile, will be 6120 feet; 1/8th of that or 51 feet, should be the length of each knot.

But because it is safer to have the reckoning before the ship than after it, therefore the length may be taken as the proper length of each knot.

The knots are sometimes made to consist of 42 feet each, even in the present practice; his method of dividing the log-line was founded on the supposition that 60 miles, each of 6000 English feet, made a degree; for 1/15th of 6000 is 400, or, in round numbers, 42 feet. Mariners rather than quit the old way, though known to be erroneous, use glasses for half minute ones, which run but 24 or 25 seconds. They have also a line of 45 feet to 30 seconds, or a glass of 30 seconds to 42 feet. When this is the case, the error between the knots should be corrected by following proportion: as 30 is to 50; so is the number of seconds of the glass to the distance between the knots upon the line. The heat or dryness of the weather has often a considerable effect upon the glass, so as to make it run slower; it should, therefore, be frequently tried by pendulum in the following manner. On a nail hang a string that has a musket-ball at one end, carefully measuring between the middle of the ball and the string's loop over the nail: of the ball and the string's loop over the nail, being the length of a second pendulum; then swing it, and count one for every time it passes under the peg, beginning at the se-

cond time it passes; and the number of swings made during the time the glass is running out shows the seconds it contains. The line also is liable to relax and shrink, and should therefore be occasionally measured. The use of the *log and line* is to keep account and make an estimate of the ship's way or distance run; which is done by observing the length of line unwound in half a minute's time, told by a half-minute glass; for so many knots as run out in that time, so many miles the ship falls in an hour. Thus, if there be 4 knots veered out in half a minute, the ship is computed to run 4 miles an hour. No mention of this device for measuring the ship's way, occurs till 1607, in an East-India voyage published by Purchas; but from that time its name occurs in other voyages among his collections; and henceforward it became famous, being taken notice of both by our own authors and by foreigners; as by Gunter in 1623; Snellius in 1624; Metius in 1631; Oughtred in 1633; Herigone in 1644; Saltonstall in 1636; Norwood in 1637; Pournier in 1643; and almost by all the succeeding writers on navigation of every country.

(5.) **LOG, HEAVING THE**, is throwing it into the water on the lee side, letting it run till it comes without the eddy of the ship's wake; then one, holding a half-minute glass, turns it up just as the first knot, or the mark from which the knots begin to be reckoned, turns off the reel (*fig. 3.*) or passes over the stern. As soon as the glass is out, the reel is stopped, and the knots run off are told, and their parts estimated. It is usual to heave the log once every hour in ships of war and East-Indiamen, and in all other vessels once in two hours; and if at any time of the watch the wind has increased or abated in the intervals, so as to affect the ship's velocity, the officer generally makes a suitable allowance for it at the close of the watch. The log is a very precarious way of computing, and must always be corrected by experience and good sense; there being a great deal of uncertainty in the yawing of the ship going with the wind ast, or upon the quarter, in the heaving of it, by its coming home, or being drawn after the ship; on account of the friction of the reel and lightness of the log in the course of the current, and in the strength of the wind, which seldom keeps the same tenor for two hours together; which is the interval between the times of using the log in short voyages; though in longer ones they heave it every hour. Yet this is a much more exact way of computing than any other in use; much preferable certainly to that of the Spaniards and Portuguese, who guessed at the ship's way by the running of the froth or water by the ship's side; or to that of the Dutch, who used to heave a chip over-board, and to number the paces they walk on the deck while the chip swims between any two marks, or bulk-heads on the side.

(6.) **LOG, THE COMPOUND**. The above mentioned errors, and particularly the log's being subject to drive with the motion which the water may have at its surface, whereas the experiment requires it to be fixed in the place where it is used when the mark commencing the knots goes off the reel, have been considered by writers, and

many methods have been proposed to remove, or at least to lessen them. The late M. Bouguer proposed a method, which has been thought deserving of particular attention, in the Mem. Acad. Sc. 1747; afterwards in his Treatise on Navigation, published at Paris in 1753, and since reprinted in 1760, by the abbé De La Gaille. For this purpose, take for the log a conical piece of wood, which fix to the log-line passed through or along its axis, at about 40, 50, or 60, or more feet, from one end; and to this end fix the diver, which is a body formed of two equal square pieces of tin, or of thin iron plate, fixed at right angles to one another along their diagonals; and its size so fitted to that of the cone, that the whole may float. A cone of three inches diameter in the base, and of six inches in the slant height, is proposed by M. Bouguer to suit a diver made of plates about  $9\frac{1}{2}$  inches square; the intersection of the diagonals is joined to the log-line, and the loop and peg fixed as in the common log. However, it has been found, that no kind of wood used in British dock-yards, when formed into a cone of the above dimensions, will float a diver made of stout tin plates, one side of the square being  $9\frac{1}{2}$  inches. Such a diver weighing  $1\frac{1}{2}$  lb. avoirdupoise, required to float it a cone of five inches diameter and twelve inches on the slant side, so as the point of the cone, which was made of light fir, should just appear above the water. Now supposing one side of such a square tin diver to be about ten inches, and made of plates only two thirds of the thickness of the former, such a diver would weigh, with its solder, about 20 ounces, and can be floated by a light fir cone of four inches diameter in the base, and ten inches in the slant height or length; and such a compound log might perhaps be found on trial to be affected by about as much again as that proposed by M. Bouguer; and consequently the difference between the numbers given by the common log and compound log, must be augmented by two thirds of itself for the necessary correction, as below. When the compound log of Bouguer, above described, is hoisted overboard, the diver will sink too deep to be much affected by the current or motion of water at the surface, and the log will thereby keep more steadily in the place where it first fell; and consequently the knots run off the reel will show more accurately the ship's rate of sailing. As the common log is affected by the whole motion of the current, so this compound log will feel only a part thereof, viz. such a part nearly as the resistance of the cone is to the resistance of the diver; then the resistances of the above cone and diver are about as 1 to 5; and consequently this log will drive but one fifth part of what the common log would do; and so the ship's true run will be affected by one fifth only of the motion of the waters. To obtain the true rate of sailing, it will be proper to heave alternately, hour and hour, the common log and this compound log; then the difference of their knots run off, augmented by its 4th part, is the correction; which, applied to the knots of the common log, will give the ship's true rate of sailing at the middle time between the hours when these logs were hoist. The correction is additive when

the compound log's run is the greatest, other wise it is subtractive. To find the course made good: increase the observed angle between the log-lines by one fourth part; and this gives the correction to be applied to the apparent course, or the opposite of that shown by the common log; the correction is to be applied to the *right* of the apparent course, when the bearing of the common log is to the *left* of the compound log; and *vice versa*, to the *left*, when the bearing is to the *right* of it. Or thus: the lengths run off both logs, together with their bearings, being known; in a card or compass apply the knots run off, taken from a scale of equal parts along their respective bearings, from the centre; join the ends; and in this line produced, on the side next the compound log's length, take one fourth of the interval; then a line drawn from the end, thus produced, to the centre of the card, will show the true course and distance made good. When a current, such as a tide, runs to any depth, the velocity of that current may be much better ascertained by the compound log than by the common one, provided the diver does not descend lower than the run of the current; for as those ships which are deepest immersed, drive fastest with the tide; so the diver, by being acted on below, as well as the log on the surface, their joint motion will give the total effect of the current's motion better than could be had from the motion at the surface only. Also, by such a compound log, the depth to which any current runs may be easily tried.

(7.) LOGS, OTHER KINDS OF. We have an account in the voyage to the North Pole, p. 97. of two other logs, which were tried by capt. Phipps: one invented by Mr Russel, the other by Foxon; both constructed upon this principle, that a spiral in proceeding its own length in the direction of its axis through a resisting medium, makes one revolution round the axis; if therefore, the revolutions of that spiral are registered, the number of times it has gone its own length through the water will be known. In both these the motion of the spiral in the water is communicated to the clock-work within-board, by means of a small line fastened at one end to the spiral, which tows it after the ship, and at the other to a spindle, which sets the clock work in motion. That invented by Mr Russel, has a half spiral of two threads, made of copper, and a small dial with clock-work, to register the number of turns of the spiral. The other log has a whole spiral of wood with one thread, and a larger piece of clock-work with 3 dials, two of them to mark the distance, and the other divided into knots and fathoms, to show the rate by the half minute glass, for the convenience of comparing it with the log. This kind of log will have the advantage of every other in smooth water and moderate weather; and it will be useful in finding the trim of a ship when alone in surveying a coast in a single ship, or in measuring distances in a boat between head-lands and shoals; but it is subject to other inconveniences which will not render it a proper substitute for the common log.

(8.) LOG, THE PERPETUAL, a machine so called by its inventor, Mr Gottlieb of Houndsditch London. It is intended by it to keep a constant and regular account of the rate of a ship's velocity

through the water ; whereas the common log to used does not indicate the variation in locity in the interval of heaving the log, and frequently does not ascertain the true distance the ship has run in any given length of time. *p.* 203. represents the whole machine ; *p.* 204. a part of which, EFG, is fixed to the side of the keel ; H representing only the boundary of the ship's figure. EF are the section of an external case, left open at the ends KL, admit the passage of the water during the motion of the ship. At M is a copper grating, placed to obstruct the entrance of any dirt, &c. into the machine. I, is a section of a water wheel, made 5 to 12 inches in diameter, as may be necessary with float boards upon its circumference, common water wheel, that turn by the resistance of the water passing through the channel. It turns upon a shouldered axis, represented by the vertical section at K. When the ship is in motion, the resistance of the water through the wheel LK turns round the wheel I. This wheel, consisting of a pinion, is connected with and turns round contained in the long copper tube N. A rod by a pinion fixed at its upper extremity is connected with and turns upon the whole of wheels contained in the dial of the case D. This dial, by means of the copper tube may be fixed to any convenient place aboard the ship. In the front of the dial are several useful lines or graduations, as follow : the reference by the line A has an hand which is moved by the motion of the ship in fathoms of 6 feet each. The circle B has an hand showing the knots, at the rate of 6 for each knot ; and is to be observed with a minute glass at any time. The circle at C has a short and a long hand ; the former of which shows the miles in land measure, and the latter longer the number of knots contained in a mile, viz. 128, which is in the same proportion to a mile as 60 minutes to the hour in the sailing. At *e*, a small portion of a circle is shown through the front plate called the register ; it shows, in the course of 24 hours (if the ship upon one tack,) the distance in miles that she has run ; and in the 24 hours the mariner may take but one observation, as this register is an useful check upon the fathoms, knots, &c. which are shown upon the two other circles. *f*, a dial showing 100 degrees or 6000 miles, and is as another register or check ; and is useful to prevent any mistake being made in observing the distance run by the other circles. The sailing by these circles, without fear of mistake may therefore be continued to nearly 12,000 miles. A communication from this machine may be made to the captain's bed-side, where by touching a spring only, a bell in the head of the cabin will sound as many times in an half minute as the ship sails miles in an hour. Mr Gottschalk applied this machine to the Carteret and other moreland packets. He thinks the mariner by this contrivance, be better enabled than otherwise to keep the vessel and his reckoning together ; it being well known that the most experienced navigator is too frequently erroneous in his reckoning, the ship being sometimes a-head, or

sometimes astern, off the reckoning. He also observes, that the construction of the log is such, that if the vessel was to be aground, strike a rock, or strip off her false keel, the parts would not be deranged, and further, should she be laid up for repairs, &c. six months, in half an hour after coming again into the water, the lower immersed part of the log would clear itself, and be in proper action.

(1.) LOGAN, a chief among the Mingo tribe of the N. American Indians, whose pathetic address to Lord Dunmore, governor of Virginia, has been much and justly admired. The occasion was as follows ; and the authenticity of the facts and of the speech is unquestionable. In spring 1774, a robbery and murder were committed on an inhabitant of the frontiers of Virginia, by two Indians of the Shawanee tribe. The neighbouring whites, according to custom, undertook to punish this outrage in a summary way. Colonel Cresap, a man infamous for the many murders he had committed on those much-injured people, collected a party, and proceeded down the Kanhaway in quest of vengeance. Unfortunately a canoe of women and children, with one man only, was seen coming from the opposite shore, unarmed, and unsuspecting any hostile attack from the whites. Cresap and his party concealed themselves on the bank of the river ; and the moment the canoe reached the shore, singled out their objects, and at one fire killed every person in it. This happened to be the family of LOGAN, who had long been distinguished as a friend of the whites. This unworthy return provoked his vengeance. He accordingly signalized himself in the war which ensued. In autumn 1774, a decisive battle was fought at the mouth of the Great Kanhaway, between the collected forces of the Shawanees, Mingo, and Delawares, and a detachment of the Virginia militia. The Indians were defeated, and sued for peace. Logan disdained to be seen among the suppliants ; but, lest the sincerity of a treaty should be distrusted, from which so distinguished a chief absented himself, he sent by a messenger the following speech, to be delivered to Lord Dunmore : “ I appeal to any white man to say if ever he entered Logan's cabin hungry, and he gave him not meat ; if ever he came cold and naked, and he clothed him not. During the course of the last long and bloody war, Logan remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed as they passed, and said, *Logan is the friend of white men.* I had even thought to have lived with you, but for the injuries of one man. Colonel Cresap, the last spring, in cold blood, and unprovoked, murdered all the relations of Logan, not sparing even my women and children. There runs not a drop of my blood in the veins of any living creature. This called on me for revenge. I have sought it ; I have killed many ; I have fully glutted my vengeance. For my country, I rejoice at the beams of peace ; but do not harbour a thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to save his life. Who is there to mourn for Logan ? Not one.”

(2.) LOGAN, John, D.D. late a clergyman of the

the church of Scotland, author of several works of merit. He was born in Mid Lothian about 1748; studied divinity at the university of Edinburgh, and was ordained minister of S. Leith, in 1770. In 1781, he published his *Philosophy of History*, the substance of which had been delivered in his public lectures at Edinburgh, with great approbation. He also published his *Poems*, which underwent a 2d edition in 1782. In 1783, he wrote *Runnemedes, a Tragedy*, which he offered to the manager of Covent-garden theatre, but as the lord chamberlain did not relish the political sentiments displayed in it, a licence was refused, though it was afterwards acted at Edinburgh with much applause. His last work was *A Review of the Principal Charges against Mr Hastings*; which contained such bold strokes, that Stockdale, the publisher, was tried for it, but acquitted. Mr Logan died at London, in 1788. Two vols of his *Sermons* were published since his death.

(3.) LOGAN, a county of Kentucky.

(4.) LOGAN, a river of Lanarksh. which rises among the mountains between Lasmahagoe and Muirkirk, and after running 6 miles E. falls into the Nethan, after which the united streams fall into the Clyde.

(5.) LOGAN. See ROCKING STONE.

(1.) LOGARITHMIC, [from *λογος*, ratio, and *αριθμος*, number.] *adj.* belonging to LOGARITHMS.

(2.) LOGARITHMIC CURVE. See LOGARITHMS, Sect. IV.

(3.) LOGARITHMIC LINES. For many mechanical purposes it is convenient to have the logarithms of numbers laid down on scales, as well as the logarithmic lines and tangents; by which means, computations may be carried on by mere measurement with compasses. Lines of this kind are always put on the common Gunter's scale; but as these instruments must be extended to a very great length, in order to contain any considerable quantity of numbers, it becomes an object of importance to shorten them. Such an improvement has been made by Mr William Nicholson, and published in the 77th volume of the *Philos. Trans.* The principles on which the construction of his instruments depends are as follow: I. If two geometrical series of numbers, having the same common ratio, be placed in order with the terms opposite to each other, the ratio between any term in one series and its opposite in the other will be constant: Thus,

2 6 18 54 162, &c.

3 9 27 81 243, &c. Then,

2 3 6 9 18 27 54 81 162 243, &c.

where it is evident, that each of the terms in the upper series is exactly two thirds of the corresponding one in the lower. II. The ratio of any two terms in one series will be the same with that between those which have an equal distance in the other. III. In all such geometrical series as have the same ratio, the property above-mentioned takes place, tho' we compare the terms of any series with those of another: Thus,

{ 2 4 8 16 32 64, &c.

{ 3 6 12 24 48 96, &c.

{ 4 8 16 32 64 128, &c.

{ 5 10 20 40 80 160, &c.; where it is

plain that 2, 4, 3, 6; also 2, 4, 4, 8, and 2, 4, 5,

10, &c. have the same ratio with that of the series. IV. If the differences of the logarithms be laid in order upon equal parallel right lines, in such a manner, that they be drawn across the whole shall intersect it: denoting numbers in geometrical progression by the condition of the arrangement, then from the property of this logarithmic line, it follows: 1st, That every right line so drawn will intersect the series, and indicate a geometrical series; 2dly, That such series as are in these right lines will have the same common ratio; and 3dly, That the series thus indicated by parallel right lines, supposed to move without changing either their mutual distance or their parallelism to themselves, will have each the same ratio; and in all series indicated by such lines, the ratio between an antecedent and consequent, the former taken upon one line, and the latter upon another, will be also the same.

These propositions are proved in the following manner: Let the lines AB, CD, EF, &c. represent parts of the logarithmic line, ranged according to the proportion mentioned; and let GH be a right line passing through the points *e, c, a*, denoting numbers in arithmetical progression; then will any other line drawn across the arrangement, like that through three points *f, d, b*, in geometrical progression. From one of the points of intersection, in the last mentioned line IK, draw a line parallel to GH, and intersecting the logarithmic line in the points *i, b*; and the ratios of the intervals *ei, fb*, will be equal, as well as of the intervals *eb, fi*, because the differences of the logarithms of these numbers are equal. Again, the point *f*, the line *ef*, and the line *eb*, are in arithmetical progression; the differences between the logarithms of the numbers themselves; whence the quotients of the numbers are in geometrical progression. This proposition is proved in a similar manner; it was shown that the line *ef*, parallel to GH, passes through points denoting numbers in the same continued ratio as those denoted by the line GH; it may also be shown that a line LM parallel to any other line IK, passing through a series of points denoting numbers, will have the same continued ratio with the line IK, to which it is parallel. This proposition arises from the parallelism of the lines in their former situation; by which near equal numbers in a geometrical series, having the same common ratio as before: their differences, when the logarithmic line also remains the same, will be constant. V. To find any term in an antecedent and consequent to any geometrical series, it will always be possible to find them, provided the line be of sufficient length. Drawing two parallel lines, through each of the numbers, and supposing them to move without changing their direction or their situation, they will continually describe antecedents and consequents in the same continued ratio as before. VI. Though the line contain no greater range of numbers,

from 1 to 10, it will not be found necessary for the purposes of computation to repeat it. The only thing requisite is to have a slider or beam with two fixed points at the distance of the interval betwixt 1 and 10, and a moveable point be made to range betwixt them always to indicate the antecedent; then, if the consequent fixed point fall without the rule, the other fixed point will always denote the division on which it would have fallen had the rule been prolonged; and this contrivance may easily be adapted to any arrangement of parallel lines whatever. The arrangement of right lines, however, ought always to be disposed in such a manner as to occupy a right angled parallelogram, or the cross line already mentioned ought always to be at right angles to the length of the ruler. *Fig. 6.* is a ruler consisting of ten parallel lines. *Fig. 7.* a beam composed of measuring the intervals. B, A, C, are the parts which apply to the surface of the ruler; the middle one, A, being moveable sidewise in a groove in the piece DE, so as always to preserve parallelism to the external pieces DC, which are fixed at a distance equal to the length of the ruler, and have their edges placed in such a manner as to form with the parallel lines which they intersect a ratio, which by composition is  $\frac{1}{10}$ ; which in the present case requires them to be at right angles to the length. The piece DE is applied to the edge FG of the ruler. The edges or borders H, I, K, L, are more conveniently made of transparent glass, or tortoise-shell, than of any opaque matter. In using this ruler, apply the edge of either B or C to the consequent, and slide the piece A to the antecedent; observing the difference between the numbers on the pieces denoting the lines they are fixed on; then, applying the same edge of A to the other antecedent, the other piece B or C will intersect a consequent in the same ratio upon that line, having the same situation with regard to the antecedent that the line of the former consequent had to its antecedent. But if B be the consequent line, and fall without the ruler, the piece C will intersect the consequent one line lower; or if C, in the same manner, fall without the ruler, then B will intersect the consequent one line higher. "It might be convenient (says Mr Nicholson) for the purpose of computation, to make instruments of this kind with 100 or more lines: but in the present instrument, the numbers on the pieces will answer the purpose; for if a consequent fall upon a line beyond a given number of intervals without the ruler, it will be found on that line of the arrangement, which occupies the same number of intervals reckoned inwards from the opposite edge of the ruler." *Fig. 8.* is an instrument on the plan of a Gunter's scale of 18 inches long, invented by the late Mr Robertson. There is a moveable piece in the slider GH, across which is drawn a fine line: the slider having also lines CD, EF, drawn parallel to it at distances from each other equal to the length of the ruler AB. In using the instrument,

the line CD or EF is to be placed at the consequent, and the line in AB at the antecedent: then, if the piece AB be placed at any other antecedent, the same line CD or EF will indicate its consequent in the same ratio taken the same way: that is, if the antecedent and consequent lie on the same side of the slider, all other antecedents and consequents in that ratio will be in the same manner; and the contrary if they do not. But if the consequent line fall without the rule, the other fixed line on the slider will show the consequent, but on the contrary side of the slider to that where it would else have been seen by means of the first consequent line. *Fig. 9.* is a circular instrument, equivalent to the former; consisting of three concentric circles engraved and graduated upon a plate of an inch and an half diameter. Two legs A and B proceed from the centre, having right-lined edges in the direction of radii; and are moveable either singly or together. In using the instrument, place one of the edges at the antecedent and the other at the consequent, and fix them at the angle. Move the two legs then together; and having placed the antecedent leg at any other number, the other will give the consequent one in the like position on the lines. If the line CD happen to lie between the legs, and B be the consequent leg, the number sought will be found one line farther from the centre than it would otherwise have been: and on the contrary, it will be found one line nearer in the like case, if A be the consequent leg. "This instrument (says Mr Nicholson) differing from that represented *fig. 6.* only in its circular form, and the advantages resulting from that form, the lines must be taken to succeed each other in the same manner laterally; so that numbers which fall either within or without the arrangement of circles, will be found on such lines of the arrangement as would have occupied the vacant places, if the succession of lines had been indefinitely repeated sidewise. I approve of this construction, as superior to every other which has yet occurred to me, not only in point of convenience, but likewise in the probability of being better executed; because small arcs may be graduated with very great accuracy, by divisions transferred from a larger original. The instrument, *fig. 6.* may be contained conveniently in a circle of about four inches and an half diameter. The circular instrument is a combination of the Gunter's line and the sector, with the improvements here pointed out. The property of the sector may be useful in magnifying the differences of the logarithms in the upper parts of the line of fines, the middle of the tangents, and the beginning of the vertical lines. It is even possible, as mathematicians will easily conceive, to draw spirals, on which graduations of parts, every where equal to each other, will show the ratios of those lines by moveable radii, similar to those in this instrument."

# L O G A R I T H M S.

## GENERAL DEFINITION.

(1.) \* **L**OGARITHMS. *n. f.* [*Vogarithme*, Fr. *λογος* and *αριθμος*.]—*Logarithms*, which are the indexes of the ratios of numbers one to another, were first invented by Napier lord Merchiston, a Scottish baron, and afterwards completed by Mr Briggs, Savilian professor at Oxford. They are a series of artificial numbers, contrived for the expedition of calculation, and proceeding in an arithmetical proportion, as the numbers they answer to do in a geometrical one. The addition and subtraction of *logarithms* answers to the multiplication and division of the numbers they correspond with; and this saves an infinite deal of trouble. In like manner will the extraction of roots be performed, by bisecting the *logarithms* of any numbers for the square root, and trisecting them for the cube, and so on. *Harris.*

THE doctrine of logarithms being of great importance in the science of mathematics, we shall explain their nature and properties more fully, in the following section:

### SECT. I. Of the NATURE and PROPERTIES of LOGARITHMS.

(2.) LET there be two series of numbers, the one constituting an arithmetical progression, and the other a geometrical progression, as follows:

*Arith. prog.* 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, &c.  
*Geom. prog.* 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, &c.

where the terms stand over each other in such a manner, that 0 in the arithmetical series corresponds to unity in the geometrical series; then we shall readily perceive, from induction, that the two series, so arranged, possess the following properties:

(3.) I. Let the sum of any two terms of the arithmetical series be taken; and also the product of the corresponding terms of the geometrical series; then, below that term of the arithmetical series, which is equal to the sum, will be found a term of the geometrical series, equal to the product.

Thus, if the terms of the arithmetical series be 3, and 5, those of the geometrical series will be 8, and 32. Now  $3 + 5 = 8$ ; and  $8 \times 32 = 256$ ; and, by inspecting the two series, we find that the term 256 in the geometrical series stands below 8 of the arithmetical series.

(4.) II. Let the difference of any two terms of the arithmetical series be taken; and also the quotient of the corresponding terms of the geometrical series; then, below that term of the arithmetical series, which is equal to the difference, will be found a term of the geometrical series, equal to the quotient.

Thus, if the terms of the arithmetical series be 5, and 8, and therefore those of the geometrical series 32, and 256; we shall have  $8 - 5 = 3$ , and  $256 \div 32 = 8$ ; and we find, by inspecting the series, that 8 of the geometrical series stands below 3 of the arithmetical series. This last property is evidently nothing else than the converse of the former.

(5.) In the preceding geometrical series the common ratio is 2, but it may be any other number whatever, whole, or fractional. Thus the

same properties will be found to hold these series:

*Arith. prog.* 0, 1, 2, 3, 4, 5, 6,  
*Geom. prog.* 1, 3, 9, 27, 81, 243, 729,  
 where the common ratio of the geometrical is 3. They also hold true in the follow-

*Arith. prog.* 0, 1, 2, 3, 4,  
*Geom. prog.* 1,  $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{8}$ ,  $\frac{1}{16}$ ,  $\frac{1}{32}$ , &c.  
 where the common ratio is  $\frac{1}{2}$ .

(6.) To demonstrate that the two foregoing properties must necessarily be true in every only necessary to write down a geometrical series, according to the algebraic method, thus,  $r^n$ , or 1,  $r^1$ ,  $r^2$ ,  $r^3$ ,  $r^4$ ,  $r^5$ , &c. where  $r$  denotes the ratio of the series, it presently appears, that the arithmetical series, when applied by the numeral exponents of the terms, Hence it follows, that the properties, which have been ascribed to any geometrical, and arithmetical series, are no other than two well known propositions in algebra; that the sum of the exponents of any term of an algebraic quantity is equal to the sum of their product; and that the difference of their exponents is equal to the exponent of their quotient.

(7.) When the terms of an arithmetical progression are adapted to those of a geometrical progression, as in the three examples given in § 5, the terms of the arithmetical series correspond to the *Logarithms* of the corresponding terms of the geometrical series.

Thus, in the first example, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, &c. are the logarithms of 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, &c. respectively.

In the second example, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, &c. are the logarithms of the numbers 1, 3, 9, 27, 81, 243, 729, &c.

And in the third example, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, &c. are the logarithms of 1,  $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{8}$ ,  $\frac{1}{16}$ ,  $\frac{1}{32}$ , &c.

By applying now the properties of the arithmetical series, which were demonstrated in § 6, to the logarithms, and their corresponding numbers, we find that the logarithms, to be a series of numbers in an arithmetical progression, so adapted to another series of numbers in a geometrical progression, that the differences of the former correspond to the products, and quotients of the latter.

(8.) From this definition of logarithms it appears, that there may be an infinity of systems according as one or another geometrical series is adapted to the arithmetical series, 2, 3, &c. It may however be readily perceived that some systems are better suited to calculation than others. Accordingly, it is found convenient in practice, to adopt that system in which the logarithm of 10 is unity; the numbers which may have their logarithms expressed by integers being as in the following

*Logarithms* 0, 1, 2, 3,  
*Numbers* 1, 10, 100, 1000, 10000, &c.

(9.) With respect to the numbers 10, 100, &c. and their corresponding logarithms, they may be understood to be interpolated, thus: Conceive a geometrical progression to be taken between the natural numbers 1 and 10, the extremes; and an equal number of

tical proportionals between their logarithms 0 and 1: Then, if the number of geometrical proportionals be sufficiently great, some one or other of them will be sufficiently near to each of the natural numbers, 2, 3, 4, 5, &c. to 9, so as to admit of the one being taken for the other, without any sensible error. There will also be a corresponding logarithm to each, which, as it will be less than unity, may be most conveniently, expressed by a decimal fraction.

(10.) Let us suppose the number of geometrical proportionals between 1 and 10, and also the number of arithmetical proportionals between 0 and 1, to be 9999, and therefore the number of terms, including 1 and 10, 10001. Then, the 3011th term of the geometrical series will be 1.9999, or 2 nearly, and the corresponding term of the arithmetical series, .3010: Therefore the logarithm of 2 is .3010, nearly. Again, the 4772d term of the geometrical series will be 2.9999, or 3 nearly; and the corresponding term of the arithmetical series .4771; therefore, the logarithm of 3 is .4771, nearly; and so on with respect to other numbers.

(11.) If we suppose the series of natural numbers 2, 3, 4, 5, &c. to be arranged in a table, so that each number may stand opposite to its corresponding logarithm; it is evident from the properties which we have shewn to belong to logarithms, that, by means of such a table, the arithmetical operations of multiplication, division, involution and evolution may be performed with great facility.

(12.) For, since the sum of the logarithms of any two numbers is equal to the logarithm of their product, § 3; the product of any two numbers may be found in the table, opposite to that logarithm, which is the sum of the logarithms of the numbers.

Again; because the difference of the logarithms of two numbers is equal to the logarithm of the quotient arising from the division of the one number by the other, § 4; that quotient will be found in the table, opposite to the logarithm which is the excess of the logarithm of the dividend, over that of the divisor.

(13.) Involution is performed by multiplying the number into itself a number of times, which is one more than the exponent of the power, therefore, if the logarithm of the root be multiplied by the exponent of that power, the product will be the logarithm of the power of the root. And evolution is the reverse of involution, the logarithm of the root of a number will be had if we divide the logarithm of that number by the index of the power; and thence the root itself may be found, by consulting the table of logarithms.

(14.) Upon the whole, therefore, it appears that means of a table containing the series of natural numbers, 1, 2, 3, &c. as far as may be convenient, and their corresponding logarithms, the operations of multiplication and division, may be reduced to the more simple operations of addition, subtraction; and the operations of involution, and evolution, to those of multiplication and division.

VOL. XIII. PART I.

SECT. II. HISTORY of LOGARITHMS.

(15.) THE properties of a geometrical series, which constitute the foundation of the doctrine of logarithms, appear to have been known as far back as the days of ARCHIMEDES; for that celebrated mathematician makes use of them in his work entitled *Arenarius, or Treatise on the number of sands*. The same properties are also mentioned in the writings of STIFELIUS, a German mathematician, who lived about the middle of the 16th century. It does not however appear, that any person perceived all the advantages which might be derived from these properties, till about the beginning of the 17th century; when their utility was rendered evident, by the happy invention of logarithms.

(16.) This discovery, certainly one of the most valuable that ever was made in mathematics, is due to JOHN NAPIER, baron of MERCHISTON, in Scotland, who published it to the world, in 1614, in a work which he called *Mirifici Logarithmorum Canonis Descriptio*, and which contained a large table of logarithms, together with their description and uses: but the author reserved his method of constructing them, till the sense of the learned concerning his invention should be known.

(17.) In the abovementioned work, Napier explains his notion of logarithms, by lines described, or generated, by the motion of points, in this manner. He first conceives a line to be generated by the motion of a point, which passes over equal portions of it, in equal small moments, or portions of time. He then considers another line to be generated by the unequal motion of a point, in such a manner, that, in the aforesaid equal portions, or moments of time, there may be described, or cut off from a given line, parts which shall be continually in the same proportion with the respective remainders of that line, which had before been left; then are the several lengths of the first line the logarithms of the corresponding parts of the latter. Which description of them is similar to that which we have already given, viz. that logarithms are a series of quantities, or numbers, in arithmetical progression, adapted to another series in geometrical progression.

(18.) NAPIER made the first, or whole length of the line, which is diminished in geometrical progression, the radius of a circle; and its logarithm 0, or nothing; representing the beginning of the first, or arithmetical line. Thus the several proportional remainders of the geometrical line are the natural sines of all arches of a quadrant, decreasing down to 0; while the successive increasing values of the arithmetical line are the corresponding logarithms of those decreasing sines: so that while the natural sines decrease from radius to nothing, their logarithms increase from 0 to infinity. Napier made the logarithm of radius to be 0, that he might save the trouble of adding, and subtracting it, in trigonometrical operations, in which it so frequently occurred; and he made the logarithms of the sines, from the entire quadrant down to 0, to increase, that they might be positive, and so, in his opinion, easier to manage; the sines being of more frequent use than the tangents,

gens, and secants, of which, the whole of the latter, and the half of the former, being greater than radius, would, according to his construction, have their logarithms negative.

(19.) The description and use of Napier's canon being in the Latin language, they were translated into English by Mr EDWARD WRIGHT, the ingenious inventor of what is commonly, though erroneously, called MERCATOR'S SAILING. The translation was sent to the author, who revised it, and returned it with his approbation. Mr Wright, however, dying soon after he received it back, the work, together with the tables, was published in 1616, after his death, by his son Samuel Wright, who dedicated it to the East India Company. It contained also a preface by HENRY BRIGGS, of whom we shall have occasion to speak again presently, on account of the great share he bore in perfecting the logarithms.

(20.) As Napier's canon contained only the natural sines for every minute of the quadrant; and their corresponding logarithms, it was attended with some degree of inconvenience, when used as a table of the logarithms of common numbers; because when a number was proposed, which was not exactly the same with some number denoting a natural sine, it was then necessary to find its logarithm by means of an arithmetical calculation, performed according to precepts, which the author delivered in his work. This inconvenience, which was in part obviated by certain contrivances of Wright and Briggs, was not the only one; for there was another, which arose from the logarithms being sometimes +, or additive, and sometimes —, or negative; and which therefore required the knowledge of algebraic addition and subtraction. This last defect was occasioned partly by making the logarithm of radius 0, and those of the sines to increase; and partly by the compendious manner, in which the author had formed the table; making the three columns of sines, cosines, and tangents, to serve also for the other three of cosecants, secants, and cotangents.

(21.) But this latter inconvenience was well remedied by JOHN SPEIDELL, in his *New Logarithms*, first published in 1617; which contained all the six columns, and these all of a positive form, by being taken the arithmetical complements of Napier's, that is, they were the remainders left by subtracting each of the latter from 10,000,000. And the former inconvenience was more completely removed by Speidell in a second table, given in the sixth impression of the former work, in the year 1624. This was a table of *Napier's Logarithms* for the integers 1, 2, 3, 4, 5, &c. to 1000, together with their differences, and arithmetical complements; as also the halves of the 50 numbers, with their differences and arithmetical complements; which halves were computed by the logarithms of the square root, or the said numbers. These logarithms are, however, a little varied in their form from Napier's, namely, so as to increase from 1, whose logarithm is 0, instead of decreasing to 1, or radius, whose logarithm Napier made 0 likewise; that is, Speidell's logarithm of  $n$ ; number  $n$  is equal to Napier's loga-

rithm of its reciprocal  $\frac{1}{n}$ . So that, in this last ta-

ble of Speidell's, the logarithm of 1 being logarithm of 10 is 2,302584; the logarithm is twice as much, or 4605168; and that thrice as much, or 6907753. The logarithms tained in this table are now commonly called *perbolic* logarithms; because they serve to the areas contained between the curve of perbola and its asymptote.

(22.) The celebrated inventor of the logarithm died in the year 1618; and in 1619, his son Robert Napier published a new edition of *Arithmetorum Canonis Descriptio*, to which he added the promised *Logarithmorum Canonis Fruitio*; and other miscellaneous pieces with his father and Mr Briggs. This work was printed in France, in 1620; also, nearly about the same time, by different mathematicians abroad, published of logarithms of the same kind as those of our country, as BENJAMIN URBINUS, mathematician Elector of Brandenburg, also the famous FRIEDRICH SCHICKARD, who was then mathematician to the emperor Sigismund II, and others.

(23.) Next to the discovery of logarithms, the most remarkable circumstance connected with their history, is that improvement which they received in their form from HENRY BRIGGS, who at the time of the publication of Napier's logarithms was Professor of geometry in Gresham College London, and afterwards Savilian Professor of astronomy at Oxford, where he died in the year 1630.

(24.) On the first publication of Napier's logarithms, Briggs immediately applied himself to study and improvement of them; and he soon saw that it would be of advantage to change the scale; so that the logarithm of 1 being Napier's form, the logarithm of 10 might be that of 100, 2; of 1000, 3, and so on; the logarithms of the same numbers, according to Napier's construction, were 2,302585, 4,605170, &c. This improvement Briggs communicated both to the public in his lectures, and to Napier himself, who afterwards said, he had also thought of the same thing; as from the following extract translated from the preface to Briggs's *Arithmetica Logarithmica*, I can not but see, that these logarithms were first proposed by him, when the excellent Baron Clifton published in his *Admiranda Curæ* when I explained the doctrine of the logarithms at Gresham College, in London, I said, that it would be much more convenient to have the logarithm of the sine totus being 0 (as in the *Arithmetica*), if the logarithm of the radius (or said radius, namely of 10, 44, 217, were 100, 200, &c. Concerning this, I presently wrote to the said Baron, and as the Baron of the year following would permit, I went to him, where, being kindly received by him, and of his own accord, that when we began to talk about the invention of them, he said, that formerly he had thought of it, and wished it; but he did not publish it, that was all; and I still more time of his life, and he did wait till he had made others more convenient, as to the name of the change, he thought it would be equivalent, not to be said by the logarithm and radius, &c. the logarithm of radius could not but acknowledge was made

rejecting those I had before prepared, and, at his exhortation, to calculate these, next summer I went to Edinburgh, to join the principal of them; and should be glad to do the same the third summer, if God would spare him so long."

It appears that Briggs was the inventor of the present scale of logarithms, in which the radix is 10, and a part of 100, &c. the same, which Napier had in them, advising Briggs to begin at the lowest, and make the logarithms, or artificial as Napier had also called them, to include the natural numbers, instead of those which made no alteration in the figures called Briggs's logarithms, but only in the signs, changing them from negative; for, according to Briggs's first logarithms of 1001, 101, 11, 1, 10, &c. would have been +3, +2, +1, -2, -3, &c. but, in conformity to the use of Napier, they were made -3, -2, -1, +2, +3, &c. which is a change of no importance, as the scale of the system is in either case. And the reason why he at first rejected what he had made, and began anew, was probably because he adapted his new logarithms to arcs, instead of the round numbers, and not from their being logarithmic, as were those of Napier. About the year 1618, Briggs published a thousand logarithms to eight places of figures, under the title of *Logarithmice Canon*. And, in 1624, he published his *Aritmetica Logarithmica*, a stupendous work for so short a time, containing the logarithms of 10,000 natural numbers, to 14 places besides the index; namely, from 1 to 100,000; together with the differences of the logarithms; and in this work the logarithms were calculated to the system which had been agreed upon between him and the first inventor: that is, the same as the system, which we employ at the present time.

After the publication of the *Aritmetica Logarithmica*, ADRIAN VLACQ, or FLACK, the intermediate 70 chiliads, and reprinted it at Gouda, in Holland; thus making the logarithms of all numbers, from 1 to 100,000; but only to ten places of figures. He added a table of artificial sines, tangents, &c. to every minute of the quadrant. VLACQ himself also lived to complete a table of logarithmic sines and tangents, for every degree of the quadrant, to 14 places, besides the index; together with the logarithmic sines, and tangents, to 15 places, besides the index; and the tangents and secants for the same to 15 places, besides the index. These tables were printed at Gouda, under the direction of ADRIAN VLACQ, and nearly finished off before his death.

But the death of the author, which happened in 1630, prevented him from completing the tables, and uses of them. However, the secretary of this office, he recommended, when he was dying, his friend HENRY GELLIBRAND, then

professor of astronomy in Gresham college; who added a preface, and the application of the logarithms to plane and spherical trigonometry, &c. The work was published in 1633, under the title of *Trigonometria Britannica*; and besides the arcs in degrees, and contents of degrees, it has another column, containing the minutes and seconds, answering to the several centims in the first column.

(29.) In the same year, VLACQ printed at Gouda his *Trigonometria Artificialis; sive Magnus Canon Triangulorum Logarithmicus, ad Decadas Secundarum Scrupulorum constructus*. This work contains the logarithmic sines and tangents to 10 places of figures, with their differences, for every 10 seconds in the quadrant. To them is also added Briggs's table of the first 20,000 logarithms; but carried only to 10 places of figures, besides the index, with their differences. The whole is preceded by a description of the tables, and the application of them to plane and spherical trigonometry, chiefly extracted from Briggs's *Trigonometria Britannica*, mentioned above.

(30.) GELLIBRAND published also, in 1635, *An Institution Trigonometrical*, containing the logarithms of the first 10,000 numbers, with the natural sines, tangents, and secants, and the logarithmic sines and tangents for degrees and minutes, all to 7 places of figures, besides the index; as also other tables proper for navigation, with the uses of the whole.

(31.) Having now given some account of such works on logarithms, as seem most celebrated with their first discovery, and subsequent improvement, we shall pass over many others, some of which, however, have been held in high repute, both for their accuracy, and the extent to which the tables have been carried. As, however, even the arrangement of the logarithms, in the tables, has received considerable improvements, since the days of Napier, it may be proper to mention, that they were first reduced to the most convenient form, by JOHN NEWTON, in his *Trigonometria Britannica*, published at London in 1688.

(32.) Among the tables of logarithms, which have been published of late years, in this country, there are two works most deservedly in repute, both for accuracy, and convenience of arrangement: These are, DR HUTTON's *Mathematical Tables, containing Common, Hyperbolic, and Logarithmic Logarithms, &c.* and, TAYLOR's *Tables of Logarithms of all numbers, from 1 to 101000; and of the Sines, and Tangents, to every second of the quadrant*. Several very accurate and well arranged collections of tables of logarithms have also been lately printed in France; one, which deserves to be particularly mentioned, is CALLET's *Portative edition of Tables Portatives de Logarithms*. These contain the logarithms of numbers, from 1 to 108000, and the logarithmic sines, and tangents, for every second, in the first 5 degrees, and for every 10 seconds of the remaining degrees of the quadrant; and also for every 1000th part of the arc, according to the new centesimal division of the quadrant: The logarithms are to 7 decimal places.

(33.) But a more extensive collection of logarithmic tables, than any we have yet mentioned, was begun in France, in 1794, under the direction of C. PRONY, who engaged, "not only to compute

tables, which should leave nothing farther to be desired, with regard to accuracy; but to make them the most extended, and most striking monument of calculation, which had ever been executed, or even imagined." In preparing this work, C. Prony availed himself of the advantage to be derived from the division of labour, by means of which, the greatest perfection of workmanship is obtained in the arts, with the least expence of money and time. By the united labour of C. Prony, and his assistants, who were divided into three classes, two M. S. copies of the tables were prepared; these composed 17 volumes, large folio, and contained

1. An introduction, consisting of an exposition of the analytical formulæ, the use of the trigonometrical table; and a number of auxiliary tables.
2. The natural sines for every 10000th part of the quadrant, calculated to 25 places of decimals, with 7 or 8 columns of differences; to be published with 22 decimals, and 5 columns of differences.
3. The logarithms of these sines, calculated to 24 decimals, with 5 columns of differences.
4. The logarithms of the ratios of the sines to the arcs, for the first five thousand 10000th parts of the quadrant, calculated to 14 decimals, with 3 columns of differences.
5. The logarithms of the tangents, corresponding with the logarithms of the sines.
6. The logarithms of the ratios of the tangents to the arcs, calculated like those in the 4th article.
7. Logarithms of numbers, from 1 to 100000, calculated to 19 places of decimals.
8. The logarithms from 100000 to 200000, calculated to 24 decimals, in order to be published to 12 decimals, and 3 columns of differences.

This immense work, which was begun to be printed at the expence of the French government, was suspended at the fall of the assignats, and was not resumed in 1801; since which period, we have not heard of its farther progress.

### SECT. III. The CONSTRUCTION of LOGARITHMS.

(34.) FROM the general explanation which has been given of the nature of logarithms, in Sect. 1, it is not difficult to see, how we may find the logarithms of as many numbers as we please. For the arithmetical series 0, 1, 2, 3, 4, &c. being assumed to denote the logarithms of the geometrical series

1, 10, 100, 1000, 10000, &c.

if we find any number of arithmetical proportionals, between every two terms of the former; and an equal number of geometrical proportionals, between the corresponding terms of the latter; these arithmetical proportionals will be the logarithms of the corresponding geometrical proportionals.

(35.) The logarithms thus found will not indeed correspond, exactly, to any term in the series of whole numbers 2, 3, 4, 5, &c. but proceeding upon the same principle, the logarithms of these may be also found, as in the following example, where it is proposed to determine the logarithm of the number 9. And as the inserting of two, or more, geometrical proportionals, between any two given numbers, would require the extraction of the cube, or some higher root, we

shall carry on the operation, by inserting a mean, which may be done by the extraction of the square root.

(36.) Because the log. of 1 is 0, and 10 is 1, we are to find an arithmetical mean between 0 and 1; and a geometrical mean

between 1 and 10; the former will be  $\frac{0+1}{2} = \frac{1}{2}$

and the latter  $\sqrt{1 \times 10} = \sqrt{10} = 3.1622777$ . Here the log. of 3.1622777 is  $\frac{1}{2}$ . Again, let an arithmetical mean be found between  $\frac{1}{2}$  and 1, the log. of 10; and a geometrical mean between 3.1622777, and 10; the former will be  $\frac{\frac{1}{2}+1}{2} = \frac{1.5}{2} = .75$ ; and the latter  $\sqrt{10 \times 3.1622777} = 5.6234132$ . Thus the log. of 5.6234132 is  $\frac{1.5}{2} = .75$ . For a third operation, an arithmetical mean be found between  $.75$  and 1, the log. of 10; and a geometrical mean between 5.6234132, and 10; the former will be  $\frac{.75+1}{2} = .875$ ; and the latter  $\sqrt{10 \times 5.6234132} = 7.4989422$ . Thus the log. of 7.4989422 is  $.875$ .

4th operation. Let an arithmetical mean be found between  $.875$  and 1, the log. of 10; and a geometrical mean between 7.4989422, and 10; the former will be  $\frac{.875+1}{2} = .9375$ ; and the latter  $\sqrt{10 \times 7.4989422} = 8.6596431$ . Thus the log. of 8.6596431 is  $.9375$ .

5th operation. Let an arithmetical mean be found between  $.9375$  and 1, the log. of 10; and a geometrical mean between 8.6596431, and 10; the former will be  $\frac{.9375+1}{2} = .96875$ ; and the latter  $\sqrt{10 \times 8.6596431} = 9.3325437$ . Thus the log. of 9.3325437 is  $.96875$ .

6th operation. As the geometrical mean exceeds 9, let there now be found an arithmetical mean between  $.96875$  and 1, the log. of 10; and a geometrical mean between 9.3325437, and 10; the former will be  $\frac{.96875+1}{2} = .984375$ ; and the latter  $\sqrt{10 \times 9.3325437} = 9.6875$ .

7th operation. Let an arithmetical mean be found between  $.984375$  and 1, the log. of 10; and a geometrical mean between 9.6875, and 10; the former will be  $\frac{.984375+1}{2} = .9921875$ ; and the latter  $\sqrt{10 \times 9.6875} = 9.84375$ .

8th operation. Let an arithmetical mean be found between  $.9921875$  and 1, the log. of 10; and a geometrical mean between 9.84375, and 10; the former will be  $\frac{.9921875+1}{2} = .99609375$ ; and the latter  $\sqrt{10 \times 9.84375} = 9.921875$ .

9th operation. Let an arithmetical mean be found between  $.99609375$  and 1, the log. of 10; and a geometrical mean between 9.921875, and 10; the former will be  $\frac{.99609375+1}{2} = .998046875$ ; and the latter  $\sqrt{10 \times 9.921875} = 9.9609375$ .

10th operation. Let an arithmetical mean be found between  $.998046875$  and 1, the log. of 10; and a geometrical mean between 9.9609375, and 10; the former will be  $\frac{.998046875+1}{2} = .9990234375$ ; and the latter  $\sqrt{10 \times 9.9609375} = 9.98046875$ .

11th operation. Let an arithmetical mean be found between  $.9990234375$  and 1, the log. of 10; and a geometrical mean between 9.98046875, and 10; the former will be  $\frac{.9990234375+1}{2} = .99951171875$ ; and the latter  $\sqrt{10 \times 9.98046875} = 9.990234375$ .

12th operation. Let an arithmetical mean be found between  $.99951171875$  and 1, the log. of 10; and a geometrical mean between 9.990234375, and 10; the former will be  $\frac{.99951171875+1}{2} = .999755859375$ ; and the latter  $\sqrt{10 \times 9.990234375} = 9.9951171875$ .

13th operation. Let an arithmetical mean be found between  $.999755859375$  and 1, the log. of 10; and a geometrical mean between 9.9951171875, and 10; the former will be  $\frac{.999755859375+1}{2} = .9998779296875$ ; and the latter  $\sqrt{10 \times 9.9951171875} = 9.99755859375$ .

14th operation. Let an arithmetical mean be found between  $.9998779296875$  and 1, the log. of 10; and a geometrical mean between 9.99755859375, and 10; the former will be  $\frac{.9998779296875+1}{2} = .99993896484375$ ; and the latter  $\sqrt{10 \times 9.99755859375} = 9.998779296875$ .

15th operation. Let an arithmetical mean be found between  $.99993896484375$  and 1, the log. of 10; and a geometrical mean between 9.998779296875, and 10; the former will be  $\frac{.99993896484375+1}{2} = .999969482421875$ ; and the latter  $\sqrt{10 \times 9.998779296875} = 9.9993896484375$ .

16th operation. Let an arithmetical mean be found between  $.999969482421875$  and 1, the log. of 10; and a geometrical mean between 9.9993896484375, and 10; the former will be  $\frac{.999969482421875+1}{2} = .9999847412109375$ ; and the latter  $\sqrt{10 \times 9.9993896484375} = 9.99969482421875$ .

17th operation. Let an arithmetical mean be found between  $.9999847412109375$  and 1, the log. of 10; and a geometrical mean between 9.99969482421875, and 10; the former will be  $\frac{.9999847412109375+1}{2} = .99999237060546875$ ; and the latter  $\sqrt{10 \times 9.99969482421875} = 9.999847412109375$ .

18th operation. Let an arithmetical mean be found between  $.99999237060546875$  and 1, the log. of 10; and a geometrical mean between 9.999847412109375, and 10; the former will be  $\frac{.99999237060546875+1}{2} = .999996185302734375$ ; and the latter  $\sqrt{10 \times 9.999847412109375} = 9.9999237060546875$ .

19th operation. Let an arithmetical mean be found between  $.999996185302734375$  and 1, the log. of 10; and a geometrical mean between 9.9999237060546875, and 10; the former will be  $\frac{.999996185302734375+1}{2} = .9999980926513671875$ ; and the latter  $\sqrt{10 \times 9.9999237060546875} = 9.99996185302734375$ .

20th operation. Let an arithmetical mean be found between  $.9999980926513671875$  and 1, the log. of 10; and a geometrical mean between 9.99996185302734375, and 10; the former will be  $\frac{.9999980926513671875+1}{2} = .99999904632568359375$ ; and the latter  $\sqrt{10 \times 9.99996185302734375} = 9.999980926513671875$ .

21st operation. Let an arithmetical mean be found between  $.99999904632568359375$  and 1, the log. of 10; and a geometrical mean between 9.999980926513671875, and 10; the former will be  $\frac{.99999904632568359375+1}{2} = .999999523162841796875$ ; and the latter  $\sqrt{10 \times 9.999980926513671875} = 9.9999904632568359375$ .

22nd operation. Let an arithmetical mean be found between  $.999999523162841796875$  and 1, the log. of 10; and a geometrical mean between 9.9999904632568359375, and 10; the former will be  $\frac{.999999523162841796875+1}{2} = .9999997615814208984375$ ; and the latter  $\sqrt{10 \times 9.9999904632568359375} = 9.99999523162841796875$ .

now proceed to explain, by means of the principles of the common algebraic analysis, in the following manner.

(39.) Let  $r$  denote any positive number whatever, different from unity. Then, by assuming proper exponents, the powers of  $r$  may become equal to all positive numbers whatever, whether these numbers be whole or fractional. Thus if  $r=2$ , we have  $2^0=1, 2^1=2, 2^2=4, 2^3=8, 2^4=16, &c.$  as to the intermediate numbers 3, 5, 6, 7, &c. they may be expressed, at least nearly, by fractional powers of 2. Thus,

$2^{1.5850} \approx 3, 2^{2.3219} \approx 5, 2^{2.5850} \approx 6, 2^{2.8073} \approx 7, &c.$   
So also the powers of 10 may become, either exactly, or nearly, equal to all positive numbers whatever. Thus,

$10^0 = 1$	$10^{.7781} = 6$
$10^{.3010} = 2$	$10^{.8451} = 7$
$10^{.4771} = 3$	$10^{.9031} = 8$
$10^{.6021} = 4$	$10^{.9542} = 9$
$10^{.6990} = 5$	$10^1 = 10$

(40.) In general, if  $a$  denote any positive number; it is sufficiently evident, that it is possible to conceive a corresponding number  $A$ , such, that  $r^A = a$ ; and  $A$ , that is the exponent of  $r$ , which gives a power equal to  $a$ , is called the logarithm of  $a$ .

(41.) From this manner of defining logarithms, we readily derive all their properties. For  $a$ , and  $b$  denoting any two numbers; also  $A$  and  $B$  their logarithms; we have  $r^A = a$ , and  $r^B = b$ , therefore

$$r^A \times r^B = ab; \text{ but } r^A \times r^B = r^{A+B};$$

therefore  $A+B$  is the logarithm of  $ab$ ; that is, the sum of the logarithms of any two numbers is equal to the logarithm of the product. Again,

$$\frac{r^A}{r^B} = \frac{a}{b}, \text{ but } \frac{r^A}{r^B} = r^{A-B}; \text{ therefore, } A-B$$

is the logarithm of  $\frac{a}{b}$ ; that is, the difference of the logarithms of two numbers is equal to the logarithm of their quotient.

If we resume the equation  $r^A = a$  we have

$$r^{nA} = a^n, \text{ therefore } nA \text{ is the logarithm of } a^n;$$

and since  $n$  may be either a whole number, or a fraction, it follows, that the logarithm of any power of a number is equal to the logarithm of that number, multiplied by the exponent of the power. Also, that the logarithm of any root of a number is equal to the logarithm of the number divided by the exponent of the root.

(42.) There may be various systems of logarithms, according to the different values which may be given to the number  $r$ , which is called the radical number of the system. In the common system of the logarithms,  $r$  is 10; but in the system of Napier it is 2.7182818. It is evident from the definition given in § 40, that the logarithm of the radical number in every system must be unity. In different systems, the logarithms of the same number are always to one another in a

constant ratio. Suppose that  $A$  is the logarithm of the number  $a$ , the radical number of the system being  $r$ ; and  $A'$  the logarithm of the same number, according to another system, the radical number of which is  $r'$ . Then  $r^A = a$ , and

$$r'^{A'} = a; \text{ therefore } r^A = r'^{A'}, \text{ and } \frac{r^A}{r'^{A'}} = 1;$$

thus it appears, that the fraction  $\frac{r^A}{r'^{A'}}$  depends only on  $r$ , and  $r'$ ; and therefore must be the same, whatever be the value of the number  $a$ .

(43.) Hence it follows, that if the logarithms of numbers according to any one system be given, the logarithms of the same numbers, according to any other proposed system may be readily found. Thus, if the given system be the common logarithms, the radical number of which is 10; and it be required to find the logarithm of any number  $a$ , according to Napier's system; of which the radical number is 2.7182818; let  $A$  denote the logarithm of  $a$ , according to the former system; and  $x$  the logarithm of  $a$ , according to the latter. Then, by substituting 10, and 2.7182818, for  $r$ , and  $r'$ ; also  $x$  for  $A'$ , in the last equation of

§ 42, we have  $10^x = 2.7182818^A$ , and, from the nature of logarithms,

$$\frac{A}{x} \times \log. 10 = \log. 2.7182818,$$

§ 41: Hence

$$x = \frac{\log. 10}{\log. 2.7182818} \times A = \frac{1}{.4342945} \times A = 2.3025851 \times A. \text{ Thus it appears, that Napier's logarithm of any number is equal to the common logarithm of the same number, multiplied by } 2.3025851; \text{ or divided by } .4342945.$$

(44.) Let us now denote any number whatever by  $y$ , and its logarithm by  $x$ ; then,  $r$  representing as before the radical number of the system, the relation between a number and its logarithm is represented by the algebraic equation  $r^x = y$ .

This equation suggests two subjects of enquiry, both capable of being resolved by means of the algebraic method of analysis. These are: First, To determine  $y$  when  $x$  is given; or to determine the number which corresponds to a given logarithm. Secondly, To determine  $x$  when  $y$  is given; that is, to determine the logarithm corresponding to a given number.

(45.) We proceed to the first subject of enquiry, namely, to find an algebraic expression for  $y$ , in terms of  $x$ , and  $r$ ; or to express, generally, any number, by means of its logarithm, and the base, or radical numbers of the system: for this purpose, let us assume

$$r^x = A + Bx + Cx^2 + Dx^3 + Ex^4 + \&c.$$

here  $A, B, C, D, \&c.$  are supposed to be coefficients independent of  $x$ . Let  $z$  denote any other quantity; then in like manner, we have

$$r^z = A + Bz + Cz^2 + Dz^3 + Ez^4 + \&c.$$

Taking now the difference between the assumed equations, and dividing both sides of the result by  $z-x$ , we have

$$\frac{r^x - r^z}{x - z} = \frac{B(x-z) + C(x^2-z^2) + D(x^3-z^3) + \&c.}{x-z}$$

Now it is well known that each of the quantities  $x-z, x^2-z^2, x^3-z^3, \&c.$  which compose the latter part of this equation, is divisible by  $x-z$ ; therefore, the several divisions being actually effected, the last equation may otherwise be expressed thus  $\frac{r^x - r^z}{x - z} = B + C(x+z) + D(x^2+xz+z^2) + E(x^3+x^2z+xz^2+z^3) + \&c.$

(46.) That we may expand the first part of this equation into the form of a series, let us express the numerator  $r^x - r^z$  thus,  $r^z(r^{x-z} - 1)$ ; then, putting  $1+a$  for  $r$ , we have

$$\frac{r^x - r^z}{x - z} = \frac{r^z}{x - z} \left\{ (1+a)^{x-z} - 1 \right\}$$

Now, by the binomial theorem, the quantity  $(1+a)^{x-z}$ , when expanded into a series, is  $1 + \frac{(x-z)a}{1} + \frac{(x-z)(x-z-1)a^2}{1 \cdot 2} + \frac{(x-z)(x-z-1)(x-z-2)a^3}{1 \cdot 2 \cdot 3} + \&c.$

Therefore, subtracting unity from this series, and dividing each of the remaining terms by  $x-z$ , as indicated by the latter part of the last equation,

$$\text{we have } \frac{r^x - r^z}{x - z} = r^z \left( a + \frac{x-z-1}{2} a^2 + \frac{(x-z-1)(x-z-2)}{3} a^3 + \&c. \right)$$

Hence it appears that

$$r^z \left( a + \frac{x-z-1}{2} a^2 + \frac{(x-z-1)(x-z-2)}{3} a^3 + \frac{(x-z-1)(x-z-2)(x-z-3)}{4} a^4 + \&c. \right) = B + C(x+z) + D(x^2+xz+z^2) + E(x^3+x^2z+xz^2+z^3) + \&c.$$

This last equation, by supposing  $z = x$ , becomes

$$r^x \left( a - \frac{a^2}{2} + \frac{a^3}{3} - \frac{a^4}{4} + \frac{a^5}{5} - \&c. \right) = B + 2Cx + 3Dx^2 + 4Ex^3 + 5Fx^4 + \&c.$$

and substituting for  $r^x$  the series  $A + Bx + Cx^2 + Dx^3 + Ex^4 + \&c.$  also, putting, for the sake of brevity,

$$a - \frac{a^2}{2} + \frac{a^3}{3} - \frac{a^4}{4} + \frac{a^5}{5} - \&c. = m$$

we find  $\Delta m + Bmx + Cmx^2 + Dmx^3 + Emx^4 + \&c. = B + 2Cx + 3Dx^2 + 4Ex^3 + 5Fx^4 + \&c.$

Hence, by putting the coefficients of the like powers of  $x$  in each series equal to one another,

$$\text{we find } B = Am, C = \frac{Bm}{2}, D = \frac{Cm}{3}, E = \frac{Dm}{4},$$

$$F = \frac{Em}{5}, \&c.$$

Thus we have obtained a series of equations, by which all the coefficients, except  $A$ , the first, are determined. It is however readily obtained from the assumed equation  $r^x = A + Bx + Cx^2 + \&c.$

by taking  $x = 0$ ; for then the first part of the equation, or  $r^x$ , becomes unity, and all the terms of the second part vanish, except  $A$ ; thus  $A = 1$ ,

$$B = \frac{m}{1}, C = \frac{m^2}{1 \cdot 2}, D = \frac{m^3}{1 \cdot 2 \cdot 3}, E = \frac{m^4}{1 \cdot 2 \cdot 3 \cdot 4},$$

$$F = \frac{m^5}{1 \cdot 2 \cdot 3 \cdot 4 \cdot 5}, \&c. \text{ and by substituting these values in the assumed series, we find } y = r^x = 1 + \frac{mx}{1} + \frac{m^2x^2}{1 \cdot 2} + \frac{m^3x^3}{1 \cdot 2 \cdot 3} + \frac{m^4x^4}{1 \cdot 2 \cdot 3 \cdot 4} + \&c.$$

(47.) Thus we have obtained a series, for  $y$  which will always converge, whatever be the values of the quantities  $m$  and  $x$ . Before, however, the series can be applied to practice, it will be necessary to compute the value of  $m$ , which, by putting  $r = 1$  for its value  $a$ , is equal to this other series

$$\frac{r-1}{1} + \frac{(r-1)^2}{2} + \frac{(r-1)^3}{3} + \frac{(r-1)^4}{4} + \frac{(r-1)^5}{5} - \&c.$$

But as this last series will not converge, unless  $r = 1$  be less than unity, it will be necessary to have recourse to another method of obtaining its sum, than by the mere addition of its terms.

(48.) Resuming, therefore, the equation

$$r^x = 1 + \frac{mx}{1} + \frac{m^2x^2}{1 \cdot 2} + \frac{m^3x^3}{1 \cdot 2 \cdot 3} + \frac{m^4x^4}{1 \cdot 2 \cdot 3 \cdot 4} + \&c.$$

let us suppose  $x = 1$ ; and we have

$$r = 1 + \frac{m}{1} + \frac{m^2}{1 \cdot 2} + \frac{m^3}{1 \cdot 2 \cdot 3} + \frac{m^4}{1 \cdot 2 \cdot 3 \cdot 4} + \&c.$$

This series gives the value of  $r$ , when  $m$  is known. Therefore, if we suppose a system of logarithms to be such, that  $m = 1$ , and put  $e$  for the radical number of that system, we have

$$e = 1 + \frac{1}{1} + \frac{1}{1 \cdot 2} + \frac{1}{1 \cdot 2 \cdot 3} + \frac{1}{1 \cdot 2 \cdot 3 \cdot 4} + \&c.$$

and by reducing a sufficient number of the terms of this series to decimal fractions, and taking their sum, we readily find  $e = 2.7182818$ , nearly. Now, as  $e$  is the radical number of a system, in which  $m = 1$ , for the same reason that

$$r^x = 1 + \frac{mx}{1} + \frac{m^2x^2}{1 \cdot 2} + \frac{m^3x^3}{1 \cdot 2 \cdot 3} + \&c.$$

we have

$$e^x = 1 + \frac{x}{1} + \frac{x^2}{1 \cdot 2} + \frac{x^3}{1 \cdot 2 \cdot 3} + \frac{x^4}{1 \cdot 2 \cdot 3 \cdot 4} + \&c.$$

and as this must be true, whatever be the value of  $x$ , we may suppose  $x = m$ ; hence we have

$$e^m = 1 + \frac{m}{1} + \frac{m^2}{1 \cdot 2} + \frac{m^3}{1 \cdot 2 \cdot 3} + \frac{m^4}{1 \cdot 2 \cdot 3 \cdot 4} + \&c.$$

which last series we have already found to be  $= r$ , therefore  $e^m = r$ ; and, taking the logarithms of both sides of the equation,  $m \times \log. e$

$$= \log. r, \text{ hence at last we find } m = \frac{\log. r}{\log. e}; \text{ or,}$$

since the logarithm of the radical number of any system is unity,  $m = \frac{1}{\log. e}$ . Let this value of

### III. LOGARITHMS. 327

substituted in the series of § 46. and we  
 $r^x = 1 + \frac{x}{1 \cdot \log. e} + \frac{x^2}{1 \cdot 2 \cdot (\log. e)^2} +$

$\frac{x^3}{1 \cdot 2 \cdot 3 \cdot (\log. e)^3} + \&c.$  where it is to be obser-

$x$ , and  $\log. e$  are logarithms belonging to the system, and by this series a number may be found corresponding to any given logarithm whatever.

We are next to investigate a series, which expresses the logarithm, by means of the number, which may be readily obtained, if we recollect in § 47. we found

$$\frac{r-1}{2} - \frac{(r-1)^2}{3} + \frac{(r-1)^3}{4} - \frac{(r-1)^4}{5} + \&c.$$

in § 48. we also found  $\log. r = m \times$   
 hence we have

$$= \log. e \left\{ \frac{r-1}{2} - \frac{(r-1)^2}{3} + \frac{(r-1)^3}{4} - \frac{(r-1)^4}{5} + \&c. \right\}$$

Now, this equation must hold

whatever be the value of  $r$ ; we may therefore substitute  $1 + y$  for  $r$ , and consequently  $y$  for  $r-1$ ; where  $y$  denotes any number whatever; we find

$$-y) = \log. e \left( y - \frac{y^2}{2} + \frac{y^3}{3} - \frac{y^4}{4} + \&c. \right)$$

We have found a series, which expresses the logarithm of any number whatever, by means of the number itself, and the logarithm of another number  $e$ .

The series which we have just now found is of little or no use in the actual construction of logarithms, unless  $y$  be a small fraction; we may however derive from it another series, much adapted to that purpose, in the following

Let us put  $M$  for  $\log. e = \frac{1}{m}$ . Then, because

$$(1+y) = M \left( y - \frac{y^2}{2} + \frac{y^3}{3} - \frac{y^4}{4} + \&c. \right)$$

substitute  $-y$  for  $+y$ , we shall have

$$(1-y) = M \left( -y - \frac{y^2}{2} - \frac{y^3}{3} - \frac{y^4}{4} - \&c. \right)$$

Subtracting this last equation from the former,

$$(1+y) - \log. (1-y) = 2M \left( y + \frac{y^3}{3} + \frac{y^5}{5} + \&c. \right)$$

But, from the nature of logarithms,

$$(1+y) - \log. (1-y) = \log. \frac{1+y}{1-y}.$$

Therefore

$$\frac{1+y}{1-y} = 2M \left( y + \frac{y^3}{3} + \frac{y^5}{5} + \frac{y^7}{7} + \&c. \right)$$

Let us put  $z$  for  $\frac{1+y}{1-y}$  and therefore  $\frac{z-1}{z+1}$

$$\text{for } y, \log. z = 2M \left\{ \frac{z-1}{z+1} + \frac{1}{3} \left( \frac{z-1}{z+1} \right)^3 + \frac{1}{5} \left( \frac{z-1}{z+1} \right)^5 + \&c. \right\}$$

and by a proper application of this series, which always converges, the logarithms of numbers may be found with great facility.

(51.) For example, let us suppose that it is required to compute the logarithm of 2; then because  $z = 2$ , we have  $\frac{z-1}{z+1} = \frac{1}{3}$ , therefore

$$\log. 2 = 2M \left( \frac{1}{3} + \frac{1}{3^3 \cdot 3} + \frac{1}{5 \cdot 3^5} + \frac{1}{7 \cdot 3^7} + \&c. \right)$$

This series converges very fast, for the 8th term does not exceed  $\frac{1}{100000000}$ ; by redu-

cing, therefore, the first 7 terms to decimals, and taking their sum, we find

$\log. 2 = .3465736 \times 2M = .6931472 \times \log. e$ ; but we cannot find the absolute value of the logarithm of 2, without previously assigning the particular system, to which the logarithm required is to belong. The most simple hypothesis we can assume is, that  $\log. e = 1$ ; hence we have  $\log. 2 = .6931472$ . This system, which corresponds

to the equation  $y = e^x$ , (where  $y$  denotes a number,  $x$  its logarithm, and  $e$ , the base of the system, = 2.7182818) is the same as that first adopted by NAPIER; the logarithms of which are also called *Hyperbolic*, for the reason already assigned in § 21.

(52.) It appears therefore, from § 49 and § 50, that NAPIER'S, or the *Hyperbolic* logarithm of any number  $z$ , is equal to either of these two series

$$\frac{z-1}{1} - \frac{(z-1)^2}{2} + \frac{(z-1)^3}{3} - \frac{(z-1)^4}{4} + \&c.$$

$$2 \left\{ \frac{z-1}{z+1} + \frac{1}{3} \left( \frac{z-1}{z+1} \right)^3 + \frac{1}{5} \left( \frac{z-1}{z+1} \right)^5 + \&c. \right\}$$

and that the logarithm of  $z$ , according to any other system, is equal to the hyperbolic logarithm of the same number, multiplied by a certain constant quantity  $M = \log. e$ ; which, being peculiar to that system, has been called by writers on logarithms the *Modulus* of the system.

Now it appears, by recurring to § 47. that  $\frac{1}{\log. e}$ , or  $m$ , is equal to this series

$$r-1 - \frac{(r-1)^2}{2} + \frac{(r-1)^3}{3} - \&c.$$

which is evidently the hyperbolic logarithm of  $r$ , the radical number of the system, hence it follows, that the modulus of any system of logarithms, is the reciprocal of the hyperbolic logarithm of the radical number of that system.

(53.) In the common system of logarithms, the radical

# L O G A R I T H M S.

number being 10, the *modulus* of the system may be found by computing the hyperbolic logarithm of 10. Now by the latter series of § 52, we have

$$\text{hyp. log. } 10 = 2 \left\{ \frac{9}{11} + \frac{1}{3} \left( \frac{9}{11} \right)^3 + \frac{1}{5} \left( \frac{9}{11} \right)^5 + \&c. \right\}$$

But, as this series converges too slowly to be of any use, we may find another that converges faster, by considering, that since  $10 = 2 \times 5$ , therefore,  $\log. 10 = \log. 2 + \log. 5$ : Now we have already found hyp. log. 2, it is only necessary, therefore, to compute hyp. log. 5.

(54.) But, in seeking hyp. log. 10, it will be convenient to begin with even a less number than 5; and for this purpose, we shall investigate a rule, by which, the logarithm of any number being supposed given, the logarithm of another number, a little greater, than the given one, may be found with great facility.

Let  $n$  be a number, whose logarithm is given, and  $n + v$  another number, whose logarithm is required; then, since  $n + v = n \left( 1 + \frac{v}{n} \right)$ , it follows, that  $\log. (n + v) = \log. n + \log. \left( 1 + \frac{v}{n} \right)$ . If we now put  $x = 1 + \frac{v}{n}$ , we

have  $x - 1 = \frac{v}{n}$ , and  $x + 1 = 2 + \frac{v}{n}$ , and

therefore,  $\frac{x - 1}{x + 1} = \frac{v}{2n + v}$ . Hence, by substituting  $1 + \frac{v}{n}$  for  $x$  and  $\frac{v}{2n + v}$  for  $\frac{x - 1}{x + 1}$ ,

in the series for the logarithm of  $x$ , found in § 50, we have

$$\log. (n + v) = \log. n + 2 M \left\{ \frac{v}{2n + v} + \frac{1}{3} \frac{v^3}{(2n + v)^3} + \frac{1}{5} \frac{v^5}{(2n + v)^5} + \&c. \right\}$$

which is the series we proposed to investigate.

(55.) To calculate the hyperbolic logarithm of 10, by this series, we may take  $n = 8$  and  $v = 2$ ,

then  $\frac{v}{2n + v} = \frac{2}{18} = \frac{1}{9}$ , and, remarking that

$\log. 8 = 3 \times \log. 2$ , we have

$$\text{hyp. log. } 10 = 3 \times \text{hyp. log. } 2 + 2 \left( \frac{1}{9} + \frac{1}{3} \cdot \frac{1}{9^3} + \frac{1}{5} \cdot \frac{1}{9^5} + \&c. \right).$$

This series converges very fast, so that the three first terms are sufficient to give a result true to the 7th decimal; and accordingly their sum when multiplied by the coefficient 2 will be found = .693147. Now we formerly found hyp. log. 2 = .6931472, § 51, therefore, to the number just

now found, let hyp. log. 8 = 3 by 2.0794416 be added, and the result will be the hyp. log. of 10; the

which, or  $\frac{1}{2.3025851} = .4342945$ , is

of the common system of logarithms

(56.) We may now find the common of 2, for nothing more is necessary, multiply its hyp. log. already found, by 3 *dulus*, .4342945; or divide it by 2 reciprocal of the *modulus*, and, in either find the common logarithm of 2 to The common logarithm of 5 may

found; for since  $5 = \frac{10}{2}$ , we have 1

$10 - \log. 2 = 1 - .3010300 = .6$

(57.) We have investigated a series the logarithm of  $n + v$  may be found of  $n$ ; or the logarithm of  $n$ , from the We shall now investigate another series of which, and the logarithms of any three quantities,  $n - v$ ,  $n$ ,  $n + v$ , of the remaining quantity may be found

Because  $\frac{n^2}{(n - v)(n + v)} = \frac{n^2}{n^2 - v^2}$

$2 \log. n - \log. (n - v) - \log. (n + v) = \log. \frac{n^2}{n^2 - v^2}$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

$x$ . Let us suppose  $\frac{n^2}{n^2 - v^2} =$

# III. IV. LOGARITHMS.

$$\log.(n + 1) = \log.n + \frac{NB^3}{3} + \frac{NB^5}{5}$$

$$\log.n = \log.(n - 1) + \log.(n + 1) + \frac{NC^3}{3} + \frac{NC^5}{5} + \&c.$$

EXAMPLE I. It is required to find the logarithm of 2, to 6 places of figures, by series.

$$n = 2, A = \frac{n - 1}{n + 1} = \frac{1}{3}, \text{ and the cal-}$$

will stand as below.

$$N = .8685890 \quad NA = .2895297$$

$$A^3 = .0321760 \quad \frac{NA^3}{3} = .0107233$$

$$A^5 = .0035944 \quad \frac{NA^5}{5} = .0007149$$

$$A^7 = .0003972 \quad \frac{NA^7}{7} = .0000567$$

$$A^9 = .0000441 \quad \frac{NA^9}{9} = .0000049$$

$$A^{11} = .0000049 \quad \frac{NA^{11}}{11} = .0000004$$

of 2 to six decimals is  $.301030$ .  
Required the common logarithm of 3 to six figures, having given the log. of 2, by series.

$$+ 1 = 3, n = 2, B = \frac{1}{2n + 1} = \frac{1}{5}$$

$$N = .8685890 \quad NB = .1737178$$

$$B^3 = .0069487 \quad \frac{NB^3}{3} = .0023162$$

$$B^5 = .0002779 \quad \frac{NB^5}{5} = .0000556$$

$$B^7 = .0000111 \quad \frac{NB^7}{7} = .0000016$$

$$\text{dd log. 2.} \quad = \frac{.1760912}{.3010299}$$

log. of 3 to six places is  $.4771211$   
withms of 2 and 3 being found, we hence

$$.4 = 2 \log. 2 = .6020600$$

$$.5 = \log. 10 - \log. 2 = .6989700$$

$$.6 = \log. 2 + \log. 3 = .7781511$$

$$.8 = 3 \log. 2 = .9030900$$

$$.9 = 2 \log. 3 = .9542422$$

Having given the logarithms of 6, and 8, derived from these to determine the loga-

7, to 6 places of figures, by the third

$$n = 7, C = \frac{1}{2n - 1} = \frac{1}{9}$$

III. PART. I.

$$N = .8685890, NC = .0089548$$

$$NC^3 = .0000010 \quad \frac{NC^3}{3} = .0000003$$

$$\log. 6 = .7781513$$

$$\log. 8 = .9030900$$

---

$$2)1.6901961$$

$$\log. \text{ of } 7 = \frac{.8450980}{.845098}$$

Instead of finding the logarithm of 7 from the logarithms of 6 and 8, we might have otherwise found it from those of 5 and 6, or those of 8 and 9; in the former case we should have had  $n - 1 = 5$ ,  $n = 6$ ,  $n + 1 = 7$ , and  $C = \frac{1}{7}$ ; and therefore

$$\log. 7 = 2 \log. 6 - \log. 5 - \left\{ \frac{N}{7} + \frac{N}{3 \cdot 7^3} + \frac{N}{5 \cdot 7^5} + \&c. \right\}$$

and in the latter case  $n - 1 = 7$ ,  $n = 8$ ,  $n + 1 = 9$ ,  $C = \frac{1}{127}$ ; and hence

$$\log. 7 = 2 \log. 8 - \log. 9 - \left\{ \frac{N}{127} + \frac{N}{3 \cdot 127^3} + \&c. \right\}$$

(60.) Proceeding in this manner, we may find the logarithms of as many numbers as we please, by deriving them one from another. Thus we have  
 $\log. 12 = \log. 2 + \log. 6$ .

$$2 \log. 11 = \log. 10 + \log. 12 + N \left\{ \frac{1}{241} + \frac{1}{3 \cdot 241^3} + \&c. \right\}$$

$$\log. 14 = \log. 2 + \log. 7.$$

$$2 \log. 13 = \log. 12 + \log. 14 + N \left\{ \frac{1}{327} + \frac{1}{3 \cdot 327^3} + \&c. \right\}$$

and in this way might a table of logarithms be calculated; it would however be necessary to compute the logarithms of the numbers at the beginning of the table, to many more figures than were intended to be retained; because, that at each operation, the last figure of the logarithm is set down only to the nearest figure. But in constructing a table there are many expedients by which the calculations may be abridged; these we cannot here find room to explain; and must therefore refer the curious reader to Dr HUTTON'S Mathematical Tables, where he will meet with ample information on the subject.

## SECT. IV. Of certain CURVES related to LOGARITHMS.

(61.) THE discovery of logarithms suggested to mathematicians the idea of curve lines, which might have similar properties to those numbers; Hence, the origin of the *Logarithmic*, or, as it has been also called, the *Logistic curve*, the nature and properties of which we now proceed to explain.

L O G A R I T H M S. SECT. IV.

PLATE CCIII, fig. 11. Let CD be the logarithmic curve, and AB its base or abscissa, in which be taken any number of points P, P', P'', that the lines AP, AP', AP'', &c. may constitute an arithmetical progression; then, if perpendiculars or ordinates, PM, P'M', P''M'', &c. be drawn, meeting the curve in the points M, M', M'', &c. its nature is such, that the ordinates PM, P'M', P''M'', constitute a geometrical progression. Hence, and from the properties of logarithms, it appears, that the abscissas AP, AP', AP'', &c. may be considered as the logarithms of their corresponding ordinates PM, P'M', P''M'', &c. respectively.

(63.) That we may express the relation between any abscissa, and its corresponding ordinate, by means of an equation, let us put the ordinate at the point A, or AC, = 1; take Ap, a given portion of the abscissa, and put pm, the corresponding ordinate, = a; take pp', p'p'', &c. in the abscissa, equal to one another and to Ap; and let AP = x × Ap; draw the ordinates p'm', p''m'', &c. also PM. Then, from the nature of continued proportionals p'm' = a<sup>x</sup>, p''m'' = a<sup>2x</sup>, &c. to PM, which will be expressed by a<sup>x</sup>; hence, if we put PM = y, we have a<sup>x</sup> = y for the equation of the curve.

(64.) From this equation, as well as by other methods, all the properties of the logarithmic curve may be derived. We shall briefly mention some of the most remarkable.

- I. The base AB is an asymptote to the curve.
- II. If PM be an ordinate to the curve at M, and MQ a tangent at the same point, the subtangent PQ is a constant quantity, and equal to the modulus of the particular logarithmic system, to which the curve belongs.
- III. The curvilinear space, comprehended between any two ordinates AC, PM, is equal to the rectangle contained by PQ the subtangent and PM - AC the difference of the ordinates.

(65.) There is yet another curve, the properties of which are analogous to those of logarithms; namely, the common hyperbola. PLATE CCIII, fig. 12. Let C be its center, and CD, CE, its asymptotes, in either of which, let the points A, A', A'', A''', &c. be taken, so that CA, CA', CA'', CA''', &c. may be continued geometrical proportionals; draw AB, A'B', A''B'', A'''B''', &c. parallel to the other asymptote, meeting the curve in B, B', B'', B''', &c. and join CB, CB', CB'', CB''', &c. Then, it is demonstrated by writers on conics, that the hyperbolic sectors CBB', CBB'', CBB''', &c. are equal to each other; and that the quadrilateral spaces ABB'A', A'B'B''A'', A''B''B'''A''', &c. are all equal to one another, and to each of the sectors. Hence the sectors CBB', CBB'', CBB''', &c. or the quadrilateral figures ABB'A', ABB''A'', ABB'''A''', &c. have equal differences, while their corresponding abscissas CA, CA', CA'', &c. have equal ratios to one another, viz. the ratio of CA to CA'; Thus the former are analogous to the logarithms of the latter.

(66.) Let H be the vertex of the hyperbola, draw HG and HK parallel to the asymptotes, so as to form the rhombus HGCK; then, putting CE = 1, if CP denote any number whatever, and PQ be drawn parallel to the other asymptote, the hyperbolic area KHQP will serve to express the logarithm of CP, according to a system, the modulus of which is denoted by the area of the rhombus CKHG. If the asymptotes contain a right angle, the area of the rhombus will be = 1, and thus the hyperbolic areas will express NAPIER'S or the hyperbolic logarithms. But any system of logarithms whatever may be represented by hyperbolic areas; thus if the asymptotes contain an angle of 25° 44' 25'' 5, the area of the rhombus will be .43429448, &c. viz. equal to the modulus of the common system of logarithms, and therefore the hyperbolic areas equal to the common logarithms.

L O G L O G

**LOG-BOARD**, a sort of table, divided into several columns, containing the hours of the day and night, the direction of the winds, the course of the ship, and all the material occurrences that happen during the 24 hours, or from noon to noon; together with the latitude by observation. From this table the different officers of the ship are furnished with materials to compile their journals, wherein they likewise insert whatever may have been omitted, or reject what may appear superfluous in the log-board.

**LOG-BOOK**, a book into which the contents of the log-board is daily copied at noon, together with every circumstance deserving notice that may happen to the ship, or within her cognizance, either at sea or in a harbour, &c. The intermediate divisions or watches of the log-book, containing four hours each, are usually signed by the commanding officer in ships of war or East-India-men. See NAVIGATION.

**LOGEFOUGEROUSE**, a town of France, in

the dep. of the Vendee; 3 miles S. of Chataigne raye.

**LOGENWASSER**, a river of Silesia, in Naib.  
**\* LOGGATS**, *n. f.* Loggats is the ancient name of a play or game, which is one of the unskilful games enumerated in the 33d statute of Hen VIII. It is the same which is now called kittle-pin in which boys often make use of bones instead of wooden pins, throwing at them with another bone instead of bowling. *Hanmer*.—Did these boys cost no more the breeding, but to play at loggats with them? *Shak*.

**\* LOGGERHEAD**, *n. f.* [*'ogge*, Dutch, *log* and *head*; or rather from *log*, a heavy motioned mafs, as *blockhead*.] A dolt; a blockhead; thickscul.—

Where hast been Hal?  
 —With three or four *loggerheads*, amongst th  
 or four score hogheads. *Shak*.—Says this *logg  
 head*, what have we to do to quench other p  
 ple's fires! *L'Esfrange*.

\* LOGGI

**LOGGERHEAD.** *adj.* [from *loggerhead*.] stupid; doltish.—You *loggerheaded* and un- groom, what! no attendance; *Slovak*.

**LOGGERHEADS, TO FALL TO.** } To scuffle;  
**LOGGERHEADS, TO GO TO.** } to fight with-

**LOGGERS.**—A couple of travellers that took in, *fall to loggerheads* which should be his *L'Esfrange*.

**LOGGIE.** See **LOGIE**.

**LOGGIE EASTER,** a parish of Scotland, in

the counties of Ross and Cromarty, about 7 m. long and 2 broad, 4 miles from the town of Tain. The soil is various, but fertile; yet a considerable part of it is not cultivated. The surface is hilly in the middle. Oats, barley, peas, and potatoes, are the chief crops. The population, in 1791 was 1125; increase 275, since 1755; the number of horses was 600; and of black cattle about 1500, besides some sheep.

**LOG-HILL,** a town of Ireland, in Limerick.

L O G I C.

**DEFINITIONS: and DIVISION, of LOGIC.**

**LOGIC** is defined by Dr Johnson in the following manner:

*SICK. n. f.* [*logique*, French; *logica*, Latin. *et.*] The art of reasoning. One of the sciences.—*Logick* is the art of using reason in our inquiries after truth, and the communication of it to others. *Watts.*—

Talk *logick* with acquaintance, practise rhetoric in your common talk.

*Stak.*

*logick* that left no man any thing which he all his own, they no more looked upon it as of one man, but the case of the king- arden.—

re foam'd rebellious *logick*, cagg'd and sound,

stript fair rhetorick languish'd on the proud.

*Pope.*

**LOGIC** is, by others, more accurately defined, of thinking and reasoning justly, or the or history of the human mind; as it traces the progress of our knowledge from our first and simple conceptions through all their different divisions, and all those numerous deductions that result from variously comparing them one to another.

The object of this science therefore is, To examine the nature of the human mind, and the proper manner of conducting its several powers, in order to attain truth and knowledge. It lays open the errors, which we are apt through inattention to run into; and teaches us how to distinguish between truth, and the appearance of it. It means we become acquainted with the true and power of the understanding; see what is within its reach; where we may attain truth by demonstration; and when we must content with probability.

**LOGIC** is generally divided into four parts, **PERCEPTION, JUDGMENT, REASONING, and METHOD;** which comprehend the whole sense and operations of the human mind.

PART I.

OF PERCEPTION.

is surrounded with a variety of objects, acting differently upon his senses, convey impressions into the mind, and thereby attract the attention and notice of the understanding reflecting too on what passes within us,

we become sensible of the operations of our own minds, and attend to them as a new set of impressions. But in all this there is only bare consciousness. The mind, without proceeding any farther, takes notice of the impressions that are made upon it, and views things in order, as they present themselves one after another. This attention of the understanding to the objects acting upon it, whereby it becomes sensible of the impressions they make, is called by logicians **PERCEPTION**; and the notices themselves, as they exist in the mind, and are there treasured up to be the materials of thinking and knowledge, are distinguished by the name of **IDEAS**. In the article **METAPHYSICS** it will be shown at large, how the mind, being furnished with ideas, contrives to diversify and enlarge its stock: we have here chiefly to consider the means of making known our thoughts to others; that we may not only understand how knowledge is acquired, but also in what manner it may be communicated with the greatest certainty and advantage.

SECT. I. Of WORDS, considered as the SIGNS of our IDEAS.

I. OUR ideas, though manifold and various, are nevertheless all within our own breasts, invisible to others, nor can of themselves be made to appear. But God, designing us for society, and to have fellowship with those of our kind, has provided us with organs fitted to frame articulate sounds, and given us also a capacity of using those sounds as signs of internal conceptions. Hence spring **WORDS** and **LANGUAGE**: for having once pitched upon any sound to stand as the mark of an idea in the mind, custom by degrees establishes such a connection between them, that the appearance of the idea in the understanding always brings to our remembrance the sound or name by which it is expressed; as in like manner the hearing of the sound never fails to excite the idea for which it is made to stand. And thus it is easy to conceive how a man may record his own thoughts, and bring them again into view in any succeeding period of life. For this connection being once settled, as the same sounds will always serve to excite the same ideas; if he can but register his words in the order and disposition in which the present train of his thoughts present themselves to his imagination, it is evident he will be able to recal his thoughts at pleasure, and that too in the very manner of their first appearance. Accordingly we find, that the inventions of writ-

ing and printing, by enabling us to fix and perpetuate such perishable things as sounds, have furnished us with the means of giving a kind of *permanency* to the transactions of the mind, inasmuch that they may be in the same manner subjected to our review as any other objects of nature.

II. But, besides the ability of recording our own thoughts, there is this farther advantage in the use of external signs, that they enable us to communicate our thoughts to *others*, and also to receive information of what passes in *their* breasts. For any number of men, having agreed to establish the same sounds as signs of the same ideas, it is apparent that the repetition of these sounds must excite the like perceptions in each, and create a perfect correspondence of thoughts. When, for instance, any train of ideas succeed one another in my mind, if the names by which I am wont to express them have been annexed by those with whom I converse to the very same set of ideas, nothing is more evident, than that, by repeating those names according to the tenor of my present conceptions, I shall raise in their minds the same course of thought that has taken possession of my own. For by barely attending to what passes within themselves upon hearing the sounds which I repeat, they will also become acquainted with the ideas in my understanding, and have them in a manner laid before their view. So that we here clearly perceive how a man may communicate his sentiments, knowledge, and discoveries to others, if the language in which he converses be extensive enough to mark all the ideas and transactions of his mind. But as this is not always the case, and men are often obliged to invent terms of their own to express new views and conceptions of things; it may be asked, how in these circumstances we can become acquainted with the thoughts of another, when he makes use of words, to which we have never annexed any ideas, and which of course can raise no perceptions in our minds? To unveil this mystery, and give some insight into the foundation, growth, and improvement of language, the following observations will be found of considerable moment.

III. First, that no word can be to any man the sign of an idea, till that idea comes to have a real existence in his mind. For names being only so far intelligible as they denote known internal conceptions; where they have none such to answer them, they are plainly sounds without signification, and of course convey no instruction or knowledge. But no sooner are the ideas to which they belong raised in the understanding, than, finding it easy to connect them with the established names, we can join in any agreement of this kind made by others, and thereby enjoy the benefit of their discoveries. The first thing therefore to be considered is, how these ideas may be conveyed into the mind; that being there, we may learn to connect them with their appropriated sounds, and to become capable of understanding others, when they make use of these sounds in laying open and communicating their thoughts. To comprehend this distinctly, it will be necessary to attend to the division of our ideas into the simple and complex: (see *METAPHYSICS*.) And first, as for our simple

ideas; they can find admission into the mind, but by the two original fountains of knowledge, sensation and reflection. If therefore any of these have as yet no being in the understanding, it is impossible by words or a description to excite them there. A man who had never felt the sensation of *HEAT*, could not be brought to comprehend that sensation by any thing we might say to explain it. If we would really produce the idea in him, it must be by applying the proper object to his senses, and bringing him within the influence of a hot body. When this is done, and experience has taught him the perception to which men have annexed the name *heat*, it then becomes to him the sign of that idea, and he therefore understands the meaning of the term, which, before, all the words in this world would not have been sufficient to convey into his mind. The case is the same in respect of light and colours. A man born blind, and thereby deprived of the only conveyance for ideas of this class can never be brought to understand the names by which they are expressed. The reason is plain: they find for ideas that have no existence in his mind; and as the organ appropriated to their reception is wanting, all other contrivances are vain, nor can they by any force or description be raised in his imagination. But it is quite otherwise in our complex notions. For these being no more than certain combinations of simple ideas, put together in various forms; if the original ideas out of which the collections are made have already had admission into the understanding, and the names serving to express them are known; it will be easy, by enumerating the several ideas concerned in the composition, and marking the order or manner in which they are united, to raise the complex conception in the mind. Thus the idea answering to the word *rainbow* may be readily excited in the imagination of another who has never seen the appearance itself, by barely describing the figure, largeness, position, and order of colours; if we suppose these several simple ideas, with their names, sufficiently known to him.

IV. This leads to a 2d observation upon this subject, namely, That words standing for complex ideas are all definable, but those by which we denote simple ideas are not; for simple ideas being secondary perceptions, which have no other entrance into the mind than by sensation or reflection, can only be got by experience, from the several objects of nature, proper to produce these perceptions in us. Words indeed may serve to remind us of them, if they have already found admission into the understanding, and their connection with the established names is known; but they can never give them their original being or existence there. Hence, when any one asks the meaning of a word denoting a simple idea, we pretend not to explain it to him by a definition, knowing that to be impossible; but, supposing him already acquainted with the idea, and ignorant of the name by which it is called, we mention it to him by some other name which we presume he knows its connection with, and appeal to the object where the idea itself is found. Thus, were any one to ask the meaning of

*white*, we should tell him it stood for the idea as *albus* in Latin, or *blanc* in French; or, thought him a stranger to these languages, might appeal to an object producing the idea, saying it denoted the colour we observe in milk. But this is by no means a definition of the word, exciting a new idea in his understanding; but merely a contrivance to remind of a known idea, and teach him its connection with the established name. For if the ideas which he inquires have never yet been raised in his mind; as suppose one who had seen no colours than black and white, should ask the meaning of the word *scarlet*; it is easy to perceive, that it would be no more possible to make him comprehend it by words, or a definition, than to produce the same perception into the imagination of a man born blind. The only method in such a case is, to present some object, by looking at which the perception itself may be excited; and he will learn both the name and the idea together.

But how comes it to pass, that men agree in names of their simple ideas, seeing they can never make known these perceptions by words to others? The effect is produced by experience and association. Thus finding, for instance, that the heat of *heat* is annexed to that sensation which we feel when they approach the fire, I make it the sign of the sensation excited in me by such an approach, nor have any doubt but it denotes the same perception in my mind as in theirs. For we are naturally led to imagine, that the same operations alike upon the organs of the human mind, and produce an uniformity of sensations. We see, for instance, that the idea raised in him by the smell of sugar, and which he calls *sweetness*, differs from that excited in another by the like means; or wormwood, to whose relish he has given the name *bitter*, produces in another the sensation which he denotes by the word *sweet*. Presuming therefore upon this conformity of perceptions, and that they arise from the same objects, we easily give names to the names of our simple ideas: and at any time, by a more narrow scrutiny into things, new ideas of this class come in our way, which we choose to express by terms of our own invention; these names are explained, not by a definition, but by referring to the objects whence ideas themselves may be obtained.

Being in this manner furnished with simple ideas, and the names by which they are expressed, the meaning of terms that stand for complex ideas is easily got, because the ideas themselves referring to these terms may be conveyed into the mind by definitions. For our complex notions are only certain combinations of simple ideas. When therefore these are enumerated, and the manner in which they are united into one conception explained, nothing more is wanting to that conception in the understanding; and the term denoting it comes of course to be understood. And here it is worth while to reflect upon the wisdom and goodness of the way, in thus furnishing us with the very aptest means of communicating our thoughts. For were it so ordered, that we could thus convey our

complex ideas to one another by definitions, it would in many cases be impossible to make them known at all. This is apparent in those ideas which are the proper work of the mind. For as they exist only in the understanding, and have no real objects in nature in conformity to which they are framed; if we could not make them known by description, they must lie for ever hid within our own breasts, and be confined to the narrow limits of a single mind. All the fine scenes that arise from time to time in the poet's fancy, and by his lively painting give such entertainment to his readers; were he destitute of this faculty of laying them open to the view of others by words and description, could not extend their influence beyond his own imagination, or give joy to any but himself.

VII. There is this additional advantage in the ability we enjoy of communicating our complex notions by definitions; that as these make by far the largest class of our ideas, and most frequently occur in the progress and improvement of knowledge, so they are by these means imparted with the greatest readiness, than which nothing would tend more to the increase and spreading of science: for a definition is soon perceived; and if the terms of it are well understood, the idea itself finds an easy admission into the mind. Whereas in simple perceptions, where we are referred to the objects producing them, if these cannot be come at, as is sometimes the case, the names by which they are expressed must remain empty sounds. But new ideas of this class occurring very rarely in the sciences, they seldom create any great obstruction. It is otherwise with our complex notions; for every step we take leading us into new combinations and views of things, it becomes necessary to explain these to others, before they can be made acquainted with our discoveries: and as the manner of defining is easy, requiring no apparatus but words, which are always ready; and at hand, we can with the less difficulty remove such obstacles as might arise from terms of our own invention, when they are made to stand for new complex ideas suggested to the mind by some present train of thinking. And thus at last we are let into the mystery hinted at in the being of this Section, viz. how we may become acquainted with the thoughts of another, when he makes use of words to which we have as yet joined no ideas. The answer is obvious from what has been already said. If the terms denote simple perceptions, he must refer us to these objects of nature whence the perceptions themselves are to be obtained; but, if they stand for complex ideas, their meaning may be explained by a definition.

## SECT. II. Of DEFINITIONS.

I. A Definition is the unfolding of some conception of the mind, answering to the word or term made use of as the sign of it. Now as, in exhibiting any idea to another, it is necessary that the description be such as may excite that precise idea in his mind; it is plain that definitions, properly speaking, are not arbitrary, but confined to the representing of certain determinate settled notions, such namely as are annexed by the speaker or writer to the words he uses. As nevertheless it is

universally

the signification of words is not the effect of any connection between them and sound; some may perhaps are not so too. To unravel distinctly what is and in speech, we must carefully attend to the connection of our words and the unfolding of the ideas them-

as to the connection of our words and is plain, is a purely arbitrary invention for instance, we have in our of any particular species of metals, by the name *gold* is an effect of the voice of men speaking the same language, not of any peculiar aptness in that metals that idea. Other nations we of different sounds, and with the thus *aurum* denotes that idea in Latin, and even the word *gold* itself served to express the idea we call *silver*, had custom in used it.

we are thus entirely at liberty any idea with any sound, yet it is in unfolding the ideas themselves. an idea having a precise appearance of which it is distinguished from every other manifest, that in laying it open to others, such a description as shall exhibit its appearance. When we have formed a figure bounded by 4 equal sides, joined at right angles, we may express that sound, and call it either a *square* or a

*triangle*. But whichever of these names we use, so long as the idea is the same, the description by which we would signify it to another must be so too. Let it be called *square* or *triangle*, it is still a figure having 4 equal sides, and all its angles right ones. Hence we clearly see what is and what is not arbitrary in the use of words. The establishing any sound as the mark of some determinate idea in the mind, is the effect of free choice, and a voluntary combination among men: and as different nations make use of different sounds to denote the same ideas, hence proceeds all that variety of languages which we meet with in the world. But when a connection between our ideas and words is once settled, the unfolding of the idea answering to any word, which properly constitutes a definition, is by no means an arbitrary thing: for here we are bound to exhibit that precise conception which either the use of language, or our own particular choice, hath annexed to the term we use.

IV. Thus it appears, that definitions, considered as descriptions of ideas in the mind, are steady and invariable, being bounded to the representation of these precise ideas. But then, in the application of definitions to particular names, we are altogether left to our own free choice; because as the connecting of any idea with any sound is a perfectly arbitrary institution, the applying the description of that idea to that sound must be so too. When therefore logicians tell us that the definition of the name is arbitrary, they mean no more than this; that as different ideas may be connect-

ted with any term, according to the good pleasure of him that uses it; in like manner may different descriptions be applied to the term, suitable to the ideas so connected. But this connection being settled, and the term considered as the sign of some fixed idea in the understanding, we are no longer left to arbitrary explanations, but must find such a description as corresponds with that precise idea. Now this alone, according to what has been before laid down, ought to be accounted a definition. What seems to have occasioned a small confusion in this matter, is, that many explanations of words, where no idea is unfolded, but merely the connection between some word and idea asserted, have yet been dignified with the name of definitions. Thus, when we say that *a clock is an instrument by which we measure time*; that is by some called a definition; and yet it is plain that we are previously supposed to have an idea of this instrument, and only taught that the word *clock* serves in common language to denote that idea. By this rule all explanations of words in our dictionaries will be definitions, nay, the names of even simple ideas may be thus defined. *White*, we may say, is the colour we observe in snow or milk; *heat* the sensation produced by approaching the fire; and so in innumerable other instances. But these, and all others of the like kind, are by no means definitions, exciting new ideas in the understanding, but merely contrivances to remind us of known ideas, and teach the connection with the established names.

V. But now in definitions properly so called, we first consider the term we use, as the sign of some inward conception, either annexed to it by custom, or our own free choice; and then the business of the definition is to unfold and explain the idea. As therefore the whole art lies in giving just and true copies of our ideas; a definition is then said to be perfect, when it serves distinctly to excite the idea described in the mind of another, even supposing him before wholly unacquainted with it. This point settled, let us now inquire what those ideas are which are capable of being thus unfolded? In the first place it is evident, that all our simple ideas are necessarily included. We have seen that experience alone is to be consulted here, inasmuch that if either the objects whence they are derived come not in any way, or the avenues appointed by nature for the reception, are wanting, no description is sufficient to convey them into the mind. But when the understanding is already supplied with the original and primitive conceptions, as they may be united together in an infinity of different forms, so may all their several combinations be distinctly laid open, by enumerating the simple ideas concerned in the various collections, and tracing the order and manner in which they are linked one to another. Now these combinations of simple notions constitute what we call our complex notions; whence it is evident, that complex ideas, and these alone, admit of that kind of description which goes by the name of a definition.

VI. Definitions, then, are pictures or representations of our ideas; and as these representations are then only possible when the ideas themselves are complex, it is obvious, that definitions cannot

place but where we make use of terms standing such complex ideas. But our complex idea being nothing more than different combinations of simple ideas, we then know and comprehend them perfectly, when we know the several ideas of which they consist, and can so put together in our minds, as may be necessary for the framing of that peculiar connection, which gives every idea its distinct and proper appearance.

I. Two things are therefore required in every definition: first, That all the original ideas, out of which the complex one is formed, be distinctly separated; and, 2dly, That the order and manner of combining them into one conception be fully explained. Where a definition has these respects, nothing is wanting to its perfection; because every one who reads it and understands the sense, seeing at once what ideas he is to join together, and also in what manner, can at pleasure in his own mind the complex conception answering to the term defined. Let us, for instance, describe the word *square* to stand for that idea by which we represent to ourselves a figure whose subtend quadrants of a circumscribed circle. The parts of this idea are the sides bounding the square. These must be 4 in number, and all equal among themselves, because they are each to subtend a 4th part of the same circle. But, besides these component parts, we must also take notice of the manner of putting them together, if we would exhibit the precise idea for which the word *square* here stands. For 4 equal right lines, any-where joined, will not subtend quadrants of a circumscribed circle. A figure with this property must have its sides standing also at right angles. We begin therefore in this last consideration respecting the manner of combining the parts, the idea of a square as described, and the definition thereby rendered complete. For a figure bounded by 4 equal lines, joined together at right angles, has the property required; and is moreover the only right-lined figure to which that property belongs.

III. It will now be obvious to every one, in what manner we ought to proceed, in order to arrive at just and adequate definitions. First, we must take an exact view of the idea to be defined, trace it to its original principles, and break the several simple perceptions that enter into the composition of it. 2dly, We are to consider the particular manner in which these elementary ideas are combined, in order to form that complex conception for which the term we make use of stands. When this is done, and the idea fully unravelled, we have only to transcribe the sense it makes to our own minds. Such a description, by distinctly exhibiting the order and manner of our primitive conceptions, cannot fail to be at the same time in the mind of every one that reads it, the complex idea resulting from the definition; and therefore attains the true and proper sense of a definition.

III. *Of the COMPOSITION and RESOLUTIONS of our IDEAS, and the RULES of DEFINITION thence arising.*

The rule laid down in the last section is general, extending to all possible cases; and is in-

deed that to which alone we can have recourse, where any doubt or difficulty arises. It is not, however, necessary that we should practise it in every case. Many of our ideas are extremely complicated, inasmuch that to enumerate all the simple perceptions out of which they are formed, would be a very troublesome and tedious work. For this reason logicians have established certain compendious rules of defining, of which we shall give some account. But for the better understanding of what follows, it is necessary to observe, that there is a certain gradation in the composition of our ideas. The mind of man is very limited in its views, and cannot take in a great number of objects at once. We must therefore proceed by steps, and make our first advances subservient to those which follow. Thus, in forming our complex notions, we begin at first with but a few simple ideas, such as we can manage with ease, and unite them together into one conception. When we are provided with a sufficient stock of these, and have by habit and use rendered them familiar to our minds, they become the component parts of other ideas still more complicated, and form what we may call a second order of compound notions. This process may be continued to any degree of composition we please, mounting from one stage to another, and enlarging the number of combinations.

II. But in a series of this kind, whoever would acquaint himself perfectly, with the last and highest order of ideas, finds it the most expedient method to proceed gradually through all the intermediate steps. For, were he to take any very compound idea to pieces, and, without regard to the several classes of simple perceptions that have already been formed into distinct combinations, break it at once into its original principles, the number would be so great as perfectly to confound the imagination, and overcome the utmost reach and capacity of the mind. When we see a prodigious multitude of men jumbled together in crowds, without order or any regular position, we find it impossible to arrive at an exact knowledge of their number. But if they are formed into separate battalions, and so stationed as to fall within the leisure survey of the eye; by viewing them successively and in order, we come to an easy and certain determination. It is the same in our complex ideas. When the original perceptions, out of which they are framed, are very numerous, it is not enough that we take a view of them in loose and scattered bodies; we must form them into distinct classes, and unite these classes in a just and orderly manner, before we can arrive at a true knowledge of the compound notions resulting from them.

III. This gradual progress of the mind to its compound notions, through a variety of intermediate steps, plainly points out the manner of conducting the definitions by which these notions are conveyed into the minds of others. For as the series begins with simple and easy combinations, and advances through a succession of different orders, rising one above another in the degree of composition, it is evident, that, in a train of definitions expressing these ideas, a like gradation is to be observed. Thus the complex ideas of the lowest

lowest order can no otherwise be described than by enumerating the simple ideas out of which they are made, and explaining the manner of their union. But then in the second, or any other succeeding order, as they are formed out of those gradual combinations, and constitute the inferior classes, it is not necessary, in describing them, to mention one by one all the simple ideas of which they consist. They may be more distinctly and briefly unfolded, by enumerating the compound ideas of a lower order, from whose union they result, and which are all supposed to be already known in consequence of previous definitions. Here then it is, that the logical method of defining takes place; which, that it may be the better understood, we shall explain somewhat more particularly the several steps and gradations of the mind in compounding its ideas, and thence deduce that peculiar form of a definition which logicians have thought fit to establish.

IV. All the ideas we receive, from the several objects of nature that surround us, represent distinct individuals. These individuals, when compared together, are found in certain particulars to resemble each other. Hence, by collecting the resembling particulars into one conception, we form the notion of a *species*. And here let it be observed, that this last idea is less complicated than that by which we represent any of the particular objects contained under it. For the idea of the species excludes the peculiarities of the several individuals, and retains only such properties as are common to them all. Again, by comparing several species together, and observing their resemblance, we form the idea of a *genus*; where, in the same manner as before, the composition is lessened, because we leave out what is peculiar to the several species compared, and retain only the particulars wherein they agree. It is easy to conceive the mind proceeding thus from one step to another, and advancing through its several classes of general notions, until at last it comes to the highest genus of all, denoted by the word *being*, where the bare idea of existence is only concerned.

V. In this procedure we see the mind unravelling a complex idea, and tracing it in the ascending scale, from greater or less degrees of composition, until it terminates in one simple perception. If now we take the series the contrary way, and, beginning with the last or highest genus, carry our view downwards, through all the inferior genera and species, quite to the individuals, we shall thereby arrive at a distinct apprehension of the conduct of the understanding in compounding its ideas. For, in the several classes of our perceptions, the highest in the scale is for the most part made up of but a few simple ideas, such as the mind can take in and survey with ease. This first general notion, when branched out into the different subdivisions contained under it, has in every one of them something peculiar, by which they are distinguished among themselves; inasmuch that, in descending from the genus to the species, we always superadd some new idea, and thereby increase the degree of composition. Thus the idea denoted by the word *figure* is of a very general nature, and composed of but few simple perceptions, as implying no more than space eve-

ry where bounded. But if we descend and consider the boundaries of this space they may be either lines or surface, with the several species of figure. For when it is bounded by one or more surfaces, it is called the name of a *solid* figure; but where the boundaries are lines, it is called a *plain* figure.

VI. In this view of things it is evident the species is formed by superadding a new idea to the genus. Here, for instance, the genus is a circumscribed space. If now to this we add the idea of a circumscription by lines, we have the notion of that species of figures which is called *plain*; but if we conceive the circumscription to be by surfaces, we have the species of *solids*. This superadded idea is called a *specific difference*, not only as it serves to divide the genus into the several subdivisions, we thereby also distinguish the species one from another. And as the general idea, completes the notion of a species; hence it is plain, that the genus and a specific difference are to be considered as the constituent parts of the species. If we proceed the progress of the mind still farther, and advancing through the inferior species, we find its manner of proceeding to be the same. For every lower species is formed by superadding some new idea to the species above it; inasmuch that in this descending order, our perceptions, the understanding passes through different orders of complex notions, which come more and more complicated at every step.

Let us resume here, for instance, the species of plain figures. They imply no more than space bounded by lines. But if we take a further consideration of the nature of this space, as whether they are *right* or *curves*, we have the subdivisions of plain figure, distinguishing the names of *rectilinear*, *curvilinear*, and *mixtilinear*. VII. And here we must observe, that the plain figures, when considered as one general branch that come under the notion of a species; yet, when divided with the classes, of curvilinear, rectilinear, mixtilinear, into which they themselves are divided, they really become a genus of the several before mentioned subdivisions constitute inferior species. These species, in the same manner as in the case of plain and solid figures, consist of a genus and specific difference as their constituent parts. For in the curvilinear kind, the idea of the lines bounding the figure makes up the *specific difference*; to which if we join the idea of a plain figure or space circumscribed by lines, we have all that is necessary to complete the notion of this species. We may also take notice, that this last subdivision into two genera above it, viz. plain figure, and curve-lined figures, the genus joined with the specific difference, in order to constitute the species of curve-lined figures, is that which lies nearest to the species. It is the notion of plain figure, and curve-lined figure, that joined with the specific difference, makes up the complex conception of curve-lined figures. For in this descend-

is, figure in general, plain figures, curves, &c. the two first are considered as general of the third; and the 2d in order, or that next to the 3d is called the *nearest genus*. It is this 2d idea, which, joined with of curvity, forms the *species*, of curves; it is plain, that the 3d or last idea is made up of the nearest genus and difference. This rule holds invariably, as the series is continued; because, in ideas thus succeeding one another, all the last; are considered as so many in respect of that last; and the last itself formed by superadding the specific difference genus next it.

Here then we have an universal description applicable to all our ideas of whatever kind, the nearest genus to the lowest species. For, in order downwards from the said 2d, they every where consist of the *genus*, and *differentia specifica*, as logicians call them. But when we come to the lowest of all, comprehending under it only indivisible superadded idea, by which these individuals distinguished one from another, no longer the name of the specific difference. It serves not to denote distinct species, but a variety of individuals, each of which, a particular existence of its own, is theoretically different from every other of the same. And hence it is, that in this last case, we call the superadded idea by the name of *individual difference*; inasmuch that, as the idea is made up of the nearest genus and difference, so the idea of an individual is the lowest species and numeric difference; the circle is a species of curve-lined and what we call the *lowest species*, as comprehending under it only individuals. Circles are distinguished from one another by length and position of their diameters. Hence therefore and position of the diameter from what logicians call the *numerical difference*, because, these being given, the circle is described, and an individual thereby formed.

Thus the mind, in compounding its ideas, proceeding with the most general notions, consisting of but a few simple notions, are combined and brought together into one. Thence it proceeds to the species added under this general idea, and these formed by joining together the genus and specific difference. And as it often happens, that ideas may be still farther subdivided, and a long series of continued gradations, various orders of compound perceptions. All these several orders are regularly and uniformly formed by annexing in every step the difference to the nearest genus. When the method of procedure we are come to the end of all, by joining the species and difference, we frame the ideas of individuals. The series necessarily terminates, because it is not possible any farther to bound or limit our ideas. This view of the composition of representing their constituent parts in the progress of the progression, naturally points out

II. PART. I.

the true and genuine form of a definition. For as definitions are no more than descriptions of the ideas for which the terms defined stand; and as ideas are then described, when we enumerate distinctly and in order the parts of which they consist; it is plain, that by making our definitions follow one another according to the natural train of our conceptions, they will be subject to the same rules, and keep pace with the ideas they describe.

X. As therefore the first order of our compound notions, or the ideas that constitute the highest genera in the different scales of perception, are formed by uniting together a certain number of simple notions; so the terms expressing these genera are defined by *enumerating the simple notions so combined*. And as the species comprehended under any genus, or the complex ideas of the 2d order, arise from superadding the specific difference to the said general idea; so the definition of the names of the species is absolved, in a detail of the ideas of the specific difference, connected with the term of the genus. For the genus having been before defined, the term by which it is expressed stands for a known idea, and may therefore be introduced into all subsequent definitions, in the same manner as the names of simple perceptions. It will now be sufficiently obvious, that the definitions of all the succeeding orders of compound notions will every where consist of the term of the nearest genus, joined with an enumeration of the ideas that constitute the specific difference; and that the definition of individuals unites the names of the lowest species with the terms by which we express the ideas of the numeric difference.

XI. Here then we have the true and proper form of a definition, in all the various orders of conception. This is that method of defining which is commonly called *logical*, and which we see is perfect in its kind, inasmuch as it presents a full and adequate description of the idea for which the term defined stands.

## PART II.

### OF JUDGMENT.

#### SECT. I. Of the GROUNDS of HUMAN JUDGMENT.

THE mind being furnished with ideas, its next step in the way to knowledge is, the comparing these ideas together, in order to judge of their agreement or disagreement. In this joint view of our ideas, if the relation is such as to be immediately discoverable by the bare inspection of the mind, the judgments thence obtained are called *intuitive*, from a word that denotes *to look at*; for in this case, a meer attention to the ideas compared suffices to let us see how far they are connected or disjointed. Thus, that *the WHOLE is greater than any of its PARTS*, is an intuitive judgment; nothing more being required to convince us of its truth, than an attention to the ideas of *whole* and *part*. And this too is the reason why we call the act of the mind forming these judgments *INTUITION*; as it is indeed no more than an immediate perception of the agreement or disagreement of any two ideas.

II. But here it is to be observed, that our know-

U u

ledge

of this kind respects only our ideas, and the  
 ons between them; and therefore can serve  
 as a foundation to such reasonings as are em-  
 ployed in investigating those relations. Now it fo  
 , that many of our judgments are conver-  
 ut facts, and the real existence of things,  
 cannot be traced by the bare contemplation  
 of ideas. It does not follow, because I have  
 of a circle in my mind, that therefore a  
 swering to that idea has a real existence  
 . I can form to myself the notion of a  
 or golden mountain, but never imagine  
 at account that either of them exists. What  
 are the grounds of our judgment in relation  
 ts? EXPERIENCE and TESTIMONY. By ex-  
 ce we are informed of the existence of the  
 objects which surround us, and operate u-  
 r senses. Testimony is of a wider extent,  
 ches not only to objects beyond the present  
 our observation, but also to facts and  
 us, which being now past, and having  
 any existence, could not without this  
 ance have fallen under our cognizance.

Here we have three foundations of human  
 ent, from which the whole system of our  
 ledge may with ease and advantage be deri-  
 First, intuition, which respects our ideas  
 themselves, and their relations; and is the founda-  
 tion of that species of reasoning which we call  
 DEMONSTRATION. For whatever is deduced from  
 our intuitive perceptions, by a clear and connec-  
 ted series of proofs, is said to be demonstrated,  
 and produces absolute certainty in the mind.  
 Hence the knowledge obtained in this manner is  
 what we properly term SCIENCE; because in every  
 step of the procedure it carries its own evidence  
 along with it, and leaves no room for doubt or he-  
 sitation. And it is highly worthy of notice, that  
 as the truths of this class express the relation be-  
 tween our ideas, and the same relations must ever  
 and invariably subsist between the same ideas, our  
 deductions in the way of science constitute what  
 we call ETERNAL, NECESSARY, and IMMUTABLE  
 TRUTHS. If it be true that the whole is equal to  
 all its parts, it must be so unchangeably; because  
 the relation of equality being attached to the ideas  
 themselves, must ever intervene where the same  
 ideas are compared. Of this nature are all the  
 truths of natural religion, morality and mathema-  
 tics, and in general whatever may be gathered  
 from the bare view and consideration of our ideas.

IV. The 2d ground of human judgment is EX-  
 PERIENCE; from which we infer the existence of  
 those objects which surround us, and fall under  
 the immediate notice of our senses. When we see  
 the sun, or cast our eyes towards a building, we  
 not only have perceptions of these objects within  
 ourselves, but ascribe to them a real existence out  
 of the mind. It is also by the information of the  
 senses that we judge of the qualities of bodies; as  
 when we say that SNOW is white, FIRE hot, STEEL  
 hard. For, as we are wholly unacquainted with  
 the internal structure and constitution of the bo-  
 dies, that produce these sensations in us, nay, are  
 unable to trace any connection between that  
 structure and the sensations themselves, it is evi-  
 dent, that we build our judgments altogether up-

on observation, ascribing to bodies such quali-  
 as are answerable to the perceptions they ex-  
 in us. Not that we ever suppose the qualities  
 bodies to be things of the same nature with  
 perceptions; for there is nothing in fire similar  
 our sensation of heat, or in a sword similar to  
 but that when different bodies excite in our m  
 similar perceptions, we necessarily ascribe to  
 bodies not only an existence independent of  
 but likewise similar qualities, of which it is  
 nature to produce similar perceptions in the  
 man mind. But this is not the only advan-  
 derived from experience; for to that too we  
 indebted for all our knowledge regarding the  
 existence of sensible qualities in objects, and  
 operations of bodies one upon another. In  
 for instance, is hard and elastic; this we know  
 experience, and indeed by that alone. For, b  
 altogether strangers to the true nature both o  
 lasticity and hardness, we cannot by the bare  
 templatation of our ideas determine how far  
 one necessarily implies the other, or whether  
 may not be a repugnance between them.  
 when we observe them to exist both in the  
 object, we are then assured from experience  
 they are not incompatible; and when we  
 find, that a stone is hard and not elastic, and  
 air though elastic is not hard, we also conclude  
 the same foundation, that the ideas are not ne-  
 cessarily conjoined, but may exist separately in  
 rent objects. In like manner with regard to  
 operations of bodies one upon another, it is e-  
 dent, that our knowledge this way is all deri-  
 from observation. AQUAREGIA dissolves  
 as has been found by frequent trial, nor is  
 any other way of arriving at the discovery. Na-  
 turalists may tell us, if they please, that the p  
 of aquaregia are of a texture apt to insinuate  
 tween the corpuscles of gold, and thereby lo-  
 and shake them asunder. If this is a true acco-  
 of the matter, it will notwithstanding be allow-  
 that our conjecture in regard to the conforma-  
 of these bodies is deduced from the experim-  
 and not the experiment from the conjecture.  
 was not from any previous knowledge of the  
 mate structure of aquaregia and gold, and the  
 ness of their parts to act or be acted upon,  
 we came by the conclusion abovementioned.  
 internal constitution of bodies is in a manner  
 ly unknown to us; and could we even surm-  
 this difficulty, yet as the separation of the p  
 of gold implies something like an active force  
 the menstruum, and we are unable to conceive  
 it comes to be possessed of this activity, the  
 must be owned to be altogether beyond our  
 prehension. But when repeated trials had  
 confirmed it, insomuch that it was admitted  
 an established truth in natural knowledge, it  
 then easy for men to spin out theories of their  
 invention, and contrive such a structure of p  
 both for gold and aquaregia, as would best ser-  
 explain the phenomenon upon the principle  
 that system of philosophy they had adopted.

V. From what has been said it is evident,  
 as intuition is the foundation of what we call  
 entifical knowledge, so is experience of nat-  
 For this last being wholly taken up with objec-

or these bodies that constitute the natural world; and their properties, as far as we can discover them, being to be traced only by a long and diligent series of observations; it is apparent, that, in order to improve this branch of knowledge, we must betake ourselves to the method of trial and experiment.

But though experience is what we may regard as the immediate foundation of natural knowledge, yet with respect to particular persons its utility is very narrow and confined. The objects that surround us are numerous, many of them at a great distance, and some quite beyond our power to reach.

Life is so short, and so crowded with cares, that but little time is left for any single person to employ himself in unfolding the mysteries of nature. Hence it is necessary to admit many things upon the testimony of others, which thus becomes the foundation of a great part of our knowledge of body. No man doubts of the power of aqua regia to dissolve gold, though perhaps he never himself made the experiment. In these and such like cases, we judge of the operations of nature upon the mere testimony of others. However, as we can always have recourse to experience where any doubt or difficulty arises, this is justly considered as the true foundation of natural philosophy; being indeed the ultimate support upon which our assent rests, whereto we appeal when the highest degree of evidence is required.

But there are many facts that will not admit of an appeal to the senses; and in this case history is the true and only foundation of our knowledge. All human actions of whatever kind, considered as already past, are of the nature of history; because having now no longer any reality, both the facts themselves, and the circumstances attending them, can be known only by the relations of such as had sufficient opportunity of arriving at the truth. TESTIMONY is justly accounted a 3d ground of human knowledge; and as from the other two we have derived *scientific* and *natural* knowledge, so we from this derive *historical*; by which we learn not merely a knowledge of the civil transactions of states and kingdoms, but of all facts of every kind, where testimony is the ultimate foundation of our belief.

II. Of AFFIRMATIVE and NEGATIVE PROPOSITIONS.

WHILE the comparing of our ideas is considered merely as an act of the mind, assembling them together, and joining or disjoining them according to the result of its perceptions, we call it JUDGMENT; but when our judgments are put into words, they then bear the name of PROPOSITIONS. A proposition therefore is a sentence expressing some judgment of the mind, whereby two or more ideas are affirmed to agree or disagree.

Now, as our judgments include at least two ideas, one of which is affirmed or denied of the other, so must a proposition have terms answering to these ideas. The idea of which we affirm or deny, and of course the term expressing the idea, is called the SUBJECT of the propo-

sition. The idea affirmed or denied, as also the term answering it, is called the PREDICATE. Thus in the proposition, *God is omnipotent*: *God* is the subject, it being of him that we affirm omnipotence; and *omnipotent* is the predicate, because we affirm the idea expressed by that word to belong to God.

II. But as, in propositions, ideas are either joined or disjoined; it is not enough to have terms expressing those ideas, unless we have also some words to denote their agreement or disagreement. That word, in a proposition, which connects two ideas together, is called the COPULA; and if a negative particle be annexed, we thereby understand that the ideas are disjoined. The substantive verb is commonly made use of for the copula: as in the above-mentioned proposition, *God is omnipotent*; where *is* represents the copula, and signifies the agreement of the ideas of *God* and *omnipotence*. But if we mean to separate two ideas; then, besides the substantive verb, we must also use some particle of negation, to express this repugnance. The proposition, *man is not perfect*, may serve as an example of this kind; where the notion of *perfection* being removed from the idea of *man*, the negative particle *not* is inserted after the copula, to signify the disagreement between the subject and predicate.

III. Every proposition necessarily consists of these three parts: but then it is not alike needful that they be all severally expressed in words; because the copula is often included in the term of the predicate, as when we say, *he sits*; which imports the same as *he is sitting*. In the Latin language, a single word has often the force of a whole sentence. Thus *ambulat* is the same as *ille est ambulans*; *amo*, as *ego sum amans*; and so in innumerable other instances: by which it appears, that we are not so much to regard the number of words in a sentence, as the ideas they represent, and the manner in which they are put together. For wherever two ideas are joined or disjoined in an expression, though of but a single word; it is evident that we have a subject, predicate, and copula, and of consequence a complete proposition.

IV. When the mind joins two ideas, we call it an *affirmative* judgment; when it separates them, a *negative*: and as any two ideas compared together must necessarily either agree or not agree, it is evident that all our judgments fall under these two divisions. Hence likewise the propositions expressing these judgments are all either affirmative or negative. An affirmative proposition connects the predicate with the subject, as *a stone is heavy*; a negative proposition separates them, as *God is not the author of evil*. AFFIRMATION therefore is the same as joining two ideas together, and this is done by means of the copula. NEGATION on the contrary marks a repugnance between the ideas compared; in which case a negative particle must be called in, to show that the connection included in the copula does not take place.

V. Hence we see the reason of the rule commonly laid down by logicians, That in all negative propositions the negation ought to affect the

# L O G I C.

the copula, when placed by it-  
 subject and the predicate, mani-  
 together: it is evident, that to  
 negative, the particles of ne-  
 in such a manner as to de-  
 a word, then only are two  
 in a proposition, when the nega-  
 be so referred to the copula, as  
 tion included in it, and undo  
 could otherwise establish. When  
 ce, *No man is perfect*; take a-  
 and the copula of itself plainly  
 the proposition. But as this  
 of what is intended, a negative  
 show that this union does not  
 here. The negation, therefore, by  
 of the copula, changes the in-  
 proposition, inasmuch that, in-  
 two ideas together, it denotes

judgment arises the division of prop-  
*universal* and *particular*. An *universal*  
 is that wherein the subject is some-  
 taken in its full latitude; inasmuch  
 predicate agrees to all the individuals  
 under it, if it denotes a proper spe-  
 all the several species, and their indi-  
 marks an idea of a higher order. *Th-*  
*every, no, none, &c.* are the proper  
 universality; and as they seldom fail  
 many general truths, so they are the  
 criterion whereby to distinguish the  
*man has a power of beginning man*  
 an *universal* proposition; as we know  
 word *all* prefixed to the subject *all*  
 denotes that it must be taken in it.  
 Hence the power of beginning may  
 affirmed of all the several species of:

III. A particular proposition has in  
 some general term for its subject; but  
 of limitation added, to denote, the  
 predicate agrees only to some of the indi-  
 prehended under a species, or to one  
 the species belonging to any genus,  
 the whole universal idea. Thus, *Some*  
*heavier than iron*; *Some men have*  
*share of prudence*. In the last of these  
 the subject *some men* implies only a  
 ber of individuals, comprehended in  
 species. In the former, where the  
 genus that extends to a great variety  
 classes, *some stones* may not only im-  
 ber of particular stones, but also a  
 species of stones, inasmuch as there  
 few with the property there describ-  
 we see, that a proposition does not  
 particular by the predicate's agreeing  
 species, unless that species, singly  
 considered, makes also the subject  
 affirm or deny.

IV. There is still one species of prop-  
 remains to be described, and which  
 serves our notice, as it is not yet a  
 logicians to which of the two classes  
 above they ought to be referred; *namely*  
 propositions, or those where the sub-  
 individual. Of this nature are the  
 ISAAC NEWTON *was the inventor of*  
*book contains many useful truths*. The  
 difficulty as to the proper rank of  
 tions, because the subject being tak-  
 to the whole of its extension, they do  
 the same effect in reasoning as *uni-*  
 it be considered that they are in truth  
 nited kind of particular proposition:  
 proposition can with any propriety  
 universal but where the subject is some  
 den; we shall not be long in determi-  
 nating they ought to be referred. *As*  
*Some books contain useful truths*; this  
 is particular, because the general  
 with a mark of restriction. If then  
*This book contains useful truths*: it  
 the proposition must be still more  
 the limitation implied in the word *this*  
 confined nature than in the former.

V. We see, therefore, that all prop-  
 either *affirmative* or *negative*; nor

## SECT. III. Of UNIVERSAL and PARTICULAR PROPOSITIONS.

I. THE next considerable division of propo-  
 sitions is into *universal* and *particular*. Our ideas,  
 according to what has been already observed in  
 the First Part, are all singular as they enter the  
 mind, and represent individual objects. But as  
 by abstraction we can render them universal, so  
 as to comprehend a whole class of things, and  
 sometimes several classes at once; hence the terms  
 expressing these ideas must be in like manner uni-  
 versal. If therefore we suppose any general term  
 to become the subject of a proposition, it is evi-  
 dent, that whatever is affirmed of the abstract  
 idea, belonging to that term, may be affirmed of  
 all the individuals to which that idea extends.  
 Thus, when we say, *Men are mortal*; we con-  
 sider mortality, not as confined to one or any  
 number of particular men, but as what may be  
 affirmed without restriction of the whole species.  
 Thus the proposition becomes as general as the  
 idea which makes the subject of it; and indeed  
 derives its universality entirely from that idea,  
 being more or less so according as this may be ex-  
 tended to more or fewer individuals. But it is  
 further to be observed of these general terms,  
 that they sometimes enter a proposition in their  
 full latitude, as in the example given above; and  
 sometimes appear with a mark of limitation. In  
 this last case we are given to understand, that the  
 predicate agrees not to the whole universal idea,  
 but only to a part of it; as in the proposition,  
*Some men are wise*: For here wisdom is not affirm-  
 ed of every particular man, but restrained to a  
 few of the human species.

II. From this different appearance of the ge-  
 neral idea, that constitutes the subject of any

dent, that in both cases they may be *universal* or *particular*. Hence arises that celebrated fourfold division of them into *universal affirmative* and *universal negative*, *particular affirmative* and *particular negative*, which comprehends indeed all their varieties. The use of this method of distinguishing them will appear more fully afterwards, when we come to treat of reasoning and syllogism.

SECT. IV. Of ABSOLUTE and CONDITIONAL PROPOSITIONS.

I. THE objects about which we are chiefly conversant in this world, are all of a nature liable to change. What may be affirmed of them at one time, cannot often at another; and it makes no small part of our knowledge to distinguish rightly these variations, and trace the reasons upon which they depend. For it is observable, that amidst all the vicissitude of nature, some things remain constant and invariable; nor even are the changes, to which we see others liable, effected but in consequence of uniform and steady laws, which, when known, are sufficient to direct us in our judgments about them. Hence philosophers, in distinguishing the objects of our perception into various classes, have been very careful to note, that some properties belong essentially to the general idea, so as not to be separable from it but by destroying its very nature; while others are only accidental, and may be affirmed or denied of it in different circumstances. Thus solidity, a yellow colour, and great weight, are considered as essential qualities of gold; but whether it shall exist as an uniform conjoined mass, is not alike necessary. We see that by proper menstruum it may be reduced to a fine powder, and that an intense heat will bring it into a state of fusion.

II. From this diversity in the several qualities of things arises a considerable difference as to the manner of our judging about them. For all such properties as are inseparable from objects when considered as belonging to any genus or species, are affirmed absolutely and without reserve of that general idea. Thus we say, *Gold is very weighty; A stone is hard; Animals have a power of self motion*. But in the case of mutual or accidental qualities, as they depend upon some other consideration distinct from the general idea; that also must be taken into the account, in order to form an accurate judgment. Should we affirm, for instance, of some stones, that they are very susceptible of a rolling motion; the proposition, while it remains in this general form, cannot with any advantage be introduced into our reasonings. An aptness to receive that mode of motion flows from the figure of the stone; which, as it may vary infinitely, our judgment then only becomes applicable and determinate, when the particular figure, of which volubility is a consequence, is also taken into the account. Let us, then, bring in this other consideration, and the proposition will run as follows: *Stones of a spherical form are easily put into a rolling motion*. Here we see the condition upon which the predicate is affirmed, and therefore know in what particular cases the proposition may be applied.

III. This consideration of propositions respect-

ing the manner in which the predicate is affirmed of the subject gives rise to the division of them into *absolute* and *conditional*. *Absolute* propositions are those wherein we affirm some property inseparable from the idea of the subject, and which therefore belongs to it in all possible cases: as, *GOD is infinitely wise; Virtue tends to the ultimate happiness of man*. But where the predicate is not necessarily connected with the idea of the subject, unless upon some consideration distinct from that idea, there the proposition is called *conditional*. The reason is from the supposition annexed, which is of the nature of a condition, and may be expressed as such, thus: *If a stone is exposed to the rays of the sun, it will contract some degree of heat; If a river runs in a very declining channel, its rapidity will constantly increase*.

IV. There is not any thing of greater importance in philosophy than a due attention to this division of propositions. If we are careful never to affirm things absolutely but where the ideas are inseparably conjoined; and if in our other judgments we distinctly mark the conditions which determine the predicate to belong to the subject; we shall be the less liable to mistake in applying general truths to the particular concerns of human life. It is owing to the exact observance of this rule that mathematicians have been so happy in their discoveries, and that what they demonstrate of magnitude in general may be applied with ease in all obvious occurrences.

V. The truth of it is, particular propositions are then known to be true, when we can trace their connection with universals; and it is accordingly the great business of science to find out general truths that may be applied with safety in all obvious instances. Now the great advantage arising from determining with care the conditions upon which one idea may be affirmed or denied of another is this: that thereby particular propositions really become universal, may be introduced with certainty into our reasonings, and serve as standards to conduct and regulate our judgments. To illustrate this by a familiar instance: if we say *Some water acts very forcibly*; the proposition is particular: and as the conditions on which this forcible action depends are not mentioned, it is as yet uncertain in what cases it may be applied. Let us then supply these conditions, and the proposition will run thus: *Water conveyed in sufficient quantity along a steep descent acts very forcibly*. Here we have an universal judgment, inasmuch as the predicate *forcible action* may be ascribed to all water under the circumstances mentioned. Nor is it less evident that the proposition in this new form is of easy application; and in fact we find that men do apply it in instances where the forcible action of water is required; as in corn mills and many other works of art.

SECT. V. Of SIMPLE and COMPOUND PROPOSITIONS.

I. HITHERTO we have treated of propositions, where only two ideas are compared together. These are in the general called *SIMPLE*; because, having but one subject and one predicate, they are the effect of a simple judgment that admits of

no subdivision. But if it so happens that several ideas offer themselves to our thoughts at once, whereby we are led to affirm the same thing of different objects, or different things of the same object; the propositions expressing these judgments are called **COMPOUND**; because they may be resolved into as many others, as there are subjects or predicates in the whole complex determination on the mind. Thus, *God is infinitely wise and infinitely powerful*. Here there are two predicates, *infinite wisdom and infinite power*, both affirmed of the same subject; and accordingly the proposition may be resolved into two others, affirming these predicates severally. In like manner in the proposition, *Neither kings nor people are exempt from death*; the predicate is denied of both subjects, and may therefore be separated from them in distinct propositions. Nor is it less evident, that if a complex judgment consists of several subjects and predicates, it may be resolved into as many simple propositions as are the number of different ideas compared together. *Riches and honours are apt to elate the mind, and increase the number of our desires*. In this judgment there are two subjects and two predicates, and it is at the same time apparent that it may be resolved into four distinct propositions. *Riches are apt to elate the mind. Riches are apt to increase the number of our desires. And so of honours.*

II. Logicians have divided these compound propositions into many different classes; but not with a due regard to their proper definition. Thus *conditionals, causals, relatives, &c.* are mentioned as so many distinct species of this kind, though in fact they are no more than simple propositions. To give an instance of a conditional; *If a stone is exposed to the rays of the sun, it will contract some degree of heat*. Here we have but one subject and one predicate; for the complex expression, *A stone exposed to the rays of the sun*, constitutes the proper subject of this proposition, and is no more than one determined idea. The same thing happens in causals. *Reboboam was unhappy because he followed evil counsel*. There is here an appearance of two propositions arising from the complexity of the expression; but when we come to consider the matter more nearly, it is evident that we have but a single subject and predicate. *The pursuit of evil counsel brought misery upon Reboboam*. It is not enough, therefore, to render a proposition compound, that the subject and predicate are complex notions, requiring sometimes a whole sentence to express them: for in this case the comparison is still confined to two ideas, and constitutes what we call a simple judgment. But where there are several subjects or predicates, or both, as the affirmation or negation may be alike extended to them all, the proposition expressing such a judgment is truly a collection of as many simple ones as there are different ideas compared. Confining ourselves therefore to this more strict and just notion of compound propositions, they are all reducible to two kinds, viz. *copulatives and disjunctives*.

III. A **COPULATIVE** proposition is, where the subjects and predicates are so linked together, that they may be all severally affirmed or denied one of another. Of this nature are the examples of

compound propositions given above. "*Riches and honours are apt to elate the mind, and increase the number of our desires.*"—"Neither kings nor people are exempt from death." In the first of these the two predicates may be affirmed severally of each subject, whence we have 4 distinct propositions. The other furnishes an example of the negative kind, where the same predicate, being disjoined from both subjects, may be also denied of them in separate propositions.
